*Additional information would be welcome.  
Please send it to [thomsona@flash.net](mailto:thomsona@flash.net)*

*Where possible, the material in this sourcebook is presented in chronological order.*

*The main body contains information concerning the strike from sources with some apparent credibility.*

*Appendix A contains commentary and supplementary material.*

*Readers are cautioned that the distinction  
between information and commentary is often debatable.*

*Appendix B contains material related to satellite imagery and its interpretation.*

*Appendix C briefly discusses a facility 5 km east of the site of the strike.*

*Appendix D contains frames from the April 24, 2008 intelligence briefing to Congress*

*Appendix E discusses reports of three additional sites and attempts to identify candidate facilities.*

*Appendix F lists Members of Congress belonging to committees briefed on the strike.*

*Appendix G deals with a second alleged nuclear facility constructed after the strike.*

## **Israel didn't attack Syria: Israel Radio**

Thu Sep 6, 2007 6:46pm EDT

JERUSALEM (Reuters) - The Israeli military denied on Thursday a Syrian news agency report that Israeli warplanes attacked targets in Syria, Israel Radio reported.

"This event never happened," the radio said, quoting an unidentified Israeli military spokesman.

## Syria 'fires on Israel warplanes'

Last Updated: Thursday, 6 September 2007, 16:25 GMT 17:25 UK

**Syria has said its air defences opened fire on Israeli warplanes after they violated its airspace in the north of the country.**

Syrian officials said the defences forced the jets to drop ammunition over deserted areas and turn back, according to the official news agency, Sana.

Israel's military said it would not comment on the reports.

Israel and Syria remain technically at war and tensions between them have been rising in recent months.

The Syrian government has insisted that peace talks can be resumed only on the basis of Israel returning the Golan Heights, which it seized in 1967.

Israeli authorities, for their part, have demanded that Syria abandon its support for Palestinian and Lebanese militant groups before talks can begin.

The last peace talks between the two countries broke down in 2000.

### 'Enemy aircraft'

A Syrian military spokesman said the Israeli warplanes had flown into Syrian airspace at around 0100 local time on Thursday morning, Sana reported.

"The Israeli enemy aircraft infiltrated into the Arab Syrian territory through the northern border, coming from the Mediterranean heading toward the eastern region, breaking the sound barrier," he said.

They were then engaged by Syrian air defence forces in the Tall al-Abyad, an area 160km (100 miles) north of Raqqa and near the border with Turkey, witnesses said.

"Air defence units confronted them and forced them to leave after they dropped some ammunition in deserted areas without causing any human or material damage," the spokesman said.

Pilots sometimes jettison ammunition or extra fuel to make their aircraft lighter and easier to manoeuvre.

Syria's Information Minister, Mohsen Bilal, told al-Jazeera TV that his government was "seriously studying the nature of the response".

"Israel in fact does not want peace," he said. "It cannot survive without aggression, treachery and military messages."

### **Tensions**

Officials in Damascus said Syrian forces last fired at Israeli warplanes in June 2006, when they flew over the summer residence of the Syrian president in Lattakia, while he was inside.

Over the past few months, the leaders of both countries have both stressed that they do not want war.

But both sides have also been preparing for possible conflict.

In June, Israeli Prime Minister Ehud Olmert insisted his country did not want war with Syria, and that he had communicated this to Damascus through diplomatic channels.

He also repeated his warning that a "miscalculation" could spark hostilities between the two.

Mr Olmert's statement came after the Israeli military staged major exercises in the Golan Heights. Syria is also reported to have recently built up its armaments along the border.

## **New twist to Syria-Israel tension**

By Martin Patience

BBC News, Damascus

Published: 2007/09/06 18:05:38 GMT

*[EXCERPTS]*

**The alleged violation of Syrian airspace by Israeli warplanes was announced by the official state news on Thursday afternoon.**

It is not clear why it took the Syrian authorities almost 12 hours to make the reported incident public. The Israeli military, for its part, has made no public comment on the matter.

But in a summer where the two countries seem to have oscillated from possible war to possible peace talks, this incident will have left some officials in Damascus jittery.

Information Minister Mohsen Bilal told al-Jazeera TV that Syria's leadership was "giving serious consideration to its response... to this aggression".

### **Caught by surprise**

It seems unlikely, however, that Syria will resort to anything more than public denouncements of the alleged incident.

But the alleged violation of Syria's airspace will serve only to heighten tensions between the two countries.

That it apparently happened in the country's north, close to the Turkish border - and not in the south, where Syria and Israel share a border - has taken many people here by surprise.

Daily Press Briefing  
Tom Casey, Deputy Spokesman  
Washington, DC  
September 6, 2007

*[EXCERPT]*

12:46 p.m. EDT

MR. CASEY: Okay. Well, good afternoon, everybody. I don't have anything to open you up with, so let's go right to your questions.

Matt.

QUESTION: Have you -- obviously, I was not at the gaggle this morning, but have you been able to figure out what happened in -- over Syrian airspace?

MR. CASEY: Matt, I'm where we were on this, this morning, I've seen press reports. Those stories conflict with one another so really I just don't have anything for you on it.

## **Israel mum on any IAF entry into Syria airspace**

By Yoav Stern and Mazal Mualem, Haaretz Correspondents, and News Agencies

Last update - 12:02 **07/09/2007**

**Prime Minister Ehud Olmert denied on Thursday all knowledge of a Syrian report that its military fired on an Israel Air Force warplane that infiltrated its airspace and "dropped munitions."**

"I don't know what you are talking about," Olmert said in response to a question on the issue from Haaretz, hours after his office and the Israel Defense Forces both said they refused to respond to Damascus' claims.

The prime minister was speaking at an event for his Kadima party to mark the Jewish New Year holiday next week. He insisted that it was business as usual, asking reporters, "do I not look relaxed?"

**Foreign Minister Tzipi Livni and Vice Premier Haim Ramon issued similar responses. "I don't know what happened there," Ramon said.**

The IDF said it would not comment on the Syrian reports. "It is not our custom to respond to these kinds of reports," the IDF Spokesman's Office said in a statement.

A spokeswoman for Olmert said there would be no comment beyond the military statement.

**Syrian Information Minister Mohsen Bilal said Thursday that Damascus is giving serious consideration to its response.**

**"Syria reserves the right to determine the quality, type, and nature of our response to the Israeli attack," he told Al-Jazeera television. "The Syrian leadership is seriously considering its response."**

Bilal, however, refused to indicate whether the reaction would be on the military or diplomatic level. He would not give any more details about the incident, but said it proved Israel's policies are based on hostility.

"Israel in fact does not want peace," said Bilal. "It cannot survive without aggression, treachery and military messages."

He said recent U.S. aid of \$30 billion over 10 years to Israel encouraged its government to such arrogance that it delivered the morning message.

**A Syrian Army spokesman, quoted by the official news agency, did not say how the military fired on the aircraft, but confirmed that the incident occurred at midnight Wednesday night.**

**"We warn the Israeli enemy government against this flagrant aggressive act, and retain the right to respond in an appropriate way," the spokesman said.**

"The Israeli enemy aircraft infiltrated into the Arab Syrian territory through the northern border, coming from the Mediterranean heading toward the eastern region, breaking the sound barrier," the Syrian spokesman said.

"Air defense units confronted them and forced them to leave after they dropped some munitions in deserted areas without causing any human or material damage."

Syrian Cabinet Minister Buthaina Shaaban, speaking on Al-Jazeera television's English service, would not confirm that an IAF jet had attacked Syria, but did say the aircraft violated the country's airspace. "We are a sovereign country. They cannot do that," said Shaaban.

Al-Arabiya television reported that the incident occurred in north-eastern Syria, close to the border with Turkey.

A Syrian analyst told Hezbollah's Al-Manar television that the plane was likely dumping munitions in order to maneuver, and was not carrying out a bombing raid.

The reported incident comes after months of growing tensions along the frontier and concerns that the escalation could result in war. Over the summer, Israeli and Syrian officials have repeatedly made announcements that they had no interest in hostilities.

Security official said late last month, however, that the IDF had decided that war with Syria is unlikely and was reducing its troop presence in the Golan Heights after months of tension.

The Israeli officials said recently that Syria's military had also reduced its war readiness, but offered no details as the exact steps taken by the Syrians are classified. The officials spoke on condition of anonymity because they were not authorized to divulge the information to the press.

In an interview Sunday night with Haaretz, European Union foreign policy chief Javier Solana said he saw no reason for any forthcoming military conflict between Israel and Syria.

## **Israel Is Officially Silent on Syrian Report It Entered Airspace**

By ISABEL KERSHNER

September 7, 2007

**JERUSALEM, Sept. 6** — Israeli officials were tight-lipped on Thursday after Syria said that Israeli planes had violated its airspace early that morning and that Syrian air defenses had confronted the planes and repulsed them.

A Syrian military spokesman said that the Israeli planes had also dropped some munitions in unpopulated areas in the northern part of the country, according to the official Syrian news agency, SANA. The spokesman said there were no casualties or damage.

Israeli Army officials said only that they “are not accustomed to comment on reports of this nature.” A government spokesman said he had “nothing to add.” In a speech here Thursday evening, Prime Minister Ehud Olmert made no mention of the accusations from Syria. When asked about them by an Israeli journalist, he said, “I don’t know what you are talking about.”

The first official reports of Thursday’s episode emerged, by Syrian accounts, more than 12 hours after it took place. Syrian officials were quoted in various media as saying that the Israeli aircraft had infiltrated Syrian airspace around 1 a.m. They added that the Israeli planes were flying low, and broke the sound barrier.

Syria’s minister of information, Mohsen Bilal, told the satellite television network Al Jazeera, “Syria retains the right to determine the quality, type and nature of its response.”

Syrian officials could not be reached directly for comment.

While the Israeli military would not comment, it seemed plausible that the Syrians had detected an Israeli overflight to test Syrian radar and reactions, and that the Syrian response caused the Israeli pilots to drop their munitions to fly higher and faster.

By late in the day, though, analysts and media on both sides seemed to be trying to scale down tensions over the reports. Israel’s Channel 2 television reported that unnamed Syrian officials had said they had no intention of being drawn into a war on Israel’s timetable or terms.

Samir Taqqi, a political analyst at the Orient Center for Studies, a research institute in Damascus, said the Syrian response would probably be measured. “I don’t think you’ll see it lash out,” he said. “The response will be through a political mechanism, not military.”

Eyal Zisser, a Syria expert at Tel Aviv University’s Moshe Dayan Center for Middle Eastern and African Studies, said that if the Syrians had an interest in an escalation, he would have expected much shriller statements out of Damascus.

The Syrian announcements came after months of increasing tension between Israel and Syria, with both in a heightened state of alert along their border.

Some Syrian analysts in Damascus interpreted the reported incident as an Israeli provocation, possibly aimed at increasing the stakes between the two countries. Syria's president, Bashar al-Assad, has suggested that if Israel is not willing to resume negotiations for the return of the Golan Heights, which Israel captured in the 1967 Arab-Israeli war, the alternative would be to try to regain the territory by force.

Thabet Salem, a Syrian political commentator, said of the day's reports, "Either this is in preparation for pushing Syria to peace talks by raising the stakes, or it's an attempt to abort any sort of calls for peace talks."

Formal peace talks between Israel and Syria broke down in 2000. Mr. Olmert has said he would be willing to resume talks if Syria showed its intentions were genuinely peaceful, for example by stopping its support for Hezbollah in Lebanon and for Palestinian militant factions based in Damascus.

Separately on Thursday, 10 Palestinian militants were killed in clashes with Israel in Gaza. Four were killed in clashes with an Israeli force in southern Gaza, Palestinian medical officials and the Israeli Army said.

In addition, six members of Islamic Jihad were killed, the army said, when they approached the Gaza perimeter fence in two vehicles. Islamic Jihad said in a statement that it had intended to attack an Israeli military post.

Hugh Naylor contributed reporting from Damascus.

## Israeli jets 'drop ammunition' in sortie over Syria

By Anne Penketh, Diplomatic Editor

Published: 07 September 2007

Syria was considering its response last night after an Israeli warplane violated Syrian air space and was accused of dropping ammunition inside the country. The incident, near the Turkish border on Wednesday, came just after midnight at a time when tensions are running high between the two neighbours. It prompted Syrian air defence units to open fire on the Israeli jets, Syrian officials said.

The Israeli aircraft "infiltrated Syrian air space through the northern border, coming from the direction of the Mediterranean, and headed towards northeastern territory, breaking the sound barrier," said the official Syrian news agency, Sana. "The Syrian Arab Republic warns the government of the Israeli enemy and reserves the right to respond according to what it sees fit."

A Syrian official added: "They dropped bombs on an empty area while our air defences were firing heavily at them." Residents said they heard the sound of five planes or more above the Tal al-Abiad area on Syria's border with Turkey, about 100 miles north of the Syrian city of Rakka.

The Israeli army refused to comment on the incident but no casualties or damage were reported. "We cannot discuss military operations," a spokesman said.

## **Syria accuses Israel of violating its air space, dropping 'munitions'**

Details regarding encounter unclear

By Albert Aji, Associated Press

September 7, 2007

DAMASCUS - The Syrian government charged yesterday that Israeli aircraft dropped "munitions" inside Syria overnight and said its air defenses opened fire in a new escalation of tensions between the decades-old foes.

It was unclear what happened. Syria stopped short of accusing Israel of purposely bombing its territory, and an Israeli spokesman said he could not comment on military operations.

Analysts speculated that such a foray could have been probing Syria's defenses or monitoring long-range missile bases. The reported path also would have taken the jets near Iran, whose growing power and anti-Israel government worries leaders of the Jewish state.

The incident came after a summer of building tensions that have fed worries of a military conflict erupting between Syria and Israel. Syria accused Israel last month of seeking a pretext for war, and the Israeli government is keeping a close watch on Syrian troop movements.

Both sides have insisted they want no conflict along the disputed frontier. But Syria fears it is being squeezed out of a US-brokered Mideast peace conference planned for November and will be left at a disadvantage in the standoff with Israel.

Syria has grown more vocal in pressing its demand that Israel give back the Golan Heights. Israel, in turn, seeks the return of three Israeli soldiers held for more than a year by two Syrian-allied militant groups, Hezbollah in southern Lebanon and Hamas in the Palestinian territory.

The official Syrian Arab News Agency quoted a military official as saying Israeli jets broke the sound barrier flying over northern Syria before dawn yesterday, then "dropped munitions" onto deserted areas after being shot at by Syria's air defenses.

Syria did not say the aircraft bombed its territory, however. Asked whether Israel attacked Syria, Buthaina Shaaban, a Cabinet minister, said only that the aircraft violated Syrian air space.

Syrian officials did not describe the "munitions" dropped. Pilots sometimes jettison extra fuel tanks when warplanes come under fire to make the craft lighter and easier to maneuver.

In Washington, the State Department had no specific comment on the incident, citing the lack of details about what happened.

## **Israel Condemned for Intrusion into Syria's Territorial Air**

Pyongyang, September 11 [2007] (KCNA) -- A spokesman for the DPRK Foreign Ministry gave the following answer to a question put by KCNA Tuesday in connection with the fact that Israeli warplanes invaded Syria's territorial air space:

Early in the morning of Sept. 6 Israel's warplanes illegally intruded into the territorial air above Syria and dropped bombs in the desert in its northeastern area before fleeing.

This is a very dangerous provocation little short of wantonly violating the sovereignty of Syria and seriously harassing the regional peace and security.

The DPRK strongly denounces the above-said intrusion and extends full support and solidarity to the Syrian people in their just cause to defend the national security and the regional peace.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
September 11, 2007

*[EXCERPT]*

12:07 p.m. EDT

MR. MCCORMACK: Good afternoon, everybody. I don't have anything to start off with, so we can get right into your questions. Who would like to begin? Sylvie?

QUESTION: Can you confirm that Israel carried an airstrike inside Syria last week, targeting a shipment of arms?

MR. MCCORMACK: No, I think you should talk to the Syrian Government or the Israeli Government about that.

QUESTION: Did -- the Israelis didn't inform you of any operation in --

MR. MCCORMACK: If -- any questions -- any questions about this story you can talk to the Israeli Government about.

Okay, good. We're done. (Laughter.) Ah, there you are.

<http://www.theinsider.org/news/article.asp?id=2605>

## **North Korea condemns Israel for sending fighter jets to violate Syria's airspace**

N. Korea condemns Israeli 'provocation'

11 September 2007

North Korea yesterday lashed out at Israel for invading Syrian airspace last Thursday, its official news agency said.

"This is a very dangerous provocation little short of wantonly violating the sovereignty of Syria and seriously harassing the regional peace and security," a spokesman for the DPRK Foreign Ministry was quoted as saying by the Korean Central News Agency.

"The Democratic People's Republic of Korea strongly denounces the above-said intrusion and extends full support and solidarity to the Syrian people in their just cause to defend the national security and the regional peace," he added.

Syrian air defenses opened fire on Israeli aircraft after they flew over northern Syria and dropped ammunition on September 6, according to Syria's official media.

North Korea's leader, Kim Jong Il, also sent greetings yesterday to Syrian President Bashar Assad for his 42nd birthday. Kim wished Assad good health, happiness and greater success in his responsibility-heavy work.

The message stated: "Today the Syrian people under your leadership is striving to defend the country's sovereignty and honor and to build a modern society, while meeting all challenges and overcoming all difficulties, and making a positive contribution to a fair and comprehensive resolution of the Middle Eastern problem."

The message said with satisfaction that the friendship and cooperation between the two countries are growing steadily stronger.

## **Syrian FM: Israel dropped live ammo**

By Yoav Stern and Assaf Uni Haaretz Correspondents and Agencies

Tue., September 11, 2007 Elul 28, 5767

The Israeli warplanes that violated Syria's airspace last week dropped live ammunition on Syrian soil, Damascus' foreign minister said yesterday, adding that Israel's decision not to comment was "appropriate."

"Israel used live ammunition in a deliberate and hostile attack," Minister Walid Moallem said at a news conference during an official visit to Turkey.

His Turkish counterpart, Ali Babacan, demanded a quick explanation from Israel over fuel tanks found near the Syrian border in the incident last Thursday, which he said involved violation of Turkish airspace by Israeli jets. Israel is still not commenting on the incident.

"All countries in the region must show respect to all countries' sovereignty and avoid acts that lead to tensions," Babacan said. "Otherwise, tensions would be fueled, and peace and stability in the region might be harmed."

European diplomats who met with Moallem on Sunday in Damascus quoted him as saying that Israel's decision not to comment on the incident was appropriate, given the circumstances. Moallem reportedly told the Europeans that he expected Israel to apologize "through the usual channels."

In Ankara, Moallem went on to reveal the details of the alleged strike, which according to him resulted in no casualties or damage to property. Moallem said that three Israeli planes fired four missiles at targets on the ground in the Dayr al-Zur district in eastern Syria, after entering Syrian airspace from the Mediterranean.

The Syrian foreign minister said the Syrian anti-aircraft radar system detected the planes when they were deep inside Syrian territory. He added the planes released their missiles very shortly after they were detected.

Despite the apparent outrage in Damascus over the incident, European diplomats who met with Moallem told Haaretz that they had received the impression that Syria would not retaliate militarily.

"Moallem did not demand the European Union to condemn the Israeli action, nor did he indicate that Syria would demand the United Nations Security Council hold a discussion on the matter," one European diplomat told Haaretz. "We got the impression that Syria is not interested in seeing this incident escalate."

The London-based daily Al-Hayyat reported yesterday that Israel had conveyed a calming message to Damascus via European Union foreign policy chief Javier Solana. The paper quoted Moallem as saying that Solana informed him on Wednesday night during a meeting in Cairo that Prime Minister Ehud Olmert told Solana that Israel will decrease its military presence in the Golan Heights.

Moallem reportedly said that Solana had informed him of Israel's intention to withdraw most Israel Defense Forces troops stationed in the area to ease increasing tensions with Syria.

Moallem reportedly told the diplomats that the message was just a "preparation for the penetration of planes into Syrian skies, just hours later."

Haaretz has learned that Moallem told European diplomats that the calming message before the strike proved that Israel was interested in war rather than peace.

The next day Moallem called Solana, reports Al-Hayyat, to inform him of the incident, and told him that it came in direct contrast to Olmert's message and to Israel's declarations that it has peaceful intentions.

Meanwhile, former MK Azmi Bishara said he believes Israel carried out a military operation in Syria.

"Without getting carried away in speculation, this was an aerial operation, not an [airspace] violation that's meant to send a message," he wrote in an article published on the Syrian Web site Sham-Fares. Bishara wrote that the operation could have dire consequences, and that some officials in Lebanon or Syria could view it as a pretext to go to war.

The former Balad chairman added that Israel's refusal to comment on the issue was unusual. "Israel has wrapped itself in silence, imposing it on its most talkative politicians," he wrote. "Israel realizes the quiet after the storm could become the quiet before the storm."

Bishara said the strike might have been directed against a number of targets, such as people or units involved with arms smuggling, anti-aircraft systems or missile systems.

Alternatively, Bishara wrote, Israel may have been testing Syrian air defenses in order to map out a route for an air strike on Iran.

Barak Ravid adds: At a joint news conference in Jerusalem, Foreign Minister Tzipi Livni asked her Portuguese counterpart to refrain from commenting on the incident. After Minister Luis Amado, whose country currently holds the presidency of the European Union, was asked for the EU's stance on the incident, Livni interrupted the discussion and signaled to Amado not to answer.

"I do not believe any statement by any party could help matters," Livni explained before moving on to the next question. "I find it ponderous that you should expect me to comment on this. You already know our position on the subject."

<http://web.israelinsider.com/Articles/Briefs/12035.htm>

## **Syrian FM said Israel's silence regarding alleged flyover is "appropriate"**

By: Israel Insider staff

Published: September 11, 2007

According to European diplomats, Syrian Foreign Minister Walid Moallem does not want tensions to escalate over allegations that the IAF violated Syrian airspace and dropped ammunition, according to Haaretz. Moallem did note, however, that the IAF allegedly fired missiles at targets on the ground, the diplomats said.

The foreign minister also said that Israel's vow of silence regarding the incident was appropriate due to the circumstances, according to the European diplomats that met with Moallem on Sunday [2007-09-09] in Damascus.

Moallem reportedly told the diplomats that he expected Israel to apologize "through the usual channels."

"Moallem did not demand the European Union to condemn the Israeli action, nor did he indicate that Syria would demand the United Nations Security Council hold a discussion on the matter," one European diplomat told the paper. "We got the impression that Syria is not interested in seeing this incident escalate."

## Syria lodges protest against Israeli overflights (Roundup)

Deutsche Presse-Agentur

Middle East News

Sep 11, 2007, 20:16 GMT

New York - Syria has protested to the UN Security Council that Israeli overflights of its territory may result in 'tragic uncontrollable consequences,' the UN said Tuesday [2007-09-11].

The protest note to the French Ambassador Jean-Maurice Ripert, president of the council, and UN Secretary General Ban Ki-moon called the overflights 'aggressive Israeli violations' of Syrian territory.

The UN said the letter of protest, written in Arabic, was being translated into English and it declined to comment until the translation was completed and distributed to the council's 15 members. But a short English translation was provided to Deutsche Press-Agentur dpa.

'While warning Israel of the consequences following this blatant aggression, Syria insists that the continuous silence of the international community vis-a-vis these Israeli unlawful practices would expose the region and the international peace and security to tragic uncontrollable consequences,' Syrian Ambassador Bashar al-Jaafari said in the letter.

Syria has claimed that Israel flew jet overflights of its territory in past weeks and news reports said at one point that Israeli jetfighters were fired upon inside Syrian airspace. But the reports were not confirmed.

Ban this week urged countries in the Middle East to show restraint.

'I would urge the Israeli authorities and all other authorities in the region to exercise maximum restraint in managing this already very fragile, uncertain security situation in the region,' Ban said when asked about his reaction to the Syrian charges of Israeli overflights.

Ban said he was still waiting for 'full clarifications' about the situation from the parties involved before making any decision.

## 'IAF targeted Iranian weapons in Syria'

By YAAKOV KATZ, JPOST.COM STAFF, AND AP

The Jerusalem Post

Sep 11, 2007 18:31 | Updated Sep 12, 2007 23:38

Israeli warplanes targeted weapons destined for Hizbullah in a strike last week in northeastern Syria, a US government official said Wednesday, even as Israel remained silent over the incident.

The official said the target in the strike last Thursday was a site where Israel believed Syria was storing weapons from Iran heading for the Lebanese terrorist group.

The official spoke on condition of anonymity because the information involves intelligence gathering and because of the sensitivity of the situation.

Officials in Washington declined for several days to say whether they were aware of the strike, then on Tuesday confirmed they had intelligence indicating it had taken place.

Syrian Foreign Minister Walid al Moallem's version of the alleged IAF overflight:  
At 1:30 a.m. on Wednesday Israeli planes entered Syria from the Mediterranean (1); 50 km. east of Dayr az Zawr the jets were discovered by Syrian anti-aircraft batteries (2) and as they were discovered, fired four missiles at ground targets (3); the jets then left Syria and passed near the Turkish border (4).

**A graphic showing the Syrian foreign minister's version of events.**

**Photo: Rendering by Jonathan Beck**

Meanwhile, Syria's UN Ambassador, Bashar Ja'afari, denied the reports on Wednesday, claiming the Israeli jets escaped without hitting their target.

"This is, as we say in French, blah blah," Ja'afari told reporters. "This is nonsense. This is unfounded statement. It is not true because they have already violated the airspace of a country, a member state of the United Nations."

"It's not up to the Israelis or anybody else to assess what we have in Syria and what we don't have," he said.

Ja'afari said it was also "totally wrong" because the Israelis could not find any target in Syria. That is because they were "running away" after coming under fire from Syrian air defenses and dropped their ammunition and extra fuel tanks to lighten the load, he said.

The Syrian ambassador sent identical letters to Secretary-General Ban Ki-moon and the president of the Security Council accusing Israel of "flagrant defiance of international law," the UN Charter and council resolutions.

While Syria has repeatedly affirmed its desire for "a just and comprehensive peace in the region," Ja'afari accused Israel of "choosing aggression and escalation instead of espousing the option of peace" and committing "war crimes."

"In warning the Israeli government of the consequences of such blatant aggression, Syria emphasizes that if the international community persists in disregarding these Israeli actions in breach of international law, that is likely to subject the region and international peace and security to serious consequences that may be difficult to control," he said in the letter, circulated Wednesday.

Ja'afari told reporters Wednesday that Israel carried out the "provocative act ... in the middle of the huge momentum with regard to the peace process in the Middle East."

"We think the Israeli purpose behind doing such an aggressive act is to torpedo the peace process, to torpedo the idea of holding an international conference with the idea of having a comprehensive peace," he said. "So the issue in itself might not be a pure military one, but having a very important diplomatic and political background."

The letters did not ask the Security Council to take any action, but Ja'afari said Syria expects both the council and the secretary-general to react.

"What's happened is a violation of the Charter, a violation of the sovereignty of a member state of United Nations, and about the secretary-general and Security Council should assume their responsibilities by reaction to such an aggressive act," he said. "They should react because this is their duties, this is their job. It's not up to me to dictate to them what to say."

When Israeli aircraft attacked a Syrian village in October 2003, Ja'afari recalled that the secretary-general denounced the attack and the Security Council condemned it.

"We are waiting for serious outcomes, equal, at least, to the gravity of what happened," he said.

France's UN Ambassador Jean-Maurice Ripert said the letter was circulated to all 15 members but it was not discussed at a meeting on Wednesday. Diplomats said this was because the Syrians did not ask for any action.

On Tuesday, CNN reported that Israel Air Force jets that allegedly infiltrated Syrian airspace early last Thursday apparently bombed an Iranian arms shipment that was being transferred to Hizbullah, Tuesday.

A ground operation may also have been part of the foray, according to the network. Jerusalem refused to confirm or deny the report.

CNN said the operation involved ground forces and that the aerial strike left "a great hole in the desert." Although it did not name a specific source, the network cited "US government officials." The jets have been identified by the Turkish authorities as IAF F15Is, Israel's long-range bomber, after fuel tanks were found in Turkish territory.

The CNN report said the IAF's targets were likely weaponry delivered to Syria that was possibly intended for use by Hizbullah.

CNN's chief international correspondent, Christiane Amanpour, delivered the report and quoted sources saying that Israel was "very happy" with the results of the operation.

A US military official described the Israeli incursion as an air strike "deep into Syria" that succeeded in hitting a target. The official, who spoke on condition of anonymity because it was an intelligence issue, said he did not know what that target was.

Syria has called the incursion a "hostile act," but has been largely silent on the details of what happened. Israeli officials have refused to comment.

On Thursday, Syria said its air defense systems had fired on IAF aircraft that had infiltrated its airspace near the coastal city of Latakia.

The government, including the Prime Minister's Office and the IDF, maintained their policy of refusing to comment on the incident following the CNN report.

Syria has been known to be transferring weapons of its own, as well as arms from Iran, to Hizbullah.

During the Second Lebanon War, the IDF discovered a wide range of antitank missiles and short-range rockets being used by Hizbullah that had originated in Syria. Several Iranian-made missiles were also in Hizbullah hands before the war, but these were mostly destroyed by the IDF before being fired at Israel.

Over the upcoming holidays, the IDF will continue to maintain a high level of alert along the Syrian border amid fears that Damascus will respond to the alleged flyover. Defense officials said earlier this week that tensions between the countries had begun to subside, but that there was a need to maintain a high alert "just in case."

## Syria lodges UN complaint against Israel

By AFP

Wednesday, September 12, 2007

*[EXCERPT]*

Syria lodged a formal complaint with the United Nations Tuesday [2007-09-11] over a "flagrant violation" of its airspace last week by Israeli warplanes, which dropped munitions on its territory.

Syria's UN envoy Bashar Jaafari said his government was "drawing attention to this flagrant violation by Israel of its airspace and to its aggression against the territory of the Syrian Arab Republic in clear and brazen defiance of international law".

In identical letters to UN chief Ban Ki-moon and to French Ambassador Jean-Maurice Ripert, the current president of the Security Council, Jaafari said the Israeli planes last Thursday crossed Syria's northern frontier and dropped "some munitions without managing to cause any human casualties or material damage".

The Israeli incursion ratcheted up tension between the neighboring foes.

The Syrian letter, obtained by AFP, said the Jewish state had deliberately committed "other similar crimes including the bombing of Syrian civilian facilities in 2003".

"If the international community persists in disregarding these Israeli actions in breach of international law, that is likely to subject the region and international peace and security to serious consequences that may be difficult to control," Jaafari noted.

In an interview with an Italian newspaper published Saturday, Syrian Vice President Faruq al-Shara said his country was mulling a "series of responses" to the Israeli air violations.

A US defense official, speaking on condition of anonymity Tuesday, said Israel carried out the air strike well inside Syria last week, apparently to send Damascus a message not to rearm Lebanon's Hezbollah militia.

## **Israel keeps up blackout on mystery Syria air strike**

**Sep 12, 2007**

JERUSALEM (AFP) — Israel on Wednesday maintained an official blackout on an apparent strike by its warplanes on Syria, amid reports that the mysterious attack targeted weapons financed by arch-foe Iran.

No official Israeli comment was issued on allegations that its military carried out an attack deep inside Syria last Thursday, despite confirmation of a strike by a defence official of Israel's main ally the United States.

Citing anonymous Israeli sources, an Arab Israeli newspaper, the Assennara, said on Wednesday that the jets "bombed in northern Syria a Syrian-Iranian missile base financed by Iran.... It appears that the base was completely destroyed."

The previous day CNN reported that the strike, which could also have involved the use of ground forces, was believed to have targeted weapons either coming into Syria or moving through Syria from Iran to the Iranian-backed Hezbollah, Lebanon's Shiite militia that Israel fought in a war last year.

The New York Times also reported on Wednesday that Israel thinks Syria and Iran are buying nuclear material from North Korea and had recently carried out reconnaissance flights over Syria, taking pictures of possible nuclear installations.

A US administration official said Israeli officials believe that North Korea might be unloading some of its nuclear material on Syria, the newspaper said.

"The Israelis think North Korea is selling to Iran and Syria what little they have left," the unidentified official was quoted as saying.

Syria on Tuesday lodged a formal complaint with the United Nations over the "flagrant violation" of its airspace in the early hours of September 6, when it said its air defences opened fire on Israeli warplanes flying over the northeast of the country.

Earlier a US defence official said that Israel had carried out an air strike as a warning to Damascus.

"It wasn't big. It was a quick strike. They were engaged by the Syrians, they dropped their ordnance and scooted out of there," said the official who spoke on condition of anonymity.

He said he did not know the target of the strike, but said the US military believed it was aimed at sending a message to the Syrians over their support for Hezbollah.

"The Israelis are trying to tell the Syrians: 'Don't support a resurgence of Hezbollah in Lebanon'."

Israeli officials have refused to comment on the report, as Prime Minister Ehud Olmert "specifically instructed ministers not to talk about the incident related to Syria at all," a senior Israeli government official told AFP earlier this week.

This silence -- uncharacteristic in a nation notorious for media leaks -- continued on Wednesday, with even visiting French Foreign Minister Bernard Kouchner saying he was also being kept in the dark.

"I asked my hosts and they did not inform me," Kouchner told reporters in Jerusalem when asked about the reported strike, as he wrapped up his first visit to Israel and the Palestinian territories.

"If indeed... they have bombed a weapons convoy which was headed to Lebanon, we understand why they would do it," he said. "Everybody in Lebanon knows that large quantities of weapons arrive from the Syrian border."

Olmert bypassed his traditional interviews with Israeli newspapers ahead of the Jewish New Year that starts at sundown on Wednesday, leaving President Shimon Peres to mention Syria in only general terms.

"The central problem with Syria is Lebanon -- the question is to know whether Lebanon will be Lebanese or Iranian," Peres told public television. "The Syrians support Hezbollah and provide them with arms. As long as they continue on this route there will be tension in the air."

And Sylvan Shalom, a former foreign minister, told army radio: "Syria should draw the lessons from what happened and change its attitude to avoid being completely in the hands of Iran."

## **U.S. Confirms Israeli Strikes Hit Syrian Target Last Week**

By MARK MAZZETTI and HELENE COOPER

September 12, 2007

WASHINGTON, Sept. 11 — After days of silence from the Israeli government, American officials confirmed Tuesday [2007-09-11] that Israeli warplanes launched airstrikes inside Syria last week, the first such attack since 2003.

A Defense Department official said Israeli jets had struck at least one target in northeastern Syria last Thursday, but the official said it was still unclear exactly what the jets hit and the extent of the bombing damage.

Syria has lodged a protest at the United Nations in response to the airstrike, accusing Israel of “flagrant violation” of its airspace. But Israel’s government has repeatedly declined to comment on the matter.

Officials in Washington said that the most likely targets of the raid were weapons caches that Israel’s government believes Iran has been sending the Lebanese militant group Hezbollah through Syria. Iran and Syria are Hezbollah’s primary benefactors, and American intelligence officials say a steady flow of munitions from Iran runs through Syria and into Lebanon.

In the summer of 2006, during fighting between Israeli and Hezbollah forces, the militant group fired hundreds of missiles into Israel, surprising Israel with the extent and sophistication of its arsenal. Israel has tried repeatedly to get the United Nations to prevent the arms shipments across the Syria-Lebanon border.

One Bush administration official said Israel had recently carried out reconnaissance flights over Syria, taking pictures of possible nuclear installations that Israeli officials believed might have been supplied with material from North Korea. The administration official said Israeli officials believed that North Korea might be unloading some of its nuclear material on Syria.

“The Israelis think North Korea is selling to Iran and Syria what little they have left,” the official said. He said it was unclear whether the Israeli strike had produced any evidence that might validate that belief.

The officials spoke on condition of anonymity because they were discussing a military action by another government.

In a letter circulated to members of the Security Council on Tuesday, Syria’s ambassador to the United Nations, Bashar Jaafari, said Israel dropped munitions though they did not cause any “material damage.”

Syria made its protest via Qatar, the Arab representative on the Security Council, United Nations officials said. Security Council representatives discussed the issue on Tuesday, but did not come to any conclusions.

Neither Israel nor the United States has spoken publicly on the airstrikes. The State Department spokesman, Sean D. McCormack, referred all questions to Israel and Syria, and a spokesman for the Israeli Embassy in Washington declined to comment.

Tensions between Israel and Syria have escalated over the past year, since the end of the Israel-Hezbollah war in Lebanon, and both countries remain in a heightened state of alert along their common border.

Syria's president, Bashar al-Assad, has said that if Israel is not willing to resume negotiations for the return of the Golan Heights, which Israel captured in the 1967 Arab-Israeli war, the alternative would be to try to regain the territory by force.

Formal peace talks between Israel and Syria broke down in 2000.

## **CNN: Israeli gov't 'very happy with success' of IAF strike on Syria**

By Yoav Stern and Assaf Uni, Haaretz Correspondents, Haaretz Service and News Agencies

Last update - 03:50 **12/09/2007**

The CNN television network reported Tuesday [2007-09-11] that Israel is happy with the results of an alleged Israel Air Force strike last week in Syrian territory.

Quoting sources in the United States and the region, CNN said, "The Israeli government is very happy with the success of the operation."

European diplomats quoted Syrian Foreign Minister Walid Moallem as saying Monday [10 September 2007] that the IAF warplanes that violated Syria's airspace fired missiles at targets on the ground, but did not cause any damage.

According to the CNN report, the sources said the IAF indeed carried out a strike on a target in Syria, adding that the operation "may have also involved Israeli ground forces who directed the air strike."

CNN quoted the sources as saying the strike, which possibly targeted an arms transfer from Iran to Hezbollah through Syria, "left a big hole in the desert."

The CNN report said U.S. government and military sources have confirmed the airstrike, and said that "they are happy to have Israel carry the message to both Syria and Iran that they can get in and out and strike when necessary."

Also Tuesday [11 September 2007], Syria lodged a formal complaint with the United Nations about an "aggression and violation of sovereignty" over the incident, the country's ambassador to the UN said Tuesday.

Syria's UN ambassador, Bashar al-Jaafari, said Damascus made its complaint in two letters to the UN secretary general and the president of the Security Council. The letters said the IAF action was in violation of the 1974 disengagement agreement that was reached after the 1973 Yom Kippur War.

Al-Jaafari also denied that Israel had landed troops on the ground inside Syria. "This is absolutely not true," he said, adding the reports were an attempt to show that Israel could land troops wherever it wants.

"Israel is seeking military escalation. We are exerting efforts so that we don't fall into this trap. We are dealing with the matter with utmost keenness, precision and responsibility," he added.

Meanwhile on Tuesday [11 September 2007], China's Xinhua news agency said North Korea had issued a harsh condemnation of the IAF incursion into Syrian airspace.

According to the report, the Korean Central News Agency quoted a spokesman for North Korea's Foreign Ministry as saying, "This is a very dangerous provocation little short of wantonly violating the sovereignty of Syria and seriously harassing the regional peace and security."

"The DPRK strongly denounces the above-said intrusion and extends full support and solidarity to the Syrian people in their just cause to defend the national security and the regional peace," the spokesman reportedly added.

European diplomats who met with Moallem on Sunday in Damascus quoted him as saying that Israel's decision not to comment on the incident was appropriate, given the circumstances. Moallem reportedly told the Europeans that he expected Israel to apologize "through the usual channels."

In Ankara for an official visit, Moallem went on to reveal the details of the alleged strike, which according to him resulted in no casualties or damage to property. Moallem said that three Israeli planes fired four missiles at targets on the ground in the Dayr al-Zur district in eastern Syria, after entering Syrian airspace from the Mediterranean.

The Syrian foreign minister said the Syrian anti-aircraft radar system detected the planes when they were deep inside Syrian territory. He added the planes released their missiles very shortly after they were detected.

Despite the apparent outrage in Damascus over the incident, European diplomats who met with Moallem told Haaretz that they had received the impression that Syria would not retaliate militarily.

"Moallem did not demand the European Union to condemn the Israeli action, nor did he indicate that Syria would demand the United Nations Security Council hold a discussion on the matter," one European diplomat told Haaretz. "We got the impression that Syria is not interested in seeing this incident escalate."

## 'Turkey gave Israel intel on Syria'

By JPOST.COM STAFF

Sep 13, 2007 19:39 | Updated Sep 15, 2007 16:36

Turkey provided Israel with intelligence on Syria prior to last week's alleged IAF flyover into the country, Kuwaiti newspaper Al-Jarida claimed on Thursday.

According to the report, the country had a central role in delivering precise information regarding targets in Syria that were to be hit by Israeli planes. Further, the report claimed that the Israeli pilots were given authorization by the Turkish army to use its airspace in order to carry out the operation.

Sources told Al-Jarida that Turkish intelligence did not coordinate the move with Prime Minister Recep Tayyip Erdogan. "Coordination of the [release of information] occurred far away from the political echelon," it said.

The Israeli and Turkish armies share a strong relationship that has been felt through several joint exercises and weapons sales.

On Saturday, an unnamed Turkish official demanded explanations from Israel after fuel tanks allegedly dropped by Israel F-15I planes who were conducting a foray into Syrian airspace, were found on the Turkish-Syrian border.

Turkish paper Hurriyet reported that Turkey was demanding whether the Israeli planes also passed over its own airspace.

## **Syria Might Be Seeking Nuclear Weapons Technology Through North Korea, Sources Say**

Thursday, September 13, 2007

By James Rosen

WASHINGTON — U.S. intelligence officials have developed evidence showing that North Korea is helping Syria to develop a nuclear program for weapons purposes, FOX News has learned in recent interviews with sources who have knowledge of the situation.

Syrians emphatically denied the claim on Thursday.

The details of the claims are vague, but one source told FOX News in late August that the North Koreans had sold the Syrians a nuclear facility, most likely related to uranium enrichment. Enriched uranium is necessary both for nuclear power and nuclear weapons uses. The United States accuses Syria of assisting terrorist groups including Hezbollah.

A source said the case has been assigned the internal code name, "Orchard," and the evidence was developed through Israeli channels, possibly with the assistance of U.S. aerial photography.

Other sources, however, questioned Syria's ability to afford such a pricey venture. Those sources said that in recent discussions with U.S. intelligence officials, the officials had spoken of North Korea having sent nuclear scientists, engineers, and other personnel with relevant expertise to Damascus.

"I've noticed more and more people [in the intelligence community] talking about people being sent over [from North Korea to Syria]," one high-ranking former National Security Council official said.

The former NSC official also said North Korea is "definitely still procuring [equipment] for its HEU [highly enriched uranium] program. It's not as if they are viewing the talks as some kind of 'time out' on their HEU work." This would be in direct contrast with efforts in the Six-Party talks to denuclearize the Korean peninsula .

Most of two dozen sources spoken to over the past three weeks, including current and former Bush administration officials, foreign diplomats, and nonproliferation experts, also said they have heard discussions about nuclear cooperation in one form or another between Syria and North Korea.

A spokesman for the Syrian embassy on Thursday called the allegations "absurd."

"This is an incredibly absurd and ridiculously fabricated story. Those who create such lies are misleading the American public and end-up undermining US national interest in a way reminiscent of what happened in Iraq previously. In fact, it is a shame that serious news outlets would waste time and space on such a fictitious idea," said embassy spokesman Ahmed Salkini.

## **N. Korea, Syria May Be at Work on Nuclear Facility**

By Glenn Kessler

Washington Post Staff Writer

Thursday, September 13, 2007; Page A12

North Korea may be cooperating with Syria on some sort of nuclear facility in Syria, according to new intelligence the United States has gathered over the past six months, sources said. The evidence, said to come primarily from Israel, includes dramatic satellite imagery that led some U.S. officials to believe that the facility could be used to produce material for nuclear weapons.

The new information, particularly images received in the past 30 days, has been restricted to a few senior officials under the instructions of national security adviser Stephen J. Hadley, leaving many in the intelligence community unaware of it or uncertain of its significance, said the sources, who spoke on the condition of anonymity. Some cautioned that initial reports of suspicious activity are frequently reevaluated over time and were skeptical that North Korea and Syria, which have cooperated on missile technology, would have a joint venture in the nuclear arena.

A White House spokesman and the Israeli Embassy declined to comment yesterday after several days of inquiries. A Syrian Embassy spokesman said he could not immediately provide a statement.

The new intelligence comes at an awkward moment for the Bush administration, which since the beginning of the year has pursued an agreement with North Korea on ending its nuclear weapons programs. U.S. and North Korean officials held talks last week in Geneva on the steps needed to normalize relations, and this week a delegation of U.S., Russian and Chinese experts visited North Korea's Yongbyon nuclear facility to consider ways to disable it. The New York Times first reported on the intelligence linking North Korea and Syria yesterday.

At the Geneva talks, North Korea indicated a willingness to satisfy U.S. questions about an alleged uranium-enrichment program that started the crisis over its nuclear ambitions, the sources said. U.S. officials have said that North Korean officials acknowledged the program in 2002, but Pyongyang subsequently denied doing so. In the meantime, it restarted a plutonium facility at Yongbyon and harvested enough weapons-grade material for as many as 10 nuclear weapons. In October, it tested a nuclear device.

In talks in Beijing in March 2003, a North Korean official pulled aside his American counterpart and threatened to "transfer" nuclear material to other countries. President Bush has said that passing North Korean nuclear technology to other parties would cross the line.

Israel conducted a mysterious raid last week against targets in Syria. The Israeli government has refused to divulge any details, but a former Israeli official said he had been told that it was an attack against a facility capable of making unconventional weapons.

Others have speculated that Israel was testing Syria's air defenses in preparation for a raid on Iran or that Israel was targeting weapons destined for Hezbollah in Lebanon.

Bashar Jaafari, the Syrian ambassador to the United Nations, told reporters that the idea of a Hezbollah connection was ridiculous.

Syria has signed the nuclear nonproliferation treaty but has not agreed to an additional protocol that would allow for enhanced inspections by the International Atomic Energy Agency. GlobalSecurity.org, which offers information on weapons of mass destruction, said that "although Syria has long been cited as posing a nuclear proliferation risk, the country seems to have been too strapped for cash to get far."

Syria has a Chinese-supplied "miniature" research reactor at Dayr al-Hajar, but has been unable to obtain larger reactors because of international pressure on potential sellers.

John R. Bolton, former U.S. ambassador to the United Nations and a critic of the administration's dealings with North Korea, said that given North Korea's trade in missiles with Syria, it is "legitimate to ask questions about whether that cooperation extends on the nuclear side as well."

## Israel 'Will Pay a Price'

Ambassador Imad Moustapha, Syria's envoy to Washington, gives his account of a mysterious Israeli air raid and discusses whether Syria will retaliate.

Jeffrey Bartholet

Newsweek Web Exclusive

Sep 14, 2007 | Updated: 2:00 p.m. ET Sep 17, 2007

Israel has imposed strict military censorship over news of a recent air strike deep inside Syrian territory. U.S. officials have confirmed that an air strike did take place on Sept. 6 but have not provided further details. Vaguely sourced reports, including accounts of a Syrian-North Korean nuclear program that have yet to be substantiated, are seeping into the media. What do the Syrians have to say about it? NEWSWEEK's Jeffrey Bartholet sat down with Syria's ambassador to the United States, Imad Moustapha, to get his version of events.

**NEWSWEEK: We're told the [Israeli] target was in a place called Dayr az Zawr.**

**Imad Moustapha:** No, Dayr az Zawr is a major city; it was not targeted. The Israeli planes threw their ammunition close to Dayr az Zawr, but outside Dayr az Zawr, and then they made a U-turn and threw their reserve fuel tanks. And because they were flying above the Syria-Turkish border, they threw those on the Turkish side of the border. Nothing was damaged.

**What were they bombing?**

They didn't bomb anything. Once they were spotted by our defense systems and we started attacking them, they threw their ammunition because this makes them lighter. And they threw their additional fuel tanks, which were not empty by the way, and they made a U-turn and they left. You've got to understand, they were flying in the extreme northern part of Syria, on the Syrian-Turkish border.

**How many bombs fell and what did they fall on?**

They didn't hit anything. They just fell on wasteland.

**So no casualties?**

No, nothing.

**No physical damage to structures?**

No. Just on the ground. And Turkey protested about the two fuel tanks that fell on the Turkish side.

**There have been reports, unsubstantiated at present, that what was targeted was some kind of nuclear North Korean-Syrian cooperation project.**

Those reports are absolutely, totally, fundamentally ridiculous and untrue. There are no nuclear North Korean-Syrian facilities whatsoever in Syria ... We know the game. [After the fall of

Baghdad] some were claiming that Saddam's WMDs were being smuggled to Syria. This is not a new story. Every now and then we hear about nuclear materials being transferred to Syria.

**What is the relationship between North Korea and Syria right now? It was noticed that North Korea immediately issued a strong and public denunciation of the Israeli attack, which seemed a bit unusual, given that North Korea is thousands of miles away.**

People here can be very selective. The Lebanese government made such an announcement, Turkey made such an announcement, Indonesia made such an announcement. North Korea has very few friends around the world, and we have friendly relations with North Korea.

**Do you have trade relations?**

Very little actual relations ... [The relationship] is real. We're not denying it. There's nothing to hide.

**Also a trade in missiles, in the past anyway. Scuds.**

I'm not privy to military details. I leave that to military experts to discuss. What I am saying is the following: There is nothing sinister. To talk about a Syrian-North Korean nuclear plant is really, really sad, because it reminds me of the sort of stories that used to be fabricated here in the United States before the Iraq war, about Iraq's WMDs and such things. You would think America has learned its lesson, that it won't buy such stories anymore. And then you are astonished when you see mainstream [media] outlets publishing such stories. Such short-term memory for the American media.

**There was an International Atomic Energy Commission inspection of Syria in 2003 that gave it a clean—**

We cooperate with the International Atomic Energy Commission.

**There was another unsubstantiated report that the target was a joint Iranian-Syrian missile plant.**

And there was a third report that that was a convoy taking arms to Hizbullah. All are ridiculous. In northeastern Syria they'd spot a convoy taking arms to Hizbullah?

**The reason some in the media have been speculating, I think, is because Israeli censors are enforcing a strict clampdown and people who know something have suggested that this raid was a big deal, that something was targeted and that what was targeted was hit.**

Israel usually is very boastful, very arrogant. Usually when they do something they boast about how spectacular their operation was, how successful they were. This time it's only linkages here and there by people who claim this and that. Having said this, I'm not belittling the gravity of the Israeli provocation. It has changed dramatically the situation between us. They were sending us messages the last three months that they don't want to further escalate tensions between Syria and Israel, they do not have plans of hostile intent for Syria. They were saying this publicly, on the record. Then they send their jet fighters into Syrian sovereign airspace. I think this is a very serious provocation.

**On that point, Syrian Vice President Farouk al-Sharaa told an Italian newspaper that Damascus will retaliate.**

Let us be honest with each other. Every action in the world creates a reaction. So for anyone to imagine that Syria will look at what happened and say, 'Well, let's just let things pass by' is unrealistic. But this doesn't mean that Syria will immediately retaliate in kind, exactly the same way. We have our own national priorities ... Syria has been very, very clear about its desire to end the conflict in the Middle East through negotiations and the peaceful approach, based on the land-for-peace principle. We are committed to this. Having said this, until this happens we are in a state of war with Israel. And there are different ways to retaliate. It doesn't necessarily have to be the same [method].

**Can you give me a couple of examples?**

I'm not a military expert. But anyone who has studied the situation in the Middle East will understand. They want to occupy our territories, and they will pay a price for this.

**Tell me about the diplomatic efforts that surrounded this. Did U.S. officials contact you; did you contact U.S. Officials?**

No, not at all. The United States continues to provide blanket support for Israel, no matter what Israel does. In a way, they have expressed tacit approval. But we have launched an official complaint to the United Nations Security Council. We have informed the Arab League, the Europeans, Russia, China ... and we have publicly said that we reserve our right to retaliate in a way we choose.

**Have you filed any complaint with Washington?**

It would be a waste of time. I don't think Washington today has a mindset that would allow it to understand how such grave actions can lead to further deterioration in the Middle East.

**What is the situation with U.S.-Syrian relations at this point? There was a lot of intelligence cooperation, then there was a long cold spell, and then there seemed to be a little bit of an opening in the winter and spring this year.**

Time and again, we have told the United States that we believe in cooperation. We can address the issues, find common ground, brainstorm for creative solutions. But in a way, there is no dialogue today between Syria and the United States. We are not happy about this. We believe we need good relations with the United States. No resolution of the [Arab-Israeli conflict] can take place without the direct, strong involvement of the United States. Having said this, we have a problem in Iraq. It is in our own national interest to help stabilize the situation in Iraq. It's such a dangerous situation. And we are overrun with over 1.5 million Iraqi refugees. The stakes are very high. Time and again we have told the United States that it is better to stop this propaganda war with us and sit with us and see how we can help toward stabilizing the situation.

**The other problem between Syria and the United States is Lebanon.**

Are you sure it's a problem between us and the United States? I think it's a problem over what Israel wants in the Middle East.

**One problem is that many opponents of Syrian policy in Lebanon have been assassinated. [Former prime minister] Rafik Hariri and—**

Do you think Rafik Hariri was an opponent of Syria in Lebanon? He was the prime minister of Lebanon when we were in Lebanon. All the people who badmouth us today used to be close allies of the so-called "evil occupation of Syria in Lebanon." That is preposterous.

**There have been a number of people who have been assassinated, including journalists.**

Look, listen, these assassinations are terrible crimes. There is a United Nations commission that is investigating this crime ... These are serious, grave issues. Of course we say "No, we didn't do this." Try to understand. When an assassination takes place, within a minute we are accused of it. Tremendous political damage is inflicted on us. And yet in an extremely stupid way we are supposed to have assassinated one person after another? ... Why? Something is illogical about this. Let the U.N. investigation decide who killed these guys.

**During the recent tensions, was there a moment when the Syrian government considered military retaliation [against Israel], firing missiles or—**

We have not forfeited our right to retaliate. But as I have said, we don't necessarily have to retaliate in the same way that Israel has attacked. I don't know exactly the nature of this retaliation. It can happen in various ways, sometimes in asymmetrical ways. What I'm trying to say is the following: We live in a state of war with Israel. This is not the first act of hostility between Syria and Israel ... The problem is that sometimes a foolish action can provoke terrible consequences.

**There was diplomacy [before the attack], when Israel was sending what were described as "calming" signals. There was tension, then a calming period, then this happened. Can you describe that period prior to the attack?**

I can tell you that Israel was creating an atmosphere of brinkmanship in the region. There were unprecedentedly large maneuvers in the occupied Syrian Golan. And of course the Syrians took note of this and were in a high state of preparedness. And then the Israelis, and personally [Prime Minister] Ehud Olmert, sent personal public messages—both publicly and to European officials—in which he said Syria shouldn't be concerned, Israel doesn't intend to provoke Syria or attack Syria ... Having noted this, Syria is not a gullible country. As long as there is no peace agreement, we have to always be prepared.

**Is it possible that Syria will decide that it's in its national interests not to respond?**

That would not serve our national interests. That would be detrimental to our national interests, because it would encourage Israel to repeat the same intrusions and operations. As I have said, every reaction creates a reaction. If Israel calculates that they can do what they want, they're making a big mistake, just as they made a mistake last summer [in 2006, by waging war against Hezbollah in Lebanon].

**So if the headline on this interview was "Syria Will Retaliate," that would not be inaccurate?**

What I have said is that this is a long-term war. States have different approaches to things. What I'm trying to say is that Israel will not be permitted to do whatever it does without paying a price for it.

**So Israel will pay a price.**

It will. And there will always be a price for everything.

[http://www.breitbart.com/article.php?id=D8RLAJOG3&show\\_article=1&catnum=2](http://www.breitbart.com/article.php?id=D8RLAJOG3&show_article=1&catnum=2)

## **U.S.: Syria on Nuclear Watch List**

Sep 14 [2007] 10:31 AM US/Eastern

By NICOLE WINFIELD

Associated Press Writer

ROME (AP) - A senior U.S. nuclear official said Friday that North Koreans were in Syria and that the government in Damascus may have had contacts with "secret suppliers" to obtain nuclear equipment.

Andrew Semmel, acting deputy assistant secretary of state for nuclear nonproliferation policy, did not name the suppliers, but said there were North Koreans in Syria and that he could not exclude that the network run by the disgraced Pakistan nuclear scientist A.Q. Khan may have been involved.

Semmel was responding to questions about an Israeli airstrike in northern Syria last week. Neither side has explained what exactly happened, but a U.S. government official confirmed that Israeli warplanes were targeting weapons from Iran and destined for Hezbollah militants in Lebanon.

The Washington Post reported Thursday that Israel had gathered satellite imagery showing possible North Korean cooperation with Syria on a nuclear facility.

Semmel, who is in Italy for a meeting Saturday on the Nuclear Nonproliferation Treaty, said Syria was certainly on the U.S. "watch list."

"There are indicators that they do have something going on there," he said. "We do know that there are a number of foreign technicians that have been in Syria. We do know that there may have been contact between Syria and some secret suppliers for nuclear equipment. Whether anything transpired remains to be seen."

"So good foreign policy, good national security policy, would suggest that we pay very close attention to that," he said. "We're watching very closely. Obviously, the Israelis were watching very closely."

Asked if the suppliers could have been North Koreans, he said: "There are North Korean people there. There's no question about that. Just as there are a lot of North Koreans in Iraq and Iran."

Asked if the so-called Khan network, which supplied nuclear technology to Iran, Libya and North Korea, could have been involved, he said he "wouldn't exclude" it.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
September 14, 2007  
12:06 p.m. EDT

*[EXCERPTS]*

*[deletia]*

QUESTION: Related to North Korea, are you aware of these comments that were made by the DAS -- Acting DAS for a nuclear nonproliferation policy, Mr. Semmel?

MR. MCCORMACK: You mentioned it to me. I don't know exactly what he said, but what I can tell you is that every single year the intelligence community puts out a report concerning weapons of mass destruction, the status of those programs of countries around the world. I don't have that report in front of me. It is a publicly available document. But I can tell you that that is the definitive U.S. view or assessment of the intelligence community.

QUESTION: But that report came out some time ago, correct? I mean, what he's talking about here when he says that there are North Koreans in Syria. There's no question about that.

MR. MCCORMACK: Like I said, Matt, I haven't had a chance to look at his remarks in any depth at all, so I'm not sure what --

QUESTION: Okay. Are you aware of there being a number of foreign technicians in Syria and Syrians being in contact with secret suppliers for nuclear equipment?

MR. MCCORMACK: This has been a topic that we've talked about for the past several days. And I can tell you, Matt, that certainly over the past couple of decades that we have held concerns about North Korea's nuclear program. It's well known; it's why we have the six-party talks. And we have also expressed over time our concerns about North Korea's activities in terms of dealing with A.Q. Khan and others around the globe. We've talked about that in quite some detail and some depth. Beyond that, I wouldn't have any comment about our view of North Korea, its nuclear program or any of its activities. But there's a pretty healthy public record, talking about that.

QUESTION: I understand that. But not really in relation to Syria and particularly, not in relation to Syria and nuclear --

MR. MCCORMACK: Again, there's a public record out there, Matt. I don't have it in front of me. I can't tell you what the report is. The next time we talk, I'm happy to take a meander through that report and we can talk about it in detail, but I don't have it here in front of me.

Yes.

QUESTION: Still on the same topic, if I may. I mean, you're aware of these reports that have been out this week, that are published drawing this very strong link between Syria and North Korea. Now, will this issue be on the table in any form next week, either bilaterally or amongst the six party talks?

MR. MCCORMACK: Yeah, I've seen all the news stories that you're talking about. And you know, we've talked about what our response to those news stories is and heard a little bit of it there in response to Matt's question. But completely separately, I would say that as part of the six-party talks, the core of that is North Korea's nuclear program. That's the proximate issue that's before us right now.

What we want to get to is a denuclearized Korean Peninsula. We want to be able to get North Korea to get rid of its nuclear program in all its aspects. And that also would involve any other activities outside of North Korea. So that is the core of the six-party talks. And we believe that this is the mechanism that will actually get us to that point. And that we've learned from past experience with dealing with the North Koreans and we think that having those six parties there, having that leverage, having the Chinese actively involved in these negotiations, really is the way to get to everybody's desired objective here or at least the publicly stated objective of having a denuclearized Korean Peninsula.

QUESTION: Well, also (inaudible) the delisting issue. And wouldn't these kinds of reports, if they were true, or if there was any question raised about it -- it's a very serious allegation -- wouldn't this complicate the delisting wishes of the North Koreans?

MR. MCCORMACK: Well, that's an issue that takes place and is being looked at on the basis of the facts. You're talking about delisting as a state sponsor of terrorism list?

QUESTION: Right.

MR. MCCORMACK: Chris Hill talked to the North Koreans a little bit about that, and again, we are taking a look at that in the context of any progress towards the goal that we are all talking about here: denuclearization. We have a next phase coming up and we certainly hope and we think that by the end of the year we can have the North Korean nuclear reactor at Yongbyon and the facilities disabled as well as a full listing of North Korea's nuclear program. That certainly would be progress. That would be something that has gone beyond any agreement that the international community has been able to arrive at with North Korea has gone before.

And in that context, certainly we are going to take a look at whether or not on the merits of the case we can do something about a couple issues that the North Koreans have raised: (1) the Trading with the Enemy Act and (2) the state sponsor of terrorism list. But again, we are going to take a look at that based on laws, regulations, the facts, as well as discussions with our other colleagues in the six-party talks and any progress that North Korea has made on that goal of denuclearization.

QUESTION: But you haven't really answered my question. I mean, if there's reports --

MR. MCCORMACK: What happened?

QUESTION: I don't really know. If there's any question --

MR. MCCORMACK: I don't know, take a poll. Have I answered the question? (Laughter.) I think I don't want to know the answer to that.

QUESTION: But as with any questions in the air about this possible link --

MR. MCCORMACK: Right.

QUESTION: Wouldn't that just throw a massive spanner in the works with this delisting?

MR. MCCORMACK: Well, again, the whole point of the six-party talks is to get at the issue of denuclearization, so there isn't a North Korean nuclear program. That's the source of everybody's concern with respect to North Korea's behavior in the neighborhood as well as North Korea's links with others that have been involved in nuclear proliferation, A.Q. Khan for example. So that is the focus of what we are trying to get at. We are going to take each of these issues on their merits, we're going to take these issues based on our consultations with other members of the six-party talks and we're also going to take this step by step.

Everybody understands the history of agreements with North Korea and that is why we are taking the approach that we are. And that is that good-faith actions on the part of North Korea will be met in turn by good faith. So that you have -- and that when you have this taking place in the context of the six-party talks, you have North Korea making this commitment to all the other five parties not just the United States, and that any benefits that might flow to North Korea will flow from the other five parties not just the United States, and that if North Korea reneges on any of its commitments those benefits stop. And that the -- any consequences that might flow from that failure to live up to their commitments is going to come from all the other five parties not just the United States.

QUESTION: Can I ask one last question on this?

MR. MCCORMACK: Yes.

QUESTION: In view of these reports, have you had any inquiries from any other foreign governments about it, about the reports?

MR. MCCORMACK: About?

QUESTION: About the link between Syria and North Korea.

MR. MCCORMACK: I'm not aware of any.

QUESTION: Sean --

QUESTION: Go ahead, Jonathan.

QUESTION: So we've got U.S. officials somewhere saying that there is a link with Syria -- between Syria and North Korea and you will not -- I mean, you haven't addressed the question yet, is --

MR. MCCORMACK: Well --

QUESTION: What are you officially saying?

MR. MCCORMACK: I think I just answered the question. Matt came at it from several different angles here and --

QUESTION: Well, I didn't get an answer, but basically what happened was that I gave up when realizing that I wasn't going to get an answer.

MR. MCCORMACK: Mr. Beale can take a lesson from this. (Laughter.)

QUESTION: Well, maybe you could invite him. (Laughter.)

MR. MCCORMACK: I think I gave an answer. Look, I haven't looked at these comments in any depth, but what I can tell you is that we do have plenty of publicly available assessments and documents that are out there that describe our views of the state of development of the various programs -- weapons of mass destruction programs out there and North Korea's included. And you are free to take a look at those and that can give you a definitive U.S. Government view of those programs.

Yes, Arshad.

QUESTION: You said that you hoped and thought that by the end of the year you could achieve North Korea disabling its nuclear reactor and their facilities at Yongbyon, and that it was possible that you could offer them some of the incentives, Trading with the Enemy Act, et cetera.

MR. MCCORMACK: As well as -- part of that is also they would have to provide a full declaration of --

QUESTION: Right, correct.

MR. MCCORMACK: -- their nuclear programs.

QUESTION: But the February 13th agreement doesn't say disable all the facilities at Yongbyon. It says disable all its nuclear facilities. Does that mean that you believe that there are no other nuclear facilities other than those at Yongbyon?

MR. MCCORMACK: Well, part of -- and you will see that in the declaration and we will see that in the declaration. We'll take a close look at it. In terms of -- and in terms of any other facilities that they may have, they haven't -- they have told us that they have an HEU program. They haven't told us that they have any other -- haven't acknowledged any other facilities. I guess that is something we will have to take a look at when we get the declaration.

But we would expect that as part of this process their nuclear program would be disabled. So we are, at this point, dealing with the only known that we have, and that is Yongbyon and all the facilities at

Yongbyon. If there are any others then, of course, that would be part of -- necessarily part of an agreement to disable those facilities or machinery in the context of the six-party talks.

QUESTION: So you're going to take a look at the declaration if you ever get one --

MR. MCCORMACK: Right.

QUESTION: And if you decide it's accurate and there are indeed additional facilities, they would have to be disabled, too --

MR. MCCORMACK: Then we'd have to --

QUESTION: -- before the benefits flowed?

MR. MCCORMACK: I think we -- since that is an unknown unknown at the moment, I think we would have to deal with it when that arose. If you have that fact in front of you, then you're going to have to deal with it. I think part of the idea in terms of the 950,000 tons of fuel oil or in-kind assistance, that is going to be phased in. I think you're going to see that -- because part of it is North Korea can't handle all -- a whole 950,000 tons all at once, so it is something you have to deal with.

QUESTION: Right. But it's also fuel oil, heavy fuel oil, or its equivalent --

MR. MCCORMACK: In-kind assistance.

QUESTION: -- (inaudible) a whole bunch of other stuff, too. It doesn't have to be fuel oil.

MR. MCCORMACK: That's right.

QUESTION: And it doesn't have to be strung out --

MR. MCCORMACK: Yeah, but the thing that they're really looking for -- you're right -- but the thing that they're really looking for is fuel oil.

QUESTION: And you said that they've acknowledged having an HEU program.

MR. MCCORMACK: Yeah.

QUESTION: I thought that you -- and Secretary Hill did not -- Assistant Secretary Hill did not repeat that when he briefed us two weeks ago before the Geneva talks. And I thought that it was not now so clear that you guys believed that they did, in fact, acknowledge an HEU program back in October of '02.

MR. MCCORMACK: They did back in '02, yeah.

QUESTION: Can I just ask one more on the Syria (inaudible) of this?

MR. MCCORMACK: Sure.

QUESTION: Mr. Semmel in his comments said good foreign policy -- basically, he said what you said -- good foreign policy, national security policy, would suggest that we pay very close attention to that; i.e., Syria and (inaudible). And then he said we're watching very closely, obviously the Israelis were watching very closely. Can you explain what he means by that?

MR. MCCORMACK: No, I --

QUESTION: The Israelis were watching very closely?

MR. MCCORMACK: I'm sure the Israelis are watching very closely all of their neighbors. I can't -- I don't know what he has in mind when he says that.

*[deletia]*

(The briefing was concluded at 12:25 p.m.)

## **Hill determined to push N. Korea nuke talks despite Syria reports**

WASHINGTON, Sept. 14 [2007] KYODO

Top U.S. nuclear negotiator Christopher Hill reiterated Friday [2007-09-14] that there is a need to push for six-party talks on ending North Korea's atomic programs amid news reports Pyongyang may be providing Syria with nuclear aid.

Hill, assistant secretary of state for East Asian and Pacific affairs, said the next plenary session of six-way discussions is likely to take place in Beijing from around next Wednesday and last for about three days.

## Syria-N. Korea Reports Won't Stop Talks

By Glenn Kessler

Washington Post Staff Writer

Saturday, September 15, 2007; A12

Reports that North Korea may be assisting Syria with a possible nuclear program will not derail efforts to implement a deal to end North Korea's nuclear programs, the chief U.S. negotiator said yesterday, arguing that the reports emphasized the need to complete the agreement.

U.S. sources reported this week that Israel had recently provided the United States with evidence -- known by the code name "Orchard" -- that North Korea has been cooperating with Syria on a nuclear facility. But many outside nuclear experts have expressed skepticism that Syria, which has mostly focused on chemical and biological weapons, would be conducting nuclear trade with North Korea.

"The reason we have the six-party process, and the reason we have put together a number of pretty serious countries in this process, is to make sure that the North Koreans get out of the nuclear business," Assistant Secretary of State Christopher R. Hill told reporters yesterday, in advance of a new round of talks next week in Beijing. "At the end of all this, we would expect to have a pretty clear idea of, you know, whether they have engaged in proliferation in other countries."

To the dismay of conservative critics, the Bush administration has pressed ahead with a deal that calls for North Korea to disclose all of its nuclear activities by the end of the year. Some have argued the administration is being snookered by Pyongyang to give up concessions without learning the full extent of its activities.

The White House and the State Department generally have declined to either confirm or deny reports of the Syria-North Korea link, but one top official yesterday seemed to fan the flames. Andrew Semmel, acting deputy assistant secretary of state for nuclear nonproliferation policy, told the Associated Press yesterday in Rome that North Koreans were in Syria and that Damascus may have had contacts with "secret suppliers" to obtain nuclear equipment. "There are indicators that they do have something going on there," he said.

State Department officials declined to comment on Semmel's remarks.

Meanwhile, a prominent U.S. expert on the Middle East, who has interviewed Israeli participants in a mysterious raid over Syria last week, reported that the attack appears to have been linked to the arrival three days earlier of a ship carrying material from North Korea labeled as cement.

The expert, who spoke on the condition of anonymity to avoid compromising his sources, said the target of the attack appears to have been a northern Syrian facility that was labeled an agricultural research center on the Euphrates River, close to the Turkish border. Israel has kept a close eye on the facility, believing that Syria was using it to extract uranium from phosphates.

The expert said it is not clear what the ship was carrying, but the emerging consensus in Israel was that it delivered nuclear equipment. The ship arrived Sept. 3 in the Syrian port of Tartus; the attack occurred

Sept. 6 under such strict operational security that the pilots flying air cover for the attack aircraft did not know details of the mission. The pilots who conducted the attack were briefed only after they were in the air, he said.

Israel has imposed heavy censorship on reporters regarding the raid, so few details have leaked. The expert said that Israel appeared to have learned a lesson from its experience in destroying the Osiraq nuclear reactor in Iraq -- that bragging about an operation only makes it easier for the world to condemn it.

Adding to the mystery, Syria has made only muted protests about the raid, and North Korea, which rarely comments on international matters, swiftly condemned it.

Bruce Reidel, a former intelligence official at the Brookings Institution's Saban Center, said, "It was a substantial Israeli operation, but I can't get a good fix on whether the target was a nuclear thing." He said there was "a great deal of skepticism that there's any nuclear angle here" and instead the facility could have been related to chemical or biological weapons.

But other sources who have been monitoring the Middle East said the attack was likely to be against a transit point for Iranian weapons bound for Hezbollah in Lebanon.

## U.S. Official Says Syria May Have Nuclear Ties

By MARK MAZZETTI and HELENE COOPER

WASHINGTON, Sept. 14 — A State Department official said Friday that the United States had concerns about Syria's involvement in illicit nuclear activities and suggested that North Korea might be aiding the Syrians in their efforts.

Andrew Semmel, a top official on countering the spread of nuclear weapons, said that Syria may have a number of "secret suppliers" for a covert nuclear program, and that North Korean technicians were currently operating inside Syria.

His comments, in an interview with The Associated Press in Rome, came in response to questions about an Israeli airstrike inside Syria last week. Neither Israel nor the United States has confirmed what targets the Israeli jets hit, and the government in Jerusalem has imposed a blanket restriction on the Israeli news media from reporting details about the raid.

American officials have been similarly tight-lipped, and officials who ordinarily see intelligence reports on such issues say their access has been restricted.

Mr. Semmel did not specify whether the technicians in Syria were specialists in nuclear technology; North Korea has long supplied Syria with missile technology. Some weapons experts said they were skeptical that Syria was in league with North Korea to build a secret program.

Damascus is not thought to have made serious efforts in the past to develop nuclear weapons, and those experts said it was unlikely that the Syrians could afford such a program or had the technical expertise to sustain it.

The speculation about possible North Korean activities inside Syria is heightening the Bush administration's concern about the future of its diplomatic efforts to dismantle North Korea's nuclear program. The Bush administration's top negotiator for North Korea, Christopher R. Hill, said that the United States still planned to go ahead with an agreement for food and fuel aid to North Korea in exchange for its decision to dismantle its nuclear program.

"We've always been concerned about the issue of proliferation," Mr. Hill told reporters during a news conference at the State Department. "To me, this simply is an important reminder of the need to accelerate the process which we've already engaged in, to achieve denuclearization of the Korean Peninsula."

He declined to say whether the United States had sought a specific explanation from North Korean officials, and added that the issue "does not change the goal of what we're aiming for."

A Bush administration official said earlier this week that over the past several weeks, Israel had conducted several aerial surveillance flights over Syria to take pictures of what Israeli officials were said to believe could be possible nuclear development installations.

North Korea's government took the unusual step of publicly condemning the Israeli strike. The Chinese state-run news agency Xinhua cited a North Korean Foreign Ministry official on Tuesday as calling the Israeli strike "a very dangerous provocation, little short of wantonly violating the sovereignty of Syria and seriously harassing the regional peace and security."

Some who advocate a hard-line stance toward North Korea, including former top Bush administration officials, said that possible intelligence about North Korea's efforts to aid Syria should halt diplomatic talks with Pyongyang.

"It would be a big mistake for the State Department to push ahead with the six-party process without this being resolved," said John R. Bolton, a former United States ambassador to the United Nations, referring to the diplomatic talks with North Korea. "They are rushing to finish this and declare victory, which could be a catastrophe for the president."

## Israeli official muzzled on Syria attack

By Amy Teibel, Associated Press Writer

Posted 9/16/2007 8:52 PM

JERUSALEM — Israel's chief of military intelligence was ordered Sunday [2007-09-16] not to discuss an alleged air raid on Syria before a powerful parliamentary panel, tightening the veil of secrecy the government has thrown around the issue.

Tzachi Hanegbi, chairman of parliament's foreign affairs and defense committee, told reporters he instructed military intelligence chief Amos Yadlin to avoid any mention of Syria at a committee meeting Sunday. Panel members regularly report to journalists during and after committee meetings.

In a statement some participants saw as an oblique reference to the alleged Syria raid, Yadlin told the meeting, "Israel's deterrence has been rehabilitated since the Lebanon war, and it affects the entire regional system, including Iran and Syria," according to a lawmaker who was present.

The lawmaker spoke on condition of anonymity because he was not authorized to disclose the meeting's contents to the media.

Foreign news reports have suggested that Israel struck a Syrian site designed to make non-conventional weapons, possibly a nuclear installation built with North Korean help.

John Bolton, the former U.S. ambassador to the U.N., told Israeli Channel 10 TV he thought Israel might have been attacking a nuclear installation, "a message not only to Syria, but to Iran."

"I think it would be unusual for Israel to conduct a military operation inside Syria other than for a very high value target, and certainly a Syrian effort in the nuclear weapons area would qualify," Bolton said in an interview broadcast Sunday.

Bolton, who has long called for a hard line against the Syrian and Iranian regimes, did not indicate he had firsthand information about the incident.

Among the other possible explanations are that Israel was on an intelligence-gathering mission, testing Syria's air defenses, scouting an air corridor for a future strike against Iranian nuclear facilities, or hitting a shipment of arms destined for Hezbollah, a close ally of Syria and Iran.

In the past, Israel often has been swift to announce such operations. This time, Syria cryptically announced the incident, saying its air space had been entered and that Israel had "dropped munitions." Syria has offered no evidence of any Israeli attack.

Syria and Israel fought each other in the 1967 and 1973 Mideast wars. Their last direct military confrontation was in neighboring Lebanon in 1982, when Israel's air force shot down dozens of Syrian warplanes and Israel destroyed Syrian tanks.

Israel has dismissed recent calls by Syria to restart peace talks, citing the Damascus regime's continued support for Palestinian militant groups and Hezbollah.

## **Records on North Korean ship docked in Syria were altered**

By Yossi Melman, Haaretz Correspondent

Last update - 09:30 16/09/2007

Online databases tracking a ship reportedly flying a North Korean flag that docked in Syria have changed their records following a report in The Washington Post linking the alleged Israeli air strike in Syria to a North Korean shipment.

Ronen Solomon, who searches information in the public domain for companies, told Haaretz he found references to a ship called Al Hamad on three different Web sites after the initial reports of the Israeli raid in Syria on September 6. These included the official sites of Syria's Tartous Port and the Egyptian Transportation Ministry.

Two of the three sites said the ship was flying a North Korean flag, and the third site reported it was flying a South Korean flag.

Haaretz confirmed Solomon's report.

Saturday, the Washington Post published an article citing an American Mideast expert, who said a shipment that arrived in Syria three days before the alleged Israel Air Forces strike was labeled as cement, but that Israel believed it carried nuclear equipment.

Following the Washington Post report, Solomon returned to the three sites, and discovered that all mentions of the North Korean flag on Al Hamad had been deleted, and that the ship's flag was now registered as 'unknown.'

The official site of Syria's Tartous Port, [www.tartousport.com](http://www.tartousport.com), had reported that Al Hamad, flying a North Korean flag and carrying cement, entered the port on September 3. Solomon stressed that several North Korean ships docked at Tartous during August.

Syria said IAF planes entered its airspace on September 5.

According to the site, the ship had passed through Tripoli port in Lebanon, Solomon said.

He then found a site, [www.e-ships.net](http://www.e-ships.net), that said Al Hamad was registered as a 1,700-ton ship intended for general cargo and flying a North Korean flag. The ship had been built in 1965 and had had several owners, according to the site.

In addition, Solomon found on the Web site of Egypt's Transportation Ministry, [www.MTS.gov.eg](http://www.MTS.gov.eg), a record that Al Hamad had docked in Damietta Port Said in the Nile Delta about a month earlier, on July 28. However, this site registered the ship as flying a South Korean flag.

Haaretz was able to access the Tartous Port Internet site until Saturday afternoon, after which it went offline for several hours

## **Search reveals Al Hamed bring shiploads of "cement" to Syria for months**

By: Israel Insider staff

Published: September 16, 2007

The Vessel Al Hamed, suspected of bringing in nuclear material or equipment from North Korea -- reported to be the proximate cause for Israel's recent airstrike -- has been a frequent visitor in the Syria port of Tartous, arriving on a monthly basis with shipments of "cement" since June.

Dr. Aaron Lerner of IMRA followed up on a report in Sunday's Haaretz that identified the vessel Al Hamed as having visited the Syrian port of Tartous on 3 September, searching for the same vessel using the cache option of the Google search engine. The results indicate that the same vessel also visited that port at the end of June and July, both times listing cement as the commodity it was carrying and Tripoli Lebanon as its previous port of call.

Sunday, September 16, 2007

*[EXCERPTS]*

WASHINGTON — The following is a partial transcript of the Sept. 16, 2007, edition of "FOX News Sunday With Chris Wallace":

"FOX NEWS SUNDAY" HOST CHRIS WALLACE: Well, with us now to discuss the way forward in Iraq, Iran and other hot spots is the secretary of defense, Robert Gates.

*[deletia]*

WALLACE: Let's turn to another part of the world. Is Syria involved in a covert nuclear program with North Korean assistance?

GATES: Well, I'm not going to get into things that may involve intelligence matters, but all I will say is we are watching the North Koreans very carefully. We watch the Syrians very carefully.

WALLACE: How would we regard that kind of effort both by — in terms of the Syrians and the North Koreans?

GATES: I think it would be a real problem.

WALLACE: Because?

GATES: If such an activity were taking place, it would be a matter of great concern, you know, because the president has put down a very strong marker with the North Koreans about further proliferation efforts.

And obviously, any effort by the Syrians to pursue weapons of mass destruction would be a concern for us.

WALLACE: And you can give us no confirmation that, in fact, they are involved in that kind of program?

GATES: Will not address that.

WALLACE: Let me ask you one other question. Was there an Israeli air strike on Syria last week?

GATES: We don't talk about the military operations of other countries. You'll have to ask the Israelis.

WALLACE: Well, they're not going to answer us, but you can't blame me for trying.

*[deletia]*

## **Israelis ‘blew apart Syrian nuclear cache’ Secret raid on Korean shipment**

Uzi Mahnaimi in Tel Aviv, Sarah Baxter in Washington and Michael Sheridan

**September 16, 2007**

IT was just after midnight when the 69th Squadron of Israeli F15Is crossed the Syrian coast-line. On the ground, Syria’s formidable air defences went dead. An audacious raid on a Syrian target 50 miles from the Iraqi border was under way.

*[Sourcebook note: The facility subsequently called “Al Kibar” is slightly over 80 statute miles from the Iraqi border.]*

At a rendezvous point on the ground, a Shaldag air force commando team was waiting to direct their laser beams at the target for the approaching jets. The team had arrived a day earlier, taking up position near a large underground depot. Soon the bunkers were in flames.

Ten days after the jets reached home, their mission was the focus of intense speculation this weekend amid claims that Israel believed it had destroyed a cache of nuclear materials from North Korea.

The Israeli government was not saying. “The security sources and IDF [Israeli Defence Forces] soldiers are demonstrating unusual courage,” said Ehud Olmert, the prime minister. “We naturally cannot always show the public our cards.”

The Syrians were also keeping mum. “I cannot reveal the details,” said Farouk al-Sharaa, the vice-president. “All I can say is the military and political echelon is looking into a series of responses as we speak. Results are forthcoming.” The official story that the target comprised weapons destined for Hezbollah, the Iranian-backed Lebanese Shi’ite group, appeared to be crumbling in the face of widespread scepticism.

Andrew Semmel, a senior US State Department official, said Syria might have obtained nuclear equipment from “secret suppliers”, and added that there were a “number of foreign technicians” in the country.

Asked if they could be North Korean, he replied: “There are North Korean people there. There’s no question about that.” He said a network run by AQ Khan, the disgraced creator of Pakistan’s nuclear weapons, could be involved.

But why would nuclear material be in Syria? Known to have chemical weapons, was it seeking to bolster its arsenal with something even more deadly?

Alternatively, could it be hiding equipment for North Korea, enabling Kim Jong-il to pretend to be giving up his nuclear programme in exchange for economic aid? Or was the material bound for Iran, as some authorities in America suggest?

According to Israeli sources, preparations for the attack had been going on since late spring, when Meir Dagan, the head of Mossad, presented Olmert with evidence that Syria was seeking to buy a nuclear device from North Korea.

The Israeli spy chief apparently feared such a device could eventually be installed on North-Korean-made Scud-C missiles.

“This was supposed to be a devastating Syrian surprise for Israel,” said an Israeli source. “We’ve known for a long time that Syria has deadly chemical warheads on its Scuds, but Israel can’t live with a nuclear warhead.”

An expert on the Middle East, who has spoken to Israeli participants in the raid, told yesterday’s Washington Post that the timing of the raid on September 6 appeared to be linked to the arrival three days earlier of a ship carrying North Korean material labelled as cement but suspected of concealing nuclear equipment.

The target was identified as a northern Syrian facility that purported to be an agricultural research centre on the Euphrates river. Israel had been monitoring it for some time, concerned that it was being used to extract uranium from phosphates.

According to an Israeli air force source, the Israeli satellite Ofek 7, launched in June, was diverted from Iran to Syria. It sent out high-quality images of a northeastern area every 90 minutes, making it easy for air force specialists to spot the facility.

Early in the summer Ehud Barak, the defence minister, had given the order to double Israeli forces on its Golan Heights border with Syria in anticipation of possible retaliation by Damascus in the event of air strikes.

Sergei Kirpichenko, the Russian ambassador to Syria, warned President Bashar al-Assad last month that Israel was planning an attack, but suggested the target was the Golan Heights.

Israeli military intelligence sources claim Syrian special forces moved towards the Israeli outpost of Mount Hermon on the Golan Heights. Tension rose, but nobody knew why.

At this point, Barak feared events could spiral out of control. The decision was taken to reduce the number of Israeli troops on the Golan Heights and tell Damascus the tension was over. Syria relaxed its guard shortly before the Israeli Defence Forces struck.

Only three Israeli cabinet ministers are said to have been in the know – Olmert, Barak and Tzipi Livni, the foreign minister. America was also consulted. According to Israeli sources, American air force codes were given to the Israeli air force attaché in Washington to ensure Israel’s F15Is would not mistakenly attack their US counterparts.

Once the mission was under way, Israel imposed draconian military censorship and no news of the operation emerged until Syria complained that Israeli aircraft had violated its airspace. Syria claimed its air defences had engaged the planes, forcing them to drop fuel tanks to lighten their loads as they fled.

But intelligence sources suggested it was a highly successful Israeli raid on nuclear material supplied by North Korea.

Washington was rife with speculation last week about the precise nature of the operation. One source said the air strikes were a diversion for a daring Israeli commando raid, in which nuclear materials were intercepted en route to Iran and hauled to Israel. Others claimed they were destroyed in the attack.

There is no doubt, however, that North Korea is accused of nuclear cooperation with Syria, helped by AQ Khan's network. John Bolton, who was undersecretary for arms control at the State Department, told the United Nations in 2004 the Pakistani nuclear scientist had "several other" customers besides Iran, Libya and North Korea.

Some of his evidence came from the CIA, which had reported to Congress that it viewed "Syrian nuclear intentions with growing concern".

"I've been worried for some time about North Korea and Iran outsourcing their nuclear programmes," Bolton said last week. Syria, he added, was a member of a "junior axis of evil", with a well-established ambition to develop weapons of mass destruction.

The links between Syria and North Korea date back to the rule of Kim Il-sung and President Hafez al-Assad in the last century. In recent months, their sons have quietly ordered an increase in military and technical cooperation.

Foreign diplomats who follow North Korean affairs are taking note. There were reports of Syrian passengers on flights from Beijing to Pyongyang and sightings of Middle Eastern businessmen from sources who watch the trains from North Korea to China.

On August 14, Rim Kyong Man, the North Korean foreign trade minister, was in Syria to sign a protocol on "cooperation in trade and science and technology". No details were released, but it caught Israel's attention.

Syria possesses between 60 and 120 Scud-C missiles, which it has bought from North Korea over the past 15 years. Diplomats believe North Korean engineers have been working on extending their 300-mile range. It means they can be used in the deserts of northeastern Syria – the area of the Israeli strike.

The triangular relationship between North Korea, Syria and Iran continues to perplex intelligence analysts. Syria served as a conduit for the transport to Iran of an estimated £50m of missile components and technology sent by sea from North Korea. The same route may be in use for nuclear equipment.

But North Korea is at a sensitive stage of negotiations to end its nuclear programme in exchange for security guarantees and aid, leading some diplomats to cast doubt on the likelihood that Kim would cross America's "red line" forbidding the proliferation of nuclear materials.

Christopher Hill, the State Department official representing America in the talks, said on Friday he could not confirm "intelligence-type things", but the reports underscored the need "to make sure the North Koreans get out of the nuclear business".

By its actions, Israel showed it is not interested in waiting for diplomacy to work where nuclear weapons are at stake.

As a bonus, the Israelis proved they could penetrate the Syrian air defence system, which is stronger than the one protecting Iranian nuclear sites.

This weekend President Mahmoud Ahmadinejad of Iran sent Ali Akbar Mehrabian, his nephew, to Syria to assess the damage. The new “axis of evil” may have lost one of its spokes.

## **Olmert says he respects Assad, won't rule out talks**

By Barak Ravid, Haaretz Correspondent

Last update - 21:30 17/09/2007

After eleven days of speculations regarding an alleged Israel Air Force strike on Syria, Prime Minister Ehud Olmert said on Monday that he respects Syrian President Bashar Assad and is ready, under the right conditions, to launch peace talks with Damascus.

"I have a lot of respect for the Syrian leader and for Syrian policy. They have internal problems, but we have no reason to rule out dialogue with Syria," Olmert said in a briefing for Russian-language media outlets in Israel.

"As I've said in the past, we want to make peace with everyone," Olmert went on. "If the conditions ripen, we are ready to make peace with Syria, with no preconditions and no ultimate demands."

Olmert did not respond to a question on the alleged September 6 attack, which has resulted in a slew of speculations by foreign publications. Israeli officials have remained tight-lipped about the whole affair.

According to a report in this week's London-based Sunday Times, an Israeli source said the strike came in the wake of intelligence reports suggesting Syria was been planning a "devastating surprise" for Israel. The report also claimed that Israeli ground forces were involved in the attack on a Syrian installation, which foreign sources described as a nuclear facility.

The British weekly reported the Israeli source said that planning for the strike, which the United States allegedly backed, began shortly after Mossad chief Meir Dagan presented Prime Minister Ehud Olmert, in late spring, with evidence that Syria was seeking to acquire a nuclear device from North Korea.

Meretz MK Zahava Gal-On told Attorney General Menachem Mazuz on Monday that he should demand Olmert provide the Knesset with details of the incident.

In a letter to Mazuz, Gal-On, who heads the Meretz Knesset faction, wrote, "In light of reports by foreign sources and the total blackout imposed by Israel on what happened or didn't happen, I am asking you to present the prime minister with his duty to report on all unusual IDF activity to the Foreign Affairs and Defense Committee or to one of its subcommittees."

Gal-On wrote in her letter to Mazuz on Monday that the Knesset must oversee all IDF action beyond Israel's borders, "if not in advance, then at least in retrospect." She said that if Olmert does not update the committee, then it will become a "members' club that hears briefings without the capability for real supervision."

Gal-On also referenced the Rubinstein Committee, headed by Professor Amnon Rubinstein, which scrutinized oversight of the defense establishment, and recommended the Foreign Affairs and Defense Committee be aware of IDF activities in order to ensure parliamentary oversight.

At the end of the letter, Gal-On wrote that "the existence of and respect for these constitutional principles are crucial, and unrelated to the wisdom, benefit or success the government attributes to one IDF action or another."

Meretz Chairman Yossi Beilin told Israel Radio that he did not support Gal-On's letter. He said he does not see cause for criticism of the matter, believing instead confidential matters should remain so.

## **N Korea denies Syria nuclear ties**

Published: 2007/09/18 08:48:20 GMT

*[EXCERPT]*

**North Korea has denied allegations that it may be helping Syria develop a nuclear weapons facility.**

The foreign ministry in Pyongyang called the claims an "unskilful conspiracy" and "groundless".

There were allegations last week that Syria was holding technology or materials relating to North Korea's nuclear programme.

This follows reports that Israeli jets entered Syrian air space earlier this month and hit an unknown target.

"Recently some US media including the New York Times have been spreading allegations that we are secretly helping Syria with its nuclear programme. Such reports are groundless and misleading," a ministry spokesman said.

He also dismissed reports that North Korea could be helping Syria build a nuclear weapons facility.

"We, as a responsible nuclear power, already declared in October 2006 that we will never allow the transfer of nuclear materials, and we have been sticking to this declaration," the spokesman said in a statement published by the official Korean Central News Agency.

The suspicions were "nothing but an unskilful conspiracy" fabricated again by "impure forces" who do not want to see "progress in six-party talks and in relations between Washington and Pyongyang", the spokesman added.

**No comment**

Syria has formally complained to the United Nations about the alleged raid by Israeli aircraft over its territory.

## **No Israeli Bombs Hit Syrian Targets - Syria's UN Ambassador**

**September 18 [2007]**

# Published reports have indicated that Israel jets attacked an alleged nuclear related facility in Syria back on September 6th. Syria's UN Ambassador Bashar Jaafari says the Israeli jets that violated Syrian airspace retreated when targeted by Syrian air defenses and did not attack any target in Syria. Meanwhile, the Secretary-General has expressed concern about the incident and says he's awaiting clarification as to what exactly happened. The Syrian Ambassador [*sic*] says Israel has no intention of providing the S.G. with that information. The press office at the Israeli mission to the United Nations says it has no comment on the incident. Two reports by Jerry Piasecki Report 1 - Syrian Ambassador says Israeli planes did not bomb any target in Syria Report 2 - SG says he is awaiting clarification on the incident.

## **Syria Disputes Airstrike Claims**

Israel Claims Damascus Getting Nuclear Technology From North Korea

September 19, 2007

Syria is disputing Israel's claims that Damascus is getting nuclear technology from North Korea. "Up to the Minute" Contributor Frank Ucciardo weighs in.

(CBS) U.S. Officials told CBS News that the Israeli airstrike into Syria on September 6th was to destroy a building that was believed to have contained nuclear equipment. Syria's Ambassador, Bashar Ja'afari, says no building was attacked, and there were no nuclear weapons. "It wasn't an air strike, it was a violation of our airspace," he says.

The Israeli air action came three days after a North Korean ship docked at a Syrian port. Ja'afari says Syria is not engaged in nuclear proliferation with North Korea, or any other country. "Actually, Israel has the nuclear capabilities we don't have," he says.

Ambassador Ja'afari sent two letters to U.N. Secretary General Ban-ki Moon and the security council demanding they investigate Israel's violation of their airspace. But the question remains - if the Israeli jets were not after nuclear equipment, why did they violate Syrian airspace?

"I think the Israelis and some adamant neo-cons in the administration are trying very hard to undermine and torpedo this idea of holding a so-called international conference in the fall of this year," says Ja'afari.

President Bush has proposed an international middle east conference in the United States. On Monday, Israel's president, Shimon Peres, said Israel is ready for direct peace negotiations with Syria.

"They felt what they did was wrong by penetrating and intruding our airspace, so I think they were trying to ease the tension in the area to de-escalate the situation by providing such statements. But, I'm sure they are not honest with these kinds of statements, because the background and the motivations would be political," says Ja'afari.

When the Israeli U.N. Mission was asked to comment, they said, "We are not going to comment on the alleged incident in Syria, and the Israelis will continue not to comment on this issue until further notice."

## **N Korean ship 'linked to Israel's strike on Syria'**

By Tim Butcher in Jerusalem

Last Updated: 2:31am BST 18/09/2007

A suspicious North Korean freighter that re-flagged itself as South Korean before off-loading an unknown cargo at the Syrian port of Tartous is at the centre of efforts today to investigate Israel's recent airstrike on Syria.

An Israeli on-line data analyst, Ronen Solomon, found an internet trace for the 1,700-tonne cargo ship, Al Hamed, which showed the vessel started to off-load what Syrian officials categorised as "cement" on Sept 3.

This was three days before Israeli jets attacked a site in the north eastern desert of Syria, not far from its border with Iraq.

Since leaving Tartous, one of Syria's main ports on the Mediterranean, the ship's trace has disappeared and it is not known whether western intelligence agencies are tracking the vessel.

"I became suspicious after the first reports from Syria about the attack so I traced all traffic into Syrian ports in the days prior to the incident," Mr Solomon said.

"There were five ships but the interesting one was the one with a connection to North Korea - the Al Hamed."

He said he cross-referred to other maritime databases to establish the ship was not a regular visitor to the Mediterranean but had come through the Suez Canal in late June.

It had registered itself for the Suez transit as a South Korean vessel but Mr Solomon said this was standard procedure for North Korean ships seeking to avoid international constraints on North Korea.

Records showed the vessel docked at Tartous on July 28 before going back to sea and then returning to the port on Sept 3. "Since then there is no trace so I have no idea if she has gone up into the Black Sea or is still in the Mediterranean or whatever," Mr Solomon said.

Israel has not given any details on the operation.

Last week, US officials suggested that North Korea had sought to export some of its nuclear technology and equipment to Syria but the Israelis had been tipped off, so they arranged a pre-emptive strike on a sensitive shipment.

Mr Solomon said the Al Hamed was owned by a North Korean business until a few months ago when ownership changed hands to an as yet unidentified new owner.

## **Rumor about "Secret Nuclear Cooperation" between DPRK and Syria Dismissed**

Pyongyang, **September 18 [2007]** (KCNA) -- A spokesman for the DPRK Foreign Ministry gave the following answer to a question put by KCNA today as regards the rumor about "secret nuclear cooperation" between the DPRK and Syria spread by some media of the United States:

Recently, the New York Times and some other media of the United States spread the rumor about the DPRK's secret nuclear cooperation with Syria. This is sheer misinformation.

The DPRK solemnly declared in October 2006 that, being a responsible nuclear weapons state, it would never allow nuclear transfer, and has stood by its words.

The DPRK never makes an empty talk but always tells truth.

The above-said story is nothing but a clumsy plot hatched by the dishonest forces who do not like to see any progress at the six-party talks and in the DPRK-U.S. relations.

## **Netanyahu 'admits Israeli strike'**

Last Updated: Thursday, 20 September 2007, 09:55 GMT 10:55 UK

The Israeli opposition leader, Binyamin Netanyahu, has made the first apparent admission of Israel's involvement in an alleged air strike against Syria.

In a live interview on Israeli TV, Mr Netanyahu said he had congratulated Prime Minister Ehud Olmert on the raid.

"I was a partner in the issue from the start, and I gave my backing," he said.

Mr Netanyahu was criticised for his remarks, after Israel had maintained an official policy of silence on the reported incident two weeks ago.

Speaking on Channel 1 news, Mr Netanyahu said: "When a prime minister does something that is important in my view and necessary to Israel's security... I give my backing."

When asked if he had personally congratulated Mr Olmert on the operation, Mr Netanyahu said: "Yes". But the Likud party leader refused to give details of the attack.

Labour party secretary general Eitan Cabel told state radio: "I have no idea if this was stupidity, folly or a desire to steal credit.

"This is simply very dangerous conduct and the man is not worthy of leading."

Likud MP Yuval Steinitz said the remarks "were not wise".

### Rising tensions

Damascus says Israeli warplanes violated Syrian airspace in the north of the country on 6 September, and describe the incident as a "hostile act".

The Syrian authorities say that the aircraft were forced away and that they fired their weaponry into a deserted area. Witnesses said the Israeli jets had been engaged by Syrian air defences in Tall al-Abyad, north of Raqqa and near the border with Turkey.

The Syrian government has briefed Western diplomats and complained to the United Nations.

US officials have indicated that at least one target in northern Syria was hit.

Israel and Syria technically remain at war and tensions between them have been rising in recent months.

The Syrian government has insisted that peace talks can be resumed only on the basis of Israel returning the Golan Heights, which it seized in 1967.

Israeli authorities, for their part, have demanded that Syria abandon its support for Palestinian and Lebanese militant groups before talks can begin.

The last peace talks between the two countries broke down in 2000.

Story from BBC NEWS: [http://news.bbc.co.uk/go/pr/fr/-/2/hi/middle\\_east/7004209.stm](http://news.bbc.co.uk/go/pr/fr/-/2/hi/middle_east/7004209.stm)

## **US feared N Korea-Syria link before Israeli strike**

By Demetri Sevastopulo in Washington

Published: **September 20 2007** 22:04 | Last updated: September 20 2007 22:04

The US had concerns about potential nuclear-related co-operation between North Korea and Syria before recently receiving Israeli intelligence on the issue that Israel reportedly used to justify an air strike inside Syria.

Binyamin Netanyahu, the Israeli opposition leader, on Thursday appeared to confirm reports that Israeli fighter jets had earlier this month launched strikes inside Syria, which US and Israeli media reported were due to concerns that North Korea was helping Syria develop a clandestine nuclear programme.

**One senior US official said Washington had for some time possessed intelligence about potential nuclear co-operation between the two countries.**

**While declining to outline the specific intelligence, the US official said North Korea would have to address the concerns as part of the declaration of nuclear activities that Pyongyang is required to make to complete the current stage of the six-party talks aimed at denuclearising the Korean peninsula.**

The US hopes to complete the stage this year and talks may resume in Beijing next week after North Korea refused to return to the table this week.

President George W. Bush on Thursday declined to make any comment on the Israeli attack.

But when asked whether North Korea was helping Syria with a nuclear programme, he said the US would continue to make clear to North Korea that "we expect them to honour their commitment to give up weapons and weapons programs and, to the extent that they are proliferating, we expect them to stop their proliferation if they want the six-party talks to be successful".

**The US official said the administration had made a strategic decision not to raise the issue more forcefully early on in the six-party talks – which include China, Japan, South Korea and Russia – to avoid scuppering the possibility of a successful outcome because of a "Kelly" situation.**

Negotiations between North Korea and the US broke down in late 2002 after James Kelly, the then top State Department official for east Asian affairs, confronted Pyongyang over its alleged uranium nuclear programme. Three months later, Pyongyang announced its withdrawal from the nuclear non-proliferation treaty.

The scant information provided by administration officials about the alleged nuclear co-operation has prompted scepticism by experts on the claims that Syria is developing a clandestine nuclear programme, with or without the help of North Korea.

"It is highly unlikely that the Israeli attack had anything to do with significant Syrian-North Korean nuclear co-operation," said Joseph Cirincione, director for nuclear policy at the Center for American Progress. "The basic, well-documented fact is that the 40-year-old Syrian nuclear research programme is too basic to support any weapons capability.

Universities have larger nuclear programmes than Syria.”Most experts have suggested that Israel was much more likely to have targeted some a facility related tofor conventional weapons or missiles, over which North Korea and Syria have co-operated in the past.

”I would be very, very surprised if the North Koreans were dumb enough to transfer fissile material to Syria or were trying to do work outside of North Korea in a place like Syria,” said Michael Green, a former senior Asia adviser to Mr Bush who is now at the Center for Strategic and International Studies. ”The transfer of fissile material in the wake of President Bush’s public statement after the nuclear test would be extremely dangerous for North Korea and not worth the risk.”

## Press Conference by the President

The White House,  
September 20, 2007

[EXCERPT]

Martha.

Q You won't comment on what the Israelis may or may not have done --

THE PRESIDENT: That's an accurate statement. I hope you got that from my answer -- now, you're afraid -- now, Gregory is worried I'm actually going to comment, see.

Q That's what I'm hoping.

THE PRESIDENT: I'm not going to, so you might want to go to another subject.

Q I know you won't comment on that. But let's talk about whether or not you believe that North Korea is aiding Syria with a nuclear program.

THE PRESIDENT: We have made it clear, and will continue to make it clear to the North Koreans through the six-party talks that we expect them to honor their commitment to give up weapons and weapons programs, and to the extent that they are proliferating, we expect them to stop that proliferation, if they want the six-party talks to be successful.

In other words, whether it be the exportation of information and/or materials is an important part -- it doesn't matter to us whether they do -- in terms of the six-party talks, because they're both equally important, I guess is the best way to say it. In other words, we want -- it does matter -- let me rephrase that -- it matters whether they are, but the concept of proliferation is equally important as getting rid of programs and weapons.

Q So you believe they are aiding Syria?

THE PRESIDENT: It's a general statement that we expect them not to be proliferating.

## **Talks Held between WPK and Syrian Political Party**

Pyongyang, September 21 [2007] (KCNA) -- Talks were held between Choe Thae Bok, secretary of the C.C., the Workers' Party of Korea, and Saaed Eleia Dawood, director of the Organizational Department of Syria's Baath Arab Socialist Party, on September 21.

Present at the talks were officials concerned from the DPRK side and the director's party and the Syrian charge d'affaires ad interim here from the Syrian side.

At the talks both sides informed each other of activities of their parties and exchanged views on the issue of boosting the friendly and cooperative ties between the two parties and a series of issues of bilateral interest.

The talks proceeded in a friendly atmosphere.

## **Israel, U.S. Shared Data On Suspected Nuclear Site**

Bush Was Told of North Korean Presence in Syria, Sources Say

By Glenn Kessler and Robin Wright

Washington Post Staff Writers

Friday, September 21, 2007; A01

Israel's decision to attack Syria on Sept. 6, bombing a suspected nuclear site set up in apparent collaboration with North Korea, came after Israel shared intelligence with President Bush this summer indicating that North Korean nuclear personnel were in Syria, U.S. government sources said.

The Bush administration has not commented on the Israeli raid or the underlying intelligence. Although the administration was deeply troubled by Israel's assertion that North Korea was assisting the nuclear ambitions of a country closely linked with Iran, sources said, the White House opted against an immediate response because of concerns it would undermine long-running negotiations aimed at persuading North Korea to abandon its nuclear program.

Ultimately, however, the United States is believed to have provided Israel with some corroboration of the original intelligence before Israel proceeded with the raid, which hit the Syrian facility in the dead of night to minimize possible casualties, the sources said.

The target of Israel's attack was said to be in northern Syria, near the Turkish border. A Middle East expert who interviewed one of the pilots involved said they operated under such strict operational security that the airmen flying air cover for the attack aircraft did not know the details of the mission. The pilots who conducted the attack were briefed only after they were in the air, he said. Syrian authorities said there were no casualties.

U.S. sources would discuss the Israeli intelligence, which included satellite imagery, only on condition of anonymity, and many details about the North Korean-Syrian connection remain unknown. The quality of the Israeli intelligence, the extent of North Korean assistance and the seriousness of the Syrian effort are uncertain, raising the possibility that North Korea was merely unloading items it no longer needed. Syria has actively pursued chemical weapons in the past but not nuclear arms -- leaving some proliferation experts skeptical of the intelligence that prompted Israel's attack.

Syria and North Korea both denied this week that they were cooperating on a nuclear program. Bush refused to comment yesterday on the attack, but he issued a blunt warning to North Korea that "the exportation of information and/or materials" would affect negotiations under which North Korea would give up its nuclear programs in exchanges for energy aid and diplomatic recognition.

"To the extent that they are proliferating, we expect them to stop that proliferation, if they want the six-party talks to be successful," he said at a news conference, referring to negotiations that also include China, Japan, South Korea and Russia.

Unlike its destruction of an Iraqi nuclear reactor in 1981, Israel made no announcement of the recent raid and imposed strict censorship on reporting by the Israeli media. Syria made only muted protests, and Arab leaders have remained silent. As a result, a daring and apparently successful attack to eliminate a potential nuclear threat has been shrouded in mystery.

"There is no question it was a major raid. It was an extremely important target," said Bruce Riedel, a former intelligence officer at Brookings Institution's Saban Center for Middle East Policy. "It came at a time the Israelis were very concerned about war with Syria and wanted to dampen down the prospects of war. The decision was taken despite their concerns it could produce a war. That decision reflects how important this target was to Israeli military planners."

Israel has long known about Syria's interest in chemical and even biological weapons, but "if Syria decided to go beyond that, Israel would think that was a real red line," Riedel said.

Edward Djerejian, a former U.S. ambassador to Syria and founding director of Rice University's Baker Institute for Public Policy, said that when he was in Israel this summer he noticed "a great deal of concern in official Israeli circles about the situation in the north," in particular whether Syria's young ruler, Bashar al-Assad, "had the same sensitivity to red lines that his father had." Bashar succeeded his Hafez al-Assad as president of Syria in 2000.

The Israeli attack came just three days after a North Korean ship docked at the Syrian port of Tartus, carrying a cargo that was officially listed as cement.

The ship's role remains obscure. Israeli sources have suggested it carried nuclear equipment. Others have maintained that it contained only missile parts, and some have said the ship's arrival and the attack are merely coincidental. One source suggested that Israel's attack was prompted by a fear of media leaks on the intelligence.

The Bush administration's wariness when presented with the Israeli intelligence contrasts with its reaction in 2002, when U.S. officials believed they had caught North Korea building a clandestine nuclear program in violation of a nuclear-freeze deal arranged by the Clinton administration.

After the Bush administration's accusation, the Clinton deal collapsed and North Korea restarted a nuclear reactor, stockpiled plutonium and eventually conducted a nuclear test. Secretary of State Condoleezza Rice convinced Bush this year to accept a deal with North Korea to shut down the reactor, infuriating conservatives inside and outside the administration.

But for years, Bush has also warned North Korea against engaging in nuclear proliferation, specifically making that a red line that could not be crossed after North Korea tested a nuclear device last year. The Israeli intelligence therefore suggested North Korea was both undermining the agreement and crossing that line.

Conservative critics of the administration's recent diplomacy with North Korea have seized on reports of the Israeli intelligence as evidence that the White House is misguided if it thinks it can ever strike a lasting deal with Pyongyang. "However bad it might be for the six-party talks, U.S. security requires taking this sort of thing seriously," said John R. Bolton, the former U.S. ambassador to the United Nations who was a top arms control official in Bush's first term.

But advocates of engagement have accused critics of trying to sabotage the talks. China on Monday abruptly postponed a round of six-party talks scheduled to begin this week, but U.S. officials now say the talks should start again Thursday.

Some North Korean experts said they are puzzled why, if the reports are true, Pyongyang would jeopardize the hard-won deal with the United States and the other four countries. "It does not make any sense at all in the context of the last nine months," said Charles "Jack" Pritchard, a former U.S. negotiator with North Korea and now president of the Korea Economic Institute.

## **Congressman Wexler Introduces Resolution Supporting Israeli Air Strike on Syria**

(Washington, DC) Today, Congressman Robert Wexler (D-FL), Chairman of the Subcommittee on Europe and a senior member of the House Foreign Affairs Committee, announced that he will introduce a resolution on September 24 supporting Israel's right to security and self defense and its recent covert military operation on September 6 that appears to have successfully eliminated an alleged nuclear weapons facility in Syria. The resolution also condemns the Syrian government for its cooperation with North Korea in the development of chemical, biological, and nuclear weapons. Finally, the resolution condemns Syria for continuing to provide military, logistical and political assistance to the terrorist organization Hezbollah in violation of United Nations Security Council Resolution 1701. The full text of the resolution is attached below.

Over the past several decades, Syria has acquired an advanced deadly arsenal of chemical weapons and surface-to-surface missiles, and has reportedly conducted research and development in biological weapons. According to a September 20 Washington Institute Policy Watch Report, Syria has binary-type and cluster-bomblet chemical warheads for all its major missile systems, as well as thousands of bombs filled with the nerve agents sarin and possibly VX. Additionally, it is reported that Syria currently possesses about 200 Scud-Bs, 60-120 Scud-Cs, and a smaller number of Scud-Ds as well as the Soviet SS-21 missile with a 70-kilometer range, and large numbers of domestically produced 220-millimeter and 302-millimeter artillery rockets with ranges of 70 and 100 kilometers, respectively.

"A Syria with nuclear weapons is an unacceptable threat to the United States, Israel and international community and would further destabilize the Middle East," Congressman Wexler said. "Israel's recent military action was effective and absolutely appropriate given the growing threat from Syria. Congress should go on record supporting this justified operation. It is critical that the international community immediately address Syria's massive buildup of deadly weapons of mass destruction and urge Damascus to end its support for terrorist organizations such as Hezbollah and Hamas"

Congressman Wexler is Chairman of the Europe Subcommittee, a senior member of the House Committee on Foreign Affairs and the House Judiciary Committee, and he also sits on the Financial Services Committee.

Expressing the unequivocal support of the House of Representatives for Israel's right to self defense in the face of an imminent nuclear or military threat from Syria.

Whereas on September 6, 2007, the Government of Israel justifiably conducted covert military operations in Syria, bombing a suspected nuclear facility;

Whereas in 1981, Israeli Defense Forces attacked and destroyed the nuclear reactor at Osirak, Iraq, preventing Saddam Hussein from developing nuclear weapons;

Whereas on September 6, 2007, it is reported that as many as 8 Israeli Air Force fighter jets struck a Syrian nuclear weapons facility; Whereas it has been reported that Syria is pursuing nuclear capabilities in addition to its already dangerous biological and chemical weapons programs;

Whereas according to a 2004 unclassified Central Intelligence Agency report on Syria, “Pakistani investigators said that they had confirmation of an IAEA allegation that A.Q. Khan offered nuclear technology and hardware to Syria.”;

Whereas reports suggest that the Syrian Government is working closely with the North Korean Government to develop a nuclear weapons program;

Whereas Andrew Semmel, acting Deputy Assistant Secretary of State for Nuclear Nonproliferation Policy, said Syria may have had contacts with “secret suppliers” to obtain nuclear equipment for a covert program and that North Korean technicians are currently operating in Syria;

Whereas the United States military and intelligence community have tracked several shipments of material they believe have left North Korea and are destined for Syria that may contain high-grade metals that could be used in weapons such as missiles or solid-fuel rocket technology;

Whereas it is reported that Syrian leaders have threatened Israel claiming that Syria has a big surprise in store for Israel in 2007;

Whereas over the past three decades, Syria has acquired a deadly arsenal of chemical weapons and surface-to-surface missiles and has reportedly conducted research and development in biological weapons;

Whereas according to the Department of State, Syria has missiles capable of striking anywhere in Israel and may be seeking to place a nuclear warhead on Scud-C missiles it possesses;

Whereas the Government of Syria has disclosed that an explosion occurred at a secret military facility in Aleppo in July 2007, while attempting to weaponize a Scud-C missile with mustard gas, reportedly killing 15 people and injuring 50;

Whereas Syria continues to provide logistical and political assistance to the terrorist organization Hezbollah and is the main conduit for the transfer of sophisticated rockets and other arms to Hezbollah units in violation of United Nations Security Council Resolution 1701;

Whereas Syria has been designated by the Department of State as a sponsor of international terrorism; and

Whereas the Government of Syria’s continued support for international terrorist organizations and its possession of weapons of mass destruction represent an imminent threat to the United States, Israel, and United States allies in the Middle East:

Now, therefore, be it Resolved, That the House of Representatives—

- (1) expresses its unequivocal support for Israel's right to self defense in the face of an imminent nuclear or military threat from Syria;
- (2) reaffirms America's unbreakable bond with Israel and pledges to continue to work with Prime Minister Olmert and his government to ensure that Israel continues to receive critical military and economic assistance needed to address the growing security threat of Syria and Iran;
- (3) condemns the Government of Syria for its continued support of terrorism and its illicit chemical, biological, and nuclear weapons activities, including close cooperation with the Government of North Korea;
- (4) condemns the Government of North Korea for providing Syria with technology, expertise, and materials to develop nuclear weapons;
- (5) condemns Syria and Iran for continuing to provide military, logistical, and political support to Hezbollah and Palestinian terrorist groups;
- (6) urges President George W. Bush to condemn the Government of North Korea for providing Syria with nuclear technology and expertise and to reexamine diplomatic discussions with North Korean officials in light of nuclear cooperation between Damascus and Pyongyang; and
- (7) urges President Bush and his Administration to support strengthening United States sanctions against Syria.

## **Report: IDF raid seized nuclear material before Syria air strike**

By Haaretz Service

Last update - 16:40 23/09/2007

Israel Defense Forces commandos seized nuclear material of North Korean origin during a raid on a secret military site in Syria before the Israel Air Force allegedly bombed it this month, British newspaper The Sunday Times reported Sunday.

The report, based on what the newspaper called "informed sources in Washington and Jerusalem," said the air strike was carried out with United States approval after Washington was shown evidence the material was nuclear related.

The paper quoted Israeli sources as saying Israeli special forces had been gathering intelligence for several months in Syria, and had located the nuclear material at a compound in the country's north.

In another report, Newsweek quoted Uzi Arad, a former senior Mossad official and ex-policy advisor to then-prime minister Benjamin Netanyahu, as saying of the reported operation: I do know what happened, and when it comes out, it will stun everyone."

Netanyahu stirred anger among aides to Prime Minister Ehud Olmert last week when he appeared to confirm reports of the operation - about which Israeli officials have maintained a rare silence - during an interview with Israel Channel One Television.

The Sunday Times reported that diplomats in North Korea and China believe a number of North Koreans were killed in the strike, based on reports reaching Asian governments about conversations between Chinese and North Korean officials. The officials noted that ballistic missile technicians and military scientists had been working for some time with the Syrians.

According to the report, the Bush Administration was given Israeli intelligence suggesting North Korean personnel and nuclear-related material were at the Syrian site over the summer, but the administration demanded "clear evidence of nuclear-related activities before giving the operation its blessing."

As a result, the newspaper said, IDF commandos "almost certainly dressed in Syrian uniforms" seized samples of the nuclear material and took them back to Israel for testing. The sources confirmed that the samples were identified as being from North Korea.

According to the Sunday Times, the site - near Dayr az-Zawr - now lies in ruins following the IAF strike.

The report said the operation was personally directed by Defense Minister Ehud Barak, who according to The Sunday Times is said to have been largely preoccupied with it since taking up his post on June 18. The newspaper quoted military experts as saying that the operation probably could not have taken place under former defense minister Amir Peretz.

Syria has said IAF planes violated its airspace and fired missiles at targets on the ground, but both Damascus and Pyongyang have vehemently denied the reports of nuclear cooperation.

The Sunday Times also quoted an Israeli intelligence expert as saying, "Syria has retaliated in the past for much smaller humiliations, but they will choose the place, the time and the target."

The IAF dispatched several fighter jets toward Syria Saturday, after a Syrian airplane disappeared from the Israeli radar screens, army sources said.

The jets returned to base after they ascertained that the Syrian plane had crashed.

110th CONGRESS  
1st Session  
H. RES. 674

Expressing the unequivocal support of the House of Representatives for Israel's right to self defense in the face of an imminent nuclear or military threat from Syria.

IN THE HOUSE OF REPRESENTATIVES

September 24, 2007

Mr. Wexler (for himself, Mr. Engel, Mr. Cohen, Mr. Burton of Indiana, Mr. Linder, Mr. Brady of Pennsylvania, and Mr. Renzi) submitted the following resolution; which was referred to the Committee on Foreign Affairs

RESOLUTION

Expressing the unequivocal support of the House of Representatives for Israel's right to self defense in the face of an imminent nuclear or military threat from Syria.

Whereas on September 6, 2007, the Government of Israel justifiably conducted covert military operations in Syria, bombing a suspected nuclear facility;

Whereas in 1981, Israeli Defense Forces attacked and destroyed the nuclear reactor at Osirak, Iraq, preventing Saddam Hussein from developing nuclear weapons;

Whereas on September 6, 2007, it is reported that as many as 8 Israeli Air Force fighter jets struck a Syrian nuclear weapons facility;

Whereas it has been reported that Syria is pursuing nuclear capabilities in addition to its already dangerous biological and chemical weapons programs;

Whereas according to a 2004 unclassified Central Intelligence Agency report on Syria, "Pakistani investigators said that they had confirmation of an IAEA allegation that A.Q. Khan offered nuclear technology and hardware to Syria.";

Whereas reports suggest that the Syrian Government is working closely with the North Korean Government to develop a nuclear weapons program;

Whereas Andrew Semmel, acting Deputy Assistant Secretary of State for Nuclear Nonproliferation Policy, said Syria may have had contacts with "secret suppliers" to obtain nuclear equipment for a covert program and that North Korean technicians are currently operating in Syria;

Whereas the United States military and intelligence community have tracked several shipments of material they believe have left North Korea and are destined for Syria that may contain high-grade metals that could be used in weapons such as missiles or solid-fuel rocket technology;

Whereas it is reported that Syrian leaders have threatened Israel claiming that Syria has a big surprise in store for Israel in 2007;

Whereas over the past three decades, Syria has acquired a deadly arsenal of chemical weapons and surface-to-surface missiles and has reportedly conducted research and development in biological weapons;

Whereas according to the Department of State, Syria has missiles capable of striking anywhere in Israel and may be seeking to place a nuclear warhead on Scud-C missiles it possesses;

Whereas the Government of Syria has disclosed that an explosion occurred at a secret military facility in Aleppo in July 2007, while attempting to weaponize a Scud-C missile with mustard gas, reportedly killing 15 people and injuring 50;

Whereas Syria continues to provide logistical and political assistance to the terrorist organization Hezbollah and is the main conduit for the transfer of sophisticated rockets and other arms to Hezbollah units in violation of United Nations Security Council Resolution 1701;

Whereas Syria has been designated by the Department of State as a sponsor of international terrorism; and

Whereas the Government of Syria's continued support for international terrorist organizations and its possession of weapons of mass destruction represent an imminent threat to the United States, Israel, and United States allies in the Middle East: Now, therefore, be it

Resolved, That the House of Representatives—

(1) expresses its unequivocal support for Israel's right to self defense in the face of an imminent nuclear or military threat from Syria;

(2) reaffirms America's unbreakable bond with Israel and pledges to continue to work with Prime Minister Olmert and his government to ensure that Israel continues to receive critical military and economic assistance needed to address the growing security threat of Syria and Iran;

(3) condemns the Government of Syria for its continued support of terrorism and its illicit chemical, biological, and nuclear weapons activities, including close cooperation with the Government of North Korea;

(4) condemns the Government of North Korea for providing Syria with technology, expertise, and materials to develop nuclear weapons;

(5) condemns Syria and Iran for continuing to provide military, logistical, and political support to Hezbollah and Palestinian terrorist groups;

(6) urges President George W. Bush to condemn the Government of North Korea for providing Syria with nuclear technology and expertise and to reexamine diplomatic discussions with North Korean officials in light of nuclear cooperation between Damascus and Pyongyang; and

(7) urges President Bush and his Administration to support strengthening United States sanctions against Syria, including additional sanctions under the Syria Accountability and Lebanese Sovereignty Restoration Act of 2003 (Public Law 108–175).

**Yonhap: DPRK Envoy Reiterates Denial of Syria Nuclear Ties, Comments on 6-Party Talks**

Yonhap headline: "Top N. Korean Envoy Reiterates Denial of Pyongyang-Damascus Nuclear Ties"

Yonhap

Tuesday, September 25, 2007 T06:43:29Z

Journal Code: 2489 Language: ENGLISH Record Type: FULLTEXT

Document Type: OSC Transcribed Text

Word Count: 412

BEIJING, Sept. 25 (Yonhap) -- North Korea's chief nuclear negotiator reiterated Tuesday his country's denial of allegations that the North is helping Syria with a secret atomic weapons program, warning six-nation talks aimed at denuclearizing the North could grind to a halt if no substantial agreement is reached this week.

Dismissing recent media reports that the North may have provided nuclear technology to Syria, Pyongyang said last week "dishonest forces" were spreading such suspicions to overturn progress in ties between Washington and Pyongyang.

"Lunatics have created these rumors about a nuclear deal between us and Syria," Vice Foreign Minister Kim Kye-kwan (Kim Kye Gwan) told reporters upon arriving at Beijing's international airport Tuesday morning. Kim is to attend a new round of six-nation talks aimed at ending the North's nuclear program.

Andrew Semmel, acting U.S. deputy assistant secretary of state for nuclear nonproliferation, told a conference earlier this month that Syria has "secret suppliers" of nuclear equipment and that there were North Koreans in the country, raising alarm over a possible nuclear link between the two states.

Underling the significance of the negotiations that involve the two Koreas, the U.S., Russia, Japan and host China, Kim warned North Korea's denuclearization could stop if the six-party talks fail to produce an agreement during the four-day round that begins Thursday.

"Denuclearization will continue if we reach a agreement on the steps we have achieved so far," Kim said. "And this is a very important meeting where things will return to the starting point if no agreement is produced."

North Korea in July shut down its key nuclear facility under a landmark deal reached earlier this year. A multinational team of experts recently completed surveying the North's nuclear facilities that are to be disabled, a main topic in this week's talks in Beijing.

U.S. Secretary of State Condoleezza Rice said Sunday Pyongyang has yet to come clean on all of its nuclear programs.

"There are frankly a lot of questions that remain to be answered and we want to be able to answer questions about all aspects of the North Korean nuclear program," she told reporters in Beijing, raising the possibility that the North's alleged proliferation could be brought up during the six-party talks.

Kim is expected to meet with top U.S. nuclear negotiator Christopher Hill for talks on Wednesday ahead of the plenary session.

## **North Korea denies Syria nuclear link**

Mark Tran and agencies

Tuesday **September 25, 2007**

North Korea today dismissed reports that it was providing nuclear material for Syria as allegations "fabricated by lunatics".

Pyongyang's forceful denial followed an attack by Israeli warplanes in northern Syria earlier this month.

The strike was allegedly on either a joint Syrian-North Korean nuclear project or a shipment of arms for Hizbullah guerrillas in Lebanon.

"That matter is fabricated by lunatics, so you can ask those lunatics to explain it," North Korea's top nuclear envoy, Kim Kye Gwan, told reporters as he arrived in Beijing for the latest round of talks on Pyongyang's nuclear weapons programme.

Envoys from the two Koreas, China, the US, Japan and Russia are scheduled to meet from Thursday to set out a timetable for dismantling Pyongyang's nuclear weapons programme.

Under an agreement reached in February, the five countries agreed to provide North Korea with 1m tons of heavy fuel oil, or the monetary equivalent in other aid.

In return, Pyongyang agreed to shut down its main nuclear reactor at Yongbyon - which it did in July - and to then reveal details of its nuclear programmes, with full disarmament as the ultimate goal.

"The closure of Yongbyon wasn't the key to this dispute. It was the prelude to resolving the key issues," Zhang Liangui of the Central Party School in Beijing, the main training site for Communist party officials, told Reuters.

"The key will be whether North Korea will agree to revealing its nuclear weapons in the declaration and how it will explain its uranium enrichment activities."

Speculation about possible nuclear links between North Korea and Syria has clouded the latest talks in Beijing.

The North today sought to turn the tables by accusing the US of helping Israel with its nuclear programme.

Its Communist party newspaper, Rodong Sinmun, accused the US of "shutting its eyes" to the nuclear programmes of its allies while "taking issue with the rights to nuclear activities of other countries for peaceful purposes".

The paper cited US help for Israel's nuclear weapons programme as an example. "The US has long actively promoted and cooperated with the Israeli nuclear armament plan," it said.

"They decided to provide assistance to Israel's nuclear development programme. Then the US dispatched nuclear experts to Israel and transferred highly enriched uranium, the key ingredient for nuclear weapons, to them."

Israel is widely believed to be a nuclear power, but its government has never formally confirmed or denied that it has nuclear weapons.

## **Exclusive: Ynet reporter visits site of ‘Syria operation’**

Ynet reporter and commentator Ron Ben-Yishai visits Syria, speaks to residents about Israel’s alleged overflight

Ron Ben-Yishai

Published: 09.26.07, 07:16 / Israel News

Deir Ezzor is a city located in the Syria’s northeast region close to the Turkish border, and home to what Syria claims to be an agricultural research station.

It was there that residents heard the sound of jets overhead on the night between the fifth and sixth of September. It was there that Israel allegedly carried out an air raid two weeks ago.

**Ron Ben Yishai in Deir Ezzor (Photo: Ron Ben-Yishai)**

At a checkpoint in the city, a Syrian soldier refused us access to the agricultural research station. “Mam’nua!” he said firmly, and signaled a warning sign with his hand upon noticing the camera.

The farm was four or five kilometers away from us. From a distance, we could see some pits that looked like part of a mine or a quarry. But it was hard to identify exactly what was being done there.

Deir Ezzor locals did not seem to take the issue seriously, but nevertheless described Israelis as being conniving and evil, and believed they were capable of anything.

“There were a few Israeli planes here that made supersonic booms over the city and maybe even dropped something. We didn’t hear any explosions on the ground,” said Ali (alias), a resident of the city.

“All this talk about supposed tensions following an overflight of fighter planes is only meant to intimidate Israel. But the threat is not real,” a Syrian journalist told me.

“It’s all to deter Israel from doing something similar,” the journalist continued. According to him, Israel caused the supersonic booms in order to bait Syria into shooting down the planes, and thus give Israel reason to declare war.

In recent weeks, since Syria first reported an Israeli air raid on its territory, the international press has published more and more testimonies and claims regarding cooperation between Damascus and Pyongyang on nuclear issues.

Among other things, it has been claimed that Israel’s alleged attack came three days after the arrival of a shipment from North Korea in Syria. The North Korean government refuted the reports, and said they were “fabricated by lunatics”.

Nevertheless, a security meeting between representatives of both countries regarding “common interests” was reported as taking place at around the same time.

The full story will be published Wednesday by Yedioth Ahronoth. A complete documentation of Ron Ben-Yishai’s visit to Damascus, the Syrian Golan, and other sites, will be published in Ynet and Yedioth Ahronoth at the end of next week.

## **Congress Throws Covert Israeli Attack on Syria Out Into the Open**

Florida Rep. Robert Wexler: 'This Is the World's Worst-Kept Secret'

Nathan Guttman

Wed. Sep 26, 2007

Washington - As Israel and the United States struggle to maintain a veil of ambiguity over Israel's alleged air strike against Syria earlier this month, Congress is bringing the issue out into the open and giving American sanction to an event that now seems all but confirmed.

Democrat Robert Wexler from Florida introduced a resolution this week supporting Israel's covert operation and backing the country's right to defend itself "in the face of an imminent nuclear or military threat from Syria."

"This is the world's worst-kept secret," Wexler told the Forward this week, stressing that his proposed resolution did not reveal anything that wasn't already reported in the world press.

With the lack of any official American or Israeli comment on the alleged air strike, Congress has become the leading voice in debating and promoting public discussion on the issue. A congressional source told the Forward that both the administration and Israel had expressed no opposition to having Congress play this role and that they did not ask lawmakers to abide by the rule of secrecy that both governments imposed on themselves.

The congressional source said that officials in the administration have confirmed in private conversations that the attack indeed took place. The source also said that "in general terms, the reports are right," referring to media reports describing Israel's target in Syria.

Ranking minority member on the House Foreign Affairs Committee Ileana Ros-Lehtinen also took on the issue of the Israeli attack on Syria, which according to reports was aimed at nuclear devices that Syria received from North Korea. According to Ros-Lehtinen's proposal, Pyongyang will not be removed from America's list of countries sponsoring terror until it stops supplying Damascus with nuclear technology. Both resolutions are now in the process of collecting co-sponsors and are expected to be referred to the foreign affairs committee.

According to Wexler, who is a strong backer of Israel and a member of the foreign affairs committee, congressional support for the Israeli attack is needed, since it will pose "an obvious contrast" to the lack of action on behalf of Congress when Israel attacked an Iraqi nuclear reactor near Baghdad in 1981, effectively putting an end to the Iraqi nuclear program.

Wexler added that he is pushing forward the resolution, also, in order to make clear to Syria that it will have no support if it attempts to complain about Israel at the United Nations or any other international forum.

According to Wexler, the Israeli operation "has an important positive impact on America" since Israel has "proactively negated what is seen as a Syrian nuclear effort."

Israel and the United States are in accord on issues relating to the covert action in Syria and on the need to refrain from any public affirmation of the attack, diplomatic sources said. The Washington Post reported last week that Israel had shared intelligence with the United States after first learning about the nuclear ties between Syria and North Korea.

Former Middle East envoy Dennis Ross, who is now with the Washington Institute for Near East Policy, wrote this week in a New Republic op-ed that the attack not only took care of a potential nuclear threat but also restored Israel's deterrence in the region.

"In effect," Ross wrote, "[the Israeli raid] tells President Assad that Syria has few secrets it can keep from Israel. For a conspiratorial and paranoid regime, this is bound to keep its leaders preoccupied internally trying to figure out what Israel knows and doesn't know."

While showing silent support for Israel's action, the administration is also extending an olive branch to Damascus by inviting its representatives to participate in the upcoming Middle East peace conference, scheduled for mid-November in Washington. The invitation was not conveyed directly to Syria, but rather to all countries that belong to an Arab League committee on advancing the Arab peace initiative.

The notion of Syria attending the peace conference was shot down the next day, when Syrian officials said that their country will not take part in the event. Israeli sources said that Jerusalem has no say on who attends the conference, as long as the basic ground rules of recognizing Israel and renouncing terror are kept.

Scott Lasensky, a Middle East scholar at the United States Institute of Peace, said that the seemingly contradictory signals Washington is sending Damascus are yet another sign of the lack of coherent policy toward Syria.

"There is no overall strategy regarding Syria," said Lasensky, who co-authored a study calling for a reassessment of the American approach to Syria. The study calls for a more robust policy that will include not only coercion but also engagement, and that will, among other measures, reconsider the Syrian peace offer to Israel based on its merits.

This peace offer, forwarded by President Bashar al-Assad several times in the past year, appears now to be off the table. Reuters news agency quoted an unnamed Syrian official this week as saying that the Israeli Air Force attack on September 6 had "ruined chances for peace."

**Sept. 26 [2007] Democratic debate transcript**

[EXCERPTS]

*[Sourcebook note: At the time of this debate, Senator Clinton was a member of the U.S. Senate Committee on Armed Services Subcommittee on Emerging Threats and Capabilities.]*

Russert: OK, all right -- all right, we've had that discussion.

Senator Clinton, in 1981, the Israelis took out a nuclear reactor in Iraq. On September 6th, to the best of our information, Israel attacked Syria because there was suspicion that perhaps North Korea had put some nuclear materials in Syria. If Israel concluded that Iran's nuclear capability threatened Israel's security, would Israel be justified in launching an attack on Iran?

Clinton: Tim, I think that's one of those hypotheticals, that is...

Russert: It's not a hypothetical, Senator.

Clinton: ... better not addressed at this time.

Russert: It's real life. It's real...

Clinton: What is real life is what apparently happened in Syria, so let's take that one step at a time.

Russert: But my question -- no, let me finish.

Clinton: I know what the question is.

Russert: My question is...

Clinton: But I think it's important to lay out what we know about Syria...

Russert: What Israel -- my question is...

Clinton: ... because we don't have as much information as I wish we did. But what we think we know is that with North Korean help, both financial and technical and material, the Syrians apparently were putting together, and perhaps over some period of years, a nuclear facility, and the Israelis took it out. I strongly support that.

We don't have any more information than what I have just described. It is highly classified. It is not being shared. But I don't want to go a step further and talk about what might or might not happen down the road with Iran.

Russert: My question was...

Clinton: But I think it is fair to say what happened in Syria, so far as we know, I support.

Russert: My question is: Would the Israelis be justified if they felt their security was being threatened by the presence of a nuclear presence in Iran, and they decided to take military action? Would they be justified?

Clinton: Well, Tim, I'm not going to answer that, because what I understand is...

Kucinich: I'll answer it.

Gravel: I'll...

Clinton: ... that there was evidence...

(Laughter)

Clinton: Well, let me just finish and then Mike and Dennis can answer.

But there was evidence of a North Korea freighter coming in with supplies. There was intelligence and other kinds of verification.

So I don't think it's a question of if they feel it. That is a much higher standard of proof. Apparently it was met with respect to Syria.

*[deletia]*

Russert: Senator Obama, would Israel be justified in launching an attack on Iran if they felt their security was jeopardized?

Obama: I think it's important to back up for a second, Tim, and just understand. Number one, Iran is in a stronger position now than it was before the Iraq war because the Congress authorized the president to go in.

And so, it indicates the degree to which we've got to make sure before we launch attacks or make judgments of this sort, that we actually understand the intelligence and we have done a good job in sorting it through.

Now, we don't know exactly what happened with respect to Syria. We've gotten general reports, but we don't know all the specifics.

We got general reports in the run-up to the Iraq war that proved erroneous, and a lot of people voted for that war as a consequence.

## **Hillary Clinton says she supports 'apparent' IAF action in Syria**

By Haaretz Service

Last update - 07:18 **28/09/2007**

New York Senator Hillary Clinton said on Wednesday evening [26 September 2007] that she supports what she said was the Israel Air Force's "apparent" action against a nuclear facility in Syria.

Clinton spoke during a televised debate for the leading candidates vying for the Democratic nomination for U.S. president.

The candidates largely evaded questions on the incident, on which foreign media has speculated but Israel remains quiet. The moderator of the debate, Tim Russert of NBC, raised the issue of Syria when asking whether the candidates would support an Israeli strike on Iran, should it acquire nuclear capabilities.

Clinton called the question "hypothetical," and told Russert, "That's better not addressed at this time," despite Russert's repeated attempts to extract an answer on whether a nuclear Iran would warrant an Israeli attack.

However, she went on to say, "We don't have as much information as we wish we did. But what we think we know is that with North Korean help, both financial and technical and material, the Syrians apparently were putting together, and perhaps over some period of years, a nuclear facility, and the Israelis took it out. I strongly support that."

The senator from New York also backed up reports, first exposed by The Washington Post two weeks ago, that that the IAF targeted a North Korean shipment of nuclear material that arrived in Syria three days before the strike.

"There was evidence of a North Korea freighter coming in with supplies. There was intelligence and other kinds of verification," Clinton said.

She went on to emphasize that she had no other information on the incident because of its "highly classified" nature.

Obama and Edwards were less forthcoming in their responses. On Syria, Obama said only, "We don't know exactly what happened." He said that the United States is a "stalwart ally of Israel," but added only that diplomatic means must be pursued to prevent Iran from acquiring nuclear capability. Edwards did not mention Israel, but spoke vehemently against authorizing U.S. President Bush to pursue nuclear action in Iran.

<http://conflictblotter.com/2007/09/28/more-juice-on-the-syrian-air-strike/>

## **More juice on the Syrian air strike**

**September 28th, 2007**

The Kuwaiti press claims a pair of scoops on the September 6 Israeli air strike in Syria.

The Al Jarida newspaper reported Friday [2007-09-28] [<http://www.aljarida.com/aljarida/Article.aspx?id=26165>] that retired Iranian general Ali Reza Asgari [*also transliterated as Askari and Asghari*], who defected in February, gave Israel the intelligence on Syria's missile program used in the Syrian airstrike. After the former deputy defense minister and Revolutionary Guard commander disappeared during a visit to Istanbul in February of this year it was widely reported in both the English and Arabic press that he was providing a gold mine of info to Western intelligence agencies.

Meanwhile, Kuwait's Al Watan newspaper, citing senior European diplomats, reported Friday [<http://www.alwatan.com.kw/default.aspx?pageid=37&mgdid=549500>] that US jets provided air cover to the Israeli fighter jets during the Syrian air strike. Writes Al Watan:

The sources said Washington had intensified its efforts to corner Assad, in order to make him confront the two opposing factions within the ruling regime. One of those factions is calling for direct retaliation against Israel, while the other prefers avoiding entanglement in a conflict whose results are uncertain, fearing the possibility that the Israeli air raid is an attempt to provoke a knee jerk reaction from Syria and draw it into a war that will extend to Iran.

<http://www.israelnationalnews.com/News/Flash.aspx/133907>

### **'Iranian Defector Enabled IAF Syria Strike'**

Reported: 14:39 PM - **Sep/28/07**

(IsraelNN.com) Kuwaiti newspaper Al Jerida reported Friday that the intelligence for Israel's alleged attack on a Syrian target in early September was provided by Gen. Ali Reza Asgari, who defected from Iran a few months ago. Asgari was allegedly involved in the development of Syria's missile program.

Another Kuwaiti paper, Al Watan, quoted diplomatic sources in Europe as saying that US jets circled above the Israeli fighters and gave them aerial cover during the operation.

It also said that Russian experts are trying to understand how the IAF jets managed to enter deep into Syrian territory without setting off two Russian-built radar systems that were in place in Syria.

## Seven Questions: The World According to John Bolton

Posted September 2007

[EXCERPT]

Negotiations with North Korea are on a knife's edge. Rumors of secret Israeli raids on alleged Syrian nuclear facilities and possible U.S. airstrikes on Iran are roiling political salons from Washington to Riyadh. In this Seven Questions, former U.S. Ambassador to the United Nations John Bolton offers some advice for those confronted with a dangerous world.

**FOREIGN POLICY:** It's been a tense week on the nuclear front, with Syria accusing Israel of invading its airspace, and then North Korea blasting Israel for doing so. You've been one of the only people who have spoken openly about the likelihood that Israel bombed nuclear facilities in Syria. If that were the case, why do you think Israel wouldn't announce it had done so?

**John Bolton:** Well, I don't think we really know what the target of the Israeli raid was. There seems to be a lot of indication that there was a North Korean-Syrian project in the nuclear field, although obviously the details of that are not known. And what that suggests is that we need very clear answers from the North Koreans in the context of the six-party talks [as to] whether indeed they are proliferating nuclear technology, whether they're outsourcing their program—or just exactly what it is they're doing.

Now, what the Israeli raid actually hit, I don't think people know. I was certainly reacting against the notion that it was an attack on a shipment of missiles bound from Iran to Hezbollah, because I don't think the Israelis would take the risks inherent in an attack on Syrian territory against a target like that. To me, it suggests that it was a higher-value target, and a nuclear facility of some kind would definitely qualify. But what exactly the target is, I don't know myself, and I'm not sure that there's anything but speculation out there at this point. There has been at least some public acknowledgment through official U.S. sources that there are concerns about not just North Korean ballistic-missile cooperation with Syria, which we've known about for some time, but the possibility that there's cooperation on the nuclear front as well.

## **Foreign Minister of Syria Says Tensions Are Escalating in Middle East**

**01/10/2007**

Another country in the region, Syria, says that the Middle East continues to be an arena of daunting challenges and heightened tensions as a result of the continued Israeli occupation of Arab territories. Addressing the General Assembly today, Syria's Foreign Minister Walid Al-Moualem, said this is not a new development, but the challenges and tensions are escalating, threatening security and stability throughout the region.

Foreign Minister Al-Moualem said the latest act of Israeli aggression against Syria on September 6th was proof of Israel's desire to escalate tension:

"We reiterate that the failure of the international community, including the Security Council, to condemn this act of aggression would encourage Israel to persist in this hostile pursuit, and lead to an exacerbation of tensions in the region."

The Foreign Minister of Syria said his country has repeatedly stressed that peace was its strategic choice.

## **DPRK Weekly: US 'Hardline' Forces 'Fabricating' DPRK-Syria Nuclear Cooperation**

Article by Pae Yo'ng-il: "Vicious Smear Commotion Aimed at Crushing the Republic"

T'ongil Sinbo (via Uriminjokkiri Internet)

Monday, October 1, 2007 T01:50:41Z

Document Type: OSC Translated Text

Word Count: 687

Strange talk about some "nuclear materials transfer" by the Republic is going around in the United States lately.

The gist of it is that the Republic is secretly supplying Syria with nuclear materials and equipment.

However, the countries involved, and a majority of the world's countries as well, lend no credence to this so-called "nuclear materials transfer." Even US allies are showing a reaction of disbelief, noting inconsistencies in reports by the US media.

This tells us that the so-called "nuclear cooperation" between the Republic and Syria is an anti-Republic smear story that someone created through an intentional, planned fabrication.

The problem, however, is that this rumor, which is without any factual data or scientific evidence whatever, is being circulated extensively among senior bureaucrats in the US administration.

The US newspaper "New York Times," which first reported the matter, revealed that "The information was received from a certain high-level figure in the US Government," and this is confirmed by US Defense Secretary Gates clamoring on 16 September, "If the nuclear cooperation story is true, then it is of great concern." Moreover, a US State Department spokesperson even made the deeply provocative remark, "We will bring up the issue of the Republic's nuclear proliferation" at the next six-party talks.

So, why is this vicious, anti-Republic smear story suddenly fabricated and circulated in the United States?

The world press claims that hard-line conservative forces in the present US administration, which does not desire peace and security on the Korean peninsula and wants to somehow realize its policy of crushing the Republic through isolation blockades and military aggression, came up with this "nuclear cooperation story."

This is not mistaken.

In times past, too, every time DPRK-US relations were going smoothly and the issue of guaranteeing peace on the Korean peninsula came to the agenda, hard-line conservative forces of the United States

would intentionally come up with "suspicious incidents" to turn dialogue and negotiation into confrontation and mistrust.

Some straightforward examples of this are how former US Undersecretary of State Bolton, who is considered to be representative of US hard-line conservatives, cited some "enriched uranium nuclear program" in 2002 and wantonly overturned a DPRK-US agreement from the Clinton administration's time, and how, in 2005, (they) came up with "the story of North Korea's manufacture of counterfeit currency" and wrecked implementation of the 19 September Joint Statement for nearly two years.

The facts plainly show that the "DPRK-Syria nuclear cooperation story" is something that comes from the vicious malice of US hard-line conservative forces who want to block the improvement of relations between the Republic and the United States, drive the Korean peninsula political situation into aggravated tension, and ultimately achieve the crushing of the Republic through confrontation and war.

One researcher with the Center for American Progress, a public research organization in the United States, also disclosed that hard-line factions in the US administration "started these suspicions for the purpose of creating an obstacle in North Korea-US nuclear negotiations," which they have criticized as being too appeasing.

The US hard-line conservative forces, however, are making a miscalculation.

As history shows us, no matter how many "suspicious incidents" US hard-line conservative forces have come up with in their vicious schemes to apply pressure on the Republic and realize their aggressive ambitions, justice and victory have always been with the Republic, and their vile attempts at crushing (it) could not escape wretched defeat.

Though the United States clamors about some "nuclear cooperation" by the Republic, that will not work in today's enlightened world. The US hard-line conservative forces must clearly consider the present reality and immediately cease their unjust propaganda to smear and crush the Republic.

**Full text of the interview given by HE  
Dr. Bashar al-Assad  
President of the Syrian Arab Republic  
to  
Lyce Ducet of the BBC  
OCTOBER 1, 2007  
Damascus**

**Ms Ducet:** President Bashar Al-Assad welcome to this BBC interview.

**President Assad:** You are most welcome in Syria.

**Ms Ducet:** Syria and Israel are now in a state of high alert, how do you see the possibility of the war?

**President Assad:** Whenever you talk about non-peace and non-war situations, this means that it will end by either peace or war; you do not have a third option. We have been working on peace since the peace conference in Madrid, 1991. Of course, the situation and the atmosphere are not good as it was used to be.

**Ms Ducet:** It is significantly more tense now, especially in the last few weeks.

**President Assad:** Exactly, you are right. But that does not mean that we do not have an open window or light at the end of the tunnel; we still can work for peace in order to turn the tide in the right direction towards the peace.

**Ms Ducet:** Tension increased after the 6th of September when Israeli jets entered Syrian space in the north and they carried out a bombing raid that remains mysterious to this day, what did they bomb?

**President Assad:** They bombed buildings and constructions related to the military, but it's not used, it's under construction, so there are no people in it, there is no army, there is nothing in it and we do not know the reason, it was not clear. But for us it reflects the fundamental antipathy of Israel towards peace. That is how we see it. It does not matter what the target is.

**Ms Ducet:** But why would they carry out such a high risk raid if they were not going after what you call a highly valued target?

**President Assad:** That's what you have to ask the Israelis. We are working to achieve peace in the region. We in Syria work for peace. It was surprising for us and for the entire world, why they did they

do it? Nobody knows why. What is the target? But the target is not an important target; and I think if they knew what it was they would not have done it.

**Ms Ducet:** But they were obviously sending a message to you. What was the message?

**President Assad:** I told you, because they work against peace; this is against peace. You cannot talk about peace and carry out attacks against a neighboring country. This is the only message that we got.

**Ms Ducet:** But at the same time the Israeli Prime Minister reassured you that he was interested in peace and even complemented you and said that he respects you and respects Syrian conduct. So, the air raid reflects something different?

**President Assad:** The strife that has been going on for six decades now in the region is not about personal matters to admire or respect me. It is about rights; we have our land – the Golan Heights – which is occupied and it has to go back. This is the only way to achieve peace and it is not by label or mantra or by just saying that they want peace. They have to work for peace and this attack is in the other direction.

**Ms Ducet:** But you know that there are so many speculations swirling about this: whether it was a suspected nuclear site set up with the help of North Korea, whether it was the North Koreans trying to dispose of some nuclear materials, whether it was an arms cache for Hizbollah in Lebanon, whether Israel was trying to test your air-defenses, all the details are swirling about. Why is it so mysterious in a region where there are so few secrets?

**President Assad:** It was not mysterious. We said everything in the media.

**Ms Ducet:** But it is mysterious because from Washington all the way to Tel-Aviv there is a news blackout, unprecedented for this region. So everyone says there must be something that happened and only you - there are only a few people, maybe you can count on one hand - who know exactly what happened, and you are one of them?

**President Assad:** This propaganda reminds us about what happened before the war in Iraq when they showed all the concrete evidence that Iraq has nuclear programmes or WMD programmes which turned out not to exist at all. So, about the propaganda, we do not have to waste our time about propaganda, because it is the same story. As to the reason, only the Israelis know what it is.

**Ms Ducet:** Are you going to retaliate?

**President Assad:** Retaliate does not mean missile for missile and bomb for bomb. We have our means to retaliate, maybe politically, maybe in other ways. So we have the right to retaliate in using different means, but if we wanted to retaliate militarily this means that we are going to work according to the Israeli agenda, which is something we do not look for. That does not mean we squander any opportunity for peace in the near future, something we do not want to see happening.

**Ms Ducet:** Israel used the option of an air raid, what about Syria? Do you keep military options on the table? Everywhere I go in the region, when I speak to Arab or Israeli leaders, they tell me that Syria has been re-arming since the war ended last year in Lebanon, getting better missiles, better air-defenses,

strengthening its defenses along the Golan Heights, leading to suspicion that you are planning a military strike?

**President Assad:** It is always an option. That is why you have the army to defend your territory. We do not build the army to make any aggression but to defend our country, and this is normal, especially after the war on Lebanon last year when we saw the Israelis wreck havoc in the Lebanese cities, in Beirut and in southern Lebanon where they killed civilians. It is very normal and self-evident that we are going to prepare ourselves for that, so it is an option.

**Ms Ducet:** So to those who say they are worried that Syria could carry out a military strike you say it is possible?

**President Assad:** It is possible, but we do not say that this is our option. We did not say that this is the option we are going to adopt now. We said we have many different means. That depends on which is more effective, which option achieves our interests. It is not only about the military option. This is one of the options, but we keep it. This is the last option. It should not be the first anyway if you want to talk about peace, it should not be the first option.

**Ms Ducet:** But in the present context where, although you do not seem to accept that, Israel has said it sent you a message, Washington says it sent you a message, they say you got the message; so what do you say back to them, what is your message back to them?

**President Assad:** I do not know if they see into my mind if I got the message or not.

**Ms Ducet:** Only you know that.

**President Assad:** No, they know what the message they want to send, they have to announce it.

**Mr. Ducet:** They did quite dramatically.

**President Assad:** They did not tell me directly what their message is. Again, I would say the only message that we got is that the Israelis do not want peace. This is the only message. If we say that this is an aggressive state, this is something we know for a long time; so this is nothing new.

**Ms Ducet:** So you deny that you are working with North Korea on any kind of nuclear cooperation?

**President Assad:** We have a relation with North Korea and this is not something in secret. We have a relation with them but to have a construction, if you have, like they say you mean the nuclear, we are not interested in any nuclear activity. So far even peaceful reactor we do not even mention peaceful reactor for electricity or for any peaceful use in Syria. Talking about a strategic project like this, you do not have any protection, any air-defence, any people and then the aircraft attack that reactor and there is no radiations, no emergency plans. This is impossible. This is only a building, a construction, and they attacked this construction, nothing happened. So, it is not nuclear at all; these are only false claims.

**Ms Ducet:** So has this put off the agenda for now any hopes of a resumption of official peace talks with Israel?

**President Assad:** For the meantime yes, unless they change their behavior.

**Ms Ducet:** How would you describe the state of tension now, how high is it?

**President Assad:** It is definitely high. It is high, how high we do not have a measure to say how high. It is dangerous, the situation is dangerous but we have to work to reverse it. We do not have to keep it high anyway if we want to talk about peace, although we do not see peace on the horizon, but we have to keep working for it, otherwise nobody knows where the region is going to.

**Ms Ducet:** You repeatedly have said that you would like to have direct talks with Israel on a peace deal, including giving back the Golan Heights occupied in 1967 war, and Israel has repeatedly said that it is always ready for unconditional talks, so what is stopping you?

**President Assad:** Talking about the negotiations needs more than one party; it needs a third party, which should be an impartial arbiter, but it does not exist. The United States, especially this administration, is not interested in peace. It is impossible to move towards peace and to achieve something without the United States; that is what stopped it. This is first. Second, you have a weak government in Israel, and weak governments can launch war; they cannot make peace. While in Syria we still have the public support to go towards peace, and we do not have any problem. So, we have to see what can be done with the other party to talk about direct negotiations.

**Ms Ducet:** George Bush said on June 7 to the Israeli Prime Minister: You do not need me to negotiate with Syria; go ahead on your own. For you that meant that talks are off?

**President Assad:** Yes exactly, because without a third party you cannot achieve peace, because of different circumstances and many accumulations through the last few decades; it is not that easy to say just go and talk directly.

**Ms Ducet:** But the Israelis and the Americans say why should they talk peace to Syria while you are giving exile to Khaled Mashaal, the leader of Hamas, standing with Iran and arming Hezbollah, and unless you end those ties they say there cannot be any peace-talks with Syria for peace?

**President Assad:** We did not invite Hamas to Syria; they were expelled from their country and we did not invite them. It is normal for them to be here. Hezbollah represents a large section of the Lebanese and we have normal relations with the Lebanese people, and it is normal to have relations with them and to support their cause. This is not related to being against peace. This is not logical; it is devoid of logic.

**Ms Ducet:** But you know that this is the key demand for Washington and you have to shift direction in your alliances if you would like genuinely to make peace in this region?

**President Assad:** This argument is devoid of logic, and there is no relation between this and that. Otherwise, I will say that the Israelis are killing Palestinians everyday; why to go to peace with them? How do they talk about peace and they kill Palestinians and they killed Lebanese last year. We do not kill anyone; we politically support any party, organization or country which has a just cause; this has been our position forever.

**Ms Ducet:** Is Syria going to go along to the Middle East conference planned it is seems for November to bring together Israelis, Palestinians, other Arab nations and important players in the region?

**President Assad:** I think we do not have a lot of opportunities to squander, because the more opportunities you lose, the more peace is going to be difficult. I mean this conference or any conference is going to be an opportunity, but it should be purposeful and substantive. I do not see where the purpose and what the substance of this conference is, what are they going to talk about, what are the criteria, what are the methods and means? Everything is not clear. If you want to prepare for a conference like this, you have to see what happened before in the Madrid Conference in 1991 when there was shuttling by the American officials between the different countries for nearly ten months. They did not go to any party this time. So what kind of conference is this one? It needs more clarification for Syria to take a decision.

**Ms Ducet:** If the Palestinians said that substantive issues; the final status issues of a peace deal are on the table, would Syria go?

**President Assad:** But it is not about the Palestinians and Palestinian territory; it is about the Syrian occupied territory, the Golan Heights. So, if they do not talk about the Syrian occupied territory, there will be no way for Syria to go there.

**Ms Ducet:** But it is not about Syria in this conference. It is first and foremost about an Israeli-Palestinian peace deal?

**President Assad:** It should be about comprehensive peace and Syria is part of this comprehensive peace. Without that we would not go.

**Ms Ducet:** So, most probably you are not going?

**President Assad:** If the criteria of this conference do not meet our needs and achieve our interests, we will not go.

**Ms Ducet:** What is your message to George Bush now?

**President Assad:** About what?

**Ms Ducet:** About how he should be dealing with Syria?

**President Assad:** I would only say to anyone who dealt ...

**Ms Ducet:** Well that's George Bush yes, if you want him to help you make peace with Israel, and since you are worried about the Middle East conference he is organizing?

**President Assad:** I will only tell them that their approach towards Syria, the previous approach towards Syria was futile, and you have to seek another approach which is dialogue and taking our interests into consideration. That is the only message we want, it is about our interests.

**Ms Ducet:** Well, Condoleezza Rice says I think we have not seen anything in Syrian behavior to this point that suggests Syria is doing anything but acting in a destabilizing way in the Middle East, and that is why they say they do not want to talk to you right now?

**President Assad:** I do not think that we created the war in Iraq to talk about destabilizing the Middle East; we did not create the problem in Lebanon recently, we did not meddle in the affairs of different countries to create the instability or to sow instability. This is first. Second, we do not have any interest in sowing instability in the region because we are going to pay the price. We have strong interests in having a stable region and that is what we are working for. So, we do not take these statements into consideration.

**Ms Ducet:** Some people say that you are just waiting and biding your time until president Bush finishes his second term. You do not expect anything from him?

**President Assad:** No, because we do not bet on any President or administration. We are betting on policy. But again, as I have said many times that we have lost hope with this administration. We do not think that they will work for peace. We do not think that they have learned anything from their experience and failure in Iraq. That is why, so if you call it buying time or whatever it is something subjective, but this is the reality.

**Ms Ducet:** For Washington, the number one issue, as you know, is Iraq. They maintain that you were more cooperative but still not cooperative enough. Let me just quote what ambassador Ryan Croker said to Congress in September, which you might have heard, that Syria's role has been problematic, you did host a meeting of the border security working groups, interdicted some foreign terrorists in transit to Iraq, but on the other hand, suicide bombers continue to cross the borders from Syria to murder Iraqi civilians?

**President Assad:** Again this is against our interests, because if you have chaos in Iraq we will have chaos in Syria. We are already paying the price of the chaos in Iraq. You know about the refugees in Syria; we have about 1.5 million. So we are paying the price. What is the goal of Syria in ignoring those people or those terrorists who cross the borders as they claim? Actually, the problem is political. Whenever you do not have a real political process in Iraq, you will have this chaos, and you will have the fertile ground for the terrorists. These are the issues.

**Ms Ducet:** Do you accept the report that there are foreign fighters crossing your borders going to Iraq?

**President Assad:** Any country cannot seal its borders as the Americans say. And they said they cannot control their borders with Mexico. This is the major or the greatest power in the world; it cannot control its borders. So any country cannot control its borders. But if you have smuggling, you do not know about it. It is illegal and you do not know about it. This is to be expected anywhere in the world. But if they have any information, they should send out this information, if they have any concrete information. But they only have allegations.

**Ms Ducet:** They say, and I quote the pentagon in September, this network it is funneling about 50-80 suicide bombers passing from Syria into Iraq.

**President Assad:** If they knew they crossed the Syrian borders, this means they know who they are. This is just theoretical.

**Ms Ducet:** But what do you say to them? Do you say I want to do more, but I cannot do more, because I do not have the resources. It is not a question of political will? Because they say you want to keep some of these foreign fighters here along with other groups to maintain your political options if you like, your ability to exercise influence in your neighboring countries?

**President Assad:** It is self-evident that you want to control your borders. Any country wants that. So if I want to do more, it is for my interests. We are not working for their interests. They have to know that. We have an interest in controlling our borders and we told them and many Europeans about the whole borders with Lebanon and Iraq and we said that we want to control it and any help will be welcomed. But, talking about sealing the borders, this is something not logical and not realistic.

**Ms Ducet:** Are you also working to try to prevent that kind of chaos in Lebanon? People say that Syria can do a lot more to bring about a stable solution for Lebanon which has been deadlocked many years as you know between the pro-Syrian and the Anti-Syrian coalitions?

**President Assad:** Definitely we have to work for the stability in Lebanon because again we paid a high price in Lebanon in the past because of the civil war in the 1970s and the 1980s, and we have to support the consensus in Lebanon. This is our position today; we support any consensus in Lebanon about any issue and we have interest in having a stable Lebanon.

**Ms Ducet:** Since Rafiq Hariri was assassinated in February 2005, seven prominent Lebanese including 4 members of parliament were murdered. All of them were described as anti-Syrian. You have denied being involved. If you are not involved, who would it be?

**President Assad:** But before that many pro-Syrians were killed and they did not mention that, so who killed them?

**Ms Ducet:** But who is killing the anti-Syrians?

**President Assad:** We do not know. We are not in Lebanon any way.

**Ms Ducet:** But you have influence there, a great deal of influence. Your ally Hezbollah there is playing a prominent role?

**President Assad:** Of course we have influence and we have good relations; we are a neighboring country to Lebanon and of course we have influence and this is normal, but having an influence is different from committing crimes in Lebanon. We never said that we do not have influence in Lebanon, but we have positive influence and you can have negative and bad influence; this is not in our interest. What did we get from killing those people? That is the question which should be asked. Even if we want to accuse Syria, the question should be: did Syria get any benefit from that? Actually no. the opposite is happening; we are accused and the people who are described as anti-Syrian get the benefit from that not Syria.

**Ms Ducet:** Your father, President Hafiz al-Assad, passed away without getting back the Golan Heights that you lost in 1967 war; do you think you will get it back in your lifetime as part of a peace deal with Israel?

**President Assad:** Definitely we will have it back. There is no other choice. We are not going to give it up. Some day we are going to get it back.

**Ms Ducet:** But it is not going to happen in the coming few years?

**President Assad:** Not with this American Administration.

Ms Ducet: Or with this Israeli one?

**President Assad:** It depends more on the American administration and American policy more than the Israeli one.

**Ms Ducet:** But you have to deal with Israel, they say that you use the Americans as an excuse?

**President Assad:** But from our experience through the last 16 or 17 years, since the peace process started, the main factor is the American Administration and they can apply pressure on all parties and they can play an active role in that regard.

**Ms Ducet:** Some people wonder why President Bashar al-Assad does not do more to try to repair his relations with Washington, when it matters so much to most important issue for you, which is to get the Golan Heights back, and yet your closest ally is Iran which pushes you into a corner and creates more isolation for you?

**President Assad:** Actually, we tried hard for many years, but they always turned a deaf ear not only to Syria but even to their allies who were disappointed because of the reaction towards the peace issue, Iraq, Palestine and even towards the issue of terrorism. They turned a deaf ear. It is not true that we did not try; we tried hard and it is very normal that you have to try to keep good relations with the major power in the world; it is not wise not to look for bad relations with it.

**Ms Ducet:** Was this a source of regret for you? I mean you want to be at the top table, you want to be involved in the major decisions in the region, but you are isolated from your Sunni Arab neighbors, and you are isolated from the major powers? This is not in Syria's interest?

**President Assad:** No, they cannot isolate Syria. Isolating Syria does not mean that you do not have visitors or that they do not talk to you; isolating Syria means that Syria is not active in any issue. Can they solve any problem without Syria? That is the question that they have to answer. If the answer is yes, they would not say that we have to play a better role or to show different behavior. If we are not important and isolated, they would not care about Syria. So, they cannot isolate Syria. It is a matter of time and substance because in substance they cannot isolate Syria.

**Ms Ducet:** But could you make major political concessions to change your foreign policy approach?

**President Assad:** We are not going to haggle over our right and interests and this should be clear; we are not going to work for the others' interests; we work first for our interests, and if there are common interests, we will welcome making cooperation with any country in the world. That is what they have to know. To make concessions, what do they mean by concessions?

**Ms Ducet:** Cutting your ties with these militant groups that seem to be part of the problem and not part of the solution like Hezbollah, Islamic Jihad and Hamas, who are all in Syria?

**President Assad:** All these issues are related to the peace process. If you have peace, you would not have any problem. It is all related to peace, and if you have comprehensive peace, you will not have problems with Hezbollah, Hamas, Jihad, Syria, Iran or any other party in the region.

**Ms Ducet:** It is a tough job for someone who has been trained as an ophthalmologist?

**President Assad:** Definitely, not because of being an ophthalmologist but because the reality is tough.

**Ms Ducet:** Tougher than you expected?

**President Assad:** No, I have been here since I was born. It is not related to the profession. Actually, if you want to take it as a profession, then being a politician is the profession of every Middle Eastern person today.

**Ms Ducet:** You finished one term and started the second; it is very disappointing that you have not achieved as much as you may have wished in this neighborhood and in the region?

**President Assad:** Of course it is disappointing; you always have rosy dreams when you come to your job, to achieve lot of things in your mind, but reality is different.

**Ms Ducet:** Mr. President Bashar Al-Assad, thank you very much.

**President Assad:** Thank you.

A.N.Idelbi

## **Syrian Foreign Minister says Security Council should condemn Israeli acts**

**1 October 2007** – The Security Council should condemn a recent Israeli "act of aggression" against Syria, the country's Foreign Minister told the General Assembly in a speech that also urged greater assistance to help Iraqi refugees and non-intervention in Lebanon's upcoming presidential elections.

## **Israel finally admits to Syrian air strike**

Published: Tuesday, 2 October, 2007 @ 6:47 PM in Beirut

*[EXCERPT]*

Damascus & Jerusalem - After nearly a month of official silence, Israel confirmed on Tuesday that its air force carried out a strike inside Syrian territory on Sept 6.

Israel eased a strict news blackout on Tuesday, regarding an airstrike in Syria last month, allowing the first publication of reports it struck an unspecified "military target" deep inside Syrian territory.

Journalists in Israel are required to submit articles related to security and military issues to the censor, which can make changes to stories or bar publication altogether. In a rare move, the censor's office issued a special directive about the Syrian air raid, specifically prohibiting publication of any details.

Violation of the censorship orders can result in the loss of press credentials or other sanctions.

Israel's military censor had imposed a total blackout on coverage of the Sept. 6 airstrike. But Tuesday, the office allowed preliminary details to be published after Syria's president, Bashar Assad, confirmed the airstrike in a televised interview.

"Israeli air force planes attacked a military target deep inside Syria on Sept. 6, the military censor allowed for publication today," Israel's Army Radio reported. The headline on the web site of the Maariv newspaper was, "Now it can be revealed: Israel attacked in Syria," while the Haaretz newspaper led with the military's permission to publish "the fact" of Israel's attack.

However, the censor continued to bar publication of other key details, including the target of the raid, which forces participated in the mission and whether the operation was successful.

Foreign reports, quoting unidentified U.S. officials, have speculated that Israel attacked a weapons shipment destined for Hezbollah guerrillas in Lebanon, or attacked a nuclear facility built with North Korean technology.

In an interview with the British Broadcasting Corp. Monday, Assad said Israeli warplanes attacked an "unused military building," the first time Syria officially acknowledged an air raid had taken place.

Previously, Syrian officials had said only that the Israeli warplanes entered the country's airspace, came under fire from anti-aircraft defenses, and dropped munitions and fuel tanks over northeastern Syria to lighten their loads while they fled.

## **Analysis: Syria-Israel tensions**

By Lyse Doucet

BBC News, Damascus

Last Updated: Wednesday, 3 October 2007, 13:18 GMT 14:18 UK

**The secret is out. But the speculation has not ended. And the tension lingers dangerously.**

Israel has suddenly broken its exceptional news blackout on a covert air raid against Syria, admitting officially its warplanes hit a "military installation" on 6 September.

This unexpected disclosure, after weeks of mysterious silence, came hours after the first public comments from Syria's President Bashar al-Assad.

He ended his silence in a BBC interview, saying Israeli jets hit "a building under construction related to the military but it's not used, it's under construction so there's no people in it, there's no army, there's nothing in it".

### **Regional views on conference**

So now it is official, on both sides. But speculation over exactly what was hit continues to create ripples in capitals around the world.

Was it a suspected nuclear site established with North Korean help? Had Pyongyang tried to dispose of some nuclear material to evade the inspectors? Maybe it was a Hezbollah arms cache? Or perhaps a test of Syria's new air defences?

### **'Propaganda'**

Why, I asked the president, would Israel carry out such a high-risk raid if it was not such a high-value target?

President Assad just batted the incongruity away. And, as always in the Middle East, history provided the answers.

"The propaganda reminds us," he said, "of what happened before the war in Iraq when they showed all the concrete evidence that Iraq had nuclear weapons or weapons of mass destruction which turned out not to have existed at all."

But Israel clearly sent a message to Damascus. Did Damascus get it?

The fact President Assad decided to give a rare interview suggested he had a message or two he also wanted to pass on.

What did Israel's raid tell him? That Israel had "a fundamental, visceral antipathy towards peace".

But Israel has also been sending messages to try to bring down the temperature.

Israeli Prime Minister Ehud Olmert even went so far recently as to offer a rare compliment to Mr Assad, saying "we have respect for the Syrian leader and the Syrian conduct".

President Assad seemed embarrassed by the personal praise.

### **Neither peace nor war**

In his interview, he spoke of a time of "non-peace and non-war" in a region where it had to be "either peace or war... there is no third option".

And yet, despite his firm assertion that Syria reserved the right to retaliate, Mr Assad's responses underlined a recognition of the dangers of military escalation.

"Retaliate doesn't mean missile for missile and bomb for bomb... this is the last option," he said.

One source in Damascus said Israel had made it absolutely clear its riposte to any Syrian strike would be "devastating".

But that has not stopped intense debate, in coffee shops and the corridors of power on both sides, about a possible strike by Syria or Israel - or an accidental war, a miscalculation when mistrust and misunderstanding run so deep.

### **Continuing strains**

Ever since last year's punishing war in Lebanon both sides have spoken of their readiness for peace but they've also reinforced their defences along the occupied Golan Heights. Damascus wants this territory back as part of any peace deal.

Syria is known to have acquired better long-range missiles and upgraded its air defences with Russian and Iranian help.

So that leaves them in that sensitive "non-war, non-peace" situation.

Months ago, all talk was of a summer war or a return to the peace talks broken off in 2000.

But in June, US President George W Bush made it clear to Ehud Olmert that Israel did not need Washington's approval to talk to Damascus.

That, said Mr Assad, confirmed there was no point in talking.

"From our experience of 16 years of a peace process, the main factor is the US administration," he said.

Continuing strains between the US and Syria mean the Bush team has no interest in going down this track.

## **Incomplete picture**

On an earlier trip to Damascus, as the blistering seasonal heat began to ease, I commented to a Syrian friend that the "summer war" had also not materialised.

"Oh," she answered, "but there could be an autumn war."

And then came the Israeli air strike.

So Mr Assad, like his father Hafez al-Assad, seems resigned to the "long game" because of what he calls "the realities".

He clearly feels he has his own cards to play, not least Syria's relationship with a range of militant Palestinian and other Arab groups including Hezbollah in Lebanon.

There are some signs Damascus has been trying to use its influence more positively to reduce tensions but not enough to please most of its critics.

"They can't isolate Syria," he insisted.

So this week, a few more pieces of this latest Middle East puzzle were put in place.

But as long as there are big black holes in this jigsaw, people will continue to fill them with their own pieces, whether or not they really fit. This means everyone will continue to see a different picture - and that is dangerous.

## **Israel Confirms September Air Strike on Syria.**

Publication: Israel Faxx

By Robert Berger (VOA-Jerusalem), YnetNews.com & IsraelNationalNews.com

Date: Wednesday, **October 3 2007**

Israel's military censor decided to cancel the ban on publication of information regarding the Israeli air strike that took place in Syria early in September after Syrian President Bashar Assad and Knesset

Member Binyamin Netanyahu (Likud) acknowledged that the event took place.

A YnetNews source said that after the two men gave television interviews in which they discussed the air strike "it was pathetic and ridiculous to continue to deny that the event took place and to cite foreign and anonymous sources".

In an interview with the BBC, the Syrian head of state said that Israel had attacked an abandoned army base in the northeast of the country. He also said that "Syria reserves the right to retaliate to the attack."

Former Prime Minister Netanyahu was the only source in Israel to acknowledge the Israeli Air Force's operation when he admitted in a television interview that he had given his blessing to the mission.

Before the military censor lifted the gag order, the Israeli media was obligated to cite reports made by foreign sources when discussing details of the attack. According to these foreign reports, the Israeli Air Force attacked a Syrian military installation that contained nuclear material provided to the Arab state by North Korea.

A source from within the Prime Minister's office clarified that there has been no change in policy regarding the events that took place in Syria last month. The only difference is that reporters will no longer need to cite foreign reports when writing about the incident the source said.

Israeli analyst Eyal Zisser said Israel sent a warning to Syria via the air strike. "Actually, what happened was that Israel called Bashar's bluff," he said.

Zisser said the fact that Syria did not respond militarily to the Israeli air strike shows that Assad does not want to take on the Jewish State. "Syria does understand clearly the balance of power between Israel and Syria, and I do believe that from now on Syria will be much more careful, including in what Bashar has to say to its own people," he added.

Despite the initial secrecy, Netanyahu acknowledged on September 19 that an unspecified military operation had been carried out in Syria. Netanyahu told Channel One TV that he had been briefed by Prime Minister Ehud Olmert on the impending operation "from the start" and had praised Olmert's decision to go ahead with the attack. He also said he had personally congratulated Olmert, chairman of the rival Kadima party, on the success of the operation. Netanyahu was subsequently slammed by defense officials, who called his public leak to the media "the highest level of irresponsibility."

On Saturday, September 29, Syrian Vice President Farouk Al-Shara'a reiterated Syrian claims that Israel's reported raid was not a bombing at all. "Everything reported about this raid is wrong and is part of a psychological warfare that will not fool Syria," he said, adding, "They (Israel) are making up things to justify an aggression in the future. They are playing on public opinion to mislead it." Reports of the operation were, he claimed, an attempt by Israel to "restore the image of the Israeli army following its defeat by the Lebanese resistance last year."

While saying that the September 6th Israeli operation was nothing more than a flyover, Syria's ambassador to the US, Imad Moustapha, told Newsweek last month that Israel would nonetheless "pay a price" for it.

According to a Washington Post report published September 15, the IAF raid targeted facilities that were used to process nuclear materials shipped in from North Korea several days earlier. The attack targeted an "agricultural research center" that Israel believed was actually a facility used by the Syrians to extract uranium from phosphates, according to unnamed "Israeli defense sources."

Kuwaiti newspaper Al-Jerida reported that the intelligence for Israel's attack on a Syrian target was provided by Gen. Ali Reza Asgari, who defected from Iran a few months ago. Asgari was allegedly involved in the development of Syria's missile program.

Another Kuwaiti paper, Al-Watan, quoted diplomatic sources in Europe as saying that US jets circled above the Israeli fighters and gave them aerial cover during the operation. The newspaper also said that Russian experts are trying to understand how the IAF jets managed to enter deep into Syrian territory without setting off two Russian-built radar systems in place in Syria.

The London-based Arabic newspaper Al-Hayat reported last month that, according to NATO sources, the Israeli jets made their way to their target by way of the Turkish border with Syria. The sources told the newspaper that Israeli jets fired four missiles at a target the Israelis believed was being used for weapons development with Iranian and North Korean assistance; only one of the missiles struck the targeted building. The NATO sources were quoted as saying that Israel's main objective was to warn the Syrians that Israel knows about its secret weapons programs, as well as to test the abilities of the new advanced Russian air defense system recently purchased by Syria.

## **High Level Debate Stalled Syria Air Strike**

U.S. Was Concerned Over Intelligence, Stability to Region, Officials Tell ABC News

Oct. 5, 2007

The September Israeli airstrike on a suspected nuclear site in Syria had been in the works for months, ABC News has learned, and was delayed only at the strong urging of the United States.

In early July the Israelis presented the United States with satellite imagery that they said showed a nuclear facility in Syria. They had additional evidence that they said showed that some of the technology was supplied by North Korea.

One U.S. official told ABC's Martha Raddatz the material was "jaw dropping" because it raised questions as to why U.S. intelligence had not previously picked up on the facility.

Officials said that the facility had likely been there for months if not years.

"Israel tends to be very thorough about its intelligence coverage, particularly when it takes a major military step, so they would not have acted without data from several sources," said ABC military consultant Tony Cordesman.

## **U.S. Cautious After Flawed Iraq Intelligence**

A senior U.S. official said the Israelis planned to strike during the week of July 14 and in secret high-level meetings American officials argued over how to respond to the intelligence.

Some in the administration supported the Israeli action, but others, notably Sect. of State Condoleezza Rice did not. One senior official said the U.S. convinced the Israelis to "confront Syria before attacking."

Officials said they were concerned about the impact an attack on Syria would have on the region. And given the profound consequences of the flawed intelligence in Iraq, the U.S. wanted to be absolutely certain the intelligence was accurate.

Initially, administration officials convinced the Israelis to call off the July strike. But in September the Israelis feared that news of the site was about to leak and went ahead with the strike despite U.S. concerns.

The airstrike was so highly classified, President Bush refused to acknowledge it publicly even after the bombs fell.

ABC's Martha Raddatz filed this report for "World News With Charles Gibson."

## **North Korean Mystery**

By Jim Hoagland

Sunday, October 7, 2007; B07

Two big questions hang over the new agreement to contain North Korea's nuclear weapons program at its current level -- whatever that level is.

Why has a secretive government addicted to power politics and flexing its military muscles abruptly turned to negotiations and peaceful compromise?

And why is North Korea doing the same?

The Bush administration, of course, cannot match Kim Jong Il's regime in paranoia, bellicosity and information control, although this White House seems at times to have been tempted to try. Other countries know next to nothing about Pyongyang's motivations, intentions or even its ability to carry out any agreement it makes.

This deepens the Washington end of this great strategic mystery: Why is President Bush accepting the promises of a regime he has regularly excoriated -- at a time when officials in his administration make a credible case that North Korea has just been caught helping Syria with nuclear technology?

North Korea's desperation as its economy implodes and its people starve is clearly part of the answer. Pyongyang's plight has helped U.S. negotiator Christopher Hill get an agreement that he believes can be verified and enforced. Timing is also everything for Bush, who is reaching for diplomatic successes before his presidency ends.

There are months of quibbling ahead over the differences between "disabling" and "dismantling" North Korea's plutonium production facilities and other points in the agreement. But Hill appears to have pulled the hermit nation of North Korea into an international process that carefully calibrates risks and rewards on both sides.

A crucial provision of the six-nation accord announced in Beijing on Wednesday requires Pyongyang to declare the extent of its weapons-grade plutonium stockpile, including the amount it used in a nuclear test last year.

U.S. officials have estimated that North Korea could make 10 to 12 bombs from its existing stockpile. But the actual number is smaller -- perhaps half as many -- according to the intelligence service of one major Asian nation. A significant revision downward in U.S. intelligence estimates of North Korea's nuclear threat could explain the Bush administration's more relaxed view of Pyongyang in recent months.

But the more significant change in attitude has come from Pyongyang toward Washington, according to diplomats involved in the talks, which also included China, Japan, Russia and South Korea.

A key moment came when North Korea agreed to an international inspection last month to determine

how its main nuclear complex at Yongbyon should be disabled -- and asked Hill to have the United States rather than the United Nations carry out that intrusive inspection.

A U.S.-led inspection would have much more credibility in Washington, the North Koreans indicated. They also want to move quickly -- that is, while Bush is still in office and can presumably beat back Republican opposition to the agreement.

At Hill's suggestion, the inspection team was broadened to include experts from China and Russia, the other nuclear powers represented in the talks, to spread the mission's responsibilities and risks. The inspectors' report cleared the way for the comprehensive package of requirements and incentives unveiled in Beijing.

In another bout of tacit cooperation that indicates this deal may be serious enough to last, the United States and North Korea have kept the agreement from being derailed by the mysterious airstrike that Israel launched against Syria on Sept. 6. Israel and Syria have both thrown unusual secrecy around the raid, refusing to disclose what was hit.

But highly classified U.S. intelligence reports say that the Israelis destroyed a nuclear-related facility and caused North Korean casualties at the site, which may have been intended to produce plutonium, according to a senior official with access to those reports. The Israelis have provided the United States with photographs, physical material and soil samples from the site -- taken both before and after the raid -- according to two independent sources.

A last gasp of North Korean international banditry before going straight on nuclear nonproliferation? A continuing confidence by Pyongyang that it can say one thing in public and do another covertly? Or simply the serendipity of one branch of a secretive government going about its skulduggery while others go a different way?

With North Korea, it is of course unclear. Winston Churchill's famous description of Russia -- a riddle wrapped in a mystery inside an enigma -- would be mere understatement if applied to Kim Jong Il's regime. That is why it is both good and important that Christopher Hill has put such emphasis on transparency in this agreement. Who knows? It may even catch on in Washington.

## 'A Way Out' for Iran

By David Ignatius

The Washington Post

Sunday, October 7, 2007; Page B07

*[EXCERPT]*

A powerful, albeit silent, demonstration of military power was Israel's Sept. 6 strike against a target in Syria, Iran's key ally. An informed official told me it was an attack on nuclear materials supplied to Syria by North Korea, and that the United States and Israel had shared information before the raid. The silence from all parties has been deafening, but the message to Iran is clear: America and Israel can identify nuclear targets and penetrate air defenses to destroy them.

## **Israel used electronic attack in air strike against Syrian mystery target**

**Oct. 8, 2007**

By David A. Fulghum and Douglas Barrie

Mysteries still surround Israel's air strike against Syria. Where was the attack, what was struck and how did Israel's non-stealthy warplanes fly undetected through the Russian-made air defense radars in Syria?

There also are clues that while the U.S. and Israel are struggling in the broader information war with Islamic fundamentalists, Tel Aviv's air attack against a "construction site" in northern Syria may mean the two countries are beginning to win some cyberwar battles.

U.S. officials say that close examination of the few details of the mission offers a glimpse of what's new in the world of sophisticated electronic sleight-of-hand. That said, they fault the Pentagon for not moving more quickly to make cyberwarfare operational and for not integrating the capability into the U.S. military forces faster.

Syrian President Bashar al-Assad said last week that the Israelis struck a building site at Tall al-Abyad just south of the Turkish border on Sept. 6. Press reports from the region say witnesses saw the Israeli aircraft approach from the Mediterranean Sea while others said they found unmarked drop tanks in Turkey near the border with Syria. Israeli defense officials finally admitted Oct. 2 that the Israeli Air Force made the raid.

U.S. aerospace industry and retired military officials indicated the Israelis utilized a technology like the U.S.-developed "Suter" airborne network attack system developed by BAE Systems and integrated into U.S. unmanned aerial vehicle operations by L-3 Communications. Israel has long been adept at using unmanned systems to provoke and spoof Syrian surface-to-air missile (SAM) systems, as far back as the Bekka Valley engagements in 1982.

Air Force officials will often talk about jamming, but the term now involves increasingly sophisticated techniques such as network attack and information warfare. How many of their new electronic attack options were mixed and matched to pull off this raid is not known.

The U.S. version of the system has been at the very least tested operationally in Iraq and Afghanistan in the last year, most likely against insurgent communication networks. The technology allows users to invade communications networks, see what enemy sensors see and even take over as systems administrator so sensors can be manipulated into positions where approaching aircraft can't be seen, they say. The process involves locating enemy emitters with great precision and then directing data streams into them that can include false targets and misleading messages that allow a number of activities including control.

Clues, both good and unlikely, are found in Middle East press reports. At least one places some responsibility for the attack's success on the U.S.

After the strike, the Kuwaiti newspaper Al Watan reported that U.S. jets provided aerial cover for Israeli strike aircraft during the attack on Syria. Similar statements of American involvement were made by Egyptian officials after the 1967 and 1973 wars with Israel.

More interesting is the newspaper's claim that "Russian experts are studying why the two state-of-the-art Russian-built radar systems in Syria did not detect the Israeli jets entering Syrian territory," it said. "Iran reportedly has asked the same question, since it is buying the same systems and might have paid for the Syrian acquisitions."

Syria's most recent confirmed procurement was of the Tor-M1 (SA-15 Gauntlet) short-range mobile SAM system. It uses vehicle-mounted target-acquisition and target-tracking radars. It is not known whether any of the Tor systems were deployed in the point-defense role at the target site struck by Israeli aircraft. If, however, the target was as "high-value" as the Israeli raid would suggest, then Tor systems could well have been deployed.

Iran bought 29 of the Tor launchers from Russia for \$750 million to guard its nuclear sites, and they were delivered in January, according to Agence France-Presse and ITAR-TASS. According to the Syrian press, they were tested in February. Syria has also upgraded some of its aging S-125s (SA-3 Goa) to the Pechora-2A standard. This upgrade swaps out obsolete analog components for digital.

Syrian air defense infrastructure is based on for the most part aging Soviet SAMs and associated radar. Damascus has been trying to acquire more capable "strategic" air defense systems, with the country repeatedly associated with efforts to purchase the Russian S-300 (SA-10 Grumble/SA-20) long-range SAM. It also still operates the obsolescent S-200 (SA-5 Gammon) long-range system and its associated 5N62 Square Pair target engagement radar. There are also unconfirmed reports of Syrian interest in the 36D6 Tin Shield search radar.

There remains the second mystery of the actual site of the target and its use. Israeli news reports contend it was a compound near Dayr az-Zwar in north central Syria, and not Tall al-Abyad farther north. The site of the attack has been described as a transshipment point for weapons intended for the Hezbollah in Lebanon to restock missile stores that were used in last summer's fighting with Israel. Others contend it is a site with nuclear materials that may be associated with Iran's nuclear bomb program. Mentions are also made of a North Korean ship arriving in Syria only days before the attack and the presence of North Korean workers in Syria for several months.

"There are always indications the North Koreans are doing something they shouldn't, Vice Adm. Robert Murrett, director of the National Geospatial-intelligence Agency (NGA), told Aviation Week & Space Technology in response to a question about the shipment of nuclear materials from North Korea to Syria, which were subsequently bombed. "They are a high priority. We work as a key element . . . on the trafficking of WMD [weapons of mass destruction] and high-interest arms shipments anyplace."

It's part of a growing NGA role in spotting the proliferation of weapons technology "which may be coming from East Asia to the Middle East . . . that we don't want to cross borders." Other crucial boundaries for surveillance include the borders in all directions in Afghanistan and Iraq—which includes Syria and Iran—as well as semi-governed areas such as the Horn of Africa. The use of automation to aid rapid analysis is improving, but that's being balanced by the fact that "the sheer volumes of data we are ingesting now . . . continue to increase by a couple of orders of magnitude on an annual basis," he says.

## **Syria Tells Journalists Israeli Raid Did Not Occur**

By HUGH NAYLOR

October 11, 2007

**DEIR EZ ZOR, Syria, Oct. 9** — Foreign journalists perused the rows of corn and the groves of date palms pregnant with low-hanging fruit here this week, while agents of Syria's ever present security services stood in the background, watching closely, almost nervously.

"You see — around us are farmers, corn, produce, nothing else," said Ahmed Mehdi, the Deir ez Zor director of the Arab Center for the Studies of Arid Zones and Dry Lands, a government agricultural research center, as he led two of the journalists around the facilities.

It was here at this research center in this sleepy Bedouin city in eastern Syria that an Israeli journalist reported that Israel had conducted an air raid in early September.

Ron Ben-Yishai, a writer for the Israeli daily Yediot Aharonot, grabbed headlines when he suggested that the government facility here was attacked during the raid, snapping photos of himself for his article in front of a sign for the agricultural center.

He said he was denied access to the research center, which sits on the outskirts of the city, and he did not show any photos of the aftermath of the raid, though he said he saw some pits that looked like part of a mine or quarry, implying that they could also be sites where bombs fell.

His claims have compelled the Syrian government, already anxious over the rising tensions with Israel and the United States, to try to vindicate itself after a recent flurry of news reports that it may have ambitions to acquire nuclear weapons.

President Bashar al-Assad, in a BBC interview, played down the Israeli raid, saying that Israeli jets took aim at empty military buildings, but he did not give a specific location. His statement differed from the initial Syrian claim that it had repulsed the air raid before an attack occurred.

Israel has been unusually quiet about the attack on Sept. 6 and has effectively imposed a news blackout about it. **Benjamin Netanyahu, the Israeli opposition leader, on Sept. 19 became the first public figure in Israel to acknowledge that an attack had even taken place. Some Israeli officials have said, though not publicly, that the raid hit a nuclear-related facility that North Korea was helping to equip, but they have not specified where.**

On Monday, journalists toured the agricultural center at the government's invitation to prove, Mr. Mehdi said, that no nuclear weapons program or Israeli attacks occurred there. "The allegations are completely groundless, and I don't really understand where all this W.M.D. talk came from," Mr. Mehdi said, referring to weapons of mass destruction.

"There was no raid here — we heard nothing," he added.

An entourage of the center's employees lined up with him to greet the journalists. In a seemingly choreographed display, they nodded in agreement and offered their guests recently picked dates as tokens of hospitality.

They showed off a drab-colored laboratory that they said was used to conduct experiments on drought-resistant crops and recently plowed fields where vegetables and fruits are grown.

Mr. Ben-Yishai's news report rattled Syrians for another reason: he apparently was able to slip into Syria, which bars Israelis from entering, and travel throughout the country.

"I think he came in on a European passport," said Ghazi Bילו, who said he was a graphic designer for the agricultural center.

Burhan Okko, who also said he was a graphic designer for the center, interrupted, saying, "It was definitely on a German passport." The international news media have speculated that the Israeli attack was aimed at a Syrian effort to acquire nuclear weapons materials, possibly with the aid of North Korea. Syria rejects these claims.

## **An Israeli Strike on Syria Kindles Debate in the U.S.**

By MARK MAZZETTI and HELENE COOPER

October 10, 2007

WASHINGTON, Oct. 9 — A sharp debate is under way in the Bush administration about the significance of the Israeli intelligence that led to last month's Israeli strike inside Syria, according to current and former American government officials.

At issue is whether intelligence that Israel presented months ago to the White House — to support claims that Syria had begun early work on what could become a nuclear weapons program with help from North Korea — was conclusive enough to justify military action by Israel and a possible rethinking of American policy toward the two nations.

The debate has fractured along now-familiar fault lines, with Vice President Dick Cheney and conservative hawks in the administration portraying the Israeli intelligence as credible and arguing that it should cause the United States to reconsider its diplomatic overtures to Syria and North Korea.

By contrast, Secretary of State Condoleezza Rice and her allies within the administration have said they do not believe that the intelligence presented so far merits any change in the American diplomatic approach.

“Some people think that it means that the sky is falling,” a senior administration official said. “Others say that they're not convinced that the real intelligence poses a threat.”

Several current and former officials, as well as outside experts, spoke on the condition of anonymity because the intelligence surrounding the Israeli strike remains highly classified.

Besides Ms. Rice, officials said that Defense Secretary Robert M. Gates was cautious about fully endorsing Israeli warnings that Syria was on a path that could lead to a nuclear weapon. Others in the Bush administration remain unconvinced that a nascent Syrian nuclear program could pose an immediate threat.

It has long been known that North Korean scientists have aided Damascus in developing sophisticated ballistic missile technology, and there appears to be little debate that North Koreans frequently visited a site in the Syrian desert that Israeli jets attacked Sept. 6. Where officials disagree is whether the accumulated evidence points to a Syrian nuclear program that poses a significant threat to the Middle East.

Mr. Cheney and his allies have expressed unease at the decision last week by President Bush and Ms. Rice to proceed with an agreement to supply North Korea with economic aid in return for the North's disabling its nuclear reactor. Those officials argued that the Israeli intelligence demonstrates that North Korea cannot be trusted. They also argue that the United States should be prepared to scuttle the agreement unless North Korea admits to its dealing with the Syrians.

During a breakfast meeting on Oct. 2 at the White House, Ms. Rice and her chief North Korea negotiator, Christopher R. Hill, made the case to President Bush that the United States faced a choice: to continue with the nuclear pact with North Korea as a way to bring the secretive country back into the diplomatic fold and give it the incentive to stop proliferating nuclear material; or to return to the administration's previous strategy of isolation, which detractors say left North Korea to its own devices and led it to test a nuclear device last October.

Mr. Cheney and Stephen J. Hadley, the national security adviser, also attended the meeting, administration officials said.

The Israeli strike occurred at a particularly delicate time for American diplomatic efforts. In addition to the North Korean nuclear negotiations, the White House is also trying to engineer a regional Middle East peace conference that would work toward a comprehensive peace accord between Arabs and Israelis.

The current and former American officials said Israel presented the United States with intelligence over the summer about what it described as nuclear activity in Syria. Officials have said Israel told the White House shortly in advance of the September raid that it was prepared to carry it out, but it is not clear whether the White House took a position then about whether the attack was justified.

One former top Bush administration official said Israeli officials were so concerned about the threat posed by a potential Syrian nuclear program that they told the White House they could not wait past the end of the summer to strike the facility.

Last week, Turkish officials traveled to Damascus to present the Syrian government with the Israeli dossier on what was believed to be a Syrian nuclear program, according to a Middle East security analyst in Washington. The analyst said that Syrian officials vigorously denied the intelligence and said that what the Israelis hit was a storage depot for strategic missiles.

That denial followed a similar denial from North Korea. Mr. Hill, the State Department's assistant secretary for East Asia and Pacific affairs, raised the Syria issue with his North Korean counterparts in talks in Beijing in late September. The North Koreans denied providing any nuclear material to Syria.

Publicly, Syrian officials have said Israeli jets hit an empty warehouse.

Bruce Riedel, a veteran of the C.I.A. and the National Security Council and now a Middle East expert at the Brookings Institution, said that American intelligence agencies remained cautious in drawing hard conclusions about the significance of the suspicious activity at the Syrian site.

Still, Mr. Riedel said Israel would not have launched the strike in Syria if it believed Damascus was merely developing more sophisticated ballistic missiles or chemical weapons.

"Those red lines were crossed 20 years ago," he said. "You don't risk general war in the Middle East over an extra 100 kilometers' range on a missile system."

Another former intelligence official said Syria was attempting to develop so-called airburst capability for its ballistic missiles. Such technology would allow Syria to detonate warheads in the air to disperse the warhead's material more widely.

Since North Korea detonated its nuclear device, Ms. Rice has prodded Mr. Bush toward a more diplomatic approach with North Korea, through talks that also include Japan, Russia, South Korea and China. Those talks led to the initial agreement last February for North Korea to shut down its nuclear reactor in exchange for fuel and food aid.

That deal angered conservatives who believed that the Bush administration had made diplomacy toward North Korea too high a priority, at the expense of efforts to combat the spread of illicit weapons in the Middle East.

“Opposing the Israeli strike to protect the six-party talks would be a breathtaking repudiation of the administration’s own national security strategy,” said John R. Bolton, former United States ambassador to the United Nations.

But other current and former officials argue that the diplomatic approach is America’s best option for dealing with the question of North Korean proliferation.

“You can’t just make these decisions using the top of your spinal cord, you have to use the whole brain,” said Philip D. Zelikow, the former counselor at the State Department. “What other policy are we going to pursue that we think would be better?”

## **Report: Top N. Korean official leaves for visit to Syria**

Associated Press

Published: 10.13.07, 15:56 / Israel News

A high-level North Korean official left on Saturday [2007-10-13] for an overseas trip including a visit to Syria, the North's state media reported, amid suspicions the two countries might be cooperating on a secret nuclear program.

Choe Thae Bok, speaker of the North's rubber-stamp parliament, will also visit Italy during the trip, the North's Korean Central News Agency said in a brief one-sentence dispatch that gave no further details.

The trip comes amid lingering suspicions that North Korea may be providing nuclear assistance to Syria.

North Korea provides missile technology to Syria, but has strongly denied accusations that it spreads its nuclear expertise beyond its borders. Syria also has denied receiving any North Korean nuclear help.

The two countries accused US officials of spreading the allegations for political reasons.

Andrew Semmel, acting US deputy assistant secretary for nuclear nonproliferation policy, said in September that North Korean personnel were in Syria, and that Damascus may have had contacts with "secret suppliers" to obtain nuclear equipment.

Last month, a high-level Syrian delegation visited Pyongyang.

North Korea, which conducted its first-ever nuclear test last October, has been compliant in international talks aimed at dismantling its nuclear program. In July, Pyongyang shut down its sole operating nuclear reactor and pledged earlier this month to disable it by year's end.

## Israel Struck Syrian Nuclear Project, Analysts Say

By DAVID E. SANGER and MARK MAZZETTI

The New York Times

October 14, 2007

WASHINGTON, Oct. 13 — Israel's air attack on Syria last month was directed against a site that Israeli and American intelligence analysts judged was a partly constructed nuclear reactor, apparently modeled on one North Korea has used to create its stockpile of nuclear weapons fuel, according to American and foreign officials with access to the intelligence reports.

The description of the target addresses one of the central mysteries surrounding the Sept. 6 attack, and suggests that Israel carried out the raid to demonstrate its determination to snuff out even a nascent nuclear project in a neighboring state. The Bush administration was divided at the time about the wisdom of Israel's strike, American officials said, and some senior policy makers still regard the attack as premature.

The attack on the reactor project has echoes of an Israeli raid more than a quarter century ago, in 1981, when Israel destroyed the Osirak nuclear reactor in Iraq shortly before it was to have begun operating. That attack was officially condemned by the Reagan administration, though Israelis consider it among their military's finest moments. In the weeks before the Iraq war, Bush administration officials said they believed that the attack set back Iraq's nuclear ambitions by many years.

By contrast, the facility that the Israelis struck in Syria appears to have been much further from completion, the American and foreign officials said. They said it would have been years before the Syrians could have used the reactor to produce the spent nuclear fuel that could, through a series of additional steps, be reprocessed into bomb-grade plutonium.

Many details remain unclear, most notably how much progress the Syrians had made in construction before the Israelis struck, the role of any assistance provided by North Korea, and whether the Syrians could make a plausible case that the reactor was intended to produce electricity. In Washington and Israel, information about the raid has been wrapped in extraordinary secrecy and restricted to just a handful of officials, while the Israeli press has been prohibited from publishing information about the attack.

The New York Times reported this week that a debate had begun within the Bush administration about whether the information secretly cited by Israel to justify its attack should be interpreted by the United States as reason to toughen its approach to Syria and North Korea. In later interviews, officials made clear that the disagreements within the administration began this summer, as a debate about whether an Israeli attack on the incomplete reactor was warranted then.

The officials did not say that the administration had ultimately opposed the Israeli strike, but that Secretary of State Condoleezza Rice and Defense Secretary Robert M. Gates were particularly concerned about the ramifications of a pre-emptive strike in the absence of an urgent threat.

“There wasn’t a lot of debate about the evidence,” said one American official familiar with the intense discussions over the summer between Washington and the government of Prime Minister Ehud Olmert of Israel. “There was a lot of debate about how to respond to it.”

Even though it has signed the Nuclear Nonproliferation Treaty, Syria would not have been obligated to declare the existence of a reactor during the early phases of construction. It would have also had the legal right to complete construction of the reactor, as long as its purpose was to generate electricity. In his only public comment on the raid, Syria’s president, Bashar al-Assad, acknowledged this month that Israeli jets dropped bombs on a building that he said was “related to the military” but which he insisted was “not used.”

A senior Israeli official, while declining to speak about the specific nature of the target, said the strike was intended to “re-establish the credibility of our deterrent power,” signaling that Israel meant to send a message to the Syrians that even the potential for a nuclear weapons program would not be permitted. But several American officials said the strike may also have been intended by Israel as a signal to Iran and its nuclear aspirations. Neither Iran nor any Arab government except for Syria has criticized the Israeli raid, suggesting that Israel is not the only country that would be disturbed by a nuclear Syria. North Korea did issue a protest.

The target of the Israeli raid and the American debate about the Syrian project were described by government officials and nongovernment experts interviewed in recent weeks in the United States and the Middle East. All insisted on anonymity because of rules that prohibit discussing classified information. The officials who described the target of the attack included some on each side of the debate about whether a partly constructed Syrian nuclear reactor should be seen as an urgent concern, as well as some who described themselves as neutral on the question.

The White House press secretary, Dana Perino, said Saturday that the administration would have no comment on the intelligence issues surrounding the Israeli strike. Israel has also refused to comment. Nuclear reactors can be used for both peaceful and non-peaceful purposes. A reactor’s spent fuel can be reprocessed to extract plutonium, one of two paths to building a nuclear weapon. The other path — enriching uranium in centrifuges — is the method that Iran is accused of pursuing with an intent to build a weapon of its own.

Syria is known to have only one nuclear reactor, a small one built for research purposes. But in the past decade, Syria has several times sought unsuccessfully to buy one, first from Argentina, then from Russia. On those occasions, Israel reacted strongly but did not threaten military action. Earlier this year, Mr. Assad spoke publicly in general terms about Syria’s desire to develop nuclear power, but his government did not announce a plan to build a new reactor.

The Gulf Cooperation Council, a group of Persian Gulf states, has also called for an expansion of nuclear power in the Middle East for energy purposes, but many experts have interpreted that statement as a response to Iran’s nuclear program. They have warned that the region may be poised for a wave of proliferation. Israel is believed to be the only nuclear-armed nation in the region.

The partly constructed Syrian reactor was detected earlier this year [2007] by satellite photographs, according to American officials. They suggested that the facility had been brought to American attention by the Israelis, but would not discuss why American spy agencies seemed to have missed the early phases of construction.

North Korea has long provided assistance to Syria on a ballistic missile program, but any assistance toward the construction of the reactor would have been the first clear evidence of ties between the two countries on a nuclear program. North Korea has successfully used its five-megawatt reactor at the Yongbyon nuclear complex to reprocess nuclear fuel into bomb-grade material, a model that some American and Israeli officials believe Syria may have been trying to replicate.

The North conducted a partly successful test of a nuclear device a year ago, prompting renewed fears that the desperately poor country might seek to sell its nuclear technology. President Bush issued a specific warning to the North on Oct. 9, 2006, just hours after the test, noting that it was “leading proliferator of missile technology, including transfers to Iran and Syria.” He went on to warn that “the transfer of nuclear weapons or material by North Korea to states or non-state entities would be considered a grave threat to the United States, and we would hold North Korea fully accountable.”

While Bush administration officials have made clear in recent weeks that the target of the Israeli raid was linked to North Korea in some way, Mr. Bush has not repeated his warning since the attack. In fact, the administration has said very little about the country’s suspected role in the Syria case, apparently for fear of upending negotiations now under way in which North Korea has pledged to begin disabling its nuclear facilities.

While the partly constructed Syrian reactor appears to be based on North Korea’s design, the American and foreign officials would not say whether they believed the North Koreans sold or gave the plans to the Syrians, or whether the North’s own experts were there at the time of the attack. It is possible, some officials said, that the transfer of the technology occurred several years ago.

According to two senior administration officials, the subject was raised when the United States, North Korea and four other nations met in Beijing earlier this month.

Behind closed doors, however, Vice President Dick Cheney and other hawkish members of the administration have made the case that the same intelligence that prompted Israel to attack should lead the United States to reconsider delicate negotiations with North Korea over ending its nuclear program, as well as America’s diplomatic strategy toward Syria, which has been invited to join Middle East peace talks in Annapolis, Md., next month.

Mr. Cheney in particular, officials say, has also cited the indications that North Korea aided Syria to question the Bush administration’s agreement to supply the North with large amounts of fuel oil. During Mr. Bush’s first term, Mr. Cheney was among the advocates of a strategy to squeeze the North Korean government in hopes that it would collapse, and the administration cut off oil shipments set up under an agreement between North Korea and the Clinton administration, saying the North had cheated on that accord.

The new shipments, agreed to last February, are linked to North Korea’s carrying through on its pledge to disable its nuclear facilities by the end of the year. Nonetheless, Mr. Bush has approved going ahead with that agreement, even after he was aware of the Syrian program.

Nuclear experts say that North Korea’s main reactor, while small by international standards, is big enough to produce roughly one bomb’s worth of plutonium a year.

In an interview, Dr. Siegfried S. Hecker of Stanford University, a former director of the Los Alamos National Laboratory, said building a reactor based on North Korea's design might take from three to six years.

## **IAEA Press Releases**

Press Release 2007/18  
Recent Media Reports Concerning Syria

15 October 2007

### **Statement attributable to IAEA Spokesperson Melissa Fleming on recent media reports concerning Syria:**

1. The IAEA has no information about any undeclared nuclear facility in Syria and no information about recent reports.
2. We would obviously investigate any relevant information coming our way.
3. The IAEA Secretariat expects any country having information about nuclear-related activities in another country to provide that information to the IAEA.
4. The IAEA is in contact with the Syrian authorities to verify the authenticity of these reports.

## **U.N. watchdog asks Syria about "undeclared" atom plant**

Mon Oct 15, 2007 11:53am EDT

By Mark Heinrich

VIENNA (Reuters) - The U.N. nuclear watchdog did not know about any undeclared atomic plant in Syria and has asked Damascus about information that such a site was targeted by an Israeli air strike, a spokeswoman said on Monday.

Citing unidentified U.S. and foreign officials with access to intelligence reports, the New York Times said on Sunday the nuclear reactor was partially built and apparently modeled on one in North Korea used for stockpiling atomic bomb fuel.

Israel confirmed earlier this month that it had carried out a September 6 air strike on Syria, a major foe, but has not described the target. Syrian President Bashar al-Assad said the target was an unused military building.

"The International Atomic Energy Agency has no information about any undeclared nuclear facility in Syria and no information about recent reports," spokeswoman Melissa Fleming said in a statement issued from the IAEA's Vienna headquarters.

"The IAEA is in contact with the Syrian authorities to verify the authenticity of these reports," she said.

"We would obviously investigate any relevant information coming our way. The IAEA Secretariat expects any country having information about nuclear-related activities in another country to provide that information to the IAEA."

A Vienna diplomat close to the IAEA said it had initiated contacts with Damascus shortly after the air raid but the Syrians had provided no clarification yet.

U.S. officials have linked the raid to apparent Israeli suspicions of covert nuclear cooperation between North Korea and Syria. They said the site in question was identified earlier this year in satellite photographs.

### **SYRIAN DENIES ILLICIT PROGRAMME**

Syria has belonged to the 144-nation IAEA since 1963 and has one declared, small research reactor subject to U.N. inspections, which aim to prevent illicit diversions of civilian nuclear energy technology into atomic bombmaking.

Syria has denied hiding any nuclear activity from the IAEA or having anything other than energy goals with nuclear work.

The Vienna diplomat said that if Syria was indeed building a new reactor, it would have been required to inform the agency, and provide design data, as soon as it decided to construct one.

No country had provided satellite or other intelligence about the alleged plant to the IAEA although such help would be crucial to detecting such a site, added the diplomat, who asked not to be named due to the topic's political sensitivity.

"With the (low) level of IAEA funding, inspectors can't go around a country checking every building. The IAEA is not a go-it-alone investigative agency," said the diplomat.

The IAEA has been investigating past nuclear secrecy in Iran, a member state and ally of Syria, since 2003.

Iran has pledged to clarify the scope of its program by the end of 2007 in an effort to avoid being hit with harsh U.N. sanctions over its refusal to stop enriching uranium, a process Western powers suspect Iran is channeling into bombmaking. Iran says it only wants an alternative source of electricity.

The New York Times said the targeted Syrian facility appeared to have been much further from completion than an Iraqi reactor the Israeli air force flattened in 1981.

"A very real question is whether Syria is technically and financially able to build such a reactor. It would be hard to justify an air strike on a facility so early on in construction and, if supplied by North Korea, unlikely ever to be finished," U.S. analyst David Albright, alluding to North Korea's nuclear disarmament agreement earlier this year, told Reuters.

"Israel may have wanted to send a signal to Iran. The U.S. wants to scare Iran (off nuclear work) and this air strike might have been a way to do it, and explain some of Israel's secrecy."

## Israel Silent on Reports of Bombing Within Syria

By STEVEN ERLANGER

Correction Appended

JERUSALEM, Oct. 14 — Secretary of State Condoleezza Rice and Israeli officials declined Sunday to confirm or deny a report that an Israeli Air Force strike against Syria last month had bombed a partly constructed nuclear reactor apparently of North Korean design.

The report, published in The New York Times on Saturday, was featured prominently in the Israeli news media on Sunday. But Israeli officials continued their silence about the Sept. 6 airstrike, though they have signaled they are proud of the operation; a senior military official said it had restored “military deterrence” in the region.

Former Israeli officials and intelligence experts would not discuss whether Israel hit a nuclear reactor that was under construction. But they said the report was plausible given their understanding of Syria’s ambitions in the realm of nonconventional weaponry and its longstanding quest for strategic parity with Israel.

Maj. Gen. Aharon Zeevi Farkash, Israel’s former chief of military intelligence, called the notion that Israel had targeted a nuclear reactor in Syria “logical.”

Ms. Rice, flying here from Moscow for four days of talks with Israeli and Palestinian leaders before a regional peace conference in the United States this fall, declined to discuss what she called “news reports” of the Israeli raid, though she did express concern about proliferation.

“We’re very concerned about any evidence of, any indication of, proliferation,” she said. “And we’re handling those in appropriate diplomatic channels.”

She also tried to draw a line between nuclear proliferation and the peace process. “The issues of proliferation do not affect the Palestinian-Israeli peace efforts we are making,” she said, warning sides against actions that could derail the peace effort. “This is the time to be extremely careful,” she said.

Ms. Rice met with various Israeli officials, including Prime Minister Ehud Olmert and Defense Minister Ehud Barak, hours before Mr. Barak flew to Washington to discuss security cooperation and rocket defense systems. She also met with members of the Olmert government who have been warning the prime minister not to make too many concessions to Mahmoud Abbas, the Palestinian president, on territory, the status of Jerusalem or the fate of refugees.

Ms. Rice played down the idea of a breakthrough on this trip, calling the Israeli-Palestinian talks “a work in progress.” She said she did not expect “that there will be any particular outcome in the sense of breakthroughs on the document” the two sides are trying to negotiate.

Asked about Israeli-Palestinian progress, a senior American official who briefed reporters on Sunday night said, “We’re not even into the second half of the ballgame.” Speaking on the condition of

anonymity according to standard diplomatic practice, he added, “I do think this is going to require a lot of hands-on American diplomacy.”

Regarding the Syria strike, General Zeevi Farkash said Hafez al-Assad, Syria’s former president and the father of President Bashar al-Assad, had “long spoken of Syria’s weakness opposite Israel in the realm of air power, technology and ground forces,” and the need for a nonconventional ability, which in the past meant chemical weapons.

But he added that a “constellation of interests” between North Korea and Syria could have led Syria to go “a stage further” in its quest for strategic parity and deterrence, by moving beyond its chemical ability into the nuclear realm, “as Iran is doing.”

Noting the pressure on North Korea to end its nuclear weapons program, the general suggested that smuggling some elements of its program to Syria would have allowed the North “to preserve the knowledge it has accumulated and not just throw it away.”

The Syrian president has acknowledged the Israeli airstrike but has said it was against an unused military building. North Korea has denied any involvement in a nuclear program in Syria.

Uzi Arad, who once worked for Mossad, Israel’s intelligence agency, and was the national security adviser under former Prime Minister Benjamin Netanyahu, said that he did not know what Israel bombed in Syria but that a nuclear reactor was plausible.

North Korea’s route to a nuclear weapon was based on plutonium, he said, adding that “North Korea has the technology, and its approach to life showed that technology was something to be traded.”

Israeli analysts, meanwhile, expressed surprise at reports that some American officials considered the Israeli airstrike to have been premature. Several American and foreign officials have said it would have been years before the Syrians could have used the reactor to produce the spent nuclear fuel that could, through a series of additional steps, be reprocessed into bomb-grade plutonium.

But Emily B. Landau, director of the arms control and regional security program at the Institute for National Strategic Studies at Tel Aviv University, said, “The one lesson that Israel has learned from the Iranian experience is that if you don’t take care of something like this at the very initial stages, you’re going to have a bigger problem later on.”

**Correction: October 18, 2007**

An article on Monday about the refusal of Israeli officials to confirm or deny a report in The Times that the Israeli Air Force had bombed a Syrian facility on Sept. 6 overstated the conclusion Israeli and American intelligence analysts had drawn about the target. While they judged the facility to be a partly constructed nuclear reactor, they said it was of apparent North Korean design; they did not say so definitively. The article also misstated the background of Uzi Arad, the national security adviser under former Prime Minister Benjamin Netanyahu, who said it was plausible that a nuclear reactor had been bombed. Mr. Arad once worked for Mossad, Israel’s intelligence agency; he is not “a former head of Mossad.”

## **Ambassador denies nuclear program in Syria**

Envoy: Reports that Israeli attack targeted reactor are 'fabrication'

08:50 AM CDT on Thursday, **October 18, 2007**

By TIM CONNOLLY / The Dallas Morning News

tconnolly@dallasnews.com

*[EXCERPT]*

Reports that an Israeli air strike in Syria was directed against a partly built nuclear reactor are "sheer fabrication," Syria's U.S. ambassador said Tuesday *[October 16, 2007]* in Dallas.

"This is an absolutely surrealistic story," Ambassador Imad Moustapha said. "There is no Syrian nuclear program whatsoever, absolutely not. Syria has never tried to acquire nuclear technology."

Mr. Moustapha, addressing the World Affairs Council of Dallas/Fort Worth, noted that the Israeli government did not claim to have bombed a nuclear facility and that reports that it may have done so all emanated from Washington.

He compared those reports to pre-Iraq war assertions by the Bush administration about Iraq's weapons of mass destruction and the alleged ties between the Iraqi government and al-Qaeda. Both claims were later discredited.

The New York Times, citing unidentified U.S. and foreign officials, reported Saturday that the targeted site was apparently modeled after a North Korean facility used to produce fuel for nuclear weapons. U.S. and Israeli officials have declined to confirm or deny the report.

Mr. Moustapha described the target of the Sept. 6 Israeli strike as a military facility of "minor tactical importance."

## **US diplomat discusses N Korea policy**

Australian Broadcasting Corporation

Broadcast: 16/10/2007

Reporter: Tony Jones

US Assistant Secretary of State Christopher Hill discusses the United States's relationship with North Korea.

### **Transcript**

*[EXCERPT]*

*[deletia]*

TONY JONES: Little bit more difficult to talk about domestic politics while you're here during an election campaign, I mean that's true. While you were negotiating with the regime to end its nuclear weapons program, do you believe that Pyongyang was secretly supplying nuclear technology to Syria?

CHRISTOPHER HILL: Well again, you've seen a lot of press reports on this and suffice to say that we have been very concerned about proliferation from North Korea for a long time. We've been concerned especially about their missile proliferation, we've been concerned about all of their proliferation. So, the real question is: what are we going to do about this? And there are some people that argue when we see reports of proliferation, we should somehow withdraw from the talks. And then there are others - and I would include myself in the others - that, you know, when you see reports of proliferation you need to follow them up, you need to get in the face of these people, and you need to continue this process of, you know, face-to-face talks. So, I think that's where we are. And what I can assure you of is any issues of proliferation, believe me, we address these in these talks.

TONY JONES: Do you know if there's any basis of these report of proliferation, specifically whether North Korea has supplied nuclear technology or nuclear materials to Syria?

CHRISTOPHER HILL: Again, a lot of these reports, as you know, are based on intelligence reports. We don't comment on intelligence reports, but I can assure you we follow up any reports of proliferation.

TONY JONES: It's not a stretch to imagine though, is it, because North Korea has, and it's known that it has supplied ballistic missile technology to Syria in the past.

CHRISTOPHER HILL: Well, we know that they've been involved with ballistic missile technology in Syria, we know that for a fact and we've been very concerned about their relations, generally in the Middle East. And what I've told the North Koreans is we need to hear from them what else they're doing in these countries, because [if] we don't hear from them, we're going to hear it from somewhere else. So you know, the North Koreans are often fond of telling us that we have a hostile attitude to them or we don't trust them, et cetera. I think it's time for them to show a little movement on these issues.

TONY JONES: Well, what are the North Koreans telling you about the allegations they've supplied nuclear technology to build a nuclear reactor in Syria?

CHRISTOPHER HILL: Well, I think you know that publicly they've simply dismissed all these allegations. Our concern is to follow up allegations of proliferation and make very clear to the North Koreans that as we go forward, and we are going forward in this process, in the six parties, and what we expect to get by the end of the year is for them to list all of their nuclear programs and in a verifiable way. So we've got to look at any - how to put it - export programs they might have.

TONY JONES: If these allegations were proven, if this intelligence were proven, what would the implications be?

CHRISTOPHER HILL: Well again, you know, I don't want to speculate except to say I think the best way to deal with allegations, I think the best way to deal with proliferation issues is through a process of talks. And that's where we can make very clear what needs to happen, what needs to be done, and so I - the idea that we should somehow break off from talks, not deal with them, I think begs the question and then what? Then what are we doing? How are we dealing with the problem?

TONY JONES: This will be part of the talks though, I imagine, the proliferation issue and the Syria connection?

CHRISTOPHER HILL: Any matter of proliferation needs to be addressed yes, and by the way it has been, we are working on these issues.

TONY JONES: And across the table they're denying this to you as well as publicly, are they?

CHRISTOPHER HILL: Well, you know, we are in a dialogue with them on a lot of issues including proliferation, and let's see where we come out.

## **Syria denies it confirmed target of IAF strike was nuclear facility**

By Barak Ravid, Haaretz Correspondent, and Haaretz Service

Last update - 15:24 18/10/2007

Syria denied Wednesday its representatives to the United Nations had confirmed that an Israel Air Force strike last month targeted nuclear facility, and added that such facilities do not exist in Syria, state-run news agency said.

The Syrian Arab News Agency, SANA, quoting a foreign ministry source, said that Syria had made it clear in the past that there are no such facilities in Syria.

On Tuesday, a UN press release sent after a meeting of the First Committee, Disarmament and International Security, in New York paraphrased Syria's UN ambassador, Bashar al-Jaafari, as saying that a nuclear facility was hit.

"Israel was the fourth largest exporter of weapons of mass destruction and a violator of other nations' airspace, and it had taken action against nuclear facilities, including the 6 July attack in Syria," the release paraphrased al-Jaafari as saying, in an apparent error as to the date of the September 6 air strike.

Syria has confirmed that the target of an IAF raid deep within its borders last month was a nuclear facility, Israeli Foreign Ministry officials said Wednesday.

The comments were first reported to Israel by Foreign Ministry Deputy Director General for Strategic Affairs Miriam Ziv, who took part in the UN meeting.

In an official response, the Foreign Ministry confirmed the content of Ziv's report, but declined further comment.

The comments follow a Saturday New York Times account, which said that the attack targeted a partially built nuclear reactor that was years away from completion.

Israeli officials have been largely silent about the affair. The military only recently relaxed censorship to allow Israel-based journalists to report that Israeli aircraft attacked a military target deep inside Syria.

Syrian President Bashar Assad has maintained that Israel bombed an "unused military building" in the raid.

The Times said the nuclear reactor was modeled on one North Korea had used to create its stockpile of nuclear weapons fuel. North Korea has denied involvement in any such activities in Syria.

## **Syrian Official Says Israeli Airstrike Hit Nuke Facility**

By James Rosen

Wednesday, **October 17, 2007**

DAMASCUS, Syria — A high-ranking Syrian official confirmed that Israel's airstrike last month in northern Syria hit a nuclear facility, according to a document obtained Wednesday by FOX News.

"Israel was the fourth-largest exporter of weapons of mass destruction and a violator of other nations' airspace, and it had taken action against nuclear facilities, including the 6 July attack in Syria," Syrian representative Bassam Darwish is quoted in the document as saying.

Diplomats familiar with the document cannot explain why July 6 was invoked, instead of Sept. 6, the date both countries say an incident occurred. A State Department source tells FOX News the best explanation is that Darwish misspoke.

The document, released by the General Assembly's Department of Public Information, recounted Tuesday's proceedings at the annual gathering of the U.N.'s Disarmament and International Security Committee.

What is clear is that this is the first time Syria has acknowledged its nuclear efforts.

Click here to view the document posted on the U.N. Web Site.

[deletia]

Statements in the general debate were also made by the representatives of Sudan, India, San Marino, Kuwait, Lebanon, Oman, Singapore, Lao People’s Democratic Republic, Nigeria, Ethiopia, Jordan and Uganda.

Speaking in exercise of the right of reply were the representatives of Iran, the Russian Federation, Syria, Egypt and Georgia.

[deletia]

**Right of Reply**

[deletia]

Also speaking in the right of reply, the representative of Syria said that the delegation of Israel had spoken out of context yesterday. Israel had used lies and accusations, which was not useful since the entire world was aware of the objectives and practices of that “colonial” entity, which encouraged State terrorism and had never respected the resolutions adopted against it by the United Nations. There had been politically motivated acts by Israel against Syria, and, at the same time, Israel had tried to distract attention from its actions, in particular, its interference in the internal affairs of Lebanon.

Concerning the Lebanese border, he said that the Lebanese Minister of Defence had denied that anything had crossed the border, and those controlling the border had confirmed that. Syria had informed the Secretary-General of that in writing. Contacts between Lebanese and Syrian authorities had been ongoing to protect the border, and the countries had regularly reported to the Security Council on their meetings. Syria had also recently increased the number of guards on its border, preventing any transfer of weapons from Iraq or any other countries. In a letter dated 4 May, Syria had reported on that. It had also asked Europe for help in securing its border, but had not received any such assistance.

The accusations by Israel, therefore, were totally unjustified. Israel was an “enemy entity” occupying Syrian territory. Israel regularly filmed trucks carrying fruits and vegetables into the country, and had recently bombed one of them. Israel was building eight reactors in a small territory and preparing itself “in nuclear terms” for a possible war, with 20 nuclear warheads, using thousands of cluster bombs, and not providing maps to show where they were dropped or where the nuclear waste was being disposed of. It was an entity that claimed that Gaza was trying to occupy areas, when it was itself occupying territory.

Moreover, the entity that was the fourth largest exporter of lethal weapons in the world, that which violated the airspace of sovereign States and carried out military aggression against them, as had happened on 6 September against Syria, such an entity, with all those characteristics and more, had no right to go on lying without shame.

## **UN: Action to be taken against interpreter for false report that Syria has a nuclear facility**

The Associated Press

Wednesday, October 17, 2007

UNITED NATIONS: The United Nations said Thursday action would be taken against the interpreter responsible for an erroneous report that Syria has a nuclear facility.

Syria denied that one of its representatives told the U.N. General Assembly's committee that deals with disarmament on Tuesday that Israel had attacked a Syrian nuclear facility. It said the representative was misquoted, demanded a correction, and insisted that "such facilities do not exist in Syria."

After more than seven hours of investigation Wednesday, U.N. officials agreed the Syrian delegate was misquoted. "There was an interpretation error," U.N. associate spokesman Farhan Haq said. "There was no use of the word nuclear."

The U.N. expressed regret for the incident.

The mistake made headlines in the Middle East and heightened concerns over Damascus' nuclear ambitions. Those ambitions were under scrutiny following a Sept. 6 Israeli airstrike on an unknown target in northeastern Syria near the border with Turkey. Widespread reports say it may have been a nascent nuclear facility, a claim Syria has denied.

The incident started Tuesday night with a U.N. press summary in English of the disarmament committee's proceedings that paraphrased the Syrian representative as saying, "Israel was the fourth largest exporter of weapons of mass destruction and a violator of other nations' airspace, and it had taken action against nuclear facilities, including the 6 July attack in Syria."

The Syrian representative spoke in Arabic, but Haq said Thursday the problem was not the translation from Arabic. An interpreter who worked from Arabic into French was fairly accurate, he said.

The problem occurred when interpreter translated the statement into English from French, Haq said.

"Action will be taken against that freelance interpreter to the fullest extent of the U.N. rules and regulations," Haq said, refusing to comment further on what that action might be.

Other U.N. staffers familiar with the rules said the freelance interpreter likely works on some kind of contract with the U.N. translation service that will not be renewed. The staffers spoke on condition of anonymity because they were not authorized to speak publicly.

Earlier Thursday, U.N. spokeswoman Michele Montas told reporters: "We regret the error and the department that deals with General Assembly affairs is looking further into the incident."

She confirmed that the Syrian Mission had discussed the matter with the Department of General Assembly and Conference Management. She added that any reporter who spoke Arabic and listened to the original tape recording of the Syrian delegate would realize the mistake.

According to the corrected text, the Syrian representative said: "...the (entity) that is ranking number four among the exporters of lethal weapons in the world; that which violates the airspace of sovereign states and carries out military aggression against them, like what happened on Sept. 6 against my country, such entity with all those characteristics and even more, has no right for its representative to go on lying without shame..."

The Syrian representative was replying to a speech to the committee on Monday by Israeli Ambassador Miriam Ziv, deputy director general for strategic affairs in the Foreign Ministry, who accused Syria of continuing to transfer weapons to Hezbollah fighters in Lebanon.

For Immediate Release  
Office of the Press Secretary  
October 17, 2007

## **Press Conference by the President**

James S. Brady Briefing Room

10:45 A.M. EDT

*[EXCERPT]*

Q There's a report today from Israel Army Radio indicating that the Syrians have confirmed that the Israelis struck a nuclear site in their country. You wouldn't comment on that before, and I'm wondering if now, on the general question, you think it's appropriate for Israel to take such action if it feels that there is mortal danger being posed to the state?

THE PRESIDENT: David, my position hadn't changed. You can ask me another question.

Q Can I ask you whether -- did you support Israel's strike in 1981 on the Iraqi reactor outside Baghdad?

THE PRESIDENT: You know, Dave, I don't remember what I was doing in 1980 -- let's see, I was living in Midland, Texas; I don't remember my reaction that far back.

Q Well, but as you look at it as President now --

THE PRESIDENT: -- private citizen back there in 1981 in Midland, Texas, trying to make a living for my family and --

Q But you're a careful -- someone who studies history --

THE PRESIDENT: Student of history? I do, yes. No, I don't remember my reaction, to be frank with you.

Q But I'm asking you now, as you look back at it, do you think it was the right action for Israel to take?

THE PRESIDENT: David, I'm not going to comment on the subject that you're trying to get me to comment on.

Q Why won't you? But isn't it a fair question to say, is it -- given all the talk about Iran and the potential threat, whether it would be appropriate for Israel to act --

THE PRESIDENT: Hey, Dave -- Dave --

Q -- in self-defense --

THE PRESIDENT: I understand --

Q -- if Iran were to --

THE PRESIDENT: -- I understand where you're trying to take --

Q -- develop nuclear weapons?

THE PRESIDENT: I understand where you're trying to take. It's a clever ruse to get me to comment on it, but I'm not going to. Thank you.

Q Well, I'm just wondering why you think it's not appropriate to make that judgment, when it's a -- it is a real-world scenario, as we know, since they apparently took this action against Syria --

THE PRESIDENT: Dave. Welcome back. (Laughter.)

*[deletia]*

Q Let's stay with the nuclear -- here. When North Korea tested a nuclear device, you said that any proliferation would be a grave threat to the U.S., and North Korea would be responsible for the consequences. Are you denying that North Korea has any role in the suspected nuclear --

THE PRESIDENT: See, you're trying to pull a Gregory.

Q Yes, I am.

THE PRESIDENT: Okay, well, I'm not going to fall for it. But I'd like to talk about --

Q Don't Americans have a right to know about who is proliferating, especially when you're negotiating with North Korea?

THE PRESIDENT: No, you have a right to know this, that when it comes to the six-party talks, proliferation -- the issue of proliferation has equal importance with the issue of weaponry, and that North Korea has said that they will stop proliferating, just like they have said they will fully disclose and disable any weapons programs.

Step one of that has been dealing with shuttering Pyongyang. Step two will be full declaration of any plutonium that has been manufactured, and/or the construction of bombs, along with a full declaration of any proliferation activities. And in my judgment, the best way to solve this issue with North Korea peacefully is to put it in -- keep it in the context of six-party talks. And the reason why is that

diplomacy only works if there are consequences when diplomacy breaks down, and it makes sense for there to be other people at the table so that if North Korea were to have said to all of us, we're doing to do x, y, or z, and they don't, that we have other -- people other than the United States being consequential.

There's a lot of aid that goes on with -- between North Korea and China, or North Korea and South Korea, and therefore, if they renege on their promises -- and they have said -- they have declared that they will show us weapons and get rid of the weapons programs, as well as stop proliferation -- if they don't fulfill that which they've said, we are now in a position to make sure that they understand that there will be consequences.

And I'm pleased with the progress we're making. Is there still work to be done? You bet there's work to be done. Do I go into this thing saying, well, you know, gosh, the process is more important than results? I don't. What matters most to me are whether or not we can achieve the results that I've said we're hoping to achieve. And if not, there will be consequences to the North Koreans.

Q Was Syria part of those talks? Is Syria part of the talks?

THE PRESIDENT: Proliferation is a part of the talks.

Q Including Syria?

THE PRESIDENT: Elaine.

Look, in all due respect to you and Gregory, this is not my first rodeo. And I know where you're trying to get me to comment. I'm not going to comment on it, one way or the other.

Elaine.

Q But, Mr. President, your administration has talked about --

THE PRESIDENT: Thank you, Martha. Martha, thank you. Elaine.

Daily Press Briefing  
Tom Casey, Deputy Spokesman  
Washington, DC  
October 17, 2007

[EXCERPT]

MR. CASEY: ...

Nicholas.

QUESTION: On North Korea, Tom, I know that you have not been willing to talk about any Syria links or any programs and such, though you are aware, I am sure, of reports, in addition to the Israeli strike, of a shipment that recently went to Syria that is reported to be from North Korea. But you probably also know there have been suggestions from people whom some might describe as hardliners that the reason you're not talking much about any North Korean help that Syria might have received is because you do not want this to derail the deal with North Korea. Is there any truth to that?

MR. CASEY: I think that's where I started the briefing about the answers the President gave. I think the President made very clear, and you can go back and check the transcript, that nonproliferation issues have always been a part of the six-party talks; that the North Koreans have committed to us to both ceasing any support for proliferation activities as well as providing a declaration that covers the full range of their nuclear programs, including what proliferation activities they might have engaged in. And that is where we believe we will be able to find the best answers to what exactly is the full scope of their program, and that's essential to being able to have confidence that as we move forward with the disablement and ultimately dismantling of the full range of their nuclear program that we have a complete understanding of what's there.

Beyond that, in terms of the various press reports that have been out there, it's the same answer as always. I just don't have anything for you on it.

QUESTION: So the declaration is not -- the deadline for the declaration is the end of the year, right?

MR. CASEY: Yeah.

QUESTION: So between now and then, they're free to export anything they like?

MR. CASEY: Nicholas, again, they've committed to ceasing those activities. I'm not going to try and parse it for you. They've made commitments; we expect them to live up to them.

QUESTION: A follow-up?

MR. CASEY: Yeah, Param.

QUESTION: I mean, despite Israel's admission that they've had a strike on Syria, why is the Administration refusing to admit or deny that North Korean material has been -- nuclear material had been found in Syria?

MR. CASEY: Look, I think the President refused to comment on this about five times less than an hour ago. I could probably go back and count the number of times I have simply said I don't have anything for you on it, and you could ask again, Param, but it's the same answer as before. Seriously, I just don't have anything for you.

QUESTION: Tom, can you just --

MR. CASEY: Yeah.

QUESTION: You said you expect them to abide by the commitments they've made. They actually haven't -- in these things they signed, they never said we're not going to export material --

MR. CASEY: Nicholas --

QUESTION: -- to anybody else. They haven't.

MR. CASEY: Nicholas, look, I think it's abundantly clear that we expect a full declaration from the North Koreans about the extent of their nuclear program. It's also abundantly clear -- and you've heard it from the President, you've heard it from Chris, you've heard it from the Secretary, you've heard it from every official involved in this policy -- that proliferation issues have been part of our discussion with the North Koreans since the beginning.

The United States is not going to pretend that North Korea has given us a declaration or pretend that they have ceased their activities. This is a serious process. It's designed to get us to the point where the United States can be assured, the other members of the six-party can be assured and the world can be assured that North Korea is out of the nuclear business.

Are we there yet? Nope, we sure aren't. There's still a facility at Yongbyon. It's been shut down, but it hasn't been disabled. And ultimately, after it's disabled, it'll need to be dismantled.

They've promised to give us a declaration. Do we have it yet? No, but we've got a commitment to get one. Can I tell you right now what's in that declaration or, you know, how it will look to us at the time? No, we'll have to see. That's why this whole process is based on good faith actions for good faith actions.

But I would note that we have now entered what is a really new phase in the ending of North Korea's nuclear program. We have in the past gotten to the point of suspension of activities. That's where the

February 13th agreement brought us. This latest agreement takes us to actual dismantlement, to moving their facilities, the ones that are producing plutonium for nuclear bombs, out of business not just in terms of temporary shuttering, which they could restart and have back to full operations in a few weeks, but something where it's going to take a year or more for them to do so. And I think that's an important step and it's one that hasn't been achieved before. The declaration of their full length of their programs is also extremely significant because it's something that we haven't had. And once we have that, then we will be able to know and work specifically on eliminating any and all other nuclear programs or activities that may be out there.

But anyone asserting to you that the United States is turning a blind eye to proliferation activities, whether by North Korea or anyone else, simply isn't speaking in a way that marries up with the facts on this issue.

QUESTION: Is it abundantly clear that North Korea is not (inaudible) proliferation activities?

MR. CASEY: Nice try, Param. Look, as I said, we have had proliferation as part of our discussion with them since the beginning of the six-party talks. I think when we get a declaration we'll be able to talk in more specific detail about what might or might not be there.

## **Syria denies existence of nuclear site**

Posted Thu **Oct 18, 2007** 12:00am AEST

Syria has denied media reports suggesting that its UN envoy had said a nuclear site was hit in an Israeli air strike last month, saying there was no such thing on its soil.

"The ministry denies media reports that Syria's ambassador in New York had said the September 6 raid targeted a nuclear plant because no such facility exists in Syria," the foreign ministry said in a statement.

"Syria has already made this clear in the past," it added.

Israeli media reports had said that a Syrian representative had made the comments at a meeting of a UN committee in New York.

According to a New York Times report on Sunday, Israeli warplanes bombed a site that Israeli and US intelligence believe was a partly built nuclear reactor possibly modelled after one in North Korea.

Citing unnamed US and foreign officials with access to the intelligence reports, the report said it appeared Israel carried out the raid to demonstrate its determination to snuff out even a nascent nuclear project.

But the UN nuclear watchdog said on Monday [2007-10-15] it had no information about any "undeclared nuclear facility in Syria" and that it was investigating the media reports.

## White House mum on Syrian nukes

October 18, 2007

By Nicholas Kralev -

Bush administration officials said yesterday that they are determined to prevent current and former hard-liners from using reports of North Korean nuclear-related transfers to Syria to derail negotiations with Pyongyang.

President Bush repeatedly refused at a press conference to disclose any information about the suspected exports to Syria or an Israeli air strike on a site thought to house those materials, saying any proliferation concerns that the United States has will be addressed in six-nation talks with the North.

Asked whether the American people have a right to know whether North Korea is secretly aiding the nuclear ambitions of a country hostile to the United States while negotiating the end of its own programs, Mr. Bush offered a terse answer.

“No,” he said. “You have a right to know this — that when it comes to the six-party talks, the issue of proliferation has equal importance with the issue of weaponry, and that North Korea has said that they will stop proliferating, just like they have said they will fully disclose and disable any weapons programs.”

Current and former hard-line members of Mr. Bush's administration, who drove North Korea policy during his first term but have since lost his ear, have expressed dismay that the White House is not making more of the Syria reports.

Those policy-makers to whom Mr. Bush listens now — Secretary of State Condoleezza Rice and Christopher R. Hill, the chief negotiator with the North — will not allow the hard-liners, who criticized the recent nuclear agreement even before the Syria mystery, to stall the negotiations, administration officials said.

“The president has decided that it's worth pursuing a deal with North Korea, and that's what matters,” one official said.

In February, Pyongyang agreed in principle to dismantle its nuclear programs, and to shut down its main reactor at Yongbyon as a first step, which it did in July. Earlier this month, it promised to disable Yongbyon's three main facilities and to produce a full declaration of its nuclear efforts and capabilities by year's end.

But critics of the deal — whose other parties are China, Japan, South Korea and Russia — said the text was too vague and left much room for interpretation.

Some of that vagueness became apparent yesterday, when Mr. Bush said the North Koreans had agreed to something that analysts said is not technically part of the deal.

“Step two will be full declaration of any plutonium that has been manufactured and/or the construction of bombs, along with a full declaration of any proliferation activities,” the president said.

The Oct. 3 document does say that the North “committed not to transfer nuclear materials, technology or know-how,” but when it comes to the declaration, it says it “will include all nuclear facilities, materials and programs.” There is no mention of documenting proliferation activities.

Nevertheless, such a disclosure “is implied in their commitment, and we intend to hold them to it,” said Gordon Johndroe, spokesman for the National Security Council at the White House.

The agreement is also vague on whether North Korea is required to list any nuclear weapons it has built. Kim Kye-gwan, the chief North Korean negotiator, was reported as saying two weeks ago: “We can't declare nuclear weapons this year, because if we do it at this stage, our nuclear-weapons technology level will be revealed.”

Bruce Klingner, senior fellow at the Heritage Foundation, said the “very vague document” demonstrates the need for “specific treaty language prohibiting further proliferation and requiring a full declaration” of past activities.

Congress is likely to ask questions about the Syria reports during Mr. Hill's next testimony on the deal, Mr. Klingner said.

“The administration needs to come clean on this story to the degree possible to garner more support for the negotiations,” he said.

## **Syrians Disassembling Ruins at Site Bombed by Israel, Officials Say**

By Robin Wright and Joby Warrick

Washington Post Staff Writers

Friday, October 19, 2007; A18

Syria has begun dismantling the remains of a site Israel bombed Sept. 6 in what may be an attempt to prevent the location from coming under international scrutiny, said U.S. and foreign officials familiar with the aftermath of the attack.

Based on overhead photography, the officials say the site in Syria's eastern desert near the Euphrates River had a "signature" or characteristics of a small but substantial nuclear reactor, one similar in structure to North Korea's facilities.

The dismantling of the damaged site, which appears to be still underway, could make it difficult for weapons inspectors to determine the precise nature of the facility and how Syria planned to use it. Syria, which possesses a small reactor used for scientific research, has denied seeking to expand its nuclear program. But U.S. officials knowledgeable about the Israeli raid have described the target as a nuclear facility being constructed with North Korean assistance.

The bombed facility is different from the one Syria displayed to journalists last week to back its allegations that Israel had bombed an essentially an empty building, said the officials, who insisted on anonymity because details of the Israeli attack are classified.

While U.S. officials express increasing confidence that the Syrian facility was nuclear-related, divisions persist within the government and among weapons experts over the significance of the threat. If the facility was a nuclear reactor, U.S. weapons experts said it would almost certainly have taken Syria several years to complete the structure, and much longer to produce significant quantities of plutonium for potential use in nuclear weapons. Nuclear reactors also are used to generate electricity.

"This isn't like a Road Runner cartoon where you call up Acme Reactors and they deliver a functioning reactor to your back yard. It takes years to build," said Joseph Cirincione, director for nuclear policy at the Center for American Progress. "This is an extremely demanding technology, and I don't think Syria has the technical, engineering or financial base to really support such a reactor."

While expressing concern over the prospect that Syria may have decided to launch a nuclear program in secret, some weapons experts question why neither Israel nor the United States made any effort before the secret attack -- or in the six weeks since -- to offer evidence to the International Atomic Energy Agency, a move that would trigger an inspection of Syria by the nuclear watchdog.

"The reason we have an IAEA and a safeguard system is that, if there is evidence of wrongdoing, it can be presented by a neutral body to the international community so that a collective response can be pursued," said Daryl Kimball, executive director of the Arms Control Association. "It seems to me highly risky and premature for another country to bomb such a facility."

But John R. Bolton, the Bush administration's former ambassador to the United Nations, said Syria's secrecy -- including its apparent move to clean up the site after the bombing -- suggests that Damascus

is pursuing a strategy similar to that of Iran, which the Bush administration believes is pursuing a nuclear weapons capability. Bolton said Iran once attempted to conceal nuclear activity from IAEA inspectors by bulldozing nuclear-related buildings and even digging up nearby topsoil to remove all traces of nuclear material.

"The common practice for people with legitimate civilian nuclear power programs is to be transparent, because they have nothing to hide," Bolton said.

The IAEA has not been provided any evidence about the Syrian facility and has been unable to obtain any reliable details about the Sept. 6 strike, said a European diplomat familiar with the agency's internal discussions.

Syria is a signatory to the Nuclear Non-Proliferation Treaty and has cooperated with IAEA inspections of the small, 27-kilowatt research facility it has run for decades, IAEA sources said.

Some experts speculate that Israeli and U.S. officials may have calculated that reporting their intelligence to the IAEA would have produced only limited repercussions, the equivalent of a diplomatic slap on the wrist to Syria, which might have decided to build the facility anyway.

Foreign sources familiar with the attack say Israel wanted to send a strong message to Iran about the price of developing a secret nuclear program. Israel is increasingly alarmed about Iran's intentions and frustrated that the international community has not persuaded Tehran to suspend its uranium enrichment program.

If North Korea is shown to have helped with the construction of a Syrian reactor, it would suggest that the Pyongyang government has been secretly hawking its nuclear know-how to the Syrians for years, several experts said. But even if North Korea's involvement is proved, it is unlikely that the Bush administration would halt negotiations with Pyongyang over dismantling its nuclear program, the experts said.

"The Bush administration has clearly decided not to let this incident deter them from trying to limit North Korea's nuclear activity," said Gary Samore, a National Security Council member under President Bill Clinton who is now with the Council on Foreign Relations.

## **EXCLUSIVE: The Case for Israel's Strike on Syria**

Official: Air Attack Targeted Nascent Nuclear Facility Built With North Korean 'Expertise'

By MARTHA RADDATZ

Oct. 19, 2007

Israeli officials believed that a target their forces bombed inside Syria last month was a nuclear facility, because they had detailed photographs taken by a possible spy inside the complex, ABC News has learned.

The Bush administration has steadfastly refused to say anything about the Israeli raid on Syria, or to confirm what was hit. But ABC News has learned of the apparent mole and other dramatic and secret details about the events leading up to the airstrike, plus the evidence that supported it.

A senior U.S. official told ABC News the Israelis first discovered a suspected Syrian nuclear facility early in the summer, and the Mossad (Israel's intelligence agency) managed to either co-opt one of the facility's workers or to insert a spy posing as an employee.

As a result, the Israelis obtained many detailed pictures of the facility from the ground.

The official said the suspected nuclear facility was approximately 100 miles from the Iraqi border, deep in the desert along the Euphrates River. It was a place, the official said, "where no one would ever go unless you had a reason to go there."

But the hardest evidence of all was the photographs.

The official described the pictures as showing a big cylindrical structure, with very thick walls all well reinforced.

The photos show rebar hanging out of the cement used to reinforce the structure, which was still under construction.

There was also a secondary structure and a pump station, with trucks around it. But there was no fissionable material found because the facility was not yet operating.

The official said there was a larger structure just north of a small pump station; a nuclear reactor would need a constant source of water to keep it cool.

The official said the facility was a North Korean design in its construction, the technology present and the ability to put it all together.

It was North Korean "expertise," said the official, meaning the Syrians must have had "human" help from North Korea.

A light water reactor designed by North Koreans could be constructed to specifically produce plutonium for nuclear weapons.

When the Israelis came to the CIA with the pictures, the U.S. then got the site's coordinates and backed it up with very detailed satellite imagery of its own, and pinpointed "drop points" to determine what would be needed to target it.

The Israelis urged the U.S. government to destroy the complex, and the U.S. started looking at options about how to destroy the facility: Targeters were assembled, and officials contemplated a special forces raid using helicopters, which would mean inserting forces to collect data and then blow the site up.

That option would have been very daring, the official says, because of the distance from the border and the amount of explosives it would take to take down the facility.

The options were considered, but according to the official, word came back from the White House that the United States was not interested in carrying out the raid.

But as ABC News reported in July, the Israelis made the decision to take the facility out themselves, though the U.S. urged them not to. The Bush administration, with Secretary of State Condoleezza Rice and Defense Secretary Robert Gates leading the way, said the Israelis and the U.S. should "confront not attack."

The official said the facility had been there at least eight months before the strike, but because of the lack of fissionable material, the United States hesitated on the attack because it couldn't be absolutely proved that it was a nuclear site.

But the official told ABC News, "It was unmistakable what it was going to be. There is no doubt in my mind."

## **Imad Moustapha: Give Syria a place at the table**

U.S. and Israel are trying to marginalize Syria's role in the peace process  
08:42 AM CDT on Saturday, **October 20, 2007**

Excerpts of an editorial board interview with Syrian Ambassador Imad Moustapha, who addressed the World Affairs Council of Dallas/Fort Worth on Tuesday.

*[deletia]*

**We don't know why Israel launched an air strike on Syria on Sept. 6, but we assume they had some justification. If you were in Israel's shoes, could you understand why they wouldn't want you at the negotiating table?**

We believe in Syria that the only way forward is to reach a peace agreement with the Israelis. We are realists. We do understand that the Israelis enjoy military superiority compared to the Syrian capabilities. ... We also understand that the Israelis know very well that, despite their sheer military superiority, they cannot impose on us forever their policies of occupation. ...

The Israelis know very well, and the United States knows absolutely well, that there is no Syrian nuclear program whatsoever. It's an absolutely blatant lie. And it's not like they think we have but they're not sure. They know. Let me be clear about it: Syria has never, ever contemplated acquiring nuclear technology. We are not contemplating it today. We are not contemplating doing this in the future – neither for military nor for civilian purposes.

**Then what did Israel attack?**

Israel attacked a military installation in Syria. This is not unprecedented in the history of the Arab-Israeli conflict. ... It's easy for Syria right now to launch a missile against an Israeli target. But where this will lead to – another destructive war in our region similar to what happened last summer in Lebanon? ... What did this [Lebanon] attack lead to? Nowhere. Israel attacked Syria a month ago. What did this lead to? They did not destroy our military capability. It served domestic reasons in Israel, and it served some special, narrow-minded agendas here in the United States.

**How does it serve Israel's agenda to keep this quiet? Israel hasn't said a word about this attack.**

Israel didn't say anything, but this suited Israel very well, because suddenly ... everybody in the United States is discussing this "Syrian nuclear program." Everybody – particularly The New York Times – every two or three days they have a new article about the Syrian nuclear program. And we are flabbergasted in Syria. I have written three letters to The New York Times telling them: Have you forgotten what you have done prior to the Iraq war, when you published all the fallout stories about the Iraqi WMDs? Don't you realize that you're being "Judith Millered" for the second time within five years?

I'm trying to tell The New York Times: Look, be careful. Can't you see that you are being led into extremely dangerous territory? You are accusing a country of doing something it has not even contemplated doing – based on nothing. Based on leaks from Israeli agents who are very happy playing this game.

**What was attacked, and what was the damage? Were there any deaths?**

Minor damage. The military significance of it was minor. ... Nobody died. None. It was a military warehouse. ... All I'm saying is that every story that has to do with a Syrian nuclear program is an absolutely false story, full stop. Nothing whatsoever that Syria is doing has to do with nuclear technology for reasons that are simple for anyone to analyze: We are realists. We understand that if Syria even contemplated nuclear technology, then the gates of hell would open on us.

COMMENTARY

## **What Happened in Syria?**

By PETER HOEKSTRA and ILEANA ROS-LEHTINEN

October 20, 2007; Page A10

Over the last few weeks, State Department officials have reported major diplomatic breakthroughs that will roll back North Korea's nuclear weapons program, allow Pyongyang to be removed from the U.S. state sponsors of terror list, and normalize relations between our two countries.

North Korea reportedly has agreed to disable its nuclear facilities and has, as it has done many times before, promised to give a full accounting of its nuclear program. The latest deadline is Dec. 31, 2007. Congress has been asked to support this agreement, which State Department officials claim will benefit our nation and promote regional stability.

Then, early last month, Israel conducted an airstrike against a facility in northern Syria that press reports have linked to nuclear programs by North Korea, Iran or other rogue states. If this event proves that Syria acquired nuclear expertise or material from North Korea, Iran or other rogue states, it would constitute a grave threat to international security for which Syria and any other involved parties must be held accountable.

The Bush administration, however, has thrown an unprecedented veil of secrecy around the Israeli airstrike. It has briefed only a handful of very senior members of Congress, leaving the vast majority of foreign relations and intelligence committee members in the dark. We are among the very few who were briefed, but we have been sworn to secrecy on this matter. However, we are prepared to state, based on what we have learned, that it is critical for every member of Congress to be briefed on this incident, and as soon as possible.

We are concerned that, although the Bush administration refuses to discuss the Israeli airstrike with the American people or with the majority of Congress, it has not hesitated to give information on background to the press to shape this story to its liking. New York Times writer David Sanger authored and coauthored articles on Oct. 14 and 15 that appeared to reflect extensive input from senior policy makers. Washington Post writer Glenn Kessler coauthored an article on Sept. 21 that also cited inside information from the administration. We believe this is unacceptable.

We want to remind President Bush that the Constitution invests Congress with various powers and authority over foreign policy. Not only does Congress have an obligation to conduct oversight over these matters, but it is accountable to the people of this country to ensure that their security and interests are safeguarded.

The proposed deals with North Korea will involve substantial expenditures of U.S. funds to pay for heavy fuel oil deliveries. Congress will be asked to approve the authorization of funds for this expenditure. We cannot carry out our duties when we are being denied information about these critical national security matters.

We all want to secure agreements that address the proliferation of nuclear weapons, ballistic missiles and unconventional weapons. However, for these agreements to have long-term viability, they must be transparent, and based on close consultations and collaboration with the Congress.

If the Israeli airstrike last month is related to covert nuclear collaboration involving Syria and either North Korea, Iran or other rogue states, this may or may not be an issue that can be easily addressed by negotiations alone. It is certain, however, that such a serious international security issue will not stay secret forever.

Congress, therefore, needs to be fully briefed, not just on the details of the airstrike, but on how to address this matter and how, if press reports are true, rogue states will be held accountable for what could amount to a very serious case of WMD proliferation.

We regret that the administration has ignored numerous letters from Congress asking that all members be briefed on the Israeli airstrike. Failing to disclose the details of this incident to the legislative branch, preventing due diligence and oversight -- but talking to the press about it -- is not the way to win support for complex and difficult diplomatic efforts to combat proliferation by rogue nations.

Until Congress is fully briefed, it would be imprudent for the administration to move forward with agreements with state proliferators. Congress must be a full partner in this process and, from this point forward, must be kept dutifully and currently informed about this matter.

Mr. Hoekstra is the senior Republican member of the House Permanent Select Committee on Intelligence. Ms. Ros-Lehtinen is the senior Republican member of the House Foreign Affairs Committee.

[http://www.newsmax.com/insidecover/Israel\\_attack\\_syria/2007/10/22/42934.html](http://www.newsmax.com/insidecover/Israel_attack_syria/2007/10/22/42934.html)

## **Hoekstra, Ros-Lehtinen: Reveal Syria Attack Info**

Monday, October 22, 2007 3:15 PM

By: Newsmax Staff

*[EXCERPTS]*

Two influential Republican members of the U.S. House have castigated the Bush administration for failing to brief Congress on Israeli bombing of a suspected nuclear facility in Syria last month.

In an op-ed piece in Saturday's Wall Street Journal, Rep. Peter Hoekstra of Michigan, senior GOP member of the House Permanent Select Committee on Intelligence, and Ileana Ros-Lehtinen of Florida, the senior Republican member of the House Foreign Affairs Committee, wrote:

*[deletia; full text of op-ed above]*

The day after the op-ed piece was published, Hoekstra and Rep. Jane Harman of California – who chairs the House Homeland Security Subcommittee on Intelligence – appeared on CNN's "Late Edition" with Wolf Blitzer.

*[See [http://uk.youtube.com/watch?v=ci\\_gFFXg8dY](http://uk.youtube.com/watch?v=ci_gFFXg8dY)]*

Hoekstra reiterated his call for the Bush administration to divulge to Congress details about the Israeli strike and the alleged Syrian-North Korean program.

But when asked if she had been briefed, Harman said: "I know what I know from the public media."

Blitzer said: "But you're the chair of this important intelligence subcommittee of the House Homeland Security Committee. Have they briefed you?"

Harman answered: "No, they have not briefed me on what went on in northern Syria ... I've had some conversations with Peter, but he's not free to reveal classified information even to me, although I have the clearances. That's just how the thing works."

Asked by Blitzer if the reported North Korean link to the Syrian facility "raises alarm bells" for him, Hoekstra replied:

"Absolutely. I mean what we've found through the '90s and what we have found through the Bush administration is that the North Koreans, they'll always make deal, but the other thing that we'll see consistently is that they will break those agreements."

## **GOP asks about N. Korean role in Syria**

By Peter Spiegel

October 26, 2007 in print edition A-7

House Republicans pressed the Bush administration's top North Korea negotiator Thursday [2007-10-25] to explain a reported Israeli airstrike last month on a Syrian nuclear facility under construction, indicating growing congressional concern over the incident.

At a Capitol Hill hearing, Republicans on the House Foreign Affairs Committee accused the administration of improperly withholding details of the Sept. 6. bombing raid, saying they needed to know of any evidence that North Korea was involved in spreading nuclear technology to Syria.

Evidence of North Korean involvement in a Syrian program would be grounds to void a pending nuclear deal with North Korea, some said.

Christopher Hill, the State Department's assistant secretary for Asia and the official responsible for U.S. negotiations with North Korea, acknowledged under intense questioning that he had raised the issue of Syria in recent talks with the North Korean government.

The statement was the closest any senior administration official has come to acknowledging possible North Korean involvement in a Syrian nuclear program. But Hill, like other senior officials, including President Bush, declined to confirm the Israeli strike had occurred, saying he was not authorized to discuss sensitive intelligence matters.

On Thursday, the private Institute for Science and International Security, based in Washington, said it had obtained commercial satellite photos showing that a large building at the Syrian site had been razed. Its website, [www.isis-online.org](http://www.isis-online.org), includes before-and-after images and says tractors or bulldozers can be seen where the suspected reactor building that was being constructed no longer stands.

At the hearing, Hill testified: "Clearly we cannot be reaching a nuclear agreement with North Korea if, at the same time, they're proliferating. It is not acceptable."

In February, North Korea agreed to freeze its nuclear program and allow in international inspectors in return for energy assistance and the unfreezing of North Korean assets. The agreement, the details of which are still being finalized, has been criticized by GOP conservatives for rewarding the government in Pyongyang before its nuclear program is fully dismantled.

Thursday's hearing was the latest in a series of Republican demands to be briefed on the Israeli strike and any evidence of nuclear assistance from North Korea or Iran.

Earlier this week, leading Republicans on the House Intelligence and Foreign Affairs committees, both among a select group of senior congressional leaders who have been briefed on the incident, demanded that all members of Congress be filled in.

Rep. Ed Royce (R-Fullerton) said at the hearing that if there were evidence that North Korea was providing Syria with nuclear assistance, it would be “a pretty damning indictment of Pyongyang’s intentions” that should call into question the six-party talks on the new agreement.

Hill said that the administration would not tolerate nuclear proliferation by North Korea, but declined to say whether intelligence gathered as a result of the Israeli strike showed evidence of North Korean involvement.

## A New Intelligence Failure?

By Mark Hosenball | NEWSWEEK

Nov 5, 2007 Issue

The Syrian desert facility that Israel apparently attacked in a shadowy Sept. 6 raid—and that some administration officials believe was a secret nuclear reactor—might be several years old. Israel bombed the complex near the Euphrates River months after alerting the United States to the existence of a suspect Syrian facility, according to intelligence sources. But photographic evidence obtained by NEWSWEEK shows the boxy main building already existed in 2003, and a European intelligence source said the program might have begun years earlier. The source, who asked for anonymity when discussing sensitive information, said fresh intelligence suggests the Syrians actually started a hush-hush program under the regime of late president Hafez Assad, who died in 2000, and that initially, clandestine factions of the government may have kept it secret from Bashar al-Assad, Hafez's son and successor. If true, it could be a significant intelligence failure by American and other Western spy agencies. (The CIA declined to comment.)

The facility in the 2003 satellite photo, taken by the commercial remote-sensing company GeoEye, appears identical to the one pictured in satellite images snapped weeks before the Israeli strike, with one notable distinction: the recent photos include what analysts have described as a pumping station along the Euphrates. Nuclear experts say Syria probably put in the pumping station to cool a reactor, which many believe was based on a North Korean design and was years from completion. A post-raid commercial satellite image taken last week showed the site had been flattened by bulldozers—evidence that most experts agree demonstrated Syria's desire to hide all traces of the facility. Israel has kept quiet about its attack, while Syria denied having a secret nuclear program.

Immediately after the bombing, many nuclear-proliferation experts in the United States and Europe expressed doubt that Syria had the money or the scientific capability for a secret atomic program. They also questioned whether North Korea would be desperate and greedy enough to sell nuclear wares to Syria. The new photos now have skeptics admitting they may have been mistaken.

The Bush administration has maintained a strict gag order on discussion of the Israeli attack. But two weeks after the incident, U.S. "intelligence czar" Mike McConnell began giving highly classified one-on-one briefings about the incident to a handful of congressional leaders. Republicans and Democrats came away with opposing conclusions. According to a former administration official, Republican legislators began agitating for a halt, or at least an interruption, in ongoing U.S. disarmament talks with North Korea. But House Foreign Affairs chairman Tom Lantos told NEWSWEEK that even after the briefing, he remains "fully in favor of pursuing ongoing diplomatic discussions with North Korea." Lantos said he also favors closer relations with both Pyongyang and Damascus, and that if North Korea disarmament talks succeed, the country should be dropped from a U.S. list of states that sponsor terrorism.

## **Congress Still Largely Uninformed on Israeli Strike on Syria**

Nick Schwellenbach

November 8, 2007

*[EXCERPT]*

Despite several congressional requests to the executive branch for briefings on Israel's air strike on Syria in September, Congress still remains largely in the dark, POGO learned yesterday. On October 20, Reps. Pete Hoekstra (R-MI) and Ileana Ros-Lehtinen (R-FL), respectively the ranking members of the House intelligence and foreign relations committees, published an op-ed in the Wall Street Journal charging that:

We regret that the administration has ignored numerous letters from Congress asking that all members be briefed on the Israeli airstrike. Failing to disclose the details of this incident to the legislative branch, preventing due diligence and oversight -- but talking to the press about it -- is not the way to win support for complex and difficult diplomatic efforts to combat proliferation by rogue nations. [emphasis added]

The Senate intelligence committee officially told me "no comment" yesterday *[November 7, 2007]*. However, a congressional staffer told me that "the issue has been closely held. The leadership of the defense committees and Intel committees have been briefed, but not the general membership of the Congress as you correctly noted in Ros-Lethinen's OpEd." Other sources told me that they were not aware of their full committees being briefed yet either.

Perhaps of greater practical concern for congressional oversight is, though a few select members have been briefed, none of their staff, which members depend upon for their expertise and knowledge, have not been allowed to accompany them, POGO has been told.

## **Mohamed ElBaradei pense que "l'Iran ne sera pas une menace dès demain"**

LE MONDE | 22.10.07 | 14h56 • Mis à jour le 22.10.07 | 15h01

VIENNE ENVOYÉE SPÉCIALE

[EXCERPT]

**Quel commentaire faites-vous à propos des raids aériens menés le 6 septembre par Israël en Syrie? Selon la presse américaine, ces frappes visaient des sites où se construisait un réacteur nucléaire basé sur des éléments en provenance de la Corée du Nord. Ces informations sont-elles fondées ?**

A l'Agence internationale de l'énergie atomique (AIEA), nous avons reçu zéro, et je souligne "zéro", information allant dans ce sens. Nous avons contacté les Syriens, ainsi que les agences de renseignement étrangères. Nous avons dit : si l'un d'entre vous a la moindre information montrant qu'il y avait des éléments liés au nucléaire, évidemment, nous serions contents d'enquêter là-dessus. J'ose espérer, franchement, qu'avant que les gens en viennent à bombarder et à utiliser la force, ils viennent nous voir pour signaler leurs préoccupations. Nous serions alors allés sur place pour vérifier. Nous n'avons pas d'indication montrant que c'est nucléaire. Tant que nous ne recevons pas d'information allant dans ce sens, nous ne pourrons pas faire grand-chose.

**Dans le suivi que vous avez fait jusqu'à présent des activités nucléaires de la Corée du Nord, avez-vous trouvé la moindre indication d'un lien, ou de transferts, vers la Syrie ?**

Nous ne disposons pas d'informations de cet ordre. Concernant la Corée du Nord, nous avons été les premiers à aller en 1992 au Conseil de sécurité de l'ONU pour dire que quelque chose était problématique dans ce pays. Nous ne cachons pas les faits. Mais pour pouvoir agir avec autorité, nous devons disposer d'informations.

**Comment cette action militaire israélienne en Syrie pèse-t-elle, selon vous, sur le dossier nucléaire iranien ?**

Je dois vraiment savoir - bientôt j'espère - ce qui s'est passé exactement en Syrie. Certains ont tendance à parler un peu vite de l'usage de la force, en brandissant cette idée de "guerre juste" ou de "guerre préventive". La Charte de l'ONU édicte clairement les cas spécifiques dans lesquels la force peut être autorisée : dans un cas d'autodéfense face à une attaque imminente, ou alors lorsqu'une décision collective est prise par le Conseil de sécurité de l'ONU s'il juge que la paix et la sécurité internationales sont menacées.

C'est pourquoi, lorsqu'il est question d'employer la force sans explication, je deviens très préoccupé. J'espère obtenir une explication (sur le raid en Syrie), indiquant notamment en quoi il s'agirait d'un cas d'autodéfense. Je ne le sais pas. Y a-t-il un rapport avec le nucléaire ? Y a-t-il un rapport avec l'Iran ? Ce sont des questions importantes. J'ajoute une chose. Lorsque les Israéliens ont détruit le réacteur nucléaire de recherche de Saddam Hussein en 1981 (Osirak), la conséquence a été que Saddam Hussein a fait basculer son programme dans la clandestinité. Il a commencé à mettre en place un programme nucléaire militaire massif, "underground". L'usage de la force peut repousser les échéances, mais il ne traite pas les racines du problème.

[Translated from Le Monde (Paris)]

## **MOHAMED ELBARADEI THINKS "IRAN IS NOT AN IMMEDIATE THREAT"**

By Natalie Nougayrède

Le Monde

October 23, 2007 (posted Oct. 22)

<http://www.lemonde.fr/web/article/0,1-0,36-969665,0.html>

[EXCERPT]

**\* What comment do you have about the air raids Israel carried out in Syria on September 6? According to the American press, these strikes were aimed at sites where a nuclear reactor was being constructed with equipment that came from North Korea. Are these reports well-founded?**

At the International Atomic Energy Agency (IAEA), we have received zero, and I emphasize "zero," information that goes in that direction. We have contacted the Syrians, as well as foreign intelligence agencies. We've said: if one of you has the slightest information showing that there were elements tied to nuclear matters, obviously, we would be happy to investigate it. I dare hope, frankly, that before people start bombing and using force, they will come to see us to say what they're worried about. We would then have made an on-site verification inspection. We have no indication showing that this is nuclear. So long as we receive no information going in this direction, we can't do much.

**\* In following North Korea's nuclear activities so far, have you found the slightest indication of a link or of transfers in the direction of Syria?**

We have no information of that kind. Concerning North Korea, we were the first to go in 1992 to the U.N. Security Council to say that there was something problematic about that country. We don't hide facts. But in order to act with authority, we have to have information.

**\* How has this Israeli military action in Syria affected, in your opinion, the Iranian nuclear matter?**

I should really know -- soon, I hope -- what exactly happened in Syria. Some have a tendency to talk a little quickly about the use of force, waving around this idea of "just war" or "preventive war." The U.N. Charter pronounces clearly the specific cases in which force can be authorized: in a case of self-defense when faced with an imminent attack, or when a collective decision is taken by the U.N. Security Council if it thinks that international peace and security are threatened.

That's why, when it's a question of using force without any explanation, I get very worried. I hope to obtain an explanation [about the raid in Syria], indicating in particular in what way it was a case of self-defense. I don't know. Is there a relation to nuclear matters? Is there a connection with Iran? These are important questions. I'll add one more thing. When the Israelis destroyed Saddam Hussein's nuclear research reactor in 1981 (Osirak), the consequence was that Saddam Hussein moved to a secret program. He began to implement a massive military nuclear program, "underground." The use of force can set back the clock, but it doesn't deal with the roots of the problem.

<http://www.washingtonpost.com/wp-dyn/content/article/2007/10/23/AR2007102302577.html>

## **Photographs Said to Show Israeli Target Inside Syria**

By Robin Wright and Joby Warrick  
Washington Post Staff Writers  
Wednesday, **October 24, 2007**; A01

Independent experts have pinpointed what they believe to be the Euphrates River site in Syria that was bombed by Israel last month, and satellite imagery of the area shows buildings under construction roughly similar in design to a North Korean reactor capable of producing nuclear material for one bomb a year, the experts say.

Photographs of the site taken before the secret Sept. 6 airstrike depict an isolated compound that includes a tall, boxy structure similar to the type of building used to house a gas-graphite reactor. They also show what could have been a pumping station used to supply cooling water for a reactor, say experts David Albright and Paul Brannan of the Institute for Science and International Security (ISIS).

U.S. and international experts and officials familiar with the site, who were shown the photographs yesterday, said there was a strong and credible possibility that they depict the remote compound that was attacked. Israeli officials and the White House declined to comment.

If the facility is confirmed as the site of the attack, the photos provide a potential explanation for Israel's middle-of-the-night bombing raid.

The facility is located seven miles north of the desert village of At Tibnah, in the Dayr az Zawr region, and about 90 miles from the Iraqi border, according to the ISIS report to be released today. Albright, a former U.N. weapons inspector, said the size of the structures suggested that Syria might have been building a gas-graphite reactor of about 20 to 25 megawatts of heat, similar to the reactor North Korea built at Yongbyon.

"I'm pretty convinced that Syria was trying to build a nuclear reactor," Albright said in an interview. He said the project would represent a significant departure from past policies. ISIS, a nonprofit research group, tracks nuclear weapons and stockpiles around the world.

Israel, which has nuclear weapons of its own, has not said publicly what its warplanes hit or provided justification for the raid. Syria has denied having a nuclear program. But beginning construction of a nuclear reactor in secret would violate Syria's obligations under the Non-Proliferation Treaty, which requires all signatories to declare their intent when such a decision is made, according to sources at the International Atomic Energy Agency, the U.N. nuclear watchdog.

The new report leaves many questions unanswered, such as what Syria intended to use the unfinished structures for and the exact role, if any, of North Korea in their construction. Also unclear is why Israel chose to use military force rather than diplomatic pressure against a facility that could not have produced significant nuclear material for years. The new details could fuel debate over whether Israel's attack was warranted.

Albright acknowledged the difficulties of proving what the site is, in part because the roof was put on at an early stage, blocking views of the foundation and obscuring any potential reactor components. In

construction of other types of nuclear reactors, the roof is left off until the end so cranes can move heavy equipment inside.

Some nuclear experts urged caution in interpreting the photos, noting that the type of reactor favored by North Korea has few distinguishing characteristics visible from the air. Unlike commercial nuclear power reactors, for example, a North Korea-style reactor lacks the distinctive, dome-shaped containment vessel that prevents the release of radiation in the event of a nuclear accident.

"You can look at North Korea's [reactor] buildings, and they look like nothing," said John E. Pike, a nuclear expert and director of GlobalSecurity.org. "They're just metal-skinned industrial buildings." The proximity of the building to a water source also is not significant by itself, Pike said.

But Brannan, of ISIS, combed through a huge amount of satellite imagery to find a site along the Euphrates that matches a reactor's specifications as well as descriptions of the attack site. The compound's distance from populated areas was a key detail, since reactors are usually isolated from major urban populations.

The site is also close to an irrigated area, which would explain statements by some officials privy to details of the attack that the facility was located near orchards. A small airstrip about two miles away could have been used to transport personnel to the site.

U.S. and foreign officials tracking the incident said that Syria is presently trying to remove remaining structures at the site.

The International Atomic Energy Agency has acquired its own aerial photographs but has not finished analyzing them, according to an IAEA source.

In an interview published yesterday, IAEA director and Nobel Peace laureate Mohamed ElBaradei expressed anger at the Syrians, Israelis and foreign intelligence agencies for not providing information about a suspected nuclear program.

"We have said, 'If any of you has the slightest information showing that there was anything linked to nuclear, we would of course be happy to investigate it,' " he told the French newspaper Le Monde.

"Frankly, I venture to hope that before people decide to bombard and use force, they will come and see us to convey their concerns."

ElBaradei also said an airstrike could endanger efforts to contain nuclear proliferation.

"When the Israelis destroyed Saddam Hussein's research nuclear reactor in 1981, the consequence was that Saddam Hussein pursued his program secretly. He began to establish a huge military nuclear program underground," he said. "The use of force can set things back, but it does not deal with the roots of the problem."

## **Photos show cleansing of suspect Syrian site**

By William J. Broad and Mark Mazzetti

Thursday, October 25, 2007

New commercial satellite photos show that a Syrian site believed to have been attacked by Israel last month no longer bears any obvious traces of what some analysts said appeared to have been a partly built nuclear reactor.

Two photos, taken Wednesday from space by rival companies, show the site near the Euphrates River to have been wiped clean since August, when imagery showed a tall square building there measuring about 150 feet on a side.

The Syrians reported an attack by Israel in early September; the Israelis have not confirmed that. Senior Syrian officials continue to deny that a nuclear reactor was under construction, insisting that Israel hit a largely empty military warehouse.

But the images, federal and private analysts say, suggest that the Syrian authorities rushed to dismantle the facility after the strike, calling it a tacit admission of guilt.

"It's a magic act — here today, gone tomorrow," a senior intelligence official said. "It doesn't lower suspicions; it raises them. This was not a long-term decommissioning of a building, which can take a year. It was speedy. It's incredible that they could have gone to that effort to make something go away."

Any attempt by Syrian authorities to clean up the site would make it difficult, if not impossible, for international weapons inspectors to determine the exact nature of the activity there. Officials from the International Atomic Energy Agency in Vienna have said they hoped to analyze the satellite images and ultimately inspect the site in person. David Albright, president of the Institute for Science and International Security, a private group in Washington that released a report on the Syrian site earlier this week, said the expurgation of the building was inherently suspicious.

"It looks like Syria is trying to hide something and destroy the evidence of some activity," Albright said in an interview. "But it won't work. Syria has got to answer questions about what it was doing."

The striking difference in the satellite photos surprised even some outside experts who were skeptical that Syria might be developing a nuclear program.

"It's clearly very suspicious," said Joseph Cirincione, an expert on nuclear proliferation at the Center for American Progress in Washington. "The Syrians were up to something that they clearly didn't want the world to know about."

Cirincione said the photographic evidence "tilts toward a nuclear program" but does not prove that Syria was building a reactor. Besides, he said, even if it was developing a nuclear program, Syria would be years away from being operational, and thus not an imminent threat.

Gordon Johndroe, a White House spokesman, declined to comment on the satellite pictures.

The new satellite images of the Syrian site were taken by DigitalGlobe, in Longmont, Colorado, and SPOT Image Corporation, in Chantilly, Virginia. They show just a smooth, unfurrowed area where the large building once stood.

The desolate Syrian site is located on the eastern bank of the Euphrates River some 90 miles north of the Iraqi border and 7 miles north of the desert village of At Tibnah. An airfield lies nearby. The new images reveal that the tall building is gone but still show a secondary structure and a pumping station on the Euphrates. Reactors need water for cooling.

The purported reactor at the site is believed to be modeled on a North Korean model, which uses buildings a few feet longer on each side than the Syrian building that vanished.

Albright called the Syrian site "consistent with being a North Korean reactor design." Imad Moustapha, the Syrian ambassador to the United States, denied in an interview last week with The Dallas Morning News that his country was trying to build a reactor.

"There is no Syrian nuclear program whatsoever," he said. "It's an absolutely blatant lie."

Later in the interview, he said, "We understand that if Syria even contemplated nuclear technology, then the gates of hell would open on us."

## **Diplomat tries to reassure US lawmakers on NKorea talks**

**Oct 25, 2007**

WASHINGTON (AFP) — A senior US negotiator told lawmakers on Thursday Washington would keep an eye on reports North Korea may be selling nuclear know-how, but declined to discuss allegations Pyongyang had offered nuclear help to Syria.

Assistant Secretary of State Christopher Hill faced tough questioning by lawmakers at a committee hearing on the six-nation talks, in which North Korea has promised to abandon its nuclear program.

The legislators questioned the US administration's diplomatic approach with North Korea citing reports that Pyongyang may have assisted Syria to start building a nuclear reactor. Israel reportedly launched an air strike against the suspected site in September.

Hill said he could not discuss North Korea's alleged role in Syria's nuclear program at an open congressional hearing because that information was "classified."

"I'm not in a position here to discuss intelligence matters, which is the level one would need to discuss questions whether they did or did not," Hill said.

Asked by Democratic Representative David Scott of Georgia if the issue had been brought up in disarmament talks with North Korea, Hill said: "Yes, I have raised this issue."

The US diplomat said the disarmament deal would not go ahead if North Korea was found to be smuggling nuclear arms, equipment or know-how abroad.

"I think throughout the process we have made it clear we cannot accept any agreement that has us winking at proliferation issues. So proliferation, or non-proliferation, has to be at the heart of any agreement," Hill said.

Republican Ted Poe charged the White House had failed to brief lawmakers on intelligence related to North Korea's activities in Syria.

"I'm concerned about what they're doing in Syria. And I would like you to tell me why you can't tell us what they're doing in Syria?" said Poe.

Under the six-nation talks, North Korea has agreed to dismantle its nuclear weapons programs in return for a broad package of economic and diplomatic incentives.

Hill's testimony at the House Subcommittee on Terrorism, Non-Proliferation and Trade came as President George W. Bush faced criticism from fellow Republicans and a former administration official over the deal with North Korea.

In a commentary published this week in the Wall Street Journal, two Republican members of Congress said the reports of North Korean involvement raised serious concerns about the disarmament talks.

They complained that "only a handful" of lawmakers were given intelligence briefings by the Bush administration on the Israeli air strike.

Former US ambassador to the UN John Bolton, breaking ranks with the administration, has criticized the six-party talks with North Korea and reportedly lobbied Republican lawmakers on the issue.

North Korea has angrily denied sharing atomic know-how with Damascus.

If confirmed, the reports of nuclear cooperation between North Korea and Syria would deal a blow to Bush who has portrayed US policy towards Pyongyang as a success story.

<http://www.nytimes.com/2007/10/27/world/middleeast/27syria.html>

A satellite photo from Sept. 16, 2003, shows a large structure being built near a site in Syria that was bombed last month by Israel.

### **Yet Another Photo of Site in Syria, Yet More Questions**

By WILLIAM J. BROAD and MARK MAZZETTI

Published: **October 27, 2007**

The mystery surrounding the construction of what might have been a nuclear reactor in Syria deepened yesterday, when a company released a satellite photo showing that the main building was well under way in September 2003 — four years before Israeli jets bombed it.

The long genesis is likely to raise questions about whether the Bush administration overlooked a nascent atomic threat in Syria while planning and executing a war in Iraq, which was later found to have no active nuclear program.

A senior American intelligence official said yesterday that American analysts had looked carefully at the site from its early days, but were unsure then whether it posed a nuclear threat.

In the time before the Iraq war, President Bush and his senior advisers sounded many alarms about Baghdad's reconstituting its nuclear program. But they have never publicly discussed what many analysts say appears to have been a long-running nuclear effort next door.

Yesterday independent analysts, examining the latest satellite image, suggested that work on the site might have begun around 2001, and the senior intelligence official agreed with that analysis. That early date is potentially significant in terms of North Korea's suspected aid to Syria, suggesting that North Korea could have begun its assistance in the late 1990s.

A dispute has broken out between conservatives and Secretary of State Condoleezza Rice over the administration's pursuit of diplomacy with North Korea in the face of intelligence that North Korea might have helped Syria design a nuclear reactor.

The new image may give ammunition to those in the administration, including Ms. Rice, who call for diplomacy. If North Korea started its Syrian aid long ago, the officials could argue that the assistance was historical, not current, and that diplomacy should move ahead.

The progress of the site in late 2003 also raises new questions about a disagreement at the time between intelligence analysts and John R. Bolton, then the State Department's top arms control official. In the summer of 2003, Mr. Bolton's testimony on Capitol Hill was delayed after a dispute erupted in part over whether Syria was actively pursuing a nuclear weapon. Some intelligence officials said Mr. Bolton overstated the Syrian threat.

"There was disagreement about what Syria was interested in and how much we should be monitoring it," Mr. Bolton said in an interview yesterday. "There was activity in Syria that I felt was evidence that they were trying to develop a nuclear program."

Mr. Bolton declined to say whether he had knowledge at the time about the site that the Israelis struck in September.

Spokesmen for the Central Intelligence Agency and the National Security Council declined to comment.

The new image of the desolate Syrian site was released yesterday by GeoEye, in Dulles, Va. Mark Brender, the company's vice president for communications and marketing, said the picture was taken on Sept. 16, 2003. He added that the image had been collected as part of the company's agenda of building a large archive of global images.

Earlier this week, federal and private analysts identified the precise location of the Syrian site, and since then rival companies have raced to release images. The site is on the eastern bank of the Euphrates, 90 miles north of the Iraqi border.

Images taken in August, before the Israeli raid, show a tall building about 150 feet wide on each side that analysts suspect might have sheltered a half-built nuclear reactor. Also visible is a pumping station on the Euphrates, which may be significant because reactors need water for cooling.

John E. Pike, director of GlobalSecurity.org, a private group in Alexandria, Va., that analyzes satellite images, said the 2003 picture showed the tall building in the midst of early construction, surrounded by churned earth. He put the groundbreaking in 2001.

“It’s uncommon to see such activity in the middle of nowhere,” he said, adding that it was sufficiently unusual to have worried American intelligence officials. “I’d have put it on my suspect site list and kept watching,” he said.

The senior intelligence official said that American spy satellites and analysts had, in fact, watched the site for years.

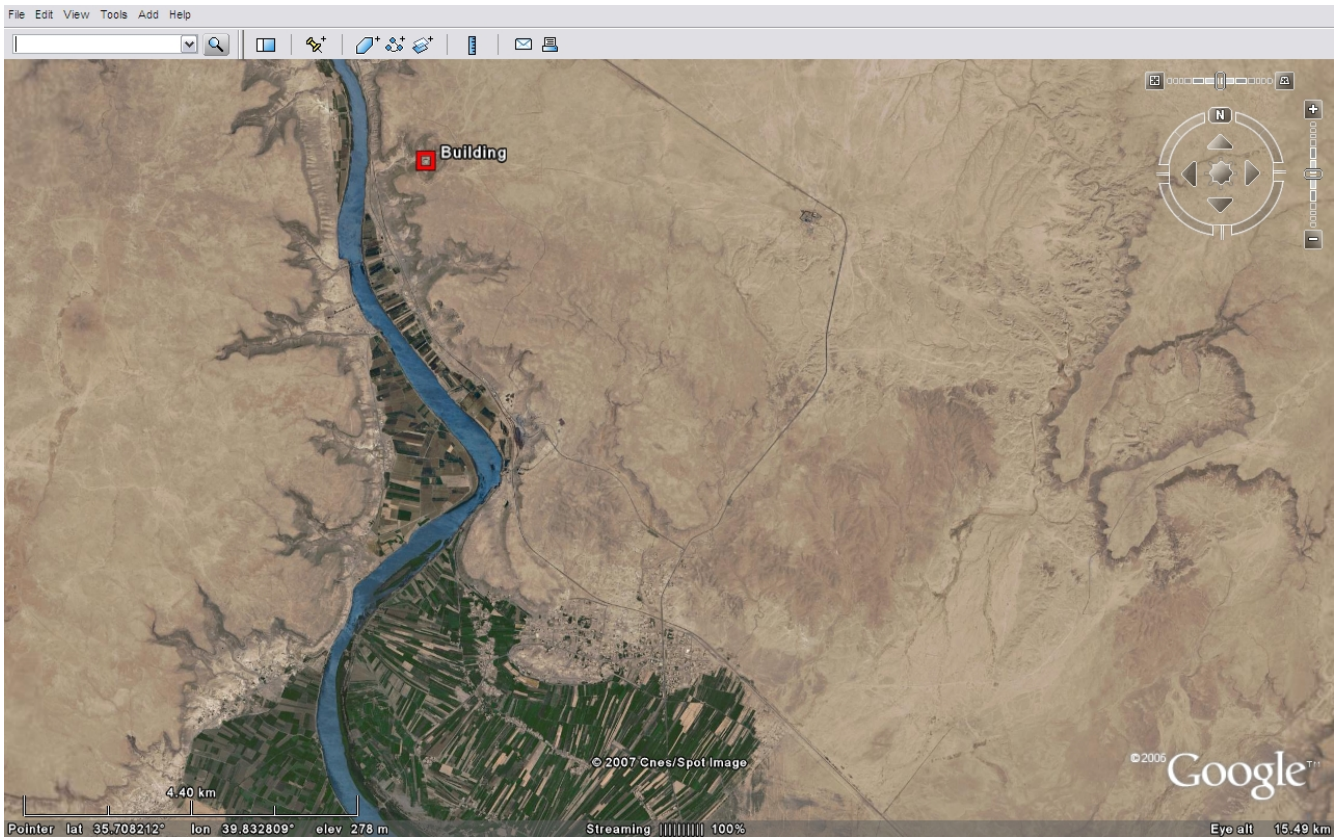

“It was noticed, without knowing what it was,” the official said. “You revisit every so often, but it was not a high priority. You see things that raise the flag and you know you have to keep looking. It was a case of watching it evolve.”

Jeffrey Lewis, an expert on nuclear proliferation at the New America Foundation in Washington, said it was surprising from the photos how little progress had been made at the site between 2003 and 2007. But Mr. Lewis said it was ironic that Syria might have been trying to build a nuclear program just as the United States was invading Iraq in the fear that Iraq was developing nuclear arms.

### **Images raise suspicions of Syria facility**

Site of a suspected nuclear reactor seems cleaned up after Israeli attack

By Robert Windrem and Andrea Mitchell

NBC News

updated 5:10 p.m. CT, Fri., **Oct. 26, 2007**

**New satellite photos taken Wednesday show that Syria apparently cleaned up the site of a suspected nuclear reactor after it was bombed by Israeli aircraft last month.**

The imagery, taken by Digital Globe, a private satellite imagery company, shows a cleared area where two months before the suspect facility stood. The boxy building is located at the end of a dirt road just off the Euphrates River. The site is about 100 miles from the Iraqi border near the town of At Tibnah in northeastern Syria.

Although reports indicated the the reactor had been in the early stages of construction, an earlier satellite photo, taken by another commercial imaging company, GeoEye, raised questions about those assertions. The imagery, taken on September 16, 2003, four year prior to the attack, shows the facility looking just as it did prior to the attack The only difference is the addition of a pumping station on the Euphrates River near the facility. Some U.S. officials have suggested the reactor was based on a North Korean design. The North has agreed to denuclearize, and if it was shown that it had helped Syria, that would complicate further relations with the United States.

David Albright, president of the Institute for Science and International Security, said the satellite imagery "effectively confirms that this site was indeed the target of the Israeli raid." Albright's group did its own analysis of the imagery.

Beyond the suspected reactor, the imagery also shows the pumping station on the Euphrates, which does not appear to have been bombed or cleaned up. The "before" picture was taken Aug. 10, the "after" on Oct. 24 (Wednesday). The raid, which Syria has confirmed but which Israel and the U.S. have officially declined to discuss, took place Sept. 6.

U.S. officials have said on background that following the Israeli attack, Syria bulldozed the debris from the site, apparently to avoid having the facility's purpose exposed. **The International Atomic Energy Agency has said it was studying satellite photos to determine if it should investigate Syria's nuclear activities and Israel's raid.** The Syrian foreign ministry on Wednesday denied the facility was a reactor. NBC News has learned that the Israelis used four F-16's in the attack, two acting as fighter bombers, two as jammers. The two bombers dropped six precision-guided thousand-pound bombs on the site. The site was believed to be in the early stages of construction and to not yet have been outfitted.

"Dismantling and removing the building at such a rapid pace dramatically complicates any inspection of the facilities and suggests that Syria may be trying to hide what was there," added Albright. "Iraq followed a similar strategy in 1991 after the first Gulf War, though eventually the International Atomic Energy Agency (IAEA) and U.N. inspectors pieced together a full picture of Iraq's activities."

Albright said tractors or bulldozers can be seen in the Oct. 24 imagery where the suspected reactor building once stood. Scrape marks can be seen around the razed part of the site as well.

"There also appears to be a trench in the Oct. 24, 2007, imagery that is better defined than in the Aug. 10, 2007, imagery," said Albright, a former IAEA inspector in Iraq. "This trench may be more visible as a result of the Syrians' digging up buried pipelines running from the pump station to the now-gone suspected reactor construction building. Because of a more prominent shadow in the Oct. 24, 2007, imagery, there appears to be evidence of an underground portion of the suspect reactor building."

Asked for a comment on whether its imagery matches Digital Globe's, a spokesman for the Central Intelligence Agency said, "Sorry, we can't help you on that."

## **Olmert Hints at Israel Air Raid on Syria**

By THE ASSOCIATED PRESS

October 28, 2007

Filed at 11:01 p.m. ET

JERUSALEM (AP) -- In the closest that Israel has come to confirming a mysterious air raid in Syria, Prime Minister Ehud Olmert acknowledged to his Cabinet on Sunday [*October 28, 2007*] that Turkish airspace might have been violated during the operation.

Israel has not officially commented on the raid or acknowledged carrying it out. But at Sunday's Cabinet meeting, Olmert offered an ambiguous apology to Turkey, which has complained to Israel that its aircraft dropped fuel tanks on Turkish territory during the incursion.

"If Israeli planes indeed penetrated Turkish airspace, then it was without prior intent or any intent to infringe upon or undermine Turkish sovereignty, which we respect," a statement from Olmert's office cited him as telling the Cabinet.

In a conversation with Turkey's prime minister last week, Olmert "expressed Israel's apologies to the Turkish government and the Turkish people for any harm that might have been caused," the statement said.

The Sept. 6 air strike has been enveloped in secrecy. Syrian President Bashar Assad said the attack targeted an unused military building.

But reports following the incident have contradicted that account, and commercial satellite images have indicated a nuclear reactor site might have been destroyed. Syria has denied developing a nuclear reactor.

Mohamed ElBaradei, director general of the International Atomic Energy Agency, on Sunday criticized the United States and Israel for failing to provide the U.N. watchdog with intelligence about Syria's purported nuclear program.

## **Roh says allegations of N.K.-Syria nuclear cooperation not backed by evidence**

휴휴 By Yoo Cheong-mo

2007/11/03 10:39 KST

SEOUL, Nov. 3 (Yonhap) -- South Korean President Roh Moo-hyun said he has never seen evidence of nuclear cooperation between North Korea and Syria, denying U.S. media reports alleging that the communist North has helped Syria build nuclear facilities.

휴휴 Roh asserted in an interview with Japan's Asahi Shimbun, published on Saturday, that "uncertain and trifling matters" should not be obstacles to the ongoing international efforts to have North Korea dismantle its nuclear weapons program by the end of the year.

휴휴 "I have never seen or heard of evidence about North Korean transfer of nuclear technologies to Syria, as reported in the U.S. It is crucial to the settlement of the six-party talks (on the denuclearization of North Korea). Uncertain issues and insignificant obstacles should not be allowed to ruin the talks," said Roh.

휴휴 "All disputes should eventually be resolved through dialogue. Mutual trust should be built in order to create such an atmosphere (for dialogue). To that end, an aggressive act should be restrained and friendly acts should be encouraged," said the president.

휴휴 As the six-party negotiations involving the two Koreas, U.S., China, Russia and Japan were gaining momentum, suspicions surfaced recently that North Korea might be providing Syria with nuclear technology. An analysis of U.S. satellite photos indicated that a Syrian site that Israel raided in September appeared to have a building whose size and shape resembled those of the North Korean reactor.

휴휴 Washington has since stressed that for North Korea to receive any further benefits, it must fulfill its obligations, disabling the nuclear facilities and fully accounting for its nuclear programs. The controversy erupted as North Korea pledged in an Oct. 3 deal to disable its key nuclear installations and declare its atomic stockpile by the end of the year.

## **Turkey puts Israeli sortie behind it**

Published: 11/06/2007

Turkey said the controversy over Israel's penetration of its airspace during a bombing run in Syria is over.

The discovery of jettisoned fuel tanks in Turkey's frontier with Syria after the mysterious Sept. 6 sortie prompted protests from Ankara. After weeks of silence, Israeli Prime Minister Ehud Olmert apologized to Turkey, one of the few Muslim powers to have good relations with the Jewish state.

"It is no easy thing to discover that combat jets from a friendly state have penetrated your skies overnight. It is good that you apologized, even though the apology was late," Turkish President Abdullah Gul said in a Maariv interview published Tuesday.

"As we see it, the matter is closed and we hope that it will not be repeated in the future."

Jerusalem has not given details on the air strike, which foreign analysts believe targeted a nascent nuclear facility. Syria complained about the incident to Turkey.

## **Syrian ambassador talks about nuclear site bombing**

Blasted Vice President Cheney

KGO By Alan Wang

BERKELEY, Calif. Nov. 6, 2007 (KGO) - Syria's ambassador to the United States spoke only to ABC7 news on Tuesday. He accused Vice President Cheney of fueling the media with more rumors of weapons of mass destruction.

"The whole story about this North Korean/Syrian cooperation on nuclear technology is a total, sheer *[sic]*, absolute fabrication," said Syrian Ambassador to the U.S. Dr. Imad Moustapha.

In September, Israeli planes bombed a Syrian target reported to be a partly constructed nuclear reactor.

ABC7's Alan Wang: "If you could, what was the site bombed by Israel?"

"It was a military site and this is not the first air raid the history of the Syrian/Israeli conflict," said Dr. Moustapha.

Professor Michael Nacht, who is the dean of UC Berkeley's Goldman School of Public Policy says everyone is keeping eerily quiet about the attack.

"The Syrian government didn't really say anything about it. Bush refuses to talk about it. The Israeli government refuses to talk about it, and no Arab government has condemned Israel for it," said Goldman School of Public Policy Dean Professor Michael Nacht.

After the ambassador's speech we tried to press him more on the issue.

Dr. Imad Moustapha: "There are plenty of military sites."

ABC7 Alan Wang: "Why was it so crucial for Israel to bomb it?"

Dr. Imad Moustapha: "It was not crucial. They could have bombarded it or another military target. The problem is the sinister stories that are fabricated in Washington D.C. alleging a nuclear program in Syria which is absolutely categorically untrue.

Alan Wang: "But what was it? What do you mean what was it? What was the military site? Was it an airbase?"

Dr. Imad Moustapha: "I'm not privy to military details. Usually countries do not reveal their military installations publicly on TV. Everything else is a blatant terrible lie."

ABC7's Alan Wang: "Thank you very much."

Dr. Imad Moustapha: "Your *[sic]* welcome."

U.S. Department of Defense  
Office of the Assistant Secretary of Defense (Public Affairs)  
**News Transcript**

Presenter: Secretary of Defense Robert M. Gates and Republic of Korea Minister of National Defense Kim Jang-soo  
November 07, 2007

Joint Press Conference with Secretary of Defense Robert M. Gates and Republic of Korea Minister of National Defense Kim Jang-soo in Seoul, Korea

*[EXCERPT]*

Q. Yokip Reason from the Wall Street Journal. You both indicated that North Korea appears to have begun dismantling its known nuclear sites, at the same time, Israel, backed by many American and European security analysis, contends that North Korea has been actively proliferating nuclear technology to Syria. I would like to ask you if your two governments believe that North Korea continues to share nuclear technology with nations like Syria despite dismantling of its own program. And Secretary Gates, do you believe that the Israeli strike on what Israel claims to be a nuclear site in Syria was justified?

SEC GATES: With regard to whether the government of Israel believes that North Korea is proliferating nuclear material to Syria and whether it continues that activity, I think that is a matter to be addressed to the government of Israel.

Q. I am sorry, Secretary Gates, I meant if the U.S. Government believes that and not if the Israeli Government believes it.

SEC GATES: I think that involves intelligence matters that we don't discuss.

## **After mystery raid, the prospect of Syrian-Israeli talks**

The Associated Press

Tuesday, November 13, 2007

DAMASCUS, Syria: Israel's reported new secret peace feelers to Syria have deepened the mystery over the countries' relations and the reason why Israeli warplanes bombed a target inside Syria two months ago.

The United States has unofficially said that Israel's target was a nascent Syrian nuclear program. But outside analysts and the U.N. maintain there isn't proof of that, and suggest the Syrian site could well have been something else, including possibly a radar station.

Syria also has disputed that the site contained anything of significance and drawn a parallel to satellite imagery before the U.S.-led invasion of Iraq, which proved unreliable.

In addition, Syria has publicly said the Sept. 6 bombing proves Israel is not interested in peace.

Yet on Tuesday, Israel's Yediot Ahronot newspaper said that Israeli Prime Minister Ehud Olmert had hinted in a briefing to an influential parliamentary committee that he was holding secret peace contacts with Syria.

Olmert also told parliament's Foreign Affairs and Defense Committee on Monday that he was "ready for peace with Syria and prepared to conduct negotiations" as long as Syria abandoned any ties with North Korea and Iran and did not support terror, according to participants.

In addition, Olmert and Israeli Defense Minister Ehud Barak have both said publicly in recent days that they hoped Syria would take part in a U.S.-sponsored peace conference in Annapolis, Maryland, later this month.

The focus of the conference will be on the Israeli-Palestinian conflict, however. And Syria has said it would not attend unless the issue of the Golan Heights also is on the table. Israel captured the strategic Golan from Syria in the 1967 Mideast war.

There was no immediate comment Wednesday from Syria on the latest Israeli report of peace talks, while state-run newspapers and the official news agency SANA ignored the report.

Damascus has in the past rejected claims that it was holding secret talks and has insisted on U.S. participation in peace talks to improve the chances of success.

Syria also might be loathe to give up ties to Iran, with whom it has economic and military relations. Both Syria and Iran also support Hezbollah in Lebanon and Palestinian militants, and Syrian President Bashar Assad has said there is no conflict between supporting militants and working for peace.

The reports of talks are not the first between the two staunch enemies, who have no diplomatic ties and have fought four times since Israel's 1948 creation — three in Mideast wars and the latest in Lebanon in 1982 during the Israeli invasion of the neighboring country.

In 2000, formal U.S.-sponsored Israel-Syria talks neared agreement but broke down over final border and peace arrangements. Since then, reports of talks have popped up occasionally — most recently a half-year ago when Israeli media reported that Olmert had relayed messages to Assad through Turkey.

But those reported talks did not lead to a breakthrough, and over the summer, war talk between Syria and Israel heated up — capped by the September air strike by Israel into northern Syria.

Syria's slow move to provide any specific details of the raid afterward, and Israel's near-silence after the raid, were seen by some as a sign the two countries were engaged in some secret dance outside the public eye.

Likewise, the silence from other Arab countries, who did not condemn the raid, was seen as a sign of Syria's own poor relations with those countries. Syria, under pressure from the United States for allegedly interfering in Lebanon and without many Arab friends, could find talks with Israel a relief, and a chance for some regional political leverage.

Meanwhile, many in the region and in Europe remain skeptical about what proof the United States or Israel have that the bombed Syrian site was nuclear-linked.

"There hasn't been anything that constitutes a definitive smoking gun proof that this facility the Israelis attacked was indeed a nuclear facility," said David Hartwell, Middle East and North Africa editor for Jane's Country Risk in London.

Syria has denied any nuclear ambitions and the U.N. nuclear watchdog, the International Atomic Energy Agency, has asked the United States and Israel to show proof.

A diplomat familiar with IAEA affairs, speaking on condition of anonymity because of the issue's sensitivity, said one theory being considered within the agency is that the bombed site may have been a forward radar system, and not a nuclear site.

But John Bolton, former U.S. ambassador to the United Nations, said last week that the site indicated nuclear cooperation between North Korea and Syria, and perhaps also cooperation with Iran.

[http://rawstory.com/news/2007/US\\_Israel\\_refuse\\_to\\_cooperate\\_with\\_1114.html](http://rawstory.com/news/2007/US_Israel_refuse_to_cooperate_with_1114.html)

## **US, Israel refuse to cooperate with inquest into Syria strike**

Larisa Alexandrovna

Published: Wednesday November 14, 2007

UN nuclear watchdog has no evidence Syria had nuclear facility

The International Atomic Energy Agency - the United Nations nuclear watchdog - has not been able to conduct an investigation into the events surrounding the Sept. 6 Israeli bombing of a Syrian military installation because neither the Bush administration nor Israel are cooperating.

A diplomatic source close to the Vienna based IAEA told Raw Story that both the United States and Israel have been approached by the organization requesting supporting evidence of a nuclear reactor which media sources have cited, based on anonymous sources in both governments, as the reason for the Israeli strike.

The source also explained that the satellite footage, which the IAEA obtained through commercial channels for lack of any "credible evidence," does not show a nuclear reactor in the early construction phase.

Another source, close to the IAEA, who wished to remain anonymous due to the sensitive nature of the topic, told RAW STORY last week that based on satellite imagery, evidence that "it was nuclear related is shaky" and pointed out that even basic security for such a facility - such as "security fences" - is missing.

Some IAEA experts have privately opined that the facility - located between the cities of Hama and Dayr az-Zawr in the Northeastern part of Syria - may have been "no more than a workshop for the pumice mining industry along the banks of the Euphrates."

Both individuals independently confirmed that the IAEA cannot conduct a formal investigation without the cooperation of either Israel or the United States, although both confirmed that the Syrian government is cooperating.

An IAEA spokesman did not immediately respond to a request for comment.

### **Little is known about the attack**

Little has been publicly revealed about the attack, which neither the US nor Israel has discussed. Israel did confirm in October that the bombing had taken place.

According to a report in the Guardian on Sept. 16, "Was Israeli raid a dry run for an attack on Iran?" the Israeli air raid was substantial and was code-named Operation Orchard.

"Far from being a minor incursion, the Israeli overflight of Syrian airspace through its ally, Turkey, was a far more major affair involving as many as eight aircraft, including Israel's most ultra-modern F-15s and F-16s equipped with Maverick missiles and 500lb bombs," the paper alleged. "Flying among the Israeli fighters at great height... was an ELINT - an electronic intelligence gathering aircraft."

Although the mystery surrounding exactly what Israel hit in Syria continues, US intelligence sources have told RAW STORY it was not a nuclear armaments site. In late September, Vincent Cannistraro - Director of Intelligence Programs for the National Security Council under President Ronald Reagan and Chief of Operations at the Central Intelligence Agency's Counterterrorism Center under President George H. W. Bush - told Raw Story that what the Israelis hit was "absolutely not a nuclear weapons facility."

According to another intelligence official, US intelligence "found no radiation signatures after the bombing, so there was no uranium or plutonium present."

"We don't have any independent intelligence that it was a nuclear facility - only the assertions by the Israelis and some ambiguous satellite photography from them that shows a building, which the Syrians admitted was a military facility," the source added.

The diplomat close to the IAEA also confirmed the lack of radiation signatures, but explained that a reactor still under construction would not yet be fully loaded with the necessary materials and would not therefore give off any radiation. The diplomat, however, again pointed to the satellite images, which do not show a nuclear reactor under construction in any case, explaining certain geometric configurations are necessary for such a facility, including certain height indicators as well as the lack of security such as armed guards.

Lawrence Wilkerson, former chief of staff to Secretary of State Colin Powell, said he doesn't believe claims that the site contained nuclear weapons.

"I've heard so many versions of this story that I despair of ever knowing the real story," Wilkerson said in response to an email query. "However, I do not believe that the real story, if it is ever known, will have anything at all to do with nuclear weapons. In short, I believe that [former Bush UN ambassador John] Bolton, [Bush Deputy National Security Advisor Elliot] Abrams, et al. are lying again."

### **Media reports diverge**

Some intelligence officials have voiced strong criticism about alleged leaks to the press, which they say have distorted actual US and Israeli intelligence surrounding the strike. One US intelligence official identified the Office of the Vice President and those close to Vice President Dick Cheney by name.

"The allegations that North Korea was helping to build a nuclear reactor have not been substantiated by US intelligence," said this intelligence official, adding, "but that hasn't stopped Dick Cheney and his minions at the NSC, Elliot Abrams and Steve Hadley, from leaking the information, which appears to be misleading in the extreme."

Claims of a Syrian nuclear weapons program have gone from the strange to the bizarre.

In mid-September, the Sunday Times reported that the Israelis had been planning the operation since the spring of this year, after learning that Syria was attempting to buy a nuclear device from North Korea, and that at the time of the airstrike on Sept. 6, the Israelis had managed to blow apart a "Syrian nuclear cache."

Former US ambassador to the United Nations John Bolton told the Times that he was worried about "North Korea and Iran outsourcing their nuclear programmes."

In late September, the Times reported again that Israeli commandos had descended on the facility and obtained samples of nuclear materials.

Yet on Sept. 17, Israeli Prime Minister Ehud Olmert made what appeared to be a bizarre statement, considering the level of nuclear hysteria surrounding the Syrian incident.

"We want to make peace with everyone," Olmert said. "If the conditions allow for it, we are ready to make peace with Syria without preset conditions and without ultimatums."

An October report on the ABC News website alleged that Mossad - Israeli intelligence - had either directly infiltrated the nuclear facility or turned a Syrian agent, and were thus able to acquire detailed photographs of the building, although no samples of nuclear materials were mentioned.

Also in October, the New York Times reported that a "partially constructed" nuclear reactor had been hit, although details "remain unclear," and the veracity of the intelligence, which was based entirely on satellite imagery, was also uncertain. There was no mention of spies infiltrating the facility or commandos obtaining samples of nuclear materials.

By Nov. 2, the "partially constructed" nuclear reactor had morphed into a "suspected nuclear site" bombed by the United States, not Israel, with tactical nuclear weapons. This was reported by Arabic news agency, Al Jazeera, and then picked up by the Jerusalem Post.

Some have pointed to Syria's chemical weapons program as the likely target, and alleged attempts by Syria to weaponize a chemical warhead as the likely reason for the air raid. Yet the secrecy and ever-changing stories from all three governments continue to obscure what actually occurred on September 6. Coupled with the lack of cooperation from the US and Israel with the IAEA, there is little chance the mystery will soon be unraveled. What is known, however, is that no type of nuclear reactor or nuclear facility was hit, despite the many anonymous leaks to the press.

## **Text of Bush and Fukuda's Conference**

By The Associated Press – 20 hours ago

Text of President Bush's news conference Friday **[16 November 2007]** with Japanese Prime Minister Yasuo Fukuda in Washington, as provided by the White House.

BUSH: Mr. Prime Minister, welcome to the White House. I really appreciate the opportunity to get to know you better. I'm looking forward to our lunch.

This is an important visit. It's the first visit the prime minister has taken since he has assumed his important office. It's a recognition that our alliance is vital for peace and security. The alliance between our two countries is rooted deeply in our strong commitments to freedom and democracy. The prime minister and I are going to keep it that way. One of the things we've decided to do is to continue to make sure the U.S.-Japanese relationship is the cornerstone of security and peace. And I appreciate you being here.

We'll continue to work together to advance freedom, security and prosperity in our respective regions and beyond. We discussed a lot of ways that we can make the world a better place by working together. We discussed North Korea and the six-party talks. I appreciate Japan's participation in the six-party talks. Together with China, Russia and South Korea, **our two nations are pressing North Korea to fulfill its obligation to abandon all its nuclear weapons programs, as well as its proliferation efforts.** The six-party talks have delivered measurable results. The plutonium production facilities at Yongbyon are now being disabled, under six-party supervision.

Hard work still remains to be done. **North Korea has agreed to provide a full declaration of all its nuclear programs and proliferation activities by the end of this year. Full declaration is one of the next steps North Korea must take to keep the six-party talks moving towards the goal of a Korean peninsula without nuclear weapons.**

We also discussed the issue of Japanese citizens abducted by North Korea. I reminded the prime minister of one of the most moving moments of my presidency, when the mother of a young girl who had been abducted by the North Koreans came to visit me. I told her, and I'm going to tell the Japanese people once again, we will not forget this issue.

I understand, Mr. Prime Minister, how important the issue is to the Japanese people, and we will not forget the Japanese abductees, nor their families.

We discussed Afghanistan and Iraq. Japanese naval forces have made valued contributions to Operation Enduring Freedom, which supports Afghanistan's young democracy. Over six years, Japanese vessels refueled ships from 11 coalition nations nearly 800 times.

Mr. Prime Minister, I appreciate the great leadership that you are showing as you work to reauthorize the Japanese refueling mission. Japanese air defense — Self-Defense Forces continue to serve bravely to support coalition efforts in Iraq. Japanese planes have flown more than 600 sorties, carrying more than half a million tons of cargo from many nations. And, Mr. Prime Minister, like I told you in the

Oval Office, I appreciate the contribution that the Japanese people are making to help this young democracy.

We discussed the realignment of our military forces, and we'll continue to do so with Secretary (Robert) Gates over lunch. Our two nations continue to implement changes in our force posture that will help our alliance meet the challenges of the 21st century.

We discussed Iran. The prime minister and I agree that a nuclear-armed Iran would threaten the security of the Middle East and beyond. Our two nations are united in our efforts to change the regime's behavior through diplomacy. We agreed that unless Iran commits to suspend enrichment, international pressure must, and will, grow.

We discussed Burma. The prime minister and I condemned the regime's crackdown on democratic activists. We call for the release of Aung San Suu Kyi and all other political prisoners. We're for a genuine dialogue between the regime and those who seek a democratic future for Burma. U.S. sanctions on the regime are in place. Japan has canceled an aid grant. The prime minister told me his government is reviewing other aid projects to ensure that they directly benefit the people of Burma.

We discussed our strong economic relationship. Prime Minister Fukuda and I discussed his plans for economic reform in Japan. We discussed Doha, and will continue our discussions over lunch.

I think we're going to serve the prime minister — I hope we serve him some good U.S. beef, which is a good way to bring up the subject of beef. We hope we're able to have the Japanese market fully open to all U.S. beef and beef products, consistent with international guidelines.

We discussed climate change and energy security. Our two nations share a similar approach to addressing the issues of climate change and energy security. We see real promise in our ongoing efforts to bring major developed and developing economies together around key elements of a future global agreement on climate change and energy security. And the truth of the matter is, we need to be in the lead, Mr. Prime Minister, because it's going to be our economies and our nations that develop most of the new technologies that will enable us to be better stewards of the environment.

And finally, we discussed the G8, and I want to thank you for taking the lead in the G8. I'm looking forward to attending.

All in all, we had a great discussion that will be continued during lunch. Mr. Prime Minister, welcome to the United States, and I thank you for your friendship.

FUKUDA: (As translated.) Well, on this first overseas trip after taking office, I have come to this one and only ally for Japan, the United States of America. And I had a very substantive meeting with President Bush just now. And I look forward to a further exchange of views with the president after this. But since this is a very good opportunity, I would like to express some of my views on the basis of the discussions we had earlier.

First of all, we agreed that Japan-U.S. alliance is playing an indispensable role in enabling Japan and the United States to address global issues together, and also provides the basis for our active diplomacy vis-a-vis Asia.

For over half a century Japan and the United States at times have overcome difficulties together and have built a solid and resilient alliance. And we today enjoy this relationship, thanks to the efforts made by countless people in our two countries and exchanges among them.

To further cement the foundation for our bilateral relations in the future, without taking for granted our current solid relations, I explained to the president my initiative to strengthen Japan-U.S. exchanges, including intellectual exchanges. And I received heartfelt support for this idea from President Bush.

Secondly, we discussed synergies between our respective Asia policies and Japan-U.S. alliance. I explained to the president that the solid Japan-U.S. alliance will provide the foundation for Asia's peace and prosperity. And realizing a stable and open Asia that advances in prosperity by further deepening our relations with Asian countries on the basis of Japan-U.S. alliance will be in our mutual interests. And I told the president I'm convinced that such active diplomacy vis-a-vis Asia in turn will further strengthen our alliance.

Following this meeting here, I shall be attending a series of ASEAN-related summit meetings in Singapore, and I desired to visit Washington, D.C. and have discussions with President Bush because of my belief regarding our alliance. And I'm extremely encouraged by the President's support.

We also discussed issues that Japan and U.S. need to address jointly, and particularly — in particular, North Korea and the fight against terrorism. With regard to North Korean nuclear programs, we agreed that Japan and U.S. need to maintain close coordination with each other, in order to achieve complete abandonment of all nuclear weapons and programs by North Korea, through the six-party talks. President Bush stated that he will never forget the abduction issue, and on that basis he once again expressed his commitment for unchanged support to the Japanese government.

We should never allow Afghanistan to once again become a hotbed for terrorism. And we agreed that Japan and the United States should continue to work together with the international community in the fight against terrorism. And I communicated to President Bush that I shall do my level best to achieve an early passage of a bill for the early resumption of the refuel act of — (inaudible) — in the Indian Ocean by the Japanese Maritime Self-Defense Force. President Bush expressed his appreciation for Japan's support for the international community's fight against terrorism and the hope that refueling operations will be resumed soon.

With regard to Myanmar, I stated that I have been working on the government of Myanmar for democratization and improvement of the human rights situation. And with regard to Iranian nuclear development, we cannot — never tolerate and we agreed that we shall together work to raise pressure with the international community so that Iran will comply with the relevant U.N. Security Council resolutions.

And in this age of rapid changes, on the basis of Japan-U.S. alliance, Japan intends to exercise more active leadership in addressing the problems of Asia and international community.

And further, we shall have discussion with President Bush over lunch on new, important issues. Japan shall be hosting two important national conferences next year. One is the G8 summit at Lake Toya in Hokkaido, in July. And the important theme for that meeting will be climate change. On this issue, Japan and the United States, through close coordination over the past half year or so, have led

international discussions. And through a new forum for negotiations at the U.N., we very much hope that we will have discussions with President on closer cooperation on global warming measures so that concrete results will be achieved for an effective framework for the future.

And through further coordination, we would like to achieve a successful G8 summit on the global climate change issue and other matters, as well, because I believe that we can have useful discussions that will allow science and technology to achieve continued economic growth, and also achieve global warming measures and energy security.

The other important conference Japan will be hosting is the International Conference in African Development, because that is a matter that the international community together should address. And this is the — (inaudible) — fourth Tokyo International Conference on African Development that will be held in Japan in May. And we would like to tie the findings and results of that meeting to the G8 summit. And again, we'd like to engage in cooperation with the United States. And there also is a question of health care in Africa, and again we would like to work in cooperation with the United States on that health care issue.

As the world economy faces numerous challenges, Japan and the United States, I believe, should work together on a global scale in the economic area, including intellectual property protection and for the sustainable development of developing countries.

There was a reference to beef. I hope that — well, we are addressing the beef issue on the basis of scientific findings. We are still in the process of our bilateral meetings.

I wanted to take this opportunity to express my appreciation for the very warm welcome by President Bush and the people of the United States. And I look forward to addressing our common challenges together, hand in hand with President Bush.

END

## **Informal U.S.-N.K. meeting turns tense as Washington raises Syria suspicions: sources**

☞☞ By Lee Dong-min

2007/11/19 14:21 KST

WASHINGTON, Nov. 18 (Yonhap) -- An off-the-record meeting Friday [November 16, 2007] between North Korean and U.S. officials turned tense when American officials pressed Pyongyang to explain its suspected nuclear ties with Syria when the North declares its atomic stockpile and activities in the coming weeks, sources who participated in the meeting said Sunday.

☞☞ Kim Myong-gil, North Korea's deputy chief of mission to the United Nations who participated in the meeting, did not give a particular response, but he and his aides seemed "clearly taken aback" at the level of pressure from U.S. participants, the sources told Yonhap in separate phone calls.

☞☞ "I think that at first, they thought the meeting was going to be more about sort of going through the motions," one source said.

☞☞ "A lot of us at the meeting were very clear to the North Koreans that if their declaration doesn't include what is going on in Syria, it's really going to be a problem," another source said.

☞☞ The meeting was sponsored by the National Committee on American Foreign Policy (NCAFP), called a "track two" channel maintained for private-level talks between the two countries that have yet to establish formal relations.

☞☞ The U.S. side included former Secretary of State Henry Kissinger and former Federal Reserve Chairman Paul Volcker, who added prestige to the delegation largely made up of Democrat and Republican congressional staffers and State Department officials, and spoke out strongly on the Syria issue, according to the contacted sources.

☞☞ "Once the Syria topic was raised, Mr. Kissinger was quite adamant," another source said. "He said there has to be clarity on Syria."

The same concerns shown by Volcker and other financial community leaders are also important, he said, because of another set of talks beginning Monday to address Pyongyang's alleged illicit activities such as counterfeiting American currency.

☞☞ "The financial representatives were reminded of North Korea's proliferation issues. They were saying, 'That's right. We have to think about this as well,'" he said.

☞☞ "We just kept coming back to the Syria issue.. and we were quite tough about it, including Mr. Kissinger," the participant said.

☞☞ The four-hour session started on a positive note as representatives of the two governments, in their opening comments, focused on progress being made at six-party talks aimed at denuclearizing the Korean Peninsula.

후후 In a series of agreements reached since September 2005, North Korea agreed to eventually give up all of its nuclear weapons and programs and in return receive economic and political rewards from the other five governments -- South Korea, the U.S., China, Russia and Japan.

후후 Under the latest deal struck last month, Pyongyang committed itself to disabling its key nuclear facilities, a process which it started this month, and declaring all of its nuclear programs and activities.

후후 The U.S. is hoping that Pyongyang's declaration will satisfactorily address the allegations involving Damascus, which started following an air raid by Israel on a Syrian installation on Sept. 6. Press reports said Israeli officials believed the facility was a nuclear site being built with the assistance of the North, or was at least modeled after Pyongyang's nuclear reactor.

후후 Both Pyongyang and Damascus have denied the allegations of nuclear cooperation.

후후 After the opening statements in Friday's talks, the U.S. participants raised the issue, calling on North Korea to provide clarity on the country's proliferation activities, and promise that it will not continue them anymore.

후후 U.S. President George W. Bush and Washington's top nuclear negotiator Christopher Hill "are so over-extended on their policy" on North Korea, one source said, that "if there is nothing on Syria or nothing that explains it, the situation is going to very difficult for everybody."

## **Israeli: Syrian Site Hit Not a Reactor**

By STEVE WEIZMAN – 1 hour ago

[accessed on Google News 2007-11-22T19:45Z]

JERUSALEM (AP) — A Syrian site bombed by Israel in September was probably a plant for assembling a nuclear bomb, an Israeli nuclear expert said Thursday, challenging other analysts' conclusions that it housed a North Korean-style nuclear reactor.

Tel Aviv University chemistry professor Uzi Even, who worked in the past at Israel's Dimona nuclear reactor, said satellite pictures of the site taken before the Israeli strike on Sept. 6 showed no sign of the cooling towers and chimneys characteristic of reactors.

Even said the absence of telltale features of a reactor convinced him the building must have housed something else. And a rush by the Syrians after the attack to bury the site under tons of soil suggests the facility was a plutonium processing plant and they were trying to smother lethal doses of radiation leaking out.

Israel has maintained an almost total official silence over the strike, which Syria said hit an unused military installation. But foreign media reports, some quoting unidentified U.S. officials, have said the strike hit a nuclear facility made with North Korean help and modeled on the North's Yongbyon reactor.

Damascus denies it has an undeclared nuclear program, and North Korea has said it was not involved in any Syrian nuclear project.

Last month, American analyst David Albright, president of the Institute for Science and International Security, said commercial satellite images taken before and after the Israeli raid supported suspicions that the target was indeed a reactor and that the site was given a hasty cleanup by the Syrians to remove incriminating evidence.

Albright saw a clue in the fact that the structure was roofed at an early stage in its construction.

Other analysts have said the satellite images are too grainy to make any conclusive judgment.

But in an interview Thursday with the Haaretz newspaper — which first reported his assessment — Even compared pictures of a North Korean reactor at Yongbyon, in which a cooling tower with steam rising from it can clearly be seen, with the Syrian images, where no such structure appears.

Even told The Associated Press that another piece of evidence against the reactor theory was that satellite pictures of the Syrian installation taken since 2003 showed no sign of a plutonium separation facility, which prepares fuel for a nuclear reactor — typically a large structure with visible ventilation openings.

"It's very difficult to hide a separation plant," he said. "It's more difficult to hide a separation plant than to hide a nuclear reactor," Even added.

"In Yongbyon, the supposed sister facility in North Korea, you can see all those signs that I am pointing out that are missing in the Syrian place," Even said. "You can see the chimneys, you can see the ventilation, you can see the cooling towers, you can see the separation plant. All that is missing from this building in Syria."

Even said he believes the Syrian cleanup, in which large quantities of soil were bulldozed over the site, was an attempt to smother lethal radiation from a plutonium processing plant.

"I have no information, only an assessment, but I suspect that it was a plant for processing plutonium, namely a factory for assembling the bomb," he told Haaretz.

"Somebody made a lot of effort to bury deeply whatever remains of this facility," he told The AP. "Not just to hide it but to pile up a large mound of dirt on top of it."

Even said Syrian authorities might have taken similar cleanup action if the site had held chemical or biological weapons. But it would not have made sense for Israel to have taken the military and diplomatic risk of attacking such a facility, long a known element of Syria's arsenal.

"We know already that the Syrians have in place armed missiles with chemical weapons," he said. "They are already well-equipped in that department."

## **U.S. Electronic Surveillance Monitored Israeli Attack On Syria**

**Nov 21, 2007**

David A. Fulghum and Robert Wall

AviationWeek.com

The U.S. provided Israel with information about Syrian air defenses before Israel attacked a suspected nuclear site in Syria, Aviation Week & Space Technology is reporting in its Nov. 26 edition.

The U.S. was monitoring the electronic emissions coming from Syria during Israel's Sept. 6 attack, and while there was no active American engagement in the operation, there was advice provided, according to military and aerospace industry officials.

The first event in the raid involved Israel's strike aircraft flying into Syria without alerting Syrian air defenses. The ultimate target was a suspected nuclear reactor being developed at Dayr az-Zawr. But the main attack was preceded by an engagement with a single Syrian radar site at Tall al-Abuad near the Turkish border.

The radar site was struck with a combination of electronic attack and precision bombs to allow the Israeli force to enter and exit Syrian airspace unobserved. Subsequently all of Syria's air-defense radar system went off the air for a period of time that encompassed the raid, U.S. intelligence analysts told Aviation Week.

However, there was "no U.S. active engagement other than consulting on potential target vulnerabilities," a U.S. electronic warfare specialist says.

Elements of the attack included some brute force jamming, which is still an important element of attacking air defenses, U.S. analysts say. Also, Syrian air defenses are still centralized and dependent on dedicated HF and VHF communications networks, which made them vulnerable.

The analysts don't believe that any part of Syria's electrical grid was shut down. They do contend that network penetration involved both remote air-to-ground electronic attack and penetration through computer-to-computer links.

"There also were some higher-level, non-tactical penetrations, either direct or as diversions and spoofs of the Syrian command and control capability, done through network attack," one U.S. intelligence specialist says.

These observations provide evidence that a sophisticated network attack and electronic hacking capability is an operational part of the Israeli Defense Force's arsenal of digital weapons.

Despite being hobbled by the restrictions of secrecy and diplomacy, Israeli military and government officials also confirm that network invasion, information warfare and electronic attack are part of Israel's defense capabilities.

These tools have been embraced operationally by key military units, but their development, use and the techniques employed are still a mystery even to other defense and government organizations. It remains "a shadowy world," an Israeli Air Force general confirms.

Israel is not alone in recent demonstrations of network warfare. Syria and Hezbollah revealed some basic expertise during the Lebanon conflict last year.

"Offensive and defensive network warfare is one of the most interesting new areas," says Pinchas Buchris, the director general of the Israeli Ministry of Defense. "I can only say we're following the [network attack] technology with great care. I doubted this [technology] five years ago. But we did it. Now everything has changed.

"You need this kind of capability," he says. "You're not being responsible if you're not dealing with it. And, if you can build this kind of capability, the sky's the limit."

#### ARTICLE COMMENTS

nayouf wrote:

I have read all the reports that have been by Mr.David A. Fulghum about the Israeli raid. I'm sorry to tell him that all the information he mentioned is but false. I know the Syrian Air-defense System as like as I know my hand's plate, and I was the first person who published pictures of the site bombed by the Israeli fighters , which was 3 weeks before David Albright (of [www.isis.org](http://www.isis.org) ) did on 24 October. In fact, there is no Syrian radar system near the Syrian-Turkish boarder. That is not mention the central radar of Shinshar ( mid-Syria) can survey up to 4000 km.

مصادر تركية وسورية متطابقة تكشف لـ " الحقيقة " طبيعة الهدف الذي استهدفته الطائرات الإسرائيلية الشهر الماضي :

صممت لتلائم رؤوسا حربية غير تقليدية ولا شيء Scud-D و Scud-C الطائرات استهدفت منشأة للصواريخ بعيدة المدى من طراز غير ذلك أبدا ، والرئيس السوري أبلغ وزير الخارجية التركي بحقيقة الهدف

الغارة أسفرت عن تدمير أو تخريب بضع عشرات من الصواريخ منزوعة الرؤوس

نادرة مطر (استانبول) ، دمشق - الحقيقة ( خاص ) : علمت " الحقيقة " من مصادر سورية وتركية موثوق بها أن الغارة التي شنتها إسرائيل الشهر الماضي على العمق السوري استهدفت مستودعا للصواريخ بعيدة المدى من طراز " سكود سي " و " سكود دي " صممت لتكون ملائمة للتجهيز برؤوس حربية غير تقليدية . وقال مصدر تركي لـ " الحقيقة " في استانبول إن وزير الخارجية التركي علي بابا خان الذي زار دمشق الأسبوع الماضي حصل على معلومات وافية بهذا الشأن من السلطات السورية ، حيث أكد له الرئيس بشار الأسد أن " الطائرات الإسرائيلية استهدفت مستودعا للصواريخ بعيدة المدى " ، لكنه لم يحدد بشكل مفصل المواصفات التكتيكية والاستراتيجية لهذه الصواريخ . وأضاف المصدر " إن علي بابا خان طلب من الرئيس السوري تأكيدات بهذا الشأن لتستطيع الحكومة التركية الدفاع عن الموقف السوري حين تثار المشكلة في وجهها من قبل الولايات المتحدة وإسرائيل ، وحتى من قبل بعض القوى " . " الداخلية ، في إشارة للجيش التركي .

على هذا الصعيد ، أكد ضابط في " هيئة التسليح " في الجيش السوري أن الغارة استهدفت مستودعا للصواريخ بعيدة المدى من طراز " سكود سي " و " سكود دي " بعيدة المدى في منطقة " حلبية - زليبية " الواقعة إلى الشمال الغربي من دير الزور بحوالي 50 كم . وقال الضابط " أستطيع أن أؤكد أن ما قصف هو مستودع للصواريخ المذكورة ولا شيء غير ذلك على الإطلاق " . وأضاف موضحا " إن المستودعات كانت محفورة في باطن التلال الموجودة هناك على الضفة اليسرى من نهر الفرات مقابل المنطقة الأثرية المعروفة باسم حلبية - زليبية ، والتي تقع إلى الشمال الغربي من المنطقة المعروفة باسم زنوبيا . وقد استخدمت الطائرات صواريخ خارقة للأتفاق في عملية القصف ، وأن ما لا يقل عن 30 - 40 صاروخا موصبا في حاويات خاصة قد دمرت كلياً أو جزئياً ، فضلا عن البناء الرئيسي للمنشأة ، وهو وحدة تقنية خاصة بتعمير الرؤوس الحربية لهذا النوع من الصواريخ " ، وكشف عن أن " بعض الأثار القريبة من المنطقة تعرض لأذى ، لكنه أدى طفيف جدا " . ولدى سؤاله عما إذا كانت الصواريخ المصابة مجهزة برؤوس غير تقليدية ، قال المصدر " لحسن الحظ إنها لم تكن كذلك . فحين تخزين هذه الصواريخ تكون رؤوسها الحربية غير التقليدية مفرغة من شحناتها " . لأسباب تتصل بحفظها بشكل آمن ، وإلا لكانت حصلت كارثة بيئية في المنطقة .

تبقى الإشارة إلى أن " الحقيقة " كانت أول من أشار إلى أن الغارة استهدفت منطقة " حلبية - زليبية " ، وذلك في تقرير نشرته في السابع عشر من الشهر الماضي مرفقا بصورة للمنطقة . كما أن " الحقيقة " تحتفظ بصورة فضائية للمنطقة من مصدر إسرائيلي يعود تاريخها إلى العام الماضي ، وهو ما يعني أنها كانت مراقبة من قبل إسرائيل منذ عام على الأقل . ( الصورة 1 أدناه ) . وكانت " الحقيقة " حصلت قبل يومين على أوضح صور تتوفر حتى الآن للمكان المستهدف ، يعود تاريخها إلى أكثر من عام . وبعد عرضها على الضابط المذكور ، أكد أنها " مطابقة تماما للمكان المستهدف قبل قصفه " ( الصورتان 2 و 3 أدناه ) . وكان تقرير " الحقيقة " المشار إليه قد نقل عن مصادر سورية خاصة قولها إن " إدارة الحرب الكيميائية " في الجيش لسوري قد أجرت اختبارات وفحوصا للمنطقة بعد القصف ، وهو ما يعني أن ثمة مخاوف كانت موجودة لجهة احتمال حصول تلوث كيميائي نتيجة لقصف المستودع .

Turkish sources, Syria identical to reveal "the truth" nature of the goal which target Israeli aircraft last month

أircraft targeted the facility for long-range missiles of the type Scud-C and Scud-D designed to suit non-conventional warheads and nothing but never, and the Syrian president told Turkish Foreign Minister fact goal

The raid resulted in the destruction or vandalism few dozen missiles without warheads

Rare Matar (Istanbul), Damascus truth (special): learned "the truth" from the Turkish and Syrian sources credible that the raid by Israel last month on the rear Syrian targeted repository of long-range missiles of the type "Scud C", "Scud D" designed to be suitable for processing non-conventional

warheads. A source said Turki told "the truth" in Istanbul that the Turkish Foreign Minister to Papa

Khan, who visited Damascus last week received adequate information in this regard from the Syrian authorities, which assured him of President Bashar al-Assad that "Israeli aircraft targeted a repository of long-range missiles," but he did not identify the detailed specifications of tactical and strategic of these rockets. The source added that "the Pope Khan asked the Syrian president assurances to that effect to the Turkish government can defend the Syrian position when the problem arose in me by the United States and Israel, and even by some internal forces, in a reference to the Turkish army."

At this level, the officer in a "militarization" of the Syrian army that the raid targeted a repository of long-range missiles of the type "Scud C", "Scud D" in the long term "ignited Zlp" located to the north-west of Deir Al-Zour about 50 km. The officer said "I can confirm that the bombing was the repository of rocket and nothing but mentioned that at all." He added, saying that "that the warehouses were dug in the subsoil of the hills there on the left bank of the Euphrates river against the region known as Sensationalism ignited Zlp, which lies to the north-west of the area known as Zenobia. Has Astkhaddt aircraft missiles extraordinary expenditure in the shelling, and what not less than 30 40 rockets Moilla in special containers had been destroyed in whole or in part, as well as the construction of the main plant, which is a unit of special technical reconstruction warheads of this type of missile, "and revealed that" some implications near the region suffered harm, but harm very little. " When asked whether the patient is equipped with missile warheads unconventional, the source said "fortunately they were not as well. Storage When these rockets are non-conventional warheads vicious cycle of shipments for reasons related to store it securely, and only got to the environmental disaster in the region."

Keep noted that the "truth" was first pointed out that the raid targeted "ignited Zlp", in a report published in the XVII of the facility last month in the region. The "truth" is a space reserved for the region from the Israeli source dating back to last year, which means it was controlled by Israel since at least. (Image 1 below). The "truth" obtained two days before the clearer images available so far to the target location, dates back to more than a year. After the presentation to the officer in question, he stressed that it was "fully correspond to the target before the bombing" (photographs 2 and 3 below). The report "the truth" referred to was quoted Syrian sources as saying that a special "management chemical warfare" in the Syrian army had conducted tests and examinations of the area after the bombing, which meant that there were fears exist regarding the possibility of a chemical contamination result of the bombing of the warehouse.

## **Israel Shows Electronic Prowess**

**Nov 25, 2007**

By David A. Fulghum, Robert Wall and Amy Butler

The U.S. was monitoring the electronic emissions coming from Syria during Israel's September attack; and—although there was no direct American help in destroying a nuclear reactor—there was some advice provided beforehand, military and aerospace industry officials tell Aviation Week & Space Technology.

That surveillance is providing clues about how Israeli aircraft managed to slip past Syrian air defenses to bomb the site at Dayr az-Zawr. The main attack was preceded by an engagement with a single Syrian radar site at Tall al-Abuad near the Turkish border. It was assaulted with what appears to be a combination of electronic attack and precision bombs to enable the Israeli force to enter and exit Syrian airspace. Almost immediately, the entire Syrian radar system went off the air for a period of time that included the raid, say U.S. intelligence analysts.

There was “no U.S. active engagement other than consulting on potential target vulnerabilities,” says a U.S. electronic warfare specialist.

Elements of the attack included some brute-force jamming, which is still an important element of attacking air defenses, U.S. analysts say. Also, Syrian air defenses are still centralized and dependent on dedicated HF and VHF communications, which made them vulnerable. The analysts don't believe any part of Syria's electrical grid was shut down. They do contend that network penetration involved both remote air-to-ground electronic attack and penetration through computer-to-computer links.

“There also were some higher-level, nontactical penetrations, either direct or as diversions and spoofs, of the Syrian command-and-control capability, done through network attack,” says an intelligence specialist.

These observations provide evidence that a sophisticated network attack and electronic hacking capability is an operational part of the Israel Defense Forces' arsenal of digital weapons.

Despite being hobbled by the restrictions of secrecy and diplomacy, Israeli military and government officials confirm that network invasion, information warfare and electronic attack are part of Israel's defense capabilities.

They've been embraced operationally by key military units, but their development, use and the techniques employed are still a mystery even to other defense and government organizations. It remains “a shadowy world,” says an Israeli air force general. Israel is not alone in recent demonstrations of network warfare. Syria and Hezbollah showed some basic expertise during the Lebanon conflict last year.

“Offensive and defensive network warfare is one of the most interesting new areas,” says Pinchas Buchris, director general of the Israeli defense ministry. “I can only say we're following the [network

attack] technology with great care. I doubted this [technology] five years ago. But we did it. Now everything has changed.

“You need this kind of capability,” he says. “You’re not being responsible if you’re not dealing with it. And, if you can build this kind of capability, the sky’s the limit [for sophisticated intelligence gathering and clandestine operations].”

So far, the most sophisticated example of nonkinetic warfare is the penetration of Syrian air defenses by Israeli aircraft on Sept. 6 to bomb a site—analyzed as a nascent nuclear facility—without being engaged or even detected. Commercial satellite pictures of the target on the Euphrates (about 90 mi. from the Iraq border) taken before and after the raid show that a large building (the suspected reactor building) in the center of the site has disappeared and the ground has been bulldozed flat.

The incident is attracting attention because “the Syrians have an extensive air defense system that they’ve been building for decades—since the [1967] Six-Day War,” says an Israeli defense planning official. “It may be the largest in the world.”

That ability of nonstealthy Israeli aircraft to penetrate without interference rests in part on technology, carried on board modified aircraft, that allowed specialists to hack into Syria’s networked air defense system, said U.S. military and industry officials in the attack’s aftermath. Network raiders can conduct their invasion from an aircraft into a network and then jump from network to network until they are into the target’s communications loop. “Whether the network is wireless or wired doesn’t matter anymore,” says a U.S. industry specialist (AW&ST Nov. 5, p. 32; Oct. 8, p. 28; Feb. 19, p. 31). Now development of the technology in Israel is being confirmed.

“The raid on Syria was a strategic signal, not a threat,” says a retired senior military official who flew combat in the region for decades. “This [raid] was about what we perceived are their capabilities [for developing weapons of mass destruction] and about deterrence more than creating damage.”

He contends that Syrian procedures even contributed to the successful bombing raid.

“Part of the vulnerability of the Syrian facility was that they kept it so secret that there weren’t enough air defenses assigned to it,” the official contends.

Israel’s capabilities are similar to the “Suter” network-invasion capability that was developed by the U.S. using the EC-130 Compass Call electronic attack aircraft to shoot data streams, laced with sophisticated algorithms, into enemy antennas. The passive, RC-135 Rivet Joint electronic surveillance aircraft then monitored enemy signals to ensure the data streams were having the intended effect on the target sensors. Israel duplicated the capability when it fielded its two new Gulfstream G550 special missions aircraft designs. Both were modified by Israel Aerospace Industries’ Elta Div. in time for the 2006 Lebanon war. The ground surveillance radar version can provide data streams from large active, electronically scanned array radars, while the intelligence version provided the signals surveillance and analyses.

Buchris contends that it’s not manpower and technology that limits development, but constructing systems (that can put invasive data streams into enemy networks and then monitor the results) and making them operational.

The new G550 radar and electronic surveillance aircraft, for example, are still “in the process of being integrated into the intelligence system,” the planning official agrees. “The name of the game is balance of systems, intelligence, training, communications and forces. It has to be conducted like an orchestra. If one instrument is out of tune, it doesn’t sound right.”

The special mission aircraft were used during the war with good results, but military officials expect better future exploitation as they are plugged into the Israel Defense Forces’ network. Another handicap in developing Israel’s network attack capabilities is that they haven’t directly enlisted the research potential of their universities as the Pentagon has done in the U.S.

“I know that in the U.S., universities are involved in these kinds of issues,” Buchris says. “But in Israel, we are not. It’s totally different. How the Israeli system works, you can’t share with anybody. I don’t want to go into the issues [of technology development, personnel training and who runs the organization]. It’s very interesting. It’s very sensitive. Any such capabilities are top secret.”

That secrecy is causing Israel problems. Compartmentalization means that those who know about the new capabilities aren’t allowed to tout their usefulness. Yet at least low-key publicity is needed to ensure government funding for additional development and acceptance of their operational use.

“Now I have to find a way to explain these capabilities to other people so that they understand,” Buchris says.

**Israeli officials won’t address the raid on Syria directly.**

“We want to ease feelings with Syria,” says Tzachi Hanegbi, chairman of the Israeli parliament’s foreign affairs and defense committee. “We don’t want them to feel humiliated.” Moreover, Israeli analysts aren’t really sure who to blame. “No one really knows whether President [Basher al-] Assad is the one who calls the shots. It may be senior army generals or other figures with influence. We don’t want a confrontation.

“It’s sensitive enough that the Army made an unprecedented decision to change an important exercise in the Golan Heights to another site,” Hanegbi says. “And, it was equally unusual for them to announce it. That’s a symptom of the atmosphere.”

**Israeli officials reject any suggestion that the Syrian and Iranian nuclear programs were or are linked in any way.**

“I don’t think Iran knew anything about what Syria was doing,” says a long-serving member of the Israeli parliament with insight into military affairs. “I don’t think they would have told the Iranians. They didn’t need Iranian assistance because they had help from the North Koreans.”

However, John Bolton, former U.S. ambassador to the United Nations, disagrees. “I’d be very surprised if the Syrians were to engage at least without Iranian acquiescence,” he says. And, “it may be beyond that,” he tells Aviation Week. Since Syria alone lacks both the funding and expertise for a nuclear weapons program, it would logically turn to Pyongyang for technology and oil-rich Tehran for funding, he says.

Moreover, Bolton says the use of network attack is a clever move by the Israelis. He contends that it will serve as a deterrent for Iran. Or, at the very least, it sends a message that even the advanced, Russian-built air defense systems won't protect Iran's nuclear activities.

"I think it is very telling, obviously, in its potential impact on Iran since they've been supplied by the Russians with air defense equipment as well," Bolton says. He describes the Syrian facility as a "clone" of North Korea's primary nuclear plant in Yongbyon, and it share the same dimensions. The roof was covered with materials to mask it, apparently unsuccessfully, from overhead collection. Prior to his work at the U.N., Bolton was undersecretary of State for arms control during 2002 when construction of the Syrian site was said to have begun.

An indication of North Korea's involvement in the Syrian facility was a condemnation of the raid issued by the government there. "This was an almost automatic response," he says. "It is not because North Korea and Syria share a common border. To me, it was an inadvertent tipoff from North Koreans that they had involvement with that facility."

Israeli analysts closely watch foreign aid to Syria and that country's support of Hezbollah during last year's fighting in Lebanon and Israel. Of key interest was a signals and communications intercept operation that was run by the Syrian military. The intelligence products on location, makeup and intent of Israeli operations—much of it obtained from cell phone intercepts—were passed to Hezbollah.

In this case, they point to the involvement of Chinese and Russian advisory groups operating in Syria.

"When you're talking about selling high-tech systems, they need support and staffing," says a senior Israeli government official. "You can't just talk about an air defense system. You also have to talk about communications, networking and intelligence gathering," which includes the skills of communications and signals intelligence gathering and analysis.

"I can tell you that now, when I go into a [ministry] meeting, I have to take the battery out of my cell phone," the government official says. "We're aware of [traffic intercept during the Lebanon fighting]. There's also the issue that in the north of Israel you have very large Arab communities. Most wouldn't be involved, but you're talking about a half-million people up on the border. That means there are people with the ability to watch and pass on information."

## **Top US nuclear negotiator will make rare visit to North Korea to inspect disarmament work**

The Associated Press

Tuesday, November 27, 2007

ANNAPOLIS, Maryland: The U.S. negotiator on North Korea's nuclear program is to become next week the highest-level U.S. official to inspect work under way to disable that country's main nuclear reactor.

A senior State Department official said Tuesday that Assistant Secretary of State Christopher Hill will leave Monday for the communist-led state to check the disabling of North Korea's Yongbyon reactor, a crucial milestone in the international bargain that North Korea made to eliminate its weapons in exchange for economic aid and other perquisites.

Hill was making the quick visit in between diplomatic meetings in neighboring Japan and South Korea, said the official, who spoke on condition of anonymity to describe the unannounced plans. North Korea invited Hill for only his second visit as an end-of-the-year deadline nears for Pyongyang to declare the extent of its once-secret nuclear program.

Hill and other envoys are expected to meet separately with the North Koreans next week in what will likely be the six-nation international bargaining group's final session before the deadline. The date of that session in Beijing also has not been announced.

The last previous round of six-party talks was in Beijing in late September. The sides announced an agreement in which North Korea promised to disable its closed Yongbyon nuclear reactor by the end of this year in exchange for economic aid and political concessions.

At the next meeting of the six — North and South Korea, the United States, China, Japan and Russia — North Korea is to lay out elements of a draft declaration detailing its nuclear programs.

U.S. nuclear experts have been in North Korea since early this month to disable the reactor, which produced plutonium for bombs.

"The process to disable the North's nuclear facilities is under way," South Korean Foreign Minister Song Min-soon said. "The process is going well."

Hill became the first high-level U.S. official to visit the impoverished, secretive North in more than four years when he made a brief, surprise stop there in June. That visit followed resolution of a banking dispute that had held up progress toward disarmament for more than a year.

U.S. officials have said North Korea is cooperating with visiting experts to disable the weapons-making facilities, but there is skepticism in Congress and within the Bush administration that North Korea really will drop out of the nuclear club it joined last year with a successful underground nuclear test. South Africa is the only nuclear power to end its weapons program voluntarily.

North Korea's test detonation in October 2006 culminated decades of efforts to build the world's deadliest weapons. Experts estimate it has enough weapons-grade plutonium to make about a dozen bombs.

It is not clear how the North will deal with secret U.S. and Israeli intelligence findings that it was supporting an illicit nuclear effort in Syria this year. Israel bombed a facility widely believed to have housed the illicit program, but details of the raid and the Syrian program have remained largely secret.

Washington hopes future talks will yield an agreement for the North to dismantle the facility entirely and also wants nuclear bombs Pyongyang is believed to have built to be confiscated.

## **U.S. to set 3 more tasks for N. Korea / New hurdles for delisting as terror sponsor**

Takashi Sakamoto / Yomiuri Shimbun Correspondent

Dec. 1, 2007

WASHINGTON--The U.S. government has decided to impose three new conditions for removing North Korea from Washington's list of state sponsors of terrorism, sources close to the six-party talks said Friday.

Pyongyang must reveal the amount of plutonium it has extracted; the reality of its uranium enrichment program; and the alleged transfer of nuclear technology and materials to other countries such as Syria, the sources said.

These points should be made clear when North Korea completes its declaration of its nuclear programs by the end of this year, the sources added.

The new conditions will be in addition to the current U.S. requirement that North Korea complete the disablement of its nuclear facilities.

It is now likely that North Korea will not be removed from the U.S. list of state sponsors of terrorism anytime soon, since it is unlikely that the country will accept all four conditions, the sources said.

It is believed that the United States and North Korea had agreed on the removal of the reclusive state from the terrorism sponsor list and punitive measures mandated by the U.S. Trading with the Enemy Act in return for Pyongyang disabling its nuclear facilities and fully declaring its nuclear programs by year's end.

Although the background of the new U.S. measures is unclear, the U.S. government is believed to have taken into consideration Japan's strong demand to keep North Korea on the terrorism sponsor list.

U.S. Assistant Secretary of State Christopher Hill, the chief U.S. delegate for the six-party talks, said Thursday in Seoul that North Korea "is required to list all of their [nuclear] programs, facilities and all of the materials. That is what the declaration is for." Hill will travel to Pyongyang on Monday and stay there until Wednesday.

However, North Korea has not submitted an initial draft nuclear listing, even though only one month remains before the the deadline to complete the declaration.

In relation to the three new conditions, North Korea has flatly denied the existence of an uranium enrichment program and of providing nuclear technology and materials to other countries.

It is also believed that North Korea is reluctant to declare its current nuclear weaponry stockpile, including plutonium, which is used to make nuclear bombs and warheads.

Hill is scheduled to meet North Korea's chief nuclear envoy, Vice Foreign Minister Kim Gye Gwan. However, negotiations on the declaration are likely to face rough going unless North Korea changes its stance.

Chief delegates to the six-party talks, scheduled to meet next week in Beijing, will highly likely face difficulties while discussing the declaration.

===

'Aluminum pipes not for N-use'

Meanwhile, North Korea has denied it is using special aluminum pipes it imported from Russia for nuclear development to produce rocket bombs, it has been learned. The pipes are usually used in the process to develop highly enriched uranium.

The United States, which strongly suspects that North Korea has a uranium enrichment program, is not convinced by the explanation, according to an informed source. The U.S. government is asking North Korea to further clarify the matter, the source said.

Clarifying its uranium enrichment program is an important point of the declaration of North Korea's nuclear programs, and is expected to be a major agenda in next week's six-party Beijing talks.

North Korea admitted earlier this year that it has purchased the high-strength aluminum pipes, to be used in centrifuges necessary for uranium enrichment, according to sources close to the six-party talks.

## **FM Livni meets with South Korean FM Song Min-Soon**

**2 Dec 2007**

In their meeting today, FM Livni and FM Song Min-Soon discussed issues relating to nuclear proliferation in the region and promoting closer relations and economic ties between the two countries

(Communicated by the Foreign Minister's Bureau)

Vice Prime Minister and Minister of Foreign Affairs Tzipi Livni met this afternoon (Sunday, 2 December 2007) with South Korean Foreign Minister Song Min-Soon. FM Livni congratulated her counterpart on the strengthening of direct relations between the two countries since her visit to South Korea last year, and asked him to rescind restrictions imposed by the South Korean government on travel to Israel.

FM Livni and FM Song Min-Soon also discussed issues relating to nuclear proliferation in the region. Regarding this, FM Livni stated: "The international community is concentrating efforts to sever commercial and financial relations with Iran, to increase pressure on that country, and we must not allow Iran to evade these significant actions by presenting Asian alternatives. When Europe takes action against Iran - Iran turns to Asia. It is extremely important for Asian countries to avoid the creation of alternative relations with Iran, especially at this crucial point." **The two foreign ministers also discussed North Korea's decision to disable its nuclear program and the obligation of preventing proliferation of elements of its nuclear program in countries in the Middle East.**

FM Livni and FM Song Min-Soon agreed to renew the deliberations of the Joint Israel-South Korea Economic Commission, with the aim of strengthening economic relations between the two countries on issues such as tourism, hi-tech, trade and research & development.

## **North Korea moves to nuclear dismantling - U.S. envoy**

By Chris Buckley

Wed Dec 5, 2007 8:41pm IST

BEIJING (Reuters) - North Korea is moving towards disabling its key nuclear complex, but has not yet agreed with the United States what nuclear activities it must disclose, the chief U.S. envoy to disarmament talks said on Wednesday.

Speaking after a rare trip by a U.S. official to the old Cold War foe, Christopher Hill told reporters that he had visited the Yongbyon nuclear complex, which contains the reactor at the heart of Pyongyang's atomic programme, and seen that dismantling was going forward at three key units of the facility.

But Hill also said he had cautioned Pyongyang that a declaration of the North's nuclear activities promised by the end of the year had to be "complete and correct" and contain no surprises.

"We wanted to make sure that they would include all the facilities, materials and programmes," Hill told reporters in Beijing. "There are definitely some differences there."

Hill said he still expected Yongbyon to be disabled by the end of the year and for North Korea to issue its disclosure.

But he was not sure there would be time for six-party talks involving the two Koreas, the United States, Japan, Russia and host China on the issue to be held by year-end.

Hill's was the highest-level U.S. visit so far to the Yongbyon nuclear complex.

## U.S. top envoy says DPRK's nuclear disablement "going well"

www.chinaview.cn

2007-12-05 22:54:13

BEIJING, Dec. 5 (Xinhua) -- Chief U.S. negotiator to the six-party talks on the Korean Peninsula nuclear issue Christopher Hill said on Wednesday the disablement of DPRK's main nuclear facilities at Yongbyon, scheduled to be completed by year end, is going well.

"The disablement is going fine...there is disabling activity going on all three sections of the facility there: the fuel fabrication facilities, the reactor and the re-processing center," Hill said after arriving in Beijing Wednesday afternoon following a three-day visit to the Democratic People's Republic of Korea (DPRK).

"They have done a lot of work in preparation of discharging the fuel in the reactor...which will enable the disabling to be of real value," he said.

Hill noted that China has been very helpful in assisting the disablement.

According to a six-party talks joint document released in Beijing on Oct. 3, the DPRK agreed to disable all the existing nuclear facilities and provide a complete and correct declaration of all its nuclear programs by the end of this year.

The document said the disablement of the five-megawatt Experimental Reactor, the Reprocessing Plant (Radiochemical Laboratory) and the Nuclear Fuel Rod Fabrication Facility in Yongbyon would be completed by Dec. 31.

Hill said the DPRK is "pretty close to providing a declaration" and the atmosphere of the meeting with his DPRK counterpart Kim Kye Gwan was very cooperative.

"The declaration should be complete and correct...It should include all the facilities, materials and programs that the DPRK has had in the nuclear area," Hill said.

Hill said he will leave China early Friday, after meeting with Wu Dawei, head of the Chinese delegation to the six-party talks, on Thursday.

He dismissed chances for a six-party talk to convene by the end of this year, citing holiday reasons.

## **US envoy says NKorea disablement on schedule: report**

1 hour ago [accessed 2007-12-05T16:15Z]

BEIJING (AFP) — The US envoy on North Korean nuclear disarmament said Wednesday the regime's disablement was on schedule but that more remained to be done to meet deadlines, Chinese state media reported.

Christopher Hill was speaking as he left Pyongyang after what he called "good talks" with officials in North Korea, Xinhua news agency said.

He had arrived on Monday to witness the US-supervised disablement of the country's main Yongbyon nuclear facility.

"We had good talks and had a full tour of Yongbyon. I would say the disablement activities are well on schedule," the assistant US secretary of state was quoted as saying.

Hill's visit was also aimed at keeping the North on track for a complete declaration of all its atomic programmes by a year-end deadline.

"We have to keep working because we have more to do to meet our deadlines," he said, summarising talks on the issue with his North Korean counterpart Kim Kye-gwan.

Hill arrived later Wednesday in Beijing for talks with Chinese officials, the US embassy in the Chinese capital said.

The North said in October 2006 it had successfully tested its first nuclear device, but in February it agreed to a six-nation accord to disable such programmes in return for energy aid and various diplomatic and security guarantees.

A new round of six-nation talks was expected this week in Beijing but they appeared to have been put off, and the United States and China have not set a date for when the discussions restart.

The lack of a date comes amid reports of a delay in Pyongyang's nuclear declaration, considered a vital part of the multi-faceted six-nation deal.

The US wants Pyongyang to declare all material, including a plutonium stockpile and any warheads.

"We have to see what the DPRK does, but it has to give a full declaration and it has to be a complete declaration," Xinhua quoted Hill as saying.

DPRK stands for the Democratic People's Republic of Korea, North Korea's official name.

Cho Hee-Yong, spokesman for South Korea's foreign ministry, said Tuesday the North had not yet handed over the list.

North Korea has a history of striking deals on its nuclear programmes only to scupper them at the last minute with new demands, but Hill said that the deadline still could be met.

"I think (North Korea) is working very hard for the declaration and we have some discussions about that... so I'm assured they will be prepared to meet the deadline," he told Xinhua.

US State Department spokesman Tom Casey said Tuesday the talks delay was due to scheduling problems and that they would take place in the "near future".

Hill is expected to return to Washington on Friday.

The six-party negotiations involving the two Koreas, the United States, Japan, China and Russia began in August 2003.

Evening Walk-Through at Six-Party Talks  
Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs  
Kerry Center Hotel  
Beijing, China  
December 5, 2007

QUESTION: How was the discussion with the DPRK?

ASSISTANT SECRETARY HILL: It was a good two and a half day trip. The first part of it was, I made a visit down to Yongbyon. And, indeed, there is a lot of disabling activity going on. We went through all three sections of the facility there. That is, the fuel fabrication facility, the reactor, and then finally the reprocessing center. There is disabling activity going on at all three. They have done a lot of work in preparation of discharging the fuel in the reactor, which I think will have a big effect -- because that will mean they can't easily put it back. That will enable the disabling to be of real value, so that we have over a year worth of disabling.

We have Americans there on the spot staying in the guest quarters there and working together with the DPRK counterparts. I'd say the work is proceeding rather well. We put on protective gear in order to go inside some of the facilities and see what they are doing. And it really involves taking apart equipment and making it very difficult to get the facility started again. So that was mainly Monday's activities. Then on Tuesday I had talks, first of all, starting with the Foreign Minister. Or -- I should say -- on Monday, at the end of that day at Yongbyon, I met with the head of their nuclear energy agency, Dr. Rhee.

Then on Tuesday, I met with the Foreign Minister and then had lengthy discussions with Kim Kye Gwan. Now the discussions with Kim Kye Gwan centered on the activities leading to what we are calling Phase II. That is, leading to the end of the year. We talked about disabling, and I think we had a good understanding of what we are doing on disabling. But we also talked about the declaration that they are preparing. And we wanted to make very clear that when they submit the declaration to the Six Parties, it is important that the declaration, even as a first draft, should nonetheless be complete and correct. And we emphasized that. And I discussed some of the elements that I would want to see in the declaration to ensure that when the declaration comes forward there are no surprises.

So that was mainly the focus with Vice Minister Kim Kye Gwan. We also discussed the next phase, although I think Mr. Kim preferred to keep the discussion on Phase II -- because we have not yet completed Phase II. But I raised the issue of our strong view that we need to get through all of these phases and complete the process by „08. I saw the Vice President of the People's Assembly, Mr. Yang. Then I saw, the next day, I saw Kim Kye Gwan once again for additional discussions. We didn't really

have a lot of time to get around Pyongyang. I did see -- We have a person who is working on the disabling and working on the administrative arrangements for the disabling staying at the Koryo

Hotel, and I was able to see him. His name is Pat O'Brien. In addition, I did see, I did one trip to go down and have a look at their subway system. So that was about it.

QUESTION: Ambassador Hill, on the declaration, what seems to be the hold-up on that? You've been expecting a draft copy for quite a while now. What seems to be the hold up?

ASSISTANT SECRETARY HILL: I hate to call it a hold-up -- except that our concern is, we don't want a declaration that arrives and that immediately people see what is missing. So the DPRK is under an obligation to provide a complete and correct declaration. So we wanted to discuss what we see as, what we believe is necessary for complete and correct. So I think the DPRK is pretty close to providing a declaration, but we want it to be as good as possible.

QUESTION: And did, while you were up there, you get a chance to talk about what is in the declaration, or did you get a chance to see a draft copy?

ASSISTANT SECRETARY HILL: No. We discussed what they plan to have in the declaration, and we wanted to make sure that they would also include all the facilities, materials, and programs that the DPRK has had in the nuclear era in these many years that it has had these nuclear ambitions.

QUESTION: Is the problem with HEU?

ASSISTANT SECRETARY HILL: I'm not prepared to say it is a problem. But we need to make sure that all programs need to be included.

QUESTION: South Korea has said that North Korea might not be able to dismantle by the end of the year. What is your take on that?

ASSISTANT SECRETARY HILL: You mean disable by the end of the year?

QUESTION: Disable.

ASSISTANT SECRETARY HILL: I think the disabling has gone very well. You know, one of the issues has been the discharge of fuel -- which is very important, but we want it to be done safely. It was at our instigation that we slowed down the discharge to ensure that it would be done safely. I think it is fair to say the disabling is going very well.

QUESTION: (Inaudible) by the end of the year?

ASSISTANT SECRETARY HILL: Again, we are not looking for some sort of cliffhanger, five minutes of twelve. What we want to see is that this is going on as quickly as possible and as safely as possible, and we are very much convinced that that is the case. So disabling is going fine. And I thought it was very significant that all members of the Six Parties came out and saw last week, and I think they had that same impression.

QUESTION: Is there a difference between what you think is necessary on the declaration and what the North Koreans think is necessary?

ASSISTANT SECRETARY HILL: I don't want to go into details, but there are definitely some differences there, yes. But I don't want to go into details. We are trying to work with them to make sure we don't have differences, and the atmosphere of the meeting was very cooperative. So I don't want to suggest that we are at some impasse or that we can't seem to solve something, because the atmosphere was positive. But, yes indeed, there are some differences.

QUESTION: Not so big differences?

ASSISTANT SECRETARY HILL: Well, again, I just told you I don't want to get into characterizing those differences.

QUESTION: But is this the reason why we can not have Six-Party Talks this week?

ASSISTANT SECRETARY HILL: You know, I am not sure what is the reason we are not having Six-Party Talks, because I think there are various things to talk about. But I'll be seeing the Chinese tomorrow. But you should ask the Chinese, who are the ones who talk to all the parties. I'm not sure that this has anything to do with the declaration, because although if we had had Six Parties we would have wanted to talk about the declaration, I don't think that it has been the issue. I think it's some other things, probably having to do with scheduling.

QUESTION: (Inaudible) tomorrow?

ASSISTANT SECRETARY HILL: I think my plan is, I'm going to stay here tomorrow. And then on Friday morning I will go through Narita, and I hope I will have the opportunity to meet with Ken Sasae and brief him in a little more detail than I am briefing you all.

QUESTION: Have you discussed with the North Koreans about the terrorism list issues, and also does that have anything to do with them not coming up with a list yet?

ASSISTANT SECRETARY HILL: Second question, no, I do not think so. It does not seem to. And, yes, every time we talk to them we've talked about the terrorism list and the Trading with the Enemy Act.

QUESTION: Would you say that you made progress in your discussion with Mr. Kim Kye Gwan on the declaration?

ASSISTANT SECRETARY HILL: Yes, I think we did actually.

QUESTION: Do you think you've narrowed your differences?

ASSISTANT SECRETARY HILL: I can see you're writing an article, and you're looking for ready-made quotes to fit your article. But look, I think we have had a very useful exchange on the subject. In that sense, I think we have made progress. I won't really know until I see a declaration though. So I don't want to go too far in characterizing the progress, because I need to see what their declaration is going to look like.

QUESTION: Did they give you an estimate of when that declaration might be available?

ASSISTANT SECRETARY HILL: Certainly in time to meet the December 31st deadline.

QUESTION: On the enrichment issue and the declaration, is your concern that North Korea is not going to include that entire program in the declaration, (inaudible) certain elements of the enrichment program?

ASSISTANT SECRETARY HILL: Again, I indicated that I do not want to discuss the specifics, but to be sure we are looking for elements. As we discussed the declaration, as we discussed materials, installations, and programs we found that items in each of these three lists were not there that in our view should be there. And so we discussed those items that we believe should be included in the declaration. Again, I don't want to get into specifics at this point.

QUESTION: Do you anticipate the heads of delegation meeting in December?

ASSISTANT SECRETARY HILL: I think it might have been possible in December. But I've just been out here this week, and I'm not sure I want to come around and turn back so soon before Christmas. So we will have to see, but it may slip to the beginning of January.

QUESTION: So you might not have a full declaration before the end of the year?

ASSISTANT SECRETARY HILL: No, no, I think we will have it, and then there will be the question of how it is looked at by the five other members. And I think, from a holiday point of view, it might be difficult to get the five members around a table – six all together, of course, since the DPRK will have to be there. So I am going to talk to the Chinese and see. This is their process, and let's see what they want to do.

And, by the way, the Chinese have been very, very helpful in terms of assisting in getting the material into the DPRK, because most of it is being purchased in China and being brought to the DPRK. We are talking about heavy earth-moving equipment, large lorries, front-end loaders, forklifts, large heaters for use inside warehouse-sized places. We have a lot of tanker trucks bringing fuel. We have a lot of major items that are being brought in through China. It has not been done before, and we're very pleased at the cooperation we're getting on that.

QUESTION: The original plan was to get the draft and then go back-and-forth and get it finalized. Since you will not have the heads of delegation meeting, will [it] be more like a one-time declaration?

ASSISTANT SECRETARY HILL: Well, I don't think we're quite in a position to tell you. I think you are quite right; the original idea was to get a draft and start working it. But I think what we want to do is make sure that the draft we get is as complete and correct as possible, because we know there are a lot of people – cheering on from the sidelines or not cheering on from the sidelines – who would perhaps leap at the opportunity to look at a draft that is not complete and not correct. So, in short, I think it is very important that whatever first draft gets out there is as complete and as correct as possible.

Now you raise an important question. How are we going to do this in the Six Parties? Because we do at some point need a meeting. Ideally, we should be doing this in time for December 31, because it is the time we all laid out for us. But a lot of members have problems trying to leave their families at Christmas to go and look at some pieces of paper because we want it to be done before the 31st and not immediately after the 31st. So let me talk to the Chinese and see how they see this.

QUESTION: When you were in Pyongyang, did the light water reactor issue come up?

ASSISTANT SECRETARY HILL: No, it did not.

QUESTION: Did you suggest to the North Koreans that they not present the declaration because you wanted a more complete draft, or were they at this time prepared to present it?

ASSISTANT SECRETARY HILL: I think the North Koreans are prepared to move very fast. But I think it was Mr. Kim Kye Gwan who also said, we don't want to rush this and cause problems. "Haste makes waste," I think is what he said. So I don't think we have any big disagreement on that. But they were very interested in showing that they are meeting our timelines.

QUESTION: Do the North Koreans have any other issues that they want resolved, energy issues or anything like that, before they present the declaration?

ASSISTANT SECRETARY HILL: Well, to be sure, we've been -- The various members of the Six Parties or, I should say, four of the Six Parties have been organizing energy assistance, and we've been kind of rotating each month. So the North Koreans are very aware of when the energy arrives. In fact, one of the plants had to shut down because the energy hadn't arrived on time. So, yes, they are very aware of energy issues, but they are also very aware that we are doing everything we can do to work on this and to keep it moving.

QUESTION: (Inaudible)

ASSISTANT SECRETARY HILL: I am so looking forward to going up to my hotel room and sleeping, and then I'll think about tomorrow. But, yes, I am seeing Wu Dawei. I think I also have some bilateral meetings at the Chinese Foreign Ministry, and I'm sure there are some other meetings. I'm sure the Embassy can give you a read out on what they all are. But my plan is to be here through tomorrow night, and then leave early Friday to get to Narita, and then see Ken Sasae.

QUESTION: And then continue on to Washington?

ASSISTANT SECRETARY HILL: And then continue on to Washington.

QUESTION: So what time are you leaving tomorrow morning?

ASSISTANT SECRETARY HILL: Tomorrow morning? I think it's -- Check with the Embassy. I want to say it is a nine thirty meeting, but --

AIDE: Eight forty

ASSISTANT SECRETARY HILL: So I'm leaving here at 8:40?

AIDE: Yes.

ASSISTANT SECRETARY HILL: So if you show up at 8:41 – (Laughter)

All right. See you later.

Released on December 5, 2007

## **Bush sends letter to NKorean leader on nuke talks: US**

4 hours ago [accessed 2007-12-06T16:05Z]

SEOUL (AFP) — US President George W. Bush has written to North Korean leader Kim Jong-Il urging Pyongyang to fully disclose its atomic activities, officials said Thursday, as doubts emerged over whether a year-end deadline will be met.

He also sent letters to the four other parties involved in the six-party talks aimed at disabling the communist state's atomic programmes, said US National Security Council spokesman Gordon Johndroe.

"President Bush wrote letters to all the leaders involved in the six-party talks last Saturday, December 1," Johndroe said.

"In these letters, the president reiterated our commitment to the six-party talks and stressed the need for North Korea to come forward with a full and complete declaration of their nuclear programs, as called for in the September 2005 six-party agreement."

US Assistant Secretary of State Christopher Hill delivered the letter to North Korean Foreign Minister Pak Ui-Chun this week, the North's official Korean Central News Agency said Thursday.

Hill, the US chief negotiator with Pyongyang, visited the North this week to observe the US-led disabling of its nuclear plants at Yongbyon.

Bush is not known to have communicated personally before with the hardline communist state, which he termed part of an "axis of evil" in 2002. He once reportedly said he "loathes" Kim Jong-Il.

The North shocked the world with its first nuclear test in October 2006.

But this year it agreed, under a six-nation pact which includes the US, to disable its plutonium-producing plants and declare all nuclear programmes and facilities by year-end.

In return it would receive major energy aid.

The letter comes at a crucial time in international efforts to scrap North Korea's nuclear programmes.

South Korea's Foreign Minister Song Min-Soon said earlier Thursday that Pyongyang may miss the deadline for the declaration.

"Currently the nuclear issue is at a crossroads where it may proceed towards a stable phase or to a rough road," Song said.

"As to the declaration part, progress is not yet being made. We are aiming at the end of the year as a target date but if we miss it, we will be flexible in readjusting it and doing it in a realistic way."

A South Korean official said later that a key problem is the North's refusal to address its suspected highly enriched uranium weapons (HEU) programme to US satisfaction.

The latest nuclear crisis began in late 2002 when the US accused North Korea of having a secret HEU programme in addition to its declared plutonium operation. Pyongyang has never admitted such a programme.

The North is also demanding that it be removed from a US list of state sponsors of terrorism in return for denuclearisation, as envisaged in the six-nation pact.

The designation prevents it receiving US economic aid and also blocks aid from multilateral bodies like the World Bank. Bush must notify the US Congress if he intends to remove the designation.

Song said such an action was conditional on getting a full declaration.

"The US is preparing to remove the North from the list of terror-sponsoring states if it (declaration) is carried out to an acceptable degree," he said.

Hill is currently visiting Beijing, which hosts the six-party talks also grouping the two Koreas, Russia and Japan. He stressed that the North must make credible declarations about all its programmes.

"We want to make sure that when they transfer (issue) even a first draft, that it is credible," Hill told journalists. "We need them to step up and show some trust in us and trust in the process."

Hill has said Washington has "credible evidence" of North Korea purchasing equipment and materials that could be used in a HEU programme.

Pyongyang must account for these before Washington moves towards establishing diplomatic relations, he said Thursday.

"We have had a lot of discussion with them about uranium enrichment. It is a very delicate... discussion," Hill said. "Being clear about what has happened in the past is the means for us to build a future relationship."

Following talks in Beijing, which will include discussions with the Russian ambassador, Hill said he would meet his Japanese counterpart to the talks in Tokyo on Friday before returning to Washington.

## **Bush sends letter to North Korea**

**Published: 2007/12/06 15:50:49 GMT**

US President George W Bush has sent a personal letter to the North Korean leader Kim Jong-il, the White House has confirmed.

The letter urged Pyongyang to honour its pledge to reveal all the details of its nuclear programme.

The letter was delivered by US envoy Christopher Hill.

Mr Hill has just visited North Korea to assess progress on the disabling of its main nuclear reactor at Yongbyon as part of an aid-for-disarmament deal.

US National Security Council spokesman Gordon Johndroe said that Mr Bush had written to all leaders involved in the six-party talks about North Korea's nuclear programme.

"In these letters, the president reiterated our commitment to the six-party talks and stressed the need for North Korea to come forward with a full and complete declaration of their nuclear programmes, as called for in the September 2005 six-party agreement," he said.

**The letter was handed over during Mr Hill's meeting on Tuesday [4 December 2007] with North Korea's foreign minister Pak Ui-chun.**

Under an international deal, signed in February, Pyongyang pledged to declare all its nuclear programmes and disable Yongbyon by the end of the year.

Deal 'at a crossroads'

News of the letter comes a day after Mr Hill and South Korean ministers expressed concern that North Korea's declaration of its nuclear programme might not be completed on time.

Mr Hill said this declaration had to include details of the country's uranium enrichment programme.

"We want to make sure that when we do transfer, even the first draft, it is a credible effort," he said in Beijing.

"We need them to step up and show some trust in us and trust in the process," he said.

South Korean Foreign Minister Song Min-soon said on Thursday that the deal was "at a crossroads where it may proceed towards a stable phase or to a rough road".

The US has said it would consider removing North Korea from a list of countries it says sponsors terrorism if Pyongyang fully complies with the deal.

Meanwhile negotiations are continuing over a date for the next round of six-party talks, between the Koreas, Russia, the US and China.

Talks were due to restart this week but were called off because of to "scheduling problems", according to a US State Department spokesman.

Mr Bush once branded North Korea part of the "axis of evil", along with Iran and pre-war Iraq, and said the country was "an oppressive regime [whose] people live in fear and starvation".

North Korea's nuclear ambitions first attracted international attention in 2002 and in October 2006 Pyongyang shocked the world by testing a nuclear missile.

## **Bush Writes Leaders in NK Nuclear Talks**

Thursday December 6, 2007 5:46 PM

By DEB RIECHMANN  
Associated Press Writer

WASHINGTON (AP) - President Bush directly told North Korean leader Kim Jong Il in a letter that the United States expects the secretive regime to keep its promise to fully disclose all nuclear programs, the White House said Thursday.

It was Bush's most personal intervention with Pyongyang since he called the country part of an "axis of evil."

The letter to North Korea underscored Bush's desire to resolve the nuclear standoff with the communist regime, and made plain that the North cannot skirt requirements to fully explain the extent, use and possible spread of nuclear material and technology, a U.S. official told The Associated Press.

That is the message the North has already heard from Bush's nuclear envoy, Assistant Secretary of State Christopher Hill, but the Bush letter is a diplomatic exclamation point. It also serves a domestic political purpose - signaling to conservative critics of the North Korea deal that the United States will not roll back its requirements or accept less than a full declaration of the North's nuclear program.

The North agreed to fully account for its nuclear activities by year's end, but U.S. officials acknowledged Thursday that the deadline is likely to slip.

Better to have the complete document in hand a couple of weeks late than to have a half-baked version by the Dec. 31 deadline, one official said, in part because the latter scenario opens the Bush administration to criticism that the North is still hiding things.

The North conducted a clandestine nuclear program for years and proved its entry into the world nuclear club with an underground test explosion last year.

The official said that Hill discussed the likelihood of a late declaration during meetings over the past week with the North and the other four nations bargaining alongside the United States to eventually rid the Korean peninsula of nuclear weapons.

The official spoke on condition of anonymity to describe closed-door diplomatic meetings.

Secretary of State Condoleezza Rice expressed optimism, but also suggested the schedule is sliding.

"It is going to take a monumental effort to get all of this done by the end of the year," she said, speaking to reporters on Thursday as she flew to Brussels for NATO meetings. "And I am not too concerned about whether it's December 31st or not. They seem to be on track. Everybody believes the cooperation is very good."

Hill delivered Bush's letter, dated Dec. 1, to North Korea's foreign minister during Hill's visit to

Pyongyang earlier this week. Hill also gave similar letters from Bush to China and South Korea and Japan, and another letter went to the fifth partner, Russia.

Neither the White House nor the State Department would release the letters or describe their content in detail.

"He sent a letter to Kim Jong Il that urged the North Koreans to fully declare their nuclear programs, as called for in the September 2005 six-party agreement," Gordon Johndroe, a spokesman for the National Security Council, said Thursday.

The U.S. official, however, said the letter to the North makes reference to the need to resolve three main sticking points: the exact amount of weapons-grade nuclear material the North produced, the number of warheads it built and whether and how North Korea may have passed nuclear material or knowledge to others.

Bush also called Chinese President Hu Jintao on Thursday to discuss several issues, including North Korea, Johndroe said. The Xinhua News Agency reported that Hu pointed out that the starting action of the relevant joint declaration has been implemented, and the second phase has started. Hu said all parties should keep the dialogue going to meet the target of denuclearizing the Korean Peninsula, Xinhua said.

The question of proliferation has taken on great significance, and become a political hurdle for the Bush administration, since Israel's air strike on a suspected Syrian nuclear site Sept. 6. Intelligence reports suggested that Syria was cooperating in some fashion with North Korea in building the site.

The news that North Korea may have been working with others as recently as this year, after it had agreed to give up its weapons, reinvigorated U.S. domestic opposition to what some conservatives in Congress see as an overly generous deal with an unreliable country.

White House press secretary Dana Perino said the president decided to send the letter to "so that we can keep it all on track."

In comments early Thursday, South Korean Foreign Minister Song Min-soon sounded a gloomy note, saying: "There has not been progress on the declaration yet." A Japanese Foreign Ministry spokesman expressed disappointment that North Korea was likely to miss the year-end deadline, but that it is unlikely to affect the overall agreement.

Chinese Foreign Ministry spokesman Qin Gang said the six countries were consulting on whether to hold another round of meetings before the end of the year.

On Thursday, Hill suggested that negotiations had stalled on producing a draft declaration of North Korea's nuclear programs by the end of the year. The deadline was part of an agreement the six nations reached in February.

Under the deal, North Korea was promised 1 million tons of fuel oil or the equivalent, plus political concessions such as its removal from a U.S. list of terrorism-supporting nations, in return for disabling its nuclear program and making other moves.

“The disablement activities are going well,” Perino said. “I would characterize it as timely because we are nearing the deadline by which they had to declare.”

North Korea began disabling its reactor, which was shut down in July, and two other facilities last month under the watch of U.S. experts. It has promised to complete the process by the end of December, but South Korean nuclear envoy Chun Yung-woo said last week it would take longer to remove about 8,000 spent fuel rods from the reactor.

Hill said investigators were seeking to clear up questions over North Korea's purchase in past years of gas centrifuges for its nuclear program.

On the declaration, Hill told reporters in Beijing, where he was meeting diplomats following his visit to North Korea, that Washington and Pyongyang still had differences to resolve on the issue.

Speaking in Seoul, Song called on the U.S. and North Korea to allow some wiggle room on the issue.

“The issue of nuclear declaration is not easy,” he told reporters. Each side “should take a flexible attitude.”

INTELLIGENCE AUTHORIZATION ACT FOR FISCAL YEAR  
2008

DECEMBER 6, 2007.—Ordered to be printed

Mr. REYES, from the committee of conference,  
submitted the following

CONFERENCE REPORT

[To accompany H.R. 2082]

[EXCERPT]

**SEC. 328. LIMITATION ON USE OF FUNDS.**

Not more than 30 percent of the funds authorized to be appropriated for the Expenditure Center referred to on page 157 of Volume VI, Book 1 of the Fiscal Year 2008-Fiscal Year 2009 Congressional Budget Justification, National Intelligence Program, may be obligated or expended until each member of the congressional intelligence committees has been fully and currently informed with respect to intelligence regarding a facility in Syria subject to reported military action by the State of Israel on September 6, 2007, including intelligence relating to any agent or citizen of North Korea, Iran, or any other foreign country present at the facility, and any intelligence provided to the Federal Government by a foreign country regarding the facility (as available).

**SEC. 329. INCORPORATION OF REPORTING REQUIREMENTS.**

Each requirement to submit a report to the congressional intelligence committees that is included in the classified annex to this Act is hereby incorporated into this Act and is hereby made a requirement in law.

### **White House Objects to FY2008 Intelligence Authorization Bill**

Perhaps the clearest indication lately that intelligence oversight still matters is a new White House Statement of Administration Policy (pdf) expressing strong opposition to the FY2008 Intelligence Authorization bill.

"If this bill were to pass the House and the Senate and be presented to the President for signature, the President's senior advisors would recommend that he veto the bill," the Statement notes.

On issue after issue, from interrogation to congressional reporting, the White House indicates disapproval of the new legislation, which has already been accepted by a House-Senate conference and awaits a final vote in each house.

Among other things, "The Administration also objects to section 328, which attempts to use Congress' power of the purse to circumvent the authority of the Executive Branch to control access to extraordinarily sensitive information."

This provision, which represents something of a new milestone in intelligence oversight, would impose a "fence" on certain spending until the Administration briefs the intelligence committees on the Israeli strike on a Syrian facility. It was introduced by Rep. Pete Hoekstra (R-MI) and adopted on a bipartisan basis.

## **US Says More Talks Needed on North Korea Nuclear Issue**

By Kurt Achin

Seoul

07 December 2007

The senior U.S. delegate to multinational talks aimed at dismantling North Korea's nuclear capabilities says more discussions are needed before North Korea produces a formal declaration of its nuclear programs. VOA's Kurt Achin reports from Seoul, where South Korean officials are praising an unprecedented high-level outreach to North Korea by President Bush.

South Korean Foreign Ministry Spokesman Cho Hui-young told reporters Friday that Seoul welcomes President Bush's letter to North Korean leader Kim Jong Il. He says the letter shows President Bush's determination to support the process of North Korea's denuclearization.

North Korean broadcasters have been confirming Kim Jong Il's receipt of the letter, after first announcing it Thursday night. Prior to the North Korean announcement, U.S. officials and their regional partners made no mention of such a letter.

U.S. Assistant Secretary of State Christopher Hill delivered the letter last week in Pyongyang. Hill is Washington's representative at multinational talks to end North Korea's nuclear arsenal by diplomatic means.

He told reporters during a stop in Tokyo Friday North Korea is "quite on schedule" in disabling key nuclear facilities, as it promised South Korea, China, Russia, Japan and the United States it would do as part of a multi-stage agreement. He says the North will soon advance that process by removing spent fuel from its main reactor at Yongbyon.

However, Hill says more discussions are needed before North Korea fulfills another part of the agreement by producing a full declaration of all its nuclear facilities, materials, and existing weapons.

The United States has insisted the North account for an alleged uranium enrichment program Pyongyang has never publicly admitted. It also wants North Korea to address Washington's concerns about the possible transfer of nuclear equipment and technology to Syria.

White House officials say Mr. Bush's letter urged Kim Jong Il to make a full and accurate declaration of its nuclear activities, and said the U.S. will know if North Korea leaves the declaration incomplete.

Cheon Ho-seon, a spokesman for South Korean President Roh Moo-hyun, says South Korea played a significant role in the White House decision to send the letter. He says U.S. envoy Hill did not have the letter when he was in Seoul, shortly before leaving for North Korea. He says the idea to send the letter arose during Hill's consultations with South Korean officials.

The White House has not released the full contents of Mr. Bush's letter to Kim Jong Il, but say it underscores Washington's view that the six-nation negotiations are at a critical juncture.

## **Chinese Nuclear Negotiator To Visit North Korea**

December 8, 2007 1:00 p.m. EST

John Concepcion - AHN News Writer

Tokyo, Japan (AHN) - China is apparently concerned about whether North Korea will keep its pledge to reveal the extent of its nuclear programs.

In an attempt to find out how sincere North Korea is, China's vice foreign minister is reportedly planning to visit that nation next week. His anticipated trip is in an effort to ensure that North Korea does not renege on its promise of a full disclosure of all its nuclear programs by the end of the year, according to an article that appeared in Kyodo News.

The news agency quoted an unnamed source close to the United States-North Korea relations, who said that Chinese Vice Foreign Minister Wu Dawei, also the chairman of the six-party North Korea nuclear talks, will be pressing for proof on the promise when he meets with his North Korean counterpart Kim Kye Gwan.

North Korea has agreed to a disclosure of its nuclear programs and the dismantling of its nuclear facility by the end of the year, according to a deal it signed with five other nations that include China and the U.S, in exchange for energy aid.

The dismantling of a key nuclear facility started in early November, but the North has yet to disclose its nuclear program.

Wu is expected to talk to Kim and press for the disclosure in order to satisfy those who signed the deal.

Last week the Associated Press reported that the U.S. was confident that North Korea would meet the year-end deadline to disclose details of its nuclear program.

SRES 399 IS

110th CONGRESS

1st Session

**S. RES. 399**

Expressing the sense of the Senate that certain benchmarks must be met before certain restrictions against the Government of North Korea are lifted, and that the United States Government should not provide any financial assistance to North Korea until the Secretary of State makes certain certifications regarding the submission of applications for refugee status.

**IN THE SENATE OF THE UNITED STATES**

**December 10, 2007**

Mr. BROWNBACK (for himself, Mr. KYL, Mr. LIEBERMAN, and Mr. GRASSLEY) submitted the following resolution; which was referred to the Committee on Foreign Relations

**RESOLUTION**

Expressing the sense of the Senate that certain benchmarks must be met before certain restrictions against the Government of North Korea are lifted, and that the United States Government should not provide any financial assistance to North Korea until the Secretary of State makes certain certifications regarding the submission of applications for refugee status.

Whereas international press reports noted that Iranian officials traveled to North Korea to observe the long and short-range missile tests conducted by the North Korean regime on July 4, 2006, and this was confirmed by Ambassador Christopher Hill, Assistant Secretary of State for East Asia and the Pacific, during testimony before the Committee on Foreign Relations of the Senate on July 20, 2006;

Whereas international press reports in the summer of 2006 indicated that North Korea was involved in training in guerrilla warfare of Hezbollah cadres who subsequently were involved in operations against Israeli forces in south Lebanon;

Whereas the United Nations Security Council, under the presidency of Japan, unanimously adopted Resolution 1718 on October 14, 2006, 'condemning' the nuclear weapon test conducted by North Korea on October 9, 2006, and imposing sanctions on North Korea;

Whereas President George W. Bush stated in November 2006 that: 'The transfer of nuclear weapons or material by North Korea to states or non-state entities would be considered a grave threat to the United States, and we would hold North Korea fully accountable for the consequences of such action. ... It is vital that the nations of this region send a message to North Korea that the proliferation of nuclear technology to hostile regimes or terrorist networks will not be tolerated.';

Whereas Secretary of State Condoleezza Rice stated in October 2006 that 'a North Korean decision to try to transfer a nuclear weapon or technologies either to another state or to a non-state actor' would be an 'extremely grave' action for which the United States would 'hold North Korea accountable'; and

Whereas Congress authoritatively expressed its view, in section 202(b)(2) of the North Korean Human Rights Act of 2004 (Public Law 108-333; 22 U.S.C. 7832(b)(2)), that 'United States nonhumanitarian assistance to North Korea shall be contingent on North Korea's substantial progress' on human rights improvements, release of and accounting for abductees, family reunification, reform of North Korea's labor camp system, and the decriminalization of political expression, none of which has occurred: Now, therefore, be it

Resolved, That the Senate--

(1) recognizes that restrictions against the Government of North Korea were imposed by reason of a determination of the Secretary of State that the Government of North Korea, for purposes of section 6(j) of the Export Administration Act of 1979 (as continued in effect pursuant to the International Emergency Economic Powers Act; 50 U.S.C. App. 2405(j)), section 40 of the Arms Export Control Act (22 U.S.C. 2780), section 620A of the Foreign Assistance Act of 1961 (22 U.S.C. 2371), and other provisions of law, was a government that has repeatedly provided support for acts of international terrorism;

(2) believes that this designation should remain in effect and should not be lifted unless it can be demonstrated that the Government of North Korea--

(A) is no longer engaged in the illegal transfer of missile or nuclear, biological, or chemical weapons technology, particularly to the Governments of Iran, Syria, or any other country, the government of which the Secretary of State has determined, for purposes of any of the provisions of law specified in paragraph (1), is a government that has repeatedly provided support for acts of international terrorism;

(B) is no longer engaged in training, harboring, supplying, financing, or supporting in any way--

(i) Hamas, Hezbollah, or the Japanese Red Army, or any member of such organizations;

(ii) any organization designated by the Secretary of State as a foreign terrorist organization in accordance with section 219(a) of the Immigration and Nationality Act (8 U.S.C. 1189(a)); and

(iii) any person included on the Annex to Executive Order 13224 (September 23, 2001) and any other person identified under section 1 of that Executive Order whose property and interests in property are blocked by that section (commonly known as a 'specially designated global terrorist');

(C) is no longer engaged in the counterfeiting of United States currency 'supernotes';

(D) has made inoperable Bureau No. 39 under the North Korean Workers Party headed by Kim Jong Il, which is charged with laundering illicit funds obtained by narcotics trafficking and other criminal activities;

(E) has released United States permanent resident Kim Dong-Shik who, according to the findings of a South Korean court, was abducted by North Korean agents on the Chinese border in January 2000;

(F) has released or fully accounted to the satisfaction of the Government of the United States and the Government of the Republic of Korea for the whereabouts of the 15 Japanese nationals recognized as abduction victims by the National Police Agency (NPA) of Japan;

(G) has released or fully accounted to the satisfaction of the Government of the United States and the Government of the Republic of Korea for the whereabouts of an estimated 600 surviving South Korean prisoners of war, comrades-in-arms of United States and Allied forces, who have been held in North Korea against their will and in violation of the Armistice Agreement since hostilities ended in July 1953; and

(H) has ceased and desisted from engaging in further terrorist activities subsequent to the 1987 bombing of Korean Air Flight 858 over Burma, the 1996 murder in Vladivostok, Russia, of South Korean diplomat Choi Duck-keun, following Pyongyang's threats of retaliation for the deaths of North Korean commandoes whose submarine ran aground in South Korea, and the 1997 assassination on the streets of Seoul of North Korean defector Lee Han Young; and

(3) believes that the United States Government should not provide any financial assistance to North Korea (except for adequately monitored humanitarian assistance in the form of food and medicine) unless the Secretary of State certifies that--

(A) appropriate guidance has been provided to all foreign embassies and consular offices regarding their responsibility under section 303 of the North Korean Human Rights Act of 2004 (22 U.S.C. 7843) to facilitate the submission of applications by citizens of North Korea seeking protection as refugees under section 207 of the Immigration and Nationality Act (8 U.S.C. 1157);

(B) such guidance has been published in the Federal Register; and

(C) the facilities described in subparagraph (A) are carrying out the responsibility described in subparagraph (A) in good faith.

## **South Korean prime minister arrives for talks in Beijing**

2007-12-10 09:26:30 -

BEIJING (AP) - South Korean Prime Minister Han Duck-Soo arrived in China on Monday [10 December 2007] for talks with Premier Wen Jiabao concerning North Korea's nuclear weapons programs and economic ties.

Han will also meet President Hu Jintao during his two-day visit, the official Xinhua News Agency reported.

Han's office in Seoul said he would hold talks on North Korea's nuclear weapons programs, economic cooperation and other bilateral issues.

China has played host to the six-party talks in which North Korea has agreed to dismantle and account for its nuclear activities by the end of the year. That deadline is unlikely to be met, but U.S. nuclear envoy Christopher Hill said last week he was still pleased with the progress.

U.S. President George W. Bush sent a letter to North Korean leader Kim Jong Il last week urging his government to fully disclose its nuclear programs, the White House said.

Han's trip will also mark the 15th anniversary of the establishment of diplomatic relations between China and South Korea.

## **Six-Party Talks' Energy Group to Meet in Beijing Tuesday**

By Yoon Won-sup  
Staff Reporter

The six-party talks' working group on economic and energy aid for North Korea will take place in Beijing on Dec. 11-12, according to the Ministry of Foreign Affairs and Trade Monday.

The ministry said the group will discuss mainly the ways of providing heavy fuel oil and non-oil economic aid to North Korea as promised.

The meeting will be chaired by Lim Sung-nam, deputy chief of South Korea's delegation to the North Korea denuclearization talks that also involve North Korea, the United States, Japan, China and Russia.

Under the February accord, North Korea will receive 1 million tons of oil or equivalent assistance in return for shutting down and disabling its key nuclear facilities and disclosing all its nuclear programs.

## Hoekstra Sets His Sights on CIA Chief

BY ELI LAKE - Staff Reporter of the Sun

December 12, 2007

*[EXCERPTS]*

WASHINGTON — When the CIA director, Michael Hayden, testifies today before the House intelligence panel, he will face particular scrutiny from the committee's top-ranking Republican.

In an interview yesterday *[December 11, 2007]*, Rep. Peter Hoekstra, a Republican from Michigan, said Mr. Hayden's memo to CIA employees last week, claiming that oversight committees were informed of the agency's plans to destroy the interrogation videos, was inaccurate. Stopping just short of calling Mr. Hayden a liar, Mr. Hoekstra, who headed the House Permanent Select Committee on Intelligence in 2005 and 2006, said, "He says Congress was adequately and fully informed. We were never informed. He contends that briefings in 2002 and 2003 are more than sufficient for activities that took place in 2005 when you had new leadership of the community. That makes no sense."

*[deletia]*

Mr. Hoekstra has been a tough critic of Mr. Hayden's since Mr. Hayden was the principal deputy director of national intelligence in 2005. Mr. Hoekstra at the time pressed the intelligence community to re-open the inquiry into Iraq's weapons of mass destruction, noting that even the final report of the Iraq Survey Group concluded that key sites were modified and stripped clean before inspectors could get to them.

Mr. Hayden and Mr. Hoekstra have also clashed on questions of declassification. Mr. Hoekstra sponsored an amendment yesterday to force the executive branch to make public what it knows about Israel's bombing of an alleged nuclear facility in Syria in September. "It is so compelling and necessary to get people briefed in on what happened in Syria, that would give you insights into a lot of this," Mr. Hoekstra said. That said, Mr. Hoekstra's frustration with the spy chief now comes at a terrible time for Mr. Hayden, who testified yesterday before the Senate Select Committee on Intelligence about his agency's decision to destroy videotapes of interrogation of at least two Al Qaeda suspects.

## **Straight talk: Syrian ambassador says Americans have been misled about his country**

By MICHAEL MOORE of the Missoulian

Thursday, December 13 2007

*[EXCERPTS]*

When Americans think about the war in Iraq, they mostly confine their thoughts to American soldiers there.

But the war has had a dramatic effect throughout the Middle East, creating tensions that reverberate through American diplomatic relationships with other countries.

One of those countries is Syria, which has seen 1.5 million Iraqis pour across its eastern border as the war has progressed. Syria supported America against Saddam Hussein in the Desert Storm war in Kuwait, but opposed the 2003 American war on Iraq.

The country did not, however, close its doors to the displaced.

“We have 1.5 million Iraqi refugees in Syria, and that has imposed a tremendous burden on our country,” the Syrian ambassador, Imad Moustapha, said in an interview Tuesday *[December 11, 2007]*. “That’s the equivalent of 30 million refugees coming to the United States. How do you think your country would deal with that?”

That’s pretty direct communication coming from a diplomat, but that is Imad Moustapha, a Renaissance man who rose to diplomatic prominence along the unlikely path of an academic.

Moustapha was in Missoula on Tuesday to “directly address Americans” in a speech at the University of Montana. The ambassador’s speech was sponsored by the World Affairs Council of Montana.

In the interview, Moustapha said Americans, to the extent that they know anything at all about Syria, have a mistaken view of his country.

*[deletia]*

Syria, of course, has a fractious relationship with Israel, epitomized most recently by the Israeli bombing of a military site in Syria in September.

Although information about the attack has been murky at best, Israel suspected that Syria was attempting to develop some sort of nuclear capability through its relationship with North Korea.

Moustapha said that was a lie.

“There are no nuclear projects in Syria,” he said. “Anything else is ... a lie, totally, no truthfulness whatsoever.”

[http://news.xinhuanet.com/english/2007-12/11/content\\_7231306.htm](http://news.xinhuanet.com/english/2007-12/11/content_7231306.htm)

## **China's chief nuclear envoy to visit DPRK next week**

www.chinaview.cn

2007-12-11 18:59:15

BEIJING, Dec. 11 (Xinhua) -- China's Foreign Ministry announced here on Tuesday [December 11, 2007] that Vice Foreign Minister Wu Dawei would visit the Democratic People's Republic of Korea (DPRK) next week to discuss the nuclear issue on the Korean Peninsula.

Wu, top negotiator of the Chinese delegation to the six-party talks, would meet with his DPRK counterpart, Kim Kye Gwan, Foreign Ministry spokesman Qin Gang told a regular press conference.

Also on Tuesday, a meeting of the working group on economic and energy cooperation, one of the five working groups under the framework of the six-party talks, was held in Beijing.

The two-day meeting was led by the Republic of Korea, Qin said, adding that the main topic was to discuss relevant issues of economic and energy assistance to the DPRK.

Qin said he hoped the six parties could have a full exchange of views at the meeting.

Qin also urged the parties concerned to take advantage of the current positive momentum of the nuclear talks, express their own concerns and respect others' reasonable concerns as well, so as to promote mutual trust and produce a positive outcome from the negotiations.

The six-party talks include China, the DPRK, the United State, the Republic of Korea, Russia and Japan.

## **CIA failed to fully inform Congress on tapes, director says**

Michael Hayden said the agency should have kept lawmakers better apprised on videotaped interrogations.

By Greg Miller, Los Angeles Times Staff Writer

December 13, 2007

*[EXCERPT]*

WASHINGTON -- CIA Director Michael V. Hayden acknowledged Wednesday *[December 12, 2007]* that the agency failed to keep key congressional committees adequately informed of the CIA's decision to destroy videotapes of secret interrogations.

"I think that it's fair to say that, particularly at the time of the destruction, we could have done an awful lot better in keeping the committee alerted and informed as to that activity," Hayden said in brief remarks after a three-hour meeting with the House Intelligence Committee on the tapes controversy.

*[deletia]*

Rep. Peter Hoekstra of Michigan, the top Republican on the committee, said the case is part of a pattern that prompted him to write to President Bush last year expressing concern about the CIA and other agencies that make up the U.S. intelligence community.

"I didn't believe the administration and the community was fully keeping Congress informed on all of the different types of programs and issues that the intelligence community might be working on," he said.

Hoekstra noted that many lawmakers still are seeking more information from U.S. intelligence agencies on the Israeli military strike on a suspected nuclear facility in Syria earlier this year.

Hoekstra suggested that Hayden didn't deserve to be the focus of the criticism, saying that the committee knew less about the tapes "than maybe what Gen. Hayden had been led to believe" by his staff.

UPDATE 1

## **US envoy hopes for N. Korea nuclear disclosure soon**

Wed Dec 12, 2007 7:55pm GMT

By Susan Cornwell

(Adds detail, quotes, background)

WASHINGTON, Dec 12 (Reuters) - The United States hopes that North Korea will keep its promise and disclose all its nuclear activities by the end of this year, Washington's envoy to nuclear talks on North Korea said on Wednesday.

"We are hopeful that we will have the complete declaration provided by around the year end," Assistant Secretary of State Chris Hill told reporters on Capitol Hill.

He spoke after briefing senators on efforts to get North Korea to dismantle its nuclear weapons program -- and winning rare Democratic praise for Bush administration foreign policy.

"This is real," California Democratic Sen. Barbara Boxer, who presided at the closed-door briefing of the Senate Foreign Relations Committee, said of the progress Hill described. She is a big critic of some other White House undertakings, such as the war in Iraq.

"We support the president in his request to the North Koreans that this be full disclosure," said Boxer, who chairs the foreign relations subcommittee on East Asian and Pacific Affairs.

President George W. Bush, in his first direct communication with North Korea's leader Kim Jong-il, wrote to him last week urging Pyongyang to reveal all nuclear programs.

Under an agreement in six-party talks over North Korea's nuclear program, Pyongyang has pledged to disable its main nuclear complex and declare all of its nuclear activities in exchange for economic and diplomatic incentives.

Hill, who handed Bush's letter to the reclusive state's foreign minister last week while on a visit to Pyongyang, said progress was being made on disabling North Korean nuclear facilities.

Boxer thought Congress would approve "reasonable sums of money" needed to support the process, including \$106 million that Hill requested as the U.S. contribution toward fuel oil that is being provided to North Korea as an incentive.

Hill described more diplomatic activity directly ahead, including a trip soon by chairman of the six-party talks, Chinese Vice Foreign Minister Wu Dawei, to North Korea.

North Korea is "very interested" in being removed from the U.S. list of state sponsors of terrorism, Hill noted. "We will follow the letter of the law in that regard," he said, but added: "We are making progress on the issue."

Asked about concerns North Korea had nuclear ties with Syria, another country on the terrorism blacklist, Boxer said, "I came away (from the briefing) with the sense that whatever, if anything ever had occurred in the past, it is not occurring now. And I think our negotiators feel that with good confidence."

Hill, standing next to Boxer, did not contradict her. He said the United States must "ensure that as we make progress on this, that proliferation issues, whether they've existed in the past or not, certainly don't exist in the present or in the future."

Boxer said White House policy on North Korea had evolved and such progress demonstrated "we must never take diplomacy off the table. ... Talking to your enemies is hard work, but it's important work."

(Editing by Cynthia Osterman)

**(2nd LD) Senator supports funding for N.K. Denuclearization, says Syria connection likely in past**

By Lee Dong-min

2007/12/13 04:52 KST

WASHINGTON, Dec. 12 (Yonhap) -- A U.S. senator said Wednesday [December 12, 2007] she and her colleagues would support American funding for North Korea's denuclearization as a senior U.S. envoy expressed hope that the communist state will meet the benchmark deadline in disclosing its nuclear activities.

"Things can change at any point, but we want to be very supportive," Sen. Barbara Boxer (D-California) told reporters.

She also said she "came away with a sense" that the alleged North Korean nuclear cooperation with Syria, if it ever took place, was in the past and "not occurring now."

On approving funding for North Korea, Boxer said, "I can imagine no scenario where the (George W.) Bush administration comes to the Congress now and says, 'We have an opportunity to work with North Korea, to make sure that North Korea is no longer an isolated nation and therefore a threat to the world'" and not receive a positive response.

"The point is, we think the answer will be yes to the reasonable sums of money that are needed to avoid a disaster," she said.

Drawing parallel with the war in Iraq, she said, "If we can avoid such an end, I think the American people will embrace it."

Boxer, chair of the Senate subcommittee on East Asia and Pacific affairs, received a closed-door briefing from Assistant Secretary of State Christopher Hill, who represents the U.S. at what is known as the six-party talks.

Also involving South and North Korea, China, Russia and Japan, the forum aims at denuclearizing the Korean Peninsula. In a series of agreements dating back to September 2005, Pyongyang agreed to eventually give up its nuclear weapons and programs. As interim steps, it pledged to disable its core nuclear facilities and submit a declaration of all its nuclear stockpile by the end of this year.

In return, North Korea would receive wide-ranging political and economic incentives, including a total of 1 million tons of heavy fuel oil or its equivalent. The Bush administration has asked for \$106 million to participate in the heavy fuel oil delivery.

The U.S. has said it will foot the initial cost of North Korea's nuclear disablement, as well as provide economic assistance as denuclearization progresses. Once in the final dismantlement phase, the U.S. is considering the Nunn-Lugar formula that was applied to the former Soviet Union and which required massive international funding to disassemble and discard its atomic weapons and to retrain and employ nuclear scientists.

후후 But as a Dec. 31 deadline was nearing, the nuclear declaration has not yet been presented. Hill was in Pyongyang last week to remind the North Koreans that the disclosure has to be complete and correct, but ensuing reports indicated that the initial draft did not meet Washington's expectations.

후후 China's top nuclear envoy, Wu Dawei, is expected to travel to Pyongyang next week, also with the same message for the North to make a complete declaration.

후후 Speaking side by side with Boxer, Hill said the North Koreans are continuing to work on their declaration.

후후 "We envision some additional discussions with the North Koreans later this month, so we are hopeful that we will have the complete declaration provided by around the year end," he said.

후후 The push for an honest disclosure took on urgency after new allegations that Pyongyang may have transferred its nuclear technology or parts to Damascus, a proliferation issue that the U.S. considers a red line.

후후 Israeli air forces raided a Syrian facility early September, claiming it was a nuclear installation being equipped with the help of North Korea. But information surrounding the incident remains closely held, and no evidence has been provided in the open to either prove or disprove the allegations.

후후 Boxer and Hill said the issue did come up at the briefing.

후후 "We need to continue to be vigilant on this point as we go forward," said the envoy, "to ensure that...the proliferation issues, whether they've existed in the past or not, certainly don't exist in the present or in the future."

The senator said although she and her colleagues are asking questions, "we don't really know the answer at this point."

"I came away with a sense that if anything ever had occurred in the past, it is not occurring now," she said.

후후 "And I think our negotiators feel that with good confidence."

But if North Korea is engaged in proliferation, "that's a deal breaker from my perspective," she said.

## **Hill: North Korea refused nuclear declaration**

Takashi Sakamoto and Takeo Miyazaki / Yomiuri Shimbun Correspondents

(Dec. 14, 2007)

Christopher Hill, the chief U.S. envoy at the six-party talks on North Korea's nuclear programs, told the U.S. Congress on Wednesday [December 12, 2007] that North Korea had refused to declare its past uranium enrichment programs and nuclear technology transfers, according to sources close to Congress.

Speaking during a closed-door hearing at the Senate Foreign Relations Committee on North Korea's nuclear program and U.S.-North Korea ties, Hill made clear that negotiations at the six-party talks have degenerated into a standoff, the sources said.

Hill previously said North Korea's complete declaration of its nuclear programs and disablement of nuclear facilities in Yongbyon are "political conditions" to remove North Korea from the list of nations supporting terrorism.

There was speculation from the start that the United States would not delist North Korea by the end of the year. With the latest development, it is likely to become even more difficult for the United States to start the procedure.

Hill told the closed-door meeting that among steps to be taken in the second phase of North Korea's denuclearization, disablement of the Pyongyang's key nuclear facilities is in progress, according to the sources.

As for a complete and correct declaration of all its nuclear programs, however, Hill reportedly said that North Korea failed to meet any U.S. requests. The United States had demanded that Pyongyang make declarations on all:

-- Nuclear-related materials, facilities and plans.

-- Uranium enrichment programs.

-- Transfer of nuclear technology.

More specifically, North Korea refused to elaborate on its use of plutonium, which can be used to develop nuclear warheads.

As for uranium enrichment programs and nuclear technology transfers, North Korea is reluctant to disclose what it had done in the past, while insisting that it is currently not engaged in such activities.

Hill also indicated that North Korea has failed to meet political conditions to be removed from the list of countries sponsoring terrorism at this stage, according to the sources.

To achieve the goal, North Korea should cooperate with the United States through denuclearization, apart from legal procedures, Hill reportedly told the meeting.

The fact that North Korea is showing a negative attitude on the declaration of its nuclear programs may significantly impact on the future prospects of the six-party talks, observers say.

Because denuclearization will be carried out based on North Korea's declaration of its nuclear programs, the declaration is considered a key step in the negotiations.

With a meeting of the heads of the six delegations originally scheduled for early December having been postponed, the resumption of the ministerial meeting is expected to be significantly delayed.

Hill, who has been making a series of concessions to keep North Korea at the negotiating table, is taking a self-assured approach toward Pyongyang's declaration of its nuclear programs.

Therefore, the future of the six-party talks is seen to largely depend on how North Korea will respond from now, according to the observers.

According to sources close to the nuclear negotiators, U.S. President George W. Bush asked North Korean leader Kim Jong Il to make a full declaration of North Korea's nuclear programs in a personal letter to Kim early this month.

The sources expressed expectations that Kim would take a forward-looking step, saying that if there is a will on the North Korean side to develop negotiations, it would be possible to bridge the gap between Washington and Pyongyang.

## **N.K. acknowledges Bush's letter but stays mum on future intentions**

2007/12/14 14:36 KST

훈훈 WASHINGTON, Dec. 13 (Yonhap) -- North Korea, in its first formal response to a letter sent by U.S. President George W. Bush, said it appreciated the missive but did not mention its intentions on the denuclearization steps mentioned in the letter, diplomatic sources here said Thursday.

훈훈 "It was a verbal message," one of the sources said, speaking on condition of anonymity. The message was delivered through New York where North Korea has a representative mission to the United Nations, he said.

훈훈 The response was brief, acknowledging the receipt of the letter and expressing appreciation, the sources said. On U.S. calls for the North to implement its immediate denuclearization commitment, the message was basically that "you do your part, we will do our part," they said.

훈훈 President Bush last week sent letters to all other members of the so-called six-party talks, a multinational process aimed at removing all nuclear weapons and programs from the Korean Peninsula. South and North Korea, China, Russia and Japan are participants in the talks.

훈훈 The letter to Pyongyang emphasized that the negotiations were at a critical juncture and "reminded" North Korea of its commitments under the six-party agreements, the White House said. The letter also reaffirmed that should the North fulfill its commitments, the U.S. would reciprocate with its own pledges, including diplomatic normalization with Pyongyang.

훈훈 The six-party talks are approaching an important year-end deadline, when the North is required to submit a declaration disclosing all of its nuclear programs. The U.S. and others have been pressing for a complete and correct declaration, considering it a test of North Korea's sincerity.

훈훈 As an initial incentive, the U.S. would reciprocate by removing the North from its list of terrorism-sponsoring states, a designation that effectively prohibits any meaningful political and economic exchanges with the North.

훈훈 [ldm@yna.co.kr](mailto:ldm@yna.co.kr)

## **Bush to N. Korea: Disclose Nuclear Plans**

By DEB RIECHMANN – 2 hours ago

*[Accessed 2007-12-14T21:45Z]*

WASHINGTON (AP) — President Bush said Friday that he got Kim Jong Il's attention by writing the North Korean leader a letter and that Kim can get his attention by fully disclosing his nuclear programs and proliferation activities.

The White House said Kim verbally responded through a diplomatic channel on Tuesday to a letter Bush sent to him earlier this month. The letter, the president's first to the leader of the communist regime, was viewed as a personal gesture from Bush, who once branded North Korea as part of an "axis of evil."

"I got his attention with a letter and he can get my attention by fully disclosing his programs, including any plutonium he may have processed and converted some of that into whatever he's used it for. We just need to know," Bush said in the Rose Garden after a meeting with his Cabinet. "As well, he can get our attention by fully disclosing his proliferation activities."

"An important step is a full declaration of programs, materials that may have been developed to create weapons, as well as the proliferation activities of the regime."

A senior U.S. official with knowledge of the contents of North Korea's message said it contained what appeared to be a pledge from Pyongyang to follow through on its denuclearization deal as long as the United States held to its end of the bargain.

North Korea began disabling its plutonium-producing reactor last month under watch of U.S. experts. In exchange, the U.S. agreed to seek normalizing ties with North Korea and remove the country from terrorism and trade sanctions blacklists.

"We'll live up to our side, we hope you'll live up to yours," the official paraphrased Kim's message as saying. The official spoke on condition of anonymity to describe the private diplomatic exchange.

The message was the country's first official response to the letter from Bush.

State Department spokesman Sean McCormack said the message was delivered through channels in New York, where North Korea has its only diplomatic mission in the United States at the United Nations.

"We heard it via the New York channel," he said. "It was an oral message and it was on Tuesday [11 December 2007]."

He declined to comment on the details of the message and referred questions about it to the White House.

(This version CORRECTS that North Korea responded to Bush's letter on Tuesday, instead of Wednesday.) )

<http://www.whitehouse.gov/news/releases/2007/12/20071214.html>

For Immediate Release  
Office of the Press Secretary  
December 14, 2007

President Bush Meets with Cabinet  
Rose Garden  
10:32 A.M. EST

*[EXCERPTS]*

THE PRESIDENT: Good morning. I just finished meeting with members of my Cabinet. I am proud of this team; I appreciate their service to the country. We discussed the priorities that we're working on to meet for the needs of the American people; we're talking about the business that remains on Capitol Hill.

*[deletia]*

[THE PRESIDENT:] Toby.

Q Mr. President, what was Kim Jong-il's message to you in response to your letter to him? And what was -- what is your response to him?

THE PRESIDENT: Well, first I'm -- you know, I got his attention with a letter, and he can get my attention by fully disclosing his programs, including any plutonium he may have processed and converted -- into whatever he's used it for; we just need to know.

As well, he can get our attention by fully disclosing his proliferation activities. We have laid out a way forward -- and I say "we" -- there's four other countries that have joined us; we've got what's called the six-party talks. And the five of us agree that there's a way forward for the -- Kim Jong-il, and an important step is a full declaration of programs, materials that may have been developed to create weapons, as well as the proliferation activities of the regime.

Thank you very much.

Q Oh, don't stop now.

THE PRESIDENT: I had a -- well, I've got freezing Cabinet members out here. (Laughter.) They're whispering; you can't hear their whispers. (Laughter.) I can just feel their vibe saying, I'm envious,

they're all wearing these expensive coats, and here we are. (Laughter.)

I hope you enjoyed the holiday bash as much as I did. I noticed some of the silverware is missing. (Laughter.) We'll be taking a full inventory. (Laughter.) Happy holidays.

## **Progress Is Reported on Nuclear Pact**

N. Korea Is Disabling Plant but Holding Back on Data, U.S. Aides Say

By Glenn Kessler

Washington Post Staff Writer

Saturday, December 15, 2007; A16

North Korea has made significant progress in disabling its nuclear facility in Yongbyon but has hesitated at providing key details about the extent of its nuclear programs, including whether it has weaponized the plutonium harvested from the reactor, according to U.S. officials.

Under a six-nation agreement, North Korea is supposed to finish disabling the facility and to provide a detailed declaration of its nuclear activities by Dec. 31, but officials acknowledge both deadlines will slip.

Technicians disabling the plant have completed or nearly completed seven of the 11 key tasks expected under the agreement. A key factor in the delay is that officials discovered that water in a cooling pond for spent fuel rods is contaminated, a potentially dangerous situation that North Korea was willing to ignore to meet the deadline. But U.S. officials objected and insisted that the water must first be filtered.

In the case of the declaration, large gaps exist between what Washington expects and what Pyongyang wants to deliver, officials said. "You are dealing with a country that is not instinctively given to handing out information," one official said, speaking on the condition of anonymity because of diplomatic sensitivities.

President Bush last week sent a private letter to North Korean leader Kim Jong Il, urging him to provide a complete declaration and laying out the elements the United States needs to see to keep the delicate process going. North Korea, via its ambassador at the United Nations, told the State Department on Wednesday that North Korea wants to stick to the agreement as long as the United States fulfills its commitments.

"I got his attention with a letter," Bush told reporters yesterday. "And he can get my attention by fully disclosing his program, including any plutonium he may have processed and converted into whatever he's used it for. We just need to know. As well, he can get our attention by fully disclosing his proliferation activities."

The Yongbyon facility includes a five-megawatt reactor, a fuel fabrication facility and a reprocessing laboratory for making bomb-grade material. Yesterday, North Korean officials began removing irradiated fuel rods from the reactor, a major step that continues a process that experts say will go well beyond the "freezing" of the reactor negotiated by the Clinton administration in 1994.

When that agreement collapsed in 2002, after the Bush administration accused Pyongyang of having a clandestine uranium-enrichment program, North Korea was able to restart the plutonium facility within three months. Under the current agreement, experts say, it could take as long as a year for North Korea to restart the facility.

Four key steps in disabling the plant have been completed, and three are nearly completed, administration officials said, citing reports from U.S. observers at the site.

At the reactor, the concrete bottom of its cooling tower has been broken through, rendering it unusable. A secondary cooling loop has also been severed. At the reprocessing plant, workers have removed machinery that helped transfer spent fuel rods into hot cells and have severed steam-line valves used to heat the reprocessing areas of the building. In the fuel fabrication facility, workers are close to removing casting furnaces and uranium metal reduction furnaces necessary to shape the fuel rods.

David Albright, president of the nonpartisan Institute for Science and International Security, said that during the negotiations, North Korea was anxious that there be no language suggesting that disablement would make the facility completely unusable, but he said the steps taken so far are impressive. Albright, who co-wrote a paper earlier this year outlining possible options for disabling the facilities, said removing the machinery needed to transfer fuel rods into hot cells is important because the cells are necessary to prevent exposure to radiation.

Albright said that bursting through the concrete of the cooling tower was visually symbolic -- wisps of vapor from the cooling tower appear in most satellite photographs of Yongbyon -- but the hot water could still be dumped directly in a nearby river if North Korea were unconcerned about possible ecological damage.

One lingering question is what should be done with fuel rods prepared for a never-completed 50-megawatt facility. Although those rods do not fit in the five-megawatt reactor, they could be reshaped unless they were bent.

U.S. officials outlined several key gaps in the declaration. First, the United States is seeking information on North Korea's past proliferation activities, especially any help it may have provided to Syria for a facility attacked by Israel in September. North Korea has indicated that it would assure that it is not currently exporting its expertise, but does not want to dwell on past practices.

Second, the United States wants to know whether any plutonium has been weaponized. North Korea simply wants to say how much plutonium it has produced.

Third, U.S. officials want a complete list of nuclear-related facilities but suspect that North Korea will provide an incomplete list.

Finally, the United States is seeking clarity on North Korea's uranium enrichment activities. The United States tracked purchases of material and equipment that could be used in such a program, but North Korea wants to say only what happened to the materials and how they are being used or whether they were smelted. It does not want to disclose its reasons for purchasing the equipment.

"To say what they were purchased for in the first place would involve acknowledging something they are not quite prepared to acknowledge," the official said. "We need to know what's been going on there."

## **North Korea Replies to Bush With an Offer and a Condition**

By HELENE COOPER

Published: December 15, 2007

WASHINGTON — Responding to a recent letter from President Bush, North Korea agreed on Friday to follow through on its pledge to denuclearize the Korean Peninsula, provided the United States reciprocates by normalizing relations between the countries.

President Bush said Friday that his initial letter, which was delivered by Assistant Secretary of State Christopher R. Hill to the North Korean leader, Kim Jong-il, on Dec. 5, achieved its purpose.

“I got his attention with a letter and he can get my attention by fully disclosing his programs, including any plutonium he may have processed and converted some of that into whatever he’s used it for. We just need to know,” Mr. Bush told reporters in the Rose Garden after a cabinet meeting. “As well, he can get our attention by fully disclosing his proliferation activities.”

North Korea agreed in October to dismantle all of its nuclear facilities and to disclose all of its past and present nuclear programs by the end of the year in return for 950,000 metric tons of fuel oil or its equivalent in economic aid.

That agreement has come under fierce criticism from national security hawks, in part because it does not require North Korea to turn over its existing stockpiles of weapons-grade plutonium and any nuclear warheads it may already have produced. But many foreign policy experts point to it as a rare diplomatic success for President Bush in a period that has been dominated by frustration in Iran, Afghanistan, Pakistan and the Middle East.

“An important step is a full declaration of programs, materials that may have been developed to create weapons, as well as the proliferation activities of the regime,” Mr. Bush said.

A White House official said that Mr. Kim’s response was delivered to State Department officials through an intermediary, North Korea’s representative to the United Nations. The official said that the reply contained a pledge that the North would follow through on its promise as long as the United States held to its end of the bargain.

The proliferation issue has taken on new importance after an Israeli strike in Syria in September, which administration and Israeli officials say was conducted against a nuclear-related facility near the Euphrates River that was supplied with material from North Korea. Administration officials want North Korea to disclose whatever help it may have given Syria, although they note that the help for Syria predated the North’s agreement to dismantle its nuclear reactor and disclose its nuclear programs.

The exchange between Mr. Bush and Mr. Kim is a huge leap from the veritable cold war that prevailed throughout most of the Bush administration. In 2002, during a meeting with Republican senators, Mr. Bush compared Mr. Kim to a “spoiled child at a dinner table,” according to news reports at the time.

## Syrian envoy denies nuclear cooperation with North Korea

2007/12/18 06:43 KST

☞☞ WASHINGTON, Dec. 17 (Yonhap) -- The top Syrian envoy to the United States denied on Monday allegations of nuclear cooperation with North Korea, brushing it off as "silly, absurd, ridiculous hype."

Speaking at the Woodrow Wilson Center, a think tank in Washington, Amb. Imad Moustapha said Syria was "never told" that its relations with North Korea were an issue with the U.S.

☞☞ "Now, if you are referring to the hype in the U.S. media -- not by even the Israeli government or the American government -- about the alleged Syrian-Korean nuclear link or cooperation or problem, well, I think nobody is discussing this anymore," the envoy said.

☞☞ Syria, whose relations with the U.S. are strained, was brought into the North Korean nuclear debate in early September. Israel struck a site in Syria its intelligence agencies say was a nuclear facility being equipped in part by North Korea.

☞☞ The site has since been razed, and information surrounding the strike or the facility has been closely held, leaving the allegations unconfirmed. Some satellite photos, released and analyzed by the Institute of Science and International Security, indicated the installation may have been a reactor closely resembling a North Korean reactor in size and construction.

☞☞ Pyongyang is known to have sold and passed on missile parts and technology to Damascus in the past. But both countries have denied any nuclear cooperation, an issue that touches on proliferation by North Korea, which the U.S. has set as a red line not to be crossed.

☞☞ A six-nation forum, involving South and North Korea, the U.S., China, Russia and Japan, is in the middle of implementing a deal intended to eventually denuclearize the Korean Peninsula. Under the agreement, North Korea is required to declare its nuclear stockpile and any proliferation activities.

☞☞ Moustapha claimed U.S. officials quietly have said they do not believe Syria is collaborating with North Korea on the nuclear front.

☞☞ "Even here at the United States, at a highly classified hearing that was presented at the U.S. conference a couple of weeks ago, key officials from the U.S. administration had to say behind closed doors that there are no Syrian nuclear projects, no Syrian-Korean nuclear cooperation," the envoy said.

☞☞ "So this is, you know, the sort of silly, absurd, ridiculous hype" reminiscent of pre-war claims that Iraq had weapons of mass destruction, he said.

☞☞ "It's so easy to fabricate stories if you are ideologically motivated, and if you have a gullible audience that does not critically read and analyze the sort of information they are being fed or told," the envoy said.

## **China's top nuclear envoy inspects NKorea nuke disablement process**

18 hours ago [*accessed 2007-12-18T22:50Z*]

BEIJING (AFP) — China's top nuclear envoy inspected the atomic disarmament process in North Korea Tuesday, as part of efforts to push the reclusive country to meet a key agreement, state media and officials said.

Vice Foreign Minister Wu Dawei was also to meet North Korean leaders, including top nuclear envoy Kim Kye-Gwan, during his visit that began Tuesday, ministry spokesman Qin Gang told journalists.

"The purpose of his visit is to exchange ideas with the DPRK (North Korean) side... on the current situation in the six-party talks and the work for the next phase," Qin said, without saying how long Wu would stay in Pyongyang.

"We believe that the six-party talks have made positive progress and that the good momentum should be maintained and pushed forward."

Xinhua news agency said Wu inspected the disablement process at the Yongbyon atomic power plant, while North Korea's state media said the Chinese envoy had also met with North Korean Foreign Minister Pak Ui-Chun.

Qin refused to discuss recent concerns over whether North Korea would declare and disable all of its nuclear programmes by the end of this month, as agreed in a six-nation pact, but said all sides should make efforts for more progress.

"Relevant parties should overcome difficulties, deepen mutual trust and cooperation so as to implement the (denuclearisation) agreement in a comprehensive way," Qin said.

The six-party pact calls on Pyongyang to disable its plutonium-producing plants and declare all nuclear programmes and facilities by December 31, in return for energy aid and the promise of future major diplomatic concessions.

But the process has reportedly hit a key problem -- the North's refusal to address its suspected highly enriched uranium weapons programme to the satisfaction of the United States.

US President George W. Bush this month wrote to North Korean leader Kim Jong-Il, urging him to fully disclose his country's nuclear programmes.

On Friday Bush reiterated the demand after Kim gave what US officials said was a "verbal reply" to the unprecedented letter.

Bush called for a full declaration of "programmes, materials that may have been developed to create weapons, as well as the proliferation activities of the regime".

The latest nuclear crisis began in late 2002, when the United States accused North Korea of having a secret highly enriched uranium weapons programme in addition to its declared plutonium operation.

Pyongyang has never publicly admitted having a highly enriched uranium programme.

The crisis escalated last year when North Korea tested a nuclear bomb.

The six-party talks group the two Koreas, host China, the United States, Russia and Japan.

## **Syrian Leader Reportedly Says His Country Was Approached by Head of Nuclear Black Market**

Wednesday, December 19, 2007

Associated Press

VIENNA, Austria — Syria received a letter purportedly written by the head of the same nuclear black market that supplied Iran and Libya with its atomic technology but did not respond, the country's president said in comments published Wednesday.

President Bashar Assad's comments appeared to be the first time that a senior Syrian official linked the country to Abdul Qadeer Khan, the top Pakistani scientist who was exposed in 2004 as the head of an international black market in nuclear technology.

Assad also told the Austrian daily "Die Presse" that the target hit by Israeli combat jets in September was not a nuclear site, describing it only as a "military facility in the process of being built."

Israel has kept silent on what it thought it was targeting in the September air strike, but media reports have cited unnamed U.S. officials and analysts that it was a North Korean-style nuclear reactor.

Former U.N. nuclear inspector David Albright, president of the Institute for Science and International Security, subsequently circulated commercial satellite images taken before and after the Israeli raid that he said supported suspicions that the target was indeed a reactor and that the site was given a hasty cleanup by the Syrians to remove incriminating evidence.

The International Atomic Energy Agency, which looked at its own set of images, has said nothing publicly about them, but diplomats linked to the agency have told the AP that they were too grainy to draw concrete conclusions. On Wednesday, one of the diplomats — who demanded anonymity because he was not authorized to discuss the issue — said the Syrians have not reacted to agency requests for more information.

Khan's black market network was the key supplier of both Iran and Libya.

In the interview, Assad said that in early 2001, "someone brought a letter from a certain Khan," adding, "we didn't know whether the letter was real or a fake from the Israelis who wanted to entice us into a trap.

"In any case, we turned it down," he was quoted as saying. "We had no interest in nuclear weapons or a nuclear reactor. We never met with Khan."

Libya has voluntarily scrapped its nuclear arms program since acknowledging its existence in 2003. Iran has admitted to being a Khan customer of know-how and equipment that included the basis of its present uranium enrichment program — which can be used to create the fissile core of nuclear warheads — but insists it wants to perfect the technology only for its other use, generating reactor fuel. Its refusal to cease enrichment has resulted in two sets of U.N. Security Council sanctions.

Assad: „Ohne die USA geht gar nichts“

18.12.2007 | 18:15 |

CHRISTIAN ULTSCH (Die Presse)

*[EXCERPTS]*

Syriens Präsident Assad signalisiert Friedensbereitschaft, glaubt aber nicht an einen Durchbruch im kommenden Jahr. Und er denkt nicht daran, seine Allianz mit dem Iran aufzugeben.

*[deletia]*

**Am 6. September haben israelische Kampfflugzeug eine Einrichtung In Syrien angegriffen. Welche?**

**Assad:** Es war eine im Bau befindliche Militäranlage. Und weil es eine Militäranlage war, kann ich Ihnen keine Details geben. Das heißt aber nicht, dass es eine Nuklearanlage war, wie die Israelis behauptet haben.

**Warum hat Syrien so zurückhaltend reagiert?**

**Assad:** Wir haben das Recht, jederzeit zurückzuschlagen. Das haben wir auch gesagt. Aber es geht nicht nur um Rache. Man kann eine Rakete auf Israel abfeuern. Aber was erreicht man damit? Man würde den Israelis helfen, einen neuen Krieg anzuzetteln. Und wohin würde ein neuer Krieg führen?

**Hat Syrien Kontakte zu pakistanischen Atomingenieuren?**

**Assad:** Tatsächlich war es so: Anfang 2001 brachte jemand einen Brief von einem gewissen Khan (dem Vater der pakistanischen Atombombe; Anm.). Wir wussten nicht, ob der Brief echt war oder eine Fälschung der Israelis, die uns in eine Falle locken wollten. Wir lehnten jedenfalls ab. Wir waren nicht interessiert daran, Kernwaffen oder einen Nuklearreaktor zu haben. Wir trafen Khan nie.

Das Interview wurde gemeinsam mit dem „Kurier“ geführt.

(„Die Presse“, Print-Ausgabe, 19.12.2007)

[http://www.newsmax.com/timmerman/bolton\\_state\\_department/2007/12/25/59694.html](http://www.newsmax.com/timmerman/bolton_state_department/2007/12/25/59694.html)

## **Bolton: State Department Leftists Have Defeated Bush**

Tuesday, December 25, 2007 6:41 PM

By: Kenneth R. Timmerman

*[EXCERPTS]*

Resistance by partisan "shadow warriors" at the Department of State has limited the president's options and is bringing us dangerously close to a military showdown with Iran, former Bush administration official John Bolton told Newsmax in an exclusive interview.

*[deletia]*

Excerpts from the interview:

*[deletia]*

NEWSMAX: How is this Administration's track record on hiring and keeping conservatives in key positions?

BOLTON: I think it is unfortunately not very good. I talk about this in my book, about what happens when Presidential personnel doesn't focus on the very difficult circumstances appointees face within the State department, which is one of the savviest bureaucracies in Washington experts in co-opting, seducing or subverting political appointees who try to pursue policies it disagrees with. And I think in this Administration, it has had considerable success. I use the example of North Korea, and what's happened to our policy there. What has happened since I wrote the book is an even more graphic example of the bureaucracy in effect turning the President's policy in effect in a 180 degree U-turn.

NEWSMAX: Do you think the North Korean have agreed to talk and to shut down the reactor because they have sold off the critical elements?

BOLTON: I think they are doing the same thing they did under the [1994] Agreed Framework. I think they have been planning to cheat on their declaration and their program and hope they get away with it, which they will if we don't have an adequate verification program.

And I think this facility [in Syria] that the Israelis bombed on September 6 is an indication of yet another alternative, which is either to clone the Yongbyon reactor or outsource some of the nuclear weapons program. How better to hide your North Korean program than to build it in Syria where nobody is looking!

Just this morning there was a story that it may be harder to shut down Yongbyon than people thought. Now this will extend into the next year, which I think is part of North Korea's pattern of slow-rolling the program. But which also shows something which I and others have been saying for some time, which is that Yongbyon is at or beyond its useful life. Part of the reason they have difficulties extracting the fuel rods that are in there now is that the whole facility is in terrible repair, which means they agreeing to freeze it or even to dismantle it is not such a big concession from the North Koreans.

They may already have been able to extract as much plutonium as they were going to be able to. Shutting down a broken facility is hardly a sign of good faith.

NEWSMAX: There is a lot of dispute about North Korea's uranium program. You write in your book that the North Koreans talked to our delegation in 2002 about the uranium enrichment program. Do you think that is what they transferred to Syria?

BOLTON: It's hard to say what they've transferred. There was no sign of radiation escaping after the Israeli attack [on Syria], which seems to indicate that they proceeded before there was any actual enriched uranium or even unenriched uranium there. Otherwise you would see likely release of radiation.

*[deletia]*

Daily Press Briefing  
Tom Casey, Deputy Spokesman  
Washington, DC  
December 27, 2007

[EXCERPT]

QUESTION: The latest out of Seoul was that North Korea has cited delays in aid for -- as a reason why it will not be able to make its declaration or may not be able to make its declaration. Have you confirmed these North Korean statements and what is the state of play as far as the aid pipeline that you know of, as well as North Korea's progress ahead of December 31st?

MR. CASEY: Well, a couple things. First of all, the agreement that the six parties reached called for North Korea to provide a full and complete declaration by December 31st. And we certainly think that they are capable of meeting that deadline. We encourage them to do so and we'll see what happens over the next few days.

In terms of questions about aid shipments, as you know, there's been sort of a rotating schedule of heavy fuel oil equivalent that's been provided. I am not certain, to be honest with you, what the exact status of the last -- you know, latest shipment is, whether there have been any delays or not. Certainly, there's been no policy decision on the part of our government or any of the other six parties to change our basic approach to that, so I'm not aware that there is any substantive problem with those deliveries. As to what the North Koreans will or will not do, it's the obligation of all parties to honor their commitments and we intend to honor ours and we certainly hope they'd honor theirs as well.

Glenn.

QUESTION: Yeah. The South Korean Foreign Minister was actually quoted today as saying that the big hitch in this was North Korea admitting to the uranium enrichment program that the U.S. has said that they have maintained. Would you agree with that assessment? Is that your understanding as well that this is really the thing holding up the declaration?

MR. CASEY: Certainly, don't want to try and get myself into a public argument with the South Korean Foreign Minister, but I'll let him speak to his understanding of it.

QUESTION: Well, what is your understanding of it?

MR. CASEY: Well, my understanding of it is they have an obligation to provide us with a full and complete declaration by the 31st. We'd hope they'd honor it. We've had numerous discussions with

them about what such a declaration should include. You've heard from Chris Hill repeatedly that that does need to include any accounting for the highly enriched uranium activities that they've pursued in the past and may be pursuing currently. It certainly also includes dealing with things like proliferation and the other concerns that we've raised. Full and complete is probably the best way to describe it. There can't be fudging around the edges here. We need to really understand the full extent of the program and the full extent of the activities because that's the only way that you can guarantee that when we get to the end of this process, we've actually achieved our goal, which is full denuclearization of the Korean Peninsula.

QUESTION: And do you have any readout of Sung Kim's visit last week to Pyongyang?

MR. CASEY: I don't, but let's see if we can get you something.

QUESTION: There's only three days left for this year. How are you going to guarantee for the -- by the end of this year for the declaration?

MR. CASEY: Well, look, I'm not going to guarantee the North Korean Government's going to do anything. That's up for them -- up to them to do. What I did say and what I will repeat is that we believe they're certainly capable of meeting the deadline and providing the declaration by the 31st. We encourage them to do so and we'll see what happens in the next couple of days.

Press Statement  
Tom Casey, Deputy Spokesman  
Washington, DC  
December 30, 2007

## North Korea Declaration

In September 2005, the United States, China, Russia, Japan and South Korea agreed on a Joint Statement with North Korea that charted the way forward toward achieving a nuclear weapons free Korean peninsula. Under the terms of the Initial Actions Agreement of February 2007, North Korea shut down operations at the Yongbyon nuclear facility where it had produced weapons-grade plutonium and international inspectors returned to North Korea to verify and monitor this process. In October 2007, North Korea committed to declare all its nuclear programs and to disable the three key nuclear facilities at Yongbyon by the end of December 2007 as an initial step toward eventually abandoning all its nuclear weapons and existing nuclear programs. The other parties, in turn, agreed to cooperate in economic and energy assistance to North Korea. Such assistance has been provided under a formula of "actions for actions" as the North carried out its commitments to disable its nuclear facilities.

It is unfortunate that North Korea has not yet met its commitments by providing a complete and correct declaration of its nuclear programs and slowing down the process of disablement. We will continue to work with our close allies Japan and South Korea, and partners China and Russia, as we urge North Korea to deliver a complete and correct declaration of all its nuclear weapons programs and nuclear weapons and proliferation activities and complete the agreed disablement. The United States is committed to fulfilling our obligations under the Six Party agreements as North Korea fulfills all its obligations.

Press Gaggle by Scott Stanzel  
Crawford Middle School  
Crawford, Texas

11:15 A.M. CST

*[EXCERPT]*

Q Scott, on North Korea -- North Korea has missed the deadline for the disablement of the reactor and the declaration on the programs. What's the President's reaction to this?

MR. STANZEL: Well, you saw the statement last night from the administration. Tom Casey, from the State Department, did issue a statement. You've also seen statements from the Japanese and the South Koreans. It has been clear that the North Koreans would not provide a declaration by the deadline, and a full and complete declaration we believe is critical in order to move to the next phase.

So it is our view that that process should move forward. There is an opportunity to do that. Good progress has been made at Yongbyon. The United States has been working with North Korea in terms of the removal of the fuel rods and making sure that that's done safely and securely. But there does have to be a complete and full declaration, and this cannot be a situation where the North Koreans pretend to give a complete declaration. So we want that process to move forward and we will be pressing and working with all of the parties in the six-party talks to make sure that happens. Secretary of State Rice, Deputy Secretary Negroponte, Ambassador Chris Hill all have open lines of communication with members of the six-party talks and we hope and expect that that process will move forward.

Q Do you envision the United States pushing for sanctions or any sort of action like that?

MR. STANZEL: Well, those conversations about moving the process forward are ongoing. I think we think it's possible for the North Koreans to provide a full and complete declaration, and we hope that they will do that as soon as possible. I'm not going to speculate beyond that about other actions that could occur.

Q Are you surprised that North Korea didn't meet the deadline?

MR. STANZEL: I think that we had all hoped that North Korea would meet the December 31st deadline. We think that there is an opportunity to move forward. You saw the statement last night from the State Department that it is unfortunate that they didn't meet the deadline, but we'll be working with all the parties to make sure that this process moves forward.

Q Do you believe they are committed to the deadline?

MR. STANZEL: Well, they did not meet --

Q Or the talks, rather?

MR. STANZEL: I think there is reason to believe that all of the members of the six-party talks think that this process should move forward, and we expect a full and complete declaration. So we hope that it will move forward.

Q North Korea -- have you gotten any indications that they will be filing a report or providing this information in the near term?

MR. STANZEL: It was our understanding, based on recent conversations, that obviously they were not going to make the December 31st deadline. You know, the United States actually slowed down part of the disablement process, and that is not something that we blamed the North Koreans for, but we wanted that to be done in a safe and secure manner. So we are not blaming the North Koreans for the slowdown in that disablement process.

However, we believe that the full and complete declaration is key to this process and we think there is an opportunity for them to do that.

Q Do you expect it soon?

MR. STANZEL: I'm not going to put a timeline on it, but we'll be working with all the parties in pressing North Korea to make sure that that does happen.

Q I hear you saying that there are no consequences, though, for missing a deadline.

MR. STANZEL: Well, as you know, this is an action-for-action process, where at each point if North Korea meets certain deadlines they can move forward with the process and there is aid that can be provided. I would refer you to the State Department about all of the specifics on that, but it is an action-for-action process, and in order to have action on one side, we have to have action on the other side as well.

## **Experts differ on significance of N. Korea missing nuclear deadline**

December 31, 2007 --

Updated 0136 GMT (0936 HKT) [2008-01-01]

From State Department Producer Charley Keyes  
CNN

WASHINGTON (CNN) -- The Bush administration was hoping to spend the early hours of 2008 poring over a new document from the North Koreans: a full list of its nuclear secrets. No such luck.

The North Koreans let the New Year's Eve deadline come and go without revealing anything.

The United States is now hoping the delay will only be temporary and that the official declaration will be sent along in the coming days. The U.S. goal is to press ahead with negotiations and achieve full denuclearization of the Korean peninsula by the end of the new year.

State Department spokesman Tom Casey told reporters in his office Monday morning that the delay in the declaration is unfortunate. "We want to see it provided as soon as possible," he said. "The important thing is not whether we have the declaration today. It is that it needs to be full and complete."

Meanwhile, an international team remains in North Korea overseeing the "disabling" of the country's reactor at Yongbyon. This will be followed by the "dismantling" phase, in which buildings will be destroyed and key facilities filled with cement or cut apart and shipped out of the country.

In exchange for its cooperation so far, North Korea has received food and fuel oil aid. It also wants to be removed from the list of terrorism-sponsoring countries.

President Bush, who once labeled North Korea as part of "the axis of evil," took the extremely rare step of writing to North Korean leader Kim Jong Il in early December, urging him to meet the December 31 deadline. The "Dear Mr. Chairman" letter, signed by hand by Bush, said continued progress would be tied to a full declaration.

Bruce Klingner, senior research fellow in the Asian Studies Center at the Heritage Foundation, said delays can now be traced back to negotiations earlier this year, and what he called "vague texts" about what North Korea is required to do. Klingner is a long-time observer of North Korea and a 20-year veteran of the CIA and intelligence community.

"I think the North Koreans are going to try to drag it out," he said by telephone from his Washington office. "Even more important is what's going to be in the declaration. Does it comply with what North Korea is required to do or is it just what North Korea wants to declare?"

Still unknown is just how much plutonium, the raw material of nuclear bombs, the North Koreans have. There are also big question marks over how much enriched uranium they have and how they shared or sold nuclear technology and expertise to other countries.

The still-mysterious bombing by Israel of an industrial installation in Syria raised questions about whether North Korea's proliferation activities have extended even further than realized. The Bush

administration has ducked any questions about what the Syrians may have been doing, and whether North Korea was involved.

Joe Cirincione of the Center for American Progress downplayed the importance of North Korea missing the deadline for the declaration.

"This is not a big deal," Cirincione said in an e-mail to CNN. "The momentum is still very positive, the reactor has been shut down and disabled; the disablement will proceed over the next 100 days and could then move into permanent dismantlement." He is the author of "Bomb Scare: The History and Future of Nuclear Weapons."

And Cirincione predicts some hard bargaining ahead for the United States -- as well as its partners in the talks, China, Japan, Russia and South Korea -- to get North Korea to spill all its secrets. "The North Koreans see everything as negotiations. So the declaration itself will likely not be complete," he said in his e-mail. "They will see it as something else to negotiate over as we point out that it does not include, for example, a full description of the gas centrifuge equipment they bought from Pakistan, or details on whether or not they fashioned their plutonium into weapons."

And the Heritage Foundation's Klingner said the Bush administration may be tempted to ease up on North Korea, realizing the clock is running out on Bush and Secretary of State Condoleezza Rice and their international policy team.

"The Bush administration is perhaps becoming increasingly desperate to secure a foreign policy legacy to counter the concern over the situation in Iraq," he said, "so may be more willing to accept a lower level of compliance by North Korea as to its data reporting as well as a verification regimen later."

Press Briefing by Dana Perino  
James S. Brady Press Briefing Room

*[EXCERPT]*

*[MS. PERINO:]* James.

Q Dana, earlier today I asked you if there was any reason to believe that North Korea was actually going to provide a complete and correct declaration of all of its nuclear programs and materiel, and your reply was that "We are skeptical of that." And so I wonder why the administration is proceeding forward with the entire agreement if it has such skepticism.

MS. PERINO: We -- as we've dealt with North Korea over the past several years, it is only appropriate that we would be skeptical. This is a very closed society that has had a secret program that's been ongoing. But North Korea did agree with the other members of the five -- of the six-party talks to disable and to provide a complete and accurate declaration. We don't have any indication that they will not provide one, but we -- they missed the deadline, and we are waiting to hear from them. And I would remind you that the State Department continues to be in regular contact with all the members of the six-party talks, and Deputy Secretary Negroponte will be in the region, in Beijing, middle of January, a couple weeks from now.

Q And you also said this morning that you imagine that this topic will be very high on Deputy Secretary Negroponte's agenda in Beijing, and he's going there in mid-month. Should we infer from that that you don't expect to receive this declaration by at least the middle of this month?

MS. PERINO: No, I really don't have any time frame as to when we would get the declaration. We would like it as soon as possible, but we do want it to be complete and accurate, because that's what they agreed to. And we'll continue to help them with the disablement. We have people on the ground now who are making sure it's done in a safe and proper manner.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
January 2, 2008

[EXCERPT]

QUESTION: North Korea; we know what happened on January 1st and didn't happen.

MR. MCCORMACK: Right.

QUESTION: Can you sketch out for us what Chris Hill has -- maybe has already done or will be doing this week?

MR. MCCORMACK: Yeah, he's going to be headed out to the region to do his Northeast Asia tour, leaving at the end of this week. I can't tell you whether that's Thursday or Friday. We'll try to get you some details on that. I don't know his stops, but I would anticipate that he's going to do the usual tour. I will see if he has any planned interactions with North Korean officials at this point. I don't have the details of the Chris Hill January 2008 Northeast Asia tour yet, but we'll get them to you.

QUESTION: On the same note, do you have any more details about the itinerary and agenda for Deputy Secretary Negroponte's trip to China in the middle of the month?

MR. MCCORMACK: Not yet. We'll -- more to follow on that.

Yeah, Gollust.

QUESTION: Would you say you're becoming increasingly --

MR. MCCORMACK: Sorry about the Browns, man.

QUESTION: No, it was a good season.

MR. MCCORMACK: It was a good season, (inaudible) since.

QUESTION: Would you say that you're becoming increasingly apprehensive about the lack of a declaration?

MR. MCCORMACK: No, I think everybody knows that -- a healthy appreciation for the pace at which this process moves. Sometimes it moves according to schedule, sometimes it moves in what some

might consider tectonic or glacial fashion, but it does move forward. But the fact that it doesn't progress at the pace that we would perhaps desire doesn't mean that people aren't working hard to try to make it work. Sometimes, the reason why it moves a little bit more slowly than we would have hoped is because we're doing new things and we're doing hard things.

The fact that the North Koreans have agreed to provide a full and complete declaration is something new. This is groundbreaking, just as it is new that they are disabling these facilities at Yongbyon. And that process continues. The reports we get back from the team are that that process is continuing. Now there are some technical questions about the cooling of the fuel rods. We want to make sure that that happens, it happens in an appropriate way. So that was the reason behind the delay in terms of the disablement that it is not completed by December 31st.

In terms of the declaration, we're going to keep hammering away on it. And we're not lowering the bar. North Korea has to come out with a full and complete declaration. Nobody is holding them to an unfair statement. They set out to provide a full and complete declaration, not to the United States but to the other five members of the six-party talks. And the other members of the six-party talks are going to hold them -- hold them to that. No standard, no higher, no lower, but just what they said that they were going to do.

QUESTION: Is the Deputy Secretary heading to the region as well?

MR. MCCORMACK: Excuse me?

QUESTION: Deputy Secretary Negroponte --

MR. MCCORMACK: He's going to -- that's what Kirit was talking about. He's going to be headed out there. I don't have a date for you, but he will be headed out to China, I believe. I think there was some discussion of that.

QUESTION: Before the bell rings --

MR. MCCORMACK: No, no, we got plenty of time.

QUESTION: Are you guys still encouraged, though? Are you still encouraged by the North Koreans? I mean, is -- though they haven't finished the declaration, are you still seeing a positive trend towards one?

MR. MCCORMACK: Well, yeah, you still have the continuation of the disablement process. The teams on the ground there who are engaged in the disablement process helping with technical assistance. The disablement process -- that's continuing. That continues to move forward and that's -- and that's good. That's a good sign.

We're trending in the right direction. I mean, remember where we were, what, not quite a year ago with the Banco Delta Asia. Well, that took a lot longer than everybody would have hoped, but it did get resolved. And again, we're trying to do new things here, new things in a positive sense and a responsible way. It's not as though we're -- we are adhering to the pathway that was laid out back in September '05. And you know, would we have hoped that we could have been further along in this process? Yeah. We do. We do.

QUESTION: Without a declaration itself?

MR. MCCORMACK: A declaration itself? Well, again, we'll see. You know, we'll see what the final declaration says. That's what really matters. And we'll make a judgment once the North Koreans say this is our final declaration. We'll see what gets handed over to, I would expect, the Chinese as the chair of the six-party talks and we'll make an assessment at that point -- a final public assessment, at least.

QUESTION: Are there any U.S. -- any measures the U.S. is considering in response to the failure to meet the deadline on the declaration, or are there any corresponding measures such as the fuel shipments that you would sort of hold back on at this point till they produce something?

MR. MCCORMACK: Well, it's going to be action for action. And they are doing things. They are making positive steps in some areas, as I noted with the disablement. There are some areas where they're still working on it.

I didn't -- I'll check for you what exactly -- check for you where exactly we stand in terms of our obligations as well as the other parties providing fuel, heavy fuel oil or in-kind assistance. I haven't read up on that recently. So we'll -- you know, we'll check for that. But we are still committed to fulfilling our obligations under the agreement, under the idea of action for action. So, but we'll check for you where we stand on that.

## **DPRK Foreign Ministry Spokesman on Issue of Implementation of October 3 Agreement**

Pyongyang, January 4 [2008] (KCNA) -- A spokesman for the Foreign Ministry of the DPRK released the following statement Friday as regards the delay in the implementation of the October 3 agreement made at the six-party talks:

It is beyond Dec. 31, 2007, the deadline set in the Oct. 3 agreement.

It is regrettable that points agreed there remain unimplemented except the disablement of the DPRK's nuclear facilities.

The disablement started early in November last year and all the operations were completed within the "technologically possible scope" as of Dec. 31.

At present, the unloading of spent fuel rods scheduled to be completed in about 100 days is underway as the last process.

However, the delivery of heavy fuel oil and energy-related equipment and materials to the DPRK, commitments of other participating nations, has not been done even 50 per cent.

The schedule for the monthly delivery of heavy fuel oil as well as the delivery of energy-related equipment and materials and relevant technical processes are being steadily delayed.

The U.S. has not honored its commitments to cross the DPRK off the list of "sponsors of terrorism" and stop applying the "Trading with the Enemy Act" against it.

Looking back on what has been done, one may say that the DPRK is going ahead of others in fulfilling its commitment.

As far as the nuclear declaration on which wrong opinion is being built up by some quarters is concerned, the DPRK has done what it should do.

The DPRK worked out a report on the nuclear declaration in November last year and notified the U.S. side of its contents.

It had a sufficient consultation with the U.S. side after receiving a request from it to have further discussion on the contents of the report.

When the U.S. side raised "suspicion" about uranium enrichment, the DPRK allowed it to visit some military facilities in which imported aluminum tubes were used as an exception and offered its samples

as requested by it, clarifying with sincerity that the controversial aluminum tubes had nothing to do with the uranium enrichment.

As far as the fiction about nuclear cooperation with Syria is concerned, the DPRK stipulated in the October 3 agreement that "it does not transfer nuclear weapons, technology and knowledge". This is our answer to this question.

This was also done in line with the prior discussion with the U.S. Side.

All facts go to clearly show what is the reason behind the delayed process of the implementation of the October 3 agreement.

Consistent in all agreements reached at the six-party talks including the September 19 joint statement is the principle of "action for action".

Now that other participating nations delay the fulfillment of their commitments, the DPRK is compelled to adjust the tempo of the disablement of some nuclear facilities on the principle of "action for action."

The DPRK still hopes that the October 3 agreement can be smoothly implemented should all the participating nations make concerted sincere efforts on the principle of simultaneous action.

## **NKorea Says It Gave US Nuclear List**

By JAE-SOON CHANG

26 minutes ago [Accessed 2008-01-04T15:25Z]

SEOUL, South Korea (AP) — North Korea said Friday [2008-01-04] it gave a list of its nuclear programs to the United States in November, claiming it tried to meet commitments under an international disarmament agreement and accusing the U.S. of not doing its part to deliver aid.

North Korea also said that because of the delays by the U.S. and other parties to the six-nation talks, it was slowing the pace of disabling its nuclear facilities.

The North's Foreign Ministry did not list the contents of what it gave Washington, but stressed it had follow-up consultations with U.S. officials and tried its best to defuse allegations that Pyongyang had a uranium-based nuclear weapons program.

U.S. officials have voiced skepticism about the North's commitment to a February aid-for-disarmament deal worked out in the talks after Pyongyang failed to meet a year-end deadline on the nuclear declaration. The six nations are the U.S., China, Russia, Japan, South Korea and North Korea.

"As far as the nuclear declaration on which wrong opinion is being built up by some quarters is concerned, (North Korea) has done what it should do," the Foreign Ministry said in a statement carried by the country's official Korean Central News Agency.

The North accused the U.S. and other parties in the six-nation talks of delays in carrying out their commitments, such as shipping energy aid and removing the North from U.S. terrorism and trade blacklists. That forced Pyongyang to "adjust the tempo of the disablement of some nuclear facilities on the principle of action for action," it said.

North Korea last year promised to abandon its nuclear ambitions in return for the equivalent of 1 million tons of oil and political concessions. In October, it pledged to disable its nuclear facilities and issue a declaration on its atomic programs by the end of 2007.

The North began disabling the facilities under the watch of U.S. experts in November. On Friday, the North said the last process in the disablement work — removing spent fuel rods from its sole operational reactor — was continuing, and that work was expected to be completed in 100 days.

But the real hurdle was the nuclear declaration, as Pyongyang and Washington remain far apart over North Korea's suspected uranium enrichment program — an allegation that touched off the latest nuclear standoff in late 2002, and that the North has long denied.

U.S. officials have charged that the North's purchase of suspicious material and equipment — including aluminum tubes that could be used in the process of converting hot uranium gas into fuel for nuclear weapons — showed it pursued a uranium enrichment program.

On Friday, the North's Foreign Ministry said it offered an explanation to the U.S. about the uranium program, showing American officials military facilities where the aluminum tubes were used, and providing samples to clarify "the controversial aluminum tubes had nothing to do with the uranium enrichment."

Regarding suspicions about its nuclear connection with Syria, the North's ministry repeated its earlier stance that it had already pledged in the Oct. 3 agreement that it would never transfer any nuclear material, technology or know-how out of the country.

The North said the aid-for-disarmement deal could still be implemented smoothly "should all the participating nations make concerted sincere efforts on the principle of simultaneous action."

Subject: Weirdness in Syria

In a probably vain attempt to figure out the Israeli strike in Syria on 6 Sep 2007, I've been keeping an eye on the available commercial satellite imagery of the area. There's now a GeoEye IKONOS image of 23 November that's, well, strange.

I don't have the disposable cash to get the 1-meter resolution image itself, but just the browse image on the geoeye.com site is very interesting. What it shows is an apparently new, or at least seriously refurbished, road between the bombed building and a previously noted facility five kilometers to the east. This road is not apparent in any earlier image, including the DigitalGlobe one of 24 October.

And, more weirdly, there is definitely a square structure on the site of the former building. In the 24 October image there was nothing there but a low mound of dirt.

I have no clue what this means, but it is interesting...

## **US, NKorea, differ on nuke issue**

By FOSTER KLUG Associated Press Writer

Jan. 4, 2008, 10:04AM

WASHINGTON — The United States on Friday disputed North Korean claims that Pyongyang had handed over a list of its nuclear programs ahead of a year-end disarmament deadline. Despite the North's charges of U.S. obstruction, the State Department expressed confidence that the process was moving ahead.

Spokesman Sean McCormack told reporters that North Korea has yet to provide a complete nuclear declaration, a key part of a February aid-for-disarmament deal worked out in six-nation talks.

"They're engaging the international media, in their own way," McCormack said of the North Korean Foreign Ministry's statements. "It is an important point that in none of this have any of the parties been backing away at all from their commitment to the process."

North Korea said Friday it gave the U.S. a list of its nuclear programs in November and accused the U.S. of not doing its part to move the process forward.

The North's Foreign Ministry did not elaborate on the contents of what it gave Washington but stressed it had follow-up consultations with U.S. officials and tried its best to clear their suspicions that Pyongyang had a secret uranium-based nuclear weapons program.

The North's claims came as the chief U.S. envoy at disarmament talks, Christopher Hill, headed to Asia to discuss the disarmament accord.

U.S. officials have voiced skepticism about the North's commitment to the deal after saying that Pyongyang failed to deliver the declaration by the end of the year. The six nations involved in the talks are the U.S., China, Russia, Japan, South Korea and North Korea.

The North's producing what the U.S. calls a "complete and accurate" declaration is seen as key to the process moving forward. Washington is especially keen for the declaration to address the suspected uranium enrichment program — an important sticking point that touched off a nuclear standoff in late 2002.

North Korean and U.S. officials have had ongoing talks on the declaration, McCormack said. But, he said, the U.S. is still waiting for a final declaration. He would not elaborate on the discussions.

McCormack also would not discuss the North's claim that it had offered an explanation to U.S. officials about its alleged uranium program.

Hill told reporters in December, after visiting North Korea, that he had not seen a draft of the declaration but that U.S. and North Korean negotiators had had extensive talks about what the U.S. expects to see in the list of nuclear programs.

When asked at the time if the North was prepared to present a draft of the declaration, he said his North Korean counterpart, Kim Kye Gwan, told him, "We don't want to rush this and cause problems. Haste makes waste, I think is what he said."

North Korea has promised to abandon its nuclear ambitions in return for energy aid and political concessions. In October, it pledged to disable its nuclear facilities and declare its programs by the end of the year in return for the equivalent of 1 million tons of oil.

The North shut down its sole functioning atomic reactor in July and began to disable it and other facilities under watch of U.S. experts in November; that process, though slowed by technical difficulties, continues.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
January 4, 2008

[EXCERPT]

[MR. MCCORMACK:] Yeah, Nina.

QUESTION: On North Korea, the -- I just watched a response to their foreign ministry saying that they've already made this -- about (inaudible)?

MR. MCCORMACK: Right. Well, the first thing I'll note about what they said is that they are committed to the six-party process. That is, I think, the kicker line in their statement and there is every evidence that they are still committed to the six-party process and are moving forward with the implementation of this phase of the agreement as was outlined back in October.

So disablement continues. They have yet to produce a declaration. Would we have wished they had produced a declaration by now? Absolutely, and when I say "we," all the other five members of the six-party talks. Chris Hill, when he was in Pyongyang and Sung Kim, when he was in North Korea, talked to them about the importance of producing a full and complete declaration. The Chinese have and I know others have as well. We're going to continue doing that. We want to see this as soon as possible, but we're not going to sacrifice fullness and completeness in the interest of time.

But the North Koreans need to get about the business of completing this declaration. It's important to the process. It is another data point that will indicate that they are, in fact, serious about denuclearizing the Korean Peninsula, which is, of course, the objective of the six-party talks. So it proceeds. It is not -- would we have wished that it had gone faster? Yes. Part of what Chris Hill is going to do in his tour in Northeast Asia as well as to Moscow is talk about this, talk about it with the other members of the six-party talks and urge them to do what they can to encourage the North Koreans to produce a full and complete declaration.

QUESTION: Is he in Tokyo today or is he en route?

MR. MCCORMACK: He left today. He left the United States today, so -- I don't have his schedule in front of me right now. I went through it yesterday.

QUESTION: Are you suggesting that there's something about Hawaii that has changed?

MR. MCCORMACK: No, no.

QUESTION: Is it no longer a part of the United States?

MR. MCCORMACK: All right, I left that (inaudible) there.

QUESTION: He left Washington today?

MR. MCCORMACK: He left Washington today. I think -- what did I say, he left here today?

QUESTION: You said he left the United States today.

MR. MCCORMACK: Touché, Matt. There we are.

QUESTION: Sean, is the Bush Administration emphasis on this complete and correct declaration, because what they showed you originally wasn't complete and correct? I mean, it's -- you keep saying it has to be complete and correct --

MR. MCCORMACK: Right.

QUESTION: -- leads one to assume, well, maybe what they originally showed you wasn't complete and correct.

MR. MCCORMACK: Well, look, I know Chris talked to them about this when he was up there and we have had several conversations, as have others about the declaration and I'm not going to get into the specifics of the back and forth, but the fact is they haven't turned in a final declaration yet. They're going to turn that in to the Chinese as chair, conveners of the six-party meetings and we don't have that yet. We look forward to a full and complete declaration. We also look forward to their completing the disablement phase up at Yongbyon. That is moving forward and there is good progress on that.

I just have to emphasize to everybody, when you're looking at this process, if -- while we all wish that these diplomatic processes would unfold as we had planned them, sometimes they don't. And part of the reasons why they are not right now is we are breaking new ground in terms of what we're doing, in terms of disabling Yongbyon and in terms of working with North Korea in the six-party talks to get a full, complete picture of their nuclear program, not something that has ever been done before.

So that is why, when you say, "Well, it hasn't been done by December 31st, what are you going to do," and we say, well, we're going to keep working on it within a reasonable period of time, that's the reason why, because we're breaking new ground here. This hasn't been done before. But all of that said, none of what we're doing is lowering the bar. The North Koreans made certain commitments. We expect them to live up to those commitments. We as well as the other members of the six-party talks made commitments and we are going to fulfill those commitments. It's going to be action in return for action.

Yeah.

QUESTION: Is Mr. Hill going to meet with President Lee in Seoul? Is that on the agenda?

MR. MCCORMACK: I don't have his list of meetings for you. We'll try to detail those for you if we can.

## North Korea Says Earlier Disclosure Was Enough

By CHOE SANG-HUN and STEVEN LEE MYERS

January 5, 2008

SEOUL, South Korea — North Korea said Friday that it had already explained enough about its nuclear programs to meet a deadline for declaring its nuclear activities, saying the information was in a nuclear declaration it prepared in November and gave to the United States.

The statement from the North Korean Foreign Ministry on Friday was carried by the Korean Central News Agency, North Korea's voice to the outside world. It was the country's first official pronouncement after it missed a Dec. 31 deadline to disable its main nuclear complex at Yongbyon, north of Pyongyang, and, according to other nations involved in six-nation talks, failed to provide a full list of its nuclear activities, including weapons, facilities and fissile material.

The statement said that North Korea had already conducted "enough discussions" with the United States officials after they demanded more negotiations on its November draft declaration. Using the abbreviation of the North's official name, the Democratic People's Republic of Korea, the Foreign Ministry said, "As far as the nuclear declaration on which wrong opinion is being built up by some quarters is concerned, the D.P.R.K. has done what it should do."

In Washington, officials disputed North Korea's claims, saying the government in Pyongyang had not yet provided a declaration. They muted their criticism, however, and said that issue had not reached an impasse.

"The North Koreans know what's expected of them and what the rest of the parties are looking for, and that is a full and complete and accurate declaration of their nuclear activity," said Tony Fratto, a White House spokesman. "They know that."

The chief American negotiator, Assistant Secretary of State Christopher R. Hill, left Washington on Friday en route to China, where the status of North Korea's adherence to its commitments to dismantle its nuclear weapons program will be the focus of a new round of negotiations. An administration official, speaking on condition of anonymity because of the delicacy of the situation, played down the North Korean statement, saying it followed a pattern of public posturing in advance of new talks.

Since the passing of the deadline, agreed on in October, the United States, South Korea and Japan have criticized the North and called for details on how much plutonium it had produced at Yongbyon, whether it had provided nuclear assistance to Syria and what it had done with tons of aluminum tubes it had bought from Russia, the type that could be used to build centrifuges to enrich uranium.

The State Department's spokesman, Sean McCormack, said that the United States and the other countries involved in the talks had not reacted more strongly to the missed deadline because foreign nuclear experts were continuing their work to dismantle the Yongbyon plant, hoping through that work to learn more about aspects of North Korea's nuclear program.

"We're breaking new ground here," Mr. McCormack said. "This hasn't been done before."

Earlier in the day, North Korea also renewed its threat to bolster its “war deterrent,” a phrase it uses for its nuclear arsenal. The North, with one of the world’s largest standing armies, usually threatens to bolster its deterrent when it feels international pressure in crucial negotiations.

North Korea has acknowledged building bombs with plutonium, but has denied pursuing an alternative weapons program using enriched uranium.

In the October deal that North Korea struck with the United States, South Korea, Japan, China and Russia, it promised to disable its nuclear facilities and give a full list of its nuclear programs in exchange for one million tons of heavy fuel oil, or its economic equivalent, and diplomatic concessions.

It has so far received 150,000 tons of oil and 5,010 tons of steel products to renovate its aging power plants.

On Friday, North Korea accused the United States and other countries of delaying the fulfillment of their commitments to provide the aid and remove the North from American terrorism and trade blacklists.

“We still hold hope that the Oct. 3 agreement will be implemented smoothly if all countries participating in the six-party talks make sincere efforts based on the principle of action for action,” the statement said.

North Korea said the disablement work at Yongbyon was “completed within the technologically possible scope as of Dec. 31.”

But since the aid delivery “has not been done even 50 percent,” the North had to “adjust the speed of the nuclear disablement process,” it said. The work of unloading spent fuel rods from the North’s nuclear reactor at Yongbyon, a crucial part of the disablement, will take an additional 100 days, it said.

Choe Sang-hun reported from Seoul, and Steven Lee Myers from Washington.

## **N. Korea says it fulfilled nuclear deal**

By Paul Richter

Los Angeles Times Staff Writer

January 5, 2008

WASHINGTON — American and North Korean officials traded charges Friday over the lagging effort to shut down Pyongyang's nuclear program, raising new doubts about an initiative that the Bush administration has hoped would yield a rare diplomatic success.

North Korea's Foreign Ministry declared that it had fulfilled a commitment to provide U.S. officials with a full list of its nuclear activities before a Dec. 31 deadline, and intended to do no more.

"As far as the nuclear declaration on which wrong opinion is being built up by some quarters is concerned, [North Korea] has done what it should do," the ministry said in a statement carried by the official Korean Central News Agency.

U.S. officials insisted that Pyongyang had not yet provided the declaration that it promised on two occasions last year.

"The North Koreans need to get about the business of completing the declaration," said Sean McCormack, the chief State Department spokesman. "It is another data point that will indicate that they are serious about denuclearizing the Korean peninsula."

The North Korean government last year pledged a step-by-step program of disabling and then dismantling its nuclear complex in return for various rewards, including fuel oil, steel products and normalization of diplomatic relations.

By the end of last year, North Korea was to have dismantled a decrepit reactor at Yongbyon and disclosed all nuclear assets and activities, including its inventory of bombs and fissile materials and a uranium enrichment program that Pyongyang has so far denied.

But as the year-end deadline passed without completion of the nuclear inventory or full disabling of the reactor, criticism has grown in the United States that Kim Jong Il's government is following a familiar pattern of probing to see what it can obtain without giving up the nuclear program it considers a precious asset.

U.S. officials, who have clung to optimism despite a series of snags, said it was important not to overlook that North Korea said in its statement that it remained committed to the effort.

"I think we're seeing progress on parts of this agreement," said Tony Fratto, a White House spokesman.

But Robert Einhorn, a former senior U.S. official on nonproliferation, said North Korea's statement may be more than just bluster aimed at improving its bargaining position in talks with the United States, China, Japan, South Korea and Russia. Pyongyang regards secrecy about its nuclear program as a "strategic asset," and may be unwilling to come clean, said Einhorn, who is at the Center for Strategic and International Studies in Washington.

"Obviously, a failure to make a full and accurate declaration will cast real doubt on whether they are willing to get rid of their nuclear capability completely," he said. For that reason, he said, it is "potentially a showstopper" for the six-nation denuclearization talks.

North Korean officials and the U.S. negotiating team, headed by Assistant Secretary of State Christopher Hill, had discussed what the nuclear inventory declaration would include, American officials have said. U.S. officials hoped those discussions would avoid a later confrontation over an inadequate declaration.

But North Korea said Friday that it had offered the United States a document in November, which the Americans apparently found insufficient. The North Koreans said that although the U.S. officials wanted more talks, Pyongyang had had "enough discussions."

The ministry's statement again denied that the North Koreans had aided Syria in a nuclear weapons program, calling that allegation "a fiction." U.S. officials have demanded to know whether North Korea had a hand in building an alleged Syrian nuclear facility that reportedly was bombed by Israel in early September.

The North Koreans said that in response to American suspicions that Pyongyang had imported aluminum tubes for uranium enrichment, they had shown U.S. officials a military site at which aluminum tubes were used for other purposes.

The North Koreans accused the United States of failing to honor its commitment to take North Korea off the U.S. list of state sponsors of terrorism and to lift sanctions under American trade laws.

The ministry asserted that North Korea had done more than other countries as part of the denuclearization deal. But it said it refused to go further because the deal provided that each side would move ahead "action for action."

Charles L. Pritchard, a former Bush administration envoy who is president of the Korea Economic Institute, said the North Korean statements were aimed at rebutting accusations from several countries that Pyongyang had failed to meet its commitments by the year-end deadline. He said he did not view them as a threat to the denuclearization effort.

The countries are "signaling each other in a PR kind of way," he said.

The Bush administration, after taking a hard line on North Korea for its first six years, has made a series of concessions in the last year to keep negotiations going. Einhorn said the administration might change its tune if the latest statement proves to be a signal of intransigence.

The administration "has already taken a lot of hits from the right wing," he said. "I think the administration will feel it's under pressure to do something to show that it doesn't have infinite patience."

## **IAEA: We hope to visit site of IAF strike on Syria**

By Yoav Stern, Haaretz Correspondent, and Reuters

Last update - 17:18 07/01/2008

The International Atomic Energy Agency (IAEA) has no information on any Syrian nuclear plans, but does hope to pay a visit soon to the Syrian site bombed by the Israel Air Force in September, IAEA chief Mohamed ElBaradei told the London-based Arabic-language newspaper Al-Hayat on Monday [2008-01-07].

ElBaradei said the IAF strike three months ago, which foreign media has reported targeted a nascent nuclear facility, "set a bad precedent."

ElBaradei also said that an information network established by the Pakistani scientist Abd al-Qadir, which reportedly stretched over 30 countries, aided Libya, Iran and possibly North Korea with obtaining nuclear technologies.

However, he did not mention Syria in this context.

In the interview, ElBaradei also expressed his concern over attempts made by terrorist organizations to produce a radioactive or "dirty" bomb that would potentially explode in a crowded city, spreading radioactive radiation.

"Hundreds or even thousands could die [from the radioactive bomb]," ElBaradei said, adding that "it would have severe long-term economic ramifications."

ElBaradei warned that such a scenario would be far worse than the attack of September 11, and that it was "in the interest of extremist groups," who are "more likely to execute such an attack than obtain nuclear weapons."

### **ElBaradei to visit Tehran**

The IAEA will visit Iran on January 11-12 to help resolve outstanding questions about Iran's disputed atomic program, an spokeswoman from the agency said on Monday.

ElBaradei would be making the rare trip at the invitation of the Islamic Republic, following diplomatic reports late last month that Iran's staged plan for transparency agreed with the UN watchdog agency was getting bogged down.

"The Director-General will visit Tehran on Friday and Saturday. During the visit he will meet with a number of high officials," IAEA spokeswoman Melissa Fleming said.

"[ElBaradei] hopes that the visit will develop ways and means to enhance and accelerate implementation of (nuclear) safeguards in Iran, with a view of resolving all remaining outstanding issues and enabling the agency to provide assurance about Iran's past and present nuclear activities," she said in an emailed statement.

## **US Nuclear Envoy Says Completeness More Important than Speed in North Korean Nuclear**

By Kurt Achin

Seoul

08 January 2008

*[EXCERPT]*

U.S. Assistant Secretary of State Christopher Hill's stop here Tuesday is the second on his latest attempt to push the North Korean nuclear disarmament process

He continues to express concern over Pyongyang's failure to meet a deadline for issuing a full list of its nuclear activities.

North Korea promised its five partners in the six-nation nuclear talks last year that it would declare all of its nuclear weapons, programs and stockpiles by December 31. That date passed, to silence from Pyongyang.

But Hill says accuracy in Pyongyang's report is more important than speed.

"I'm not too concerned about them being a little late. The main concern is that when they do give a declaration, that it be complete," Hill said.

Last week, the North Korean Foreign Ministry said a declaration provided to U.S. officials in November was sufficient. Hill says it was not.

"They can make as many declarations as they want. The issue is, have they made a complete one? And the answer is no," Hill said.

Hill flew here from Japan Tuesday, and after his stop in South Korea he plans to head to China and Russia - all participants in the six-nation talks, which are aimed at ending the North's nuclear weapons programs for good.

On his arrival in Seoul, he called for patience with Pyongyang - up to a point.

"I think we need to kind of stick with it, be a little patient with it - but be tough, and try to get through," Hill said.

He says North Korea's reticence can be understood, to the extent that the country is "not automatically inclined toward transparency." However, he says providing a complete declaration is something that "needs to be done."

He also says China, as the host nation of the talks, has a special responsibility to push North Korea to honor its nuclear obligations.

## **IAEA chief, el Baradei, voices concern over safety of Pakistani nukes news**

10 January 2008

*[EXCERPTS]*

Beirut: The head of the International Atomic Energy Agency (IAEA), the UN atomic watchdog, Mohamed el Baradei, has added his voice to mounting concerns over the safety of Pakistan's nuclear arsenal. In an interview to Arabic daily Al-Hayat on **Tuesday [2008-01-08]**, Baradei expressed his fear that it could fall into extremist hands.

*[deletia]*

**With regard to Syria, the United Nations nuclear chief also told Al-Hayat that authorities in that country did not authorise international inspectors to visit a site bombed by Israel last September.** Speculation fed into international media after the September 6 attack by Israeli jets suggested that the site may have been used to store nuclear materials from North Korea.

Syria had denied these allegations.

*[deletia]*

## **Al Baradei To Al-Hayat (2/2): Old And Renewed Nuclear Fears Abdul-Qadeer Khan aided Libya and Iran...No information on Syria's nuclear program**

By Ghassan Charbel

Al-Hayat

11/01/08//

### *Syria and North Korea*

**> Israel launched a strike against a target on Syrian territories claiming that it was linked to North Korea. Is there any information about a Syrian nuclear program?**

- We have no information about a Syrian nuclear program. I was surprised by this step. If anything had to do with a nuclear program, the Israelis and the Americans must inform us first so we can conduct inspections. The solution cannot be by striking first and then asking questions. Any state that has information about the nuclear program of another state must inform the Agency. So far, we have not received any information about any nuclear programs in Syria. When I spoke to the Syrian brothers, they said that the target was a military facility. I asked for their permission to allow the Agency to visit the facility and to verify that it was not nuclear.

**> The Syrians said the target was a military facility?**

-Yes, they said it was a military facility, but I am not concerned with the nature of the military facility targeted as long as it is not within my jurisdiction. Yet, the Syrian brothers did not allow us to visit and inspect the location.

**>It is said that they have flattened the facility?**

- The location was razed down according to our information. Yet, even if this is the case, we have technologies to assure that the location did not host a nuclear facility. Based on satellite photographs, experts believe it is unlikely that the targeted construction was a nuclear facility. I consider the Israeli strike to be a negative precedent.

**> Have you demanded information and evidence from the Israelis?**

- We made requests but they offered us no information, neither they nor any other intelligence agencies. I deal with the issue on the basis that the target was a military but not a nuclear facility. I still hope that the brothers in Syria will permit us to visit the targeted location to verify that it was not a nuclear facility.

## U.S. sets new deadline for N. Korea's declaration of nuclear programs

☞☞ By Lee Chi-dong

2008/01/10 13:56 KST

INCHEON, Jan. 10 (Yonhap) -- The United States wants North Korea to disclose all of its nuclear programs before the launch of South Korea's new government late next month, Washington's chief nuclear envoy said Thursday.

☞☞ Assistant Secretary of State Christopher Hill presented the fresh deadline for recalcitrant North Korea after his meeting with South Korea's incoming leader Lee Myung-bak.

☞☞ The United States accuses North Korea of failing to meet the year-end deadline to provide a "complete and correct" declaration on the North's nuclear activity, a key part of the second phase of the denuclearization process. But Pyongyang insists that it already explained enough about its nuclear programs. North Korea criticizes the U.S. and other dialogue partners over delays in their provision of further energy aid and political incentives.

☞☞ It is very desirable to complete phase two even before Lee takes office so negotiators can focus on the last phase by the time his government begins its term, Hill told reporters at Incheon International Airport before heading to Beijing.

☞☞ The envoy said he had a "very good discussion" with Lee about the need to work closely together for denuclearization of the Korean Peninsula.

☞☞ Hill cited North Korea's lack of transparency as a reason for its failure to meet the deadline.

☞☞ "We can't have a situation where we pretend programs didn't exist for we both know that they existed," he said. "We can't have a program, a process that goes forward on the basis of not being honest with each other."

His remarks were understood to refer to the North's alleged uranium enrichment program and nuclear black-market connection with Syria.

☞☞ "It is a tougher issue than maybe it should be. I mean tougher from a psychological point of view," he said. "That is why I think we need to show a little patience with the situation." Asked about the timing for a new round of six-way talks on the nuclear crisis, Hill said it depends on consultations with host China.

☞☞ He said he will discuss the issue with his Chinese counterpart Wu Dawei later Thursday. The other participants in the talks are Japan, Russia, and the two Koreas.

☞☞ During his hectic three-day schedule in Seoul, he had a series of meetings with President Roh Moo-hyun, Foreign Minister Song Min-soon, and Seoul's top nuclear envoy Chun Yung-woo.

☞☞ Hill and Chun agreed to push for a quick resumption of the six-way talks.

## **U.S. tells N.Korea to fully declare nuclear activities**

Guy Faulconbridge , Reuters

Published: Friday, **January 11, 2008**

MOSCOW (Reuters) - The United States urged North Korea on Friday to give a full declaration of its nuclear activities after Pyongyang missed an end-2007 deadline for presenting the inventory under a disarmament-for-aid deal.

U.S. Assistant Secretary of State Christopher Hill held talks with Russia's chief negotiator in Moscow after a tour of Asia to discuss the deal, which would award fuel oil or aid for making the declaration and dismantling its nuclear facilities.

"They are obliged to give a complete and correct declaration, a declaration which would cover all their nuclear materials, all their nuclear facilities and all their nuclear programs and any nuclear cooperation they have with anyone," Hill told reporters after talks.

"That is what we are expecting," he said, declining to give any new deadlines for the declaration.

North Korea says it has accounted for its nuclear programs as required.

The United States says none of the countries party to the deal -- a result of six-party talks between the two Koreas, the United States, China, Japan and Russia -- has seen the final declaration.

Russia's chief negotiator on North Korea, Deputy Foreign Minister Alexander Losyukov, expressed frustration with the speed of the process.

"We are unanimous in our regret at the slow movement we have within the process, but at the same time we recognize that this is a very difficult and bumpy road which we have to go along," he told reporters at a joint briefing with Hill.

### **DISARMING**

If North Korea lives up to the deal, the energy starved state would get 1 million tons of heavy fuel oil or equivalent aid, and Washington would take it off its terrorism black list.

North Korea has been cooperating in disabling its three main nuclear facilities -- an ageing reactor, a plant that makes nuclear fuel and another that turns spent fuel into arms-grade plutonium -- U.S. and South Korean officials have said.

The disabling of North Korea's nuclear reactor is a key part of a complex nuclear deal struck after years of diplomatic wrangling and Pyongyang's test of a nuclear bomb in late 2006.

Hill said the next round of talks would take place soon but declined to give a date: "I think the Chinese will be looking to call a six-party meeting."

China is the host of the six party talks. Earlier, Itar-Tass news agency quoted Hill as saying the next round of the could take place in the next few weeks.

Russia will complete a delivery of 50,000 tons of fuel oil to North Korea this month under an agreement reached at the six-party negotiations, Losyukov told reporters.

"I think that around January 20-21 we will complete the delivery of our portion to North Korea of the oil which was envisaged by the six-party talks," Losyukov said. "So it can not be used as a pretext to slow the process down."

## **Syria Rebuilds on Site Destroyed by Israeli Bombs**

By WILLIAM J. BROAD

Published: **January 12, 2008**

The puzzling site in Syria that Israeli jets bombed in September grew more curious on Friday with the release of a satellite photograph showing new construction there that resembles the site's former main building.

DigitalGlobe

<http://graphics8.nytimes.com/images/2008/01/11/world/12syria-450.jpg>

**New construction at a disputed Syrian site that Israeli and American analysts judged to be a partially built nuclear reactor.**

Israel's air attack was directed against what Israeli and American intelligence analysts had judged to be a partly constructed nuclear reactor. The Syrians vigorously denied the atomic claim.

Before the attack, satellite imagery showed a tall, square building there measuring about 150 feet long per side.

After the attack, the Syrians wiped the area clean, with some analysis calling the speed of the cleanup a tacit admission of guilt. The barren site is on the eastern bank of the Euphrates, 90 miles north of the Iraqi border.

The image released Friday came from a private company, DigitalGlobe, in Longmont, Colo. It shows a tall, square building under construction that appears to closely resemble the original structure, with the exception that the roof is vaulted instead of flat. **The photo was taken from space on Wednesday [2008-01-09].**

Given the international uproar that unfolded after the bombing, "we can assume it's not a reactor," said David Albright, president of the Institute for Science and International Security, a private group in Washington that has analyzed the Syrian site.

If international inspectors eventually get to the site, he added, they will have a more difficult time looking for nuclear evidence. "The new building," he noted, "covers whatever remained of the destroyed one."

Skeptics have criticized the nuclear accusation, saying the public evidence that has so far come to light was ambiguous at best. They noted, for instance, that at the time of the attack the site had no obvious barbed wire or air defenses that would normally ring a sensitive military facility.

**The International Atomic Energy Agency in Vienna recently became aware of the new construction, a European diplomat said Friday.**

**"Obviously, they're keeping an eye on the site," he said, speaking on the condition of anonymity because of the issue's diplomatic delicacy.**

As a signer to an agreement with the atomic agency, Syria is obligated to report the construction of a nuclear reactor to international inspectors. Nuclear reactors can make plutonium for the core of atom bombs, and therefore secretive work on reactors is usually interpreted as military in nature.

Senior Syrian officials continue to deny that a nuclear reactor was under construction, insisting that what Israel destroyed was a largely empty military warehouse.

Mohamed ElBaradei, who directs the atomic agency, this week told Al-Hayat, an Arabic-language newspaper based in London, that his agency wanted to inspect the site.

"So far, we have not received any information about any nuclear programs in Syria," he said, according to a transcript posted on the newspaper's Web site. Dr. ElBaradei said he had asked for the Syrians' permission "to allow the agency to visit the facility and to verify that it was not nuclear."

He added: "The Syrian brothers did not allow us to visit and inspect the location."

While some analysts have suggested that the new building might slow down international inspectors, Dr. ElBaradei said in the interview that his agency had sensitive "technologies to assure that the location did not host a nuclear facility."

The satellite photographs, he added, led experts to doubt "that the targeted construction" was in fact a nuclear reactor.

## Syria Builds at Ruined Site of Israeli Airstrike

Saturday, January 12, 2008; Page A11

**U.S. officials said this Syrian site, now under construction, may have housed a partially constructed nuclear reactor. (Digital Globe-institute For Science And International Security)**

Syria has begun new construction on the ruined site of a mysterious facility where some U.S. officials believe a secret nuclear reactor was being built.

However, nuclear experts played down the possibility that the new building has a nuclear purpose.

The facility, visible in images taken by a commercial satellite, is being built directly over the building that was destroyed Sept. 6 in an airstrike by Israeli warplanes. Syria has denied allegations that a partially constructed nuclear reactor was the target of the raid. North Korea had been helping Syria build the facility, U.S. officials said.

"It would be very unlikely for this to be a reactor, and we would be very surprised if they tried to put a reactor inside this building," said David Albright, president of the Institute for Science and International Security, who analyzed the images and provided a copy to The Washington Post.

Albright said the new facility appears significantly different from the earlier one, having slightly larger dimensions and a vaulted roof. There are no visible signs suggesting a nuclear purpose, he said.

The new construction could complicate future efforts by outsiders to determine the purpose of the original building, Albright said. He added that it is possible that Syria might have constructed the facility to allow the country to secretly excavate all traces of the original building out of the view of spy satellites.

-- Joby Warrick

<http://www.state.gov/r/pa/prs/dpb/2008/jan/99300.htm>

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
January 14, 2008

*[EXCERPT]*

QUESTION: Sean, another IAEA question. There were reports over the weekend that the agency has expressed interest in visiting, inspecting the site in Syria that was bombed by Israel in September because there was some new activity being detected there. Do you think that would be a good idea?

MR. MCCORMACK: It's up to the IAEA to make those requests. Certainly, we support the professionals of the IAEA in making these kinds of requests of a member state. I think it's up to those professionals to make those kinds of requests.

## **Bush Privately Lauds Israeli Attack on Syria**

By BARBARA OPALL-ROME

And VAGO MURADIAN

Posted 01/14/08 16:02

TEL AVIV and WASHINGTON — In one of the most extensive, face-to-face security discussions since an Israel Air Force attack on a Syrian nuclear reactor last autumn, U.S. President George W. Bush privately commended his Israeli host on what was described as an important preventive action, according to an Israeli official briefed on the high-level exchange.

Bush's private endorsement of the Sept. 6 attack — offered in the context of Jan. 9 discussions in Jerusalem on the Iranian threat and Israel's cardinal opposition to nuclear weapon development programs in the region — was disputed by Olmert spokesman Mark Regev. "I don't know that to be true," Regev said.

Nevertheless, the Israeli official briefed on the Bush-Olmert talks said he understood the U.S. president's comments as endorsement of the pre-emptive necessity of the Syrian strike. If true, such a reference to the Syrian operation during talks devoted to denial options vis a vis Iran appears to support contentions that the Syrian reactor was very close to becoming operational prior to its destruction.

In a late December interview, a participant in Israeli security cabinet discussions in the months leading up to the Sept. 6 attack said information gathered on the Syrian facility was unequivocal. "There was no doubt about the time-critical need to act as we did," he said.

Israeli intelligence agencies concluded that Iran had no connection to the Syrian nuclear program and probably was not even aware of the clandestine site in eastern Syria along the Euphrates River, the official said.

According to U.S. officials and analysts, the challenge in attacking nuclear facilities is to attack them before they are fueled to minimize the chance of radioactive contamination that could be released in the strike. Achieving that level of precision, they said, requires pinpoint intelligence through external persistent aerial surveillance and human intelligence inside the facilities themselves.

Despite intense efforts by Tel Aviv to determine linkage between the Iranian and Syrian nuclear drives, "multiple examinations by various means" determined just the opposite, the official said. He added that Israeli political officials had hoped to use incriminating evidence of Iranian proliferation to ratchet up international pressure to halt Tehran's enrichment program.

"It was certainly disappointing to discover no connection between the two programs," the official said. "Apparently, this was an independent, high-priority Syrian-funded national project sustained and supported through bilateral ties with the North Korean regime."

That Israeli determination coincided with a U.S. National Intelligence Estimate in which American intelligence agencies concluded that Iran halted its nuclear weapons program in 2003 while continuing to seek a civilian nuclear capability.

Bush, at a Jan. 9 joint news conference with Olmert, sought to clarify misperceptions stemming from the NIE.

“Iran is a threat towards peace. There was a recent intelligence report that came out that I think sent the signal to some that said perhaps the United States does not view an Iran with a nuclear weapon as serious problem,” Bush said. “Now I want to remind people ... that Iran was a threat. Iran is a threat, and Iran will be a threat, if the international community does not come together and prevent that nation from the development of the know-how to build a nuclear weapon.

“A country which once had a secret program can easily restart a secret program; a country which can enrich for civilian purposes can easily transfer that knowledge to a military program; a country which has made statements that it has made about the security of our friend Israel is a country that needs to be taken seriously, and the international community must understand with clarity the threat that Iran provides to world peace. And we will continue to work with European countries, Russia and China, as well as nations in this neighborhood, to make it abundantly clear the threat that Iran poses for world peace.”

But with the Israeli government intent on using the occasion of the first American presidential visit here in more than a decade to showcase the Iranian threat, that findings absolving Iranian involvement in the Syrian program were presented to Bush or his considerable entourage.

According to the Israeli official present at most of the Olmert-Bush events, the two sides were adhering to a coordinated policy of discretion regarding the disabled Syrian nuclear program, in large part as a means of maintaining regional and international focus on the Iranian nuclear threat.

The official refused all additional comment on the Syrian nuclear program and its connection — or lack thereof — to Iran.

“That problem appears to be solved for the time being,” the official said of the Syrian nuclear threat. “Now more than ever, we need to keep focused on the problem of Iran.”

Indeed, neither leader mentioned the Syrian nuclear threat during a Jan. 9 joint news conference or in multiple public addresses offered during the first day of Bush’s three-day visit here.

In contrast, both leaders repeatedly aired their respective concerns and grievances regarding Iran, including the prospective threat that a nuclear-capable Islamic Republic would pose to Israel and others throughout the region.

“It seems [Syrian President] Bashar al-Assad distrusted A.Q. Khan and his agents in Dubai,” the official added. “He suspected they may be agents of the West preparing for him a trap.”

In a Dec. 19 interview with the Austrian newspaper Die Press, Assad was quoted as saying Syria rejected overtures thought to have come from Khan back in 2001. “Someone brought us a letter from a certain Khan. We did not know if the letter was genuine or a forgery by Israel to lure us into a trap. In any case ... we never met Khan,” Assad was quoted as saying.

In the Austrian report, Assad acknowledged that the site bombed by the Israel Air Force was “a military facility under construction,” but insisted, “That does not mean this was a nuclear facility.”

John Bolton, a former U.S. State Department official and U.S. ambassador to the United Nations, was one of the first to publicly shed light on the target of Israel's Sept. 6 air operation, all details of which remain heavily classified by Israel's military censor.

In a Dec. 25 interview with political analyst Kenneth Timmerman, Bolton restated contentions that the site was a North Korean-supplied nuclear reactor and went further by suggesting the Syrian project provided a convenient vehicle through which Pyongyang could renege on international inspection and verification agreements.

"I think this facility [in Syria] that the Israelis bombed on Sept. 6 is an indication of yet another alternative [for cheating on international commitments]. ... How better to hide your North Korean program than to build it in Syria where nobody is looking!" Bolton was quoted as saying in an interview published by Newsmax.com.

Prior to conclusions from the Israeli investigations clearing Iran of proliferation links with Syria, Tehran was widely presumed to have provided funding, or at the very least indirect support, for the reactor project.

A strategic update by analyst Emily Landau, published in November by Tel Aviv University's Institute for National Security Studies, reflected prevailing conventional wisdom: "Considering the nature of relations between the two countries, it is hard to believe that Iran had no involvement in the decision [to pursue an elevated regional standing through nuclear capabilities]."

She wrote that Iran was the likely source of funding for the project and that "It's possible that Iran and North Korea hoped to use Syria as a 'shelter' for their respective technologies and nuclear components at a time when they would be subject to more intrusive international inspections."

## **West says N. Korea, Syria had nuclear link**

**A European diplomat says the consensus is that a site in the Mideast nation bombed by Israel was part of an atomic program.**

By Paul Richter, Los Angeles Times Staff Writer

January 17, 2008

WASHINGTON -- Western governments have concluded that Syria and North Korea were collaborating on a nuclear weapons program at a mysterious site in the Syrian desert that was bombed by Israel last year, a senior European diplomat said Wednesday in a rare comment about the episode by a high-ranking official.

The diplomat said that after a review of available intelligence, Western governments have reached "some sort of common ground . . . that there seems to have been cooperation between Syria and North Korea" at the site. The official's remarks were made on condition of anonymity because of the sensitivity of the subject.

Since the Israeli bombing in September, U.S. and allied officials have said little about the attack, the site or the possible existence of a Syrian nuclear weapons program, which could further destabilize the turbulent Middle East. Officials at the CIA and the State Department declined comment again Wednesday.

But the European official's remarks represented both an acknowledgment of the attack and the conclusion of Western governments that the site was a nuclear installation. Before Wednesday, leading Americans, Israelis and Western allies had avoided addressing either issue.

An international consensus that the governments in Pyongyang and Damascus have collaborated on nuclear weapons would mark a new setback to U.S. efforts to entice North Korea to scrap its nuclear armament program. It also could blunt efforts to pursue engagement with Syria, after apparent U.S. overtures before November's Mideast peace conference in Annapolis, Md.

Yet some observers have remained skeptical that the Syrian structure was part of any nuclear program.

Mohamed ElBaradei, director-general of the International Atomic Energy Agency, the U.N. nuclear watchdog, has said that on the basis of satellite photos, IAEA experts believe it unlikely the site housed a nuclear reactor. ElBaradei's comments came in a Jan. 8 interview with the Arabic-language newspaper Al Hayat.

Syrian officials have said repeatedly that the building was not a nuclear installation but an empty military structure. Israeli officials have acknowledged the attack in vague terms but have provided no detailed information concerning the site.

U.S. allies acknowledge that the evidence of weapons activity could be stronger.

The European diplomat acknowledged that the available intelligence is "not as much as we would love to have about that."

He also said it was not clear how far along the Syrian effort was, or what the Syrian government is doing now at the site.

There have been some signs of rebuilding at the site, on the banks of the Euphrates in eastern Syria. Recent satellite photos by a private Colorado firm, DigitalGlobe, show a new building on part of the site, based on photos kept on the firm's website. However, private analysts said it was unlikely the Syrians would try to duplicate facilities destroyed in the Israeli attack.

The European diplomat said it was "possible" that the structure that seems to be under construction at the site was being built simply to conceal the nature of past activities.

David Schenker, a former Pentagon specialist on Syria now at the Washington Institute for Near East Policy, said a general agreement among Western governments that North Korea and Syria collaborated at a nuclear site would be "a pretty significant development."

There has been wide agreement that North Korea has helped Syria on its arms program. Pyongyang helped Damascus build Scud missiles, the crude, short-range weapons used by Iraq in the 1991 Persian Gulf War, as well as more advanced designs, Schenker noted.

Syria has sought to buy nuclear reactors in years past from several countries, including Russia, analysts say. International officials know of only one small reactor operating in Syria, a 30-kilowatt Chinese-supplied plant at Dayr Al Hajar. .

ElBaradei, in his Al Hayat interview, said IAEA officials would like to examine the Syrian site but have so far been barred by Damascus. Syria is a signatory to the Nuclear Nonproliferation Treaty, which allows for periodic inspections of declared nuclear materials and activities.

U.S. officials have asked North Korea whether it has worked with Syria on a nuclear program; the North Koreans have denied it.

As part of the ongoing denuclearization talks between North Korea and five international powers, U.S. officials are awaiting a formal declaration of Pyongyang's nuclear activities, including any nuclear collaboration with Damascus. North Korea, however, has said it plans no further disclosures, jeopardizing what had been considered a promising deal.

The potential warming between U.S. and Syrian officials already had begun to encounter strains.

After hints of progress last fall, friction has developed recently over Lebanon's selection of a new government. U.S. officials are unhappy with what they consider Syrian meddling in the process.

On Tuesday, as President Bush toured the Middle East, a bomb exploded near a U.S. Embassy convoy in Beirut, killing three people and injuring more than 20, including two U.S. Embassy employees who are Lebanese.

Schenker said the bomb may have been intended as a warning from Syrian-supported militants to U.S. officials.

## **North Korean Human Rights and U.S. National Security**

Jay Lefkowitz, U.S. Special Envoy for Human Rights in North Korea

Remarks at the American Enterprise Institute

Washington, DC

January 17, 2008

*[EXCERPT]*

Thank you Nick for that introduction. I'm pleased to be back here at the American Enterprise Institute. I would like to thank AEI for holding this conference, and for its ongoing commitment to freedom for people around the world, including, of course, North Koreans.

### RECENT EVENTS

Quite a lot has happened in regard to North Korea since I last spoke at AEI nearly two years ago. That was not long after a joint statement had been issued six-party talks in September 2005, in which North Korea promised anew to abandon its nuclear weapons and rejoin the nuclear Non Proliferation Treaty. Talks had begun two years earlier after it became clear that North Korea had not ended its nuclear program as required under the 1994 Agreed Framework. Not long after the speech, I was making plans to visit the Kaesong Industrial Complex inside North Korea to assess human rights conditions, when the regime tested ballistic missiles on July 4, 2006.

I was again considering a trip when the regime conducted a nuclear test that October. Economists teach us that correlation does not prove causality, but I have remained wary of announcing future travel to North Korea for fear of what might happen next!

About this time last year, the North Korean regime and the other five negotiating parties reached the February 13 agreement, under which North Korea promised the abandonment of one of its known nuclear facilities and the full disclosure of all nuclear activities in return for economic and energy assistance and other inducements, including the normalization of relations. An initial requirement that North Korea "discuss" all its nuclear activities within 60 days of the agreement was not met, and it has since missed a December 31 deadline to disclose fully its activities. Recently, the regime said it will strengthen its "war deterrent."

This is rather unfortunate as it signals that North Korea is not serious about disarming in a timely manner. It is a regrettable development for our security, but it is also bad for North Korea. It is unlikely the regime will get from the international community a better deal than the current one.

In other recent developments, the Congressional Research Service noted in a study last month that there are “reports from reputable sources that North Korea has provided arms and possibly training to Hezbollah in Lebanon and the Tamil Tigers in Sri Lanka... two of the most active terrorist groups...” This comes on the heels of widespread reports that North Korea may have been engaging in nuclear proliferation to Syria, which likely prompted the preemptive air strike by Israel four months ago.

Taken together, these developments should remind us that North Korea remains one of the hardest foreign policy problems for the U.S. to solve. Its conduct does not appear to be that of a government that is willing to come in from the cold. Moreover, it is increasingly clear that North Korea will remain in its present nuclear status when the Administration leaves office in one year.

*[deletia]*

## The North Korean Problem: Toward a Diplomatic Solution in 2008?

**Start:** Thursday, January 17, 2008 2:30 PM  
**End:** Thursday, January 17, 2008 4:00 PM  
**Location:** Wohlstetter Conference Center, Twelfth Floor, AEI  
1150 Seventeenth Street, N.W., Washington, D.C. 20036  
[Directions to AEI](#)

*In the final year of George W. Bush's presidency, Washington finds itself engaged in continued multilateral negotiations with Pyongyang. In striking contrast to its earlier approaches, the Bush administration now emphasizes the desirability of a comprehensive diplomatic solution to the North Korean problem.*

*Are talks and renegotiated agreements realistic means of mitigating the international community's current concerns about the Kim Jong Il regime? If so, what should the diplomatic agenda be? How should the United States approach the unresolved diplomatic issues, which range from North Korea's nuclear disclosure and the prospective removal of the country from the U.S. list of state sponsors of terrorism to Pyongyang's alleged abduction of foreign nationals and the regime's persistent violation of human rights? On January 17, key experts and practitioners will discuss these and other pressing questions looming on this year's policy horizon. Jay P. Lefkowitz, special envoy for North Korean human rights at the State Department, will give the keynote speech.*

2:15 p.m.	Registration	
2:30	Keynote Speaker:	Jay P. Lefkowitz, U.S. Department of State
3:00	Panelists:	Larry Niksch, Congressional Research Service L. Gordon Flake, Maureen and Mike Mansfield Foundation Michael Auslin, AEI
	Moderator:	Nicholas Eberstadt, AEI
4:00	Adjournment	

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
January 18, 2008

[EXCERPT]

QUESTION: Have you been able to figure out what Mr. Lefkowitz was talking about yesterday when he did his --

MR. MCCORMACK: Yeah.

QUESTION: Or why he was --

MR. MCCORMACK: Yeah, I don't know. You can talk to Jay. I don't know if he'll want to, but let me make it very clear. He is the envoy for issues related to human rights in North Korea. I know Jay is a very bright, dedicated person, a public servant who has taken on this responsibility on behalf of the Secretary of State. He is not, however, somebody who speaks authoritatively about the six-party talks. He -- his comments certainly don't represent the views of the Administration. We believe that the six-party talks provides a forum, a mechanism and an opportunity to realize the goal of a denuclearized Korean Peninsula. So I can only say that he must have been expressing his own opinions when he was speaking about his assessment of the six-party talks.

QUESTION: Well, he was -- you know, he was asked directly if he was representing the Administration position and he kind of waffled on that answer.

MR. MCCORMACK: Well, I can tell you he was not.

QUESTION: But -- well --

MR. MCCORMACK: I can tell you categorically --

QUESTION: You know, considering the --

MR. MCCORMACK: You'll hear the same thing from the White House.

QUESTION: Okay. But considering the sensitivity of this issue and the fact that the North Koreans often take comments from U.S. officials, whether they are speaking authoritatively for the Administration or not, they take them seriously. Is it -- are you worried that this is going to complicate the whole process?

MR. MCCORMACK: It shouldn't. It shouldn't if North Korea truly intends to follow through on all of its commitments to a --

QUESTION: But how do they know what to believe?

MR. MCCORMACK: Well, they -- as you would --

QUESTION: You (inaudible) speak about the opaque nature --

MR. MCCORMACK: Right.

QUESTION: -- of their regime. Well, they don't have anyone here who is looking in -- you know, they could say the same thing about you guys.

MR. MCCORMACK: I hear you, Matt, but they read the AP, they tune into CNN and they read reports from your news organizations. So if you faithfully report my comments here and accurately reflect them, I think they'll get the message.

QUESTION: Okay. Well, so did Mr. Lefkowitz get a little talking-to about --

MR. MCCORMACK: I'm not going to talk about any internal --

QUESTION: Would you expect him to be making comments --

MR. MCCORMACK: (Laughter.)

QUESTION: Would you expect him to make similar -- be making similar comments in the future?

MR. MCCORMACK: I'd be surprised, but again, this is -- there is a first amendment here and one can express one's own opinion and I have to emphasize that those were his own opinions and not the views of the Administration.

QUESTION: Did he make that clear to people in this building today or last evening?

MR. MCCORMACK: I think he understands where we stand on the matter.

QUESTION: Did he seek authorization before speaking out like this?

MR. MCCORMACK: Not that I'm -- not that I'm aware of. Again, let me repeat the only thing that I can say --

QUESTION: Is he going to in the future?

MR. MCCORMACK: What's that?

QUESTION: Is he going to in the future if he didn't this time?

MR. MCCORMACK: You know, Arshad, I don't know. You know, I don't know. Look, he has a job to do and with respect to being the envoy on the issue of North Korea and human rights. That's his lane. His lane is not talking about the six-party talks, the status thereof, his assessment for the prospects of success. I don't know if I can make it any more clear than that.

QUESTION: Well, except that he did speak about the six-party talks. So he was out of his lane?

MR. MCCORMACK: Yes. He was expressing his own opinions.

QUESTION: And can you tell us, has he been told that he was out of his lane?

MR. MCCORMACK: I'm not going to -- I'm not going to get into that.

QUESTION: Why is that such a sensitive question? I mean, if you're really trying to convince the North Koreans that this Administration isn't split down the middle --

MR. MCCORMACK: Right.

QUESTION: -- that there are some hawks who agree with the kind of John Boltons of the world who are fighting against what Chris Hill is trying to do or arguing against it.

MR. MCCORMACK: All I can tell you is --

QUESTION: You should say -- this guy has been told he was speaking out of turn.

MR. MCCORMACK: Well, Matt, you know, we don't inquire every time your editors yell at you. (Laughter.) So --

QUESTION: I'd be happy to give you the details of all --

MR. MCCORMACK: I (inaudible) we would be quite busy, I know.

QUESTION: Well, I'm willing to --

MR. MCCORMACK: (inaudible)

QUESTION: I'd like to share those, if you're willing to tell me -- (Laughter.)

MR. MCCORMACK: Perhaps we can have a future discussion about that. But let me tell you that if you listened to what the President of the United States says, the Secretary of State says, and Ambassador Hill said, those are the people who are involved in the policy process who speak authoritatively. Of course, you hear from people like me as well. I'm speaking on behalf of Secretary Rice. Those are the people who have -- are sitting at the table making decisions about the policy. And at the end of the day, the only voice that matters is that of the President of the United States and this is his policy and I think you'll hear that from the White House. Yeah.

QUESTION: Well, does Mr. Lefkowitz -- does he still have his job?

MR. MCCORMACK: (Laughter.) He is still the envoy, yes.

QUESTION: For the moment.

MR. MCCORMACK: (Laughter.) He's still the envoy.

Yeah, Elise.

QUESTION: I mean, were these ideas that he's tried to advance in the Department? Or is this like the first --

MR. MCCORMACK: Yeah. Elise, I don't know. I mean, it doesn't really matter because it's --

QUESTION: I mean, are these views that shared that he shared with you?

MR. MCCORMACK: It's irrelevant. That's not his job. His job is to work on issues related to human rights in North Korea, not the six-party talks.

QUESTION: Well, part of his comments are saying that -- listen, we're not getting any -- we're not really going to get anywhere on the nuclear issue. I understand that's not part of his portfolio. But he's saying that the issue of human rights is not in the six-party talks. It should be and this needs to be more of a comprehensive dialogue with North Korea on the issue of human rights. I mean, specifically on his portfolio, he's saying that there's not enough attention put to human rights.

MR. MCCORMACK: Right. But yeah, I don't think you're going to find anybody else who is more adamant in speaking out about the issue of human rights in North Korea than the President of the United States, followed by a close second by the Secretary of State. The fact of the matter is if you are successful in the six-party talks in reaching a denuclearized Korean Peninsula, you have a much different relationship between North Korea and the rest of the world. And certainly that opens up many, many different potential possibilities for North Korea as well as the North Korean people, on top of the fact, you have a much more stable security situation in the region. So any idea that somehow this President and this Secretary of State are not concerned about human rights in North Korea just couldn't be further from the truth.

QUESTION: So you would reject the idea that in an effort to rush to "yes" -- to get a "yes" on the agreement on security, you're not, you know, kind of giving them a pass at least for the foreseeable future on human rights?

MR. MCCORMACK: Well, this is the first time that we've been accused of rushing the six-party talks. I think most of the questions that I've gotten over the past year in this room have talked about, well, why is this thing going so slowly. Well, we're going through this in a very deliberate way. We're not lowering the bar for anybody and we have made a lot of progress. We are now to a point where we're breaking new policy ground. You have the North Koreans. They are disabling the Yongbyon facility -- never happened before. We are working with them on a declaration. They haven't yet come forward with a complete declaration, but it's still our hope that they will and we're going to keep working with them on that. Once we have that, that is completely a new policy ground. And from that point on, you can think about a lot of other elements of that September 2005 agreement that you can implement, including getting to work on dismantling the entire North Korean nuclear program.

## **U.S. Sees Stalling by North Korea on Nuclear Pact**

By HELENE COOPER

January 19, 2008

WASHINGTON — A debate is under way within the Bush administration over how long it can exercise patience with North Korea without jeopardizing the fulfillment of a nuclear agreement that President Bush has claimed as a foreign policy victory.

With North Korea sending signals that it may be trying to wait out Mr. Bush's time in office before making any more concessions, administration officials are grappling with how the United States should react.

The debate has fractured along familiar lines, with a handful of national security hawks in Vice President Dick Cheney's office and at the State Department arguing for a more confrontational approach with Pyongyang.

On the other side, Mr. Bush's lead North Korea nuclear negotiator, Christopher R. Hill, has argued that the United States should continue a more restrained approach, one that is widely credited with bringing about an agreement last year that is intended eventually to lead to the denuclearization of the Korean peninsula.

While the restrained stance still appears to have support from Mr. Bush and Secretary of State Condoleezza Rice, it is coming under fire from conservative critics, both in and out of the administration.

In a public departure from administration policy, Jay Lefkowitz, a conservative lawyer who is Mr. Bush's envoy on North Korean human rights, said this week the North would likely "remain in its present nuclear status" when the next president took over in January 2009.

"North Korea is not serious about disarming in a timely manner," Mr. Lefkowitz told an audience at the American Enterprise Institute, a conservative think tank. "We should consider a new approach to North Korea."

At issue is a declaration that North Korea was supposed to make by the end of last year formally stating everything in its nuclear inventory. When the North missed that deadline, administration officials initially sought to minimize the significance of the lapse, but they have expressed increasing concern in the wake of a North Korean statement on Jan. 4, in which the North insisted that it had already disclosed everything that it needed to.

The North has cited a list of nuclear programs that it provided in November, but the United States has rejected the list as incomplete.

"Some people make the argument that we're just pursuing a policy of talks that go nowhere," said one administration official with knowledge of the debate within the administration.

John R. Bolton, the former United States ambassador to the United Nations, argued in a Wall Street Journal op-ed article last week that the Bush administration should dump the nuclear pact with North Korea because, he said, Pyongyang was not interested in giving up its nuclear program. “They’re in the classic North Korean role of deception,” Mr. Bolton said in an interview. “It’s like groundhog day; we’ve lived through this before.”

Mr. Bush said the two countries needed to resolve three sticking points: the number of warheads that North Korea has built; the amount of weapons-grade nuclear material produced by North Korea; and the need for North Korea to disclose that it has passed nuclear material to others.

The proliferation issue has taken on new importance after an Israeli strike in Syria in September, which American and Israeli officials said was conducted against a nuclear facility near the Euphrates River that was supplied with material from North Korea. Administration officials want North Korea to disclose what help it may have given Syria, although they also say that the help came before the North agreed to dismantle its nuclear reactor and disclose its nuclear programs.

Mr. Bolton and other critics of the agreement, including the officials in Mr. Cheney’s office, never liked the pact to begin with, and advocates of the deal with North Korea say their second-guessing is expected.

They argue that the Bush administration’s previous confrontational strategy with North Korea is part of what led to the North’s detonation of a nuclear device in October 2006.

Besides the United States and North Korea, the other parties to the nuclear pact include China, South Korea, Japan and Russia.

“People lambaste the six-party process, and sure, it offers no refuge for those in need of instant gratification,” Mr. Hill, the negotiator, said in an interview. “But when asked for alternatives” to the nuclear pact, Mr. Hill said, “even the noisiest critics fall silent.”

Administration officials say that the North has remained true to one part of the October agreement: It has made great strides in disabling and dismantling its nuclear reactor at Yongbyon. “Bush can say, with credit, that he has achieved more than any other administration as far as dismantlement,” said Gary Samore, a vice president at the Council on Foreign Relations who helped negotiate the Clinton administration’s 1994 agreement with North Korea. “He can say that he managed to freeze further production, and handed the next administration a diplomatic process.”

But Bush administration officials say that they want more than just dismantlement on their record, and insist that they have not written off their chances of getting North Korea to make a complete declaration of its nuclear programs before the end of the administration.

Bush officials say they will not ultimately be able to verify that North Korea has got rid of its nuclear weapons program unless they first know what is in the program.

“The issue of the declaration is important because that which they declare must later be abandoned,” a senior administration official said.

The official, who asked that his name not be used because he was not authorized to speak publicly on the issue, said that the administration really wanted North Korea to provide an explanation for purchasing aluminum tubes that could be used to convert uranium gas into nuclear fuel.

In its Jan. 4 statement, North Korea accused the United States and the other countries in the six-party talks of renegeing on promises made under an October deal, including the shipment of one million tons of fuel and the removal of North Korea from the United States' list of states that sponsored terrorism.

So far, North Korea has received about 150,000 tons of fuel, and Bush administration officials say the removal of the North from the terrorism list will depend on whether it meets the requirements of the October deal.

North Korea agreed in October to dismantle its nuclear facilities and to disclose all of its past and present nuclear programs by the end of 2007 in return for 950,000 metric tons of fuel oil or its equivalent in economic aid. Last month, Mr. Bush reached out directly for the first time to the North Korean leader, Kim Jong-il, holding out the prospect of normalized relations with the United States if North Korea fully disclosed all nuclear programs and got rid of its nuclear weapons.

Briefing En route Berlin, Germany  
Secretary Condoleezza Rice  
En route Berlin, Germany  
January 22, 2008

[EXCERPT]

QUESTION: Can I ask about bilats (inaudible)? Do you get the sense that the Chinese and the Russians are confused at all about (inaudible) the Administration's position on North Korea after Mr. Lefkowitz's comments?

SECRETARY RICE: Since Jay Lefkowitz has nothing to do with the six-party talks and I would doubt very seriously that they would recognize the name, no, I don't think they're confused.

QUESTION: You don't think the Chinese (inaudible)?

SECRETARY RICE: No.

QUESTION: (Inaudible) a Boston Journal editorial page doesn't (inaudible) suggested that he was (inaudible) the Administration.

SECRETARY RICE: Well, I can tell you in no uncertain terms that he wasn't. He's the human rights envoy. That's what he knows. That's what he does. He doesn't work on the six-party talks. He doesn't know what's going on in the six-party talks and he certainly has no say in what American policy will be in the six-party talks.

QUESTION: (Off-mike.)

SECRETARY RICE: And by the way, the President has spoken as to what our policy is in the six-party talks. I think that's what --

QUESTION: (Off-mike.)

SECRETARY RICE: I know where the President stands and I know where I stand and those are the people who speak for American policy.

<http://www.haaretz.com/hasen/spages/947169.html>

## **Ex-U.S. envoy Bolton: Chance Bush will strike Iran near 'zero'**

By Yuval Azoulay and Haaretz Service

Last update - 20:03 22/01/2008

Former U.S. ambassador to the UN John Bolton said on Tuesday that there is almost no chance that U.S. President George W. Bush will approve a military strike on Iran before he leaves office in January 2009.

"It's close to zero percent chance that the Bush Administration will authorize military action against Iran before leaving office," he said.

Bolton addressed the Herzliya Conference of the Institute for Policy and Strategy, as part of a panel discussion on Iran's nuclear program.

He said the recent American intelligence assessment, according to which Iran halted its nuclear program in 2003, was a politically-motivated report intended to restrict the Bush Administration's room to maneuver.

"It seems that for the next few years the United States will be a bystander to the process," Bolton said.

Bolton also said that Israel's "stunningly successful" military strike on Syria last September could constitute a precedent for a similar attack on Iran in the future.

The Israel Air Force attacked a structure in northeast Syria that foreign media reports said was a nuclear facility built with North Korean assistance. Syria and North Korea both denied the reports, and Israel has remained silent. Bolton had warned of nuclear cooperation between the two countries before the strike.

"Why wouldn't the government of Israel want to take the credit for a stunningly successful military strike?" Bolton asked.

Bolton said Israel and the United States know very well that Syria's close relations with North Korea have not been severed, but refused to elaborate. He said North Korea might sell nuclear know-how and a ready-to-use nuclear bomb to the highest bidder.

"The proliferation of nuclear weapons in the middle east will start with North Korea. It counterfeits money, sells narcotics, and it will do anything for hard money," he said.

He insisted that Syria's nuclear efforts should be taken with the utmost seriousness, as North Korean expertise and Iranian willingness to fund are more available than ever.

He insisted that it be made known to the public that the facility that was hit was an offshoot of a joint Syrian, North Korean, and Iranian cooperation.

## **Bolton: Israel May Have to Strike Iran Soon**

On: Thursday, January 24, 2008 - By: Israel e News

*[EXCERPT]*

Former US ambassador to the United Nations John Bolton said on Monday [2008-01-21] that Israel may have to take military action to prevent its archfoe Iran from acquiring an atomic bomb.

Bolton also said that further UN sanctions against the Islamic republic will be ineffective in stopping Iran's controversial nuclear programme which Israel and the US believe is aimed at developing a bomb -- a claim denied by Tehran.

"One can say with some assurance that in the next year the use of force by the United States is highly unlikely," Bolton told AFP on the sidelines of the Herzliya conference on the balance of Israel's national security.

"That increases the pressure on Israel in that period of time... if it feels Iran is on the verge of acquiring that capability, it brings the decision point home to use force," he said.

The hawkish former diplomat said that after a US intelligence report published late last year that claimed Iran had suspended a nuclear weapons programme in 2003, the US was unlikely to take military action against it.

"The pressure is on Israel now after the National Intelligence Estimate because, I think, the likelihood of American use of force has been dramatically reduced," he said.

Ambassador Bolton devoted the first part of his speech to an attempt to push the Israeli press into revealing details of the strike against the suspected Syrian nuclear facility four months ago. "There is a lot that we don't know about the facility because of the veil of secrecy that the Israel government and the American government have tried to throw over it," he said.

"We don't know for example exactly what the facility was – whether it was a clone of the Yongbyon reactor; whether it was a uranium enrichment facility; whether it was a storage location for North Korean plutonium or plutonium based weapons," he added, and explained that he could speak freely at the conference because the American Constitution's First Amendment applied to him even when he was abroad (this elicited laughter from the audience).

Bolton calls Israeli press 'timid'

Bolton went on to list his conjectures: "We don't know if it was North Korea in effect renting space in Syria to recreate the North Korean program. We don't know if it was a sale of technology or equipment from North Korea directly to Syria and we don't know whether it was a joint venture perhaps between Syria and North Korea working together," he said. "Our governments, however, do know the answers to some of these questions."

He continued with a jab at Israel's media: "What I don't understand really is the timid nature of the Israeli press which I know knows a lot more about this strike than it's been willing to talk about. I am sure somewhere in the Israeli press there is a John Peter Zengler who is willing to risk something in order to give the public more information about this."

John Peter Zengler was an 18th century publisher who was arrested for libelous sedition after printing criticism of the governor of New York and then acquitted, in what is considered a landmark trial in the development of the freedom of the press in the U.S.

Bolton explained that this information is being withheld for fear that if it came out that North Korea once again, following its game plan, was engaged in nuclear proliferation contrary to its obligations, it would embarrass the U.S. which is seeking ways to back off of North Korea.

Iran 'noticed' IAF raid

Regarding the IAF Syria raid, Bolton said: "The daring and successful Israeli military strike... has obvious significance for the potential of a military strike against Iran's nuclear program. I think, given the debacle caused by our National Intelligence Estimate, that it's close to zero likelihood that President Bush will authorize use of military force against Iran's program before he leaves office, absent some dramatic new development."

He concluded: "Certainly in Teheran you can bet that they took careful notice of what the Israeli Defense Force did. Penetrating Russian supplied radars very similar to the air defenses that Teheran has; using techniques that could be very useful for a long range strike against Iran; this is the kind of operation that the Iranians need to continue to worry about. Because I think with the collapse of American policy, the Israeli strike against the Syrian / North Korea facility is the harbinger of what may be – absent regime change in Teheran – the last resort... Unless you are prepared to see Iran proceed unmolested toward a nuclear weapons capability, which this NIE has given them free rein to do in my judgment, you are coming very close to a decision point in this country of whether you will use military force to stop Iran."

Daily Press Briefing  
Gonzalo R. Gallegos, Director, Office of Press Relations  
Washington, DC  
January 22, 2008

*[EXCERPT]*

QUESTION: Do you – on North Korea, they’re saying in a newspaper commentary that the U.S. is dragging its feet on its commitments to the nuclear deal and saying the U.S. is slowing progress on the deal.

MR. GALLEGOS: Yeah. Well, I have something on that. The U.S. has met and is meeting its commitments. As part of the February 13 agreement, the United States agreed to begin the process of removing the designation of North Korea as a state sponsor of terrorism. We also agreed to advance the process of terminating the application of the Trading with the Enemy Act to North Korea. Criteria for removing a country’s designation as a state sponsor of terrorism and lifting the application of the Trade with the Enemy Act – Trading with the Enemy Act are set forth in U.S. law. The U.S. action related to the terrorism designation and the Trading with the Enemy Act application are dependent on the – on North Korea’s fulfillment of the requirements

of U.S. law and its progress on addressing concerns on the nuclear issue and meeting its denuclearization commitments.

QUESTION: Is there any risk to this turning into a rift?

MR. GALLEGOS: We’re going to continue working with our close allies, Japan and South Korea, and our partners China and Russia, as well as North Korea, to deliver a complete and correct declaration of all its nuclear programs, including its nuclear weapons and programs, facilities and proliferation activities and to complete the agreed disablement activities at the three core facilities at Yongbyon.

We’re going to make --

QUESTION: Is there any –

MR. GALLEGOS: We’ve been very clear in the past where we stand on this. Our policy has not changed. We’re going to continue.

For Immediate Release  
Office of the Press Secretary  
January 23, 2008

Press Briefing by Dana Perino  
James S. Brady Press Briefing Room  
1:49 P.M. EST

[EXCERPT]

Q Regarding the removal in North Korea from the list of terrorist states, what is the United States government -- (inaudible) --

MS. PERINO: Well, regarding whether or not North Korea will be removed from the State Sponsor of Terrorism list, first and foremost, the ball is in North Korea's court right now. The agreement that we made with them is that there would be actions for actions. And right now, we are waiting on North Korea to release -- or to give to us their complete and accurate declaration of all of their nuclear activities, including proliferation activities. We don't have that yet from them; therefore, there's not any movement on any of the other parts of the agreement. So that's where we are right now. The ball is in their court. We are waiting for them.

Q That answer suggests, Dana, that the decision about whether to remove North Korea from the terror list is contingent on a quid pro quo, rather than on the merits of whether they should be on the list or not.

MS. PERINO: That's not what I was suggesting. So -- of course, there's a lot of factors that go into the President's decision as to whether or not to remove a country from the State Sponsor of Terrorism list. But where we are right now at this moment is waiting for North Korea to give to us their complete and accurate declaration that they said they would give to us last February.

Q So you're not concerned, for example, about the prospect that North Korea was proliferating with Syria --

MS. PERINO: I said that all of those activities -- nuclear activities, proliferation, et cetera, and I'm not commenting on anything specific, but all of those activities have to be disclosed.

Q They're not anywhere close to being removed, then?

MS. PERINO: I would say it's definitely not imminent. And so we need to have that declaration before we could even talk about any next steps.

Q Thank you.

END 2:11 P.M. EST

## **Syria strike invoked in Olmert's defense**

Published: 01/24/2008

One of Ehud Olmert's confidants invoked last year's Israeli air strike in Syria as proof of the prime minister's military mettle.

Vice Premier Haim Ramon was asked in a Channel Ten television interview broadcast Wednesday [2008-01-23] about the government's decision-making on security issues, a topic of pressing public interest ahead of next week's publication of an inquiry's final report on the setbacks of the Second Lebanon War.

"You all heard, from foreign sources, what happened at the beginning of September in Syria," Ramon said.

"The process of decision-making ahead of the event was, according to everyone involved in it, extraordinary - in terms of deliberations, organization, preparation, and considering the alternatives."

Israel issued a blanket gag on descriptions of the Sept. 6 bombing run, forcing local media to rely on foreign reports that suggested the target was a nascent Syrian nuclear reactor.

Though he stopped short of confirming this, Ramon's remarks - the most expansive by any Israeli official - drew charges that he was exploiting classified information in a bid to boost popular support for Olmert and off-set the criticism of the Winograd Commission of inquiry.

<http://www.ynetnews.com/articles/0,7340,L-3498420,00.html>

## **Olmert expresses surprise over Ramon's Syria remarks**

Published: **01.24.08**, 17:21 / Israel News

Prime Minister Ehud Olmert says he was surprised about Vice Premier Haim Ramon's remarks regarding Israel's strike on a Syrian site last year. In an interview to Channel 10 Wednesday, Ramon praised the decision-making process that led to the operation.

"I was surprised by Ramon's words. They were not coordinated with me," Olmert said following a tour of the Arava region. (Roni Sofer)

## **Samore: North Korea May Delay Nuclear Treaty Implementation Until 2009**

Interviewee:

Gary Samore, Vice President, Director of Studies, and Maurice R. Greenberg Chair

Interviewer:

Bernard Gwertzman, Consulting Editor

January 25, 2008

Gary Samore, an arms control official in the Clinton administration, says the prevailing view in the Bush administration is that North Korea is unlikely to carry out the terms of the international nuclear disarmament agreement it signed in February 2007 until there is a new president in the White House. He says U.S. officials believe that “the North Koreans are certainly not, in the remainder of this year, going to give up their nuclear weapons.”

**There’s been a certain amount of public confusion over whether North Korea is complying with the agreement it made at the Six-Party Talks last year, to close down the Yongbyon reactor and also provide full declaration of its past nuclear activities by last December 31 and eventually to close down all these activities. What’s causing this confusion?**

You have to separate the two steps that North Korea was required to take. The first step was to disable the nuclear facilities at Yongbyon. North Korea, in fact, has taken most of the steps required to disable the five-megawatt reactor. So it would not be easy for North Korea to resume production of plutonium. At the same time it appears that the reprocessing plant at the Yongbyon facility is still intact, so in theory, if the North Koreans wanted to play hardball, if they wanted to create a crisis, they could reprocess the spent fuel they already have on hand to recover enough plutonium for a weapon or two. They still have a threat in their arsenal even though the five-megawatt reactor has been pretty much disabled.

**Weren’t they supposed to close down the reprocessing plant too?**

Yes, part of the agreement is to disable both the reactor and the reprocessing facility. But the North Koreans have slowed down the disablement, in part because they are complaining that the heavy fuel oil, which they are getting paid in return for disabling the facilities, has been slow in coming. In part, this is because the second step of the process, the “nuclear declaration,” has completely gone off the rail. When Christopher Hill, the assistant secretary of state for East Asian and Pacific affairs, was in Pyongyang in November, he was shown a draft declaration by the North Koreans. Hill told them that the declaration was completely inadequate in terms of the amount of plutonium that it declared, in terms of its explanation of North Korea’s secret uranium enrichment, and in terms of what the North said about possible nuclear exports to Syria. Hill told the North Koreans that unless they gave him a more credible, plausible declaration he would not be able to sell it back in Washington. In return for a plausible declaration, the United States has promised to take North Korea off the list of state sponsors of terrorism. The process is stuck now because North Korea has not given Hill a plausible declaration.

### **Is there a new deadline?**

I don't think the administration wants to set a deadline. It is hoping that when the new South Korean government takes office in February—the new president-elect, Lee Myung-bak, has campaigned on a platform of being tougher with North Korea—that this might influence the North Koreans to make a more forthcoming declaration. That remains to be seen. It may be that the North Koreans have decided they are just going to freeze the process and wait until the next U.S. president takes office and then resume the negotiations. They may come forward with a more forthcoming declaration in the hopes of getting off the list of state sponsors of terrorism. Or they might, if they want to escalate, threaten to stop the disablement process and to actually separate plutonium from the spent fuel they have on hand. They have options in front of them.

### **In an article by nuclear experts David Albright and Jacqueline Shire that appeared in the Washington Post on Thursday [January 24, 2008], they said that North Korea had revealed that it had a separated plutonium stockpile of thirty kilograms and denied that it had a uranium enrichment program. Were the North Koreans that specific?**

That's my understanding. The problem is that [chief U.S. negotiator] Chris Hill was expecting a much bigger number. Privately he has been saying the number would be closer to sixty. The natural question is why did the North Koreans come in with a very low number? David Albright is right; thirty kilograms is still within the range, because we don't know of course how much plutonium they actually have, but it's at the lower end of the range. The natural suspicion is that North Korea has deliberately given us a low number so they can hide the other twenty or thirty kilograms that they have. Chris Hill just thought that thirty kilograms wasn't credible enough to take back to Washington. On the uranium-enrichment side, we know that we have extremely good information that the North Koreans were out trying to buy large quantities of specialized materials of components for enrichment programs.

Some of their efforts to buy this specialty material were intercepted and stopped mid-shipment. We know that they were trying to buy very large quantities; enough for thousands of centrifuges. For the North Koreans to come back and say "we didn't really have an enrichment program" just is not plausible.

### **This is the issue which halted the North Korea-U.S. talks in 2002, wasn't it?**

Absolutely. The CIA [Central Intelligence Agency] concluded that North Korea was cheating on the Agreed Framework, signed by the Clinton administration in 1994, by pursuing the secret enrichment program. That judgment was correct. What we don't know is how far that program went. We know that North Korea got a small quantity of centrifuge machines from Pakistan. We know that they were out trying to buy much larger quantities of raw material, which would allow them to reverse engineer and build thousands of centrifuge machines. But how far that program proceeded and what the status is now, we just don't know. Unless North Korea comes forward with a more plausible explanation rather than just denying everything, then the whole process of an accurate declaration is at a standstill.

### **If they don't comply then they don't get the oil?**

No, there's a separation for disablement of Yongbyon, for which they are getting the oil, and the declaration, for which they would be taken off the list of state sponsors of terrorism. In theory, the

process could be on hold for the rest of this year. As long as they don't reverse disablement, they would continue to get paid the heavy fuel oil.

**What do they still have to do on disablement?**

My understanding is they have done most of what needs to be done on the five-megawatt reactor. There's still a question of how to dispose of the existing spent fuel, which has to be removed from the reactor and stored in a cooling pond right on site. As I understand it, they still have to take some steps to disable the reprocessing facility but that's on the very end of the list. My guess is that the North Koreans are holding that in reserve as it allows them to threaten to resume reprocessing.

**Let's talk about Jay Lefkowitz, who is a human rights ambassador on North Korea. He says the North Koreans are not going to comply and it's all a failure by the Bush administration. What do you make of his comments?**

He said publicly what a lot of administration officials believe privately—that the North Koreans are certainly not, in the remainder of this year, going to give up their nuclear weapons. And it looks like they may not even submit a credible declaration, in which case the whole process would stop. In that case, the next administration would have to pick the whole issue up.

**Do you think the North Koreans now figure they should wait for the next administration?**

Everybody in Asia is beginning to think beyond the Bush administration, and in the view of all the important players—China, South Korea, Japan and North Korea—the Bush administration has very little time left in order to make much more progress with the North Koreans. That doesn't mean it is all over. It is still possible that the North Koreans would make a credible declaration, in which case, the United States would remove them from the list of state sponsors of terrorism, and the next steps in the process would begin, which would include negotiations for a peace treaty, and negotiations for the dismantlement and removal of North Korea's nuclear weapons. But the longer this stalemate goes on, the more and more it looks like the North Koreans might have decided they would be better off trying to make a deal with the next administration.

**That's one subject that most candidates seem to have avoided speaking about. I know they all have prepared statements.**

It's true. What is interesting is that the Democrats are more sympathetic and supportive of the new approach the Bush administration has taken than the Republican candidates. At least in the past, Senator John McCain [R-AZ] has been very critical of this kind of approach which the Clinton administration began in trying to negotiate these kinds of incremental arms-control agreements with North Korea. So my guess is that Senator McCain is not very sympathetic with what President Bush has done, but there is very little value in raising this issue as long as the situation seems to be under control. It is certainly not a crisis that any of the candidates have to address.

**Do we know for sure how many nuclear weapons North Korea possesses?**

We can guesstimate based on our estimates of how much plutonium they have and how much would be required for each weapon. Those are the two variables. It is reasonable to say that they have something

on the order of less than a dozen weapons unless they have some sources of plutonium that we don't know about.

### **What kinds of weapons are these?**

These would be simple weapons.

### **Missile warheads?**

It is another uncertainty. We don't know if the North Koreans can build warheads small enough to be delivered by the No-dong missile. That's an interesting issue because we know that the Pakistani bomb will fit on the No-dong missile. That's why Pakistan bought the No-dong missile. The question which has never been fully answered is whether in addition to providing centrifuge technology, the Pakistanis might have provided nuclear-warhead technology to North Korea, in which case the North Koreans would have in their possession the nuclear design that is capable of being delivered by missile. That's just speculation. We don't know the answer.

### **What about the Syrian connection—the secret Israeli bombing of a facility in Syria, said to have been put together with North Korean help?**

I still hear different things. The Israelis are absolutely convinced that they bombed a nuclear reactor under construction and that the North Koreans were providing technical assistance and material for that project. Some people in the U.S. administration accept that. Others are more skeptical and say it was a kind of military facility but whether it was nuclear is really in doubt. Amazingly enough, unlike most situations, not enough has come out in the public domain to make an independent judgment. The people who are reviewing the actual evidence are not talking.

## White House Mulls Giving North Korea Some Wiggle Room on Nuke Declaration

Friday, January 25, 2008

By James Rosen

WASHINGTON — With North Korea almost a month overdue on its obligation to provide a complete and correct declaration of all its nuclear programs and materiel, the Bush administration — under increasing pressure from American conservatives to take a harder line with Pyongyang, or abandon the talks altogether — is now considering accepting a declaration that would be less than complete, carving out the two most contentious issues for later resolution, sources told FOX News.

The foreign diplomatic sources, representing countries involved in the six-party nuclear disarmament talks with North Korea — a group of nations that includes the U.S., Russia, China, Japan, and South Korea — told FOX News that the U.S. envoy to the talks, Assistant Secretary of State Christopher Hill, has floated the idea of allowing the North Koreans to exclude from their declaration both their highly enriched uranium (HEU) program and their nuclear collaboration with Syria, with the understanding that these issues would be revisited later.

However, Hill said the idea he is considering accepting a less-than-complete declaration from Pyongyang is "completely inaccurate." Such an option, Hill told FOX News in an e-mail message, "has never been under consideration."

The sources said such a less-than-complete declaration would mirror the very proposal made by the North Koreans in November, at which U.S. negotiators scoffed, dismissing the incomplete submission as mere "research" instead of a real declaration. But the North Koreans have since "put their foot down," said an American analyst familiar with the Bush administration's internal deliberations, and made clear their intention to withhold the declaration unless and until the U.S. capitulates swiftly on one of North Korea's key demands: that the country be removed, or "de-listed," from the State Department's list of nations that sponsor terrorism, where North Korea has had a spot since 1988. As another sign of Pyongyang's hardening position, analysts point to its recent and abrupt cancellation of a planned working group meeting between North and South Korean officials on the establishment of a rail line between the two Koreas.

In private talks, FOX News has learned, the North Koreans have also claimed that none of the three written agreements negotiated in the six-party process — neither the landmark September 19, 2005 agreement nor the implementation accords of February 13 and October 3, 2007 — requires the North to declare any activities with regard to proliferation with countries like Syria. The text of the September 19 agreement committed the North only to "returning, at an early date, to the Treaty on the Non-Proliferation of Nuclear Weapons and to IAEA safeguards," nuclear accords from which the North has formally withdrawn but which, if observed, would bar the North from covertly exporting nuclear technology. Likewise, in the text of the October 3 implementation accord, North Korea committed not to "transfer nuclear materials, technology, or know-how beyond its borders." However, by that point, the suspected nuclear facility in Syria that was allegedly built with North Korean assistance had already been targeted by the Israeli Air Force and apparently destroyed.

"This is a matter of interpretation," said one foreign diplomat. But American conservatives, predictably, do not see it this way, and have forecast a "wild" eruption on Capitol Hill if North Korea is

taken off the terrorism list despite having covertly exported nuclear technology to Syria, another country on the State Department's terror list. These critics of Assistant Secretary Hill's approach — which sources say has the full backing of Secretary of State Condoleezza Rice — cite the post-9/11 Bush Doctrine, which was perhaps most succinctly articulated by President Bush on September 25, 2001, during a joint appearance at the White House with Japanese Prime Minister Junichiro Koizumi: "[I]f you harbor a terrorist, if you aid a terrorist, if you hide terrorists, you're just as guilty as the terrorists." Thus North Korea cannot have earned the right to be de-listed, these critics argue, if it has "aided" a fellow terror-sponsoring state like Syria, let alone by providing it with nuclear technology.

A foreign diplomat suggested that the idea of carving out the HEU program and Syrian issue for later resolution will not fly because of the strong opposition it will encounter among American conservatives. "These two issues got too much publicity here," the diplomat said.

As recently as January 7, when he was visiting Tokyo, Assistant Secretary Hill appeared utterly unwilling to accept an incomplete declaration from North Korea, saying "complete means complete... We can't go with something that's 80 percent or 90 percent. We really need to go with something that's complete." The Japanese, whose top priority in the six-party Talks has been to determine the status of roughly two-dozen Japanese citizens abducted by North Korea over the past two decades, typically take the hardest line with Pyongyang, and are keen to see the North remain on the U.S. terror list until the abductions issue is fully resolved.

Yet on the same trip, just three days later, during a stop in Beijing, China — the North's chief patron and ally in the talks — Hill hinted at a sudden willingness to accept an incomplete declaration, if only to restore momentum to the stalemated six-party process. Because the North Koreans' original submission contained "some glaring omissions," Hill told reporters on January 10, the U.S. considered whether to "invite them to submit an incorrect and incomplete declaration and then start haggling over that. But instead we chose to continue the discussion with the idea that when they do produce a declaration, it ought to be pretty close to being final."

Besides the expected backlash from domestic conservatives within the Bush administration and on Capitol Hill, secretaries Rice and Hill face three major problems in their efforts to move beyond the impasse over the North Korean declaration. First, according to one foreign diplomat, is that the North "does not trust the U.S. promises," particularly on the de-listing issue.

Second is the clock: A number of sources contacted by FOX News suggested North Korea is determined to wait out the end of the Bush administration, in the hope, as one American analyst put it, that "another Madeleine Albright will come to Pyongyang and start toasting champagne glasses" with the regime of Kim Jong Il. This notion was most forcefully expressed in recent days by Jay Lefkowitz, the State Department human rights envoy who told the American Enterprise Institute on January 17 that North Korea is "not serious about disarming in a timely manner" — remarks that earned swift and unusually severe repudiation from State Department spokesmen and Secretary Rice herself.

A third problem, and perhaps the most serious, is that Washington's allies in the six-party process have grown openly skeptical about the reliability of American intelligence on the North's HEU program and its collaboration with Syria and other rogue states. This skepticism is borne of the celebrated intelligence failure with regard to Iraq's WMD programs, and, too, the seeming about-face, on the issue of Iran's nuclear program, contained in the National Intelligence Estimate released December 2. "If the

U.S. shared its information regarding the North Korean nuclear programs with the other parties [in the six-party process]," said one foreign diplomat, "and all agree it is really strong evidence, then it would be much easier to get the North to confess."

This diplomat also pointed to the public acknowledgment by senior Bush administration officials in early 2007 that their confidence in the U.S. intelligence data showing that North Korea was pursuing an HEU program had been downgraded from "high" to "at least moderate."

[http://www.washingtonpost.com/wp-dyn/content/article/2008/01/25/AR2008012502766\\_3.html](http://www.washingtonpost.com/wp-dyn/content/article/2008/01/25/AR2008012502766_3.html)

## **A Conversation With Ehud Barak**

By Lally Weymouth

Saturday, January 26, 2008; A17

*[EXCERPTS]*

Newsweek-The Post's Lally Weymouth interviewed Israeli Defense Minister Ehud Barak in Davos, Switzerland, this week. Excerpts:

**Can you say anything about the raid that Israel waged into Syria, supposedly against a nuclear facility, last September?**

**No.**

**Do you think that the Syrian track should be pursued?**

I think that we have shown . . . a respect for Syria, its interests and its leaders. We expect from them to do the same regarding Israel. If this basic kind of element will be there, I think a Syrian track is . . . potentially positive.

**I thought the U.S. has opposed Israel negotiating with Syria.**

I think they realized in recent years that we understand the Syrian issue better.

## **KCNA Ridicules U.S. Mandarin's Reckless Remarks**

Pyongyang, **January 28** (KCNA) -- Some days ago, Lefkowitz, special envoy for North Korean human rights issue of the U.S., was impudent enough to poke his nose into the nuclear issue, only to bring shame to himself.

What he uttered is nothing but rubbish which admits of no argument as it only provoked wry laughter.

But what merits attention here is that some American guys who do not know even where they stand, to say nothing of the way the world goes, are watching for a chance to scuttle the processes to settle the nuclear issue and improve the DPRK-U.S. relations, displeased with them.

According to the International Herald Tribune, a few hard-line officials in charge of national security at the office of the vice-president and the State Department were reported to have asserted a more confrontational approach towards the DPRK.

It was in this context that Lefkowitz underlined the need to include the human rights issue in the agenda items of the six-party talks and complained that China and south Korea are not pressurizing north Korea at the American Enterprise Institute, a center of conservatives.

This assertion was, in every respect, prompted by a dangerous attempt to sacrifice the process for the denuclearization of the Korean Peninsula directly related to the interests of the U.S. and other countries concerned and the peace and prosperity in Northeast Asia for meeting their selfish purpose as it is a revelation of their extreme uneasiness created by their impending political bankruptcy.

As well known, the U.S. conservative hardliners led by neo-conservatives are now seized with extreme uneasiness and anxiety, marginalized in the political arena for the catastrophic consequences entailed by their extreme and subjective way of thinking.

They have neither anything new nor future.

Lefkowitz, Bolton and others are keen to misuse the process for the denuclearization of the Korean Peninsula for achieving their political ambition under the slogan of hard-line and conservative policy which has already proven bankrupt inside the U.S. Nothing is graver mistake and crime against history than this.

The hackneyed methods used by the U.S. during the Cold War will never work on the DPRK although they may work on others. The six-party talks cannot be treated the same as the "Helsinki process" under any circumstances.

The agreements reached at the six-party talks on the principle of simultaneous action and progress made in this course are welcomed by all countries. Lefkowitz and others who seek to scuttle them cannot escape public censure and jeer.

The reality goes to prove that the negotiated settlement of the nuclear issue remains the general will of the international community and the trend of the times.

We would like to question them what they really seek by turning back the clock.

Such nonsensical remarks would never help stem the trend of the times.

Now that the denuclearization process has reached an important phase the U.S. should refrain from irresponsible remarks that may deflect it from its focus and countries concerned should thoroughly abide by the principle of "action for action."

*Annals of National Security*

**A Strike in the Dark**

What did Israel bomb in Syria?

by Seymour M. Hersh

February 11, 2008

[Accessed 2008-02-04T15:40Z]

Sometime after midnight on September 6, 2007, at least four low-flying Israeli Air Force fighters crossed into Syrian airspace and carried out a secret bombing mission on the banks of the Euphrates River, about ninety miles north of the Iraq border. The seemingly unprovoked bombing, which came after months of heightened tension between Israel and Syria over military exercises and troop buildups by both sides along the Golan Heights, was, by almost any definition, an act of war. But in the immediate aftermath nothing was heard from the government of Israel. In contrast, in 1981, when the Israeli Air Force destroyed Iraq's Osirak nuclear reactor, near Baghdad, the Israeli government was triumphant, releasing reconnaissance photographs of the strike and permitting the pilots to be widely interviewed.

Within hours of the attack, Syria denounced Israel for invading its airspace, but its public statements were incomplete and contradictory—thus adding to the mystery. A Syrian military spokesman said only that Israeli planes had dropped some munitions in an unpopulated area after being challenged by Syrian air defenses, “which forced them to flee.” Four days later, Walid Moallem, the Syrian foreign minister, said during a state visit to Turkey that the Israeli aircraft had used live ammunition in the attack, but insisted that there were no casualties or property damage. It was not until October 1st that Syrian President Bashar Assad, in an interview with the BBC, acknowledged that the Israeli warplanes

had hit their target, which he described as an “unused military building.” Assad added that Syria reserved the right to retaliate, but his comments were muted.

Despite official silence in Tel Aviv (and in Washington), in the days after the bombing the American and European media were flooded with reports, primarily based on information from anonymous government sources, claiming that Israel had destroyed a nascent nuclear reactor that was secretly being assembled in Syria, with the help of North Korea. Beginning construction of a nuclear reactor in secret would be a violation of Syria’s obligations under the Nuclear Non-Proliferation Treaty, and could potentially yield material for a nuclear weapon.

The evidence was circumstantial but seemingly damning. The first reports of Syrian and North Korean nuclear cooperation came on September 12th in the Times and elsewhere. By the end of October, the various media accounts generally agreed on four points: the Israeli intelligence community had learned of a North Korean connection to a construction site in an agricultural area in eastern Syria; three days before the bombing, a “North Korean ship,” identified as the Al Hamed, had arrived at the Syrian port of Tartus, on the Mediterranean; satellite imagery strongly suggested that the building under construction was designed to hold a nuclear reactor when completed; as such, Syria had crossed what the Israelis regarded as the “red line” on the path to building a bomb, and had to be stopped. There were also reports—by ABC News and others—that some of the Israeli intelligence had been shared in advance with the United States, which had raised no objection to the bombing.

The Israeli government still declined to make any statement about the incident. Military censorship on dispatches about the raid was imposed for several weeks, and the Israeli press resorted to recycling the disclosures in the foreign press. In the first days after the attack, there had been many critical stories in the Israeli press speculating about the bombing, and the possibility that it could lead to a conflict with Syria. Larry Derfner, a columnist writing in the Jerusalem Post, described the raid as “the sort of thing that starts wars.” But, once reports about the nuclear issue and other details circulated, the domestic criticism subsided.

At a news conference on September 20th, President George W. Bush was asked about the incident four times but said, “I’m not going to comment on the matter.” The lack of official statements became part of the story. “The silence from all parties has been deafening,” David Ignatius wrote in the Washington Post, “but the message to Iran”—which the Administration had long suspected of pursuing a nuclear weapon—“is clear: America and Israel can identify nuclear targets and penetrate air defenses to destroy them.”

It was evident that officials in Israel and the United States, although unwilling to be quoted, were eager for the news media to write about the bombing. Early on, a former officer in the Israel Defense Forces with close contacts in Israeli intelligence approached me, with a version of the standard story, including colorful but, as it turned out, unconfirmable details: Israeli intelligence tracking the ship from the moment it left a North Korean port; Syrian soldiers wearing protective gear as they off-loaded the cargo; Israeli intelligence monitoring trucks from the docks to the target site. On October 3rd, the London Spectator, citing much of the same information, published an overheated account of the September 6th raid, claiming that it “may have saved the world from a devastating threat,” and that “a very senior British ministerial source” had warned, “If people had known how close we came to World War Three that day there’d have been mass panic.”

However, in three months of reporting for this article, I was repeatedly told by current and former intelligence, diplomatic, and congressional officials that they were not aware of any solid evidence of ongoing nuclear-weapons programs in Syria. It is possible that Israel conveyed intelligence directly to senior members of the Bush Administration, without it being vetted by intelligence agencies. (This process, known as “stovepiping,” overwhelmed U.S. intelligence before the war in Iraq.) But Mohamed ElBaradei, the director-general of the International Atomic Energy Agency, the United Nations group responsible for monitoring compliance with the Nuclear Non-Proliferation Treaty, said, “Our experts who have carefully analyzed the satellite imagery say it is unlikely that this building was a nuclear facility.”

Joseph Cirincione, the director for nuclear policy at the Center for American Progress, a Washington, D.C., think tank, told me, “Syria does not have the technical, industrial, or financial ability to support a nuclear-weapons program. I’ve been following this issue for fifteen years, and every once in a while a suspicion arises and we investigate and there’s nothing. There was and is no nuclear-weapons threat from Syria. This is all political.” Cirincione castigated the press corps for its handling of the story. “I think some of our best journalists were used,” he said.

A similar message emerged at briefings given to select members of Congress within weeks of the attack. The briefings, conducted by intelligence agencies, focussed on what Washington knew about the September 6th raid. One concern was whether North Korea had done anything that might cause the U.S. to back away from ongoing six-nation talks about its nuclear program. A legislator who took part in one such briefing said afterward, according to a member of his staff, that he had heard nothing that caused him “to have any doubts” about the North Korean negotiations—“nothing that should cause a pause.” The legislator’s conclusion, the staff member said, was “There’s nothing that proves any perfidy involving the North Koreans.”

Morton Abramowitz, a former Assistant Secretary of State for intelligence and research, told me that he was astonished by the lack of response. “Anytime you bomb another state, that’s a big deal,” he said. “But where’s the outcry, particularly from the concerned states and the U.N.? Something’s amiss.”

Israel could, of course, have damning evidence that it refuses to disclose. But there are serious and unexamined contradictions in the various published accounts of the September 6th bombing.

The main piece of evidence to emerge publicly that Syria was building a reactor arrived on October 23rd, when David Albright, of the Institute for Science and International Security, a highly respected nonprofit research group, released a satellite image of the target. The photograph had been taken by a commercial satellite company, DigitalGlobe, of Longmont, Colorado, on August 10th, four weeks before the bombing, and showed a square building and a nearby water-pumping station. In an analysis released at the same time, Albright, a physicist who served as a weapons inspector in Iraq, concluded that the building, as viewed from space, had roughly the same length and width as a reactor building at Yongbyon, North Korea’s main nuclear facility. “The tall building in the image may house a reactor under construction and the pump station along the river may have been intended to supply cooling water to the reactor,” Albright said. He concluded his analysis by posing a series of rhetorical questions that assumed that the target was a nuclear facility:

How far along was the reactor construction project when it was bombed? What was the extent of

nuclear assistance from North Korea? Which reactor components did Syria obtain from North Korea or elsewhere, and where are they now?

He was later quoted in the Washington Post saying, “I’m pretty convinced that Syria was trying to build a nuclear reactor.”

When I asked Albright how he had pinpointed the target, he told me that he and a colleague, Paul Brannan, “did a lot of hard work”—culling press reports and poring over DigitalGlobe imagery—“before coming up with the site.” Albright then shared his findings with Robin Wright and other journalists at the Post, who, after checking with Administration officials, told him that the building was, indeed, the one targeted by the Israelis. “We did not release the information until we got direct confirmation from the Washington Post,” he told me. The Post’s sources in the Administration, he understood, had access to far more detailed images obtained by U.S. intelligence satellites. The Post ran a story, without printing the imagery, on October 19th, reporting that “U.S. and foreign officials familiar with the aftermath of the attack” had concluded that the site had the “signature,” or characteristics, of a reactor “similar in structure to North Korea’s facilities”—a conclusion with which Albright then agreed. In other words, the Albright and the Post reports, which appeared to independently reinforce each other, stemmed in part from the same sources.

Albright told me that before going public he had met privately with Israeli officials. “I wanted to be sure in my own mind that the Israelis thought it was a reactor, and I was,” he said. “They never explicitly said it was nuclear, but they ruled out the possibility that it was a missile, chemical-warfare, or radar site. By a process of elimination, I was left with nuclear.”

Two days after his first report, Albright released a satellite image of the bombed site, taken by DigitalGlobe on October 24th, seven weeks after the bombing. The new image showed that the target area had been levelled and the ground scraped. Albright said that it hinted of a coverup—cleansing the bombing site could make it difficult for weapons inspectors to determine its precise nature. “It looks like Syria is trying to hide something and destroy the evidence of some activity,” he told the Times. “But it won’t work. Syria has got to answer questions about what it was doing.” This assessment was widely shared in the press. (In mid-January, the Times reported that recent imagery from DigitalGlobe showed that a storage facility, or something similar, had been constructed, in an obvious rush, at the bombing site.)

Proliferation experts at the International Atomic Energy Agency and others in the arms-control community disputed Albright’s interpretation of the images. “People here were baffled by this, and thought that Albright had stuck his neck out,” a diplomat in Vienna, where the I.A.E.A. is headquartered, told me. “The I.A.E.A. has been consistently telling journalists that it is skeptical about the Syrian nuclear story, but the reporters are so convinced.”

A second diplomat in Vienna acidly commented on the images: “A square building is a square building.” The diplomat, who is familiar with the use of satellite imagery for nuclear verification, added that the I.A.E.A. “does not have enough information to conclude anything about the exact nature of the facility. They see a building with some geometry near a river that could be identified as nuclear-related. But they cannot credibly conclude that is so. As far as information coming from open sources beyond imagery, it’s a struggle to extract information from all of the noise that comes from political agendas.”

Much of what one would expect to see around a secret nuclear site was lacking at the target, a former State Department intelligence expert who now deals with proliferation issues for the Congress said.

“There is no security around the building,” he said. “No barracks for the Army or the workers. No associated complex.” Jeffrey Lewis, who heads the non-proliferation program at the New America Foundation, a think tank in Washington, told me that, even if the width and the length of the building were similar to the Korean site, its height was simply not sufficient to contain a Yongbyon-size reactor and also have enough room to extract the control rods, an essential step in the operation of the reactor; nor was there evidence in the published imagery of major underground construction. “All you could see was a box,” Lewis said. “You couldn’t see enough to know how big it will be or what it will do. It’s just a box.”

A former senior U.S. intelligence official, who has access to current intelligence, said, “We don’t have any proof of a reactor—no signals intelligence, no human intelligence, no satellite intelligence.” Some well-informed defense consultants and former intelligence officials asked why, if there was compelling evidence of nuclear cheating involving North Korea, a member of the President’s axis of evil, and Syria, which the U.S. considers a state sponsor of terrorism, the Bush Administration would not insist on making it public.

When I went to Israel in late December, the government was still maintaining secrecy about the raid, but some current and former officials and military officers were willing to speak without attribution. Most were adamant that Israel’s intelligence had been accurate. “Don’t you write that there was nothing there!” a senior Israeli official, who is in a position to know the details of the raid on Syria, said, shaking a finger at me. “The thing in Syria was real.”

Retired Brigadier General Shlomo Brom, who served as deputy national-security adviser under Prime Minister Ehud Barak, told me that Israel wouldn’t have acted if it hadn’t been convinced that there was a threat. “It may have been a perception of a conviction, but there was something there,” Brom said. “It was the beginning of a nuclear project.” However, by the date of our talk, Brom told me, “The question of whether it was there or not is not that relevant anymore.”

Albright, when I spoke to him in December, was far more circumspect than he had been in October. “We never said ‘we know’ it was a reactor, based on the image,” Albright said. “We wanted to make sure that the image was consistent with a reactor, and, from my point of view, it was. But that doesn’t confirm it’s a reactor.”

The journey of the Al Hamed, a small coastal trader, became a centerpiece in accounts of the September 6th bombing. On September 15th, the Washington Post reported that “a prominent U.S. expert on the Middle East” said that the attack “appears to have been linked to the arrival . . . of a ship carrying material from North Korea labeled as cement.” The article went on to cite the expert’s belief that “the emerging consensus in Israel was that it delivered nuclear equipment.” Other press reports identified the Al Hamed as a “suspicious North Korean” ship.

But there is evidence that the Al Hamed could not have been carrying sensitive cargo—or any cargo—from North Korea. International shipping is carefully monitored by Lloyd’s Marine Intelligence Unit, which relies on a network of agents as well as on port logs and other records. In addition, most merchant ships are now required to operate a transponder device called an A.I.S., for automatic

identification system. This device, which was on board the Al Hamed, works in a manner similar to a transponder on a commercial aircraft—beaming a constant, very high-frequency position report. (The U.S. Navy monitors international sea traffic with the aid of dedicated satellites, at a secret facility in suburban Washington.)

According to Marine Intelligence Unit records, the Al Hamed, which was built in 1965, had been operating for years in the eastern Mediterranean and the Black Sea, with no indication of any recent visits to North Korea. The records show that the Al Hamed arrived at Tartus on September 3rd—the ship’s fifth visit to Syria in five months. (It was one of eight ships that arrived that day; although it is possible that one of the others was carrying illicit materials, only the Al Hamed has been named in the media.) The ship’s registry was constantly changing. The Al Hamed flew the South Korean flag before switching to North Korea in November of 2005, and then to Comoros. (Ships often fly flags of convenience, registering with different countries, in many cases to avoid taxes or onerous regulations.) At the time of the bombing, according to Lloyd’s, it was flying a Comoran flag and was owned by four Syrian nationals. In earlier years, under other owners, the ship seems to have operated under Russian, Estonian, Turkish, and Honduran flags. Lloyd’s records show that the ship had apparently not passed through the Suez Canal—the main route from the Mediterranean to the Far East—since at least 1998.

Among the groups that keep track of international shipping is Greenpeace. Martini Gotjé, who monitors illegal fishing for the organization and was among the first to raise questions about the Al Hamed, told me, “I’ve been at sea for forty-one years, and I can tell you, as a captain, that the Al Hamed was nothing—in rotten shape. You wouldn’t be able to load heavy cargo on it, as the floorboards wouldn’t be that strong.”

If the Israelis’ target in Syria was not a nuclear site, why didn’t the Syrians respond more forcefully? Syria complained at the United Nations but did little to press the issue. And, if the site wasn’t a partially built reactor, what was it?

During two trips to Damascus after the Israeli raid, I interviewed many senior government and intelligence officials. None of President Assad’s close advisers told me the same story, though some of the stories were more revealing—and more plausible—than others. In general, Syrian officials seemed more eager to analyze Israel’s motives than to discuss what had been attacked. “I hesitate to answer any journalist’s questions about it,” Faruq al-Shara, the Syrian Vice-President, told me. “Israel bombed to restore its credibility, and their objective is for us to keep talking about it. And by answering your questions I serve their objective. Why should I volunteer to do that?” Shara denied that his nation has a nuclear-weapons program. “The volume of articles about the bombing is incredible, and it’s not important that it’s a lie,” he said.

One top foreign-ministry official in Damascus told me that the target “was an old military building that had been abandoned by the Syrian military” years ago. But a senior Syrian intelligence general gave me a different account. “What they targeted was a building used for fertilizer and water pumps,” he said—part of a government effort to revitalize farming. “There is a large city”—Dayr az Zawr—“fifty kilometres away. Why would Syria put nuclear material near a city?” I interviewed the intelligence general again on my second visit to Damascus, and he reiterated that the targeted building was “at no time a military facility.” As to why Syria had not had a more aggressive response, if the target was so benign, the general said, “It was not fear—that’s all I’ll say.” As I left, I asked the general why Syria had not invited representatives of the International Atomic Energy Agency to visit the bombing site and

declare that no nuclear activity was taking place there. “They did not ask to come,” he said, and “Syria had no reason to ask them to come.”

An I.A.E.A. official dismissed that assertion when we spoke in Vienna a few days later. “The I.A.E.A. asked the Syrians to allow the agency to visit the site to verify its nature,” the I.A.E.A. official said.

“Syria’s reply was that it was a military, not a nuclear, installation, and there would be no reason for the I.A.E.A. to go there. It would be in their and everyone’s interest to have the I.A.E.A. visit the site. If it was nuclear, it would leave fingerprints.”

In a subsequent interview, Imad Moustapha, the Syrian Ambassador to Washington, defended Syria’s decision not to invite the I.A.E.A. inspectors. “We will not get into the game of inviting foreign experts to visit every site that Israel claims is a nuclear facility,” Moustapha told me. “If we bring them in and they say there is nothing there, then Israel will say it made a mistake and bomb another site two weeks later. And if we then don’t let the I.A.E.A. in, Israel will say, ‘You see?’ This is nonsense. Why should we have to do this?”

Even if the site was not a nuclear installation, it is possible that the Syrians feared that an I.A.E.A. inquiry would uncover the presence of North Koreans there. In Syria, I was able to get some confirmation that North Koreans were at the target. A senior officer in Damascus with firsthand knowledge of the incident agreed to see me alone, at his home; my other interviews in Damascus took place in government offices. According to his account, North Koreans were present at the site, but only as paid construction workers. The senior officer said that the targeted building, when completed, would most likely have been used as a chemical-warfare facility. (Syria is not a signatory to the Chemical Weapons Convention and has been believed, for decades, to have a substantial chemical-weapons arsenal.)

The building contract with North Korea was a routine business deal, the senior officer said—from design to construction. (North Korea may, of course, have sent skilled technicians capable of doing less routine work.) Syria and North Korea have a long-standing partnership on military matters. “The contract between Syria and North Korea was old, from 2002, and it was running late,” the senior officer told me. “It was initially to be finished in 2005, and the Israelis might have expected it was further along.”

The North Korean laborers had been coming and going for “maybe six months” before the September bombing, the senior officer said, and his government concluded that the Israelis had picked up North Korean telephone chatter at the site. (This fit the timeline that Israeli officials had given me.) “The Israelis may have their own spies and watched the laborers being driven to the area,” the senior officer said. “The Koreans were not there at night, but slept in their quarters and were driven to the site in the morning. The building was in an isolated area, and the Israelis may have concluded that even if there was a slight chance”—of it being a nuclear facility—“we’ll take that risk.”

On the days before the bombing, the Koreans had been working on the second floor, and were using a tarp on top of the building to shield the site from rain and sun. “It was just the North Korean way of working,” the Syrian senior officer said, adding that the possibility that the Israelis could not see what was underneath the tarp might have added to their determination.

The attack was especially dramatic, the Syrian senior officer said, because the Israelis used bright magnesium illumination flares to light up the target before the bombing. Night suddenly turned into day, he told me. “When the people in the area saw the lights and the bombing, they thought there would be a commando raid,” the senior officer said. The building was destroyed, and his government eventually concluded that there were no Israeli ground forces in the area. But if Israelis had been on the ground seeking contaminated soil samples, the senior officer said, “they found only cement.”

A senior Syrian official confirmed that a group of North Koreans had been at work at the site, but he denied that the structure was related to chemical warfare. Syria had concluded, he said, that chemical warfare had little deterrent value against Israel, given its nuclear capability. The facility that was attacked, the official said, was to be one of a string of missile-manufacturing plants scattered throughout Syria—“all low tech. Not strategic.” (North Korea has been a major exporter of missile technology and expertise to Syria for decades.) He added, “We’ve gone asymmetrical, and have been improving our capability to build low-tech missiles that will enable us to inflict as much damage as possible without confronting the Israeli Army. We now can hit all of Israel, and not just the north.”

Whatever was under construction, with North Korean help, it apparently had little to do with agriculture—or with nuclear reactors—but much to do with Syria’s defense posture, and its military relationship with North Korea. And that, perhaps, was enough to silence the Syrian government after the September 6th bombing.

It is unclear to what extent the Bush Administration was involved in the Israeli attack. The most detailed report of cooperation was made in mid-October by ABC News. Citing a senior U.S. official, the network reported that Israel had shared intelligence with the United States and received satellite help and targeting information in response. At one point, it was reported, the Bush Administration considered attacking Syria itself, but rejected that option. The implication was that the Israeli intelligence about the nuclear threat had been vetted by the U.S., and had been found to be convincing.

Yet officials I spoke to in Israel heatedly denied the notion that they had extensive help from Washington in planning the attack. When I told the senior Israeli official that I found little support in Washington for Israel’s claim that it had bombed a nuclear facility in Syria, he responded with an expletive, and then said, angrily, “Nobody helped us. We did it on our own.” He added, “What I’m saying is that nobody discovered it for us.” (The White House declined to comment on this story.)

There is evidence to support this view. The satellite operated by DigitalGlobe, the Colorado firm that supplied Albright’s images, is for hire; anyone can order the satellite to photograph specific coordinates, a process that can cost anywhere from several hundred to hundreds of thousands of dollars. The company displays the results of these requests on its Web page, but not the identity of the customer. On five occasions between August 5th and August 27th of last year—before the Israeli bombing—DigitalGlobe was paid to take a tight image of the targeted building in Syria.

Clearly, whoever ordered the images likely had some involvement in plans for the attack. DigitalGlobe does about sixty per cent of its business with the U.S. government, but those contracts are for unclassified work, such as mapping. The government’s own military and intelligence satellite system, with an unmatched ability to achieve what analysts call “highly granular images,” could have supplied superior versions of the target sites. Israel has at least two military satellite systems, but, according to Allen Thomson, a former C.I.A. analyst, DigitalGlobe’s satellite has advantages for reconnaissance,

making Israel a logical customer. (“Customer anonymity is crucial to us,” Chuck Herring, a spokesman for DigitalGlobe, said. “I don’t know who placed the order and couldn’t disclose it if I did.”) It is also possible that Israel or the United States ordered the imagery in order to have something unclassified to pass to the press if needed. If the Bush Administration had been aggressively cooperating with Israel before the attack, why would Israel have to turn to a commercial firm?

Last fall, aerospace industry and military sources told *Aviation Week & Space Technology*, an authoritative trade journal, that the United States had provided Israel with advice about “potential target vulnerabilities” before the September 6th attack, and monitored the radar as the mission took place. The magazine reported that the Israeli fighters, prior to bombing the target on the Euphrates, struck a Syrian radar facility near the Turkish border, knocking the radar out of commission and permitting them to complete their mission without interference.

The former U.S. senior intelligence official told me that, as he understood it, America’s involvement in the Israeli raid dated back months earlier, and was linked to the Administration’s planning for a possible air war against Iran. Last summer, the Defense Intelligence Agency came to believe that Syria was installing a new Russian-supplied radar-and-air-defense system that was similar to the radar complexes in Iran. Entering Syrian airspace would trigger those defenses and expose them to Israeli and American exploitation, yielding valuable information about their capabilities. Vice-President Dick Cheney supported the idea of overflights, the former senior intelligence official said, because “it would stick it to Syria and show that we’re serious about Iran.” (The Vice-President’s office declined to comment.) The former senior intelligence official said that Israeli military jets have flown over Syria repeatedly, without retaliation from Syria. At the time, the former senior intelligence official said, the focus was on radar and air defenses, and not on any real or suspected nuclear facility. Israel’s claims about the target, which emerged later, caught many in the military and intelligence community—if not in the White House—by surprise.

The senior Israeli official, asked whether the attack was rooted in his country’s interest in Syria’s radar installations, told me, “Bullshit.” Whatever the Administration’s initial agenda, Israel seems to have been after something more.

The story of the Israeli bombing of Syria, with its mixture of satellite intelligence, intercepts, newspaper leaks, and shared assumptions, reminded some American diplomats and intelligence officials of an incident, ten years ago, involving North Korea. In mid-1998, American reconnaissance satellites photographed imagery of a major underground construction project at Kumchang-ri, twenty-five miles northwest of Yongbyon. “We were briefed that, without a doubt, this was a nuclear-related facility, and there was signals intelligence linking the construction brigade at Kumchang-ri to the nuclear complex at Yongbyon,” the former State Department intelligence expert recalled.

Charles Kartman, who was President Bill Clinton’s special envoy for peace talks with Korea, told me that the intelligence was considered a slam dunk by analysts in the Defense Intelligence Agency, even though other agencies disagreed. “We had a debate going on inside the community, but the D.I.A. unilaterally took it to Capitol Hill,” Kartman said, forcing the issue and leading to a front-page Times story.

After months of negotiations, Kartman recalled, the North Koreans agreed, under diplomatic pressure, to grant access to Kumchang-ri. In return, they received aid, including assistance with a new potato-

production program. Inspectors found little besides a series of empty tunnels. Robert Carlin, an expert on North Korea who retired in 2005 after serving more than thirty years with the C.I.A. and the State Department's intelligence bureau, told me that the Kumchang-ri incident highlighted "an endemic weakness" in the American intelligence community. "People think they know the ending and then they go back and find the evidence that fits their story," he said. "And then you get groupthink—and people reinforce each other."

It seems that, as with Kumchang-ri, there was a genuine, if not unanimous, belief by Israeli intelligence that the Syrians were constructing something that could have serious national-security consequences.

But why would the Israelis take the risk of provoking a military response, and perhaps a war, if there was, as it seems, no smoking gun? Mohamed ElBaradei, expressing his frustration, said, "If a country has any information about a nuclear activity in another country, it should inform the I.A.E.A.—not bomb first and ask questions later."

One answer, suggested by David Albright, is that Israel did not trust the international arms-control community. "I can understand the Israeli point of view, given the history with Iran and Algeria," Albright said. "Both nations had nuclear-weapons programs and, after being caught cheating, declared their reactors to be civil reactors, for peacetime use. The international groups, like the U.N. and the I.A.E.A, never shut them down." Also, Israel may have calculated that risk of a counterattack was low: President Assad would undoubtedly conclude that the attack had the support of the Bush Administration and, therefore, that any response by Syria would also engage the U.S. (My conversations with officials in Syria bore out this assumption.)

In Tel Aviv, the senior Israeli official pointedly told me, "Syria still thinks Hezbollah won the war in Lebanon"—referring to the summer, 2006, fight between Israel and the Shiite organization headed by Sheikh Hassan Nasrallah. "Nasrallah knows how much that war cost—one-third of his fighters were killed, infrastructure was bombed, and ninety-five per cent of his strategic weapons were wiped out," the Israeli official said. "But Assad has a Nasrallah complex and thinks Hezbollah won. And, 'If he did it, I can do it.' This led to an adventurous mood in Damascus. Today, they are more sober."

That notion was echoed by the ambassador of an Israeli ally who is posted in Tel Aviv. "The truth is not important," the ambassador told me. "Israel was able to restore its credibility as a deterrent. That is the whole thing. No one will know what the real story is."

There is evidence that the preëemptive raid on Syria was also meant as a warning about—and a model for—a preëemptive attack on Iran. When I visited Israel this winter, Iran was the overriding concern among political and defense officials I spoke to—not Syria. There was palpable anger toward Washington, in the wake of a National Intelligence Estimate that concluded, on behalf of the American intelligence community, that Iran is not now constructing a nuclear weapon. Many in Israel view Iran's nuclear ambitions as an existential threat; they believe that military action against Iran may be inevitable, and worry that America may not be there when needed. The N.I.E. was published in November, after a yearlong standoff involving Cheney's office, which resisted the report's findings. At the time of the raid, reports about the forthcoming N.I.E. and its general conclusion had already appeared.

Retired Major General Giora Eiland, who served as the national-security adviser to Prime Minister Ariel Sharon, told me, "The Israeli military takes it as an assumption that one day we will need to have

a military campaign against Iran, to slow and eliminate the nuclear option.” He added, “Whether the political situation will allow this is another question.”

In the weeks after the N.I.E.’s release, Bush insisted that the Iranian nuclear-weapons threat was as acute as ever, a theme he amplified during his nine-day Middle East trip after the New Year. “A lot of people heard that N.I.E. out here and said that George Bush and the Americans don’t take the Iranian threat seriously,” he told Greta Van Susteren, of Fox News. “And so this trip has been successful from the perspective of saying . . . we will keep the pressure on.”

Shortly after the bombing, a Chinese envoy and one of the Bush Administration’s senior national-security officials met in Washington. The Chinese envoy had just returned from a visit to Tehran, a person familiar with the discussion told me, and he wanted the White House to know that there were moderates there who were interested in talks. The national-security official rejected that possibility and told the envoy, as the person familiar with the discussion recalled, ““You are aware of the recent Israeli statements about Syria. The Israelis are extremely serious about Iran and its nuclear program, and I believe that, if the United States government is unsuccessful in its diplomatic dealings with Iran, the Israelis will take it out militarily.’ He then told the envoy that he wanted him to convey this to his government—that the Israelis were serious.

“He was telling the Chinese leadership that they’d better warn Iran that we can’t hold back Israel, and that the Iranians should look at Syria and see what’s coming next if diplomacy fails,” the person familiar with the discussion said. “His message was that the Syrian attack was in part aimed at Iran.”

**ISIS STATEMENT REGARDING "A SHOT IN THE DARK" IN THE  
FEBRUARY 11 ISSUE OF THE NEW YORKER, BY SEYMOUR HERSH**

**THE INSTITUTE FOR SCIENCE AND INTERNATIONAL SECURITY (ISIS)  
FEBRUARY 6, 2008**

Seymour Hersh recently published an article for the New Yorker magazine in which he seeks to find reasons behind the September 6, 2007 Israeli strike against a facility in eastern Syria. Mr. Hersh took one quote from David Albright out of its original context and used it to imply that ISIS had earlier concluded that the site attacked was a reactor and had since backed away from that conclusion. In fact, ISIS's analysis of the suspect site has been consistent since October 2007. Our continuing assessment is that the building is consistent with reactor construction, and thus consistent with credible reports in the media that U.S. and Israeli officials have concluded that the site represents a reactor under construction.

Mr. Hersh met with David Albright and Paul Brannan in January at ISIS's office to discuss the Israeli strike and ISIS's analysis of the imagery of the site. On the third page of his article, Hersh writes, "Albright, when I spoke with him in December, was far more circumspect than he had been in October." Hersh then quotes Albright as saying, "We never said 'we know' it was a reactor, based on the image. We wanted to make sure that the image was consistent with a reactor, and, from my point of view, it was. But that doesn't confirm that it was a reactor."

This quote was drawn from a point in our discussion related to the process by which ISIS confirmed the location of the attacked site in October by providing the imagery to the Washington Post. We did this by first analyzing a large, 2000 square kilometer area of Syria and identifying a site that was consistent with a nuclear reactor. The goal was also to show that the site was consistent with earlier reporting by the Washington Post and The New York Times that U.S. and Israeli officials had concluded the site was a reactor under construction. The fact that we independently found this site by searching for a reactor either is one of the world's most remarkable coincidences or is further evidence that the site could be a reactor.

Hersh, who we at ISIS greatly respect, is correct to raise the issue of whether Israeli and U.S. intelligence are right about the purpose of the site. We are committed to developing that information publicly. Moreover, the bombing of the site raises troubling questions that require public answers. Hersh has added interesting and important information to this critical debate. He clearly believes that the site did not house a reactor, and he is entitled to his opinion. But much of his argument hinges on Albright's statement that was taken out of context. His other evidence is from people who do not have direct knowledge of the case, or are limited to analyzing satellite imagery of the site, which we know cannot on its own answer the question of whether or not the site is a reactor

## **North Korea Maintains Uranium Enrichment Program, U.S. Says**

By Ed Johnson

*[EXCERPTS]*

**Feb. 5 [2008]** (Bloomberg) -- North Korea maintains its uranium enrichment program and remains a nuclear proliferation risk, the top U.S. intelligence official said in his annual threat assessment to Congress.

"We remain uncertain about Kim Jong Il's commitment to full denuclearization as he promised in the six-party agreement," Director of National Intelligence Michael McConnell told the Senate Intelligence Committee today.

*[deletia]*

"While Pyongyang denies a program for uranium enrichment, and they deny their proliferation activities, we believe North Korea continues to engage in both," McConnell said.

In the annual assessment of the global threats facing the U.S., McConnell noted North Korea has already sold ballistic missiles to "several Middle Eastern countries" including Iran.

"We remain concerned North Korea could proliferate nuclear weapons abroad," he said in the assessment.

## **US Envoy Urges NKorea to Hand Over List**

By FOSTER KLUG – 59 minutes ago

[Accessed at 2008-02-06T18:35Z]

WASHINGTON (AP) — The chief U.S. envoy at North Korean nuclear talks urged leader Kim Jong Il to hand over a promised list of his country's nuclear efforts, saying Wednesday that nuclear negotiators are working to make sure "Pyongyang lives up to its word."

Christopher Hill told lawmakers that six-nation disarmament talks are at a "critical, challenging" point, noting "there is some sense of urgency."

The United States says the North has balked at providing a "complete and correct" disclosure of nuclear programs to eventually be dismantled; Washington has refused to take the North off a U.S. terrorism blacklist, a coveted goal of Pyongyang, until negotiators have the list.

"Let me be clear," Hill said at a Senate Foreign Relations Committee hearing. "Complete and correct' means complete and correct. This declaration must include all nuclear weapons, programs, materials and facilities, including clarification of any proliferation activities."

His comments came a day after the director of U.S. intelligence, Mike McConnell, questioned North Korea's commitment to the stalled talks. McConnell also said the U.S. intelligence community believes North Korea continues to work on a secret uranium enrichment program and to sell its weapons around the world.

Conservatives have recently expressed worry that President Bush, seeking a foreign policy success before he leaves office in January, is ignoring North Korean abuse.

North Korea has begun disabling its main nuclear facilities under an agreement with the other countries at the international arms talks: China, Japan, Russia, South Korea and the U.S. Most of the tasks of disabling those facilities have been completed, Hill said, with American experts working to ensure the plutonium-making facility would require at least a year to become operational again.

But the talks have faced an impasse since the North missed a Dec. 31 deadline on the declaration.

North Korea accuses the United States of failing to meet its commitments and claims it gave the U.S. a nuclear list in November. Washington says Pyongyang never produced a complete list.

The North's declaration, Hill said, must also address its alleged uranium enrichment program. The U.S. accused North Korea in 2002 of seeking to secretly enrich uranium in violation of an earlier disarmament deal, sparking the latest nuclear standoff.

North Korea has insisted it does not have an active uranium program, but Hill has said Pyongyang officials have promised they would address the issue to Washington's satisfaction.

While the United States cannot accept an incomplete declaration, Hill testified, there is reason to believe that progress can still be made.

Still, he said, the U.S. is "very concerned about nuclear proliferation" and noted that the North has promised not to transfer nuclear materials to other countries. "We intend to hold North Korea to its word," he said.

U.S. lawmakers have expressed worry that North Korea may have helped Syria pursue a nuclear weapons program. Such cooperation would raise the specter of a country that conducted a nuclear test in 2006 — North Korea — providing atomic assistance to Syria, a nation Washington considers hostile and a sponsor of terrorism.

Syria has repeatedly denied that it is building a nuclear facility. North Korea denies accusations it spreads its nuclear expertise beyond its borders. Hill refused to publicly discuss specifics of the allegations.

A lawmaker at the hearing, Republican Sen. Dick Lugar, said that a U.S. program for dismantling Cold War-era weapons of mass destruction could be applied to North Korea. He said officials in Pyongyang have expressed interest in getting information on the program, which Lugar co-founded.

**U.S. Senate Committee  
on  
Foreign Relations**

**Chairman Joseph R. Biden, Jr.  
Senate Committee on Foreign Relations Hearing  
“Status of the Six Party Talks for the Denuclearization of the Korean Peninsula”  
February 6, 2008  
Opening Remarks  
As Prepared for Delivery**

Today, the Foreign Relations Committee will examine the efforts of the United States and the other participants in the Six Party Talks to remove the threat of nuclear weapons from the Korean Peninsula and build a permanent peace there.

I want to welcome Ambassador Christopher Hill, the Assistant Secretary of State for East Asian and Pacific Affairs, back to the committee today. I thank you, Mr. Ambassador, for your tireless efforts over the past three years to try to resolve this difficult problem.

I also want to take note of the fact that the Foreign Relations Committee was originally scheduled to have Assistant Secretary Hill up here today to testify on a different subject – Vietnam – at a hearing to be chaired by my friend Senator Boxer.

I want to thank Senator Boxer, the chairwoman of our East Asia Subcommittee, for agreeing to reschedule her hearing for early March, at which time we look forward to seeing Ambassador Hill again.

**No Alternative to Patient Diplomacy**

I look forward to the day that we can close the book on the nuclear issue and turn to other challenges, like how the United States and North Korea might cooperate to expand trade and cultural and educational exchanges between our two nations.

But we are not there yet.

The New York Philharmonic will be playing a concert in North Korea at the end of the month, the first ever visit by a U.S. orchestra to North Korea.

I understand they will perform the New World Symphony, by Dvorak. That is fitting. But for now we have to keep our eye on the ball and deal with the old world we still inhabit.

Our goal – and the stated objective of the Six Party Talks – is to peacefully dismantle North Korea’s nuclear weapons program in exchange for energy assistance, sanctions relief, and the creation of a permanent peace on the Korean Peninsula.

This objective is consistent, in my view, with the vital national security interests of all six nations joined in the Six Party Talks. Nuclear weapons offer only a false sense of security to North Korea. The Democratic People’s Republic of Korea, or DPRK as it is called, will find true security only when it has jettisoned its nuclear weapons program, rejoined the Nuclear Nonproliferation Treaty, and fully normalized relations not only with the United States, but even more importantly, with its neighbors to the south.

South Korea is America’s close friend and ally. Last December, South Koreans went to the polls and elected a new president, Lee Myung-bak. Today, Senator Murkowski and I plan to introduce a resolution congratulating President-elect Lee and the people of the Republic of Korea on their nation’s vibrant democracy and affirming our desire to strengthen and deepen our alliance in the years ahead. There is much we can accomplish together both on and off the Korean Peninsula.

Some say we should never negotiate with North Korea because they can’t be trusted. This view offers no viable solution to a problem – a problem that got much worse when the Bush Administration disengaged from the effort.

We wasted a lot of time; time that North Korea used to acquire uranium enrichment equipment and to more than double its stockpile of plutonium, leading ultimately to an actual test of a nuclear device on October 9, 2006.

There is still no substitute for patient, principled, sustained, high level diplomacy. Moreover, our efforts are more likely to succeed when we enlist our allies South Korea and Japan and other friends to help us.

That is what this committee has been calling for on a bipartisan basis for six years. The formula for success is clear, and I am glad that President Bush finally embraced it and chose Ambassador Hill to undertake it.

The formula is validated by history. President George Herbert Walker Bush in 1991 agreed to remove U.S. tactical nuclear weapons from the Korean Peninsula – weapons we no longer needed to station in Korea given advances in technology – and thereby convinced North Korea to remain inside the Nuclear Nonproliferation Treaty and to accept inspections.

Inspections by the IAEA yielded evidence late in 1992 that North Korea was violating its NPT commitments as well as the terms of the 1991 South-North Joint Declaration on the Denuclearization of the Korean Peninsula.

Without the first Bush’s diplomatic efforts, we might have remained in the dark, giving North Korea a free path to pursue its nuclear ambitions unchecked.

Under President Clinton, the United States negotiated the October 1994 Agreed Framework.

The North agreed to freeze and eventually eliminate its nuclear facilities under international monitoring. In exchange, Pyongyang was to receive two proliferation-resistant Light Water nuclear reactors (LWRs) and annual shipments of heavy fuel oil during construction of the reactors. The LWRs were to be financed and constructed through the Korean Peninsula Energy Development Organization (KEDO), a multinational consortium including South Korea, Japan, and the European Union.

The Agreed Framework failed to eliminate the North's nuclear programs. But it prevented the North from producing even one ounce of plutonium from 1994-2003. That is no small accomplishment.

And the creation of KEDO established a useful precedent – namely, that the United States should reach out to other nations that share our interest in a nuclear-free Korean Peninsula to help shoulder the financial and diplomatic burdens.

Under the terms of a February 17, 2007 agreement hammered out by our witness today and North Korea's lead nuclear negotiator, North Korea promised first to freeze and then to disable its key nuclear facilities and to provide a complete and accurate declaration of all of its nuclear programs, facilities, and materials. In exchange, the North is to receive energy assistance and sanctions relief. The ultimate goal remains the same: the complete dismantlement of the North's nuclear facilities in exchange for normalization of relations with the United States and the establishment of a permanent peace regime on the Korean Peninsula.

The freeze was implemented without a hitch, and North Korean workers under the direct supervision of U.S. technicians are today in the process of disabling the three key nuclear facilities at Yongbyon – the reactor, the spent fuel reprocessing plant, and the fuel fabrication plant.

North Korea is no longer in the plutonium production business.

But as we will hear from our witness, we still have a long way to go.

The North has not yet submitted a complete and accurate declaration of its nuclear programs, as called for under the agreement. The original December 31, 2007 deadline has come and gone.

North Korea's preferred outcome still appears to be having both a limited nuclear deterrent and good relations with the United States. They must choose one or the other. The United States will never acquiesce to a nuclear-armed North Korea. I hope Assistant Secretary Hill will share with us the administration's game plan going forward. How does the Administration plan to convince North Korea to submit a declaration of its nuclear activities, including any proliferation of nuclear know-how, promptly so that we can get on with the business of dismantling the North's nuclear facilities, removing fissile material from the country, and ultimately normalizing our bilateral relations and integrating North Korea into the community of nations? What do we want South Korea, China, Japan, and Russia – as equal members of the Six Party Talks – to do to help us?

I also hope that Ambassador Hill will share with us some thoughts on how the Administration plans to actually implement the next phase of the agreement. Specifically, I hope he will address the concern that Senator Lugar and I have expressed about the Glenn Amendment, which currently prohibits the Department of Energy from providing more than token assistance to the denuclearization effort. Senator Lugar and I have drafted legislation that would provide the Department of Energy and the Department of State with the necessary authority to implement a robust denuclearization plan, and I hope the Administration will endorse it.

Mr. Ambassador, I look forward to your testimony. Let me now turn to my friend Senator Lugar.

**Statement of Christopher R. Hill

**Senate Foreign Relations Committee**

**February 6, 2008**

**Status of the Six-Party Talks  
for the Denuclearization of the Korean Peninsula**

**Introduction**

Thank you, Chairman Biden, Ranking Member Lugar, and distinguished Members for inviting me to discuss with your committee recent developments in our efforts to achieve the verifiable denuclearization of the Korean Peninsula through the Six-Party process.

I have had the opportunity to brief many of you on the Six-Party Talks over the last few months. Since that time, we have made progress on implementation of the October 3, 2007 agreement on “Second Phase Actions for the Implementation of the Joint Statement,” particularly on the disablement of the Yongbyon nuclear facility. We continue to have good cooperation with the DPRK on implementation of agreed disablement tasks. These advances notwithstanding, we are again at a critical, challenging point in the Six-Party process, as we and our Six-Party partners work towards the completion of the Second Phase. Specifically, we are working to ensure that North Korea follows through on its commitment to provide a complete and correct declaration of all its nuclear programs, including its nuclear weapons.

**Implementation of the October 3 Agreement**

The October 3 agreement builds on the February 13, 2007, agreement on “Initial Actions for the Implementation of the Joint Statement,” under which the DPRK shut down and sealed the core nuclear facilities at Yongbyon and invited back the International Atomic Energy Agency (IAEA) to conduct monitoring and verification activities, as provided for in the February 13 agreement. Under the October 3 agreement on Second-Phase actions, the DPRK agreed to disable all existing nuclear facilities subject to abandonment under the September 2005 Joint Statement and February 13 Agreement, beginning by disabling the three core facilities at Yongbyon by the end of the year. The DPRK also agreed to provide a complete and correct declaration of all its nuclear programs by the end of the year.

## Disablement

Disablement of the three core facilities at Yongbyon – the 5-MW(e) nuclear reactor, reprocessing plant, and fuel rod fabrication facility – is proceeding well. A rotating team of U.S. experts has been on the ground overseeing the disablement of these facilities since early November and will remain in place throughout the completion of the agreed disablement activities. Upon completion, the specific disablement actions should ensure that the DPRK would have to expend significant effort and time (upwards of 12 months) to reconstitute all of the disabled facilities. This would curtail their ability to produce new weapons-grade plutonium at Yongbyon. Our experts report continued good cooperation with DPRK experts at the site, and most of the agreed disablement tasks at the three core facilities have been completed.

Specifically, all agreed disablement tasks at the reprocessing plant were completed prior to December 31, 2007, including the removal of several key pieces of equipment necessary for the separation of plutonium from spent fuel rods. Similarly, major pieces of equipment at the fuel fabrication plant were disabled and removed prior to December 31. One of the primary disablement tasks at the 5-MW(e) reactor – the discharge of spent fuel – is now underway. Due to health/safety and verification concerns, the parties understood that the fuel discharge (consisting of approximately 8,000 rods in the reactor core) would continue beyond December 31, 2007. In the meantime, other disablement tasks, including the destruction and removal of the interior structure of the cooling tower, were completed prior to December 31, 2007.

At the request of the Six Parties, in addition to leading the disablement activities, the United States is also providing initial funding for these activities. As we look to the tasks ahead in the next phase, dismantlement, we will request additional authorities in order to ensure that the United States is prepared to take timely action to facilitate completion of these important tasks. We are in active discussions within the administration on dismantlement costs and will consult with Congress.

## Declaration

The other key element of Phase II – provision by the DPRK of a complete and correct declaration of all its nuclear programs – remains to be implemented. Let me be clear – “complete and correct” means complete and correct. This declaration must include all nuclear weapons, programs, materials, and facilities, including clarification of any proliferation activities. The DPRK must also address concerns related to any uranium enrichment programs and activities. While we have had discussions of a declaration with the DPRK, the DPRK did not meet the December 31, 2007 deadline for this commitment, and we have still not received such a declaration. We and the other parties continue to press the DPRK for completion of this important commitment. A U.S. team was recently in Pyongyang to continue these discussions, and the other parties have also continued to engage with the DPRK to press for it to live up to its commitments. The DPRK, including leader Kim Jong-il, maintains that it is committed to the Six-Party process and to fulfilling all its obligations. Working closely with our Six-Party partners, we intend to ensure that Pyongyang lives up to its word by submitting to the Chinese chair as soon as possible a declaration that is in fact complete and correct.

As the DPRK fulfills its commitments, the United States remains committed to fulfilling ours. The other Parties agreed to provide the DPRK with one million tons of Heavy Fuel Oil (HFO) or equivalent

in return for its actions in the Initial and Second phases. To date, the DPRK has received almost 200,000 tons of HFO, including one shipment each from South Korea, China, Russia and the United States. The Six Party Talks Working Group on Economy and Energy Cooperation has informally agreed to provide half of the energy assistance in HFO and the remaining half in HFO-equivalent, namely materials and equipment related to refurbishing coal mines and thermal and hydro power plants. The United States has thus far only provided HFO, and we are in the process of preparing another shipment. We have also cooperated with the other Parties in ensuring that HFO-equivalent materials and equipment are consistent with U.S. laws controlling exports to the DPRK.

Under the October 3 agreement, the United States also reaffirmed its intent to fulfill its commitments regarding rescinding the designation of the DPRK as a state sponsor of terrorism and the termination of the application of the Trading with the Enemy Act (TWEA) with respect to the DPRK. U.S. action related to the terrorism designation and TWEA application will depend on the DPRK's fulfillment of its Second-Phase commitments on providing a complete and correct declaration and disabling its nuclear facilities, as well as on satisfaction of legal requirements. The legal criteria for rescinding the designation of a country as a state sponsor of terrorism are set forth in U.S. law, and the Administration intends to consult closely with Congress and follow appropriate procedures on any decision to take action on the terrorism designation or TWEA.

At the same time, the United States will also continue to press the DPRK to address other important issues, including questions about Japanese abductees. We will continue to urge the DPRK at every opportunity to address Japan's concerns. Japan is an important friend and ally of the United States, and we will continue to consult closely with the Japanese government as we move forward.

We also remain very concerned about nuclear proliferation – the potential for such proliferation has always been one of our major concerns about the DPRK's nuclear weapons programs. In the October 3 agreement the DPRK reaffirmed its commitment “not to transfer nuclear materials, technology, or know-how,” and we intend to hold North Korea to its word. We have discussed this issue with the North Koreans many times and will remain vigilant about proliferation concerns. The North Koreans are cognizant of the fact that United Nations Security Council Resolution 1718 remains in effect.

### **Offering the DPRK A Better Future**

While we are in a difficult period, we remain confident that the Six-Party process is the best mechanism to address the danger to the United States and the international community posed by the DPRK's nuclear programs. We continue to urge the DPRK to provide a complete and correct declaration and complete the agreed disablement actions. Even once we have completed this phase, however, significant work remains. Following completion of the Second Phase, we hope to move quickly into a final Phase, which will be aimed at abandonment of North Korea's nuclear weapons and existing nuclear programs, dismantlement of all North Korea's nuclear facilities, capture of all fissile material the DPRK has produced, and verification of North Korea's denuclearization.

In exchange, the United States is prepared to transform our relations with the DPRK into a more normal relationship. The United States and DPRK have committed to improving bilateral relations and working toward full diplomatic relations. One way we will seek to do this is by increasing bilateral exchanges between the United States and DPRK aimed at enhancing mutual trust. Our goal through this process will remain improving the lives of the people of North Korea.

On a separate track, to address humanitarian assistance needs, the United States is aware of and concerned about possible food shortages in the DPRK in 2008. We are prepared to help respond to such shortages, subject to appropriate program management consistent with international standards. We assisted U.S. NGOs in providing aid to fight the outbreak of infectious diseases following floods in North Korea last summer. The United States is also working with U.S. NGOs to carry out a plan to improve the supply of electricity at provincial hospitals in North Korea.

We have also made clear to the DPRK how much we value the advancement of human rights in all societies and that discussion of important outstanding issues of concern, including the DPRK's human rights record, would be part of the normalization process.

Full implementation of the September 2005 Joint Statement could also provide a way forward for the transformation of overall security relations in Northeast Asia. We remain committed to replacing the 1953 Armistice with a permanent peace arrangement on the Korean Peninsula. The United States believes that discussions of a Korean Peninsula peace regime could begin among the directly related parties once the DPRK has disabled its existing nuclear facilities, has provided a complete and correct declaration of all of its nuclear programs, and is on the road to complete denuclearization. We can achieve a permanent peace arrangement on the Korean Peninsula once the DPRK fully discloses and abandons its nuclear weapons programs. We also hope to explore the development of a Northeast Asia Peace and Security Mechanism, which could help further solidify the cooperative relationships built through the Six-Party process.

### **The Road Ahead**

While we have made important progress toward the full implementation of the September 2005 Joint Statement, much work remains on the road to verifiable denuclearization of the DPRK. We must continue to move forward in the Six-Party process to realize the DPRK's abandonment of all fissile material and nuclear weapons in accordance with the September 2005 Joint Statement, as well as its return to the Treaty on Non-Proliferation of Nuclear Weapons and to IAEA safeguards. We will continue to work closely with our Six-Party partners as we move forward on the tough tasks that lie ahead.

Thank you for the opportunity to appear before you today. I am happy to answer your questions.

## **North Korea warns U.S. pressure could aggravate nuclear standoff**

9 hours ago

[Accessed 2008-02-08T15:40Z]

SEOUL, South Korea - North Korea warned the United States on Friday [2008-02-08] pressure over its nuclear weapons programs will only aggravate the standoff and could lead to an "explosive crisis."

North Korea's Rodong Sinmun newspaper issued the warning, accusing what it called "hardline conservative forces in the U.S." of seeking to increase pressure on Pyongyang in an attempt to disrupt efforts to end the nuclear dispute through dialogue.

"As shown in the previous nuclear crises on the Korean peninsula, pursuing a policy of force would only bring about an explosive crisis, not a resolution of the problem," the paper said in a commentary, carried by the country's Korean Central News Agency.

"Everything achieved through dialogue so far would evaporate into the air," it said, warning of an unspecified "corresponding response if bellicose U.S. forces" continue to put pressure on North Korea.

The paper accused hardline U.S. officials of calling for an end to negotiations with North Korea on the nuclear dispute, raising the North's human rights record and seeking to build a missile-defence system in the region.

The warning came as six-country talks on the nuclear dispute, which made progress in shutting down and disabling the North's nuclear reactor, are now at a deadlock over Pyongyang's refusal to provide a complete list of its nuclear programs.

North Korea says it gave the U.S. a declaration in November as it promised to do by the end of 2007 but Washington says Pyongyang never produced "complete and correct" documentation.

The U.S. Embassy in Seoul was not immediately available for comment on the Lunar New Year holiday.

Meanwhile, an aide to U.S. Senator Richard Lugar and two U.S. experts on North Korea plan to visit the North next week to tour its main nuclear reactor and meet with officials, Lugar's spokesman Andy Fisher said.

A focus of the visit by Keith Luse, the Lugar aide, and North Korea specialists Joel Wit and Siegfried Hecker, will be Pyongyang's interest in a U.S. program for dismantling Cold War-era weapons of mass destruction, Fisher said.

Lugar said Wednesday the program, which he co-founded, could be applied to North Korea.

## **U.S. One-sided Hardline Policy Denounced**

Pyongyang, **February 8** (KCNA) -- The U.S. hardline conservative forces are nowadays making outcries that the U.S. should show its "will" through the one-sided hardline policy and put the "human rights" issue on the table of negotiations for the settlement of the nuclear issue to intensify pressure upon the DPRK.

In the meantime they call for providing dialogues at all levels to establish the missile defence system involving the U.S., Japan and Australia and closely cooperate with one another.

In this regard Rodong Sinmun today in a signed commentary terms their ill-minded remarks an act of going against dialogue and peace aimed to strengthen the pressure upon the DPRK through the high-handed policy and destroy the process of denuclearization of the Korean Peninsula and thus drive the situation back to that before the six-party talks, instead of seeking a negotiated solution to the issue.

The attitude of the U.S. hardline conservative forces against dialogue and negotiation is a manifestation of their way of thinking in the Cold War era, the commentary says, and goes on:

The U.S. hardline conservative forces are playing a tacit trick, turning aside from the reality with the wrong viewpoint. Lurking behind such actions is a sinister purpose to extremely sharpen the DPRK-U.S. relations and create an international environment favorable for the realization of their hostile policy toward the DPRK.

It can be typically evidenced by the fact that they are scheming to expand the sphere of MD by enlisting not only Japan but Australia in it. The high-handed attitude of the U.S. hardline conservatives, who attach more importance to the military tough policy than to dialogue, is an expression of their unilateralism and supremacy.

If they continue to persist in one-sided hardline policy, the DPRK will be compelled to take due countermeasures. The DPRK has no debt to the U.S. The one-for-one principle is the DPRK's way of counteraction and it is its stand that if one do a thing for the other, latter would do the same. The DPRK never allows anything of defaming its self-confidence and dignity to be done. The U.S. hardline conservative forces should give up their one-sided tough policy, well aware of the DPRK's unshakable principle and will. The one-sided hardline policy will bring no good but only harm.

If the U.S. hardline conservative forces drive the situation of the Korean Peninsula and the DPRK-U.S. relations to the worst phase, persistently refusing to find a negotiated solution to the issue, the efforts made so far will come to naught and the U.S. would be chiefly to blame for the results.

## **U.S. Pact With North Korea May Hinge on Syria**

By JAY SOLOMON

February 8, 2008; Page A5

WASHINGTON -- As the Bush administration seeks to cinch a disarmament deal with North Korea, questions about Pyongyang's past defense cooperation with Syria have emerged as perhaps the principal stumbling block to a successful completion of the pact.

North Korea missed a Dec. 31 deadline to fully declare the extent of its nuclear activities, as called for under a six-country negotiating process. But U.S. negotiators are voicing guarded confidence that they will eventually gain disclosure from Pyongyang on two key elements of its nuclear program: the number of atomic weapons and North Korea's believed attempt to develop a uranium-enrichment capacity to produce nuclear fuel.

It is the issue of North Korea's believed assistance to third countries, particularly Syria, where U.S. officials say there remains significant distance between Washington and Pyongyang. North Korea continues to deny it has given any nuclear assistance to Syrian President Bashar Assad's government, though it hasn't denied conventional military support. And the international community itself remains divided over what they believe was the full extent of Pyongyang's military assistance to Damascus in recent years.

"The Syria issue is where we really need to push," said a U.S. official involved in the six-party negotiations, which also include Russia, China, Japan and South Korea. "It's the one where we haven't made any headway."

Media disclosure of an Israeli missile strike inside Syria last September brought to international attention the issue of North Korea's possible nuclear assistance to Damascus. The Israeli government declined to comment on its raid along Syria's Euphrates River, and Damascus has denied it has been attempting to develop a nuclear capacity, either for civilian or military use. But a number of U.S. and European officials familiar with the intelligence have said in recent weeks that they believe Israel destroyed a nascent nuclear reactor Syria was developing in cooperation with North Korea.

These officials said spy satellites detected North Korean workers regularly appearing at the Euphrates site. And photographs taken of the facility showed its dimensions and structure bore numerous similarities to the Yongbyon nuclear reactor North Korea is currently disabling as part of its disarmament agreement with the U.S. Satellite photos also showed Syrian bulldozers had cleared the site days after the Israeli strike, a sign to some counterproliferation experts that Damascus was attempting to cover up its activities. A senior European diplomat working on Middle East issues said Western governments, after reviewing intelligence on the Israeli strike, have reached "some sort of common ground...that there seems to have been cooperation between Syria and North Korea" on nuclear development.

Still, seeking to clarify the extent of North Korea's activities inside Syria remains a major obstacle for the U.S. and other countries attempting to finalize the nuclear agreement with Pyongyang, say U.S. officials. Neither Syria nor Israel has been willing to provide information to inspectors from the United

Nations nuclear watchdog, the International Atomic Energy Agency, about the activities of the site the Israelis destroyed. And, even inside the U.S. government, intelligence information concerning the Israeli action has been tightly controlled by just a few senior officials.

The result is that there remains a lack of consensus among the five nations negotiating with North Korea over what exactly Pyongyang is supposed to divulge. "Some actors believe that what's been disclosed [about Syria] is serious and it's nuclear. But it's not universally accepted," said the official close to the six-party talks.

## **Report: Syria has built 3 facilities at site of IAF strike**

By JPOST.COM STAFF

Feb 10, 2008 20:24

Three more installations near the location bombed by IAF planes in Syria have been built, Channel 2 reported on Sunday evening.

It was unclear what purpose the facilities were to serve but satellite images taken by DigitalGlobe, a private company in Longmont, Colorado, clearly showed three new compounds circling an installation which was built in place of the old one, destroyed by Israel in September 2007.

Foreign media reports, some quoting unidentified US officials, have said the strike hit a nuclear installation linked to North Korea. Damascus denies it has an undeclared atomic program, and North Korea has said it was not involved in any such project.

## **US Intel Links Iran With Nuke Bomb Bid**

By GEORGE JAHN

The Associated Press

Thursday, February 14, 2008; 8:38 AM

*[EXCERPT]*

VIENNA, Austria -- The U.S. has recently shared sensitive information with the International Atomic Energy Agency on key aspects of Iran's nuclear program that Washington says shows Tehran was directly engaged in trying to make an atomic weapon, diplomats told The Associated Press on Thursday.

The diplomats said Washington also gave the IAEA permission to confront Iran with at least some of the evidence in an attempt to pry details out of the Islamic republic on the activities, as part of the U.N. nuclear watchdog's attempts to investigate Iran's suspicious nuclear past.

The decision by the U.S. administration to declassify its intelligence and indirectly share it with Iran through the IAEA was a clear reflection of Washington's drive to pressure Iran into admitting that it had focused part of its nuclear efforts toward developing a weapons program.

While the Americans have previously declassified and then forwarded intelligence to the IAEA to help its investigations, they do so on a selective basis.

Following Israel's bombing of a Syrian site late last year, and media reports citing unidentified U.S. officials as saying the target was a nuclear installation, IAEA chief Mohamed ElBaradei turned, in vain to the U.S. in asking for details on what was struck, said a diplomat who \_ like others \_ asked for anonymity in exchange for divulging confidential information.

Shared in the past two weeks was material on a laptop computer reportedly smuggled out of Iran, said another diplomat, accredited to the IAEA. In 2005, U.S. intelligence assessed that information as indicating that Tehran had been working on details of nuclear weapons, including missile trajectories and ideal altitudes for exploding warheads.

He said that after declassification, U.S. intelligence also was forwarded on two other issues \_ the "Green Salt Project" \_ a plan the U.S. alleges links diverse components of a nuclear weapons program, including uranium enrichment, high explosives testing and a missile re-entry vehicle, and material in Iran's possession showing how to mold uranium metal into warhead form.

## **North Korean Newspaper Denies North Korea's Alleged Nuclear Connection with Syria**

By Jeong Jae Sung

[2008-02-14 15:49 ]

Chosun Shinbo once again denied North Korea's alleged nuclear connection with Syria, saying the allegation was unfounded.

“North Korea clearly stipulated its commitment not to transfer nuclear materials, technology, or know-how in the October 3 Agreement. That alone should dismiss the allegation,” said Chosun Shinbo in the article published in its internet edition under the title, “The U.S.’ maneuver against North Korea (Part II)- Arbitrary stigmatization against North Korea as one responsible for nuclear proliferation.” Chosun Shinbo is a pro-Pyongyang newspaper published by Chongryon (the General Association of Korean Residents in Japan).

The Foreign Ministry spokesman of North Korea also said on January 4, “The North Korea has already stipulated its commitment not to transfer nuclear materials, technology or know-how under the October 3 Agreement. That fact itself is enough to dismiss the allegation against North Korea.”

Chosun Shinbo denounced those neoconservative forces of the U.S. saying, “American hard-line conservatives are arguing that North Korea should include an explanation about the allegation when it submits a declaration of nuclear programs. By doing so, they are trying to sway the media to their side and putting an obstacle to the efforts to settle the current nuclear dispute.”

“The allegation of North Korea's nuclear collaboration with Syria began circulating in the U.S. media in September last year. However, the Six Party Talks meeting that took place shortly after did not make a big issue out of the allegation,” Chosun Shinbo said.

The newspaper stressed that U.S. envoy Christopher Hill also dismissed the allegation at the closed session meeting of U.S. Senate Foreign Relations Subcommittee on East Asian Pacific Affairs that took place on December 12 last year.

At that time, South Korean media reported that Hill had said at the meeting that whether or not North Korea collaborated with Syria on a nuclear program in the past would not have any influence on the current nuclear negotiations between North Korea and the U.S. as long as North Korea has no nuclear connection with Syria at the present time. However, Hill was also reported to have said that North Korea must prove that North Korea did and will not pose a nuclear threat regardless of whether or not North Korea engaged in any nuclear proliferation activities in the past

In addition, Chosun Shinbo contended that it is unfair to demand North Korea to provide an explanation about the allegation of UEP (Uranium Enrichment Program). The newspaper quoted David Albright, president of the Institute for Science and International Security (ISIS) as saying, “No one believes that North Korea has technology to use a uranium enrichment program to develop nuclear weapons.”

On February 10, David Albright said in his interview with Radio Free Asia that what needs to be declared by North Korea is plutonium and the U.S. should not lower the bar for declaration standards. However, the U.S. needs to extend the deadline for declaration and makes sure North Korea declares its plutonium stockpile, said David Albright.

David Albright said that he confirmed from a high rank official that North Korea declared to have produced a total of 30 kg of plutonium in its first declaration draft. He added that although the issues of UEP and nuclear proliferation can be discussed later, North Korea must provide a full and complete declaration of its nuclear facilities.

## Envoy urges not to dwell on past N.K. nuclear acts

2008/02/14 06:03 KST

⚡⚡ WASHINGTON, Feb. 13 (Yonhap) -- A Chinese diplomat on Wednesday urged negotiators at the North Korean denuclearization talks not to dwell on Pyongyang's past conduct, the main sticking point between North Korea and the United States.

⚡⚡ "The point is, we should not just go back in the past to say what you have done. The most important thing is what we should do in the future," Ruan Zongze, minister counselor at the Chinese embassy in Washington, said at a forum.

⚡⚡ The diplomat said North Korea was making efforts to implement the six-party agreements by disabling its nuclear reactor and facilities. The accords call for action for action, requiring other countries to provide economic assistance and other incentives, he said, and the North Korea-U.S. arguments over removing Pyongyang from the U.S. list of terrorist-sponsoring states, one of the incentives most coveted by Pyongyang, "play a part in handicapping" progress, the diplomat said.

⚡⚡ But he described the current impasse as a tactical one rather than strategic.

⚡⚡ China is the host of the six-party talks, also involving South and North Korea, the U.S., Russia and Japan, aimed at denuclearizing the Korean Peninsula. Wednesday marks the anniversary of the Feb. 13, 2007, agreement in which Pyongyang agreed to eventually give up its nuclear weapons and programs, in return for financial and political benefits.

⚡⚡ As interim steps, Pyongyang was required by the end of 2007 to disable its reactor and auxiliary facilities that were churning out weapons-grade plutonium, and submit a declaration detailing its nuclear activities and any proliferation overseas.

⚡⚡ But North Korea missed the deadline, and while disablement was proceeding, Pyongyang's initial offer on the declaration fell short of U.S. expectations. Washington wants a "complete and correct" disclosure that addresses nuclear facilities, material and any transfer to other countries.

⚡⚡ Christopher Hill, the top U.S. nuclear negotiator, told a Senate hearing last week the six-party members need to know about the history of Pyongyang's nuclear activities, specifically proliferation.

⚡⚡ "We believe that, as we go forward, we need more transparency from the North Koreans on this," he said. "We need to know what they were up to in the past. We need to have a clear picture of that so that we can go forward."

Critics often cite Pyongyang's previous conduct to argue the communist regime cannot be trusted. North Korea is accused of running a secret nuclear weapons program, violating a 1994 bilateral agreement with Washington to suspend all atomic activities. The deal, known as the Geneva Agreed Framework, collapsed as a result.

⚡⚡ Ruan, speaking at a forum sponsored by the Institute of Corean (Korean)-American Studies, talked about "speculation of some disagreement" between North Korea and the U.S., apparently referring to the dispute over Pyongyang's past activities, and hoped for a "creative" resolution.

후후 He repeatedly emphasized that the six-party agreements clearly require action for action. "What does action for action mean? That means once DPRK is moving towards, is taking some measures for disablement or for declaration, at some time that requires economic assistance, not only from the U.S., but from other countries," he said. DPRK stands for the Democratic People's Republic of Korea, North Korea's official name.

후후 "At the same time, there are some very critical issues," the diplomat said, citing the removal of Pyongyang from the U.S. terrorism list.

후후 The issue is under discussion, "but certainly they play a part in handicapping the progress," he said.

후후 On China's relations with North Korea, Ruan said economic relations were growing, but it was "really hard" to say how much leverage Beijing has over its neighbor and ideological ally.

후후 "It is not China's way, or China's philosophy, to urge another country to do something it doesn't want," he said. "So everything should be conducted through political dialogue."

## **U.S. Envoy Says North Korean Uranium Program Remains Stumbling Block**

Interviewee:

Christopher Hill, Assistant Secretary of State for East Asian and Pacific Affairs

Interviewer:

Robert McMahon, Deputy Editor

**February 15, 2008**

The denuclearization deal signed by North Korea on February 13, 2007, marked its first anniversary stalled over Pyongyang's lack of a full declaration of its programs. The envoy leading the U.S. effort in the Six-Party Talks, Assistant Secretary of State Christopher R. Hill, says the dismantling of the Yongbyon reactor remains a positive sign of cooperation. But he says a chief problem at this stage is getting North Korea to admit to any past uranium-enrichment efforts as well as to dealings with third parties like Syria. North Korean officials are prepared to say they have no enrichment or export programs under way, but that is not sufficient, Hill says. "We really do need to know what all went on before, if it stopped, when did it stop." In response to criticism of the negotiating process by the U.S. human rights envoy, Hill said rights issues will eventually become central to the talks.

**We're about six weeks past the deadline for North Korea to declare its nuclear activities and at the one-year anniversary of the denuclearization deal. In some circles it's seen as stopped in its tracks or even off the rails. Should we expect to see a declaration from North Korea in the near future?**

In order to go forward, we're going to need to get a declaration. A declaration is part of what is called Phase Two, and it's called for very explicitly in the agreement, including in the October [2007] agreement. So the North Koreans know they have to provide a declaration. The problem is not that they're not willing to provide a declaration. The problem is they don't want to give us a complete and correct one. And we don't want to accept something that's less than complete, less than correct. So we're continuing to go back and forth with them on this. And we certainly made it clear to our other partners in the process that we need a complete, correct [declaration]. So I don't want to talk about the process being off the rails. In many respects some good things have happened, including the disabling of the nuclear facility, which is something they had never done before. So we're going to stick with it and see if we can get something.

**The weapons-grade plutonium—apparently toward the end of last year the North Koreans came in with an estimate that was seen as not realistic. Can you talk about that? And then separate from that, the uranium-enrichment program?**

Let me break the declaration down into three major components. First, nuclear materials. Second, nuclear facilities. Third, nuclear programs. Under nuclear materials, they are prepared to give us a figure for the separated plutonium. The plutonium they produced from this facility is presumably sitting in a bunker somewhere. From my way of thinking, it is not so important what the figure is. What is important is that we be able to verify it. So people who say it's too small really are in no position to say that until we can verify it. Now, if it comes in at fifty kilos and the verification process turns out it

should be sixty, then we have a gap of ten. That's a problem. If it comes in at thirty and the verification shows that thirty is correct, then we don't have a problem. Under the facilities, we kind of know what kind of facilities they have. They know what kind of facilities they have. They know what we know about their facilities. We'll probably be okay on facilities.

**The third area is the big problem: that's programs.** And here they're prepared to tell us all about the plutonium program, but we already know about the plutonium program. We have U.S. technicians crawling around Yongbyon as we speak dealing with that. **The real thing we need to know about is the uranium enrichment and any export programs that they've had.** Now they're prepared to say, in the category of uranium enrichment and the export programs, that they don't have anything going now, and they won't in the future. And some of our partners are saying, "Well, two out of three is not bad." But we really do need to know what all went on before, if it stopped, when did it stop, etc. We really need clarity on this. **Again, some people say, "Why do you worry so much about the past?" Well, frankly we need to know what they've been up to. And I don't think we can really go forward with some of our obligations until we have a complete picture.**

**Another stumbling block mentioned is the issue of third-state assistance, in this case Syria. That's generating a lot of concern. What is the extent of dialogue on that issue, on assistance to Syria, the site that was targeted by the Israelis [in September 2007]? And will the Six-Party Talks get into that issue?**

**We've made it abundantly clear to the North Koreans that the issue of nuclear cooperation with abroad, whether it's Syria or other states—we need to know all about that. And it's not enough to do as they're doing now which is to say, "We don't have any, we won't in the future." We need to know what they've done in the past. We do know some information about some of their programs from the past. Some of this came out only recently, and some of the issues you are alluding to in Syria are fairly new issues. So we need to know what they've been up to. And I would say that in order to go forward, we need to get some clarity on that.**

**There's been some calls within the United States from the human rights community, human rights envoys, for making human rights part of the dialogue, and maybe even raising the issue of a Helsinki-type process [of engagement]. Could that work at this stage?**

Well, people who are well informed on this issue understand that as we get through this declaration, we will then go to something called the Third Phase. Now what we would like in the Third Phase is for North Korea to not only dismantle all of their programs, but also to give up, to abandon, pursuant to the September 2005 agreement, to abandon their separated plutonium, and any other fissile material they have. Now, in order to get that, we're going to put a few things on the table. And one of them is normalization with the United States, a bilateral normalization process. As part of normalization, we will of course be discussing human rights, and we have been discussing human rights. And I don't think we should ever be afraid to discuss human rights.

The problem is not that they're not willing to provide a declaration. The problem is they don't want to give us a complete and correct one. And we don't want to accept something that's less than complete, less than correct.

Human rights needs to be understood by the North Koreans as really the price of admission to the international community. So as we discuss our normalization, of course this subject will be discussed.

But what we would like the North Koreans to come to understand is that human rights is something that they don't have a choice on, that if they want to join the international community, they have to start living up to some human rights standards. This is not just some desiderata on the part of the United States. This has to do with international obligations. And so, to the extent that we can convey this, of course we'll convey it through this bilateral process of leading to normalization.

**So in Phase Three, that focus comes more into sharper relief?**

Yes, because in Phase Three, we would put several things on the table. One is the normalization path with the United States. Obviously human rights would be a part of that as we go forward. But we will also be putting on the table an effort to get North Korea access to international financial institutions and to international organizations, generally, that they're not a part of. And here, too, human rights will be a part of that.

**Very soon South Korea will have a new president taking office, President Lee [Myung-bak] . Do you see that as possibly a move that will create some sort of catalyst for momentum?**

First of all we've worked well with the South Koreans throughout the Six-Party process. And this new administration is indicating it will have a somewhat different approach on some of the issues, namely North-South [relations]. The president-elect, President Lee Myung-bak, has talked about having more reciprocity involved in the assistance that South Korea gives to North Korea directly. So we can probably expect some change, but it will obviously be up to the new administration as it takes off to survey the situation and see what it wants, and what it wants to do.

**South Korea and China, there are concerns that their sort of unconditional aid to North Korea has in some ways undermined the leverage that could be brought to bear in really forcing the North Koreans to accept more readily some of the conditions of the agreement. What is your view on that?**

Well, it's important that what South Korea and what China does directly with North Korea gets somehow coordinated with the Six-Party process because we can't have a situation where the things we give North Korea through the Six-Party process become sort of to the right of the decimal point compared to what's going in directly.

But I do want to caution American audiences, in particular, to understand that in Korea, there is a real feeling that what happened in Korea in the middle of the twentieth century that resulted in the division of the Korean peninsula came about through no fault of Korean people, but rather through sort of international big powers arrangements. And indeed, the division of the Korean peninsula came about by happenstance, where U.S. troops took surrendered Japanese troops south of the 38th parallel, and Soviet troops took their surrender north of the 38th parallel. In short, this division is a great tragedy in Korea. And we as Americans need to be sensitive to the fact that many Koreans—even Koreans who are not so anxious to reunite, or who see all the impediments of unification, the economic challenges involved—even to those Koreans, there is a great deal of anxiety about what happened in the mid-twentieth century. And if we end up wagging our finger at Koreans and telling them how to deal with North Korea, we could be doing that at some peril to the relationship.

**At this stage what's the concern that there's this lame-duck feeling, that people are waiting for this process to play out, and then a new U.S. administration to come in? Has this been a hindrance at this point, this perception? Are you getting this from Asian diplomats?**

I'm certainly not getting it from the North Koreans, who indicated a desire to try to wrap this up in 2008. But it is fair to say that as the days and weeks roll by, where we haven't got through Phase Two, obviously it becomes a greater challenge to try to wrap everything up on the timescale that we want it wrapped up. So we do need to pick up the pace if we're going to succeed here. But what's been very important for the North Koreans to understand is this issue of dealing with North Korea's nuclear ambitions has not been politicized in the United States. We have both parties, Democrats and Republicans, very much wanting to see this resolved, and pretty much wanting to see it resolved on similar terms. So I'm hopeful that the North Koreans understand that, and frankly the sooner the better. If we can get this resolved, the sooner North Korea can begin to address the very acute needs of their people.

**Report: North Korea provided technological assistance to Syria to build nuclear reactor**

The Associated Press

Monday, February 18, 2008

SEOUL, South Korea: North Korea helped Syria build an underground nuclear reactor in the Middle East country, a South Korean news report said Monday.

"The U.S. government has circumstantial (evidence) that the North provided technology assistance to build an underground reactor in Syria," South Korea's Hankook Ilbo newspaper reported, citing an unidentified diplomatic channel.

U.S. Embassy officials in Seoul were not immediately available for comment on the report.

North Korea has repeatedly dismissed its alleged nuclear connection with Syria, saying that it had already pledged it would never transfer any nuclear material or technology out of the country.

Monday's report came as the international process aimed at stripping North Korea of its nuclear weapons programs was at a deadlock over Pyongyang's refusal to give a complete list of its nuclear programs as required by a landmark agreement.

U.S. Assistant Secretary of State Christopher Hill arrived in Beijing earlier Monday for talks with Chinese officials on how to jump-start the stalled disarmament deal with North Korea.

The U.S. nuclear envoy was scheduled to visit Seoul and Tokyo this week for similar consultations.

Evening Walk-Through at Six-Party Talks  
Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs  
Kerry Center Hotel  
Beijing, China  
February 18, 2008

*[EXCERPT]*

ASSISTANT SECRETARY HILL: Hello. It's nice to be back in Beijing. Are there any questions?

QUESTION: Did you have any meetings today? And, what are your plans for tomorrow?

ASSISTANT SECRETARY HILL: I was over at the Foreign Ministry today, and we had a lengthy meeting on bilateral issues, in particular on preparation for Secretary Rice's trip here next week. And then tomorrow morning I have meeting also at the MFA with He Yafei.

QUESTION: So did you meet with Mr. Wu Dawei today?

ASSISTANT SECRETARY HILL: No, he is not here today. So I'm going to meet him later in the trip -- probably in Tokyo.

QUESTION: Are you going to meet with the North Koreans here? Is there still that possibility?

ASSISTANT SECRETARY HILL: Well, as is always our practice, we always let them know that I am here, and we don't have anything set up yet. But if it's possible, I am here tomorrow. But we don't have any meetings scheduled just yet.

QUESTION: But you would like to have a meeting?

ASSISTANT SECRETARY HILL: If the DPRK is interested, I am here.

QUESTION: What would you say is the purpose of your trip? Because it seems like the Six-Party Talks are kind of stalled right now, is it to sort of revive the talks?

ASSISTANT SECRETARY HILL: No, the purpose is that we have Secretary Rice coming out here for her first trip in a quite a while actually. So I am here to discuss some of the elements of that visit. And also to talk to Six-Party members about how we are perceiving the situation. Just to sort of be in touch.

QUESTION: Can you tell us how the U.S. side is perceiving the Six-Party situation right now?

ASSISTANT SECRETARY HILL: I think that everyone knows we are trying to get through phase two, which involves a declaration on the part of the DPRK. We don't have that declaration yet. And so we are a little stuck on the need for a complete and correct declaration.

QUESTION: There seems to be a stalemate over a couple of [inaudible] regarding the declaration and taking North Korea off the terrorism list. How do you plan to resolve that?

ASSISTANT SECRETARY HILL: First of all, I don't know if things are in stalemate, because stalemate implies they cannot change. I think the issue is, the DPRK needs to be prepared to make a complete and correct declaration. I'm not too concerned about the sequencing of their obligations and our obligations. I think there are ways to deal with the sequencing. I think the real problem is they have not yet been willing to provide a complete and correct declaration.

QUESTION: So are you willing to move simultaneously?

ASSISTANT SECRETARY HILL: Again, I don't think sequencing is the problem. I think the problem is, as yet, they have not been prepared to provide a complete and correct declaration. So to talk about sequencing at this point is a little premature.

QUESTION: Do you plan to go to Pyongyang [inaudible] --

ASSISTANT SECRETARY HILL: No --

QUESTION: -- with the New York Philharmonic Orchestra?

ASSISTANT SECRETARY HILL: No, because I will be in Seoul for the inauguration of the new president. It happens to be on the same day.

*[deletia]*

Released on February 18, 2008

## **Airport Departure From Six-Party Talks**

Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs

Beijing, China

February 19, 2008

4 pm

ASSISTANT SECRETARY HILL: I had a good meeting this morning at the Chinese Ministry of Foreign Affairs with Mr. He Yafei, who deals with Asia-wide issues. So we discussed various issues in Asia. In addition, beginning at around 11:30 and concluding just a few minutes ago, I met with our DPRK counterpart Kim Kye-gwan at the DPRK Embassy, and we reviewed the overall situation in Phase II with particular attention paid to the issue of the declaration. And I think we had good, substantial discussions -- a good exchange of views on that. We agreed we will stay in contact, and now I'm off to Seoul.

QUESTION: Did you have any new ideas of how to move things forward?

ASSISTANT SECRETARY HILL: We discussed ideas that China has had and how things could be moved. So it was a good, substantial discussion.

QUESTION: Was that concerning the declaration?

ASSISTANT SECRETARY HILL: It was mainly on the declaration, but we also had a look at what the next phase might look like -- that is, so-called Phase III. But of course we can't get to Phase III until we get through Phase II.

QUESTION: Were they prepared to submit full and complete declaration?

ASSISTANT SECRETARY HILL: Well, we had a discussion of what we felt, what we believe needs to be included in that. I think they understand our point of view. But we won't have a complete and correct declaration until we have a complete and correct declaration. So I'm not sure if we yet have an understanding on that. But it was a good exchange of views on it.

QUESTION: So how long do you think you have to wait to get this?

ASSISTANT SECRETARY HILL: Well, I want to report on my conversations. I want to give a report on that conversation to Secretary Rice, and obviously we will be discussing it in the next week. And of course she'll be in the region next week, and I'll be back in the region. So we'll see if we can get through this issue. We are going to work very hard on it on the coming weeks, and I think the Chinese

are also very interested in doing that. I'll be seeing Wu Dawei in Tokyo, and I'll be able to report to him on my discussions with the DPRK.

QUESTION: Any change [inaudible]? What's the indication from North Korea?

ASSISTANT SECRETARY HILL: I don't want to say that, except to say that it was a good and substantial discussion. We really went through all of the elements that we would expect to see in the declaration. And we also discussed the overall fulfillment of Phase II and what we can look ahead to in Phase III. So it was a very complete review of where we are and what we need to do in order to make progress.

QUESTION: Does [inaudible] the Syria project?

ASSISTANT SECRETARY HILL: Yes, we discussed all of the elements that we believe need to be included, including the Syrian matter and uranium enrichment. So all of the elements.

QUESTION: Sir, you've been involved in negotiations with Milosevic for a long time. Do you have any comments on the current situation in Kosovo?

ASSISTANT SECRETARY HILL: Well, I am not in the position really to comment on the ongoing situation in Kosovo. Of course, I spent some years there working on what was at the time a broad autonomy deal, in Rambouillet. As I emphasized to the Chinese interlocutors today, it is quite a unique situation in Kosovo -- really very unique. There is nothing like it in the world. Secretary Rice made clear in her statement we are pleased at the declaration of independence, and we also feel very strongly that we want to have a good and substantial relationship with Serbia and ultimately with a Balkans that is ultimately at peace and one that is integrated into a European-Atlantic system. OK, we'll see you later.

## US, North Korean Envoys in Beijing Talks

By HENRY SANDERSON – 42 minutes ago

[Accessed 2008-02-19T15:10Z]

BEIJING (AP) — Senior U.S. and North Korean negotiators met Tuesday for hurriedly arranged talks on salvaging a sputtering process to eliminate the North's nuclear programs.

The meeting between U.S. Assistant Secretary of State Christopher Hill and North Korean Vice Foreign Minister Kim Kye Gwan was their first since December.

In the two months since, fitful progress in ending North Korea's nuclear programs has come to a virtual stop over differences on whether the North has made a full accounting of its nuclear facilities.

North Korea wants Washington to remove it from terrorism and other blacklists before making the disclosures.

Hill said he had "a good substantial discussion" with Kim inside North Korea's embassy in Beijing, but indicated no breakthroughs had been made.

Hill said he again urged North Korea to make a full disclosure of its nuclear programs to keep alive a year-old disarmament agreement.

"We had a discussion about what we think needs to be included in that. I think they understand our point of view, but we won't have a complete and correct declaration until we have a complete and correct declaration," he said at the Beijing airport before flying to Seoul.

"So I am not sure we yet have an understanding on that," Hill said.

Hill said a full declaration should include uranium enrichment and Pyongyang's relations with Syria, to which it has been accused of providing nuclear assistance. Damascus denies it has an undeclared atomic program, and North Korea has said it was not involved in any such project.

The wrangling is the latest in nearly five years of tortuous diplomacy over North Korea's nuclear programs, during which it exploded a nuclear device only to later agree to abandon the programs.

A February 2007 agreement and a follow-up pact in October — endorsed by China, Japan, Russia and South Korea as well as the United States and North Korea — promised the North energy and other assistance in return for relinquishing its nuclear programs. It also committed Washington to begin removing trade sanctions and the terrorism designation.

South Korea said Tuesday that 2,830 tons of steel will be shipped to North Korea on Friday as part of promised aid under the disarmament agreements. The shipment is about a 10th of what the South Korean government will send to North Korea before June, the South's Unification Ministry said.

While it has shut and begun dismantling its main nuclear facility as the agreement called for, North Korea missed a year-end deadline for disclosing all its nuclear programs. In recent weeks, it has shown

signs of slowing down its disarmament. At the same time, with President George W. Bush leaving office in a year, Washington has shown added urgency about North Korea.

"This administration is running out of time," said Jonathan Pollack, a Korea watcher at the U.S. Naval War College. "This was one of the few things we could say that the Bush administration could cite as a possible accomplishment of one kind or another by the end of the year. But it's looking tough, barring a sudden breakthrough."

Adding urgency to Hill's mission, Secretary of State Condoleezza Rice is to visit the region next week, stopping in Beijing, Tokyo and Seoul, where she is to attend the inauguration of South Korean President-elect Lee Myung-bak.

Hill said he would also meet China's nuclear envoy in Tokyo later this week in a bid to push the process forward.

"We're going to work very hard on it in the coming days and week. I think the Chinese are also very interested in doing that."

## U.S. presses N. Korea on Syria

By Nicholas Kralev

February 20, 2008

The United States, alarmed by mounting evidence that North Korea gave nuclear assistance to Syria, has rejected pressure from some of its partners in six-nation talks to compromise on an overdue declaration of Pyongyang's nuclear activities, U.S. officials said yesterday.

The declaration, which was due at the end of December, would complete the second phase of an October deal aimed at denuclearizing the Korean Peninsula and clear the way for promised political and economic benefits to the communist state.

"We won't have a complete and correct declaration until we have a complete and correct declaration," Christopher R. Hill, the chief U.S. negotiator, said yesterday after meeting with his North Korean counterpart, Kim Kye-gwan, in Beijing. "So I'm not sure if we yet have an understanding on that."

The Syrian connection has become a major problem for the United States since an Israeli air strike in Syria in September. The target was widely reported to be a nuclear facility under construction with help from North Korea. Current and former U.S. officials said yesterday that intelligence points to a plutonium-related facility.

Yesterday, Mr. Hill said the North's declaration must account for the Syrian connection. "We discussed all of the elements that we believe need to be included, including the Syrian matter and uranium enrichment," he said of his talks with Mr. Kim.

U.S. and Israeli officials have refused to talk about the September strike, but diplomats and analysts said even the administration's strongest advocates of engagement with Pyongyang are worried by what they have learned from intelligence sources.

Only days after the bombing, the North's official KCNA news agency reported that a high-level meeting between Syria and North Korea had taken place in Pyongyang.

"We've made it abundantly clear to the North Koreans that the issue of nuclear cooperation abroad, whether it's with Syria or other states — we need to know all about that," Mr. Hill said in a little noticed interview on Friday.

North Korea currently is saying, " 'We don't have any [nuclear programs], we won't in the future,' " said Mr. Hill. But that "is not good enough. ... We need to know what they've done in the past."

He said in the interview on the Council on Foreign Relations Web site that "some of our partners" in the six-party talks have told him, "Well, two out of three is not bad," and "Why do you worry so much about the past?"

He did not name those countries, and U.S. officials yesterday declined to do so either. But analysts said it was unlikely that Japan was one of them. The other participants in the negotiations are China, South Korea and Russia.

Bruce Klingner, senior research fellow at the Heritage Foundation, said there has been "a mood shift in Washington" since the air attack in Syria.

"The administration has taken a firmer line with North Korea," he said.

At times over the past year, Mr. Klingner said, Mr. Hill has given the impression that he was "lowering the bar" on the requirements from the North, particularly on verification of Pyongyang's claims in the declaration.

But since the Israeli strike, which was followed by criticism of the administration's policy by some Republicans, there has been no room for trusting the North Koreans blindly, Mr. Klingner said.

The administration is also insisting that Pyongyang come clean about a uranium enrichment program, which the United States first accused it of having in 2002.

In their draft declaration, the North Koreans say they currently do not have any such program and will not have one in the future, U.S. officials said. There is no mention, however, of a past program.

"The real thing we need to know about is the uranium-enrichment and any export programs that they've had," Mr. Hill said. "I don't think we can really go forward with some of our obligations until we have a complete picture."

Mr. Hill, who is in the region to prepare for Secretary of State Condoleezza Rice's visit to Seoul, Beijing and Tokyo next week, yesterday denied reports that he had tried to separate the Syrian and the uranium issues from the declaration to help the North Koreans save face.

"We are not talking about breaking apart the declaration," he said.

## **Briefing on Recent Africa Trip and Upcoming Asia Trip**

Secretary Condoleezza Rice

Washington, DC

February 22, 2008

(3:35 p.m. EST)

*[EXCERPTS]*

SECRETARY RICE: Good afternoon. I thought I would stop off in Washington on my way from Africa to Asia and pick up those of you who will be going on with me to Asia. Let me just make a few opening remarks and then I'm happy to take your questions.

*[deletia]*

SECRETARY RICE: *[deletia]* Moving on, I, of course, tomorrow will travel to Asia, first to South Korea to attend the inauguration of the new South Korean President. I'll then go on to China and Japan. Asia is a place where we have put a lot of effort into strengthening our relationships, particularly our bilateral relationships, and I really look forward to meeting the new South Korean leadership. We've had an extensive period now of strengthening our bilateral security arrangements. We've had a period of negotiating an FTA, a free trade agreement and, of course, working together in the six-party talks to address the North Korean nuclear challenge. I will also meet, for the first time, my new Japanese counterpart and I look forward to that. And I look forward to going on to China.

Now obviously, we will have a broad range of discussions, but I do expect that there will be considerable discussion of the six-party talks and how we move forward. There has been progress, particularly on the disabling side. There is more work to do. We need a complete declaration from the North Koreans about both their proliferation activities, their current program – plutonium program, which they are in the process of disabling, but also the HEU program, that they need to make clear what has happened there. So we'll talk about how to do that.

Let me just note that we've been concerned, of course, about the proliferation issue for quite a long time and I will talk to our six-party partners about how we use the six-party framework to address proliferation issues. Because I am of the mind that we have the right group of countries at that table with the right set of incentives and disincentives to address not just denuclearization, which obviously is extremely important, but also proliferation. And I'll be carrying that message and discussing that with our partners.

*[deletia]*

QUESTION: Yes, Madame Secretary, on your forthcoming trip, when you're in Beijing, do you -- would you hope to meet with any North Korean delegate? If so -- since they're a part of the process, obviously? And did you plan to? And if you don't plan to, why don't you plan to?

SECRETARY RICE: I don't plan to. And I just don't think that it's something that's useful at this time or that is warranted. Chris Hill has recently had those contacts and he'll continue to have them. I think everybody knows what needs to happen here. North Korea is quite aware of what it needs to do. And I do look forward to talking to the Chinese, the Japanese, the South Koreans about how we can move this forward.

I want to say I do think that the progress that has been made on disabling is something that already moves us further along than we've really ever been with the North Korean nuclear program. But there is surely a lot of work to do in terms of next stages of really not just disabling but dismantling. There is work to be done on, of course, the accounting for various programs. But I don't see any purpose at this point in meeting with North Koreans.

*[deletia]*

## Rice seeks North Korea solution before window closes

Fri Feb 22, 2008 3:53am EST

By Arshad Mohammed

[EXCERPTS]

WASHINGTON (Reuters) - U.S. Secretary of State Condoleezza Rice visits South Korea, China and Japan next week to seek ways to persuade North Korea to give up its nuclear programs before the window closes on the Bush administration.

[deletia]

At the top of her agenda will be reviving the six-party agreement under which North Korea has begun to dismantle key nuclear facilities at Yongbyon but has balked at providing a complete declaration of all of its nuclear programs.

[deletia]

According to U.S. officials and analysts, the declaration's sticking point has been Pyongyang's reluctance to discuss any transfers of nuclear technology to other nations, notably Syria, as well as its suspected pursuit of uranium enrichment.

North Korea has produced plutonium, which can be used to make atomic bombs, at Yongbyon. Uranium enrichment would give it a second pathway to fissile material for nuclear weapons.

The United States has questions about any possible North Korean role in a suspected Syrian covert nuclear site that was bombed by Israel in September. Syria has denied having a nuclear program but the case remains murky.

A senior U.S. official said Washington has begun exploring whether Pyongyang might disclose any proliferation and uranium enrichment in a separate document to be kept secret.

"We are flexible on this issue. We are open to ideas on how to do that," said the official, who spoke on condition that he not be named because of the sensitivity of the negotiations.

He said China and South Korea had floated ideas to North Korea on what it might say in such a separate document but the United States had not.

However, he insisted that North Korea must disclose all of its nuclear programs at the same time to be relieved of sanctions under the U.S. state sponsors of terrorism list and the U.S. Trading with the Enemy Act (TWEA).

He ruled out the idea of North Korea making a sequential declaration -- offering some information up front and disclosing the proliferation and uranium enrichment later.

"The difficulty with that is that the North is quite clear that ... their expectation is that they would be removed from the terrorism list and TWEA. And those things really are impossible to consider without this issue settled," he said.

## **Scholar: N. Korea denies link to alleged Syria nuke facility hit by IAF**

By The Associated Press

Last update - 08:36 23/02/2008

North Korea denies any involvement with a suspected nuclear facility in Syria reportedly bombed by Israel Air Force planes in September, an American researcher who met with officials in Pyongyang said.

Four years after Pakistan's top nuclear scientist confessed to leaking weapons technology to North Korea, the North Koreans have denied receiving any such help, Siegfried Hecker, the Stanford University scientist who met with the officials, said.

The North Koreans dismissed the confessions from Pakistan, saying, "That's your story," Hecker said.

The North Koreans also told Hecker they had nothing to do with a suspected Syrian nuclear site destroyed by Israeli fighters in September, he said. News media reports, some quoting unidentified U.S. officials, have said the strike hit a nuclear installation linked to North Korea.

Hecker, a Stanford University professor and a former director of the Los Alamos National Laboratory, said he questioned North Korean officials on the two issues during a trip to that country from Feb. 12-16. Hecker also visited the country's Yongbyon nuclear facility on Feb. 14.

Pyongyang's past actions are sticking points in disarmament efforts under way now, because under recent agreements, North Korea is supposed to provide a full accounting - "a declaration" - of its nuclear programs and activities.

Hecker has visited the North annually for the past five years, and last week's trip was unofficial. Nevertheless, he pressed North Korean officials, whom he would not identify, on issues of concern to the United States, he said.

He told a small group of reporters on Wednesday that he had made plain that the issue of the Syrian site destroyed in September was "high on the list of American concerns." And U.S. officials are still awaiting North Korea's account of nuclear ties to Pakistan following Islamabad's acknowledgments years ago of the transfers, he said.

In early 2004, Abdul Qadeer Khan, Pakistan's top nuclear expert, admitted that he transferred nuclear weapons technology to Iran, North Korea and Libya. Pakistani President Pervez Musharraf wrote in a memoir in late 2006 that he believed the equipment sent to North Korea included some of Pakistan's most technologically advanced nuclear centrifuges.

Enriching uranium, a step toward producing nuclear fuel for weapons, requires centrifuge technology.

Hecker said he told the North Koreans that "one of the reasons the Americans want a full accounting is because of those statements."

"When I bring up the Pakistan connection, they say, 'That's your story, we haven't dealt with the Pakistanis on uranium enrichment,'" Hecker said.

Asked whether the North Koreans meant they had never done so, Hecker said, "They're talking about all times: They have not done this with the Pakistanis now or in the past, meaning, have cooperated in uranium enrichment.

"Since I specifically posed the question in terms of having bought the uranium centrifuges, they said, 'We have not, that's your story.'"

As part of its push for a complete declaration from North Korea, the U.S. is asking it to address its suspected uranium enrichment program - an issue that touched off a nuclear standoff in late 2002. North Korea denies ever having such a program, and reiterated its denials to Hecker.

Earlier this week, Assistant Secretary of State Christopher Hill said North Korea's declaration must cover both uranium enrichment and Pyongyang's relations with Syria, to which it has been accused of providing nuclear assistance. Hecker said he believed it was possible there were North Korean connections to the site bombed in September, whose true purpose remains officially unknown. Damascus has denied having a secret atomic program.

"If you look at potential connections, North Korea has the capabilities in the nuclear arena, so one at least has to consider that as a possibility," Hecker said.

When he asked the North Korean officials about it, "their comment was, we don't have anything to do with Syria in the nuclear arena." An October agreement forbids North Korea to export nuclear materials and technology in the future.

Asked whether the North Koreans had denied any involvement with the site bombed by the Israelis, Hecker said: "No, they were not that specific, but then I didn't ask the questions in such a fashion to try to pin them down exactly to that site. I should add that I made it very clear that that's the site I was talking about in terms of a Syrian connection."

## **South Korea, Japan, U.S. May Resume North Korea Preview Talks**

By Viola Gienger

Last Updated: February 25, 2008 08:45 EST

Feb. 25 (Bloomberg) -- South Korea, Japan and the U.S. may resume meetings that preceded formal six-nation negotiations on North Korea's nuclear program, Assistant Secretary of State Christopher Hill said.

The meetings ended under previous administrations in Seoul and Tokyo because they "didn't go very well," Hill told reporters today in the South Korean capital, where he joined Secretary of State Condoleezza Rice at the start of a three-nation tour of East Asia.

"I would expect that that kind of trilateral process would be starting up again," said Hill, who is returning to East Asia after meetings there earlier this month. "There seems to be a political will to do that." He didn't say when they might resume.

Rice and Hill are visiting South Korea, China and Japan to confer on improving cooperation to salvage the so-called six-party talks. The stalled negotiations, which also involve North Korea and Russia, are aimed at persuading leader Kim Jong Il to reveal the extent of his nuclear activities in exchange for fuel aid and better relations with the U.S. and his neighbors.

"I'm not sure she'll have any breakthrough on this particular visit," said Wendy Sherman, a policy coordinator on North Korea when Bill Clinton was president and now a principal at the Albright Group consulting firm in Washington.

Rice, 53, led a U.S. delegation to Seoul for the inauguration of Lee Myung Bak as the new president of South Korea, also known as the Republic of Korea, before an outdoor audience of 50,000 people. The two met later in the day at the presidential Blue House, greeting each other with hugs.

### **Stronger Ties**

Lee, 66, pledged during the 45-minute meeting to boost relations with the U.S. and demand more cooperation from North Korea for the diplomatic and other benefits its partners in the nuclear negotiations have provided, Hill said.

"President Lee said he would do all he could to strengthen cooperation with the U.S. on the six-party talks," Hill said. Lee asserted that, rather than increasing tensions with Pyongyang, stronger ties with the U.S. would bolster discussions between the peninsular neighbors.

Lee's designated foreign minister, Yu Myung Hwan, also reiterated in a meeting with Rice earlier in the day the new president's campaign promises to hold North Korean leader Kim Jong Il to greater accountability, Hill said.

Yu said the new administration in Seoul would "continue an overall policy of engagement with North Korea," Hill told reporters. "But they would be looking for greater reciprocity."

## Compliance

The U.S. also is looking for ways to more effectively ensure compliance with agreements, such as an October joint statement signed by the six nations that required North Korea to take certain steps, including outlining the extent of its atomic programs. Pyongyang missed a Dec. 31 deadline for making that declaration, failing to fully account for its arms programs and its nuclear trade, including possible ties to Syria.

"I think the sentiment is that the six parties need to be responsible for making sure that agreements reached are agreements that are fulfilled," Hill said.

Ensuring compliance with provisions such as ending the spread of nuclear technology by North Korea might involve steps such as sharing information, he said. Hill declined to elaborate, saying it requires more discussion with others involved.

Such a process also might benefit North Korea, which has complained that its partners in the talks aren't fulfilling pledges to provide fuel aid in return for Pyongyang's cooperation on nuclear issues.

'Right Group of Countries'

Rice said on Feb. 22 in Washington that she wants to use the six-party process to "address proliferation issues."

"We have the right group of countries at that table with the right set of incentives and disincentives to address not just denuclearization, which obviously is extremely important, but also proliferation," Rice told reporters before her Asia trip. "I'll be carrying that message and discussing that with our partners."

Rice and Hill are headed next to Beijing tomorrow and then on to Tokyo.

## **U.S. urges monitoring flow of nuclear materials**

By Nicholas Kralev

February 26, 2008

SEOUL — The United States wants six-nation talks aimed at ending North Korea's nuclear programs to begin monitoring transfers of nuclear materials and technology from the North to other countries, U.S. officials said yesterday.

The anti-proliferation focus, for which Secretary of State Condoleezza Rice is trying to gather support during an East Asian tour this week, is a response to mounting evidence that the North gave nuclear assistance to Syria.

"The North Koreans promised not to engage in nuclear proliferation," said Christopher R. Hill, the chief U.S. envoy to the six-nation talks. "We want to make sure they follow through on their pledge."

Mr. Hill was referring to an October agreement in which the North "reaffirmed its commitment not to transfer nuclear materials, technology or know-how."

All five countries negotiating with the communist state — the United States, China, Japan, South Korea and Russia — have said that they expect Pyongyang to honor its promise.

The Oct. 3 deal, however, did not specify how the nonproliferation pledge would be verified.

Now the Bush administration, alarmed by the Syrian connection, is pushing for "monitoring" the implementation of North Korea's pledge.

In September, an Israeli air strike targeted what was widely reported to be a nuclear facility in Syria under construction with help from North Korea.

Miss Rice told reporters on Friday that she will discuss during her trip to South Korea, China and Japan "how we use the six-party framework to address proliferation issues."

"I'm of the mind that we have the right group of countries at that table, with the right set of incentives and disincentives to address not just denuclearization, which obviously is extremely important, but also proliferation," she said.

Japan and Russia are already members of the U.S.-sponsored "Proliferation Security Initiative," a voluntary agreement to share intelligence on illicit trade in deadly weapons. China, South Korea and North Korea — the primary target of the effort — have refused to join.

The U.S. initiated the program to avoid the repeat of a 2002 incident, in which it allowed 15 North Korean scud missiles to reach Yemen.

The missiles had been seized by a Spanish ship acting on U.S. intelligence, but the Bush administration decided it lacked authority under international law to block the sale.

Mr. Hill, briefing reporters traveling with Miss Rice yesterday, said the new proposal would involve monitoring the implementation of the entire Oct. 3 agreement, not just North Korea's obligations.

It would include seeking accountability for the heavy fuel oil the United States must deliver to the North at various stages of the process that would dismantle Pyongyang's nuclear programs in exchange for political and economic incentives, Mr. Hill said.

In October, North Korea also "agreed to provide a complete and correct declaration of all its nuclear programs" by Dec. 31, but it missed the deadline.

Although it has almost completed the required disablement of its Yongbyon reactor, the declaration remains a major problem.

Ms. Rice will seek to break the impasse when she visits Beijing today by enlisting Chinese help in persuading the North to explain the Syrian issue, a uranium-enrichment program that U.S. intelligence says it discovered in 2002 and other past activities.

Washington has rejected pressure from some of its partners in the six-party talks to compromise on the overdue declaration.

Mr. Hill said earlier this month that those countries had told him, "Well, two out of three is not bad," and "Why do you worry so much about the past?"

China, eager for progress in the negotiations, is said to be one of those countries. It is also expected to be cool to the new U.S. anti-proliferation proposal.

Japan appears to be on the same page with the United States, as does South Korean President Lee Myung-bak, who took office yesterday.

"We understand that the proliferation element is an important part of a complete and accurate declaration. In our view, it is already included in what we expect on the part of [North Korea] as part of the six-party framework," said Hiroshi Suzuki, a Japanese Foreign Ministry spokesman.

## **Kim should not wait to declare nukes: former Clinton advisor**

17 minutes ago

[Accessed 2008-02-26T15:40Z]

SEOUL (AFP) — A former senior US policymaker on North Korea urged the communist state Tuesday not to put off declaring its nuclear programmes until a new president takes office in Washington.

Wendy Sherman, who was former president Bill Clinton's North Korea policy coordinator, said Kim Jong-Il -- whom she called a "smart man" -- should take advantage of US President George W. Bush's shift to a more conciliatory policy.

"It (the situation) might get worse, not better," she told Yonhap news agency in an interview.

"If you (North Koreans) take too long to make the decision, even a Democratic president will have a hard time making rapid progress because there will be even less trust if you don't take action."

Under a six-nation accord, the North was supposed by last December to have disabled its main plutonium-producing atomic plants and to have declared all nuclear programmes.

But the declaration is being delayed by disagreements over what it should include. The United States says the North must fully answer suspicions that it bought equipment for a covert uranium enrichment bomb-making programme.

Sherman said US officials "believe very strongly" that North Korea has or had an uranium enrichment programme and had engaged in nuclear cooperation with Syria, allegations which Pyongyang flatly denies.

"People that I know, who are in the administration, do believe that they have evidence of a highly enriched uranium programme and that they do have evidence of cooperation between North Korea and Syria for reasons other than just regular cooperation," she told Yonhap.

"It is a proliferation concern. So those have to be addressed."

Americans, whether Republicans or Democrats, want the problem solved since it is not about domestic politics but national security, said Sherman.

Sherman had 12 hours of meetings with Kim in 2000 when she accompanied then-secretary of state Madeleine Albright to Pyongyang.

Current Secretary of State Condoleezza Rice was in Beijing Tuesday as part of a regional tour aimed at ending the impasse in the six-party talks, which group the two Koreas, the United States, China, Russia and Japan.

## **Iran and North Korea a threat to Asia stability: Olmert**

By Tova Cohen

Reuters

Tuesday, February 26, 2008; 10:03 AM

*[EXCERPTS]*

TOKYO (Reuters) - Israeli Prime Minister Ehud Olmert discussed in Japan on Tuesday North Korea's missile cooperation with Iran, cautioning that both countries posed threats to the stability of Asia and the Middle East, an Israeli official said.

*[deletia]*

Olmert, on a four-day official visit to Japan, provided Japanese officials with information regarding the sale of long-range missiles by North Korea to Iran, said the official, who spoke on condition of anonymity.

*[deletia]*

According to Japan's Nikkei newspaper, Olmert will provide Fukuda with information on North Korea's alleged military cooperation with Syria and Iran.

An Israeli official declined to comment on the report.

Last September, Israel carried out an air strike inside Syrian territory. Some U.S. officials have linked the raid to suspicions of secret nuclear cooperation between Damascus and North Korea. Syria and North Korea have denied any nuclear ties.

## Can NY Phil Concert in NK Resolve Denuclearization?

By Yoon Won-sup

02-27-2008 18:22

Will the New York Philharmonic concert usher in the beginning of new era of diplomacy in Washington-Pyongyang relations amid North Korea's nuclear weapons standoff?

The concert could play at least a starting point for the two countries to reconsider their ties by this cultural gesture.

The musical diplomacy is reminiscent of the ping-pong diplomacy in which table tennis players went to Beijing to play in contests to help the United States soften its relations with China in the 1970s.

Among other things, U.S. President George W. Bush didn't exclude the possibility of further cultural exchange with North Korea on condition that the communist country makes progress toward denuclearization.

Plus, through the Pyongyang concert, the United States delivered a message that it hopes to resolve the nuclear problem during Bush's presidency, according to a report.

The U.S.-funded Voice of America (VOA) said former U.S. Ambassador to Seoul Donald Gregg and former U.S. Defense Secretary William Perry conveyed such a message to Kim Kye-gwan, top North Korean nuclear envoy.

"We explained that it would be easier for North Korea to deal with the nuclear issue with the Bush administration than with the next administration," Gregg was quoted as saying. "The North's uranium enrichment program and alleged nuclear technology transfer to Syria should be cleared."

Now all eyes are turning to the stalled six-party talks, aimed at ending North Korea's nuclear ambition. The talks failed to make any progress for the North's denclearization since North Korea refused to submit a full list of nuclear weapons' programs by the end of 2007.

Yu Myung-hwan, nominee for foreign minister, also said the Lee Myung-bak government will maintain the six-party framework to resolve North Korea's nuclear stance.

"It is true that the six-party talks made some achievements on the nuclear issue," Yu said during a parliamentary confirmation hearing, Wednesday. "We will do our best to encourage North Korea to follow the denuclearization process as quickly as possible."

Yu added the nuclear issue is the most important agenda for the new government to tackle.

North Korean Concert Organizers Seek Momentum on Nuclear Issue

By Kurt Achin

Seoul

28 February 2008

**This week's New York Philharmonic performance in the North Korean capital was more than just a night at the symphony. It was also a chance for several unofficial U.S. envoys to talk extensively with senior North Korean officials. VOA Seoul Correspondent Kurt Achin reports on what two of the concert's main organizers heard from Pyongyang about the stalled nuclear weapons talks.**

Former U.S. Ambassador to South Korea Donald Gregg and Evans Revere, president of the New York-based Korea Society, said in Seoul Thursday they sensed an "overwhelming" feeling of good will at this week's Pyongyang concert.

The two former U.S. diplomats say the event, broadcast live across North Korea, may have created the right atmosphere for a breakthrough on stalled nuclear weapons diplomacy. North Korea promised early last year to declare all of its nuclear activities before the start of 2008, but has still failed to do so.

During their Pyongyang visit, Gregg and Revere held several hours of talks with senior North Korean nuclear negotiator Kim Kye Kwan. Ambassador Gregg says he asked Kim why the North's declaration was stalled, but received an incomplete answer.

"He fought that question off by saying, 'you Americans have been too slow in the delivery of heavy oil fuels and so he said you're not living up to the formula of action to action, and that explains why we are stalled,'" he said.

The declaration is part of a broader, multi-phase agreement, which rewards North Korea with energy aid, financial assistance, and the prospect of better relations in exchange for gradual steps toward completely abandoning nuclear weapons.

Gregg says a deeper reason for the declaration's delay is that North Korea fears possible embarrassment over its contents. Washington has insisted the North account for uranium enrichment Pyongyang has never publicly admitted, and also that it address U.S. suspicions the North may have provided nuclear assistance to Syria.

Gregg says former Defense Secretary William Perry told Kim Kye Kwan the best time to act is now, while President Bush is in office, rather than after one of the front-running candidates to replace him is sworn in next January.

"When we shifted to why it was imperative to move quickly, by describing what would happen under a McCain administration or an Obama administration - which would very clearly be a more difficult situation than the one today - he made no response," Ambassador Gregg said.

Gregg says he interpreted that silence as acceptance. Experts say a McCain administration would likely take a much harder line on North Korea, while a Democratic party president may find their options limited by Republican opponents in the U.S. Congress.

Revere says he remains convinced North Korea is serious about the negotiations.

"I came away from all of these discussions over several hours with the very clear sense that the North Koreans are prepared to engage in exploratory diplomacy, and creative diplomacy, designed at getting around the current obstacles," he said.

U.S. Assistant Secretary of State Christopher Hill, Washington's chief envoy to the nuclear talks, left Beijing Thursday after looking for ways to renew the process. No new date has been set for the multinational talks to resume.

## **U.S. suggests secret disclosure of nuclear past**

By Nicholas Kralev

February 28, 2008

BEIJING — The United States is urging North Korea to end a deadlock in six-nation nuclear talks by completing an overdue account of its nuclear past with a document that might remain secret.

In November, Pyongyang disclosed details of its efforts to make atomic bombs from plutonium. But the United States says it failed to explain a parallel program to make highly enriched uranium, an equally potent fuel for nuclear weapons.

Secretary of State Condoleezza Rice publicly raised the prospect of an additional disclosure yesterday in Tokyo, her last stop on a three-nation visit to East Asia.

"I really have less concern about what form it takes or how many different pieces of paper there may have to be or how many times it may have to go back and forth," Miss Rice said.

U.S. officials said privately last month that North Korea could submit a second list to account for uranium-enrichment efforts, which are thought to have led to transfers of equipment and technology to Syria.

At a private dinner in Washington late last month, Alexander Vershbow, the U.S. ambassador to South Korea, said the Bush administration is looking for a way to persuade North Koreans to cooperate without "rubbing it on their noses."

A separate document would give the United States the information it demands about dangerous North Korean activities and save Pyongyang public embarrassment by keeping part of the list secret, diplomats said.

The declaration, which was due at the end of December, would complete the second phase of an October deal aimed at denuclearizing the Korean Peninsula and would clear the way for promised political and economic benefits to the communist state.

A Syrian facility targeted by an Israeli air strike in September has become a major issue for the United States because it was widely reported to be a nuclear site under construction with help from North Korea.

The matter was expected to be raised during a meeting between Miss Rice and Israeli Prime Minister Ehud Olmert today in Tokyo.

Mr. Olmert was in Tokyo to explain intelligence on North Korean nuclear cooperation with Syria.

The Bush administration first accused North Korea of running a secret uranium-enrichment program in 2002.

Chinese negotiators have urged the United States to accept North Korea's November declaration and leave uranium enrichment and transfers to Syria for future negotiations.

Christopher R. Hill, the chief U.S. negotiator with North Korea, remained in Beijing to continue talks with the Chinese yesterday while Miss Rice flew to Tokyo from Beijing. She visited Seoul on Monday.

South Korea, China and Japan, along with the U.S., Russia and North Korea, are in talks to denuclearize the Korean Peninsula.

North Korean cooperation would bring energy aid and other assistance from the United States and South Korea, including a supply of 1 million tons of fuel oil for conventional power plants.

"The third phase is going to be really hard, which is where you have to really talk about dismantling [the North's programs] and you have to account for the material and you have to figure out what to do with the material," Miss Rice said.

Diplomats and analysts said Washington must find a way to break the impasse while holding to its demands that North Korea explain any secret programs and proliferation activities.

*[Sourcebook note: As ranking minority member of the Senate Committee on Armed Services, Senator McCain was presumably briefed on the available intelligence concerning the 6 September 2007 strike. See <http://pogoblog.typepad.com/pogo/2007/11/congress-still-.html> above.]*

## **Press Roundtable in Hanoi, Vietnam**

Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs

Hanoi, Vietnam

March 3, 2008

Released on March 4, 2008

*[EXCERPTS]*

QUESTION: During your 16-day trip you spent more time than scheduled in Beijing.

ASSISTANT SECRETARY HILL: Yes.

QUESTION: And this weekend Kim Jong-il visited the Chinese embassy in Pyongyang. It seems unusual. Are Washington and Beijing working together to ramp up the pressure a little bit?

ASSISTANT SECRETARY HILL: You're quite correct, I spent a lot of time in Beijing. Actually, I made three separate trips to Beijing during this overall trip. Rather than talk about ramping up pressure, I'd rather ramp up the effort to find a solution. We are hopeful that we can find the formula for moving forward, but what we need from the North Koreans is a willingness to give us a complete and correct declaration. We look forward to meeting with the North Koreans and working toward that end. Of course, if we can get through this complete and correct declaration we will be able to move on to the third phase, which for us will be a very decisive phase -- because that's when we look forward to seeing if we can have the North Koreans fulfill the requirements of the September '05 joint statement and to try to get to the end of this very long process.

I met with the North Koreans about a week ago. We had looked forward to another meeting. I assume we will get that organized at some point in the near future and see if we can get through this phase two and on to phase three.

QUESTION: The meeting with Kim Jong-il at the Chinese Embassy, do you think it's significant?

ASSISTANT SECRETARY HILL: I think he's gone to the Chinese Embassy before. In fact, I think he's also visited the Russian embassy in the past. So I really am not in a position to weigh its significance. I don't think it was related to the talks I was having in Beijing.

QUESTION: I'm from NHK. When do you expect to resume the Six-Party Talks on North Korean nuclear issues?

ASSISTANT SECRETARY HILL: We first need to get through this problem of getting a complete and correct declaration. When we're through that, we will take our obligations in the so-called second

phase and then try to move on to the third phase. So if we can resolve these matters in the next few weeks, let's say -- which I think is possible -- I think we could perhaps, depending on the views of the Chinese host, we could maybe get together for a Six-Party meeting to plan out the third phase. So time is short, and I would hope we can get on with that this month.

QUESTION: Complete and correct declaration?

ASSISTANT SECRETARY HILL: Complete and correct.

QUESTION: Complete and correct declaration is about plutonium or uranium or --

ASSISTANT SECRETARY HILL: It's the overall declaration of all of their nuclear programs so that we will be able to identify all the programs that need to be abandoned pursuant to their requirements under the September '05 statement. We've had a number of discussions with the North Koreans on what is meant by complete and correct. We have to resolve this in order to move on to the next stage.

North Korea needs to understand that its security will be guaranteed when it has good relations with its neighbors. And it will have good relations with its neighbors when it gives up the nuclear ambition.

QUESTION: Do you think Vietnam shares some similar history with North Korea? Are you asking the Vietnamese to act as go-betweens or to deliver messages to Pyongyang?

ASSISTANT SECRETARY HILL: No, we're not asking Vietnam to be a mediator or a go-between with North Korea. That's not a role we're asking them to play nor a role that they would be particularly interested in playing. Nor are we asking the North Koreans to ask the Vietnamese what the Vietnamese experience has been in getting their economy moving the way they have. But I wish the North Koreans would ask that question, and I wish the Vietnamese would answer it in as detailed as way as possible -- because what has happened in Vietnam in the last half decade is nothing short of extraordinary. I think every country, even North Korea, should be very inspired by the progress made by the Vietnamese people in bringing this economy up. So I do hope North Korea asks that question. Thank you very much. I've got a full program here thanks to Ambassador Michalak and the Embassy. They're kind of pulling me around to one meeting after the other. So it's great to see you all

## **N.K. wants more cultural exchanges with UK: envoy**

2008/03/05 15:14 KST

후후 LONDON, March 5 (Yonhap) -- North Korea is exploring ways to expand cultural exchange with Britain following the New York Philharmonic's unprecedented performance in Pyongyang, the communist state's envoy to Britain said Tuesday [2008-03-04].

후후 Amb. Ja Song-nam delivered an address in a joint session of the British House of Lords and House of Commons for the first time as a North Korean diplomat.

후후 North Korea invited the legendary British rock guitarist Eric Clapton to perform in Pyongyang early next year in exchange for a performance in London by the North's State Symphony Orchestra scheduled for September, Ja said.

후후 "We haven't yet heard from Clapton and he will make a decision," the envoy said. He appealed for help from all participants in the meeting "to promote cultural exchange between the two countries." North Korea established diplomatic ties with Britain in 2000. The reclusive communist state has been making concerted efforts to beef up its cultural diplomacy as it struggles to join the international community.

후후 Clapton's concert in Pyongyang, if held, would be a rare opportunity for North Koreans to hear Western rock music, as the communist country has banned rock music out of fear that it would spread capitalist Western pop culture in the isolated society.

후후 During the meeting that lasted for one and a half hours, Ja gave a brief explanation of the past and present situations surrounding North Korea and answered questions on human rights, nuclear issues and cultural exchanges from participants. Among them were seven British lawmakers, human rights activists, Korea experts, businessmen and journalists.

후후 The envoy denied allegations of a covert uranium enrichment program by Pyongyang and nuclear technology transfers, both key sticking points delaying negotiations over North Korea's nuclear programs. "There is no uranium enrichment program and the allegation that our country has transferred nuclear technology to Syria is groundless," Ja said. "We cannot disclose a non-existent thing, whether the disclosure is made in public or in secret."

The six-party process for disarming North Korea is stalled over the dispute. Washington is insisting that Pyongyang provide a "complete and accurate" list of its nuclear programs, including an alleged uranium enrichment program and technology transfers. The North claims it has already provided the list.

## **U.S. negotiator wants North Korean declaration in March**

Thursday, **March 6, 2008**; 7:32 PM

NEW YORK (Reuters) - The top U.S. negotiator with North Korea said on Thursday that he wants Pyongyang to submit a complete declaration of its nuclear activities by the end of March because further delays could slow the denuclearization process.

"It's important that we try to get through this in March, because we're kind of running out of time in calendar year '08," U.S. Assistant Secretary of State Christopher Hill said in remarks to Columbia University's Weatherhead East Asian Institute in New York.

North Korea committed to abandoning all nuclear weapons and programs in exchange for economic and diplomatic benefits under a 2005 multilateral deal.

But the accord between the two Koreas, China, Japan, Russia and the United States has become bogged down by Pyongyang's failure to produce a declaration of its nuclear programs by the end of last year.

"Everything we've asked them to do, they can certainly do. Moreover, everything we've asked them to do, they've already agreed to do," Hill told reporters after his speech.

Hill, who has been Washington's point man on North Korea, said he did not believe it would be impossible to work around problems with the declaration. But without a complete declaration this month and the U.S. presidential elections in November, Hill said it was important to finish the process with North Korea by the end of this year.

"What I'm worried about is getting enough time to finish the whole process because we don't want partial denuclearization," Hill said.

## **US Lawmakers Seek Assurances From State Department On International Commitments**

By Dan Robinson

Capitol Hill

07 March 2008

*[EXCERPTS]*

In a congressional hearing, Deputy Secretary of State John Negroponte, faced questions from members of Congress on a range of international issues, including Iraq and Afghanistan, the situation in the Middle East, and Darfur. VOA's Dan Robinson reports, a House subcommittee hearing came as the Bush administration seeks to unlock billions of dollars in funding for key priorities.

*[deletia]*

Negroponte also asked lawmakers to approve \$53 million needed to fund additional deliveries of heavy fuel oil for North Korea in support of Six-Party efforts to end that country's nuclear program.

## **45th Anniversary of March 8 Revolution in Syria Marked**

**Pyongyang, March 6 [2008]**

(KCNA) -- A meeting and a film show took place at the Taedonggang Club for the Diplomatic Corps in Pyongyang on Thursday to mark the 45th anniversary of the March 8 revolution in Syria.

Present there on invitation were Charge d' Affaires ad Interim Muhammad Adib Al Hani and staff members of the Syrian embassy here.

Kim Jin Bom, vice-chairman of the Korean Committee for Cultural Relations with Foreign Countries and vice-chairman of the Korea-Syria Friendship Association, officials concerned and working people in the city were on hand.

Kim Jin Bom said at the meeting that the victory of the March 8 revolution in Syria was a brilliant result of the just struggle of the Arab people for independence, peace, progress and prosperity and a new history started in Syria since then.

The Syrian Arab people are now striving to defend the sovereignty of the country and build a modern state, he added.

Muhammad Adib Al Hani said that the friendly relations between Syria and the DPRK, provided by former President Hafez Al-Assad and eternal President Kim Il Sung, are now developing under the deep care of President Bashar Al-Assad and General Secretary Kim Jong Il.

Syria is fully supporting the Korean people in their efforts to build a great prosperous powerful nation and reunify the country, he added.

A congratulatory letter to the president of Syria was adopted there.

After the meeting the participants saw a Syrian feature film.

## **Congratulations to Syrian President**

Pyongyang, **March 8 [2008]** (KCNA) -- General Secretary Kim Jong Il sent a congratulatory message to Bashar Al-Assad, regional secretary of the Arab Baath Socialist Party and President of Syria, on Saturday on the occasion of the 45th anniversary of the March 8 Revolution in Syria.

The message said:

The March 8 Revolution marked an occasion of historic turn in the Syrian people's struggle to safeguard the dignity and sovereignty of the country and achieve its political stability and economic development.

Our people have always and fully supported the Syrian people in their righteous cause of building independent and modern Syria and solving the Mid-east problems in a fair and comprehensive manner under the guidance of the Arab Baath Socialist Party headed by you.

Convinced that the relations of friendship and cooperation between our two countries will grow stronger in various fields, I take this opportunity to sincerely wish you good health and happiness and your friendly people greater progress and prosperity.

<http://www.kcna.co.jp/item/2008/200803/news03/10.htm#3>

## **Greetings to Syrian President**

Pyongyang, **March 8 [2008]** (KCNA) -- Kim Yong Nam, president of the Presidium of the DPRK Supreme People's Assembly, sent a message of greetings to Syrian President Bashar Al-Assad on Saturday on the occasion of the 45th anniversary of the March 8 Revolution in Syria.

Kim in the message said: I am rejoiced over the fact that the Syrian Arab people have achieved many successes in the efforts to build independent and modern Syria while invariably maintaining the principled stand under the leadership of the Arab Baath Socialist Party headed by you.

Extending support and solidarity to the Syrian people in their just cause of defending sovereignty and security of the country, retaking occupied Arab territory including the Golan Heights and solving the Mid-east issues in a fair and comprehensive way, the message wished the Syrian people greater progress and success.

## **N. Korea Hopes for Friendship With Syria**

6 hours ago

[Accessed 2008-03-08T15:40Z]

SEOUL, South Korea (AP) — North Korean leader Kim Jong Il hopes for stronger friendship with Syria, the North's official news agency reported Saturday, amid lingering suspicions of a secret nuclear connection between the two countries.

Kim expressed the hope in a message to Syrian President Bashar Assad on the anniversary of a 1963 coup that brought Syria's Baath Arab Socialist Party to power, the North's Korean Central News Agency reported.

"I express my firm belief that the friendly cooperative relations between the two countries will be further expanded and strengthened in various areas," Kim said in the message.

The North's No. 2 leader, Kim Yong Nam, sent a similar message to the Syrian president, KCNA said.

North Korea has been suspected of helping Syria with a secret nuclear program.

But Pyongyang has strongly denied the accusations, saying it has never spread its nuclear expertise beyond its borders. Syria has also denied receiving any North Korean nuclear help.

The alleged nuclear link is believed to be a sticking point stalling international talks on the North's nuclear programs, along with the communist nation's suspected uranium enrichment program.

Under last year's agreement with the United States, China, Japan, South Korea and Russia, the North is required to give a full account of its nuclear programs, including whether it spread nuclear technology beyond its borders.

Pyongyang claims it gave the nuclear declaration to the United States in November, but Washington says the North never produced a "complete and correct" declaration.

North Korea and Syria established diplomatic relations in 1966.

## **N. Korea admits to sending engineers to Syria**

**Mar 7 [2008]** 08:45 PM US/Eastern

NEW YORK, March 7 (AP) - (Kyodo)—North Korea admitted to sending engineers to military-related and other facilities in Syria during its recent talks with the United States over its nuclear program, diplomatic sources in New York said Friday [2008-03-07].

Pyongyang, however, denied its involvement in Syrian nuclear development, according to the sources.

The dispatch of engineers and other personnel for bilateral cooperation, including on the military front, started in around 2000, North Korea told the United States in their talks from the end of last year to January.

The North also exported materials to Syria, the sources said.

Pyongyang claimed most of the personnel worked at civilian facilities, according to the sources.

## **US wants 'clear signal' from NKorea over nuclear declaration**

SEOUL, March 10 (AFP)

Mar 10, 2008

North Korea must send a "clear signal" to fully declare its nuclear programmes in order to get itself removed from a list of state sponsors of terrorism, the US ambassador here said Monday.

Ambassador Alexander Vershbow's demand to South Korea came as the six-party nuclear disarmament talks on North Korea were stuck in a stalemate over Pyongyang's complaint over the list.

North Korea last year signed a landmark deal to abandon all its nuclear weapons in exchange for badly needed energy and economic aid and major security and diplomatic benefits.

But the disarmament process has been in a stalemate since North Korea missed an end-2007 deadline to declare all its nuclear programmes.

Pyongyang has said it submitted a full list in November, but Washington insists it is still awaiting a complete declaration, including a full account of a suspected covert uranium enrichment programme.

Last week, North Korea's ruling communist party newspaper Rodong Sinmun blamed Washington for the deadlock, saying the US has yet to start removing the North from a list of state sponsors of terrorism.

"We aren't able to do that until we see a clear signal from the North Koreans that they are going to do their part with regards to the declaration," Vershbow told a news conference.

"They have not yet shown us even the elements of what will constitute a complete and concrete declaration," the US ambassador to South Korea said.

He said Washington wants to push forward the disarmament process talks, which group the United States, both Koreas, China, Japan and Russia.

But he said North Korea was still "in a wait-and-see mode" in making progress in the six-party talks, after South Korea's new conservative government took over last month.

"It is clear that North Korea has to adjust, in fact, to much closer alignment between Washington and Seoul, as we move forward to the six-party talks," Vershbow said.

Last week, US State Department deputy spokesman Tom Casey said he hoped to seek a complete North Korean declaration in "the not too distant future" as US top negotiator Christopher Hill hoped six-party talks could resume this month.

## **Vershbow: "Impatience building up" on North**

March 11, 2008

United States Ambassador to South Korea Alexander Vershbow said Pyongyang must "adjust" to warmer relations between Seoul and Washington after President Lee Myung-bak took office.

Vershbow also said there is a "sense of impatience building up" among participants in the six-party talks on North Korea's nuclear program over the long delay by Pyongyang to fully declare its nuclear programs.

"We are pleased with President Lee's emphasis on strengthening U.S.-Korea relations, one of the central issues in his foreign policy doctrine," Vershbow said in a speech to the American Chamber of Commerce in Seoul yesterday.

"The key aspect of it is the nation's continued support for the global war against terrorism and weapons of mass destruction."

Vershbow also reiterated Washington's position that it would remove North Korea from the U.S. list of state sponsors of terrorism and lift trade restrictions only after the North fully completes the next step toward denuclearization.

North Korea, according to an agreement made last October, is committed to making a "complete and correct" declaration of all of its nuclear programs by Dec. 31, 2007, a deadline it missed.

"We will be prepared to do these two things only in parallel with North Korea's obligations," he said. "There is a sense of impatience building up, and we want to get on with it."

Vershbow cautioned that people "should not have any illusion" that the recent historic concert of the New York Philharmonic orchestra in Pyongyang could jump-start the stalled talks on North Korea. His comment echoed sentiment on Capitol Hill that downplayed the political significance of the event.

"My view is that North Korea is calculating what should be its next move in the six-party talks," he said. "It is clear that North Korea has to adjust to closer relations between Seoul and Washington."

**"State of U.S.-Korea Relations – 2008 and Beyond"  
Remarks to Members of the  
American Chamber of Commerce in Korea**

**Alexander Vershbow  
U.S. Ambassador to the Republic of Korea**

**Grand Hyatt Hotel, Seoul – March 10, 2008**

*[EXCERPTS]*

*[deletia]*

A challenge that's been with us for a long time has been North Korea and its pursuit of nuclear weapons. We look forward to the closest possible cooperation with the new government to achieve the complete denuclearization of the Korean peninsula and North Korea's abandonment of all its nuclear weapons and existing nuclear programs.

The past year has seen some encouraging developments, including the shutdown and disablement of the North's nuclear facilities at Yongbyon. Just two weeks ago, we all followed the events connected with the New York Philharmonic's historic concert in Pyongyang. It was an extraordinary event broadcast live across the entire peninsula. It was an opportunity for North Koreans to see Americans as they really are rather than through the prism of propaganda, and perhaps to see the possibility of a different kind of relationship with the United States.

But we shouldn't have any illusions. North Korea's nuclear program still remains a fundamental problem. North Korea has yet to present a complete and correct declaration of all its nuclear programs, as they were supposed to do by the end of last year. As Assistant Secretary Hill has emphasized, it's crucial in the Six-Party process for the North Koreans to fulfill their commitments. When they're ready to do so, we'll be ready to deliver on our commitments to remove the North from the State Sponsors of Terrorism List and the Trading with the Enemy Act. We want to move on to the next stage, the stage of full denuclearization, which will open the way to normal relations between North Korea and the rest of the world, and to economic assistance that can improve the lives of the North Korean people.

*[deletia]*

## **SKorea reviews agreements due to NKorea nuke deadlock**

SEOUL, March 10 (AFP)

Mar 10, 2008

South Korea will review inter-Korean economic projects agreed at an October summit due to deadlock in a nuclear disarmament deal, the minister responsible for relations with Pyongyang said Monday.

"In implementing the agreements, we must consider a change of circumstances," Unification Minister Kim Ha-Joong told a parliamentary confirmation hearing.

North Korea last year signed the deal to abandon its nuclear weapons. But the process is at an impasse while awaiting a North Korean declaration of all its nuclear programmes.

At the summit, the South pledged help to repair the North's dilapidated railways. A cross-border railway cargo service started in December for the first time since the 1950-1953 Korean War.

The two sides also agreed to develop a joint economic zone around the North's Haeju city on the west coast.

Since South Korean President Lee Myung-Bak took office last month, inter-Korean relations have been soured by a US-South Korea joint military exercise.

Lee, a conservative, pledged to take a firmer line with Pyongyang and to press the regime on its human rights record.

North Korea has warned that inter-Korean relations might slip back to confrontation.

Conservatives in the South want the government to stop providing unlimited aid to North Korea. They have criticised previous governments for giving too much while gaining little in return.

But Kim said South Korea should push ahead with humanitarian aid to its impoverished neighbour.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
March 11, 2008

*[EXCERPTS]*

*[deletia]*

QUESTION: Yes. Sean, we know Chris Hill is going to Geneva later this week --

MR. MCCORMACK: Right.

QUESTION: -- to meet with his North Korean counterpart. Do you consider the talks in trouble -- the six-party process in trouble? Do you consider this just another meeting in a long line of meetings?

MR. MCCORMACK: Well --

QUESTION: What's the status?

MR. MCCORMACK: Let's hope that it's a meeting that moves the process forward. And by moving the process forward, I mean taking some positive steps towards the -- or talking about positive steps towards completing dismantlement, to providing a complete declaration, which the North Korean Government has promised to do in the context of the six-party talks. We are prepared, along with our other partners in those discussions, to fulfill our commitments. So -- but this is a discussion that is based upon the principle of action for action, so the other five members of the six-party talks are looking for North Korea to fulfill their commitments, and all the while we are going to continue to fulfill ours.

As to the first part of your question, we believe that this diplomatic process still has a lot of life left in it. We are focused on trying to move the process forward. We're devoting a lot of energy and focus to it, as are other members of the six-party talks, most notably the Chinese Government.

So the diplomacy continues to move forward. While it may not move forward at the pace that we would have originally wished, we believe that there is the possibility to succeed in completing this phase and then move on to a new phase in which we would start to talk about actually dismantling the North Korean nuclear program and other aspects of the September 2005 agreement that talk about peace and security on the Korean Peninsula.

QUESTION: But you don't think it's in trouble?

MR. MCCORMACK: No, we still think that this process has a lot of life in it.

*[deletia]*

QUESTION: One on North Korea. Do you still expect their talks to be just one day?

MR. MCCORMACK: Right now I think they're scheduled for a day, but if they need a few hours more to discuss additional agenda items or to go deeper into the discussions, I'm sure they'll take that time. That will be up to Chris and his counterpart.

QUESTION: And have the North Koreans given any indication that they might provide a declaration or something to move this forward?

MR. MCCORMACK: You know, I'm not going to offer any particular comment. You can get comment from the North Korean Government as to their expectations for the meeting.

*[deletia]*

## **U.S., N. Korean nuke negotiators to meet Thursday in Geneva:**

AP

Posted: 2008-03-11 12:14:19

WASHINGTON, March 11 (Kyodo) - (EDS: ADDING SPOKESMAN'S QUOTES)

The top U.S. and North Korean nuclear negotiators will meet Thursday in Geneva to discuss Pyongyang's declaration of its nuclear activities, State Department spokesman Sean McCormack said Tuesday.

Christopher Hill, assistant secretary of state for East Asian and Pacific affairs, and Vice Foreign Minister Kim Kye Gwan are expected to try to bridge differences on the substance of the declaration that Pyongyang is obliged to submit under a six-party deal, the spokesman told reporters.

"This is part of the six-party process. They're going to be discussing ways in which to move that process forward," he said. "This phase has not yet been completed and we need to try to push forward."

The six-party nuclear talks have stalemated since Pyongyang missed an end-of-2007 deadline to reveal all details of its nuclear activity, in breach of the accord with the United States, China, South Korea, Japan and Russia.

The differences include North Korea's alleged uranium enrichment program, as separate from its known plutonium-powered nuclear program, and Pyongyang's suspected transfer of nuclear technology to such countries as Syria.

The United States, which wants a "complete and correct" list, and North Korea have been discussing possible solutions, including separating the issues from the main declaration as an attachment or writing down both sides' arguments in the declaration.

"We have said that this should be a full and complete declaration and that means any proliferation activities, any activities related to highly-enriched uranium, any activities related to plutonium. Full and complete," McCormack said.

Hill and Kim met in Beijing on Feb. 19 but failed to achieve a breakthrough. Hill tried in vain to hold another round of talks there on March 1.

Hill said during a talk at Columbia University in New York Thursday that it is vital for North Korea to provide a full account of its nuclear activity by the end of this month.

"There is no drop-dead deadline, but it is important to try to get through this in March because we're running out of time," he said, referring to the change in the U.S. administration next year.

## **U.S. and North Korean officials to meet on Thursday**

Tue Mar 11, 2008 4:43pm EDT

By Arshad Mohammed

WASHINGTON (Reuters) - U.S. and North Korean officials will meet in Geneva on Thursday to try to revive a deal for Pyongyang to disclose its nuclear activities in return for aid and the easing of U.S. sanctions, U.S. officials said.

If Pyongyang were to provide an accurate declaration, the United States could act "in a matter of days" to drop North Korea from its list of state sponsors of terrorism and to ease sanctions under the U.S. Trading with the Enemy Act, said a senior U.S. official who spoke on condition he not be named.

U.S. Assistant Secretary of State Chris Hill will meet his North Korean counterpart Kim Kye-Gwan to discuss a 2005 deal under which Pyongyang agreed to abandon its nuclear programs, U.S. State Department spokesman Sean McCormack told reporters.

The deal, which suffered a severe setback when Pyongyang tested a nuclear device in October 2006, has been bogged down more recently by North Korea's failure to produce a promised declaration of its nuclear programs by the end of last year.

"They are going to be discussing ways to move that process forward. ... We need to try to push forward," McCormack told reporters of the Geneva meeting, saying he did not know if an agreement on the document would emerge after the talks.

A sticking point of the declaration had been Pyongyang's reluctance to discuss any transfers of nuclear technology to other nations, notably Syria, as well as its suspected pursuit of uranium enrichment.

The United States has questions about any possible North Korean role in a suspected Syrian covert nuclear site that was bombed by Israel in September. Syria has denied having a nuclear program but the case remains murky.

A highly enriched uranium (HEU) program would give North Korea a second source of fissile material with which it could produce nuclear weapons in addition to its plutonium-based nuclear facilities.

The senior U.S. official, who asked not to be named because of the sensitivity of the negotiations, said he believed North Korea is comfortable with disclosing the proliferation and uranium-related activities in a separate, secret document.

"If the North provides what they need to in terms of a complete and correct declaration and what is required on HEU and proliferation, our actions (on sanctions) can occur very much at the same time," he said.

He also said Washington -- which wants Pyongyang to give up its atomic activities, any weapons and related materials before U.S. President George W. Bush leaves office in January -- was heartened by North Korea agreeing to the Geneva talks.

Under the so-called second phase of the denuclearization agreement, North Korea committed to disable its nuclear facility at Yongbyon, where it has produced plutonium, and to make the "complete and correct" declaration.

In return, the other parties to the accord reached among the two Koreas, China, Japan, Russia and the United States, agreed to provide up to 1 million tonnes of heavy fuel oil or its equivalent.

There has been significant progress in disabling Yongbyon -- U.S. officials say 8 of 11 tasks are completed -- but North Korea has slowed down the process in recent months, arguing that the others have delayed keeping their end of the bargain.

The senior U.S. official said there had been no effort by the other five to delay deliveries of fuel oil or other aid.

The Chinese are giving North Korea coking coal, the South Koreans have provided steel plates to reinforce mine roofs and both countries are providing basic parts for power plants and mines.

"You will find on the South Korean and Chinese side that the (materials) will start to move very quickly now," he said. "The contracts have been let and things are beginning to flow into a pipeline of materials moving to the North."

News of the Geneva meeting came as the United States released its annual human rights report in which North Korea was listed among the worst offenders.

The State Department cited extrajudicial killings, disappearances and arbitrary detention, including of political prisoners, and called North Korea's regime "repressive."

## **U.S., N. Korea to Work Toward Ending Weapons Impasse**

By Glenn Kessler

Washington Post Staff Writer

Wednesday, **March 12, 2008**; A08

Top U.S. and North Korean diplomats will gather in Geneva tomorrow amid signs that the two sides, with the help of China, have structured a diplomatic framework that could resolve an impasse that has blocked a deal to end Pyongyang's nuclear weapons programs.

Assistant Secretary of State Christopher R. Hill, the chief U.S. negotiator, will meet with North Korean counterpart Kim Gye Gwan for one or two days. State Department spokesman Sean McCormack said, "We're focused on trying to move the process forward."

Under an agreement reached in February 2007, North Korea was to have declared all of its nuclear programs and materials by the end of the year. **Pyongyang admitted to possessing 30 to 40 kilograms of plutonium, U.S. officials said, but balked at providing full details about a suspected uranium enrichment program and about whether it had cooperated with Syria in an alleged nuclear program destroyed by Israeli fighters last September.**

Now, diplomats said, a possible face-saving solution for North Korea may have been found in which those issues are separated from its initial declaration, such as in statements from Kim to Hill that would become part of the six-nation negotiations. Secretary of State Condoleezza Rice recently signaled the new approach in a statement after talks last month in Asia: "I really have less concern about what form it takes or how many different pieces of paper there may have to be," as long as it results in progress.

**Rice and Hill have increasingly focused on North Korea's stockpile of plutonium as the real threat to international security, officials said. But to persuade Pyongyang to abandon the plutonium, obtained from fuel rods in a small nuclear reactor, the administration must first settle the lingering questions concerning uranium enrichment and Syria. Increasingly, top U.S. officials view those as historical issues compared with the immediate proliferation risk posed by plutonium.**

North Korea acquired much of its plutonium after the 2002 collapse of a Clinton administration agreement that froze the reactor. The Bush administration accused North Korea of cheating on the deal, citing evidence that Pyongyang had a clandestine uranium-enrichment program. Plutonium and highly enriched uranium are different routes to building nuclear weapons.

**In a little-noticed speech at Amherst College on Jan. 30, Hill said that U.S. officials had largely concluded that thousands of aluminum tubes acquired by North Korea in 2002 -- which sparked the intelligence finding that Pyongyang was building a large-scale uranium-enrichment program -- were not currently being used to create fissile material.**

"We have seen that these tubes are not being used for a centrifuge program," he said, according to an audio recording of the speech on Amherst's Web site. "We had American diplomats go and look at this aluminum that was used and see what they are actually using it for. We actually had American diplomats, people like myself, carry this aluminum back in our suitcases to verify this is the precise aluminum we knew the North Koreans had actually purchased."

Government scientists have discovered traces of enriched uranium on the aluminum samples, suggesting that they may have been used in such a program or that they came in contact with a centrifuge kit that North Korea acquired from a Pakistani smuggling network.

## **Ethnic dispute tears al Qaeda, Hayden says**

By Bill Gertz

March 12, 2008

*[EXCERPTS]*

CIA Director Michael V. Hayden said Osama bin Laden is putting more energy into hiding than into running his terror network.

Internal divisions between Saudi and Egyptian leaders of al Qaeda are producing "fissures" within the terrorist group and a possible battle over who will succeed Osama bin Laden, CIA Director Michael V. Hayden said yesterday *[2008-08-11]*... in a wide-ranging interview with editors and reporters of The Washington Times.

*[deletia]*

On other issues, Mr. Hayden said:

- North Korea's government has not provided a full accounting of its plutonium, uranium-enrichment program and arms proliferation. Pyongyang must "readmit" that it has the uranium program, and "our requirement as a nation is they've got to come clean on all three."

North Korea had a uranium-enrichment program, but the status is not clear.

*[deletia]*

## **Pressure building on North Korea**

By LEE JONG-HEON

UPI Correspondent

Published: **March 12, 2008**

SEOUL, South Korea, North Korea is under mounting pressure to hasten its disarmament process in the face of a strengthening South Korea-U.S. alliance following the inauguration of a conservative administration in Seoul.

Seoul's Foreign Minister Yu Myung-hwan used his first press briefing since taking office on Wednesday **[2008-03-12]** to call for the North to fulfill its denuclearization obligations, warning that a further delay would sap the momentum of the hard-won disarmament process.

**The North Korean nuclear issue "is making no progress" due to a deadlock over the country's alleged uranium enrichment program and nuclear technology transfer to Syria, Yu said. "I am concerned that the six-way (nuclear) talks may lose momentum," he said.**

Under the six-nation agreement reached in February last year, the North completed the first phase of disarmament in July by shutting down and sealing its plutonium-producing reactor at the country's main nuclear complex in return for energy aid. But it has failed to finish the second phase of the disarmament deal that called for a declaration of all its nuclear programs by the end of last year, delaying the third and final phase of dismantling its atomic weapons programs.

The North says it submitted a nuclear list in November, but the United States insists it must account fully for a suspected uranium weapons program. Pyongyang has flatly denied the existence of a uranium enrichment program and any transfer of nuclear technology and materials to other countries.

"A complete and correct declaration is a key to moving to the next stage," Yu told the press conference. "I expect a quick resolution of the declaration issue," he said. The new diplomatic chief also vowed to strengthen policy coordination with the United States in dealing with the nuclear standoff and other regional and global issues.

"The (Seoul) government will work out a vision for the alliance in the 21st century through close consultations with the United States," he said. "We would deepen the alliance with the United States beyond the Korean peninsula to jointly handle Northeast Asian and global issues."

Yu plans to travel to the United States on March 25-29 to discuss the bilateral alliance and tackle the North Korean nuclear issues, ahead of a planned trip to Japan slated for April 5-6. He leaves for China next week for a three-day visit.

South Korean President Lee Myung-bak plans to visit the United States April 15-19, which will be followed by a two-day trip to Japan on his way back home.

Adding to pressure on the North, the top U.S. envoy in Seoul said North Korea must send a "clear signal" that it plans to give a complete accounting of its nuclear programs so that Washington could move toward improving ties with Pyongyang.

The United States would not take North Korea off its terrorism blacklist "until we see a clear signal from the North Koreans that they are going to do their part with regards to the declaration," Ambassador Alexander Vershbow told a news conference in Seoul earlier this week. "There is a sense of impatience building up and we want to get on with it," he said.

The envoy called for a quick move from the North if it wishes to avoid a tougher stance from Seoul and Washington. "I think it is clear that North Korea has to adjust to closer relations between Washington and Seoul," he said.

The sense of urgency came as top nuclear negotiators from Washington and Pyongyang plan to meet in Geneva later this week, in a new push to break the nuclear impasse. "We hope that progress will be made at the Geneva talks so that the six-party process may move forward to the next stage," Yu said.

According to diplomatic sources, the Geneva talks may focus on a proposed compromise crafted by China, which has hosted the six-nation nuclear talks. Under the proposed deal, the North may declare its plutonium-producing facilities in an open document, while admitting the uranium-based program in a separate, secret document.

The next step would be closed-door two-way contacts between Pyongyang and Washington to resolve the uranium-based program, according to the sources.

Suh Jae-jean, a senior researcher at the government-run Korea Institute for National Unification, expects Pyongyang and Washington to accept the compromise deal because both want a resolution before the Bush administration leaves in early 2009.

"The current standoff can be resolved by drawing up two documents that will enable North Korea to save face and prevent backlash within the United States," Suh told a group of journalists. "One document should be an agreement made public and the other, an undisclosed document," he said.

Suh said the North is expected to make a strategic decision within this month. "North Korea wants normalization of diplomatic ties with the United States as a survival strategy. In addition, the North's economic situation is too dire to reject the aid-for-disarmament deal," he said.

## **Seoul Urges N. Korea Nuclear Negotiators to Preserve 'Momentum'**

By Kurt Achin

Seoul

12 March 2008

South Korea's newly appointed foreign minister is warning talks aimed at ending North Korea's nuclear weapons capabilities could stall over unresolved issues related to the North's promised declaration.

However, officials in Seoul are optimistic a one-on-one meeting this week between North Korean and American negotiators may produce progress. VOA's Kurt Achin reports from Seoul.

In his first media briefing since taking office, South Korean Foreign Minister Yu Myung-hwan expressed concern about the future of the North Korea nuclear talks.

He says he is concerned the six-nation talks may lose "momentum."

For five years, South Korea has worked with the United States, Japan, China and Russia to persuade North Korea to give up its nuclear programs, in exchange for financial and energy aid along with diplomatic incentives.

The six-nation diplomacy has produced progress in shutting down the North's main plutonium-producing facilities. However, Pyongyang has failed to produce a complete declaration of its nuclear activities and stockpiles it promised to submit by the end of 2007.

Yu said Wednesday the delay is because of two basic obstacles.

He says there are roadblocks over accusations North Korea maintained a uranium enrichment program and engaged in nuclear cooperation with Syria.

North Korea has never publicly admitted having a uranium enrichment program, but the United States says it has abundant evidence such a program exists. Washington also suspects North Korea may have lent assistance to a possible nuclear facility in Syria which Israeli warplanes bombed in September.

Negotiators in the six-nation process are now pinning their hopes on a meeting scheduled Thursday in Geneva between U.S. Assistant Secretary of State Christopher Hill and senior North Korean envoy Kim Kye Kwan. The diplomats are their respective countries' chief delegates to the multinational nuclear talks.

A similar one-on-one meeting last year in Berlin helped the two countries resolve a financial dispute that was paralyzing the diplomatic process. It is unclear what specific proposals the two envoys will discuss. However, experts and some U.S. officials have suggested North Korea may seek to address Washington's concerns on the most sensitive issues in a document, separate from the formal nuclear declaration.

## US mulls new statement to break North Korea deadlock

1 day ago

[Accessed 2008-03-13T15Z]

WASHINGTON (AFP) — The United States is looking for a flexible way to unblock North Korea nuclear talks without letting the Stalinist state off the hook of full disclosure, officials said Wednesday.

One option set to be discussed at talks in Geneva Thursday is a separate declaration, addressing US concerns that North Korea has been secretly exporting nuclear technology to Syria, a diplomatic source said.

That would enable fuller six-party talks to resume, the source said, putting renewed pressure on North Korea to come clean on the full extent of its publicly disclosed nuclear program.

"We'll look at any and all ideas with the understanding that at the end of the day, we need a complete and correct declaration," chief US negotiator Christopher Hill told reporters before flying to Geneva.

"How we get that, what the pieces of paper look like, I think we should be a little flexible on the format, but with the understanding that flexibility on format doesn't mean flexibility on getting a complete and correct declaration."

North Korea last year signed a landmark deal to abandon all its nuclear weapons in exchange for badly needed energy and economic aid, along with major security and diplomatic benefits.

But the process -- involving the United States, China, both Koreas, Russia and Japan -- has been stalled since North Korea missed an end-2007 deadline to declare all its nuclear programs and disable a plutonium plant.

"I think we have some ideas that are maybe workable but they are only workable in the context of providing a complete and correct declaration," said Hill, the top State Department official for East Asia.

"We cannot have a situation where they don't give us a complete declaration and where we try to ignore elements that need to be there."

North Korea has blamed Washington for the deadlock, citing a US failure to remove it from a list of state sponsors of terrorism.

US accusations of North Korean complicity in a secret Syrian atomic drive, and allegations that Pyongyang has a furtive program to produce highly enriched uranium, have complicated the process.

Last September, Israeli military jets reportedly bombed a site in Syria after Israeli and US intelligence determined the location housed a partially built nuclear reactor constructed with North Korean help.

Washington, which is under pressure from security hawks to get tough with North Korea, has already rejected an initial declaration by Pyongyang that failed to address secret nuclear technology transfers to Syria.

But the separate declaration being negotiated in Geneva between Hill and his North Korean counterpart, Kim Kye-Gwan, would allow the six-party talks to get back on track, the diplomatic source said.

The declaration would be submitted to the other countries in the process and made public, the source added, declining to be identified.

Whatever emerges cannot be a "secret agreement" but must be transparent, Hill said, before being asked if he was feeling upbeat about his trip to Switzerland.

"I never talk about optimism or pessimism, except with the Red Sox," the US official said, referring to his Boston baseball team.

## **U.S. flexibility on North Korea deal has limits: envoy**

Wed Mar 12, 2008 9:40pm GMT

WASHINGTON (Reuters) - The United States insists on receiving a "complete and correct" North Korean disclosure of its nuclear activities under a disarmament-for-aid pact but can be flexible on the form of that statement, the U.S. envoy to atomic talks with Pyongyang said on Wednesday.

U.S. Assistant Secretary of State Chris Hill will meet his North Korean counterpart Kim Kye-Gwan on Geneva on Thursday to discuss a 2005 deal under which Pyongyang agreed to abandon its nuclear programs.

The deal has been bogged down more recently by North Korea's failure to produce a promised declaration of its nuclear programs by the end of last year.

U.S. insistence on a "complete and correct" accounting of North Korea's nuclear programs and activities has clashed with Pyongyang's reluctance to discuss any transfers of nuclear technology to other nations, notably Syria, as well as its suspected pursuit of uranium enrichment.

"We have some ideas that may be workable, but they're only workable within the context of providing a complete and correct declaration," Hill told reporters in Washington before leaving for Switzerland.

A senior U.S. official, who asked not to be named because of the sensitivity of the negotiations, said on Tuesday he believed North Korea would be comfortable with disclosing the proliferation and uranium-related activities in a separate secret, document.

Asked about this formula, which analysts believe could help North Korea save face and advance the stalled talks, Hill said: "I think we should be a little flexible on format, but with the understanding that flexibility on format doesn't mean flexibility on getting a complete and correct declaration."

He indicated, however, that sensitive elements of any North Korean declaration would not be kept secret.

"I don't think we can have secret agreements, secretly arrived at," Hill said. "We have to make this understandable to the public."

The United States has questions about any possible North Korean role in a suspected Syrian covert nuclear site that was bombed by Israel in September. Syria has denied having a nuclear program but the case remains murky.

"Any nuclear cooperation abroad needs to be clarified and certainly (North Korea) has said that they don't have any now and won't have any in the future, but we also need to know what went on in the past," Hill said.

**Press Stake Out at The Hotel de La Paix**  
**Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs**  
The Hotel de La Paix  
Geneva, Switzerland  
March 13, 2008

QUESTION: What are your expectations for this meeting?

ASSISTANT SECRETARY HILL: First of all, let me just say that I am very grateful to the Swiss authorities for helping to facilitate this meeting.

As you know, the DPRK suggested we try to get together here in Geneva, and I think it was a good idea. Obviously what we are going to try to do is to have a thorough discussion of the declaration. Now I want to emphasize that the declaration is something that they have to deliver to the chair of the Six-Party process -- that is, the Chinese. But I would hope we would have a good discussion about it, and I would hope that we would be able to talk about all of the elements that we would expect to see.

QUESTION: Do you expect some movement, Mr. Secretary? Do you expect them to come up with something new regarding the declaration?

ASSISTANT SECRETARY HILL: Well, rather than handicap this thing, why don't I go and talk to them, and it would be easier if I came back and told you if we had some movement. I just don't know. I do know that we need to get some movement. We are already some ten weeks behind if we are going to get onto phase three and what we see as the complete denuclearization, and we need to get moving. So let's see if we can get that done.

QUESTION: You've said March is critical.

ASSISTANT SECRETARY HILL: I think it is pretty critical to get moving on this now. We are, as I said, ten weeks late already -- or something like ten weeks late -- and we have to get to the declaration. The declaration has to be a complete and correct declaration if we are going to get onto the next phase.

QUESTION: Any type of format is acceptable, if the content is --

ASSISTANT SECRETARY HILL: Any type of format? Well, I wouldn't look for like a coloring book or something like that, but obviously I think we can be flexible on format. But we cannot be flexible on the fact that we need a complete and correct declaration. That is, we need all the elements there, and we need them to be expressed correctly.

QUESTION: What is your best case scenario?

ASSISTANT SECRETARY HILL: I don't know. My best case scenario is this is all over, and I go home. (Laughter) But I think we are going to try to get through and have a good discussion on the declaration and try to come to an understanding of what it is they are going to be submitting to the Chinese.

QUESTION: Just one meeting or more?

ASSISTANT SECRETARY HILL: I think the plan is to meet early tomorrow morning as well.

QUESTION: How about the Uranium issue?

ASSISTANT SECRETARY HILL: Well that is part of the declaration. So obviously that has to be addressed. So we have a lot of work to.

QUESTION: There seems to be talk about separating --

ASSISTANT SECRETARY HILL: Only from you. We have talked about different formats, but we have never talked about separating elements from the other, or separating them in time and space. We need all of the elements essentially at the same time. How the format, how many pieces of paper there are, we can discuss that.

QUESTION: (Inaudible)?

ASSISTANT SECRETARY HILL: Well look, we are going to have a discussion about where we are and what we need to get done if we are going to stay on schedule.

QUESTION: Is some of this being done verbally or in private rather than on paper, or does everything have to be on paper?

ASSISTANT SECRETARY HILL: Well, we have emphasized throughout that this is not a U.S. problem. This is a problem of six parties. And when we need a complete and correct declaration, that is not some U.S. position; that is a position expressed in the October agreement. So I don't think verbal assurances to the U.S. is really what does it. I think we need a declaration to reflect all of these elements.

So let's see how we do. I will let you know.

All right. See you later.

Released on March 13, 2008

## Press Briefing

### Christopher Hill, Assistant Secretary for East Asian and Pacific Affairs

U.S. Mission Geneva

Geneva, Switzerland

March 13, 2008

ASSISTANT SECRETARY HILL: Well, for those of you who are not jet-lagged, you're up late. For the rest of us, it doesn't matter. [Laughter].

Thank you for coming.

We've had a long day of discussions today in the context of our consultation with the DPRK delegation. We've discussed a number of issues, especially the question of the substance of what has divided us for the last ten weeks, but also format questions. I want to stress this was not a decisional meeting. That is, we had good discussions about it. We looked at some of the issues that have been problematic. We explored some avenues for going forward, but we're still working on these issues. I look forward to communicating with Secretary Rice to give her an update on where we are and where we hope to be.

We agreed that we can sort of proceed on this basis. And our hope is that we can achieve what we need -- which is a declaration which will be complete and correct -- and that the declaration will be provided to the Chinese as the chair of the Six-Party process.

Again, I don't want to get into the substance at this point -- except to say that we talked about format questions, and then we talked about the actual substance. We talked about substance insofar as it relates to the October '07 agreement and the need to cover all aspects of that agreement. That includes such issues as proliferation, but also issues of uranium enrichment, of course. And, I might add, we had a good discussion of the need to address the question of Japanese concerns.

So I would say it was a very good consultation. We certainly are further along in this consultation than we were when we got off the plane this morning. So I would say there's been progress. But we are not there yet, and we still have to continue to work on this.

With those sort of opening comments let me take a couple of questions.

QUESTION: Saki Ouchi with the Yomiuri Shimbun, Japan. Ambassador Hill, would you be meeting the North Koreans again tomorrow? And are you so far, what is your analysis of whatever declaration they might have come up with?

ASSISTANT SECRETARY HILL: I'm sorry, what is my analysis of the --

QUESTION: How would you evaluate? Did the North Koreans come up with a satisfactory list?

ASSISTANT SECRETARY HILL: As I said, we had some very good discussions, and we covered all of the issues we needed to cover. I might add that in addition to covering the format questions of how the declaration would look and in addition to the specific issues within the declaration -- as you recall, many of them are contained in the October '07 agreement -- we also had kind of a sneak preview of what the so-called phase three might look like. We discussed all aspects of what we're trying to do in phase three. We also discussed issues such as humanitarian assistance and where that stands. We discussed the issue of heavy fuel oil and the status of that, the up-to-date status of that.

As for tomorrow, our plan is: right now we need to report to our capitals. In particular, I need to report to Secretary Rice. I haven't done that as yet. And I know that Mr. Kim Kye-gwan needs to report to his capital. And so we'll see how it looks tomorrow.

QUESTION: [Inaudible], Fox News.

I know you're careful about the substance, but you haven't been satisfied with what the North Koreans have provided so far regarding this declaration, regarding proliferation and also uranium enrichment. Have they moved at all? Have they gone closer to what you want or expect?

ASSISTANT SECRETARY HILL: Well, again, I don't want to get into too much of the substance. Frankly, I'd really rather report that to Secretary Rice. But let me just say we've had some good discussions on all substantive issues, including the ones that you mentioned.

Yes, Mike.

QUESTION: You said that you were coming here with some workable ideas to try to move the process forward. Do you feel after today's meeting that you have a basis for a declaration, to start moving forward on a declaration?

ASSISTANT SECRETARY HILL: Let me say that I believe that as we meet here at almost midnight Geneva time that we've moved the issues forward compared to when we arrived here this morning. I'm not in a position to say we've resolved these matters. But there's no question we've had a very thorough discussion of the format and of the substance and, I think importantly to us as well, of the next stage. So whether we've resolved these issues and whether we've achieved our goals, I'm not in a position right now to say so -- except to say that there is no question we've had some very good discussions, and I look forward to briefing Secretary Rice on precisely what those discussions were.

QUESTION: Are you starting to see a bit of light at the end of the tunnel? [Inaudible]

ASSISTANT SECRETARY HILL: He's asking about light at the end of the tunnel. That's such a cliché. I mean I'm really surprised at you. [Laughter].

QUESTION: [Inaudible].

ASSISTANT SECRETARY HILL: Well that's a rare example of restraint. But let me say we really went straight on in terms of dealing with some of the problems, especially the substantive problems,

because we've had an idea in format terms of how to address this for several weeks now. But I think our problem has been on the actual substance. So we were able to tackle that, and I think we're in a better position now than we were when we arrived here. But if you don't mind, I would really prefer to brief Secretary Rice on this before I brief you.

Tomo, ok. You're kind of a ringer though. I mean, you know all this stuff. (Laughter)

QUESTION: Ambassador, right after the dinner Kim Kye-gwan told us reporters that the two issues -- the proliferation and the enrichment -- that they haven't done it, and they are not doing it right now, and they are not going to do it in the future. So that sounds like they're still keeping a hard stance on it. So do you feel that you have narrowed the distance between you and the North Koreans on today's talk? And do you now have a more clear view that you can get this declaration done within this month?

ASSISTANT SECRETARY HILL: Well, I have made clear publicly -- and I must say I made clear with the DPRK delegation today -- that we need to pick up the pace. We are already in March of '08. We have some ambitions for trying to get done with this, get through this in '08. And so therefore there's no question we need to move faster.

I want to emphasize that what we did today was not decisional. That is, we did not reach an agreement today that will allow us to move on to phase three tomorrow. We did have, again, very substantive discussions of how to go forward, and we're going to report to capitals and see where we are tomorrow and the next day.

The DPRK has maintained a position on proliferation, on uranium enrichment that we have really had to challenge and had to work with them on. So I'm not really in a position to tell you whether we've resolved that -- except to say that I think we've made some progress today.

QUESTION: [Inaudible], working for the Korean Broadcasting System. Simply, can I translate this question to successfully pave the way to hold next Six-Party Talks or hold Six-Party Talks in a month? And second, are you going to meet him tomorrow again?

ASSISTANT SECRETARY HILL: On the second question, we don't have a plan yet. I think we both agreed we need to report to capitals very specifically about some of the discussions we had and the ideas we had. The first question, though, was -- I think you're asking me to write your lead, and I'm not sure I can. But --

QUESTION: Can I translate the good discussion successfully paved way to hold next Six-Party Talks in a month?

ASSISTANT SECRETARY HILL: Oh, I see. Well, we are trying to get ready for making that progress -- that is, for getting to phase three. And phase three would mean a Six-Party meeting, to be sure. This was not a decisional meeting. So I don't want to suggest that we have paved the way, and we're waiting for the cement to dry in order to move forward. I think we still have some work to do on the road forward. But it certainly -- Since we've run into this difficulty in early December, I think these were probably the most substantive discussions we've had on how to go forward. But I'm not prepared at this point to tell you we've paved the way and that this will be a cakewalk from now on in.

QUESTION: Ambassador, did you come up with the agreement or understanding when you can remove them from the terrorism list?

ASSISTANT SECRETARY HILL: We certainly had a discussion of the terrorism list and what the issues are and what the timing would be for the terrorism list.

QUESTION: You mentioned in your opening statement that you addressed the issue of the Japanese concerns.

ASSISTANT SECRETARY HILL: Yes, I did.

QUESTION: Did you talk about the abduction issue --

ASSISTANT SECRETARY HILL: I sure did.

QUESTION: -- and was there anything new that they said?

ASSISTANT SECRETARY HILL: No. Nor was there anything new that I said, because I raise the abduction issue just about every time we've met.

I think it's fair to say that as I addressed this issue of the DPRK's bilateral relationship with Japan, I did so in the context of the overall effort to go forward. And I think my comments were very much understood. But I think these issues, just as I need to report some issues to Washington, these need to be reported to Pyongyang. So I would say on this issue we had a very clear understanding of what we need to see happen.

QUESTION: Was there anything different in their position on this and [inaudible]?

ASSISTANT SECRETARY HILL: Again, these were points that I made to the DPRK and that they need to report to [their] capital. So I think it was a very useful exchange, but I'm not in a position to characterize their response.

QUESTION: Could you elaborate about what you had talked with Kim Kye-gwan on the terrorist list and trading with the enemy act? And also, what did you talk about to normalize the relation between U.S. and DPRK? And the last question is, are you going to have some kind of a written, formal agreement or promise note or something?

ASSISTANT SECRETARY HILL: I think everything that we discussed ultimately needs to be reflected in some kind of written instrument. I don't think we're going to allow an oral conversation to be part of the historical record on this.

With respect to the issue of the terrorism list, abductions, etc., we also had a very good discussion of this, but we need to report to capitals. We have some ideas of how to move forward. But we need to report to capitals and see whether those are acceptable in capitals. And, in particular, I need to talk with Secretary Rice. So you'll forgive me if I don't tell you more than I'm going to tell Secretary Rice.

QUESTION: Considering the deadline for the terrorism list [inaudible] --

ASSISTANT SECRETARY HILL: Well, the issue of the terrorism list -- there is an annual terrorism report, and then the issue of when a country is taken off the list of state sponsors of terrorism is quite separate from the publication of that report. So it's not tied to the timing of that report.

QUESTION: I'm from Nippon Television. I just want to ask you, you mentioned that this meeting was proposed by the North Koreans. In that sense, what was the difference in their attitude? What kind of new answers did you get from a week ago or ten days ago?

ASSISTANT SECRETARY HILL: Well, you know, I hate to be the spokesman for the DPRK and to talk about their attitudes or this or that. Certainly I had looked forward to having a discussion with them earlier, about a week ago in Beijing. Indeed, I flew up from Bangkok to do just that. We weren't able to get together. They proposed coming to Geneva.

I can't really give you much more information -- except to say that we had a very substantive discussion about format and about the actual substance, the issues that have really divided us for these last ten weeks. I do believe we're further along now than we were this morning. I need to report to my capital, to Secretary Rice. I know that Mr. Kim Kye-gwan needs to report to his capital. And we will see if this meeting that I believe was very substantive and very useful to all of us, whether it can really lead to or pave the way to the progress that we very much need in order to get on to phase three.

I want to emphasize that as difficult as phase two has been, phase three is going to be even more difficult. For those of you who from time to time look at video games, you know that phase two is always more difficult than phase one, and phase three is always more difficult than phase two. And so we're very much playing that kind of game.

All right? Thank you.

Sorry, one more. I always regret taking one more question, but go ahead. [Laughter].

QUESTION: Mark [inaudible] with Bloomberg News. Did you hear any complaint from North Korea? Did they say that the speed of the promises were too slow?

ASSISTANT SECRETARY HILL: We discussed, as I mentioned earlier, we discussed all aspects of our interaction, and that includes heavy fuel oil. But, actually, I did not hear complaints about the heavy fuel oil -- because I think there was a realization that the U.S. has just in the past few days completed or is completing its requirement under the heavy fuel oil. I know that the Republic of Korea and China are working on heavy fuel oil equivalents. That is part of the issue, or the package with regard to the disablement of the Yongbyon facility. I think there was an understanding, including within the DPRK delegation, that that is moving forward.

So I think we are more or less ok on that. But, again, we're not playing this game for phase two. We're trying to get on to phase three and see if we can finish this job.

Thank you very much. Good to see you all.

## **US Sees Progress but No NKorean Pact**

By ELIANE ENGELER –

13 hours ago [Accessed 2008-03-14T13:55Z]

GENEVA (AP) — The United States and North Korea made progress Thursday in overcoming obstacles that have stalled a major nuclear disarmament deal but remained short of a breakthrough, the chief U.S. negotiator said.

Assistant U.S. Secretary of State Christopher Hill told reporters that the talks in Geneva were probably the most substantive that Washington has had with North Korea since problems developed in December over disarming Pyongyang's nuclear weapons program.

"We certainly are further along in this consultation than we were when I arrived this morning," Hill said after meetings with North Korean Vice Foreign Minister Kim Kye Gwan. "There has been progress."

Hill said he wanted to report to U.S. Secretary of State Condoleezza Rice before going into more detail.

"We've had good discussions on all substantive issues," Hill said. "Whether we've resolved these issues and achieved our goals I'm not prepared to say."

Kim separately denied allegations that North Korea had a secret uranium enrichment program or that it had any connection with a nuclear program in Syria.

"We did not have, we don't have and we will not have," Kim said.

Hill went into the Geneva discussions insisting that Pyongyang fully reveal all details of its nuclear weapons program.

"We need to get some movement. We're already some 10 weeks behind," Hill said, referring to the North Korean commitment to make a full declaration of its program by Dec. 31.

North Korea agreed last year to provide a complete list of its nuclear programs and disable its facilities and its main reactor by the end of 2007 as part of a disarmament deal.

For its part, Washington promised aid and said it would consider removing North Korea from terrorism and economic sanctions blacklists.

Pyongyang made unprecedented progress, shutting down and starting to disable its main nuclear reactor last year. But the talks have faced an impasse since the North missed its December deadline.

North Korea complained that promised energy aid was late in coming. Washington said Pyongyang still had to provide a detailed declaration of its nuclear programs as a condition for receiving the assistance, and North Korea insisted it gave the U.S. a list of its nuclear programs in November.

South Korea, China, Japan and Russia have been working with the United States to resolve the dispute.

Hill said the United States, South Korea and China were well on the way to living up to their commitment to provide energy aid to North Korea in exchange for the declaration and disarmament.

"I think there's a realization that the U.S. has just in the past few days completed or is completing its requirement on the heavy fuel oil," Hill said. "I know that the Republic of Korea and China are working on heavy fuel oil equivalents."

"I think we are more or less OK on that," Hill said.

Associated Press writers Foster Klug in Washington, Kwang-tae Kim in Seoul and Alexander G. Higgins and Frank Jordans in Geneva contributed to this report.

## **U.S., North Korea stay in contact in Geneva**

**Fri Mar 14, 2008** 8:22am EDT

(Recasts paragraph 1 and adds U.S. mission comment on Sung Kim meeting in paragraph 6)

By Jonathan Lynn GENEVA, March 14 (Reuters) - U.S. officials held further discussions in Geneva on Friday with North Korea a day after the two countries had substantive talks on getting the secretive communist state to abandon its nuclear activities.

The top U.S. negotiator on North Korea, Christopher Hill, told reporters he was departing for Warsaw, but leaving the state department's head of Korean affairs, Sung Kim, in Geneva to follow up on Thursday's talks.

The State Department's Kim is an expert on North Korea's nuclear programme and has visited the Yongbyon facility that is at the centre of negotiations and is currently being disabled.

"There's a growing understanding of the issues that need to be resolved," said Hill, who is pushing North Korea to speed up the pace of the talks.

His comments showed that relations between the two enemies had improved to the extent that they remained in touch, but they have still not agreed on how to carry out the deal in which Pyongyang will abandon its nuclear programme.

A spokesman for the U.S. mission in Geneva said State's Kim had held a brief follow-up discussion on Friday with his North Korean working-level counterparts, but gave no further details.

North Korea agreed to abandon its nuclear programme in 2005 but the deal has been stalled by Pyongyang's failure to produce a detailed declaration of its nuclear projects by the end of last year.

That deal was worked out in talks between six countries -- North and South Korea, Russia, Japan and the United States, with China chairing the negotiations.

In return for abandoning its nuclear programme, which can be used to produce nuclear weapons as well as energy, North Korea would receive humanitarian aid and fuel oil, and see relations with the rest of the world normalised.

That would include Washington dropping North Korea from its list of state sponsors of terrorism, and easing sanctions.

### **SIX PARTY TALKS**

At Thursday's meeting, Hill and North Korean Vice Foreign Minister Kim Kye-Gwan discussed all the issues including enriched uranium, proliferation, humanitarian aid, heavy fuel oil for North Korea and the abduction of Japanese citizens.

For the talks to progress, North Korea must provide China with a full declaration of its nuclear activities.

That would culminate with the final dismantling of the Yongbyon facility, but Hill said they were not yet ready to move to that phase.

North Korea's reluctance to discuss transfers of nuclear technology to other countries and its suspected pursuit of uranium enrichment have delayed the declaration.

The United States has questions about a possible North Korean role in a suspected Syrian covert nuclear site bombed by Israel in September. A uranium enrichment programme would give North Korea a second source of fissile material to produce nuclear weapons besides its plutonium-based facilities.

North Korea's Kim was quoted by Japanese and Korean media as denying any involvement in enrichment or proliferation.

"Our position is that there have never been such programmes in the past, there are no such things going on currently and that we will not engage in them in the future," Kyodo News quoted him as saying.

Hill said further one-on-one meetings were needed before the six-party talks resumed, but said he had no meetings arranged.

"I think there might be another need for a consultation but frankly we'll all have to do a number of consultations with different parties before we have a six-party meeting," he said.

But Hill said the declaration from Pyongyang, whatever form it takes, was not the goal of the negotiations.

"The purpose of this six-party process is not a declaration. The purpose is the denuclearisation of the Korean peninsula and for that reason we really need to pick up the pace if we're going to achieve that," he said. (Editing by Ralph Boulton)

## Remarks to the Media in Geneva

Christopher R. Hill, Assistant Secretary of State for East Asian and Pacific Affairs

Hotel de La Paix

Geneva, Switzerland

March 14, 2008

ASSISTANT SECRETARY HILL: Some of our team is still here, including Sung Kim, so we will follow up this morning to see the status of what we are trying to get accomplished. But again I want to emphasize that it was a very good meeting yesterday. We went through a lot. We talked a lot about the format, but we also talked a lot about substance.

I am not in a position though to say whether we are prepared to go on to phase three at this point, but we will continue to be in touch with the DPRK delegation through the weekend. I also had some discussions with other members of the Six Parties, and I talked to Saiki-san three or four times by telephone, including this morning. So we will see how it goes. But again it was a very good meeting, and I am very appreciative to the Swiss authorities for helping to facilitate this.

QUESTION: Mr. Secretary, the North again last night were reported as saying no on uranium enrichment, no on proliferation. It doesn't seem they have moved on those substantive issues that you want them to move on.

ASSISTANT SECRETARY HILL: Again, I am not responsible for what they say in their press conferences. I can just tell you we had some very good discussions, and we will see where we are.

QUESTION: How was the response from Secretary Rice? Was she satisfied with some improvements?

ASSISTANT SECRETARY HILL: Well, I think you would have to ask the spokesman on that. I talked to her a couple of times, including at three in the morning our time. So I think we have been in touch, and she is very familiar with what we are trying to get accomplished here.

QUESTION: Would you be coming back from Warsaw to Geneva?

ASSISTANT SECRETARY HILL: I don't have any plans to do that.

QUESTION: Do you think you need to meet with the Koreans bilaterally before going on to Six-Party Talks?

ASSISTANT SECRETARY HILL: I think there might be another need for consultation. But frankly, I think we will have to do a number of other consultations with other parties before we have a Six-Party meeting. But again, it was a very full day of discussion. We went through a lot of issues that we needed

to go through. I think there is a growing understanding of the issues that need to be resolved, so we will see how we do. And I will leave Sung Kim here for another day, in case there is any need for face-to-face follow up.

QUESTION: You said you need to make some progress within this month, it is critical.

ASSISTANT SECRETARY HILL: Well, I think it is just a matter of the timing. We are going to get on to phase three and make some serious progress in '08 because the purpose of this Six-Party process is not a declaration. The purpose is denuclearization of the Korean peninsula, and for that we need to really pick up the pace if we are going to achieve that.

QUESTION: Do you have a meeting scheduled?

ASSISTANT SECRETARY HILL: I don't have a meeting scheduled right now.

QUESTION: Why did you have to talk to Saiki (inaudible) two or three times?

ASSISTANT SECRETARY HILL: I think I called him, and he called me. He had some messages to pass on to me. And we also were doing some logistics because I look forward to him as well in a bilateral consultation in the near future.

QUESTION: When do you leave for Warsaw?

ASSISTANT SECRETARY HILL: About two minutes ago.

## **Briefing En route Santiago, Chile**

Secretary Condoleezza Rice

En route Santiago, Chile

March 14, 2008

*[EXCERPT]*

QUESTION: Do you have any kind of readout on the negotiations that Chris Hill (inaudible) Geneva now; I guess Sung Kim is going to carry on without him. Any progress, any (inaudible) uranium enrichment (inaudible)?

SECRETARY RICE: My understanding – I haven't had a chance to (inaudible) readout. But my understanding is that there will now have to be some period of (inaudible) to the capitals and so I wouldn't expect anything immediate, but it's time to solve this issue in the declaration and that's what we're going to keep doing. The United States is ready to fulfill its obligations when North Korea fulfills its obligations. So North Korea needs to fulfill those obligations.

QUESTION: Are there any plans for any (inaudible) Chris Hill back from Geneva and can you give us any sense – you talked about (inaudible) maintaining about how you were sort of indifferent or flexible on form. Can you give us a sense now of what is left to sort out? **Is it a matter of form or is it still a matter of substance that they're actually --**

**SECRETARY RICE: I would say it's still a matter of substance.** And Chris doesn't have any plans to go back to Geneva at this point. It was intended to be a one-day meeting. He'll come back to the United States and we'll see where we are when he gets back. I'll have a chance to consult and he'll have a chance to talk himself with the allies.

## **Scenarios for N.Korea nuclear resolution**

By LEE JONG-HEON

UPI Correspondent

Published: **March 17, 2008**

SEOUL, South Korea, Closed talks between North Korea and the United States last week fell short of producing a breakthrough to end the protracted nuclear standoff, with negotiators admitting substantive differences between the two sides.

But hope is cautiously reviving for a last-minute compromise. The two countries have left the door open for further meetings as both sides are under pressure to hasten the disarmament process.

Washington's chief nuclear envoy Christopher Hill said his country was ready to exercise "flexibility on the format" of North Korea's declaration of its nuclear programs, saying, "We have some ideas that may be workable."

Hill's North Korean counterpart Kim Kye Gwan also said differences between Pyongyang and Washington were not insurmountable, saying, "There are U.S. proposals we have been continually considering."

The North Korean nuclear envoy did not disclose what the U.S. proposals were, but diplomatic sources say Pyongyang and Washington are weighing three scenarios to bridge their differences and move forward to the next stage of the denuclearization process.

One scenario involves separating the issues of contention -- North Korea's alleged uranium enrichment program and suspected nuclear proliferation to Syria -- from the main declaration where the plutonium-powered nuclear program would be specified.

Under a six-nation agreement reached in February last year, the North completed the first phase of the disarmament in July by shutting down and sealing its plutonium-producing reactor at the country's main nuclear complex in return for energy aid. But it has failed to finish the second phase of the disarmament deal that called for a declaration of all its nuclear programs by the end of last year, delaying the third and final phase of dismantling its atomic weapons programs.

The North says it submitted a nuclear list in November, but the United States is calling for Pyongyang to fully clear up the suspicions about a uranium-based weapons program, including questions about how the centrifuges and aluminum tubes it had bought were used.

Pyongyang has flatly denied the existence of a uranium enrichment program. There is ample evidence that North Korea acquired components for a centrifuge-enrichment program, but it is unclear that the North produced highly enriched uranium or developed its enrichment capabilities in the manner claimed by the United States.

The North's alleged transfer of nuclear technology and materials to Syria is another thorny issue that has put the disarmament process in limbo. The United States has questions about any possible North

Korean role in a suspected Syrian covert nuclear site that was bombed by Israel in September. But Pyongyang denies any nuclear connection with Syria.

"By separating the plutonium problem from the sticky issues of uranium and proliferation, the two sides can break the nuclear stalemate," the diplomatic source said. "The proposed option would make it earlier for North Korea to submit the nuclear list," he said.

The second scenario would be that North Korea and the United States sign two separate agreements -- one open, the other secret. Under this idea, the North would declare plutonium-producing facilities in an open document, while acknowledge, in a separate, secret document, its initial research and development of enriched uranium while citing the import of centrifuges only for industrial purposes. This option may be related to Hill's remark of "flexibility on the format."

Suh Jae-jean, a senior researcher at the government-run Korea Institute for National Unification, has campaigned for this option, saying the secret agreement would "enable North Korea to save face and prevent backlash" from U.S. hawks.

The third and final scenario involves essentially agreeing to disagree, with each side stating its own views in the document. This idea calls for the United States to express its concerns about the possible uranium program and transfer of nuclear technology, while North Korea would state its denials in the document.

Suh and other analysts say both North Korea and the United States are concerned that time is running out to reach a breakthrough. If they fail to produce tangible results within weeks, the nuclear problem could be handed over to the next U.S. administration, given the upcoming U.S. presidential election.

The Bush administration, which is desperate to win a foreign policy success to offset its failures in the Middle East, is still pushing for a big bargain with North Korea to end the nuclear standoff, which would be a diplomatic victory for President George W. Bush, who leaves office at the beginning of 2009.

The North also does not want further delay into next year, after a new lineup is established in Washington, because Pyongyang desperately wants economic aid in return for hastening the disarmament process.

"Likely is a grand political compromise between North Korea and the United States to move forward the denuclearization process in the near future," Suh said.

## **Moving Forward in 2008: The U.S.-East Asia Relationship**

Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs

Foreign Press Center Briefing

Washington, DC

March 19, 2008

3:00 P.M. EDT

*[EXCERPTS]*

AMBASSADOR HILL:

*[deletia]*

And the problem, of course, that I, unfortunately, have to spend most of time on is the issue of denuclearization in North Korea. I had a meeting just last week, as many of you know, in Geneva. It was a good substantive discussion. I had hoped that we could reach some conclusion about having the DPRK, the North Koreans go forward with their declaration, which they need to give to the chair of the six-party process. They were unable to do that or unable to put together something that would meet, I think, the definition that is set out in the October '07 agreement, that is complete and correct. And so we talked about this. And now, I think, the DPRK's negotiating team is back in Pyongyang and we'll give them a few days and see what the next step is.

I've said in a number of settings that I think we are at a point where we really do need to make progress soon to wrap up this second phase. I certainly would like to see it done in -- even in this month, in March, because I think if we're going to get onto the next phase, which is a very ambitious phase where we would like to see the fulfillment of the September '05 statement in which the DPRK is required to denuclearize and rejoin the Nonproliferation Treaty, we better get moving on that very quickly if we're to get that done in '08. So we are trying to get this done as fast as we can. We've devoted a lot of attention to it in recent weeks as we've been in this sort of overtime period since the end of December, but we're not there yet.

*[deletia]*

QUESTION: Daguchi with Kyodo News. On your meeting with Kim Gye Gwan in Geneva, how was the discussion on sequence and timing of delisting them from the state sponsor of terrorism list? Are they still insisting on seeing delisting prior to the declaration? And can you be flexible on that timing and sequence issue?

AMBASSADOR HILL: You know, I'm not sure I want to get into the specifics of what we talked about except to say, as I've said before, that I don't see sequencing and timing as a problem. I think that can be worked out. And when you look at the issues that we're dealing with there, sequencing and timing has not emerged as a problematic element in the discussions. I think the really problematic element is we don't have a commitment from the DPRK to provide a complete and correct declaration. They'd rather have one that misses a few elements; that is, that's rather incomplete.

And I think the declaration, while some people think it's just a paper exercise, after all, one of the main issues has been the continued disablement of the Yongbyon nuclear facility, disablement that followed the shutdown of that facility in the latter part of '07. So a lot of people say, "Well, why are you so concerned about the declaration when the real issues should be happening on the ground?" And I think the answer is very clear that as we move forward and as we achieve complete denuclearization, we need to have transparency in the process. We can't have a situation where they, you know, are - fail to list some of their nuclear programs, where they fail to list some of the experiences they've had, especially in their interest - in one case, in their interest in a uranium enrichment program. We need this to be clear.

So I know there's a great deal of impatience about it. People say, "Well, why can't you just accept something partial and work on the rest later?" And I think we are really at a point where we have to have a complete and correct declaration. That will be what enables us to wrap up phase two and then we will go to what I described earlier and what I continue to describe as a very, very difficult phase three. Getting a country that has produced fissile material on its own and getting that country to relinquish that fissile material is obviously going to be difficult. Again, I don't think we're asking the DPRK to do something that's not in its interest. I think it is very much in its interest to keep on this program. There will be a lot on the table in this next phase and so, a lot on the table in terms of their access to economic assistance, in terms of their diplomatic recognition, in terms of their security situation because we're prepared to replace the armistice with a more durable peace instrument.

So there is a great deal on the table that is in their interest, but they have to understand that we cannot, at the end of the day, permit them to hold on to nuclear material. So we're just going to have to keep making that clear and I've said it to them 50 times and I'll be happy to say it another 50 times. So this is where we are and I hope they will come to understand that they need to complete this phase two before we get on to phase three. And I can assure you that issues such as sequencing and, you know, who's going to step first and this sort of thing, that's not the issue. That really is not the issue. Those are issues that may come up in other negotiations, but not in this one.

*[deletia]*

QUESTION: Can we assume that to mean that you will accept North Korea making separate -- I know you don't like the word "separate," but separate pieces of paper of declaration, separating -- separate between plutonium, uranium, proliferation? And also, would you be willing to accept the declaration directly from North Korea to the U.S. instead of insisting that it be given to the chair, China?

AMBASSADOR HILL: Again, I don't think formatting is a problem. I really don't think how many pieces of paper are the issue here. Moreover, China has worked very hard in this process. China has taken their responsibilities very seriously. They have put together a very good diplomatic team. They are the chair of the six-party process. I don't quite see the purpose in having the DPRK give the U.S.

the declaration when, in any other multilateral diplomatic process, you would provide it to the chair. So I don't think -- I don't see the purpose of it, nor has the issue really come up. The North Koreans have not said, well, we'll give you the declaration but not the Chinese. So it's really not an issue.

So, again, what it finally looks like in terms of numbers of pieces of paper, I don't know now. I mean, I have an idea of what it's going to look like, but it's not the problem. The problem is we don't have all the elements of their nuclear program. And if they give to the Chinese as the chair an incomplete declaration that skips elements of the nuclear program, it is not politically sustainable for us or for other members of the six parties to say that we accepted a declaration, to say it fulfills the requirements in October to be complete and correct, when, in fact, it's incomplete and incorrect.

So this is a moment where I think we have to be pretty clear about what we need. Now, I know there's a lot of discussion about are there models, are there diplomatic models out there that can save people's face, are there ways to handle things that don't require people to be -- you know, to feel that they have had to change their position or something. Of course, there are things like that. And probably, in the end, some of these things can be put to use. **The basic problem, though, is that the DPRK is not yet prepared to provide the complete and correct declaration.**

I've also said that as difficult as this issue is, I think the next phase will probably be even more difficult, and therefore it's in -- it's my judgment that as we -- as we go forward here, I predict that if the six-party process does not work finally, the problem will not be the format of the declaration or even the scope of the declaration, because I think we will figure out a way through the declaration. I am much more focused on the next set of problems, which is what we're calling phase three.

*[deletia]*

QUESTION: Okay. I know in Geneva, you said that there were a lot of issues of substance that weren't cleared up, but you seem to be - have - be a little bit more optimistic on format. I'm wondering if you came to an understanding or close to an understanding on format in Geneva. And on the format, the issue of a secret document on the sensitive issues of uranium and proliferation, it's still in the press, it refuses to die down. Can you definitively say that the United States will not accept a secret - a separate, secret document on these issues?

(Laughter.)

AMBASSADOR HILL: I can definitively tell you that format is not the problem. How - you know, these things have to be explainable to our public, so the idea of a secret document secretly arrived at that one can never describe, you know, that's not what this is really about. I mean, this is about seeking transparency. So again, how we do that and the format, what documents are actually, you know, put out for people's perusal, you know, I'm not in a position to say with any great - in any great detail. But you know, we are not interested in more secrecy. We're interested in more openness.

And - I mean, that's what the declaration is all about too: Put things on the table, resolve issues that have taken place and move on. I think the - to some extent, one of the problems we seem to get from the DPRK is that as we ask questions, they feel that somehow, this will be a never-ending series of questions. They think that I have nothing better to do in my time or in my life than to keep asking them questions. And they've kind of misunderstood where I am. We ask questions because we need answers and when we get the complete and correct answers, we'll move on.

So the DPRK does not need to worry that our efforts to get clarity on this will somehow boomerang, will somehow come back to cause problems for them. They need to understand that this is how we resolve things and when we resolve them, we will move on and try to resolve the next problem. So it's a sequential, step-by-step approach and people always say, "Why are you going step by step?" And the answer is you can't just do it in one leap. You've got to, you know, work on each of these problems, resolve them, move on to the next.

And again, I think people do need to remind themselves that we have made some headway. We got Yongbyon shut down, we've got it disabled and with every passing day, it's more and more disabled. Now we've got to get a complete declaration in order to get on to some of the continuing -- the next elements and we'll continue to work that. And I'm telling you, at the end of the day, if this doesn't work, it's not because we didn't try hard enough.

QUESTION: Did you (inaudible) format?

AMBASSADOR HILL: We have discussed format and we anticipate we will not have a problem on format.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
March 24, 2008

*[EXCERPT]*

MR. MCCORMACK: Uh-huh.

QUESTION: The first one is: Has North Korea suggested additional bilateral talk with the U.S. after the recent Geneva meeting? And my second question is: Washington Post reported yesterday that North Korea had made a secret agreement to provide technical know-how and some materials for the reactor with Syria. Do you have any comment on this report?

MR. MCCORMACK: In terms of – in terms of the last part of your question, we have said that the North Korean declaration needs to be full and complete. That means talking about their plutonium program, their HEU program, as well as any proliferation-related activities. I'm not aware of any request for any further consultations within the context of the six-party talks with our – between the United States and North Korea. I'll check with Chris Hill to see if there is anything, but at this point, I'm not aware of any.

## TRANSCRIPT

Ambassador Christopher R. Hill  
Assistant Secretary of State for East Asian and Pacific Affairs  
Global Leadership Speaker Series  
March 25, 2008

**Frederick Kempe:** Good afternoon. Good afternoon, I'm Fred Kempe. I'm President and CEO of Atlantic Council and I'd like to welcome you to this installment of our Global Leadership Speaker Series featuring Ambassador Christopher Hill.

I won't introduce Chris. I'll leave it to our executive committee member from our board, Frank Kramer, to do that-except to say that we've known each other a very long time. Dating back to the mid '80s in Poland and then in the first democratic elections in South Korea. And it's wonderful to have you here and following your incredibly distinguished career where you've done so much service to our country. And for that matter, I'd say also to the world.

Our mission here at the Atlantic Council is to renew the Atlantic Community for 21st century global challenges. And this speaker series brings key American and European policy makers to the Council to discuss how best to deal with the global challenges that we face together. I'd like to thank our board member, David Aufhauser and his company, UBS, for their generous support of this Global Leadership Speaker Series from the very beginning.

We were fortunate to have as the first speaker in this series Nick Burns, then the Undersecretary for Political Affairs of the State Department, who used his words to define a global agenda for the Euro-Atlantic Community. He spoke of a dramatic and undeniable shift in the European-American relationship. Perhaps the most important of a century. Likely to be felt for a generation to come. And that the United States policy towards Europe is no longer about Europe, it's about the rest of the world. He said, "It's about what we together have to do to be effective and purposeful around the world and in all regions of the world."

We for many years have had an Asia program at the Atlantic Council, but this new global focus on the Atlantic relations makes the Asia Program more important than ever before. I want to thank Joe Snyder who's the director of the Asia Program for bringing together this event tonight along with his deputy, Patrick deGateño.

Often our work on Asia has a direct Euro-America connection, as for example when we conduct trilateral discussions with the EU, China, and the U.S. on issues. And it's clear that almost everything that happens in Asia has implications, direct or indirect, for Europe and the United States. We've done work on U.S.-China security cooperation, we've done work on cross-Straits relationships – across the Taiwan Strait – and we've done work on energy cooperation between the U.S., China, and India.

Finally, one of our big projects for the last two years has been a study of what it will take to normalize U.S. relations with North Korea. We issued a major report on this last year and have just finished an interim report after discussing our findings with the South Koreans. Later this year we will be taking the report on the road to other countries of the Six-Party process after which we'll make some recommendations about a regional security structure. Many of our board members, including those serving on the Asia Committee have been critical to our efforts in this area. I want to thank Julia Chang-Bloch, General John Fu, and Harry Harding, who are here today for their help in this work. And now, here to introduce Ambassador Hill, is the chair of the Asia Committee of the Board and an executive committee member of the Atlantic Council, Frank Kramer. Frank has been an extraordinary public servant over the years. He was the Assistant Secretary of Defense for International Security Affairs from 1996 to 2001 where he was dealing with, among other issues, Korean and Asian matters. He's also been Deputy Assistant Secretary for European and NATO affairs. So with that Frank, let me hand it to you. Thank you very much.

**Frank Kramer:** Thanks, Fred. We're all here to listen, not to me, but to Chris Hill. Chris is one of the extraordinary Ambassadors for the United States, one of the extraordinary diplomats. He and I first met when he was the Ambassador in Macedonia. He then went on to [be] the [U.S.] Ambassador in Poland. He was Ambassador to South Korea; he was the Special Envoy for Kosovo; and obviously now he's the Assistant Secretary for East Asia and Pacific Affairs and he heads the team of the Six-Party talks on the North Korea nuclear issue.

He's spent enormous amounts of time on this issue and he's probably been the person who is most associated with the fact that the talks have gone forward. He's been patient, he's been diplomatic, and he's been tough. And he has actually caused a certain amount of things to happen. The nuclear facility of Yongbyon has largely shut down. We have had fuel oil given to the North Koreans, and there are a number of steps forward, although I think many people would say there've been a number of steps backward. Two forward, one back, some people say; [others say] one forward, two back. And I think that's what he'll be talking about today. As to where we really go for the next six months, for the next year, how do we actually come to a conclusion? We have a new government in South Korea. Will that make a difference? We will have a new government in the United States. What impact will our elections have? What impact will the government have? These are all open questions. Chris is about as knowledgeable about this set of issues as anyone in the world.

This is an extraordinarily capable audience I can see by looking around. There are a whole variety of people. There are some long-term players on the nuclear issue and many, many diplomats, military and otherwise.

So, I'm going to turn it over to Chris. He will speak and then he will take questions and answers. And he'll deal with the issues of the declaration, which you all know, complete declaration. I'm sure he'll deal with the issue of 'What about actual destruction?' And he might even deal with the issue of Damascus, 'What about the Syrian side of the problem?' With that, let me turn it over to Chris, and let's hear what you have to say.

**Ambassador Christopher Hill:** Thank you very much, Frank. It's a great pleasure to be here. One issue I will not deal with is, I noticed on CNN this morning, I hadn't seen a picture of myself from some ten years ago on CNN, but there I was getting off an airplane in Tuzla, and I know the question was 'Was I concerned about sniper fire?' (laughter) All I can remember is getting off that plane and making a bee-line for the car because, you know, when you get off of a plane with a VIP you stand to be left behind if you don't get in that car in a hurry. So I crouched down and ran for the car.

But let me just say, it is a great pleasure to be here. Being here at the Atlantic Council brings back a lot of great memories, I must say. One, of course, is being with Fred Kempe back in Poland in the mid-'80s. We had a softball team at the American Embassy and we used to play the Marines and we were pretty unsuccessful at it. But one time I brought this ringer along, this reporter for the Wall Street Journal, who I assured our Marines had never played baseball before. I think we won 16 to 2 thanks to four grand slams by Fred. So Fred, great to see you again. It's the first day of baseball season . . . I don't know what you're doing here! Anyway.

I suppose it would seem in years past that the Atlantic Council was the wrong place to talk about Korea and Northeast Asia security, but I think in recent years especially, thanks to the work of Frank Kramer, but also Joe Snyder, who I know from previous assignments back when I was in Korea in the mid '80s. That I think the Atlantic Council is very much engaged on these security issues in Asia and I think it's very good news for Asia that the Atlantic Council is so engaged on it.

When I look at the situation that we're dealing with, these negotiations with North Korea, and in our times I describe myself as "the Assistant Secretary for North Korea" because it does take up an inordinate amount of time. I do try to bear in mind every single day what we're really trying to do in those negotiations. And what we're trying to do is the sort of thing the Atlantic Council has helped to do over the decades. Which is to form a greater sense of community in the North Atlantic and what we're trying to do in Northeast Asia is to do precisely that.

Of course, we're doing it through a rather intricate and difficult problem, that is, North Korea's nuclear ambitions, which, by the way, have been — they've had nuclear ambitions for as long as the Atlantic Council has been around. Those nuclear ambitions began sometime in the 1960s. They didn't just begin with their sense of upset and being labeled a member of the Axis of Evil, frankly speaking. They were well at it long before they felt bad listening to a speech. So I think we approach the task with the understanding that we've got to get through denuclearization. But as we work on denuclearization we can already see the beginnings of a sense, a greater sense I should say, of community in Northeast Asia.

We have a process called the Six-Party Talks. Everyone hates the word process. So do I. And a lot of people hate the word talks and so do I. But in putting together these six countries, very heterogeneous countries, very different countries, countries that look at this issue in North Korea from very different vantage points, very different perspectives, we can see that as we work on the issue we're beginning to form a greater sense of community. Even through the most difficult times of the Japan-China relationship a couple of years ago, you could see that Japan and China were able to work together at the Diaoyutai guest house. At times it seems like a prison because you get stuck there for a long time, but it's actually a very nice place to sit and have these multilateral meetings. But we were able to see how Japan and China were able to work together through difficult times, how Japan and South Korea were able to work together. You could see how the South Koreans in some respects were sort of still

introducing themselves to the Chinese, and working well together. And it wasn't so long ago. Indeed it was in the 1980's when there were no relations between China and South Korea, so you can see that that relationship is also functioning.

So what we're hoping to do as we go forward is not only solve the conundrum of North Korea's nuclear ambitions, but also form the sense of community and perhaps make it something lasting on the Northeast Asian landscape and seascape. That is, make these countries feel comfortable sitting together, working out things, and talking to each other but also at some point in the future maybe having some dispute mechanism — dispute resolution mechanism — and otherwise having a sense that they are all together in this region.

So as we face the various problems posed by not only North Korea's nuclear ambitions but also North Korea's extreme self isolation, that has caused this dark hole in the middle of this region, as we deal with that problem everyday we realize that we are addressing another problem, which is getting these countries together into sharing a sense of community. So I think that is going forward, but obviously we're not going to get there unless we can get through the North Korean nuclear issue. So let me briefly describe where we are and where we need to be.

Frank mentioned that we'd gotten the reactor, the nuclear facility at Yongbyon shut down, and that's — or I think Frank said largely shut down — actually that's completely shut down. What we also have been able to do through this painstaking step by step process is not only to get it completely shut down, but also disabled. The point about disabling is not so much to buy time during which it would take the North Koreans money and effort to get the reactor going again. The idea of disabling it is to make it clear to the North Koreans that this is a one-way ticket toward eventual abandonment. So as we set out on the Six-Party Talks to try to create a sort of step by step process toward denuclearization, first we set out a statement of principles, and then we came back and tried to implement each principle. And one of the most important principles, indeed I think the guiding principle if you will, is that we would have North Korea completely denuclearize, that is, abandon all their nuclear programs and all their nuclear weapons. And so obviously they didn't want to do that overnight, so we began on a step-by-step implementation. It took a while; there were a lot of problems that came up in the meantime, which I'm still in therapy over some of those problems and I certainly don't want to traumatize you with them, but what we managed to do is to, last July, to turn the switch, shut it off. Which is something that was done in the 90's, but then I think importantly we got them to begin the disabling process. Now I think it was encouraging to us as we got into disabling that the North Koreans said, 'we would like the American's to disable'. We appreciated being asked and indeed I think it is in everyone's interest that there are American technicians, as there are as I speak to you tonight, working and living in Yongbyon. But what we also wanted to do is make sure that the disabling process was pursuant to the six party process. Because, again, we want to continue to form this sense of community. We don't want to turn this process into a bilateral process. And so we worked it out with the six parties that the disabling would be conducted by the U.S. at the behest of the six parties. So since the fall we have had teams there taking a series of measures, there are eleven total measures which are aimed at the disabling of the facility, leading to the eventual dismantling and abandonment of the facility.

I must say this process is going well. People point out that some of these disabling measures can be redone and it's true. But what I think is important about it is that the North Korean technicians, with whom our people are working with on a daily basis, have understood this is a one-way ticket, that they're not planning to restart this thing. Indeed, when you look at the comparison of how they

conducted the freeze or the shutdown of the facilities in the 1990's with how they've handled this there is a big difference and I would say the most important for us is the fact that there's no maintenance going on in the facility today. That is, when they cut out the reverse cooling loop, it has sat, this huge hunk of metal, has sat on the ground through the winter months with no effort to, you know, make it so that it could somehow be reattached. Indeed it would take quite an effort to reverse the reverse cooling pipe. So we, by working there, by being there everyday, have gained the sense that the North Koreans really are committed to the abandonment of this facility. So much so that some of the critics of the whole process began by saying 'Well they could undo these activities in a matter of months' and as we looked through and as we summed up the eleven activities we could see that we were essentially were somehow buying some twelve, thirteen months of disabling. But as the months have gone by, it's pretty clear that that's not going to happen and now the critics I've heard say that actually the North Koreans want to give up on Yongbyon and they never intended to keep it and that's why they've allowed it to be disabled. I would say, by the way, to that second point, to the question to how long could North Korea have kept Yongbyon going if they wanted to. And I think the same is for a Cuban taxi driver, driving a 1956 Chevy: as long as he wants. So I think the North Koreans could have kept Yongbyon going and if you look at the actual time that its run compared to any sort of commercial power plant you can see that there are many days, years left on that reactor. So they have made the decision to shut down that facility and I think that we can feel positive about that.

The second element though, that we needed from them in this phase has proven to be a much more problematic element. And that is the question of them providing us a complete and correct — it's always easier to remember if you can alliterate it — a complete and correct declaration of all of their nuclear programs. Every year this problem has proven more difficult than many people anticipated. This is divided into three main areas.

First of all, of course is the issue of nuclear materials. Here we have very good reason to believe when they give the declaration we will get a complete picture of how much actual plutonium they have produced from the actual facility. What's important is, when you produce plutonium, from a facility like that, there are means, there are ways, to verify the exact amount of plutonium, and in the case of separated plutonium you want to be pretty exact in what you've got.

The second area is the question of facilities. We know what their nuclear programs or what their nuclear facilities are and what we need from the North Koreans to do is to list those facilities and to make sure they give us a complete list. Here too we don't anticipate a serious problem in terms of what the facilities are going to be.

But the third element, I think has proven to be much more problematic, that is, nuclear programs. To be sure the North Koreans are prepared to list the plutonium program. But we know — we know from as early as 2001-2002 — we know that they had aspirations to have a uranium enrichment facility, uranium enrichment program. We know they made certain purchases that were entirely consistent with these aspirations. We need to know about what that is. If it's continuing, we need to have it stopped. If it's already stopped, we need to know when it stopped and what the situation was. So that's one problem that we've had.

The second is the fact that we know, unfortunately, that North Korea has had some nuclear cooperation with abroad. Some proliferation issues, I think any reader of the popular press knows what country I'm talking about but there's an issue where also we need to know, very clearly from the North Koreans,

what happened and if it's stopped, as they say it has, when did it stop, how did it stop?. And if it's not going to continue, as they say its not, we need to have means to verify and to monitor that indeed there is no such program now or in the future. So as we've worked with the North Koreans, it has not been easy. The North Koreans have said 'we don't have anything now and we won't have anything in the future, why are you dwelling on the past? After all, two out of three's not bad...' We've made the point that we need clarity as to what's happened, we're not looking to cause problems, we're not looking to create a situation where somehow we would pull out of this, on the contrary we need clarity so that somehow we can pull forward. And we are way into overtime at this point. We have expected this phase of the denuclearization to have been completed at the end of December and here it is, already the end of March and it's still not completed. And that has prompted some people to say 'they have not fulfilled their part of the bargain, the United States should pull out of the Six-Party Talks. I mean, after all the North Koreans were supposed to provide a complete and correct declaration by December 31st, it hasn't happened, what are we doing still talking about this?'

So I think there's a question I think where you have to look very specifically at what your interests are. Are your interests served by exerting your right to pull out? After all we can pull out of this process any time we want. But, or do you look at your interests and conclude that your interests are better served by staying in it? Clearly from our vantage point our interests are better served by staying in the process. So I think, we have continued to work with the North Koreans, we have worked with them multilaterally through the six party process and bilaterally. By the way, I think a six party process, a multilateral process has never meant that you can't have bilateral contacts. It's a pretty broad, pretty solid platform to have a lot of different processes. We have three way talks, we have two way talks, we do all kinds of talks. So I mean, this is a multilateral process in which you can very easily imbed bilateral process and bilateral talks and we continue to work with the North Koreans on this.

Frankly, we went to Geneva last week or two weeks ago for what we thought would be talks that would lead to a resolution of this declaration issue. We had some very good discussions. But at this point we do not yet have a complete and correct declaration from the North Koreans. We've continued to have talks through the New York Channel. Which is the means by which we communicate to the DPRK government, to the North Korean government. And again, some of those discussions, some of those specific things that we've been talking about I think could lead to a resolution of this. It's my view, and this is a, really a guess, if the six party talks fail, it will not be for lack of a declaration. We will get through this phase. The problem I think will come to the next phase. And the next phase I think is a far more crucial phase because if we have a declaration, if we are able to rule out uranium enrichment as a continuing problem, as it was a problem. If we are able to rule out that it is an issue that is producing fissile material. If we are able to ensure that there is no proliferation or not further proliferation concerns, we will be down to the problem of getting North Korea to abandon the fissile material that it has already produce.

Now we will have a precise figure for that, a precise figure for how much plutonium they have produced but in this third phase we will need them to turn over to the international community that fissile material and that in effect, become a non-nuclear country. This will be a big challenge. As we get ready for this third phase, we look at some of the things that we might put on the table. For example, we believe we can put on the table an offer of the establishment of diplomatic relations with North Korea and normalization. We would do that in the context of a denuclearized North Korea. That is, they denuclearize, we will establish full relations with North Korea. Does that mean we don't have any more problems with North Korea? Of course not. We have a lot of issues with North Korea, but we

will address those issues as we do with many countries that we have diplomatic relations. We will talk about human rights as we do with many countries with whom we have diplomatic relations. We might set up a human rights dialogue as we do, we have many other issues that I think we will need to address. We will do that in the context of having relations with a country that we, in addition to having relations, we will continue to have some problems and we will deal with those through diplomatic means. So that's one thing we can put on the table.

Another thing we can put on the table is the fact that in Korea, in the Korean Peninsula we have had an armistice, which is a, since 1953, it's kind of an elaborate cease-fire, we're prepared to move that armistice to a peace treaty. And it's a peace treaty that would give to North Korea a southern border and South Korea a northern border. Obviously North Korea and South Korea would be primary players in this but I think other players, namely the U.S. and China would have to play an important role in this, but we're prepared sit down and see if we can work out a peace treaty with the understanding that there are a lot of complexities in this but we're prepared to do it.

Thirdly, we'd be prepared to assist with not only bilateral assistance trade packages but also assist in getting North Korea better access to the international financial institutions. This is not entirely within the, it's certainly not something the five parties can do on their own. Obviously North Korea will have to live up to certain standards. There are statistics in various things that they would have to provide if they're ever going to have membership in some of these organizations. But we're prepared to work with them and see if that could be accomplished and together also provide bilateral aid packages.

Fourthly, we would be prepared once they have denuclearized, once they are backed in the non-proliferation treaty and establish a record of non proliferation, we would be prepared to discuss with them their desire for a civil nuclear program. North Korea does not have a lot of fossil fuels at its command. Energy is a huge problem for North Korea, and we would be prepared, once they are out of the nuclear business and into the NPT and have established a record of no-proliferation, we would be prepared to talk to them about aspirations for a civil nuclear program. We are also prepared to work with them on retraining opportunities for their scientists. North Korea has many scientists who have been engaged in these nuclear programs over the years. We'd be prepared to sit down and see what can be done in terms of getting them out of these fields and into other scientific fields.

Finally, and this goes back to the first point I started with, we're prepared to create a Northeast Asia peace and security mechanism, whether it looks like the OSCE, whether it looks like some other institution from some other part of the world, will depend on the participants, I would say. We at this point cannot say with any precision what it would look like, but North Korea could be one of the founding members of this Northeast Asia peace and security mechanism. So all of these elements would go on the table. And what North Korea needs to decide is does it want to keep its aspirations for nuclear weapons in lieu of all these other elements. So, again, if we thought North Korea was simply prepared to fall out of bed one day and get rid of their nuclear programs, we would have done it one day and I would be on to other things, but alas, they are the kind of people who move step by step, and we believe this is the best way to do this. We do feel it is an important accomplishment that not only is the nuclear facility shut down, but it is disabled. This means that, if we can get it down to that amount of plutonium, we know that it is that amount of plutonium. That is, the plutonium will not be increasing every month. We think that is an important accomplishment and an accomplishment worth keeping us in the game to continue on this. I know there's a lot of questions about can we get through this ambitious third phase, during the life of the Bush Administration, which has some 300 days to go. And

again, I think this is something North Koreans are going to have to answer. They have said on a number of occasions that they would like to reach this deal with the Bush Administration. They've said it to us on a couple of occasions. The question is whether they're willing to follow through. North Korea is a country that has a, how to put it, vertically oriented governing structure to be sure, but that —this is on live TV so I have to be a little diplomatic about that — but at the same time, it is a place with politics. And so I think it is fair to say that there are people in North Korea who are really not with the program here. Who'd really rather continue to be producing this plutonium for whatever reason. And so I think we're going to have to understand that they're just not going to wake up one day and everything's going to be O.K.

Finally, let me just say that as we have gone forward, we have done this in an interagency process to be sure. The State Department plays a big role, but we have worked with other agencies as well. I would say the teamwork has been pretty good. It's not to say that we don't have people who are less enthused about this than others but I think we have been able to work together. I'm very proud of the foreign service officers who have worked with me through this. But we have been able to get together a very good team. And I think overall our countries relationships with that part of the world have been helped by our efforts in this regard. I think when you work in Asia, you want to show people in Asia that you're sincere about what you're doing. I think we've managed to do that. I think you want to show people in Asia that you're willing to work hard. I like to think the team we have together has indeed shown that we can work hard. And I think when you work in Asia, although I wouldn't limit this to Asia, when you work anywhere, you want to be respectful of your interlocutors and you want to show an understanding that they come from different experiences, different national experiences than you do, that they have a different history than you. That you're willing to listen at least 50% of the time and that you're willing to understand where they're coming from and see if we can work things out together. And I think we've succeeded in doing that. So speaking of not speaking more than 50% of the time, maybe this is a good time to go to questions. Thank you.

For Immediate Release  
Office of the Press Secretary  
March 26, 2008

## **Press Briefing by National Security Advisor Stephen Hadley on the President's Trip to the NATO Summit**

James S. Brady Press Briefing Room

*[deletia]*

Q Mr. Hadley, I was wondering -- back to China and the phone call today -- was there one particular thing that prompted the President to call today? The violence in Tibet has been going on for almost a couple weeks now. Is there anything that triggered today --

MR. HADLEY: Well, there are a couple things. One, the Taiwanese election presents an opportunity to encourage China to reach out to Taiwan and to try and resolve differences, and the President did not want to let that go by. And that election, of course, was just this last weekend.

Secondly, there seemed to us to be -- we have talked a lot about Tibet. The Secretary of State has made some comments. We've sent messages through a lot of channels. Particularly since the President was going to be talking to President Hu Jintao about Taiwan, he wanted to use that as an opportunity to talk about Tibet. And in some sense, the message is the same. There's an opportunity here and China needs to seize it.

Three, there have been ongoing discussions, as you know, on North Korea, an effort to get North Korea to come forward with a complete and correct declaration. This has been going on for a while. It's time to bring this to conclusion. As you know, China, as part of the six-party talks, has been critical in this conversation that members of the six-party talks together have had with North Korea. It was time, I think, for the President to signal to Hu Jintao that it's time for all the parties of the six-party talks, including China, to reengage with North Korea. And, again, if you've got that agenda, you don't want to not talk about Burma, because Burma is a very important issue, and China has real influence on it.

So you put all those together, seemed like a good time, and seemed like to be a fairly robust agenda. And as you can see from the readouts by the two sides, it was a very substantive conversation.

## **Remarks With Republic of Korea Minister of Foreign Affairs and Trade Yu Myung-hwan After Their Meeting**

Secretary Condoleezza Rice

Benjamin Franklin Room

Washington, DC

March 26, 2008

SECRETARY RICE: It's a great pleasure to welcome Foreign Minister Yu of the Republic of Korea. I had an opportunity to meet with him when I was in Seoul for the inauguration of President Lee Myung-bak, but he was not yet officially Foreign Minister at the time and he has now taken up those duties.

*[deletia]*

And we've had an opportunity to discuss regional issues of interest. In particular, we've spent significant time talking about the six-party talks in which we are both engaged, talks that, if they can lead to the denuclearization of the Korean Peninsula, if all parties follow their obligations, would really be landmark -- have a landmark agreement in terms of a more stable Korean Peninsula and a more stable region.

*[deletia]*

MINISTER YU: Thank you, Madame Secretary. Secretary Rice and I had a very good meeting and followed by a working luncheon. We discussed matters related to the preparation for the upcoming visit by the President Lee Myung-bak to Washington and Camp David, and we discussed ways to make it a success.

Secretary Rice and I shared a view that our alliance relationship has played an important role in maintaining peace and security for Korea, thus promoting this economic development and democratization for the last several decades. And we also agreed to strengthen joint efforts to develop the traditional friendly and cooperative relations into a future-oriented partnership.

Secretary Rice and I also discussed North Korean nuclear problem and shared the view that six-party talks is a useful venue to pursue a peaceful denuclearization of North Korea. We agreed to increase our efforts, in close coordination with other members of the six-party talks, to persuade North Korea to submit complete and correct declaration so that the next round of six-party talks can be convened to go into next phase of dismantlement of North Korean nuclear programs.

*[deletia]*

QUESTION: This question addressed to both the ministers. In your discussions, did you discuss the

current impasse in the efforts to end North Korea's nuclear weapons drive, particularly in terms of the declaration?

And the question of South Korea easing its restrictions on U.S. beef, as well as any timelines in terms of visa procedures for those two countries?

SECRETARY RICE: I think that was three questions, Minister -- (laughter) -- but we'll take them.

First of all, on North Korea, as the Minister said, we had extensive discussions about the six-party talks. We have made some progress in terms of the shutdown of the reactor and the disablement of the reactor. But it is really time now for there to be movement on the declaration so that, with that declaration in hand, we can move forward on the next phase in the agreed statement, which is to actually dismantle the North Korean program and account for all of the programs and materials and the like. Because, ultimately, that is the only way that we are going to be able to realize the vision of a completely denuclearized and peaceful Korean Peninsula. And so we did have that discussion.

*[deletia]*

MINISTER YU: Regarding North Korean nuclear issue and about the declaration, I think time and patience is running out. So I hope North Korea will submit a declaration as soon as possible, so as not to lose good timing.

*[deletia]*

QUESTION: Kim Ghattas from the BBC. Madame Secretary, we're wondering about the specifics of what is holding up the six-party talks and whether the issue of proliferation and Syria is still the sticking point.

Minister, you're also talking about the fact that time is running out. What are you suggesting to make this process move forward? What are you offering?

SECRETARY RICE: Well, as to what is holding it up, it is the declaration that is holding it up. And we expect that the declaration and any associated documents will show the full range of the North Korean programs and activities so that there can be an effort to verify and to deal with anything that has happened concerning North Korean programs and proliferation and the like. We've been concerned about North Korean proliferation for quite a long time.

The six-party framework should be able to deal with this problem – or these problems so that we can stay on course to the denuclearization of the Korean Peninsula. But it requires, first, that there be an accounting for those activities and for those programs. And so that's the process in which we're engaged. And again, it should – it was supposed to have been completed on December 31st. I'm not one to say that exact deadlines are that important. To get it right is more important. But I completely agree with the Minister that we've been at this for quite a long time and we are prepared, the United States is prepared, to meet its obligations when North Korea has met its obligations.

MINISTER YU: North Korea was supposed to submit declaration by the end of last year, so in order not to lose timing and momentum of six-party talks, we hope that North Korea will submit declaration as soon as possible.

QUESTION: Thank you. My question is to both Madame Secretary and Foreign Minister Yu. What is the link, if there is any, between humanitarian aid to North Korea and the current impasse on the six-party talks? Given the delay in the declaration, are both governments still willing to go ahead with food assistance and other types of humanitarian assistance to North Korea?

MINISTER YU: To me or to Madame Secretary?

SECRETARY RICE: There's a very clear path ahead in terms of what is expected of North Korea and what is expected of the other parties to the six-party talks. And so as North Korea goes along the path that it is supposed to, fulfills its obligations, then other parties in the six-party talks will do the same. And for instance, the North Koreans have been disabling; fuel deliveries have therefore been available to the North Koreans. So it should be very clear, and this was laid out in a way -- it was the North Koreans who talk about action for action. It's been laid in a way that everyone knows what they need to do and they know in what sequence they need to do it, and so that's the path that we're following.

MINISTER YU: Well, food aid is basically humanitarian aid. But providing annually a larger scale of food is not 100 percent humanitarian. But if there is anything a big necessity in North Korea, I think we have to provide food aid without any conditions.

SECRETARY RICE: Yes. And let me just say the United States has always believed that humanitarian needs of people need to be met wherever they are. So on that point, we're in complete agreement.

## **DPRK formally denies uranium enrichment, nuclear co-op with Syria**

www.chinaview.cn

2008-03-28 19:58:14

PYONGYANG, March 28 (Xinhua) -- The Democratic People's Republic of Korea (DPRK) on Friday categorically denied it had ever carried out uranium enrichment nor had it proliferated nuclear facilities to other countries.

"The DPRK has never enriched uranium nor rendered nuclear cooperation to any other country. It has never dreamed of such things. Such things will not happen in the future, either," the official news agency KCNA quoted a Foreign Ministry spokesman as saying.

"The Bush administration was so absurd as to raise the issue of suspected uranium enrichment," the spokesman said. But "taking into consideration the face of the Bush administration," the DPRK rendered necessary sincere help by allowing U.S. experts to see sensitive military objects and providing them with samples, he said.

As for the issue of "suspected nuclear cooperation with Syria" raised by the United States, the DPRK said it has nothing to do with it. Nevertheless, it still tries to meet the U.S. request for reconfirming its commitment not to proliferate the nuclear technology, the spokesman said.

"However, the further the negotiations went on, the greater disappointment the attitude of the Bush administration brought to the DPRK," said the spokesman, adding: "The DPRK can never fall victim to the Bush administration's move to justify its wrong assertion."

The six-party talks, which involve the United States, the DPRK, the Republic of Korea, China, Japan and Russia, on dismantling the DPRK's atomic programs remain stalled by disputes over the issues of "uranium enrichment" and "nuclear proliferation."

The DPRK has said it gave the U.S. a list of its nuclear programs in November, but the U.S. says it still awaits a "complete and correct " declaration.

## North Korea Test-Fires Missiles

By Blaine Harden

Washington Post Foreign Service

Friday, March 28, 2008; 10:57 AM

TOKYO, March 28 -- North Korea test-fired a volley of missiles into the sea Friday and warned that it might stop disabling its nuclear facilities unless the United States drops its demands for more details about the North's nuclear arsenal.

The missile launch and the combative warning -- which accused the Bush administration of "persistently trying to cook up fictions" -- came one day after the North expelled 11 South Korean officials from an industrial park north of the border that separates the two Koreas.

The White House called the missile tests "not constructive" and said North Korea should "refrain from testing missiles," Reuters news service reported. But South Korea played down the missile firings, characterizing them as part of a routine military exercise. "We believe the North does not want a deterioration of relations between South and North," a government spokesman said.

The three truculent actions in two days suggest that North Korean leader Kim Jong Il, after a relatively placid stretch of cooperative diplomacy, is increasingly peeved by demands from the United States and South Korea.

The Bush administration is refusing to lift diplomatic sanctions against the North until it explains its suspected uranium enrichment program and details any efforts to sell nuclear technology to Syria or other countries. "North Korea should focus on the denuclearization of the Korean peninsula and deliver a complete and correct declaration of all its nuclear weapons programs and nuclear proliferation activities," White House spokesman Gordon Johndroe said after the tests were reported.

North Korea reiterated on Friday that it has "never enriched uranium nor rendered cooperation to any other country."

South Korea's new president, Lee Myung-bak, who was sworn in last month, is taking a much tougher line than his predecessors in dealing with the North. Lee's government has said it will condition food aid and economic assistance on human rights and on timely dismantlement of the North's nuclear program.

This week's flare-up in tension on the Korean peninsula comes at an unusually stressful time for Kim's government. It is facing dire food shortages due to weather-related crop failures, the soaring world price of food and declines in aid from South Korea, China and the U.N. World Food Program. The shortages are expected to reach their peak late this summer -- at a time when China, the North's closest ally and primary benefactor, will be hosting the Olympics.

Analysts say that China expects Kim's government not to allow disturbances inside North Korea that could, during the games, send hungry refugees spilling across the border into China.

For reasons that have not been explained publicly, China has been supplying less food assistance in the past three years to North Korea, according to figures compiled by the World Food Program.

At the same time, China -- in order to keep more food for its own population -- has this year slapped tariffs on food exports. Combined with much higher grain prices on world markets, the 22 percent Chinese tariff has substantially reduced the impoverished North's capacity to buy food from there.

Perhaps more important, South Korea has this spring delayed the delivery of the free fertilizer that the North has come to rely on. The delay, according to analysts, means that this year's harvest in North Korea will almost certainly fall far short of what is needed to feed the country next winter.

The World Food Program has warned that the North this summer will have about 25 percent less food than it needs to feed the country's 23 million people.

Most of the severely affected people are in rural northern areas of the country, but a South Korean aid group said this month that food shortages are also affecting the country's elite in the capital Pyongyang. Citing unnamed sources inside the country, Good Friends, a Buddhist group that sends food and other aid into North Korea, said that mid- and low-level officials in the capital were not receiving rations of rice.

With the near-collapse of the state-controlled economy in the North and a sharp increase in corruption among local police, analysts say that widespread discontent over food shortages -- especially if it spreads among the urban elite -- has the potential to destabilize Kim's government.

Complicating Kim's situation further, there are reports that North Korean military and industrial officials are unhappy with his government for granting access to U.S. diplomats to visit a missile factory. Speculation about the inner workings of the secretive North Korean government, of course, is mostly guesswork. But Keith Luse, an aide to Sen. Richard G. Lugar (R-Ind.), visited North Korea in February and later wrote that Kim's efforts to strike a deal with the United States on nuclear weapons might be a "stretch too far" for hard-liners in his country.

Actions taken in the past two days show that, for whatever reasons, Kim's government is much less amiable than it was as recently as last month, when it welcomed the New York Philharmonic Orchestra for an unprecedented concert in Pyongyang. A statement Friday from the North Korean foreign ministry warned that the United States is endangering an agreement brokered last year by six nations. The deal was intended to rid the North of nuclear weapons while providing it with energy assistance and ending its diplomatic and economic isolation.

The North insisted in Friday's statement that it has submitted paperwork that fulfills all its obligations under the agreement.

"Should the U.S. delay the settlement of the nuclear issue, persistently trying to cook up fictions, it will seriously affect the disabling of nuclear facilities which has been under way so far with a great deal of effort," the statement said.

The Bush administration has said North Korea has, in fact, disabled much of its primary nuclear facility, a plutonium plant at Yongbyon.

But it says that the North has failed to explain the extent of a different bomb-making process -- uranium enrichment -- and has refused to talk about whether it has shared nuclear technology with other countries, including Syria.

## **DPRK Foreign Ministry's Spokesman Blasts U.S. Delaying Tactics in Solution of Nuclear Issue**

Pyongyang, **March 28 /2008/**(KCNA) -- A spokesman for the DPRK Ministry of Foreign Affairs released the following statement Friday blaming the U.S. for the deadlocked implementation of the October 3 agreement of the six-party talks:

The implementation of the October 3 agreement of the six-party talks is at a deadlock due to the behavior of the U.S.

The U.S. has not fulfilled its commitments as regards the lifting of the sanctions within the agreed period but insisted on its unreasonable demands concerning the nuclear declaration, thus throwing hurdles in the way of settling the issue.

As clarified in the statement issued by the spokesman for the Ministry of Foreign Affairs on January 4, the DPRK worked out a report on the nuclear declaration and informed the U.S. side of this in November last year. And when the U.S. proposed to have a further discussion on the content of the report with the DPRK, the latter has shown so far such magnanimity as responding to such negotiations.

Simple is the reason why the DPRK responded to the negotiations on the issue of the nuclear declaration.

The Bush administration was so absurd as to raise the issue of "suspected uranium enrichment" in 2002, scuttling the DPRK-U.S. dialogue and straining the situation to an extreme pitch of tension. This pushed the DPRK to its access to nuclear weapons in the end.

The DPRK rendered necessary sincere help in clarifying the issue raised by the U.S. side, taking into consideration the face of the Bush administration which was to blame for the former's access to nuclear weapons.

When the U.S. side claimed that the issue of "suspected uranium enrichment" can be solved if the DPRK tells about whereabouts of the imported aluminum tubes, the DPRK took such a measure as an exception as allowing U.S. experts to see even sensitive military objects and providing them with samples.

And when the U.S. side was the first to raise the issue of the "suspected nuclear cooperation with Syria," it asked the DPRK to reconfirm its commitment not to proliferate the nuclear technology as the relevant object of Syria was destroyed by the bombing of Israel, making it unnecessary to clarify it any longer.

This "suspicion", too, had nothing to do with the DPRK. But it was so broadminded as to meet this request as a part of its sincere efforts to help implement the October 3 agreement.

The DPRK has sincerely taken part in the negotiations taking the face of the U.S. side into consideration.

However, the further the negotiations went on, the greater disappointment the attitude of the Bush administration brought to the DPRK.

The U.S. side is playing a poor trick to brand the DPRK as a criminal at any cost in order to save its face.

The DPRK can never fall victim to the Bush administration's move to justify its wrong assertion.

Explicitly speaking, the DPRK has never enriched uranium nor rendered nuclear cooperation to any other country. It has never dreamed of such things.

Such things will not happen in the future, too.

Should the U.S. delay the settlement of the nuclear issue, persistently trying to cook up fictions, it will seriously affect the disabling of nuclear facilities which has been under way so far with a great deal of effort.

## **Syria got N. Korea help for N-facility**

BY NANAE KURASHIGE THE ASAHI SHIMBUN

03/31/2008

An Israeli airstrike against Syria last September targeted a nuclear-related facility that was under construction with technical assistance from North Korea, according to Israel's prime minister.

Japanese government sources said over the weekend that the Israeli leader, Ehud Olmert, briefed Prime Minister Yasuo Fukuda about the attack during summit talks in Tokyo on Feb. 27.

It is apparently the first time that the intended target had been disclosed to the head of a foreign government.

Previously, Jerusalem had only acknowledged it carried out the Sept. 6, 2007, attack, but stopped short of identifying the type of facility.

Tokyo has shown keen interest in the disclosure as it suggests Pyongyang was providing nuclear technology to Damascus in violation of an agreement made at six-party talks on the North Korean nuclear issue not to transfer nuclear materials, technology or know-how.

According to the sources, Olmert told Fukuda that the site was a nuclear-related facility that was under construction with know-how and assistance from North Korean technicians dispatched by Pyongyang.

Olmert also said Israel remains concerned about the issue of nuclear proliferation by North Korea and sought greater information sharing with Tokyo through expanded dialogue on the issue.

Japanese government officials expressed differing views on how to interpret Olmert's statement.

"While we cannot confirm the facts, the fact that such an assertion was made at an official occasion such as a summit meeting is significant, making it highly credible," said one high-ranking Foreign Ministry official.

Another Foreign Ministry official pointed out, however, that the Israeli leader "may have only presented facts that were favorable for the Israeli side."

Under a joint statement issued at six-party talks in September 2005, Pyongyang agreed to "abandon all nuclear weapons and existing nuclear programs."

North Korea agreed to "provide a complete and correct declaration of all its nuclear programs" and reaffirmed its "commitment not to transfer nuclear materials, technology or know-how" to other countries, under a list of actions for implementation of the joint statement, agreed on during the talks in October.

Washington has since sought clarification from Pyongyang on suspected nuclear proliferation by North Korea to other countries such as Syria. Pyongyang has denied the allegations, leaving the talks stalled.

## **U.S. 'Called N.Korea's Bluff Over Syria'**

Updated Apr.1,2008 09:22 KST

The U.S. in recent bilateral talks reportedly gave Pyongyang a list of North Korean officials involved in the supply of nuclear technology to Syria, a suspicion the North denies.

A high-level diplomatic source on Monday said that the U.S. obtained the list of officials including nuclear engineers, who were involved in the supply of nuclear technology to Syria, through various intelligence networks. This persuaded the U.S. that the North Korea-Syrian nuclear connection did exist.

According to the source, it was chief U.S. nuclear negotiator Christopher Hill who gave the list to his North Korean counterpart Kim Kye-gwan during their latest nuclear talks. Kim denied knowing anything about it.

Japan's Asahi Shimbun on Sunday [2008-03-30] reported Israeli Prime Minister Ehud Olmert, during a visit to Japan last month, told Japanese Prime Minister Yasuo Fukuda that attacks by Israeli warplanes inside Syria in September last year targeted a suspected nuclear facility where North Korean agents were reportedly operating.

The daily quoted Olmert as telling Fukuda that Israeli air strikes in Syria last September attacked a facility being built with a blueprint and technicians provided by North Korea. North Korea denies any past or present involvement in nuclear development abroad.

## **Remarks Upon Arrival at Incheon Airport**

Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs

Incheon Airport

Seoul, South Korea

April 1, 2008

QUESTION: Welcome back.

ASSISTANT SECRETARY HILL: Hi, how are you? Thank you. It's always great to get on the plane for 14 hours and speak to you.

QUESTION: Do you have any opening comment?

ASSISTANT SECRETARY HILL: I'm sorry? No I don't.

QUESTION: There has been a report that you showed Kim Kye-gwan a list of people who cooperated in Syria and Kim Kye-gwan quickly denied the list (inaudible). Do you have anything to say on that?

ASSISTANT SECRETARY HILL: Well, look, I 'm not going to discuss what our private discussions are. Obviously we've had a lot of discussion with them on getting a proper declaration, and it has to include what their activities are in terms of nuclear cooperation with other countries. They know that. We've worked with them on this. We had a lot of discussion in Geneva. We've been in touch with them since then, and I hope we can figure out a way to get through this. But, obviously, we are kind of running out of time right now.

QUESTION: This week DPRK are delivering a continuous message, escalating message toward South Korea. What do you think about (inaudible)?

ASSISTANT SECRETARY HILL: Well, I saw those comments, which are obviously completely inappropriate and out of line. I would mention that [the source was] KCNA, which I don't think is the most reliable news agency in the world. Obviously, these are sorts of comments that are just inappropriate for discussing relations with other states. I don't think there's anything that people in the ROK or the U.S. need to be too concerned about. I think we should probably not overreact to comments that really have no basis in fact and seem to be entirely propagandistic and aimed at domestic audiences, whoever they are.

QUESTION: (Inaudible) missiles affects the Six-Party Talks process?

ASSISTANT SECRETARY HILL: Well, no. I mean, I don't think I'll take a fire extinguisher with me

to the next set of talks. So it doesn't really make any difference.

QUESTION: (Inaudible) running out of time?

ASSISTANT SECRETARY HILL: Well you know, here we are April 1 and we still don't have this thing. Again, we had some progress in Geneva. We thought we had some progress after that. So we 'll see. They know what they need to do.

QUESTION: Sir, don't you think we need a real deadline? We just can't sit and wait like this forever. So don't you think -- .

ASSISTANT SECRETARY HILL: Well this is not forever, okay? We haven't been waiting forever. But, obviously, we are getting to the point where we need to make some progress very quickly.

QUESTION: (Inaudible) How long? Do you have any specific deadline in mind?

ASSISTANT SECRETARY HILL: Again, I don't have a specific deadline. I'll know it when I see it.

QUESTION: Do you still think that it's possible to complete denuclearization of DPRK in calendar year 2008?

ASSISTANT SECRETARY HILL: You know, they could complete it very quickly if they wanted to. I think the problem is that the DPRK needs to make this fundamental decision. Again, I think we have made progress on the declaration. But until we complete the declaration, we won't have succeeded. And then we need to get on to the third phase, which is the very important phase where they should be giving up all their nuclear ambitions. Obviously they are a -- You know, it's a country that has difficulty making decisions of this kind. When I look at some of the problems they're confronting right now with food production and other things like that, they're obviously in a difficult position.

Okay?

QUESTION: Do you feel that there are some sorts of (inaudible)?

ASSISTANT SECRETARY HILL: I have no idea. I have absolutely no idea how that works.

QUESTION: Is there a downside to just waiting out the Bush Administration and doing nothing (inaudible)?

ASSISTANT SECRETARY HILL: Well look, if you've been to the States lately you know it's quite a political season. We have several political candidates who are running for president. Absolutely nobody has suggested that they want this problem. Nobody has suggested that they are interested in giving the DPRK a better deal than the one we have put on the table. So I would say, from the DPRK's point of view, the time to settle is now.

QUESTION: Is there a talk of when to meet next -- Six-Party Talks (inaudible) any discussion on that?

ASSISTANT SECRETARY HILL: No, again, we've got to get through this declaration. So no point in having a meeting until we have a willingness on the DPRK's part to discuss all of the nuclear programs, which is the requirement that they have under the October declaration. So until we get that, no point in discussing further.

QUESTION: Has there been some progress in your Geneva meeting with Kim Kye-gwan until now?

ASSISTANT SECRETARY HILL: I'm sorry?

QUESTION: Has there been some progress in your Geneva meeting with Kim Kye-gwan?

ASSISTANT SECRETARY HILL: Well, we've had some indirect contacts, and I would say there is some progress on that. But, again, it doesn't really mean anything until we actually get a declaration

QUESTION: They at least agreed they have to provide the declaration?

ASSISTANT SECRETARY HILL: I think they agreed they have to provide a declaration, yes.

QUESTION: Do they still insist they already did so in November?

ASSISTANT SECRETARY HILL: Not to us. Not to us. They never showed us the declaration. They showed us some research materials, research reference materials rather, and it was very clear it was not a complete and correct declaration. So you bet they are on the hook to do that.

QUESTION: Can we expect some developments in U.S. food aid in the near future?

ASSISTANT SECRETARY HILL: I think we continue to monitor what we believe to be a deteriorating food situation in North Korea. We continue to monitor it and be guided by what we can do to help the North Korean people overcome these issues. But I think everyone is concerned about the deteriorating food situation.-- I think everyone except, I guess, for KCNA.

QUESTION: So, now you haven't come up with any concrete idea of moving forward on that food assistance?

ASSISTANT SECRETARY HILL: No, we haven't. Obviously, whenever you have a food assistance problem in a country, that country's government needs to come forward, acknowledge they have some problems, and make some specific requests. And we haven't had that yet.

QUESTION: (Inaudible)

ASSISTANT SECRETARY HILL: I think -- I am not sure there is much more I can tell you. I mean, you know the situation. I mean, they are just not quite there yet.

QUESTION: Are you still stuck over the same old issues (inaudible)?

ASSISTANT SECRETARY HILL: Basically. Basically --

QUESTION: (Inaudible) it's all about wording now (inaudible)?

ASSISTANT SECRETARY HILL: Well, I'll let you know when it's done. It's not good to talk about things in the middle, because you can end up making more work for yourself.

QUESTION: Do you have plans for a meeting with Kim Kye-gwan anytime during your (inaudible) Asian trip?

ASSISTANT SECRETARY HILL: No, we have no specific plans.

QUESTION: (Inaudible)

ASSISTANT SECRETARY HILL: Again, I don't like to talk about those things, because it just makes my job more difficult.

So, all right?

(Later in the airport)

QUESTION: Two reporters from Kyodo here. Is it true that your talks with Kim Kye-gwan in Geneva have come close to complete agreement?

ASSISTANT SECRETARY HILL: No, no, because we don't have a declaration, and when we do I will let you know. We don't have one, so --

QUESTION: Do you plan to meet with Kim Kye-gwan during your Asian tour?

ASSISTANT SECRETARY HILL: No, I have no plans right now.

QUESTION: Do you think it's possible to resume Six-Party Talks this month?

ASSISTANT SECRETARY HILL: It depends on the North Koreans. It depends entirely on them.

QUESTION: Reportedly you have a list of North Korean engineers who gave assistance to Syria.

ASSISTANT SECRETARY HILL: I don't know what they are talking about. But, anyway, if we had any private discussions, I would keep them private.

QUESTION: What is the focus of your discussion with Korean officials here?

ASSISTANT SECRETARY HILL: Oh, I think we will be talking about a lot of things, including the situation in (inaudible).

All right. See you later.

Released on April 1, 2008

Comments by Assistant Secretary Hill in Jakarta, Indonesia  
Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs  
Jakarta, Indonesia

April 4, 2008

There is some thought of a possible meeting, there's nothing that has been confirmed therefore I can't make any announcements but I can tell you that we really need to get moving on this declaration. This has held us up now for over three months. We don't have three months to spare anymore so we've really got to see if we can make some progress on this.

We have made very clear that the comments that were made in some cases by anonymous spokesmen of the Korea Central News Agency, the so called KCNA, that those comments were very, in many cases very inappropriate and very unhelpful to the situation. The DPRK (the Democratic People's Republic of Korea) needs to be reaching out to its neighbors, not, should not be engaged in that sort of commitment.

We have not seen, with respect to the six-party process, we have not seen how the six-party process is affected by those comments. But I want to say that I have not seen, I've not met with any DPRK representatives since Geneva and so we'll have to see whether those comments affected or not.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC

April 4, 2008

*[EXCERPTS]*

QUESTION: Can you give us what you have on the U.S.-North Korean talks for next week, please?

MR. CASEY: Oh, well, where in the world is Chris Hill? Let's see what we can do for you there. I apologize. There was some confusion this morning about the exact timing of his visit. So let me give you a dramatic reading of what I've got here from EAP and we'll see if we can clarify it for you.

First of all, I think everyone knows that Chris met today in Jakarta with a variety of officials, including President Yudhoyono and had some discussions about bilateral issues there. He then returned to Bali, where he's been attending the Asia Society's Williamsburg Conference. Now he's going to leave Bali on Sunday – that's this Sunday, April 6th – and go to Timor-Leste, as previously scheduled, for some bilateral meetings there. And then he will depart Dili on Monday, April 7th and will arrive in Singapore on the evening of April 7th. He'll meet with Singaporean officials on Monday evening and then – you thought I'd never get to it – on Tuesday the 8th, he will then have a meeting with Kim Kye Gwan, his counterpart, in – North Korean counterpart in the Six-Party talks. This meeting, again, is, as I said this morning, a follow-up on the discussions that were held in Geneva last month.

He's then expected to leave Singapore on the morning of Wednesday, April 9th and – and this is in addition to what I told you this morning – we now do have an additional stop for him, so he'll be going to Beijing later that day on the 9th and have discussions with Chinese officials there. I'm sure that will include a variety of topics, including some bilateral ones, but I'm sure he'll also use that as an opportunity to provide a readout of the discussions that he will have had previously with Kim Kye Gwan. And then he'll be leaving Beijing the evening of April 8th\* and arriving, again, that same – that same evening back here in Washington.

So, you know, you can start notifying your correspondents in all of those locations to start stalking him at the usual hotels and places and times so that he can have an opportunity to tell you himself about how any of these conversations have gone.

QUESTION: Do you have – do you have any secret agreement between the U.S. and North Korea? You have any --

MR. CASEY: No, that's a simple answer.

Yeah.

QUESTION: (Inaudible), what are the expectations for this meeting?

MR. CASEY: Oh, I think the expectations are as I described this morning. This is going to be a follow-up on the talks held in Geneva last month. I'm sure they will cover both issues related to the declaration itself as well as the implementation of the disablement phase of talks. As Chris has said too, his discussions in Geneva also talked a bit about how we would move beyond that once the declaration is provided to dealing with what is the most difficult phase in this process, which is the actual dismantling and abandonment of North Korea's nuclear programs. So I think we expect they'll have a good conversation about those issues and further the dialogue in Geneva.

Yeah.

QUESTION: Just – sorry, as a follow-up, because Ambassador Hill, before leaving here, also he had mentioned how he would not meet with the North Koreans unless there will be a final resolution to the declaration issue. Can we expect significant progress in this meeting?

MR. CASEY: Well, I love that term, significant progress. I'm not sure what it means, but I love the term nonetheless. Look, I think that we will know, and this is something Chris has also said repeatedly, we'll know how much progress we've made when we have a full and complete declaration. Until that happens, it's pretty hard for me, or for him, or for anyone else to say, whether we're one, ten or a hundred degrees closer to achieving that goal. And ultimately, until that declaration is in, until we have a full and complete declaration, we really won't be able to give you anything, I think, of a benchmark assessment of how close we are or how far we are. And ultimately, it doesn't matter until and unless we get the declaration. I appreciate the musical accompaniment. (Laughter.)

## **Israel, U.S. plan to release details on Syria attack**

By Barak Ravid and Amos Harel

Last update - 16:58 06/04/2008

Israel and the United States are coordinating the release of details on the air force strike in Syria last September, which foreign reports claim targeted a nuclear installation Syria was constructing with North Korean assistance. American officials may reveal details of the strike later this month during congressional hearings.

Even though the defense establishment in Israel is opposed to any publication of details of the attack, the Prime Minister's Bureau and U.S. President George W. Bush's administration are of the opinion that it is now possible to reveal details because there is little chance of a conflagration as a result of a Syrian decision to avenge the attack.

Details of the attack are likely to be revealed by senior Bush administration officials during hearings before Congress. Advisers to Prime Minister Ehud Olmert, Yoram Turbowicz and Shalom Turjeman, discussed the issue last week in Washington with senior U.S. intelligence officials, and National Security Adviser Stephen Hadley.

During the meetings, the two sides agreed on which details of the attack to make public and which details could have negative implications. According to foreign reports, Israel transferred to the U.S. detailed intelligence on the installation attacked, and the two sides agreed not to reveal any details without prior coordination.

The view in Washington and in Jerusalem is that publishing details of the attack will bolster Israel's deterrence and may even lead Syria to cool its close ties with Iran and North Korea.

According to the American assessments, the revelations about the attack will also bolster its hand in negotiations with North Korea on dismantling its nuclear arms.

However, the Israel defense establishment is strongly opposed to revealing any details of the attack in Syria and expressed concern that any airing of the details of the attack will result in lifting the strict censorship that was imposed in Israel on this incident.

Senior figures in the defense establishment and the Israel Defense Forces said in recent day that Israel must convince the Americans to deliver the report to Congress "in closed session."

Intelligence analysts in Israel maintain that any further release of the details on the strike will contribute to the already tense situation between Syria and Israel, which has been exacerbated in part because of Hezbollah's plans to avenge the assassination of the group's terrorist mastermind, Imad Mughniyah.

Any official release of the details of the attack and the nature of the installation may push Syria's Bashar Assad into a corner and put pressure him to respond, say intelligence officials.

The possibility of details being made public has also contributed to the mutual suspicions between the PMO and the Defense Minister's Bureau. In political circles it is now commonly accepted that the release of details of the attack may help bolster the public image of Prime Minister Ehud Olmert. Some politicians have offered assessments that Olmert may decide to lift the curtain on details of the attack close to the 60th anniversary of Israel's independence, in early May.

Other political sources say that the American revelations on this matter will not result in a change in Israel's censorship policy, and insist that Olmert will not discuss the subject of the attack during holiday interviews.

The hearings at the House Intelligence Committee may be held in the coming weeks. Congressmen have included in the bill on the intelligence budget that American intelligence agencies will not be given large portions of their budget unless they reveal in full the details of the strike in Syria and the nuclear cooperation between Pyongyang and Damascus.

This has led U.S. and Israeli officials to conclude that American officials will release details of the strike during the hearings.

Talks between the U.S. and North Korea are scheduled to resume tomorrow in Singapore. One of the American conditions for lifting the sanctions on Pyongyang is for it to expose its nuclear collaboration with other countries, which North Korea maintains does not exist. According to South Korean media sources, Pyongyang has agreed to provide the U.S. with information on its nuclear cooperation with Syria, on condition that Washington will not make this public. The same sources stated that the U.S. has given North Korea a list of engineers that are suspected of involvement in the construction of the installation that was targeted in Syria.

Meanwhile, readiness levels are high at Northern Command and in security for Israeli missions abroad, as well as at airlines, as concerns remain that Hezbollah will try to avenge the assassination of its terrorist mastermind, Imad Mughniyah in February.

The statement by Defense Minister Ehud Barak last week, that Israel would retaliate with a heavy hand against any attack, was made following deliberations with intelligence officials. There are concerns that an order to carry out a terrorist attack has already been issued - and Barak's tough words were meant to signal Hezbollah and its patrons, Syria and Iran, that Israel will respond to any attack.

### **Syria strike details to be released**

6 hours ago [*Accessed 2008-04-08T15:15Z*]

*[EXCERPT]*

Israel and the US are coordinating the release of details of a mysterious Israeli air force strike in Syria, according to reports.

The Haaretz newspaper says US officials might disclose details of the Sept 6 strike later this month during congressional hearings.

The Yediot Ahronot newspaper reported that the matter would come up April 17 before the congressional Committee on Foreign Relations.

<http://www.haaretz.com/hasen/spages/972228.html>

## **Israel concerned N. Korean nuclear know-how, material has reached Iran**

By Barak Ravid

Last update - 02:38 07/04/2008

The United States and Israel seek to pressure North Korea to cease its nuclear cooperation with Iran, which is one of the motives behind their agreement to disclose details on the air-force strike in Syria last September.

According to information obtained by Washington and Jerusalem, North Korea transferred technology and nuclear materials to Iran to aid Tehran's secret nuclear arms program.

U.S. and Israeli officials agreed last week that the talks between the U.S. and North Korea, scheduled to take place in Singapore tomorrow, should be used to pressure Pyongyang to disclose its nuclear cooperation with countries in the Middle East. As a pressure tactic, U.S. officials could reveal details of North Korea's cooperation with Syria to Congress.

Foreign news sources reported that in addition to helping Syria build the nuclear facility that Israel attacked, North Korea sent engineers and various materials to the site. Israel and the U.S. fear that Pyongyang could be doing even more to boost Iran's nuclear program.

During their talks in Washington last week with high-ranking officials, Yoram Turbowicz and Shalom Turjeman, advisers to Prime Minister Ehud Olmert, agreed that the details of the air strike would be released by the Americans.

Israel would continue to decline commenting on the matter, as it has done since September, and would not alter its censorship policy.

Syria claimed that the facility hit was an unused military installation and denied having a nuclear development program. North Korea also denies exporting its nuclear expertise. Iran claims that its nuclear program is for civilian purposes only.

In the past few months Olmert has met with key world leaders to discuss Syria.

The most important meeting in Olmert's "campaign" to defend the Israeli air strike and create a united international front against Syria was with Russian President Vladimir Putin. On October 10, about a month after the attack, the two leaders spoke on the phone about Syria and other issues. They agreed that due to the sensitivity of the matter, talks should be continued face to face.

On October 18, Olmert flew to Moscow for a five-hour visit. It had been announced, to much surprise, the day before. Officials in the Prime Minister's Office said at the time that the Iranian issue was the focus of the talks, and that Olmert planned to present Putin with intelligence on a number of strategic issues.

Haaretz learned that Olmert presented Putin with the problems relevant to Syria.

## **Olmert briefs world leaders**

One week later, Olmert flew to Paris and London, where he met with President Nicolas Sarkozy and Prime Minister Gordon Brown, respectively, and filled them in on the operation. While in London, Olmert also met with his Turkish counterpart, Recep Tayyip Erdogan, who was also visiting the British capital.

After the air strike in Syria, two detachable fuel tanks from Israeli fighter planes were found in Turkish territory, near the Syrian border. Turkish news reports said this proved that Israeli aircraft had flown over Turkish airspace on their way to their target.

Turkey made a formal complaint to Israel and asked for clarifications from Jerusalem.

In his hour-long meeting with Erdogan, Olmert briefed the Turkish prime minister on the situation.

A few days later Olmert informed the cabinet that he had apologized to Erdogan for the fuel-tank incident.

"If Israeli planes indeed penetrated Turkish airspace, then it was without prior intent or any intent to infringe upon or undermine Turkish sovereignty, which we respect," Olmert told the cabinet.

TOKYO (Reuters) - The United States and North Korea have been discussing a possible face-saving compromise in a standoff over Pyongyang's accounting of its nuclear programs, diplomatic sources said, as the two sides headed into talks in Singapore.

Under the compromise proposal, North Korea would acknowledge U.S. assertions that the secretive communist state had a clandestine program to enrich uranium for weapons and proliferated nuclear technology and material to Syria, diplomatic sources in Tokyo told Reuters.

"The compromise deal was floated when representatives from the United States and North Korea met in Geneva last month," one of the sources said.

Washington has said a major sticking point in talks aimed at ending North Korea's nuclear programs is the need for Pyongyang to deliver a declaration giving a complete account of its programs as called for in a February 2007 six-party nuclear deal. That account was due at the end of last year.

If the two sides accept the compromise proposal, it could come in a document separate from North Korea's "complete and correct declaration" of its nuclear ambitions, the source said.

Washington suspects North Korea of having a secret program to enrich uranium for weapons and proliferating nuclear technology, and wants those issues addressed in the declaration. North Korea has repeatedly denied the allegations.

North Korea has said it had already made the declaration and it described the U.S. suspicions as fiction.

Another diplomatic source said it was not clear whether North Korea would accept the compromise.

"The proposal is face-saving to both sides," he said. "It is particularly face-saving to North Korea because they don't have to directly admit that they had done something wrong."

U.S. Assistant Secretary of State Christopher Hill is due to meet North Korea's Kim Kye-gwan in Singapore later on Tuesday.

The talks between Hill and Kim come at a time of heightened tension on the heavily armed Korean peninsula in recent days after the North's missile tests and threat to attack the South.

If the North makes the declaration, it stands to be removed from a U.S. terrorism blacklist and be better able to tap into finance that could boost its economy.

## **N Korea 'agrees nuclear deal'**

UPDATED ON:

WEDNESDAY, APRIL 09, 2008

17:40 MECCA TIME, 14:40 GMT

North Korea has reached an agreement on compensation in exchange for providing full details of its nuclear programmes, Pyongyang's foreign ministry told state media.

The issue has been hindering progress in disarmament talks between North Korea and the US, China, Japan, South Korea and Russia.

"As a result of the talks, a consensus was reached on the US measure to make political compensation and the nuclear declaration essential for winding up the implementation of the agreement," an unidentified spokesman was quoted as saying by the Korean Central News Agency.

The deal includes North Korea's demand to be removed from a US terrorism blacklist, as well as energy aid and major diplomatic and security benefits.

### Aid for weapons

In February 2007, North Korea had agreed to give up its nuclear weapons in return for aid.

Pyongyang last tested a nuclear weapon in 2006, but said it had submitted its declaration in November.

The US countered that the declaration did not account for an alleged secret uranium enrichment programme or for alleged proliferation to Syria.

The US response to talks with Pyongyang on Tuesday was less enthusiastic.

"We've definitely made progress [on a declaration] but I don't want to suggest there has been any major breakthrough," Christopher Hill, the US negotiator, said.

Hill was speaking in Beijing after discussing the nuclear issue with Kim Kye Gwan, the senior North Korean negotiator, in Singapore.

The US negotiator had been briefing other parties to the six-nation disarmament deal on the outcome of the Singapore talks.

South Korea's Yonhap news agency quoted Kim as saying after the Tuesday meeting that differences between the two countries "have narrowed a lot".

### Autumn breakthrough?

Wu Dawei, China's senior negotiator in the disarmament talks, said on Wednesday that they were experiencing ups and downs and suggested that a breakthrough could be made "around autumn".

The main sticking points are believed to be the details North Korea will reveal about any nuclear know-how or materials provided to other nations, along with allegations it had a secret uranium enrichment programme in addition to its known plutonium programme.

China is North Korea's main diplomatic ally and source of food and energy assistance.

Remarks Upon Departure From Six-Party Talks

Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs

U.S. Embassy

Beijing, China

April 9, 2008

ASSISTANT SECRETARY HILL: Hi. How are you? I've just come from briefing and talking about the Six-Party process with the chair of the Six-Party process, Vice Minister Wu Dawei. I've also had the occasion today to talk about the situation with my ROK counterpart, Minister Chun Young-woo. And this morning I met with my Japanese counterpart (inaudible) Saiki-san to discuss where we are.

Yesterday in Singapore, I had a long series of discussions with my DPRK counterpart, Mr. Kim Kye Gwan. I would say these were good discussions that I think allowed us to make some progress as we try to get through this difficult -- what has turned out to be difficult -- second phase.

I want to stress that we haven't yet arranged for all the factors, all the elements that need to be put together. Obviously, this is a package. We are talking about a declaration that has several elements. One of the key ones, of course, would be the amount of plutonium that the DPRK declares. But we've been able to have very good discussions on some of the other key factors that have allowed us to go forward.

Again, as is always the case in the Six-Party process, nothing is agreed unless everything is agreed. So we have to continue to work on what an overall package of elements there'll be in order to conclude phase two and then get on to the very important phase three -- where we anticipate, or we look forward to, dealing with the question of the DPRK separated plutonium and seeing what kind of overall arrangements can be made to have that third phase be the phase that fulfills the September '05 statement of principles to achieve the denuclearization of the Korean Peninsula.

All in all, though, I would say it has been a good couple of days. I think some of the work that we were able to do in Singapore was work that was kicked off when Secretary Rice was here and we were talking to our Chinese counterparts. So we have done a lot of work with China on this. And a lot of what I talked about with Kim Kye Gwan in Singapore reflects the work we've done with the other parties, including work especially with the Japanese and the ROK.

So we have a lot of work ahead of us. I wouldn't want to suggest there is any major breakthrough. I think we will be, as the days go by, we will be announcing some efforts to try to move ahead and complete this second phase. I don't have anything to announce today, but I will be getting on a plane in a few minutes, heading back to Washington. I'll be talking about this, where we are, with Secretary Rice, and I think I have a Congressional hearing on Thursday. So the work will very much continue.

Maybe I can take a question or two?

QUESTION: Do you expect a partial declaration from the DPRK? (Inaudible.)

ASSISTANT SECRETARY HILL: I think we will continue to be in close contact with the DPRK, as we are with other partners. I think people need to understand this continues to be very much a Six-Party process, and proposals we make to the DPRK need to be worked out within and by Six-Party members. So, as always, China remains a very key factor in all of this, which is why it was very important to get back here and talk to the Chinese and see where we go from here.

Obviously, if we can finalize the issue of the declaration, that will be a key moment -- because the declaration needs to be submitted to the Chinese chair. China then needs to bring the Six Parties together. We need to look at the overall declaration, make sure it is consistent with our expectations, and then we have to have to look ahead at how we are going to deal with the next phase. China is very much the key factor in this, and that's why it is very important to stay very close to China.

QUESTION: What specifics did you and Kim Kye Gwan discuss in Singapore?

ASSISTANT SECRETARY HILL: Well, we did get into some specific issues. There were detailed discussions, but I'm not sure I really want to discuss them in the press right now -- except to say they were very detailed. And in the Six-Party process, if you don't discuss details, you're bound to be tripped up by them. We do need to discuss them and make sure we have a clear understanding, and we did just that. But no, I don't want to get into those right now.

QUESTION: How close are we now to getting a declaration from the DPRK?

ASSISTANT SECRETARY HILL: Well, we've definitely made progress on it. And, again, every time I measure the time, I'm always wrong. Just check with other people who have asked me the questions about when we're going to get something done. But we've definitely made some progress on it. I think we're going to try to do some more things in the next few days in terms of trying to tee up what needs to be done for this second phase. And we'll see if we can, at that point, have a better time estimate. As I've said before, we don't have a lot of time, and that's why we really do need to put it in place.

QUESTION: Can the declaration be direct or indirect? Can it have an attachment --

ASSISTANT SECRETARY HILL: The format issue is, we've had discussions about that. We've talked about that with all the partners. I don't think we have a problem with format. I think it's a declaration process, if you will. Whether it has three pieces of paper or two pieces of paper is not a big issue for us. The issue is that it has to be complete and correct in order to make some progress.

QUESTION: How big an obstacle is North Korean-Syrian cooperation to the process?

ASSISTANT SECRETARY HILL: The issue of the DPRK's nuclear cooperation with other countries has been a major issue. That is something that we have had considerable discussions about, and we will probably continue to talk about it. But I think it's something that, together with other things, we will need to have all resolved as we get to the end of this. I would just say we talked about that and other things, and we did make progress.

MODERATOR: We have time for one more question, as long as it's a short question.

ASSISTANT SECRETARY HILL: Tomo, have you ever asked a short question in your life? All right, we'll try this -- your first ever. Go ahead.

QUESTION: What do you need to tee up in the next few days -- is it time or obstacles?

ASSISTANT SECRETARY HILL: Time. It's time. Time and logistics. Time and logistics, they can be obstacles. But we are dealing with time and logistics.

Okay, sorry there's not more news for you, guys. But that's the way it goes in this business.

See you later.

## **Israel briefed U.S. on Syria strike**

Published: 04/09/2008

Israel has kept the United States informed about its mysterious airstrike in Syria last year, Ehud Olmert said.

The Israeli prime minister, who like the rest of his government has refused to provide details of the Sept. 6 bombing run that is widely assumed to have targeted a Syrian nuclear facility, said Wednesday that the Bush administration is privy.

"Issues related to this subject were presented to the U.S. government by the defense minister and myself," Olmert told reporters without elaborating.

Israeli media have reported that U.S. intelligence assessments on the airstrike could become public during an upcoming debate in the U.S. House of Representatives' foreign affairs committee.

Those who believe the Syrians were trying to develop a secret nuclear facility say Damascus may have had help from North Korea, a regime under intense U.S. scrutiny.

Some Israeli pundits have suggested that Olmert differs with his defense minister, Ehud Barak, on whether to go public on the operation. Olmert denied this.

"Everything to do with these issues was precisely formulated between myself and the defense minister," he said. "We conduct lengthy and elaborate discussions, and in the end we formulate a joint policy."

## **Spokesman for DPRK Foreign Ministry on DPRK-U.S. Talks**

Pyongyang, **April 9 /2008**(KCNA) -- A spokesman for the DPRK Foreign Ministry gave the following answer to the question put by KCNA on Wednesday as regards the DPRK-U.S. talks held in Singapore:

The DPRK-U.S. talks were held in Singapore on April 8.

The talks had an in-depth discussion on issues arising in implementing the October 3 agreement of the six-party talks.

As a result of the talks a consensus was reached on the U.S. measure to make political compensation and the nuclear declaration essential for winding up the implementation of the agreement.

The recent Singapore agreement fully proved the effectiveness of the DPRK-U.S. talks. We will follow the fulfillment of the commitments of those countries participating in the six-party talks.

## **Israel May Reveal Details of Attack on Alleged Syrian Nuclear Program**

U.S. Lawmakers Push Disclosure, Point to North Korean Proliferation

By Nathan Guttman

Thu. **Apr 10, 2008**

Washington - Israel is considering disclosing classified information about alleged nuclear ties between North Korea and Syria due to concern that Washington may downplay the issue as it pursues closer ties with Pyongyang.

Israeli sources say that Jerusalem holds information implicating North Korea in a nascent Syrian nuclear program, which was reportedly the target of an Israeli air strike this past September.

Until now, Jerusalem has maintained a policy of deliberate ambiguity regarding the attack, but Israel is reluctantly considering opening up because of Washington's steps toward rapprochement with Pyongyang. Israel officials and American lawmakers believe that disclosing information about the attack may force Washington to maintain a firm line on North Korean nuclear proliferation.

"Israel has concerns about North Korea because of its proliferation activity, but Israel doesn't want to get into a conflict over this issue or to take any action which could be viewed as opposing a policy led by Condoleezza Rice," said David Makovsky, a senior fellow at the Washington Institute for Near East Policy.

To date, authoritative information about Israel's September 6, 2007, attack has been scarce. Following the air strike, the Israeli government avoided making any public statements on the incident, and even the country's famously talkative Cabinet members stayed mum on the topic.

But the international media, which is not obliged to observe Israel's military censorship laws, was full of information about the attack, including "before and after" satellite images of the targeted site. The reports provide a fairly detailed account of the attack, describing its target as a partially built nuclear site being constructed using North Korean know-how.

The issue re-emerged April 4, when Israeli media reported a dispute among policymakers in Jerusalem about providing official information regarding the attack. According to front-page reports in a number of leading Israeli newspapers, the information was expected to be revealed in Washington during an April 17 briefing held by the House Foreign Affairs Committee.

A spokeswoman for the committee, however, said this week that no hearing had been scheduled on issues relating to Syria, Israel or North Korea. A representative for the House Intelligence Committee also made clear that there were no plans to discuss the issue.

A congressional aide, speaking on condition of anonymity due to what was described as "the extreme sensitivity of the issue," told the Forward that administration officials would be giving closed-door briefings to several members of the House Permanent Select Committee on Intelligence in the near future. The briefings, according to the congressional aide, will deal with Israel's attack on Syria and with North Korea's involvement in an alleged Syrian nuclear program.

Israeli officials refused to discuss the matter, citing the standing policy of not commenting on any aspect of the attack. Officials did confirm, however, that two senior advisers to Prime Minister Ehud Olmert were in Washington in early April holding discussions with administration officials. According to Israeli press reports, these discussions also touched on the issue of disclosing information about the September 6 air strike.

Meanwhile, talks between the United States and North Korea reached a critical point this past week. Christopher Hill, the administration's point man for negotiations with Pyongyang, met April 8 in Singapore with his North Korean counterpart in an attempt to overcome the current impasse, which stems from Pyongyang's refusal to disclose all its nuclear activity within the country and from its proliferation of nuclear technology to other countries.

A full disclosure in writing is a condition set by Washington for removing North Korea from the list of states that sponsor terrorism, a move that would mark the beginning of North Korea being accepted back into the international community. A possible compromise being discussed is having North Korea provide only a declaration acknowledging American findings on these issues.

Republican lawmakers have insisted that the Bush administration not drop North Korea from the list of terrorism sponsors before Pyongyang gives a full account of its proliferation activity.

"Pyongyang continues to transfer missile technology to nations of concern in South Asia and the Middle East," a group of Republican lawmakers wrote in a March 16 letter to Secretary of State Condoleezza Rice. "Moreover, during last year's July 4 missile launch by North Korea, the international press reported the presence of Iranian observers."

The group, led by Florida's Ileana Ros-Lehtinen, who is the ranking Republican on the House Foreign Affairs Committee and a strong supporter of Israel, argued that it is premature to remove North Korea from the list because of its supplying of nuclear technology to other countries, which the letters' authors view as an "even greater threat to American security."

Lawmakers also added to this year's Intelligence Authorization Act a stipulation requiring the director of national intelligence to provide Congress with a quarterly report on the nuclear intentions of Iran and North Korea, although the legislation does allow the administration to keep the report classified and allow only committee members and staffers with security clearance to read it. Congressional sources would not say if the planned briefings by the administration are in response to this legislation.

Israel, according to press reports, is concerned mainly about alleged North Korean involvement in developing Iran's nuclear program. In the talks held by Olmert's advisers in Washington this month, the Israelis stressed the need to demand that North Korea come clean regarding its nuclear ties with Iran as part of any grand deal being negotiated by the United States, according to reports confirmed by Israeli sources in Jerusalem.

A congressional source, however, told the Forward that the need to disclose details of the Israeli attack on Syria had not been raised by either the administration or Jerusalem.

"It is not clear that it is needed in order to make the case against North Korea's proliferation record," the congressional source said.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC

April 10, 2008

[EXCERPT]

On North Korea --

Oh, yes, back there. Yes, in the back.

Is there any other informal and separate agreement between the U.S. and North Korea in Singapore meeting? If you have any, can you tell us what is the contents of informal agreement between U.S. and North Korea?

I'm not prepared to characterize the discussions beyond what I have said previously, what Chris has said previously. The Singapore meeting, in Chris's firsthand characterization, took the discussion beyond where they were in Geneva. Chris had the opportunity to have some further discussions with other members of the six-party talks, his counterparts in the six-party talks in Beijing. He's now back here in the United States.

There's work that remains to be done, and our basic position is that we are prepared to continue in that work. We are prepared, along with the other members – other four members of the six-party talks, to fulfill our obligations as North Korea fulfills its obligations, which includes dismantlement of the – dismantle – disabling of the Yongbyon facility as well as a declaration.

There was a formal agreement, an informal agreement, that there are two kind of agreement held between U.S. and North Korea (inaudible)?

Again, this is not between the U.S. and North Korea. We are engaging them in the context of the six-party talks. We are fully consulting with the other members, the other four members of those talks other than North Korea, about the declaration and the process of working with North Korea to produce a declaration that is acceptable to all the members of the six-party talks. So this is not a U.S.-North Korea issue.

There was – what was the other part – the other part to your question? Sorry.

There's an informal --

Oh, right. As to – we have said the – the form of this is – of the declaration is not necessarily important. What's important is the substance of it, whether or not it is acceptable to the other members of the six-party talks. So you know, whether it comes in one, two, three, four, five or more pieces of paper, that's not important. What's important is the substance of it.

<http://www.washingtonpost.com/wp-dyn/content/article/2008/04/10/AR2008041004082.html>

## **U.S. Ready to Ease Sanctions on N. Korea**

Pyongyang Would Have to Acknowledge Evidence About Nuclear Activities

By Glenn Kessler

Washington Post Staff Writer

Friday, April 11, 2008; A15

The United States is prepared to lift two key economic sanctions against North Korea under a tentative deal reached with that country this week, which requires Pyongyang to acknowledge U.S. concerns and evidence about a range of nuclear activities, U.S. and Asian diplomats said yesterday.

The agreement also requires North Korea to finish disabling its main nuclear facility and provide a full accounting of its stockpile of plutonium. But, in a key shift, the two sides agreed to sidestep a dispute over how much detail North Korea must provide about any past uranium enrichment-related activities and its involvement in a mysterious Syrian facility bombed by Israel last September.

North Korea had balked at confirming the Bush administration's allegations, stalling for months a process designed to eliminate its nuclear programs. But after negotiations this week in Singapore and last month in Geneva, the United States and North Korea agreed that Pyongyang must "acknowledge" the allegations without precisely admitting them publicly.

That paves the way, diplomats said, for President Bush to remove North Korea from the U.S. list of state sponsors of terrorism and to exempt it from the Trading With the Enemy Act.

U.S. officials have concluded it is more important to persuade North Korea to surrender its weapons-grade plutonium -- enough for perhaps half a dozen weapons -- than for the process to collapse over the impasse, according to Assistant Secretary of State Christopher R. Hill, the chief U.S. negotiator.

"North Korea has difficulty saying things publicly," Hill said. Indeed, the still-secret text of the new agreement has elements similar to the Shanghai Communique issued by China and United States in 1972 during President Richard Nixon's historic visit, in which the two sides offered their own interpretations of key disputes.

Hill said that resolving questions about Pyongyang's interest in uranium enrichment remain important, but that plutonium poses an immediate proliferation risk.

"We are trying to focus on the plutonium as we try to resolve our suspicions on uranium enrichment," Hill said. Recalling Willie Sutton's line that he robbed banks because "that's where the money is," Hill said: "That's where the bombs are. We don't have suspicions about plutonium; we have cold, hard facts about plutonium."

North Korea acquired much of its plutonium after the 2002 collapse of a Clinton administration agreement barring operation of a plutonium-producing reactor. Bush accused North Korea of cheating on the deal, citing evidence that Pyongyang had a clandestine uranium-enrichment program. Plutonium and highly enriched uranium offer different routes to building nuclear weapons.

Some North Korea experts are skeptical Pyongyang will ever give up its recently acquired plutonium.

Diplomats say Japan is upset that North Korea may be removed from the terrorism list before questions are resolved about North Korea's abductions of Japanese citizens. In its 2004 report, the State Department said that the kidnapping issue was a factor in North Korea's inclusion on the list, but in recent months the administration has steadily unlinked the two issues.

North Korea is one of five countries on the list of state sponsors of terrorism, which makes it subject to severe U.S. export controls, particularly of dual-use technology and military equipment. Those controls prohibit much foreign aid and obligate the United States to oppose financial assistance to the country from institutions such as the World Bank and the International Monetary Fund.

Under the agreement, Pyongyang would also be freed from financial sanctions imposed by the Trading With the Enemy Act, a 1917 law that allows for a near-total economic boycott of countries at war with the United States.

Hill previously has said U.S. officials concluded that thousands of aluminum tubes acquired by North Korea in 2002 -- which prompted the intelligence finding that Pyongyang was building a large-scale uranium-enrichment program -- were not currently being used to create fissile material.

North Korea allowed U.S. diplomats to visit a missile factory that used the tubes and to carry samples home, but government scientists later discovered traces of enriched uranium on the aluminum samples, officials said.

U.S. officials said further negotiations are needed, and an Asian diplomat said those will involve the amount of plutonium that North Korea plans to declare. Last year, North Korea said that it possessed about 30 kilograms of plutonium, much less than U.S. intelligence had estimated.

"The ball is on the North Korean side," the diplomat said, speaking on the condition of anonymity. "We need to have a clear explanation for the amount, and it has to be verified."

The United States is preparing about 500,000 tons of food aid to assist North Korea with a devastating grain crisis, but Hill said that is unrelated to the nuclear discussions.

## **US, NKorea May Break Nuclear Impasse**

By ANNE GEARAN – 25 minutes ago *[Accessed 2008-04-11T22:10Z]*

WASHINGTON (AP) — The United States is backing off its earlier demand for a precise inventory of North Korea's nuclear programs and past activities that had hung up potentially historic disarmament negotiations with the Communist nation.

U.S. officials say they will still get the information they need, but it will be packaged and presented in a way more acceptable to the reclusive North. Any change in the terms, however, will open the White House to criticism from the political right that the administration has gone soft.

Secretary of State Condoleezza Rice suggested Friday that a deal to resolve a four-month impasse may be close, including a U.S. promise of swift action to lift economic and political penalties on the North.

"There are obligations on both sides," Rice said. "The U.S. is absolutely prepared to undertake its obligations should the North Koreans fulfill their obligations."

Washington had refused to take the North off a U.S. terrorism blacklist, a coveted goal of North Korean leader Kim Jong Il, until negotiators have a "complete and correct" inventory of the North's nuclear program and past activities to spread weapons know-how to other nations.

North Korea had agreed in six-nation talks in October to provide the list and disable its facilities and its main reactor by the end of 2007. The North made unprecedented progress last year, shutting down and starting to disable the reactor in exchange for aid and diplomatic concessions.

But the North missed the Dec. 31 deadline in a dispute over how specific, and how public, the North's accounting had to be.

Now the Bush administration has decided that the exact contents of the North Korean declaration are less important than an assurance that the U.S. and other nations can check up on the North to make sure it told the truth and isn't resuming any nuclear activities.

Asked Friday about a potential agreement to resolve the impasse, Rice did not repeat her usual demand that the North produce a full and complete declaration of its nuclear programs and past.

"We are trying to get people off of this sort of 17th Century notion of expiating sins and on to the notion that the verification is the key here," a senior U.S. official said later. The official spoke on condition of anonymity because the deal is not final.

The North would finish work to take its plutonium nuclear reactor out of service and provide a full accounting of the program it ran there, including work to produce the nuclear device the North tested in 2006. That test confirmed Pyongyang as a nuclear weapons state and intensified world efforts to bargain the North out of the weapons business.

A second, vaguer agreement would have the North "acknowledge" world worries about an alleged separate nuclear development program using uranium, and about the North's activities to spread nuclear technology or material to other nations, officials said. The North would agree to new verification programs to make sure it does not resume those suspect activities.

Previously, U.S. officials had said the North would have to detail that alleged uranium program and explain its presumed role in assisting Syria with what may have been an incipient nuclear program. Israel last year destroyed a site widely believed to have housed that program.

Officials now say they are more concerned about the plutonium program, because of its demonstrated ability to yield a nuclear weapon, and did not want the dispute to threaten the entire disarmament deal.

"We are determined to have an outcome ... that would have the North Koreans account for all of their nuclear programs ... and their activities in nuclear proliferation," Rice said.

A meeting of nuclear envoys from the six nations involved in the talks — the Koreas, China, the United States, Japan and Russia — could occur in Beijing in the next few weeks if all sides fulfill their obligations, the State department's lead negotiator with North Korea said Thursday

## **US must verify any North Korean declaration -Rice**

Fri **Apr 11, 2008** 12:59pm EDT

(Adds quotes, background)

By Susan Cornwell

WASHINGTON, April 11 (Reuters) - The United States will have to verify whatever North Korea discloses about its nuclear programs but Washington is not yet at a point where it can do so, U.S. Secretary of State Condoleezza Rice said on Friday.

**"Any document that we get, any declaration that we get, has to be verified and it has to be verifiable," Rice said at a news conference with German Foreign Minister Frank-Walter Steinmeier.**

Such verification could not take place overnight but the United States had to be certain it had the means to do it, she said.

Six-nation talks over North Korea's nuclear program have been held up for months pending a full accounting of North Korea's nuclear activities -- a declaration that was due at the end of last year.

People familiar with the matter said this week the United States had reached a tentative agreement with North Korea on how Pyongyang would disclose its nuclear programs, a step that would trigger its removal from the U.S. list of states that sponsor terrorism and termination of other U.S. sanctions.

**Rice said the United States was "still in the process of trying to determine if the North Koreans are going to fulfill their obligations" under the six-party process.**

**"We are determined to have an outcome ... that would have the North Koreans account for all of their nuclear programs," she said. "We are not yet at a point as to where we can make a judgment as to whether or not the North Koreans have met their obligations."**

People familiar with the matter said the United States and North Korea might break the deadlock with a formula under which Washington would put forward its concerns about North Korea's suspected uranium enrichment program and nuclear proliferation -- and North Korea would then acknowledge these concerns.

This could provide a face-saving way for Pyongyang to produce the declaration of its atomic programs required by the two Koreas, China, Japan, Russia and the United States.

The declaration has been held up partly because of Pyongyang's reluctance to discuss any transfer of nuclear technology to other countries, notably Syria, as well as to account for its suspected pursuit of uranium enrichment. (Editing by John O'Callaghan)

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC

April 11, 2008

*[EXCERPT]*

QUESTION: What about those reports floating around that North Korea is prepared to make some indirect declarations of its nuclear holdings and --

MR. MCCORMACK: What part of the Secretary's answer didn't you record? (Laughter.) Look, I don't really -- I don't have much to offer beyond what she has told you in that regard. She did emphasize the importance of verification and verifying any declarations that are made. There is actually a subgroup as part of the six-party talks which is charged with that task of verifying any declarations. And as she said, that we are ready to live up to our obligations once North Korea has fulfilled its obligations.

## North Korea, U.S. reach secret deal to break nuclear deadlock, report says

2008/04/12 13:35 KST

훈 훈 SEOUL, April 12 (Yonhap) -- North Korea and the United States have reached a secret deal to end the impasse in the six-nation talks to dismantle the North's nuclear weapons program, a U.S. government-funded radio station reported Saturday.

훈 훈 Under the secret agreement, reached at a meeting of the top nuclear envoys of the two countries in Singapore early this week, the U.S. will make a declaration of North Korea's alleged uranium enrichment program and nuclear cooperation with Syria on behalf of Pyongyang, Radio Free Asia reported on its Web site, citing "multiple diplomatic sources" in Washington.

훈 훈 In return, the agreement calls for North Korea to "acknowledge" the U.S. concern over the two issues, which have been key sticking points at the six-nation disarmament talks, and not to "challenge the facts," the radio station said.

훈 훈 North Korea and the U.S. agreed to exchange a secret memorandum of understanding on the agreement, it said.

훈 훈 The radio station said North Korea agreed to make a complete and correct declaration of its nuclear weapons program "in the coming weeks." In a 2007 deal at the six-nation negotiations, North Korea agreed to disclose full details of its nuclear programs by the end of last year in exchange for economic aid and better ties with Washington, including its removal from the U.S. list of countries sponsoring terrorism.

훈 훈 The U.S. claims North Korea let the year-end deadline pass without any action, while North Korea puts the blame on the U.S., arguing that it fulfilled its end of the deal in November.

훈 훈 The U.S. dismisses the north's claim, arguing that its November declaration was "incomplete." Despite the deadlock, North Korea has made progress in disabling its nuclear facilities by shutting down its main nuclear reactor in Yongbyon.

훈 훈 Earlier this week, Assistant U.S. Secretary of State Christopher Hill, Washington's chief negotiator for the six-nation talks, met his North Korean counterpart Kim Kye-gwan and later acknowledged that "important" progress was made in Singapore.

훈 훈 However, Hill said more time is needed for the results to materialize.

훈 훈 North Korea was more upbeat.

훈 훈 "A consensus was reached on the U.S. measure to make political compensation and the nuclear declaration essential for winding up the implementation of the agreement," North Korea's foreign ministry said in a April 9 report by the country's Korean Central News Agency.

## Status of Syria strike hearing unclear

Yaakov Katz and Herb Keinon

THE JERUSALEM POST

Apr. 14, 2008

Despite an Israeli request, and amid heightened tensions with Syria, officials in Jerusalem said on Monday that it was still unclear whether US Congressional testimony on Israel's air strike against Syria last September would be held in public or behind closed doors.

The hearing, scheduled for Thursday at the Subcommittee on Terrorism, Nonproliferation and Trade, will discuss US policy in the face of Iran's continued efforts to obtain nuclear capability.

According to the committee's current schedule, which appears on its Web site, the committee will hold an open session which will hear testimony from Daniel Glaser, Deputy Assistant Secretary for Terrorist Financing and Financial Crimes in the Department of Treasury, and Jeffrey Feltman, Principal Deputy Assistant Secretary of State, Bureau for Near Eastern Affairs.

The attack took place on September 6 in northeastern Syria when, according to foreign reports, a number of Israeli Air Force fighter jets infiltrated northeastern Syria and bombed a nuclear facility that was being built there with North Korean assistance. Raising the issue at the hearing is seen in Israel as part of a congressional attempt to humiliate the Bush administration and prove that North Korea lied to the US when it claimed to have abandoned its nuclear activity.

The assessment in Israel is that full disclosure of the attack in an open congressional hearing could "embarrass" Syrian President Bashar Assad and force him to respond, possibly with military force.

Assad has denied the reports that Syria was building a nuclear facility and has kept parts of the Syrian leadership in the dark regarding the true purpose of the facility that was bombed. If the details of the attack are released in public, Israel fears that Assad will come under immense pressure in Damascus to take action.

However, Israel's defense establishment believe that as long as the meeting is held behind closed doors, Assad could plausibly deny any leaks emanating from such a hearing. Either way, Israel does not plan on changing its policy of silence on the issue.

Officials in Jerusalem said Monday that there was a disagreement in Israel between those - primarily from the defense establishment - concerned that public testimony would put Syria on the spot and perhaps cause Assad to feel the need to take some kind of retaliatory measure for the IAF attack, and those who believe it was in Israel's interest to highlight in the US North Korea's nuclear involvement with Syria.

The officials said that those in the US interested in an open hearing want to show the public that while the US is engaged in nuclear disarmament talks with North Korea, the North Koreans are behind nuclear proliferation in the world's most sensitive spots.

Relations with Syria reached a high point last week amid news reports that the Syrian military was conducting military maneuvers along its border with Lebanon. Israeli defense officials said that the moves were mainly defensive and were being taken out of fear that Israel would attack Syria if it were attacked by Hizbullah in response to the February assassination of arch-terrorist Imad Mughniyeh.

A House Intelligence Committee aide said that no hearings on topics related to Israel, Syria or North Korea are listed on the public schedule. She noted that almost all intelligence committee hearings are held in closed sessions, so it would be highly unlikely that information about the Syrian incident would be revealed in a public forum. It is also possible that any administration briefing on the sensitive topic would be done selectively with intelligence committee members.

Some members of Congress have been pushing for fuller disclosure of the events surrounding September 6 primarily because they are concerned about the reports alleging that North Korea has been supplying Syria with nuclear capabilities in contravention of its disarmament commitments made as part of the Six Party talks.

These members of Congress are wary about the Six Party process continuing without having a clearer picture of North Korean activities in connection to Syria, among other issues. However, many of the members are sympathetic to Israel and understanding of the Israeli perspective that disclosing information could push Syria to retaliate, something its leader Bashar Assad has refrained from doing until now.

There is also the hesitance of the Bush administration to be factored in. The administration has strategic concerns about revealing details of the Syrian incident, and it is also in the midst of a tug of war with Congress about disclosing sensitive information on intelligence and decision-making. It also doesn't want to give Congress reason to complicate the Six Party Talks, a delicate process that has suffered many hiccups along the way.

## **Senate to hold debate on Syria-N.Korea nuke ties next week**

By Amos Harel and Shmuel Rosner, Haaretz Correspondents

Last update - 02:26 15/04/2008

The American administration intends to give the Senate Intelligence Committee an account of the nuclear ties between North Korea and Syria for the first time on April 22.

Senior IDF officers have warned, however, that the release of any information containing details of the Israeli Air Force strike in Syria last September could increase tension between Israel and Syria.

The meeting is expected to be held behind closed doors at Israel's insistence, but the Americans did not promise not to brief journalists afterward.

Media reports in the United States could alter the gag order Israel has imposed on Israeli media coverage of the IAF's strike in Syria.

Washington sources on Monday told Haaretz that the administration and North Korea are making headway in their talks about what to call Pyongyang's supply of nuclear technology to Syria. North Korea is expected to give the Americans a statement that indirectly acknowledges its violation of the agreement to dismantle its nuclear power by maintaining nuclear ties with Syria.

However, North Korea will not publicly admit to any guilt in this matter and the Americans are expected to accept this. This arrangement would enable both sides to return to the agreement to dismantle the North Korean nuclear program. In this case, the administration will be interested in downplaying North Korea's ties with Syria and American officials may make do with a general survey on this issue to the Senate.

The Intelligence Committee has scheduled two hearings, on April 22 and 24. The first session is expected to be about the North Korean-Syrian issue.

Sources in Israel on Monday reiterated their position that any release, however partial, about North Korea's ties with Syria, which would include details about the installation the IAF attacked, could complicate the already tense situation between Israel and Syria.

These sources said that despite the administration's duty to report to Congress, they hoped it would be done in a most limited way so as to avoid increasing tension in the Middle East.

The affair is causing tension between Israel's prime minister and defense minister. The defense minister's aides suspect that the Prime Minister's Bureau has been covertly encouraging the Americans to release information about the attack, hoping to make political gains. The prime minister's aides deny these allegations.

For Immediate Release  
Office of the Press Secretary  
April 14, 2008

Press Briefing by Dana Perino  
James S. Brady Press Briefing Room

12:40 P.M. EDT

*[EXCERPT]*

Q Thank you, Dana. At last meeting in Singapore between U.S. and North Korea, a tentative agreement has been made for North Korea to report complete nuclear declaration. Under what condition United States is to give North Korea some economic incentive, plus the removal of North Korea from the terrorist list? How was the President's response on that?

MS. PERINO: Well, as I have said before, there's a -- there is a package that was agreed upon in the six-party talks in regards to North Korea. What we are waiting on right now is a complete and accurate declaration. We don't have one yet, but Ambassador Chris Hill had good meetings last week. An issue regarding the state sponsor of terrorism list is a part of that package, but things happen in sequence, and so it is way premature to suggest that that's going to happen anytime soon.

Q Did he -- had made agreement with North Korean Kim Kye-gwan. The President agreed to that agreement in Singapore.

MS. PERINO: I believe so, yes.

Okay, thanks.

## **U.S. and North Korea envoys think key row cleared: sources**

Wed Apr 16, 2008 8:41am EDT

By Teruaki Ueno

TOKYO (Reuters) - Negotiators from the United States and North Korea believe they have settled a thorny dispute over Washington's allegations that Pyongyang had a program to enrich uranium for weapons and proliferated nuclear technology to Syria, diplomatic sources in Tokyo said on Wednesday.

Under the face-saving deal reached by U.S. and North Korean envoys in Singapore last week, Washington would state in a document its concerns about North Korea's suspected uranium enrichment program and transfer of nuclear technology and material to Syria, a diplomatic source said.

In the same document, North Korea would "acknowledge" the U.S. assertions, the source told Reuters.

"The negotiators concerned think that the issue over uranium and Syria has been settled," a Japanese government source said. "It is hard for North Korea to admit (the U.S. assertions)," a Japanese government source said.

The deal was reached when U.S. Assistant Secretary of State Christopher Hill held talks with North Korea's Kim Kye-gwan in Singapore on April 8, the sources said.

The first diplomatic source said it remained unclear whether top officials of the two governments would accept the compromise deal.

Uranium enrichment could provide North Korea with a second way to produce fissile material for nuclear weapons in addition to its plutonium-based program, which it used to test an atomic device in October 2006.

The Japanese government source said a huge gap remained over details of North Korea's declaration of its plutonium-based nuclear arms program, stalling six-party talks on ending North Korea's nuclear ambitions.

Six-party talks involve the United States, the two Koreas, China, Japan and Russia.

Washington has said a major sticking point in talks aimed at ending North Korea's nuclear programs is the need for Pyongyang to deliver a "complete and correct" declaration of its programs as called for in a February 2007 six-party nuclear deal. That account was due at the end of last year.

If the North makes the declaration, it stands to be removed from a U.S. terrorism blacklist and be better able to tap into finance that could boost its economy.

U.S. Secretary of State Condoleezza Rice said on Friday that the United States would have to verify whatever North Korea discloses about its nuclear programs but Washington was not yet at a point where it could do so.

Rice said the United States was "still in the process of trying to determine if the North Koreans are going to fulfill their obligations" under the six-party process.

[http://afp.google.com/article/ALeqM5hq\\_OCivLoF2IouIBR4S8-XKgMmOg](http://afp.google.com/article/ALeqM5hq_OCivLoF2IouIBR4S8-XKgMmOg)

## **New mechanism set to verify North Korea's nuclear program**

11 hours ago [Accessed 2008-04-17T14:00Z]

WASHINGTON (AFP) — A mechanism is being set up to scrutinize any declaration provided by North Korea of its nuclear weapons program, the United States said Wednesday amid scepticism over a tentative deal between the two nations.

The "new effort" will verify the long-delayed declaration by Pyongyang under a six-nation aid-for-denuclearization deal, the State Department said.

"That's something that will be handled in the verification subgroup" of the six-party talks, department spokesman Sean McCormack told reporters when asked on prospective "verification methods" for North Korea's nuclear program under the bid to end Pyongyang's atomic weapons drive.

The verification mechanism is expected to be set up under the "denuclearization of the Korean peninsula" working group, one of five groups set up under a February 2007 agreement among the six parties.

"It's a new effort. It's something that has been integrated into the talks, and I guess as a bureaucratic grouping then organized within the context of those talks," McCormack said.

US Secretary of State Condoleezza Rice had discussed the establishment of the verification subgroup with leaders of China and well as other countries, a State Department official said, speaking on condition of anonymity.

The announcement of the verification measure Wednesday came amid criticism of a reported prospective deal reached earlier this month between US and North Korean envoys for the hardline communist state to declare its nuclear program.

Under the deal, North Korea would provide a list of its plutonium stockpile and merely "acknowledge" concerns listed by the United States about its suspected uranium enrichment and nuclear proliferation activities, reports have said.

Washington had earlier called for a full accounting of an alleged North Korean secret uranium enrichment program and suspected proliferation of nuclear technology and material to Syria, charges denied by Pyongyang.

Although the latest deal may have broken the months-old deadlock, it has caused a great deal of scepticism among experts.

"After months of demanding that the North live up to its promise to provide a 'complete declaration of its nuclear programs,' the US is now backtracking," the Wall Street Journal said in an editorial Wednesday headlined "Six-party giveaway."

John Bolton, a former State Department non-proliferation chief, said the deal "rests on trust and not verification" and warned that Pyongyang's "escape from accountability could break down international counter-proliferation efforts."

But Rice said last week that any declaration from North Korea had to be "verified and it has to be verifiable.

"And we have to make certain that we have means to assess what the North Koreans tell us, and we have to have means to verify what the North Koreans tell us," she said.

North Korea had missed a December 31, 2007 deadline for providing a full declaration of its nuclear program and proliferation activities, delaying implementation of its denuclearization drive that Washington wants completed before President George W. Bush leaves office in January 2009.

After testing a nuclear bomb in October 2006, Pyongyang closed its key atomic plant and is now on the verge of disabling it under the six-party deal.

If North Korea completes providing the nuclear declaration, the parties could move to implement the final phase of dismantling its nuclear program and materials.

## **Q&A: Top U.S. diplomat on N. Korean negotiations, China and the Olympics, and American image**

By Kristi Heim

Seattle Times staff reporter

Thursday, April 17, 2008 - Page updated at 09:46 PM

*[EXCERPT]*

U.S. Assistant Secretary of State Christopher R. Hill will be the point man for the U.S. as it makes what may be a final push toward resolving one of the biggest threats to international security: a North Korean nuclear weapon. The Bush administration faces criticism from some for softening the U.S. stance against the rogue nation. But he has weathered challenges before, keeping six-party talks among the U.S., North Korea, South Korea, China, Japan and Russia moving forward.

Negotiating the agreement with North Korea has been the hardest job of his career, he said, one he's eager to put behind him. Hill was in Seattle Wednesday for several appearances, including a talk with students at the University of Washington, where he sat down for a brief interview with The Seattle Times.

**Q: Has the issue of North Korea's suspected uranium enrichment and transfer to Syria been resolved?**

**A: We're looking to try to resolve this so-called second phase. The second phase includes giving us a declaration, and we need a declaration to cover all of these elements — Syria, uranium enrichment and especially plutonium. We made progress in Singapore, but until we get all the elements done, and we're not done yet, we're going to have some more diplomacy next week. I can't tell you whether it's resolved yet.**

Q: What are the next steps?

A: We need to make sure that when the North Koreans present their declaration of their plutonium holdings, that it is complete and that we can verify that it's correct. And then there are some other things we need to ensure we have means to monitor and verify that all of these elements are done. So these verifying things are the things we're working on with the North Koreans and other parties in the six parties. I don't want to say I'm optimistic, but I certainly don't want to say I'm pessimistic right now.

What we're trying to do is get to the point where we know precisely what their fissile material holdings are, so when we know precisely whether it's 35 kilos or 45 kilos, we can then have a final phase negotiation where they will abandon or give up that fissile material. But until we get the declaration done, we can't get to that final phase.

Q: What restraints are being put on North Korea's distribution of this fissile material?

A: The good thing about fissile material is it has a signature, so if they ever sold it to somebody, and it was discovered, we would know where it came from. We don't have any indication they have ever proliferated fissile material, but that said, we don't know where it is. We know it's somewhere in North Korea. We don't know the arrangements they have for guarding it. So we have to be very focused on trying to resolve the issue of the fissile material, that is, trying to get them to do what they promised to do in September 2005, which is abandon it.

Q: Is it important to keep any momentum going before a change in the U.S. administration?

A: My sense is there's broad bipartisan support for this step-by-step negotiation we're on. To be sure, there's a lot of criticism of elements of it. Some people have been saying we're going too far too fast. But overall, there's bipartisan support. I don't think a next administration, whether it's Republican or Democrat, would really want to have this issue dropped in their laps. Everyone would like to have it resolved. Whether it can be resolved or not will depend on the North Koreans.

Q: What will you be doing next week?

A: We're in very close contact with our partners. In fact, the South Korean president is in Washington at the end of this week. We'll be having extensive discussions with the South Koreans on this. We are also in almost daily communication with the Chinese on this.

And beyond that we'll have to see. I think everyone understands that we really should try to have this wrapped up by the end of this month.

Q: Do you think it's possible to open diplomatic relations with North Korea sometime soon?

A: I think in the context of their denuclearization, that would be envisioned.

Q: What would be the time frame?

A: It depends how quickly they are willing to give up their nuclear materials. If they're willing to do it this year, we could establish relations this year.

But we won't have relations with a nuclear North Korea.

Q: How is China looking at the six-party talks?

A: China is a very active participant. It's an area we have succeeded in working with them very productively and pragmatically on an area of mutual concern. China looks at North Korea in very different ways from how we look at them. You have to recall they were a historical partner and ally. Chinese veterans associations trace their roots to the Korean War. All that said, China is very much convinced that North Korea needs to give up its nuclear ambitions. They know that if they don't, you might have a situation where other countries feel they need a nuclear program.

Q: Do they have the same urgency?

A: Chinese always have perhaps a greater sense of patience than we do, except if the subject is Taiwan. But I think we're working in sync. Many Americans think, well, why can't they just cut off the North Koreans, but that's not how they do business with a neighbor. They often use more friendly persuasion than other people feel is appropriate.

Olmert says Israel not under Syrian nuclear threat

Reuters

Published: April 17, 2008

JERUSALEM: Prime Minister Ehud Olmert said Damascus does not pose a nuclear threat to Israel, making the cryptic comments in response to a question in a newspaper interview about a mysterious Israeli air strike in Syria.

Israel has given no details on the identity of the target its planes struck inside Syria on September 6. Some U.S. officials linked the raid to suspicions of secret nuclear cooperation between Syria and North Korea.

"There are things I am not willing to discuss, Olmert, asked about the air strike, said in an interview published on Thursday in Israel's Yedioth Ahronoth newspaper.

"I will only say this: To the best of my knowledge, Israelis are not under Syrian nuclear threat," Olmert said.

Damascus and Pyongyang denied any nuclear ties.

(Reporting by Avida Landau)

## **On-the-Record Briefing by Secretary Rice**

Secretary Condoleezza Rice

Washington, DC

April 17, 2008

(9:04 a.m. EDT)

*[EXCERPTS]*

SECRETARY RICE: Good morning, everyone. I came by just to take a few of your questions, but I'd like to make a few comments first on several issues.

*[deletia]*

It's obviously a busy week in terms of the diplomacy. The President, of course, will meet with Prime Minister Brown today and talk about the whole range of issues that we share with our British colleagues. And then tomorrow, he will meet with the new South Korean President, President Lee. Korea is a strategic ally of the United States, and we look forward to this opportunity to advance our global agenda with Korea's new leadership.

We will, of course, also discuss the Six-Party talks, and I thought I might take a second to give you my assessment of where that process stands. North Korea is disabling its Yongbyon nuclear facility and we are in the second phase of our implementation agreement to denuclearize the Korean Peninsula. The outcome we and our partners require is a full account from North Korea of all its nuclear programs, including any uranium and nuclear proliferation activities.

All six parties have obligations as well, which we've agreed to undertake in parallel with North Korea's submission of a declaration, a declaration that we will verify rigorously. The steps that we are taking are measured ones, and we will continue to judge North Korea's actions and take other steps as warranted.

I want to emphasize that we are at the beginning of a very complex process, not the end -- a process that must lead to the actual removal, for the first time in history, of nuclear material from North Korea and a verifiable end to its nuclear programs. Have we made progress through the Six-Party framework? Yes. Is there still reason for caution and skepticism? Yes. Yet, the Six-Party framework has demonstrated great value. Through it, we have found common ground with China, Japan, Russia and South Korea on denuclearizing the Korean Peninsula and fighting proliferation. The framework is invaluable when North Korea conducted a nuclear test, allowing us to quickly respond at the United Nations. This is much preferable to the United States dealing with these issues alone. Further progress

on denuclearization will also enable us to step up our cooperation on other goals: a peace regime on the Korean Peninsula; normalization of relations; a new mechanism to cooperate on peace and security in Northeast Asia; and, of course, an opportunity to improve the lives of the North Korean people. In short, the six-party framework is a framework to elicit cooperation. It is also a framework to deal with noncooperation.

*[deletia]*

With that, I'm happy to take your questions.

*[deletia]*

QUESTION: Madame Secretary, on North Korea. The full accounting that you're talking about, will this be a public accounting of the uranium program and the proliferation activities? And if this happens to your satisfaction, will North Korea come off the terror list in a quid pro quo in exchange for this declaration?

SECRETARY RICE: We have -- obviously, this is a diplomatic matter, and not everything in diplomacy is public. But we have no desire to hide from anyone the means by which we would account for and then verify. There will be, undoubtedly, briefings for Congress. I don't see any reason that we shouldn't have a -- that people shouldn't have a sense of what we're going to do -- I -- what we would be expecting to do. I can't tell you that every detail of every diplomatic encounter is going to be a public matter. I think that isn't the nature of diplomacy. But that there can be confidence about what the arrangements would be, I would fully expect that that would be appropriate; that there would be information so that there would be confidence about what the arrangements would be.

In terms of what the United States would do, the lifting of certain sanctions on the North Koreans, steps that could be taken if North Korea actually carries out its obligations, we're going to have to judge whether North Korea has carried out its obligations.

But I will say this: We have a long way to go in terms of all of the various statutory sanctions and multilateral and bilateral sanctions that would remain even if the United States were to take the steps that you outlined.

QUESTION: But on the terror list --

SECRETARY RICE: Yeah.

QUESTION: -- I mean, is that a -- are we going to see them come off that terror list?

SECRETARY RICE: John, I'm going to wait until we can understand whether the North Koreans have discharged their obligations in order to -- before we begin to discuss what our obligations are.

QUESTION: Can I follow up?

SECRETARY RICE: Oh, sure. Charlie. Do you mind?

QUESTION: Just to follow up on North Korea and on the -- meeting their obligations and the declaration. This would also include reference to proliferation activities and would mention Syria on North Korea, if that's the case?

SECRETARY RICE: As I've said, there has to be an accounting for all the nuclear programs. All the nuclear programs include not just the uranium program, the plutonium program, but also nuclear proliferation activities. And we've made that very clear, not just to the North Koreans but to other parties in the six-party talks. What the six-party framework gives you is a means by which the United States is not left alone to deal with future pledges that the North Koreans might make or representations that the North Koreans might make about ongoing proliferation activities.

Again, China, Russia, Japan, South Korea -- whenever the North undertakes these obligations, they're undertaking them in the context within the framework of the six-party talks. And I think that's very important, because I can't think of another way that one is going to get a handle on North Korean proliferation activities or deal with the pledges that they make.

*[deletia]*

QUESTION: Yes. Secretary Rice, you emphasize the importance for accounting with respect to North Korea. Do you insist on having this specific verification mechanism on not only plutonium, but also on uranium program and the proliferation in North Korea's final declaration?

SECRETARY RICE: The two programs are different, the uranium program and the plutonium program, in that we, obviously, and the IAEA and the international community know a good deal about the plutonium program. And so I think that the verification mechanisms for that will be one set of verification mechanisms, but there have to be means to verify what they're doing. The uranium program is a different matter, with far less knowledge, understanding about what actually happened there and what is actually there. And so it will have to have its own -- will have to have their own means of working through the questions about that program. And the six parties will have to have the -- the other parties will have to have means to work through those thoroughly. I have heard from my other colleagues in the six parties that they, too, are concerned about verification and believe that verification is going to be important.

Now, on -- one of the innovations here on proliferation is that, initially, the six parties did not deal with proliferation, the Six-Party framework did not deal with proliferation. It will now need to deal with proliferation in light of some recent concerns about North Korean activities in proliferation. So each of these problems is different. And since each of the problems is different, you have to look to means of verification that are different.

And let me just -- I think it goes without saying, but perhaps I'd better say it. Verification takes some time because these are complex programs, this is a nontransparent society, there is a history here of surprises. And so it will take some time, even past the second phase, for verification to completely play out. But my point is just because we believe obligations may have been met in the second phase, if there is evidence in -- as we're into the third phase that something was not true that was said in the second phase, you know, there is always the ability and the absolute intention to react to that.

QUESTION: A follow-up on that.

SECRETARY RICE: Mm-hmm.

QUESTION: Do you have any immediate plans to send your team to North Korea to discuss about the verification issue?

SECRETARY RICE: There will be a team that will go. I don't think we have a date yet, but we've been looking to send an expert team to continue the discussions on verification. And again, I want to emphasize this is a process, that this is not – that Chris Hill did a very good job during these recent discussions, but there is much more work to do in order to see whether North Korea is really going to meet its obligations, how over time we are going to be able to verify that those obligations have, indeed, been met.

QUESTION: Does that mean then that you would hold the terror list removal and the other things that North Korea wants out of this out until the verification is actually complete?

SECRETARY RICE: Anne, I think I said that the verification can take some time. What we need to know is that we've got appropriate means for verification. Now, phase two will need to come to an end with both sides having met its obligations. But the process doesn't come to an end at that point. And whatever is done in phase two, if it's demonstrated in phase three that somehow something was wrong in phase two, of course, the United States reserves the right to take whatever steps it needs to, even if we've declared phase two complete.

QUESTION: So just to be – just to be clear, Madame Secretary, if they provide some kind of declaration that, based on your knowledge, that you feel is complete and you have a verification mechanism that you're satisfied will be able to get you to where you think you need to be in terms of verification, then phase two would be – and their obligations under phase two --

SECRETARY RICE: I'm not going to make this mechanistic. We are going to judge whether or not we think the North Koreans have discharged their obligations for phase two, and we will then decide whether it is time for the United States to carry out its obligations. But phase two is not a free-standing phase that just ends the process. There is a continuation all the way to the step that I outlined, which is denuclearization, which means nuclear programs are verifiably ended and the material is accounted for and out. So all along that process, we're going to continue to look at whether or not the verification – or whether -- to verify and continue to look at whether or not North Koreans are meeting their obligations and, indeed, whether they have, indeed, met their obligations in prior phases.

QUESTION: Madame Secretary, a clarification.

SECRETARY RICE: Yeah, mm-hmm.

QUESTION: Is Syria an issue in proliferation and why are you – so far have been reluctant to say so specifically?

SECRETARY RICE: Well, Syria is most certainly an issue in proliferation. We've had troubles and concerns about Syrian proliferation as well. But look, we have several nonproliferation questions on the

table about North Korea; we have for some time. What I'm saying to you is that these come now -- it is going to be very important that the proliferation issues also be a part of the Six-Party framework, because to our -- our definition is that that is also a nuclear program, not just what may exist on the soil of North Korea. And that is a position that is shared by the other members of the six parties.

QUESTION: And Syria is a part of (inaudible)?

SECRETARY RICE: End of story.

QUESTION: How about Iran?

SECRETARY RICE: Any country would be. If there is any concern, we have to deal with it in the six-party talks.

Okay.

QUESTION: Thanks.

SECRETARY RICE: All right. Thank you.

## **Seeking To Engage In Korea**

Friday, April 18, 2008; A27

South Korean President Lee Myung-bak spoke to Post reporters and editors yesterday through an interpreter. Excerpt//:

THE POST: Regarding the negotiations with North Korea: Were you saying the solution [Assistant Secretary of State] Chris Hill has come up with, the idea where North Korea says it acknowledges the U.S. concerns and evidence about uranium and the Syria connection . . . that meets your approval?

LEE: As for your question about North Korea's cooperation with Syria or North Korea's activities in the uranium enrichment program, we do not know the final results or the outcome of it. I believe that we should wait a little bit before we know for sure.

However, perhaps we can assume that North Korea did in an indirect way admit to being involved in these two activities, and if so, considering the characteristics [of the] regime, then perhaps we can consider this as an acceptance or an admission that they were involved in these activities, and then this will allow us to move on to the next level so that we can resolve the North Korean nuclear issue. . . . Another very important point is that North Korea agree not to get involved further in any proliferation activities.

## **N. Korea's nuclear past stays sealed**

**April 18, 2008**

By Nicholas Kralev and Jon Ward

The Bush administration made another concession to North Korea yesterday by agreeing to keep secret part of a required declaration of the country's nuclear programs, saving Pyongyang a public embarrassment from its proliferation activities.

The decision is likely to figure in weekend talks at Camp David between President Bush and South Korea's newly elected President Lee Myung-bak, who came into office in February pledging to take a tough stand toward his northern neighbor.

"Not everything in diplomacy is public," Secretary of State Condoleezza Rice told reporters in explaining the decision to reporters

For weeks, Miss Rice had insisted that North Korea publicly disclose all its past nuclear activities, including its bomb-making with plutonium, any efforts to enrich uranium and any transfers of nuclear technology to other countries.

North Korea's refusal to address those demands had stalled six-nation talks to denuclearize the Korean Peninsula for months.

Carefully choosing her language yesterday, Miss Rice promised to give the public "a sense" of what North Korea had done.

"There would be information so that there would be confidence about what the arrangements would be," she said, offering to brief Congress on the issue.

The administration had previously agreed to allow the North Koreans to address a uranium-enrichment program Washington says they developed in the 1990s, as well as nuclear-related transfers to Syria and other countries, in a document separate from the main declaration.

That main part, which is required by an October deal reached in six-nation negotiations, would focus on the North's plutonium program. Both plutonium and highly enriched uranium can be used to make atomic bombs.

The Washington Times reported in February that a secret document was being negotiated as a way for Pyongyang to save face, since it has never publicly acknowledged the uranium-enrichment program. At the time, administration officials denied that report.

At the White House yesterday, Dennis Wilder, senior director for East Asian affairs at the National Security Council, confirmed that non-plutonium issues will be addressed in a separate document prepared in "side negotiations that the United States has had with the North Koreans."

"That's a different matter, because that involves different kinds of activities, such as proliferation, and that is being handled in a different manner," he said.

Miss Rice also suggested that the North would not have to wait for its declaration to be verified before it received some of the political and economic rewards it has been promised, such as removal from the U.S. blacklist of state sponsors of terrorism.

"Verification takes some time, because these are complex programs," she said. Even if the United States were to take the North off the blacklist, "we have a long way to go in terms of all of the various statutory sanctions and multilateral and bilateral sanctions that would remain."

John R. Bolton, who was undersecretary of state for arms control and international security during Mr. Bush's first term, said the administration is "obviously in full retreat."

"I think [removal from the terror list] will happen in a few weeks, and it will be a disgrace," he said. "They think the plutonium issue is the only one that matters, and it's a potentially fatal mistake."

Both Miss Rice and Mr. Wilder insisted, however, that Washington will receive all the information it has demanded, regardless of the form in which it is submitted to China, which leads the six-party talks. The negotiations also include Japan, South Korea and Russia.

"The outcome we and our partners require is a full account from North Korea of all its nuclear programs, including any uranium and nuclear proliferation activities," Miss Rice said.

It was not clear, however, whether the separate document will be submitted at the same time as the main declaration.

A State Department official said that Sung Kim, director of the department's Korea office, will travel to Pyongyang next week to finalize the agreement with the North, which was reached in principle last week in Singapore between the two chief negotiators, Christopher Hill and Kim Kye-gwan.

North Korea has shut down and almost disabled its main nuclear complex at Yongbyon, but the goal of the six-party process is to "irreversibly" dismantle its programs. The declaration, which was due by Dec. 31, is necessary to make sure the North has scrapped everything.

The United States also wants to know what happened to any past programs. A Syrian facility targeted by an Israeli air strike in September has become a major issue for Washington because it was widely reported to be a nuclear site under construction with help from North Korea.

## **Past Deals by N. Korea May Face Less Study**

By HELENE COOPER

Published: April 18, 2008

WASHINGTON — The Bush administration appears to be preparing to back away from a demand that North Korea fully disclose all of its past nuclear weapons activities, in an attempt to preserve a nuclear agreement requiring it to disclose and dismantle the bulk of its nuclear weapons program.

As described by administration officials on Thursday, the step would relax a demand for North Korea to admit fully that it supplied Syria with nuclear technology. The United States would also agree to postpone its demand that North Korea provide an immediate and full accounting of its fledgling uranium program.

The new stance is intended to help complete a denuclearization deal that would focus instead on North Korea's more extensive plutonium program, which has been at the heart of its nuclear weapons development and was the source of raw material for the device it tested in October 2006.

The State Department spokesman, Sean D. McCormack, said the emerging agreement would not represent a concession. He said that even if North Korea did not fully account for its uranium efforts, the deal would allow inspectors access to all of North Korea's nuclear facilities in order to verify that it had stopped its weapons programs.

"There is nothing inevitable about this process, and we are reserving judgment about this declaration until we see it," Mr. McCormack said. "Every aspect will be subject to verification, and if we detect that they have misled or attempted to mislead, there will be diplomatic consequences."

The new approach has been endorsed by Secretary of State Condoleezza Rice and her chief North Korea negotiator, Christopher R. Hill, an assistant secretary of state, who have argued that getting the plutonium program shut down was better than getting nothing at all, an administration official said. But it is being opposed by conservatives within the administration, including aides to Vice President Dick Cheney, officials said.

"A lot of people will say this falls short of the full confession," a senior administration official said of what the new approach would demand of North Korea. "They want them to appear in Town Hall and acknowledge that they have sinned. But they weren't willing to go that far."

The administration had previously sought full disclosure of North Korea's role in the Syria program, which a senior administration official said was destroyed by an Israeli airstrike in Syria last September.

Under the new approach, the United States and North Korea have settled on fudging the issue, administration officials said. North Korea will "acknowledge" that the United States is concerned about the nuclear proliferation to Syria but will not publicly admit to it. North Korea will also promise not to engage in any more nuclear proliferation, a senior administration official said.

In return, the United States would take North Korea off the list of state sponsors of terrorism and the list of countries noted in the Trading With the Enemy Act.

State Department officials, preparing for a storm of protest from conservatives who complain that such an agreement would be too soft on North Korea, hastened to say on Thursday that the United States would continue to keep a host of economic sanctions against North Korea, including prohibitions on most foreign aid and limitations on trade.

The administration officials who described the new American approach agreed to speak only on condition of anonymity, because North Korea had not yet agreed to the deal. Asked on Thursday whether the United States was scaling back its demands, Ms. Rice responded only obliquely.

“We’re going to have to judge whether North Korea has carried out its obligations,” Ms. Rice said during a news conference. “But I will say this: we have a long way to go in terms of all the various statutory sanctions and multilateral and bilateral sanctions that would remain even if the United States were to take the steps that you outlined.”

President Bush appears to be supporting Ms. Rice and Mr. Hill, to the dismay of those who say that the administration, after six years of acting tough on North Korea, is backing down. Defenders of the emerging agreement counter that it would be a mistake to continue a strategy that has yet to produce a lasting deal, and instead allowed North Korea to build up its plutonium stockpile and detonate a nuclear device in 2006.

Part of the problem for Mr. Bush is that the proposed deal, which many foreign policy experts say may be the best the United States can hope for at this point, is being judged by standards set up by Mr. Bush himself.

The White House now finds itself charting a similar course to the one taken by the Clinton administration in striking a deal with North Korea in 1994. That agreement collapsed in 2002 after the Bush White House accused North Korea of secretly continuing work on a nuclear weapon.

Under the new deal, North Korea has agreed to dismantle Yongbyon, as part of an agreement that, like the Clinton deal, envisions that North Korea would ultimately give up all of its nuclear material.

John R. Bolton, the former United States ambassador to the United Nations and the most outspoken critic of the accord now taking shape, wrote an op-ed column this week in *The Wall Street Journal* that compared Mr. Bush unfavorably with Ronald Reagan. “His policy regarding North Korea’s nuclear weapons program looks more like something out of Bill Clinton’s or Jimmy Carter’s playbook,” Mr. Bolton wrote.

The administration is sending a negotiating team next week to try to work with the North Koreans on the details of what exactly North Korea would have to disclose about its plutonium program — and how, under such an agreement.

“We can’t play ‘trust me’ with plutonium,” one senior administration official said. Nuclear experts at the State Department and other agencies are working on a way to make sure that North Korea discloses its entire plutonium program and capacity.

In addition, American officials are pressing North Korea to take steps to alleviate concerns held by Japan, which wants questions resolved about North Korea’s abductions of Japanese citizens.

The issue is scheduled to come up over the weekend when Mr. Bush meets with President Lee Myung-bak of South Korea. White House officials say they do not plan to take North Korea at its word.

“No one has let them off the hook,” said Dennis Wilder, special assistant to the president and senior director for East Asian affairs.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC

April 18, 2008

2:01 p.m. EDT

*[EXCERPT]*

QUESTION: What came out in the Secretary's meeting with President Lee at Blair House this morning?

MR. MCCORMACK: This is a – this was a meeting in preparation for President Lee's meetings up at Camp David. And that he's going to have – I don't have a readout. They just did it one-on-one. I believe it was one-on-one. And she typically does this before meetings between President Bush and another head of state, just to prepare the ground. We did have an announcement of a deal on beef, which was most welcome. I think you saw a statement from Trade Representative Schwab. And of course, the -- President Bush and President Lee are going to talk about six-party talks, U.S.-South Korean bilateral relations, and that agenda was reflected in the discussions between the Secretary and President Lee.

QUESTION: Did the subject of the North Korean nuclear declaration and what might be required under that declaration come up?

MR. MCCORMACK: I don't know. I'm sure, given the news reporting from yesterday, that it came up. And I'll take the opportunity to reiterate what I said this morning. And that is that we have yet to see a declaration. We, the other members of the six-party talks, have yet to see a declaration from the North Koreans regarding all aspects of their nuclear activities. And we are going to withhold any judgment on this declaration until we have a chance to see it. And you're not going to see any recommendation go forward to the President of the United States from this Department until we are comfortable with this declaration, until we believe that it is acceptable.

And whatever declaration there is, as Secretary Rice pointed out yesterday, is going to be subject to robust verification. And if at any point along the way, if we actually do get to a declaration, and I'll come back to that point in a second, it's going to be subject to robust verification. And if, at any point, there's – we or anybody else in the six-party detects that the North Koreans have attempted to deceive us or attempt to provide us information which was misleading or, in any way, false, then there are going to be consequences for that.

And I want to return back to the point about this process. It is important to keep in mind that while there has been progress that has taken place within the framework of the six-party talk concerning

disabling the Yongbyon facility and some of the other discussions, there's nothing in this process that is inevitable. It is based on performance. And if North Korea, for example, doesn't perform, then the process is not going to move forward. And they are not going to receive the benefits that they might otherwise have received, if they had performed on the process, so --

QUESTION: (Inaudible) more on this?

MR. MCCORMACK: Yeah, sure.

QUESTION: Could you be any more specific than you were in the gaggle this morning about the dates that Sung Kim and the other -- the nuclear experts are going to meet at Pyongyang?

MR. MCCORMACK: I think they're going to -- I think they're going to meet Tuesday, Wednesday. They're leaving Sunday.

QUESTION: Yes.

MR. MCCORMACK: And it takes some time to travel there and I would expect that they'll be there Tuesday, Wednesday. They'll probably have discussions that'll last a day and a half, two days.

QUESTION: Thank you.

MR. MCCORMACK: Mid-week, they'll be there mid-week. We'll keep you up to date if there's any change to that.

QUESTION: Are there people from the verification bureau going with them or is that (inaudible)?

MR. MCCORMACK: I don't know. I'll -- we have to check on that to see.

MR. CASEY: We'll try and get you something.

QUESTION: Thank you.

MR. MCCORMACK: Yeah, we'll try to check to see what the composition is. I expect that it's probably going to be an interagency team, because really, what you're talking about some detailed technical items here as well, especially as they would relate to a declaration and subsequent verification of the declaration.

QUESTION: Are they going to be talking about additional facilities beyond Yongbyon? Is that an issue in the declaration?

MR. MCCORMACK: Well, we have yet to see what the North Koreans have put forward. They have not yet come up with their final declaration, so we'll see. If they bring up other facilities, then of course, that will be a topic of discussion.

Yeah.

## **Rice: Syria 'most certainly an issue in nuclear proliferation'**

By Shmuel Rosner and Yoav Stern, Haaretz Correspondents

Last update - 10:20 18/04/2008

*[EXCERPT]*

U.S. Secretary of State Condoleezza Rice told reporters on Thursday [2008-04-17] that "Syria is most certainly an issue in proliferation."

Responding to reporters' questions, Rice spoke at length about the talks between the U.S. and North Korea, which also addressed the issue of North Korea's relations with Syria. The U.S. is demanding that North Korea reveal all past activity relating to nuclear proliferation, including its ties to Syria. These came to light following September's airstrike in Syria, which foreign reports have attributed to Israel.

## **President Bush Participates in Joint Press Availability with President Lee Myung-Bak of the Republic of Korea**

Camp David

11:17 A.M. EDT

*[EXCERPTS]*

*[deletia]*

PRESIDENT LEE: Both of us reaffirmed once again that under no circumstances would we allow North Korea to possess nuclear weapons. Also, we agreed to work together closely within the six-party talks so that North Korea can fully and completely give up all their nuclear weapons programs as soon as possible.

Korea and the United States do not harbor any hostile intent towards North Korea. We both agreed to work together to help North Korea escape international isolation and to improve the lives of the North Korean people. President Bush supported our policy towards North Korea, including our denuclearization "opening-3000" policy, and also said that the United States will continue to dialogue -- seek ways to promote dialogue in exchange with North Korea.

*[deletia]*

We reaffirmed that nuclear nonproliferation and the promotion of democracy and human rights are all a vital component in making our world a better, safer place. In this regard, in order to ensure sustainable development, we agreed to work closely on the issues of climate change and energy securities, matters which are very serious and concerns us all.

*[deletia]*

I'm very happy with the results of today's meeting. And we will work very closely together to see the complete dismantlement of the nuclear weapons program of North Korea, and we will work closely within the six-party talks framework. And we must see the satisfactory conclusion, which will lead to helping the North Korean people lead better lives, with dignity.

Once again, Mr. President, I'm very happy to have met you, Mr. President, as well as Mrs. Laura Bush, and thank you for the warm hospitality extended to me and my delegation by the people of America. We will work closely together with a future-oriented mind. And I promise you I will do my very best, Mr. President.

PRESIDENT BUSH: Thank you, sir. Thank you. We'll do two questions a side, starting with Deb.

Q I have the same question for both of you.

PRESIDENT BUSH: I warned him that this was going to happen. (Laughter.)

Q Well, at least it's not two questions.

PRESIDENT BUSH: Yes, I know -- (laughter.)

Q First to President Bush, isn't scaling back demands about what North Korea has to declare giving in to a country that has repeatedly demonstrated that it can't be trusted? Former U.N. Ambassador Bolton has called it a complete collapse in the deal. And your critics are saying that you're selling out to get an agreement. Why is it not?

PRESIDENT BUSH: Look, we're going to make a judgment as to whether North Korea has met its obligations to account for its nuclear program and activities, as well as meet its obligations to disable its reactor. In other words, we'll see. The burden of proof is there. We've laid out -- they've made some promises, and we'll make a judgment as to whether they met those promises. And then we and our partners will take a look at North Korea's full declaration to determine whether or not the activities they promised they could do could be verified. And then we'll make a judgment of our own as to whether or not -- you know, about our own obligations.

You know, there's all kinds of rumors about what is happening and what's not happening. Obviously I'm not going to accept a deal that doesn't advance the interests of the region. The whole objective of the six-party talks and framework is to get them to disclose their weapons programs, is to get them to dismantle their plutonium processing, is to get them to talk about activities, nuclear activities. And we'll make a judgment as to whether or not they do that. But somehow people are precluding -- you know, jumping ahead of the game. They have yet to make a full declaration. Why don't we just wait and see what they say before people go out there and start giving their opinions about whether or not this is a good deal or a bad deal.

But one thing is for certain: The most effective way to deal with this issue is to do so with parties like China and Japan and Korea joining the United States and South Korea with a common voice. The whole object of this exercise is to convince the leader of North Korea to give up his nuclear weapons ambitions. That's the whole object.

And so we have yet to come to the stage where he has made a full declaration. And so we'll wait and see what he says, and then we'll make a decision about our obligations, depending upon whether or not we're convinced that there is a solid and full declaration, and whether or not there's a way to verify whether or not he's going to do what he says he's going to do.

PRESIDENT LEE: As for the declaration of North Korea, that is a very important process. I believe if North Korea's declaration is not satisfactory or if the verification is not satisfactory, we could probably have a temporary achievement, but in the long term, that will cause a lot more serious problems. I believe President Bush shares this thought with me.

Mr. President Bush explained just now the declaration, the verification process, has not begun. We are still waiting for North Korea to declare their full program. They should not get away with this temporary measure. The United States is not dealing with North Korea alone; there are other parties to the six-party talks, and they must all agree to North Korea's declaration. So in that regard North Korea's declaration of their nuclear weapons program should be complete and correct, and verification -- I'm not sure how long that is going to take, but North Korea must faithfully cooperate with verification process.

All the parties of the six-party talks are with one mind that the verification process must be full and complete and satisfactory. I think it's inappropriate and unconstructive for us to have too many doubts before the process even begins. The process is beginning. We should have trust in the process, and I will watch this process and cooperate fully.

Q (As translated.) I have a question for President Lee. Korea and the United States have made many achievements through the summit meeting, especially North Korean nuclear issue and the strengthening of the alliance. As for North Korean nuclear issue, Mr. President Lee suggested setting up a permanent liaison office in both Seoul and Pyongyang. What are some of the follow-up effects, if you do have any follow-up actions? And do you have any thoughts of proposing a meeting with Chairman Kim at an earlier date?

PRESIDENT LEE: The process is not something that we discussed between ourselves during the summit meeting. In fact, when I was staying in Washington, D.C., I had an interview with one of the newspapers there, and it came up. Of course it was not a sudden suggestion. I did have a meeting among my staff and related ministries, and I talked about this in detail before I came to the United States.

We have a new administration in Korea, and we haven't yet to begun dialogue with the North Koreans. Inter-Korean dialogue -- there is a need for us to have dialogue all the time. Up until now we had dialogues whenever the need arose, and then it would stop. However, dialogue should be based on genuine cooperation and sincerity. And so with this in mind, I thought that it would be helpful to set up a permanent liaison office in both Seoul and Pyongyang.

As for the summit meeting between myself and Chairman Kim, I will agree to it when the need is real. And I already said publicly that I am willing to meet with him -- not just once, but many times -- but if the meeting will yield substantial and real results. I believe only when that is possible I am ready to meet with him and have sincere dialogue, because that will help to bring about peace and stability of the Peninsula.

So basically, I do hold that thought, but I'm not suggesting to have a meeting with Chairman Kim anytime soon. If the need arises, again, I'm ready to meet with him.

PRESIDENT BUSH: Steven Lee.

Q Thank you very much, Mr. President. If I could follow up a little bit on North Korea. The North Koreans agreed last year to make their disclosure. We're now in April and we've yet to see this disclosure. There are continued negotiations, a new round next week. Are you concerned that, given this record, they're not prepared to make this full disclosure, that they're stalling the process somehow? And if so, a question for both of you, how do you respond to that?

PRESIDENT BUSH: Yes. Of course, I mean, they may be trying to stall. One thing about a non-transparent society where there's not a lot of free press, for example, or a lot of opposition voices, it's hard to tell what's going on. Now, he has made declarations, and he's testing the relationship. He's wondering whether or not the five of us will stay unified. And the only thing I know to do is to continue pressing forward within the six-party framework.

The decision -- we've made our decision. "We," the five of us, have made our decision and that is, there's a way forward. And obviously we hope he chooses to honor his commitments in a verifiable way. But when you're dealing with a society in which it's hard to get information out of, you just have to wait and see whether they're sincere or not. Unlike our society, of course, where there's all kinds of people in the administration talking and sharing information with you -- some of it authorized, some of it's not -- it doesn't happen that way in North Korea. It's a closed society. It's a society in which the will of one person decides the course of the future.

And again, we're very hopeful. We talked about our mutual desire to keep the six-party framework in place, to deal with a lot of issues. The first one of course is with North Korea. And it's -- I can just tell you, Steven Lee, it's much more effective to have more than one voice speaking on this issue than to be the sole voice speaking on the issue. And so if there ever is going to be a breakthrough, it's through the six-party framework.

And, look, I'm hopeful. We'll see. This has been a -- I've been at this for quite a while, and there's been moments where it looks like the process is going to go very smoothly and everybody is going to honor their commitments, and then for one reason or another, there's a -- there was a setback. But the key thing is, is that we haven't abandoned the efforts to solve this problem peacefully and diplomatically.

PRESIDENT LEE: Thank you. If you correctly understand North Korea, and if you do understand North Korean society, you'll probably get a better picture why we are seeing some delay in the process at the moment. If North Korea wasn't like that, then we would have seen the resolution of this issue already. We need persistent patience, ladies and gentlemen. And we need time in order to have complete resolution of this issue.

However, it's difficult to convince North Korea to give up their nuclear weapons program, but it's not impossible. It is not impossible. I believe that. So in order to resolve this issue, I believe that the six-party talks is the most effective way and mechanism to resolve this issue, like the President mentioned. And right now we're in the stages of waiting for their declaration, and then we can move on to the verification process.

So I think it's up to you to make the atmosphere so that North Korea can faithfully abide by their promise and make the right declaration; that once North Korea does so, it is also in their interest to

make the correct decision to give a full and complete declaration. And it will also help the North Korean people improve the quality of their life, and that is the best strategic choice that they can make.

*[deletia]*

END 11:46 A.M. EDT

## **Bush: North Korea Must Declare Nuclear Programs**

Published: April 19, 2008

Filed at 2:42 p.m. ET

CAMP DAVID, Maryland (Reuters) - The United States and South Korea on Saturday demanded North Korea submit its long overdue accounting of its nuclear weapons programs but offered no clues about how long they would be willing to wait for it.

Meeting for the first time at the secluded presidential retreat, President George W. Bush and South Korean President Lee Myung-bak also warned that once the declaration had been made, the information would have to be verified.

They appeared to back away from a reported proposal under which, according to sources familiar with the matter, Washington would list its concerns about the nuclear programs which Pyongyang would then acknowledge.

Some U.S. conservatives have criticized that idea as giving in to North Korea and aimed at getting a deal before Bush leaves office in early 2009.

"You know, there's all kinds of rumors about what is happening and what's not happening," Bush said at a news joint conference with Lee. "Obviously I'm not going to accept a deal that doesn't advance the interests of the region."

North Korea, which tested a nuclear device in 2006, failed to meet a December 31, 2007 deadline to reveal its nuclear weapons programs, a deal struck with the United States, China, South Korea, Japan and Russia.

"So we'll wait and see what he says, and then we'll make a decision about our obligations, depending upon whether or not we're convinced that there is a solid and full declaration," Bush said.

If Pyongyang makes the statement, the United States is expected to ease some sanctions imposed under the U.S. state sponsors of terrorism list and the U.S. Trading With the Enemy Act.

STALLING?

In addition to seeking details about North Korea's nuclear programs, the United States is concerned it may have shared nuclear technology with U.S. political foes like Syria. Bush questioned why the North Korean leader was delaying.

"They may be trying to stall," Bush said. "He's testing the relationship. He's wondering whether or not the five of us will stay unified, and the only thing I know to do is to continue pressing forward within the six-party framework."

However, Bush and Lee did not say how long they were willing to wait for the information. A team of U.S. experts will be in North Korea next week to see if they can make any progress on completing the declaration.

White House spokesman Gordon Johndroe declined to put a timetable for the declaration and said the administration first wanted to see what the team accomplished.

Lee, the first South Korean president invited to Camp David, also expressed concerns about North Korea's nuclear program. His predecessor, Roh Moo-hyun, sometimes frustrated U.S. efforts with his accommodating policies toward Pyongyang.

"We are still waiting for North Korea to declare their full program," he said through a translator. "They should not get away with this temporary measure."

"It's difficult to convince North Korea to give up their nuclear weapons program but it's not impossible," Lee said.

Separately, Bush and Lee agreed during their meeting to keep the current number of U.S. troops in South Korea and Bush said he would ask Congress to permit Seoul to buy the full complement of U.S. military hardware like NATO allies.

The United States has about 28,000 troops stationed in South Korea to help it defend against invasion by the communist North.

Bush also called on Congress to approve a free trade agreement with South Korea, but Democrats who control the House of Representatives and Senate have expressed concerns that it does not provide adequate access to the Korean auto market.

Congress "must reject protectionism, must not turn its back on a friend and ally like Korea, must approve the free trade agreement with Korea this year," Bush said.

## **Bush defends declarations stance**

**April 19, 2008**

By Jon Ward - CAMP DAVID, Md. — President Bush today rejected the notion that the U.S. has lowered the bar for North Korea's declaration of nuclear activity, pushing back against criticism from a former top administration official.

The North Koreans, Mr. Bush said, "have yet to make a full declaration."

"Why don't we just wait and see what they say before people go out there and start giving their opinions about whether or not this is a good deal or a bad deal?" he said, during a press conference at his Camp David retreat with South Korean President Lee Myung-bak.

Mr. Bush said that critics of his approach to Pyongyang – which include John Bolton, the president's former top counter proliferation official at the State Department – are "jumping ahead of the game."

Mr. Bolton, who was also the president's ambassador to the United Nations in 2005 and 2006, has turned on the Bush administration in the last year.

Mr. Bolton insists that Mr. Bush has allowed Secretary of State Condoleezza Rice to derail a hardline approach towards North Korea.

After the White House said this week that North Korea would be allowed to declare its nuclear proliferation activities in a separate declaration that would remain secret, Mr. Bolton said the administration is now "in full retreat."

Dennis Wilder, the president's top Asia adviser, insisted on Thursday that a North Korean declaration of nuclear bomb-making activities would not be "decoupled" from a declaration on passing along nuclear technology or materials to other countries.

"No one has let them off the hook with that declaration," Mr. Wilder said.

But Miss Rice said this week that she would only disclose "a sense" of what the North Koreans had revealed about past proliferation, and offered to brief Congress.

North Korean dictator Kim Jong-il had committed to provide a "full declaration," which the U.S. said for months included proliferation, by the end of 2007.

Mr. Bolton said in a phone interview that the key issue remains whether the U.S. will take North Korea off the state sponsors of terrorism list without verifying that they have destroyed all nuclear weapons and all bomb-making facilities.

Mr. Bush today simply said to "wait and see," and did not address the issue of separate agreements for nuclear production and nuclear proliferation.

“There's all kinds of rumors about what is happening and what's not happening. Obviously I'm not going to accept a deal that doesn't advance the interests of the region,” Mr. Bush said.

Mr. Bush indicated that he might not have been pleased with all the disclosures this week by Mr. Wilder and Miss Rice. He compared U.S. and North Korean press freedoms to make the point that in the U.S., government officials talk to the press more openly.

But when the president said that “there's all kinds of people in the administration talking and sharing information with you -- some of it authorized, some of it's not,” he looked over at the delegation of U.S. officials, which included both Miss Rice and Mr. Wilder.

Miss Rice could be seen after the press conference speaking animatedly with White House spokesman Gordon Johndroe.

## **U.S. Team Headed to Pyongyang in Search of 'Significant Progress'**

By Blaine Harden

Washington Post Foreign Service

Tuesday, April 22, 2008; A11

*[EXCERPT]*

SEOUL, April 21 -- For the first time since the United States eased demands on North Korea for nuclear disclosure, a U.S. delegation is headed to the communist state to try to verify the extent of its nuclear program.

Led by Sung Kim, a senior State Department expert on Korea, the interagency delegation arrived here late Monday and was scheduled to drive north to Pyongyang on Tuesday across the heavily fortified border.

"Everything is subject to verification," Kim told reporters after arriving here. He said that he hoped the visit would bring "significant progress" and that he expected detailed discussion of a much-delayed declaration North Korea has promised about its nuclear program.

That declaration, under a disclosure-for-aid deal negotiated last fall and due last Dec. 31, was to have been a "complete and correct" listing of the North's nuclear activities, from the manufacture of plutonium to details of uranium enrichment and involvement in a Syrian facility bombed last year by Israel.

Both plutonium and highly enriched uranium can be used in building nuclear weapons.

But North Korea has consistently refused to talk publicly about uranium enrichment and nuclear proliferation.

To salvage the negotiations, the United States said this month that it would be satisfied if the North would "acknowledge" evidence and concern about these matters, without a precise public admission.

In the meantime, the North -- in return for the lifting of sanctions -- would finish dismantling its principal nuclear plant and account for all the plutonium it has produced.

North Korea has said it has produced about 66 pounds of plutonium, but the U.S. government estimates it has made more. Both sides agree that significant parts of the Yongbyon reactor have already been disabled.

The delegation heading to Pyongyang on Tuesday plans to stay in North Korea for several days, a U.S. Embassy spokesman said.

## **CIA to describe North Korea-Syria nuclear ties**

Officials will tell Congress members this week that North Korea was helping Syria build a reactor last year when it was destroyed by an Israeli airstrike, a U.S. official says.

By Paul Richter and Greg Miller

Los Angeles Times Staff Writers

10:15 PM PDT, April 22, 2008

WASHINGTON — CIA officials will tell Congress on Thursday that North Korea had been helping Syria build a plutonium-based nuclear reactor, a U.S. official said, a disclosure that could touch off new resistance to the administration's plan to ease sanctions on Pyongyang.

The CIA officials will tell lawmakers that they believe the reactor would have been capable of producing plutonium for nuclear weapons but was destroyed before it could do so, the U.S. official said, apparently referring to a suspicious installation in Syria that was bombed last year by Israeli warplanes.

The CIA officials also will say that though U.S. officials have had concerns for years about ties between North Korea and Syria, it was not until last year that new intelligence convinced them that the suspicious facility under construction in a remote area of Syria was a nuclear reactor, the official said, speaking on condition of anonymity when discussing plans for the briefing.

By holding closed, classified briefings for members of several congressional committees, the administration will break a long silence on North Korean-Syrian nuclear cooperation and on what it knows about last year's destruction of the Syrian facility. Nonetheless, it has been widely assumed for months that many in the administration considered the site a nuclear installation.

It was not clear Tuesday how recently North Korea may have been aiding Syria. But disclosure of the relationship to the committees is likely to bring criticism from conservative lawmakers who already believe that U.S. overtures to North Korea have offered the government in Pyongyang too many benefits without assurances that it will disclose the extent of its nuclear arms effort or ultimately surrender its weapons.

U.S. officials provided little explanation of why they want to brief lawmakers on the North Korean-Syrian links after declining to do so for months.

A senior Senate aide said the timing appears driven by a Bush administration desire to apprise committee members of the latest intelligence on the reactor before releasing some of the information.

"I have this strong impression the reason they want to brief the committee is they want to say something publicly," said the aide, who discussed contacts with the administration only on condition of anonymity.

The administration has briefed senior members of the House and Senate intelligence committees, a senior Senate aide said. But other lawmakers have remained in the dark. The administration has been under pressure to extend briefings to a larger circle of lawmakers.

The administration is planning to ease sanctions on North Korea as part of talks aimed at removing Pyongyang's nuclear weapons. The six nations involved in the talks, which also include China, Russia, South Korea and Japan, have been negotiating since 2003.

After a breakthrough last year in which North Korea agreed to shut down its only functioning nuclear production facility, it was rewarded with fuel oil and the release of frozen bank funds. But talks stalled after the Bush administration demanded that Pyongyang provide a full description of its past nuclear activities by a December 2007 deadline.

Shifting course, U.S. officials said two weeks ago that it would be sufficient for the North Koreans to acknowledge U.S. concerns about their nuclear activities. In return, administration officials would remove North Korea from the stigmatizing U.S. list of countries that sponsor terrorism and Pyongyang would no longer be subject to U.S. trade sanctions under the Trading with the Enemy Act, a 1917 law.

The administration shift appeared to give ground to North Korea in the negotiations, spurring fierce criticism from U.S. conservatives and debate over the broader plan to ease sanctions as a step toward dismantling Pyongyang's weapons programs.

But under the latest approach, U.S. officials will describe to the North Koreans at least some of their conclusions about Pyongyang's links with Syria. Some analysts speculated that U.S. officials may wish to avoid sharing intelligence with North Korea before they have briefed most members of Congress.

Danielle Pletka, a vice president of the conservative-leaning American Enterprise Institute think tank, said the congressional briefings were simply a step the administration needed to take to move forward. "This is a box-checking exercise," she said.

Gordon Johndroe, a White House spokesman, said, "The administration routinely keeps appropriate members of Congress informed of national security and intelligence matters." He declined to comment on specific sessions, however.

Rep. Peter Hoekstra of Michigan, the ranking Republican on the House Intelligence Committee, complained in an opinion piece in the Wall Street Journal in October that the administration "has thrown an unprecedented veil of secrecy around the Israeli airstrike," and that based on information he had been given "it is critical for every member of Congress to be briefed on this incident, and as soon as possible."

Some administration officials are believed to be unhappy with the latest developments in talks with North Korea. But several analysts were skeptical of speculation that the briefing might have been initiated by internal opponents who hope to set off an outcry that would scuttle any deal with Pyongyang.

"You'll have some outcry, but I doubt there are enough people on Capitol Hill even paying attention to oppose it," said Gordon Flake, who follows the issue as executive director of the Maureen and Mike Mansfield Foundation and is a critic of such a pact.

He speculated that lawmakers would be reluctant to stand in the way of the deal, because that would risk criticism that they had blocked a hopeful avenue of progress on a top national security problem.

Another senior Senate aide said that although the disclosure might bring complaints, Congress would not turn against the negotiations with North Korea. The critics would not be able to come up with any better alternative, he said, speaking on condition of anonymity when discussing senators' views.

## U.S. to Link North Korea to Syria

Congress to Be Told

Damascus Got Help

Building a Reactor

By JAY SOLOMON

April 23, 2008; Page A7

[As of 2008-04-23T13:15Z, Google News lists this story as being posted "16 hours ago"]

WASHINGTON -- North Korea was helping Syria build a plutonium-producing nuclear reactor before Israel bombed the site last September, the Bush administration is set to tell Congress.

The new information could increase the position of hard-liners in Congress and the administration who have argued against a deal being negotiated to dismantle North Korea's nuclear-weapons program. The hard-liners say Pyongyang hasn't provided enough assurances it will dismantle its atomic arsenal in return for economic and diplomatic incentives.

Neither Israel nor the U.S. has made public information about the strike in Syria, though speculation has been widespread that the targeted site was a nascent nuclear reactor. Some Republicans have charged that the U.S. is playing down the matter to avoid hurting talks with North Korea.

This week, the Central Intelligence Agency is expected to begin briefing members of the Senate and House intelligence committees on the Israeli strike, according to congressional and administration officials. The briefings will be based in part on intelligence provided by the Israeli government, they said.

The CIA is expected to say it believes North Korea was helping Syria develop a plutonium-producing nuclear reactor similar to the Yongbyon facility North Korea built north of Pyongyang, said an official familiar with the deliberations. It also is likely to say North Korean workers were active at the Syrian site at the time of the Israeli attack.

It isn't clear what specific evidence the U.S. officials will present to support their allegations. They are likely to acknowledge uncertainty about whether the alleged Syrian reactor was designed solely to produce nuclear power for peaceful purposes or also to make fissile material for a nuclear weapon, according to the U.S. official.

Syrian officials have denied that they have sought to develop a nuclear capability of any kind and say the Bush administration is hyping the issue as a means to pursue an aggressive policy against both Iran and Syria.

"We have seen in the past that this administration doesn't require evidence, but will use false pretenses" to pursue its agenda, said Ahmed Salkini, a spokesman at the Syrian Embassy in Washington. "We hope the administration doesn't take a miscalculated step that could cause even more chaos in our region."

A spokesman for the White House's National Security Council, Gordon Johndroe, said: "The administration routinely keeps appropriate members of Congress informed of national security and intelligence matters, but I'm going to decline to comment on any specific briefings." A spokesman for the CIA declined to comment.

The Bush administration's national-security team is divided between those who want to pursue negotiations with North Korea and Iran about their nuclear ambitions and those who want to take a harder line.

The hard-liners were dealt a blow in December with the release of a National Intelligence Estimate concluding that Tehran stopped developing nuclear weapons in 2003. The White House has challenged the report, as have some in the intelligence community. By contrast, an airing of the alleged North Korea-Syria ties could put those who favor negotiations on the defensive.

In recent months, Republicans in Congress have been pushing the White House for a wider briefing on the Israeli attack. "Things seem to be coming to a head now" on North Korea, said a Republican staffer on Capitol Hill who has pushed for the release of the intelligence. "There's a sense we need to clear the decks so that we can move forward."

The U.S.-led diplomatic drive to disarm North Korea of its nuclear weapons is at a sensitive stage. U.S. officials estimate that North Korea extracted between 30 kilograms (66 pounds) and 60 kilograms (132 pounds) of plutonium from its now-shut Yongbyon reactor, although some believe the total could be higher. North Korea detonated a nuclear device in 2006.

The Bush administration has five U.S. officials working in North Korea to permanently disable the Yongbyon reactor. The dismantling is part of the first stage of a disarmament agreement the U.S. and North Korea reached last year. Under that stage, Washington and its negotiating partners have shipped heavy fuel oil to the North.

In the second stage, North Korea is supposed to give a thorough accounting of its nuclear activities at home and abroad in exchange for certain U.S. concessions, including removal from Washington's list of terrorism sponsors.

U.S. negotiators have pared initial demands that North Korea declare everything up front, say U.S. officials. State Department negotiators have hoped to persuade North Korea to acknowledge at least in private that it helped Syria's nuclear program and that, separately from the Yongbyon program, it tried to enrich uranium to create fuel for a nuclear weapon.

Hard-liners say the Syrian developments show North Korea can't be trusted. They say it is time to break off negotiations and step up pressure on North Korean leader Kim Jong Il.

North Korea, too, may pull back from talks if its alleged support for Syria receives a public airing in Washington, some U.S. officials and analysts say.

"Who knows how they'll respond?" said a U.S. official working on proliferation activities. "Maybe they'll kick us out of Yongbyon?"

Israel has publicly been silent on the Syria strike, wary of stoking tensions when it is facing threats from the Islamist groups Hezbollah and Hamas.

Still, Prime Minister Ehud Olmert's government consented in recent weeks to a wider airing of its intelligence surrounding the Syria strike, say officials involved in deliberations. Israel has long worried about North Korea's military supplies to Iran and Syria.

Conservative pundits in the U.S. have attacked Assistant Secretary of State Christopher Hill, the State Department's point man on North Korea, for fashioning a potential deal that is too weak. Vice President Dick Cheney's office and members of the nonproliferation bureaus at the Pentagon and State Department are particularly skeptical of the current denuclearization deal.

This week, the State Department dispatched envoy Sung Kim to Pyongyang in a bid to reach an agreement on the list of nuclear assets North Korea will agree to declare and verify as part of the disarmament process. Mr. Kim is focusing on gaining a specific accounting of the plutonium Pyongyang extracted from Yongbyon.

## **US thinks N.Korea aided Syria on plutonium program**

Wed Apr 23, 2008 2:11pm EDT

(Adds details, quotes, background)

By Arshad Mohammed

WASHINGTON, April 23 (Reuters) - The Bush administration is expected to tell U.S. lawmakers on Thursday that it believes North Korea was helping Syria build a nuclear reactor that could produce plutonium, a U.S. official said on Wednesday.

The White House has said little about the question of any North Korean nuclear assistance to Syria since Israel conducted a mysterious Sept. 6 air strike inside Syria that media reports said was aimed at a nuclear site built with Pyongyang's help.

"The sense is that the Syrians, with the help of the North Koreans, were attempting to build an undeclared facility that could indeed produce plutonium," said the official, who spoke on condition he not be named because of the sensitivity of the matter, of the congressional briefings' likely content.

The Los Angeles Times and the Wall Street Journal reported the information in their Wednesday editions.

While the official did not explicitly tie the closed-door briefings to the Israeli strike, he hinted at this by saying "if an undeclared reactor in dangerous hands were put out of commission before it was operational, that's a good thing."

While a handful of lawmakers were briefed on the issue last year, the decision to widen the circle comes as Washington appears closer to a deal for North Korea to provide an overdue declaration of its nuclear programs.

Once the poor, Communist state has produced the declaration, the United States is expected to ease sanctions on Pyongyang that flow from its presence on the U.S. list of state sponsors of terrorism and the U.S. Trading With the Enemy Act.

Analysts believe Thursday's briefings aim to persuade members of Congress that easing the sanctions is justified.

### **SKEPTICISM**

There is skepticism, especially among the administration's Republican allies in Congress, that relaxing the sanctions is warranted and there are concerns North Korea will not produce the "complete and correct" declaration of its nuclear programs it has promised under a multilateral agreement.

The declaration is one step toward carrying out a 2005 agreement among the two Koreas, China, Japan, Russia and the United States in which North Korea committed to abandon any nuclear weapons and programs.

The briefings could also open a diplomatic Pandora's box for the United States with implications for its dealings with close ally Israel as well as with Syria and North Korea, which have had poor relations with Washington.

The U.S. intelligence community is expected to give multiple briefings on Thursday to members of the congressional committees that oversee armed services, foreign affairs and intelligence matters.

The U.S. official who asked not to be named said that there was "good intelligence ... from more than one place and more than one source" on the suspected North Korean nuclear aid to Syria.

One matter of sensitivity for Israel -- which is widely believed to be the source of some of the intelligence on Syria -- is the possibility that wider disclosure could antagonize Damascus and produce a negative reaction.

Syria is regarded by the United States as a state sponsor of terrorism and it has long hosted Palestinian groups that have carried out attacks on Israelis.

The briefing could also irk North Korea, which U.S. officials say is sensitive to the possible disclosure of any nuclear proliferation it may have engaged in.

However, some congressional aides have said that a briefing is a necessity if the administration is to win support for continuing the six-party process and for providing the funds needed to dismantle Pyongyang's nuclear facilities.

## **NKorea gave Syria nuclear help: US official**

1 hour ago [*Accessed 2008-04-23T19:50Z*]

WASHINGTON (AFP) — In a move that could upset US policy towards North Korea, US intelligence is set to tell lawmakers this week that Pyongyang shared nuclear know-how with Syria, a US official said Wednesday.

The United States has concluded that the Stalinist regime's help came both before and after the destruction of a nuclear reactor being built in secret with North Korean help, said the official, who requested anonymity.

"If it had been complete, the reactor would have been capable of producing plutonium for nuclear weapons but it was destroyed before it could do so," the official said. "That's the result of solid intelligence."

The official did not specify who had knocked out the facility, but Israel carried out an airstrike inside Syrian territory in September in a move widely reported to have targeted a nuclear site.

US intelligence officials plan to brief US lawmakers from key committees on Thursday, amid deep concern in the US Congress about progress in six-country talks to dismantle North Korea's nuclear programs.

The White House declined to confirm details of the briefings, but spokeswoman Dana Perino and US Defense Secretary Robert Gates said separately that information on the issue could "soon" be made public.

Asked when the public would be told about what US intelligence believes about such collaboration, Gates told a Pentagon news conference: "Soon." He refused to elaborate.

"I think Secretary Gates said it well. 'Soon' is a good, short answer," Perino told reporters at her daily briefing amid a flurry of news reports that North Korea had aided Syria in a covert drive to obtain nuclear capability.

"I'm not going to be able to say much on it today. And I'm not confirming anything at this briefing in regards to the substance," Perino said as media outlets said the CIA would brief lawmakers starting on Thursday.

Asked whether she could give a reason for her silence, Perino replied: "No, I cannot. As you know, we've been asked questions about this since last fall. We have declined to comment, and I am not able to do so at this time."

"If you guys can just be a little bit patient and let some conversations happen on the Hill (Congress), then we will talk about it more at that time," the spokeswoman said.

Starting late Tuesday, US media outlets, citing unnamed US officials, said that the Central Intelligence Agency (CIA) would tell lawmakers from key committees that Israel hit a nuclear site, possibly a reactor, being constructed with North Korean help.

The news comes at a particularly sensitive time for the six-country talks aimed at stripping North Korea of its nuclear programs, months after Pyongyang was supposed to have formally "declared" the extent of its nuclear and proliferation activities.

The Wall Street Journal said the CIA was expected to confirm that Pyongyang was helping Damascus build a reactor like North Korea's Yongbyon site, and that North Korean workers were at the Syrian site at the time of the Israeli attack.

It was unclear to what degree the briefings will include evidence that Syria sought nuclear weapons, the anonymous official told the daily.

## **Source: Intel shows N. Korea-Syria nuclear link**

From Barbara Starr

CNN Pentagon Correspondent

updated 46 minutes ago [*Accessed 2008-04-23T21:45Z*]

WASHINGTON (CNN) -- U.S. intelligence officials will tell members of Congress on Thursday that North Korea was helping Syria build a nuclear facility, according to a source familiar with internal administration discussions.

The facility in question was bombed by Israeli planes in September.

The United States and Israel have refused to comment on what the target of the strike was.

Some members of Congress have demanded to know what information the administration has about the incident.

Thursday's briefings to intelligence, foreign relations and armed services committees in both chambers of Congress are intended to show that the building hit was a North Korean-designed reactor being built with assistance from Pyongyang, the source said.

It is less clear whether North Korea had provided or was about to provide essential fuel components to Syria, according to the source.

The briefings could complicate the six-party talks at which the United States and other major world powers are trying to get North Korea to give up its nuclear ambitions. Pyongyang has resisted disclosing its proliferation activities.

The United States has softened its demand that North Korea publicly admit to having a program to develop highly enriched uranium and to having provided Syria with nuclear technology, key questions that have left the negotiations stalled for months.

Officials said the United States concluded that it is more important to get a handle on the program than to have North Korea "confess" past nuclear sins.

The original agreement in the six-party talks did not deal with proliferation, but Secretary of State Condoleezza Rice said last week that it was important to do so "in light of some recent concerns about North Korean activities in proliferation."

"Syria is most certainly an issue in proliferation," she said, adding, "We have several nonproliferation questions on the table about North Korea."

State Department spokesman Sean McCormack said, "The negotiations on the six-party talks and all the actions the parties take will be judged on their own merits."

He added that President Bush and Rice would make decisions based on Washington's "compelling interest" to rid North Korea of its nuclear program.

The State Department and the Pentagon have said they are not involved in Thursday's congressional briefings. A White House spokeswoman declined to comment.

In the initial days after the attack on the Syrian facility, fewer than two dozen people in the U.S. government were briefed on the intelligence surrounding the strike, and all were ordered to keep the information secret, according to a Pentagon official who asked not to be named.

The briefing notice to House members describes Thursday afternoon's topic as regarding the Middle East, a congressional source said.

The briefing might include video shot inside the Syrian facility before it was bombed, although a final decision about whether to show the video has not been made. It is believed that the video was shot by Israeli intelligence or a mole for the Israelis, the source close to the administration said.

A media briefing is also being considered, but some in the administration and Israel are concerned about provoking Syria with the disclosure.

But when Defense Secretary Robert Gates was asked Wednesday when the American public would be told about allegations of North Korea's nuclear assistance to Syria, he replied: "Soon."

Israel bombed the facility September 6, 2007, and satellite images show that little was left of it.

Since the strike, questions have arisen as to why the Israelis took the action and whether the United States supported the mission.

Syrian officials said the bombing was an Israeli raid on a building they described as an empty military warehouse.

The International Atomic Energy Agency said in October that the agency had "no information about any undeclared nuclear facility in Syria and no information about ... reports" regarding an alleged facility.

A satellite photograph of the area taken in January seemed to indicate new construction on the site where the facility once stood. E-mail to a friend E-mail to a friend

## News Transcript

Presenter: Secretary of Defense Robert M. Gates

April 23, 2008

DoD News Briefing with Secretary Gates from the Pentagon

*[EXCERPT]*

Q Mr. Secretary, this week key members of Congress are being briefed on what U.S. intelligence knows about North Korea's providing of nuclear-technical expertise to Syria. When, if ever, will it be appropriate for the American public to be told about what the U.S. believes was going on there?

SEC. GATES: Soon.

Q And can you say anything about it?

SEC. GATES: I think "soon" will do the job.

For Immediate Release

April 23, 2008

Press Briefing by Dana Perino  
James S. Brady Press Briefing Room  
12:45 P.M. EDT

*[EXCERPT]*

Q Secretary Gates was asked today when the American public would be told about North Korea's nuclear assistance to Syria, and he said, "soon." Can you tell us what the administration has in mind and how you're going to roll it out?

MS. PERINO: No, I think Secretary Gates said it well. "Soon" is a good, short answer. We are going to be -- continuing to talk to members of Congress. That action will be happening soon, and as soon as we have more from there --

Q That will, or won't?

MS. PERINO: Will.

Q Has it started yet?

MS. PERINO: Well, let me decline to comment until they decide to talk to members of Congress more -- in an additional fashion, and then we can provide more. I'm not going to be able to say much on it today, and I'm not confirming anything at this briefing in regards to the substance of the question.

Q Well, he's the one who said, "soon."

MS. PERINO: And he was right. (Laughter.)

Q Okay, the next question is, how does this, whatever North Korea has been doing, how does it affect the six-party talks?

MS. PERINO: I think that -- let's let the action of "soon" happen and then we'll be able to talk more fully about it.

Roger.

Q Can you just shed a little light on why you can't talk about it, or at least --

MS. PERINO: No. You know that we've been asked questions about this since last fall. We have declined to comment, and I'm not able to do so at this time.

Q Is it because of the briefing tomorrow on the Hill, and are you just waiting until that --

MS. PERINO: It's not appropriate for me at this point, at this moment, to talk about it from here, and so I'll decline to do so until I'm allowed to.

Q Does it raise -- whatever it is -- (laughter) -- does it raise U.S. concerns even more about North Korea and Syria?

MS. PERINO: I'd love to be able to answer your question, but if I did, then it would answer the other questions that I've already said I can't answer. And so let's just -- if you guys can just be a little bit patient and let some conversations happen on the Hill, then we'll be able to talk about it more at that time.

## **Videotape Shows Secret Syrian Site Modeled After N. Korean Reactor**

By Robin Wright

Washington Post Staff Writer

Wednesday, April 23, 2008; 6:02 PM

A videotape taken inside a secret Syrian facility last summer convinced both the Israeli government and the Bush administration that it was modeled after a North Korean reactor that produced plutonium for nuclear weapons, according to senior U.S. officials who said it would be shared with lawmakers tomorrow.

The videotape of the interior of the site, code named Al Kibar by the Syrians, also showed North Koreans working inside the facility, the officials said. It played a pivotal role in Israel's decision to bomb the facility last September, a move that was publicly denounced by Syria but not by Washington.

Sources familiar with its contents say the video shows the design of the Syrian reactor core is the same as the North Korean reactor at Yongbyong, including a virtually identical physical configuration and number of holes for the fuel rods. It shows "remarkable resemblances inside and out to Yongbyon," said a U.S. intelligence official. A nuclear weapons specialist called the video "very, very damning."

Nuclear weapons analysts and U.S. officials predicted that the planned disclosures to Capitol Hill by CIA director Michael V. Hayden could seriously complicate Washington's accelerating effort to improve relations with North Korea as a way to halt that country's nuclear weapons program. They come as different factions inside the administration have been battling over the merits of striking a nuclear-related deal with North Korea.

Syrian Ambassador Imad Moustapha today angrily denounced the U.S. and Israeli claims. "If they show a video, remember that the U.S. went to the UN Security Council and displayed evidence and images about weapons of mass destruction in Iraq. I hope the American people will not be as gullible this time around," he said.

U.S. officials said that Israel shared the video with the United States before the bombing on Sept. 6, after Bush administration officials expressed skepticism last spring that the site, visible by satellite since 2001, was a nuclear reactor built with North Korea's assistance.

But intelligence officials will tell members of the House and Senate intelligence and foreign relations committees that the Syrian facility was not yet fully operational and that there was no plutonium for the reactor and no indication of a fuel capability, according to U.S. officials and intelligence sources.

David Albright, president of Institute for Science and International Security and a former U.N. weapons inspector, said the absence of such evidence warrants skepticism that the reactor was part of an active weapons program. "The United States and Israel have not identified any Syrian plutonium separation facilities or nuclear weaponization facilities. The lack of any such facilities gives little confidence that the reactor is part of an active nuclear weapons program. The apparent lack of fuel, either imported or indigenously produced, also is curious and lowers confidence that Syria has a nuclear weapons program," Albright said.

U.S. intelligence officials will also tell the congressional committees that the new site Syria has rebuilt at Al Kibar is not for a reactor. "The successful engagement of North Korea in the Six Party Talks means that it was unlikely to have supplied Syria with such facilities or nuclear materials after the reactor site was destroyed," Albright said. "Indeed, there is little if any evidence that cooperation between Syria and North Korea extended beyond the date of the destruction of the reactor."

## **N. Koreans Taped At Syrian Reactor**

Video Played a Role in Israeli Raid

By Robin Wright

Washington Post Staff Writer

Thursday, April 24, 2008; A01

A video taken inside a secret Syrian facility last summer convinced the Israeli government and the Bush administration that North Korea was helping to construct a reactor similar to one that produces plutonium for North Korea's nuclear arsenal, according to senior U.S. officials who said it would be shared with lawmakers today.

The officials said the video of the remote site, code-named Al Kibar by the Syrians, shows North Koreans inside. It played a pivotal role in Israel's decision to bomb the facility late at night last Sept. 6, a move that was publicly denounced by Damascus but not by Washington.

Sources familiar with the video say it also shows that the Syrian reactor core's design is the same as that of the North Korean reactor at Yongbyon, including a virtually identical configuration and number of holes for fuel rods. It shows "remarkable resemblances inside and out to Yongbyon," a U.S. intelligence official said. A nuclear weapons specialist called the video "very, very damning."

Nuclear weapons analysts and U.S. officials predicted that CIA Director Michael V. Hayden's planned disclosures to Capitol Hill could complicate U.S. efforts to improve relations with North Korea as a way to stop its nuclear weapons program. They come as factions inside the administration and in Congress have been battling over the merits of a nuclear-related deal with North Korea.

Syrian Ambassador Imad Moustapha yesterday angrily denounced the U.S. and Israeli assertions. "If they show a video, remember that the U.S. went to the U.N. Security Council and displayed evidence and images about weapons of mass destruction in Iraq. I hope the American people will not be as gullible this time around," he said.

U.S. officials said that Israel shared the video with the United States before the Sept. 6 bombing, after Bush administration officials expressed skepticism last spring that the facility, visible by satellite since 2001, was a nuclear reactor built with North Korea's assistance. Israel has a nuclear weapons arsenal that it has never declared.

But beginning today, intelligence officials will tell members of the House and Senate intelligence, armed services and foreign relations committees that the Syrian facility was not yet fully operational and that there was no uranium for the reactor and no indication of fuel capability, according to U.S. officials and intelligence sources.

David Albright, president of Institute for Science and International Security (ISIS) and a former U.N. weapons inspector, said the absence of such evidence warrants skepticism that the reactor was part of an active weapons program.

"The United States and Israel have not identified any Syrian plutonium separation facilities or nuclear weaponization facilities," he said. "The lack of any such facilities gives little confidence that the reactor

is part of an active nuclear weapons program. The apparent lack of fuel, either imported or indigenously produced, also is curious and lowers confidence that Syria has a nuclear weapons program."

U.S. intelligence officials will also tell the lawmakers that Syria is not rebuilding a reactor at the Al Kibar site. "The successful engagement of North Korea in the six-party talks means that it was unlikely to have supplied Syria with such facilities or nuclear materials after the reactor site was destroyed," Albright said. "Indeed, there is little, if any, evidence that cooperation between Syria and North Korea extended beyond the date of the destruction of the reactor."

The timing of the congressional briefing is nonetheless awkward for the Bush administration's diplomatic initiative to persuade North Korea to abandon its nuclear program and permanently disable the reactor at Yongbyon. The CIA's hand was forced, officials said, because influential lawmakers had threatened to cut off funding for the U.S. diplomatic effort unless they received a full account of what the administration knew.

Also, the terms of a tentative U.S.-North Korean deal require that North Korean officials acknowledge U.S. evidence about its help with the Syrian program, and so the disclosures to Congress are meant to preempt what North Korea may eventually say.

Following talks with the South Korean president last weekend, President Bush said that it was premature to make a judgment about whether North Korea was willing to follow through with a commitment to publicly declare its nuclear-related programs, materials and facilities.

Washington and Pyongyang still differ over what should be included in that declaration, a State Department official said. Sung Kim, the State Department director of the Office of Korean Affairs, is in Pyongyang for discussions about the contents.

Syria's top envoy to Washington said the CIA briefings were meant to undermine diplomatic efforts with North Korea, not to confront Syria. Why, Moustapha said, are "they repeating the same lies and fabrications when they were planning to attack Iraq? The reason is simple: It's about North Korea, not Syria. The neoconservative elements are having the upper hand."

He added, "We do not want to plan to acquire nuclear technology as we understand the reality of this world and have seen what the U.S. did to Iraq even when it did not have a nuclear program. So we are not going to give them a pretext to attack Syria."

Before the site was bombed, the facility included a tall, boxy structure like those used to house gas-graphite reactors and was located seven miles north of the desert village of At Tibnah in the Dayr az Zawr region, 90 miles from the Iraqi border, according to photographs released by the ISIS, a nonprofit research group.

The White House and the CIA declined to comment on the briefings.

## **U.S. Sees N. Korean Links to Reactor**

By DAVID E. SANGER

April 24, 2008

WASHINGTON — After seven months of near-total secrecy, the White House is preparing to make public on Thursday video evidence of North Koreans working at a suspected Syrian nuclear reactor just before it was destroyed in an Israeli airstrike last September.

Until now, the administration has refused to discuss the video or the attack, other than in a highly classified briefing for a few allies and crucial members of Congress.

But senior officials in Israel and the United States have said the target was a nascent nuclear reactor that had been under construction for years. Israeli and American analysts had concluded that it was loosely modeled on the reactor North Korea used to obtain the fuel for its small nuclear weapons arsenal.

Israeli jets destroyed the site on Sept. 6, and the Syrians, after issuing some protests, bulldozed the area and constructed a building on the exact footprint of the old one. They have refused to allow international nuclear inspectors to visit the location.

The timing of the administration's decision to declassify information about the Syrian project has raised widespread suspicions, especially in the State Department, that Vice President Dick Cheney and other administration hawks were hoping that releasing the information might undermine a potential deal with North Korea that would take it off an American list of state sponsors of terrorism.

"Making public the pictures is likely to inflame the North Koreans," said one senior administration official who would not speak on the record because the White House and the State Department have declared there would be no public comment until the evidence is released. "And that's just what opponents of this whole arrangement want, because they think the North Koreans will stalk off."

But another senior official said it was possible that the revelations would force the North Koreans to describe their actions in Syria more fully when they issued a long delayed declaration of their nuclear activities.

That proposed deal, negotiated by Christopher R. Hill, the assistant secretary of state for East Asian and Pacific affairs and the primary interlocutor with North Korea, has become the latest battleground in a seven-year struggle within the Bush administration over North Korea policy.

That policy has veered from efforts to squeeze North Korea in hopes that the government of Kim Jong-il will collapse, to negotiating with the country alongside Russia, China, South Korea and Japan, each of which has pursued a somewhat different approach toward the North.

Mr. Hill was put in charge of the talks more than three years ago in the hope of finding a new way to deal with the North Koreans. But support for him has wavered, and President Bush has repeatedly warned aides not to agree to anything that "makes me look weak," according to former officials who sat in on meetings with him on North Korea.

Mr. Cheney's office and other conservatives have argued that Mr. Hill's proposed deal would amount to a huge concession. In return for a minimal declaration from North Korea — an accounting of how much plutonium it has produced — it would be removed from the terrorism list and would no longer be subject to economic sanctions under the Trading With the Enemy Act.

North Korea has refused to say what, exactly, it provided to the Syrians, or what happened to an effort to start a second pathway to building arms, using uranium.

The deal would allow the North to continue to fudge on those matters, leaving unexplained the question of why it appeared to be buying uranium enrichment equipment from Pakistan. That equipment, many experts believe, was intended to help North Korea build a second path to a bomb, in case it was forced to give up its plutonium program.

In a presentation on Thursday to crucial members of Congress, and then in a presentation to reporters, American intelligence officials are expected to show images from a video, believed to have been obtained through Israeli intelligence services. The video, which Mr. Hill has shown to senior South Korean officials, shows Korean faces among the workers at the Syrian plant.

Other pictures, officials say, show what appears to be the construction of a reactor vessel inside the building that Israel later destroyed. It is unclear what the administration is willing to release. Syria's ambassador to the United States, Imad Moustapha, did not answer messages left for him on Wednesday.

For weeks after the Israeli attack in September, neither Israeli nor American officials would talk about the attack, Israel's first on a nuclear site since the 1981 attack on the Osirak nuclear reactor in Iraq.

When The New York Times published a lengthy account of the Syria attack on Oct. 14, revealing that Israeli and American analysts judged that the target was a partly constructed nuclear reactor, Mr. Bush and the White House refused to answer questions about it. Later, officials said they feared that the Syrians would retaliate against Israel if they felt publicly humiliated.

It is not clear what has changed, apart from the politics of the moment. Mr. Hill's boss, Secretary of State Condoleezza Rice, has not voiced strong support for Mr. Hill's effort to coax the North Koreans along, granting them rewards for steps along the way to compliance with a deal that calls, ultimately, for the country to give up its weapons.

Ms. Rice has been a strong critic of the 1994 agreement between North Korea and the Clinton administration, complaining that it was "front loaded" with rewards for the North.

That is exactly what critics say she and Mr. Hill have done in the most recent agreement. But Mr. Hill has argued in private that the Syrian episode and the uranium enrichment are side shows, and that the critical issue is stopping North Korea from producing more plutonium and giving up what it has. But his State Department colleagues say that he has been told not to defend the deal, or even explain it.

"He's feeling pretty abandoned by Rice and Bush," one of his colleagues said Wednesday. Mr. Hill did not respond to messages.

## **Syria's nuke facility was nearly completed when Israel bombed it**

By Nicholas Kralev and Sara A. Carter

April 24, 2008

The Bush administration is set to tell Congress today that a nuclear facility in Syria built with North Korean help was nearly complete when Israel bombed it in September, but that Pyongyang has not provided any further nuclear assistance to the hard-line Arab nation, at least at that site, U.S. officials said.

CIA Director Michael V. Hayden and other intelligence officials are expected to brief several congressional committees in closed-door sessions, breaking the administration's silence on the issue. The facility has become a major issue in six-nation negotiations to end the North's nuclear programs.

"The belief is that the reactor was nearing completion," said one official familiar with the content of the briefings. "It would have been able to produce plutonium."

According to wire services, another U.S. official said the intelligence that will be presented to lawmakers would include "some pretty compelling before and after [aerial] pictures of the site."

The presentation is expected to include still photographs taken from videotape recorded inside the Syrian facility, the official said, adding that the intelligence is expected to show that Syria was building a nuclear reactor complex much like the North Korean nuclear reactor complex at Yongbyon.

The Yongbyon reactor has been almost disabled by U.S. specialists. Both programs were based on technology to produce plutonium — a man-made element used to make the fissile core of atomic bombs.

Administration and congressional officials spoke about the Syrian facility in the past tense. One official said it was "good that it was put out of commission," and others added that the Israeli air strike occurred before fuel "had been placed in the reactor."

Satellite photos taken before the Israeli strike show a large cubical building thought to have housed the reactor. The building is absent from photos taken afterward.

Defense Secretary Robert M. Gates said the administration will be able to discuss the issue publicly "soon," but the official spokesmen for the main national security agencies refused to comment on the matter and only offered general statements.

"We have certain responsibilities to brief the Congress on matters of foreign policy and national security, in this case, intelligence matters," State Department spokesman Sean McCormack told reporters.

U.N. officials said the International Atomic Energy Agency (IAEA) could not confirm the administration's conclusions because Syria refused access to the site in question, and the IAEA authorities needed to take ground samples and conduct interviews.

The chief U.S. negotiator with North Korea, Christopher R. Hill, has said that Pyongyang insists it is not currently engaged in proliferation activities and will not be in the future.

Asked yesterday whether the North has assisted Syria's nuclear program since the Sept. 6 bombing, officials said, "Not at that site." They declined to elaborate.

The officials, all of whom spoke on the condition of anonymity because of the sensitivity of the matter, said they based their conclusions on "very good intelligence derived from a variety of sources." They added that the Israeli government was informed about the congressional briefings.

However, Yuval Steinitz, a member of the Israeli Knesset's Foreign Affairs and Defense Committee, said that no such information had been provided to legislators.

"This is inconsistent with the standard procedure," he said. "I'm upset with our government. It is not healthy that such a briefing is taking place in another parliament, even if it is a friendly parliament like the U.S. Congress."

Administration officials and outside analysts said that after today's briefings, members of Congress are likely to ask what North Korea's behavior means for the future of the six-party talks. Even though they disagreed on the answer to that question, they all deplored the North's assistance to Syria.

"It's a very outrageous step, but what do you do now? Throw away the whole process? That's a conundrum," a former administration official said.

Another former official, John R. Bolton, who was undersecretary of state for arms control and international security during President Bush's first term, said: "North Korea is outsourcing its nuclear weapons program. And if you want to hide your activities from inspectors in North Korea, what better place than in Syria?"

The United States has insisted that North Korea disclose any nuclear assistance it has provided to Syria, as well as other countries, in a declaration that was due Dec. 31 as part of a deal reached in the six-party talks last year.

Pyongyang, however, has refused to do so, and the administration has looked for "creative" ways to help both countries save face but move the process forward, so that Yongbyon's dismantling can at least begin before Mr. Bush leaves office in January.

## **U.S.: Syria hid N. Korea-aided nukes plant**

By The Washington Times

Thursday, April 24, 2008

Syria undertook extensive efforts to hide from spy satellites a nuclear reactor being built with North Korean help and then also tried to hide the bombed facility after it was destroyed by the Israelis, U.S. officials disclosed today.

Those efforts included removing all material and equipment from the site that would reveal it was a nuclear plant and then burying the reactor debris, the officials said on condition of anonymity. The Syrian nuclear reactor was built without the knowledge of the International Atomic Energy Agency and was so secret that it escaped detection by U.S. intelligence agencies during its construction.

Administration officials told The Washington Times yesterday that the plant in northern Syria, which would have produced plutonium, was nearly complete when it was bombed by Israeli warplanes Sept. 6.

Additionally, a high-level North Korean delegation of officials traveled to Syria after the raid to assist with efforts to cover up the two nations' cooperation, said senior officials who briefed reporters on condition of anonymity. The cooperation also was outlined in a videotape report made public at the briefing.

The bottom line is the reactor was put out of commission before it was loaded with fuel or became operational, said a senior U.S. official with knowledge of intelligence regarding the Israeli raid into northern Syria.

U.S. intelligence believes that North Korea assisted this effort, a U.S. official said. And that assistance occurred both prior to and after the reactor was put out of commission.

Officials said the disclosure of the intelligence is designed to force Syria to admit to the secret nuclear arms program, which was evading International Atomic Energy Agency controls.

The disclosure also seeks to pressure North Korea to abide by the six-nation talks on nuclear disarmament under which Pyongyang agreed to disclose all details of its nuclear activities, including its assistance to other nations, the officials said.

At the White House, presidential spokeswoman Dana Perino called on Syria to disclose the nuclear program.

"The Syrian regime must come clean before the world regarding its illicit nuclear activities," Mrs. Perino said.

Imad Moustapha, Syria's ambassador to the U.S., dismissed the claims as ridiculous, telling CNN that he had been called today into the State Department, where officials "told me a ridiculous story about an alleged Syria nuclear project."

Syria's ambassador to Britain, Sami al-Khiyami, told reporters, that the U.S. and other nations "just want to exert more pressure on North Korea. This is why they are coming up with this story."

CIA Director Michael V. Hayden and other intelligence officials briefed several congressional committees in closed-door sessions today, breaking the administration's silence on the issue.

The secret intelligence that had remained under wraps for seven months, a time gap that led top congressmen to criticize the Bush administration for its "veil of secrecy" and lack of trust in Congress regarding North Korea's proliferation activities.

“It’s bad management and terrible public policy to go for eight months knowing this was out there and then drop this in our laps six hours before they go to the public,” said Rep. Peter Hoekstra of Michigan, the ranking Republican on the intelligence committee.

Rep. Silvestre Reyes, Texas Democrat and panel chairman, echoed those comments.

“The challenge that we are having, particularly with the administration today, is that there’s a veil of secrecy that gets in the way [of] our committee feeling comfortable that we are getting the kind of information that we are supposed to have in order to carry out oversight responsibilities,” he said.

Mr. Hoekstra warned that the administration’s delay in informing lawmakers amounts to a lack of trust that could make it harder for Congress to approve any future nuclear agreement with North Korea.

The delay has “really damaged the relationship between Congress and the administration,” Mr. Hoekstra said. “And that’s a big disappointment, but I think that’s something that we heard consistently from all of our [committee] members today.”

But other congressmen focused on the revelations themselves, saying that they prove the U.S. needs to maintain its tough stance against North Korea.

Unless we are able to confirm that North Korea is no longer in the nuclear proliferation business, the United States should not lift sanctions on the North,” said Sen. Joseph R. Biden Jr., Delaware Democrat and chairman of the Senate Foreign Relations Committee, who also said the six-party talks should continue and that U.S. goals must remain “both shutting down Pyongyang’s nuclear programs and ensuring that North Korea does not transfer” nuclear material to others.

The Syrian reactor was identical in design to a reactor built by North Korea at its Yongbyon facility. Yongbyon is being dismantled by North Korea as part of the six-nation nuclear talks. That reactor was fueled by natural uranium to produce the plutonium now contained in North Korea’s nuclear bombs.

Until this week, the bombing raid and the nuclear cooperation has been couched in secrecy despite unofficial reports that Syria was working with North Korea on a nuclear facility.

Until this week, the Syrian nuclear program was suspected of being a covert nuclear research program based on uranium enrichment. Syria, according to a recent CIA report to Congress, was a recipient of goods provided by the Pakistani nuclear supplier network headed by A.Q. Khan, considered the father of the Islamabad’s nuclear program.

The CIA report said Syria has nuclear research centers at Dayr Al Hajar and Dubaya with the potential to be used in a weapons program.

For Immediate Release  
Office of the Press Secretary  
April 24, 2008

Statement by the Press Secretary

Today, administration officials have briefed select Congressional committees on an issue of great international concern. Until Sept. 6, 2007, the Syrian regime was building a covert nuclear reactor in its eastern desert capable of producing plutonium. We are convinced, based on a variety of information, that North Korea assisted Syria's covert nuclear activities. We have good reason to believe that reactor, which was damaged beyond repair on Sept. 6 of last year, was not intended for peaceful purposes. Carefully hidden from view, the reactor was not configured for such purposes. In defiance of its international obligations, Syria did not inform the International Atomic Energy Agency (IAEA) of the construction of the reactor, and, after it was destroyed, the regime moved quickly to bury evidence of its existence. This cover-up only served to reinforce our confidence that this reactor was not intended for peaceful activities.

We are briefing the IAEA on this intelligence. The Syrian regime must come clean before the world regarding its illicit nuclear activities. The Syrian regime supports terrorism, takes action that destabilizes Lebanon, allows the transit of some foreign fighters into Iraq, and represses its own people. If Syria wants better relations with the international community, it should put an end to these activities.

We have long been seriously concerned about North Korea's nuclear weapons program and its proliferation activities. North Korea's clandestine nuclear cooperation with Syria is a dangerous manifestation of those activities. One way we have chosen to deal with this problem is through the Six Party Framework. Through this process we are working with our partners to achieve the verifiable denuclearization of the Korean Peninsula. The United States is also committed to ensuring that North Korea does not further engage in proliferation activities. We will work with our partners to establish in the Six Party Framework a rigorous verification mechanism to ensure that such conduct and other nuclear activities have ceased.

The construction of this reactor was a dangerous and potentially destabilizing development for the region and the world. This is particularly true because it was done covertly and in violation of the very procedures designed to reassure the world of the peaceful intent of nuclear activities. This development also serves as a reminder that often the same regimes that sponsor proliferation also sponsor terrorism and foster instability, and cooperate with one another in doing so. This underscores that the

international community is right to be very concerned about the nuclear activities of Iran and the risks

those activities pose to the stability of the Middle East. To confront this challenge, the international community must take further steps, beginning with the full implementation of the United Nations Security Council resolutions dealing with Iranian nuclear activities. The United States calls upon the international community to redouble our common efforts to ending these activities and preventing the spread of weapons of mass destruction in this critical region.

For Immediate Release  
Office of the Press Secretary  
April 24, 2008

Press Briefing by Dana Perino

James S. Brady Press Briefing Room

12:40 P.M. EDT

MS. PERINO: Hello, everyone. I don't have anything to start with, so we'll go straight to questions.

Q Does the information that's being released today about North Korea and Syria help or hurt the administration's argument that North Korea is going to fully disclose its nuclear activities?

MS. PERINO: As I said this morning, there are many things I'm not going to be able to comment on in today's briefing, which I know is very frustrating, not just for you but for me, too.

Q I'm not talking about the information itself, but I'm talking about --

MS. PERINO: But commenting on -- by answering that question I would be also answering the previous question. There are Hill briefings that are ongoing right now. Out of respect for that process, and for the members of Congress to be able to hear this from administration officials first, I'm going to defer to answer specific questions on that until they have a chance. But I would refer you back to what the President said on -- just last Saturday at Camp David in regards to the North Koreans and the six-party talks and North Korea's declaration.

Q When did President Bush see the videotape of what happened in Syria?

MS. PERINO: Again, I'm going to decline to comment on specifics of whatever is being said to Capitol Hill right now and what other people -- what you all might see later today.

Q Was it shown to the South Korean President?

MS. PERINO: I'm not commenting on it. You can chase me around the podium -- (laughter.)

Q One more general question, though. The administration got it wrong on Iraq and weapons of mass destruction. Why should this new information, whatever it is, be believed?

MS. PERINO: Again, Mark, I am going to -- I understand the question. I appreciate that you'd like for me to be able to answer it. I am not going to be able to answer these questions. I'm going to let the senior administration officials and intelligence officials talk to Capitol Hill. Last fall we did brief 22 members of Congress, House and Senate members, consistent with our obligations. More members are being briefed today and I'm going to let that process take place.

Q Dana, on that point, because you brought up the lawmakers, two of them who were briefed today who were among those who were briefed back in the fall came out -- Chairman Reyes and Ranking Republican Hoekstra -- and they were livid, I think to say the least. And what Hoekstra said -- and I'm quoting him -- he says, "We were used." The administration -- he said, we were told -- "We were used today by the administration, not because they felt they had to inform Congress because it was their legal obligation to do that, but because they had other agendas in mind." He says, any bond of trust between the administration and Congress has been shattered. And he says it will now be very difficult to get any agreements, in particular, anything based on the six-party talks through Congress. What do you say to that?

MS. PERINO: Obviously we would be very disappointed that he feels that way and would hope he understands our tremendous respect for members of Congress. And as I said, back in the fall we briefed 22 members of Congress, consistent with our obligations. He was one of them. There are tensions that exist between the executive branches and the legislative branches on a range of issues in regards to who should know what when. But we will continue to work with Representative Hoekstra and continue to talk with him. And he was part of the briefings this morning, and again, I'm not going to comment on anything until those briefings can be completed today.

Q He says he just doesn't feel that then, in September, eight months ago, that they got any kind of decent explanation as to why the other members of the committee shouldn't have been briefed. They asked for them to be briefed. And he said, I don't -- still don't believe we've gotten a good explanation then today for this delay. Why now?

MS. PERINO: Again, I will decline to comment. There will be more information that will hopefully answer more of these questions later today. It could be that once senior administration officials talk with Representative Hoekstra that he still won't be satisfied, and we'll have to satisfy that he got an answer that he believes is satisfactory. We'll have to accept that -- that's his opinion. But we certainly have tried to work with him and the Democrats across the board, and consistent with our obligations, briefed the appropriate members of Congress last fall.

Q Syria is saying that this is an attempt -- all it is is an attempt to put pressure on North Korea. Is the United States at this point trying to increase pressure on North Korea to comply with its nuclear declaration?

MS. PERINO: Our pressure on North Korea has been ongoing through the six-party talks, and you just heard from the President on Saturday about that. I think that by the end of the day, I think a lot of these questions will be answered for you. I'm not able to go into details here.

Bret.

Q Will one of those questions later today be why this information came out? Will we find that out later today?

MS. PERINO: I believe that you will be given more information about that later today and that -- again, will it satisfy everybody? I don't know. But let's let the briefings take place and then we can go from there.

Q What form will the information be put out later here? Is there a statement by the White House?

MS. PERINO: As I said this morning, I am working to get something that could come out from me as soon as possible. I'm having to be respectful of the congressional briefing schedule that is ongoing today, and I'm trying to push the system a little bit for not only our interest to make sure that we inform the American public, but for yours so that you get -- don't get jammed on the back-end of your day. I'm aware of deadlines and hope that we can meet them.

Q Are there other agency briefings, backgrounders or otherwise -

MS. PERINO: I'd just refer you to the intelligence community for that.

Q But you will be having a statement later today, but maybe not before 5:00 p.m., 6:00 p.m.?

MS. PERINO: I hesitate to put a time on it. I'm pushing as hard as I can. It probably will not be as early as I would like.

Q Is it tied to the conclusion of the briefings on the Hill?

MS. PERINO: I'm trying to work on that and trying to push the system a little bit. I'm not sure if I'll be successful.

Q Dana, just to be clear, Hoekstra did already get his briefing and he wasn't satisfied. So will you be reaching out again to him?

MS. PERINO: Of course, we'll just have to -- our senior officials and our staff talk with him and his staff on a regular basis.

Q Dana, in October the President said that any such proliferation activities would be a grave threat to the United States and that North Korea would face serious consequences. Does he stand by those statements?

MS. PERINO: Yes.

Q What should the consequences be then?

MS. PERINO: Well, let's let the briefings take place and the declaration take place, and we will move on from there.

Q And what's the international component to this? Have you talked to the other -- do the other six-party -- or four parties know the information that's being provided to Congress today?

MS. PERINO: This will not come as a surprise to any members of the six-party talks.

Q Okay. And I understand that the United States reached out to the IAEA today. Do you want inspectors to go into Syria to make sure that they're satisfied -- make sure that Syria is in compliance with the NPT?

MS. PERINO: I don't know who reached out, if they did. So I'm not aware of that. I don't know who it would have been. But I think when I have my statement today that you'll have later this afternoon, that that question will be at least partially answered.

## **White House says Syria 'must come clean' about nuclear work**

By PAMELA HESS, Associated Press Writer

39 minutes ago [*Accessed 2008-04-25T01:55Z*]

WASHINGTON - The White House said Thursday that North Korea's secret work on a nuclear reactor with Syria was "a dangerous and potentially destabilizing development for the world," raising doubts about Pyongyang's intention to carry through with a promised disclosure of its nuclear activities.

Seven months after Israel bombed the reactor, the White House broke its silence and said North Korea assisted Syria's secret nuclear program and that the destroyed facility was not intended for "peaceful purposes."

Top U.S. intelligence officials who briefed reporters said they had high confidence in the judgment that North Korea had aided Syria with its nuclear program and the intention was to produce plutonium. But they claimed only low confidence for the conclusion that it was meant for weapons development, in part because there was no reprocessing facility at the site — something that would be needed to enrich nuclear material for use in a bomb.

The Bush administration's assertions could undermine six-party negotiations to try to resolve the nuclear standoff with North Korea. But a senior administration official told reporters he hoped the disclosure would instead provide leverage to officials trying to get an accurate accounting of North Korea's nuclear and proliferation activities.

The White House issued a two-page statement after lawmakers were given details about the reactor in a series of briefings on Capitol Hill that included a video presentation of intelligence information the administration contends establishes a strong link between North Korea's nuclear program and the bombed Syrian site. The briefing also included still photographs that showed a strong resemblance between specific features of the plant and one near Yongbyon in North Korea.

Sen. Joseph Biden, D-Del., chairman of the Senate Foreign Relations Committee, said the revelations make it clear that any deal to eliminate North Korea's nuclear programs must also stop its proliferation activities and include vigorous verification. But he said the information in the briefings was not a cause to end the talks.

"To the contrary, it underscores the need for pursuing the talks, which remain our best chance to convince North Korea to abandon its pursuit of nuclear weapons and to stop proliferation," Biden said.

The White House said the International Atomic Energy Agency also was being briefed on the intelligence.

While calling North Korea's nuclear assistance to Syria a "dangerous manifestation" of Pyongyang's nuclear weapons program and its proliferation activities, the White House said it remained committed to the talks.

The United States became aware North Korea was helping Syria with a nuclear project in 2003, said intelligence officials who spoke on condition of anonymity because of the matter's sensitivity. The critical intelligence that cemented that conclusion, they said, came last year: dozens of photographs taken from ground level over a period of time, showing the construction both inside and outside the building.

The Israeli strike on Sept. 6, 2007, ripped open the structure, known as the Al Kibar reactor, and revealed even more evidence to spy satellites: reinforced concrete walls that echoed the design of the Yongbyon reactor.

After the attack, Syria tried to bury evidence of its existence and erected a new building to hide the site. The building is not believed to house a new reactor, the officials said.

"This coverup only served to reinforce our confidence that this reactor was not intended for peaceful activities," White House press secretary Dana Perino said. "The Syrian regime must come clean before the world regarding its illicit nuclear activities."

The Syrian reactor was within weeks or months of being functional when Israeli jets destroyed it, a top U.S. official told The Associated Press, speaking on condition of anonymity because of the sensitivity of the matter. The official said the facility was mostly completed but still needed fueling and significant testing before it could be declared operational.

"We had to assume they could throw the switch at any time," a senior intelligence official said.

No uranium, which is needed to fuel a reactor, was evident at the site, a remote area of eastern Syria along the Euphrates River. But senior U.S. intelligence officials said the reactor was similar in design to the North Korean reactor at Yongbyon, which has in the past produced small amounts of plutonium, the material needed to make powerful nuclear weapons.

A senior intelligence official said the intelligence agencies believe North Korea was motivated by "cash" rather than a desire to obtain plutonium from the reactor.

Syria has maintained in the past that the site was an unused military facility, and on Thursday, its embassy denounced what it called the U.S. "campaign of false allegations." It accused the administration of trying to mislead Congress and world opinion "in order to justify the Israeli raid in September of 2007, which the current U.S. administration may have helped execute."

Senior U.S. officials said the U.S. military was not involved in the attack, and the U.S. government, although informed in advance, did not approve it.

"Israel made the decision to attack," a senior administration official said. "It did so without any so-called green light from us. None was asked for and none was given."

"It has become obvious that this maneuver on the part of this administration comes within the framework of the North Korean nuclear negotiations," the Syrian statement said.

And in an apparent reference to prewar claims by the Bush administration that Iraq had possessed weapons of mass destruction, the statement concluded: "The Syrian government hopes that the

international community and the American public, particularly, will be more cautious and aware this time around in facing such unfounded allegations."

Top members of the House Intelligence Committee who were briefed on the reactor said it posed a serious threat of spreading dangerous nuclear materials.

"This is a serious proliferation issue, both for the Middle East and the countries that may be involved in Asia," said Rep. Pete Hoekstra, R-Mich.

Hoekstra and Intelligence Committee Chairman Silvestre Reyes, D-Texas, told reporters after the closed briefing that they were angry that the Bush administration had delayed informing the full committee for so long. That delay has created friction that may imperil congressional support for Bush's policies toward North Korea and Syria, Hoekstra said.

The White House also used its statement as an opportunity to denounce the nuclear activities of Iran, which it says is a threat to the stability of the Middle East. Perino said the international community must take further steps, beginning with full implementation of U.N. Security Council resolutions.

While Washington was awash in condemnation of North Korea's proliferation activities, the communist regime is expressing optimism about current six-party negotiations with the United States, China, South Korea, Russia and Japan. The optimism over the talks is raising hopes of breaking the impasse that has deadlocked arms negotiations.

North Korea's Foreign Ministry said Thursday that it had discussed technical matters with the Americans for moving forward on that and other agreements from the arms talks. "The negotiations proceeded in a sincere and constructive manner and progress was made," the ministry said in a statement.

As part of that process, the North is required to submit a "declaration" detailing its programs and proliferation activity, but the talks are stalled over Pyongyang's refusal to publicly admit the Syria connection. However, officials say the North Koreans are willing to accept international "concern" about unspecified proliferation.

Associated Press writers Deb Riechmann, Barry Schweid, Matthew Lee, Anne Flaherty, Edith Lederer and Bassem Mroueh contributed to this report.

Office of the Director of National Intelligence

**Background Briefing with Senior U.S. Officials on  
Syria's Covert Nuclear Reactor and North Korea's Involvement**

**April 24, 2008**

SENIOR INTELLIGENCE OFFICIAL 1: Hello. My name is [Senior Intelligence Official 1]. And I have the start-off role. It's been a pretty busy morning and afternoon, as you might imagine. We've been on the Hill having dialogue with our committees.

What I want to do is just frame the issue. I read the press reporting coming out here. So I'm almost at the point of saying are there any questions. But just let me say that what we're going to discuss is a nuclear reactor. It was constructed by the Syrians in the eastern desert of Syria along the Euphrates River on the east side. The Syrians constructed this reactor for the production of plutonium with the assistance of the North Koreans.

Our evidence goes back an extended period of time. We have had insights to what was going on since very late '90s, early 2000, 2001 that something was happening. Our issue was pinning it down and being more precise. We had increasing appreciation for what was happening in the 2003, 2006 timeframe. But we still couldn't quite pin it down, as will become apparent to you when we show you more of the physical evidence that you'll see in just a moment.

In the spring of last year, we were able to obtain some additional information that made it conclusive. And so, we engaged in this policy process of now that we have the evidence, what do we do about it? The evidence concluded a nuclear reactor, as I mentioned, constructed by the Syrians, started probably in 2001, completed in the summer of 2007. And it was nearing operational capability.

So from that point of departure, I am joined by [Senior Intelligence Official 2] who will provide details on the intelligence and what we knew and so on. We will show you a video of the evidence - so give you a chance to ask questions about that. And then [a Senior Administration Official], seated to my right will be available for responding to any policy questions you might have. So with that, I'll turn it over to [Senior Intelligence Official 2].

SENIOR INTELLIGENCE OFFICIAL 2: The format I've got, I'll talk a bit; I've got some slides that will show up behind me that shows some data. And then, we'll run the video. The video may overlap a bit with some of the information I give verbally or on the slides. Given some of this information will be your first exposure to it, we just thought that was the best way of doing it. And I think you're all aware that the video presentation, I think everyone will get a copy.

As [Senior Intelligence Official 1] said, information we acquired since 2001 has indicated cooperation between North Korean nuclear entities and high-level Syrian officials. And we went to the 2001 data - and I know this is true in your business - when you learn something, it doesn't just illuminate the future; it illuminates the past. And when we acquired information in 2001 and then were able to look backward on information that had been collected but not quite understood, it's clear to us that this cooperation between North Korean nuclear-related personalities and entities and high-level Syrian officials began probably as early as 1997, which - and now this is estimate now, all right, not court-of-law evidence - puts it into the Hafez al Assad regime in terms of the original decision to begin this cooperation.

Now, as early as 2003, we judged that the interactions probably were nuclear-related, again, because of who it was we were seeing in these interactions. But we had no details on the nature or location of the cooperative projects. We assessed the cooperation involved work at sites probably within Syria. But again, we didn't know exactly where. So we had this body of evidence, kind of - almost like a cloud of, boy, there's something going on here but we can't get a whole lot of precision about it.

We received indications in '05 that the Syrians and North Koreans were involved in a project in the Dayr az Zawr region of eastern Syria, but again, no specific information on the nature or the exact location of the work. But you can see, as evidence mounts, more confident there is cooperation, more confident it involves nuclear-related people. And now, we've got a fairly good sense as to where the center point of the cooperation might be.

Imagery searches of the region revealed a large unidentified building under construction in a remote area near the Euphrates River near a point that we call al Kibar. And there you see the photo. The first time we saw it was after this evidence - look out there - remember '05, '06 timeframe - take a look there. We identified the facility. And once again, sometimes the present illuminates not just the future but can illuminate the past. We looked back on historical imagery that found that the only high-quality imagery we had was of a building that looked pretty much like this. It was externally complete.

And it's hard to figure out looking at that building what its purpose is. And it certainly didn't have any observable, externally observable characteristics that would say, oh, yeah, you got yourself a nuclear reactor here - things like a massive electrical-supply system, massive ventilation, and most importantly a cooling system. We acquired information, though, in the spring of '07 that enabled us to conclude that this non-descript-looking building in al Wadi, near the Euphrates River in eastern Syria was indeed a covert nuclear reactor. The information included photographs of the interior and the exterior of the building located in Dayr az Zawr showing key features of the reactor.

Now, we carefully compared these photos, which are obviously handheld - and we've got a certain volume of them measured in the dozens - these handheld photos with the overhead photos. And I'm here to assure you that all the windows, doors, holes in the wall, and so on, matched up; i.e., these handheld photos are of that building we showed you in the overhead photo. And that's very important because the handheld photos reveal construction activity at the site in a period of time prior to the external completion of the building. Does that make sense?

Okay, good.

The reactor inside that building was clearly not configured to produce electricity. We saw no way and there are no power lines coming out of it, none of all the switching facilities that you would need, and frankly was less well-suited for research - I mean, obviously, we're holding up hypotheses here, right - less well-suited for research than some existing nuclear facilities that we and the Syrians know about and have been made public in Syria.

Now, we assess that North Korea has assisted Syria with this reactor because, one, it uses North Korean-type technology. The building resembles North Korea's Yongbyon plutonium power reactor. That's Yongbyon on the left. That's that non-descript building in the eastern Syrian Desert before the curtain walls and false roof were put on the top of it to hide its shape, which, without those curtain walls and false roofs seem to carry the telltale signatures similar to the facility at Yongbyon.

Internal photographs of the reactor vessel under construction shows that it's a gas-cooled graphite-moderated reactor similar in technology and configuration to the Yongbyon reactor. And you can see that more clearly in this photo that compares the control rods and the refueling tube arrangements of both reactors. That's internal imagery of al Kibar on the left and Yongbyon on the right.

And just to hit a point I said earlier, you see the kind of crawlspace back there? If you have access to the wealth of photographs that we had, you can work from the crawlspace to the wall to the windows to the ventilation duct to the duct coming out the window, and now you're looking at the overhead photography of that window in the right place with the duct coming out of it. See what I'm trying to describe for you - that we are very confident that that on the left is inside that building that we showed you in the overhead imagery.

Our information also indicates involvement of nuclear-related North Koreans in a project somewhere in the area. And we also have evidence of cargo being transferred from North Korea, most likely to this reactor site in 2006. The reactor was destroyed in an Israeli air strike early in the morning of 6 September 2007 as it was nearing completion but before it had been operated and before it was charged with uranium fuel.

Shortly after the attack, the Syrians began - this is mid-September now - a massive effort to destroy the ruined reactor building and to remove all potentially incriminating nuclear-related equipment and structures. Much of the work was done at night or was hidden by tarps in an attempt to conceal it from our overhead observation.

The Syrian efforts to dismantle and destroy the building revealed features of the internal arrangements and structure that corroborated what we saw before and were consistent with the ground photos that we had obtained. If you understand what we're doing here, you have the building. There were real hard reinforced concrete things in there like the sarcophagus around the reactor and as you can see heat exchanges and so on. The Israeli strike make it inoperable; Syrians decide, okay, we've got to take it down. As you begin to blow it up, what remains - the hard, reinforced concrete structures, which are the guts of the reactor. And that's what you're seeing. This is after the Syrians had begun to dismantle what the Israelis destroyed and the telltale signs of it being a nuclear reactor become even more visible as they go about the destruction.

Now, we prepared a video presentation that summarizes our assessment of this Syrian covert reaction project and their efforts to cover up its existence. And so, although some of this will repeat what I've said, I think it's of use to us. Why don't we just let it roll. And I've got a word or two to follow. And then I think [the Senior Administration Official] has some things to say.

(Begin video segment.)

MODERATOR: Syria's covert nuclear reactor at al Kibar. This presentation describes a nuclear reactor Syria was building secretly, its destruction and Syria's subsequent efforts to cover up evidence of the reactor project.

The reactor was built in a remote area of eastern Syria near the Euphrates River. The nearest town is called al Kibar. Our information supports the following key points: Syria was building a gas-cooled graphite-moderated reactor that was nearing operational capability in August 2007. The reactor would

have been capable of producing plutonium for nuclear weapons. It was not configured to produce electricity and was ill-suited for research.

The reactor was destroyed in early September 2007 before it was loaded with nuclear fuel or operated. We are convinced, based on a variety of information, that North Korea assisted the Syrian's covert nuclear activities both before and after the reactor was destroyed. Only North Korea has built this type of reactor in the past 35 years.

Features of the facility and its location indicate Syria attempted to maintain its secrecy. Syria moved quickly to cover up its covert nuclear activities by demolishing and burying the reactor building and by removing incriminating equipment. These actions probably were intended to forestall identification of reactor debris by international inspectors and are inconsistent with peaceful nuclear intentions.

We have detailed information showing that the al Kibar facility was a nuclear reactor. A three-dimensional computer model of the facility has been created using features and dimensions through photographs of the facility. This diagram shows key features of a gas-cooled graphite-moderated reactor, the type built at al Kibar. We have photographs showing some of these important reactor components under construction including vertical tubes in the top of the reactor for control rods and for refueling, a reinforced-concrete steel-lined reactor vessel, and the water-supply systems use heat exchangers to remove heat from the carbon-dioxide coolant.

The main feature of the reactor hall, shown here in the center of the building, was the top of the reactor vessel. The pattern of holes on the floor were the ends of vertical tubes used for control rods and refueling of the reactor, a key feature of gas-cooled reactors. We judge other features of the building, such as heavily sealed reinforced-concrete rooms for heat exchangers and a spent fuel holding pool also are consistent with typical gas-cooled reactors.

This photograph shows the top of the reactor vessel in the reactor hall before concrete was poured around the vertical control rod and refueling tubes. Note the similar arrangement of vertical tube openings in the top of the Syrian reactor on the left and North Korea's Yongbyon plutonium production reactor on the right. We assess the Syrian reactor was similar in size and capacity to this North Korean reactor. Only North Korea has built such gas-cool graphite-moderated reactors in the past 35 years.

This photograph shows the steel liner for the reinforced-concrete reactor vessel before it was installed. The network of small pipes on the outside of the liner is for cooling water to protect the concrete against the reactor's intense heat and radiation. The animated model shows how this component was positioned in the reactor vessel. This photograph and view of the computer model shows the concrete reactor vessel under construction. The photograph shows the steel liner in place within the vessel.

Satellite imagery, together with ground photographs of the facility under construction, showed features of the cooling water-supply system. A key feature was pipes running up a canyon to supply water from the Euphrates River to an underground storage tank at the reactor site. The site lacked key features of alternative facilities such as fuel storage and turbines for an oil-fired power plant or pipes from the site for irrigation or water treatment. The water would have been pumped from the tank through heat exchangers in the reactor building and the hot water would return to the river by a separate pipeline.

When the pipeline and pump house were externally completed in early August 2007, no further observable construction was necessary before the reactor could begin operations. We assess that the reactor could have been complete and that start of operations could have begun at any time although additional weeks to months of testing were likely.

We have information spanning more than a decade that indicates sustained nuclear cooperation between Syria and North Korea. We obtained this photograph, for example, showing the head of North Korea's nuclear reactor fuel manufacturing plant in Yongbyon. Seen also at the Six-Party talks in the photograph on the right, together is Syria with the head of the Syrian Atomic Energy Commission.

Other examples of cooperation include senior North Koreans from the Yongbyon nuclear complex made multiple visits to Syria before construction of the al Kibar reactor began in 2001. In 2002, North Korean officials were procuring equipment for an undisclosed site in Syria. North Korea, that same year, sought a gas-cooled reactor component we believe was intended for the Syrian site. A North Korean nuclear organization and Syrian officials involved in the covert nuclear program reportedly were involved in a cargo transfer from North Korea to probably al Kibar in 2006.

North Korean nuclear officials were located in the region of the reactor both early and late in 2007. Our information shows that North Korean advisors also probably assisted with damage-assessment inference after the reactor was destroyed. A high-level North Korean delegation traveled to Syria shortly after the reactor was destroyed and met with officials associated with Syria's covert nuclear program. The reactor building was irreparably damaged early in the morning of September 6th, 2007, before it became operational, causing a collapse of the central reactor hall and surrounding light walls and roof structures.

Damascus, including Syrian President Assad has specifically and forcefully denied that a nuclear facility was destroyed or that it has any undeclared nuclear facilities. Syria has gone to extraordinary lengths to conceal the existence and nature of the al Kibar reactor both during its construction and after it was destroyed. These photographs show how a light roof and thin curtain walls were added after the main reactor hall was completed. They alter the building's outline, which otherwise resembles the profile of North Korea's plutonium-production reactor at Yongbyon seen in the photograph on the left.

This photograph shows how much the building's appearance changed after the curtain walls and roof were added. The reactor building was located in a remote area of the Syrian Desert and was built in a canyon which concealed it from view. Further measures including earthen wall or mound that has been in place to block the view of the reactor from the bottom of the canyon. The concealment afforded by the reactor site's terrain and by the building modifications suggest Syrian attempts to maintain the secrecy of the facility.

Immediately after the building was destroyed, the Syrians began taking additional measures to limit potential observation of the reactor and their activities including covering the exposed reactor vessel with tarpaulins; erecting structures to prevent satellite observation of their activities; and opening holes in the building, probably to remove heavy reactor-related equipment.

Syria destroyed the remainder of the reactor building with a massive controlled demolition on October 10th, 2007, as part of an ongoing effort to remove all evidence of the reactor's existence. Demolition of the building, however, revealed key nuclear-related interior structures that remain because they were made of heavily reinforced concrete. These corresponded in configuration and location to key gas-

cooled reactor features of our photography-based computer model, including the concrete reactor vessel, the shielded heat-exchanger rooms, and the probably spent fuel storage pool area.

Syria continued to demolish the building and remove equipment and by late October covered the excavation for the reactor building and remaining debris with earth. Syria subsequently erected a light metal-framework building over the site of the destroyed reactor and began preparing a pipeline to connect the site's water-pumping system to a water-treatment plant a few kilometers away, most likely an attempt to further cover up the nuclear nature of the al Kibar site. We do not know the function of the new building, but we assess it is not nuclear related and primarily is intended to discourage excavation of any remaining reactor debris.

In conclusion, our information shows that Syria was building a gas-cooled, graphite-moderated reactor that was nearing operational capability in August 2007. The reactor would have been capable of producing plutonium for nuclear weapons. It was not configured to produce electricity and was ill-suited for research. The reactor was destroyed in early September 2007 before it was loaded with nuclear fuel or operated. We are convinced based on a variety of information that North Korea assisted Syria's covert nuclear activities both before and after the reactor was destroyed. Only North Korea has built this type of reactor in the past 35 years.

Features of the facility and its location indicate Syria attempted to maintain its secrecy. Syria moved quickly to cover up its covert nuclear activities by demolishing and varying the reactor building and by removing incriminating equipment. These actions probably were intended to forestall identification of reactor debris by international inspectors and are inconsistent with peaceful nuclear intentions.

(End video segment.)

SENIOR ADMINISTRATION OFFICIAL: Just like to make a couple of points - one of the questions you may have is why are we making this disclosure now and why not before. Our first concern was to prevent conflict and perhaps an even broader confrontation in the Middle East region. We were concerned that if knowledge of the existence and then destruction of the reactor became public and was confirmed by sources that the information would spread quickly and Syria would feel great pressure to retaliate. And, obviously, that would have been a threat to Israel and risked the possibility of a broader regional confrontation which we hoped to avoid. As time has passed, our assessment is that that risk has receded. We have an obligation to keep Congress informed with matters such as this. We had briefed 22 members of Congress in positions of leadership and chairs and ranking members of key committees last September and October. We wanted and Congress wanted us to brief more widely within Congress. We also felt that we could - and we also felt that we could use public disclosure to advance a number of policy objectives. So the calculation was the risks of greater discussion and disclosure had declined and were now acceptable and that, for a number of reasons, timing was good now to advance some policy objectives

We are at the point in the - for example, first let me take North Korea. We are at the point in the Six-Party talks where we believe going public will strengthen our negotiators as they try to get an accurate accounting of North Korea's nuclear programs. We believe and hope that it will encourage North Korea to acknowledge its proliferation activity, but also to provide a more complete and accurate disclosure of their plutonium activities and their enrichment activities as well.

With respect to Iran, the Syrian episode reminds us of the ability of states to obtain nuclear capability covertly and how destabilizing the proliferation of nuclear weapons in the Middle East would be. And obviously everyone is concerned about that with respect to Iran, and we hope that disclosure will underscore that the international community needs to rededicate itself to ending Iran's nuclear enrichment activities, and needs to take further steps to ensure that Iran does not obtain nuclear weapons. And countries can start by the full implementation of the U.N. Security Council resolutions already dealing with Iranian nuclear activities, which are not being implemented as aggressively and fully as they should.

Finally, with respect to Syria, at the present time there are major initiatives underway to advance the cause of freedom and peace in the Middle East: There are talks between Israelis and Palestinians; there is progress in building a stable and democratic Iraq; there are efforts in Lebanon to consolidate its sovereignty after a long period of foreign occupation. Actions by the Syrian regime threaten progress along each of these tracks. Disclosure of Syria's nuclear activities, we hope, will help us in convincing other nations to join us in pressuring Syria to change its policies.

One of the things that I'm sure also people are wondering is whether there was any discussion between us and the Israelis about policy options and how to respond to these facts. We did discuss policy options with Israel. Israel considered a Syrian nuclear capability to be an existential threat to the state of Israel. After these discussions, at the end of the day Israel made its own decision to take action. It did so without any green light from us - so-called 'green light' from us; none was asked for, none was given.

We understand the Israeli action. We believe this clandestine reactor was a threat to regional peace and security, and we have stated before that we cannot allow the world's most dangerous regimes to acquire the world's most dangerous weapons.

Thank you.

SENIOR INTELLIGENCE OFFICIAL 2: Okay, are you going to moderate for us? Go ahead.

Q: I - just some detail on the North Korean involvement - and you showed that one photograph in the video presentation. The question is where was that taken and when was it taken? And are there any other photographic - other photos or video of North Koreans actually at the site of the reactor?

SENIOR INTELLIGENCE OFFICIAL 2: No. First of all, the video you've seen is the video we have, okay? The photo is undated and we are certain that the photo was taken in Syria. You saw the license plates on the vehicle behind the two individuals were Syrian license plates.

Was there a third piece here?

Q: Yeah. Is there any other - are there any other - I mean, so there is no other photographic evidence or video that shows North Koreans at the facility?

SENIOR INTELLIGENCE OFFICIAL 2: There are some - there's none more compelling than what we showed you.

SENIOR INTELLIGENCE OFFICIAL 1: There are also some things that you're going to ask questions about - sources - and so we're not going to be able to answer those. There's a rich level of information here that we - we can't discuss the sources or methods, and that's what we're going to try to work around to let you see what we can show you, which we have showed you, and we just won't comment on specificity about we knew this point or that point or when.

Q: I just have a follow-up. The information I had earlier today is that at least one of the images - it may have been this particular image - was North Korean nuclear scientist Chon Chibu, who was linked directly to Yongbyon.

SENIOR INTELLIGENCE OFFICIAL 2: That's him.

Q: That's him? And then my other question is a very basic question. This video presentation I would assume was put together by the CIA or -

SENIOR INTELLIGENCE OFFICIAL 2: [Senior Intelligence Official 1] asked us, when this all started breaking about a year ago, really picked up pace, to marshal the resources of the entire community. So what you've seen here was constructed here, that's right.

Q: And this was shown on the Hill today.

SENIOR INTELLIGENCE OFFICIAL 2: Yes.

Q: [Senior Intelligence Official 2], it has been awhile - Syria kind of committed to trying to counterbalance the Israeli nuclear program several years ago and started working on that, and Syria has been a crossroad for all types of unsavory activity for many years, so are you fairly certain that this is the only type of activity going on there - was the only type of activity going on there?

SENIOR INTELLIGENCE OFFICIAL 2: In terms of the nuclear program? Clearly, it's something we'll continue to keep a full-court press on, all right? Let me say that. But with the destruction of this facility, this is - I'll use the word "achievement;" I don't have time to think of a better one - in terms of ending that kind of behavior. There is cooperation that continues, however, between North Korea and the Syrians with regard to the Syrian missile program, and we see that same kind of cooperation between North Korea and Iran.

Q: A quick follow-on: Would the U.S. have considered any kind of activity had the Israelis not?

SENIOR ADMINISTRATION OFFICIAL: We obviously were looking very closely at options, and we had looked at some approaches that involved a mix of diplomacy and the threat of military force with the goal of trying to ensure that the reactor was either dismantled or permanently disabled, and therefore never became operational.

We looked at those options. There were, as I mentioned to you, conversations with the Israelis. Israel felt that this reactor posed such an existential threat that a different approach was required. And as a sovereign country, Israel had to make its own evaluation of the threat and the immediacy of the threat, and what actions it should take. And it did so.

Q: You said in your briefing that the only apparent purpose of this reactor was to use plutonium not for power but apparently for weapons purposes.

---

SENIOR INTELLIGENCE OFFICIAL 2: It lacked the -

Q: Can you give us an assessment and tell us what kind of information you might have about the existence - if it does exist and if you have the information - of a Syrian nuclear weapons design program? And secondly, can you tell us whether these pictures from inside the building are at different stages or are they all at one particular point in time?

SENIOR INTELLIGENCE OFFICIAL 2: The pictures inside of the building are over a period of time, okay? And I really don't have anything more to add with regard to a Syrian weapons program.

Q: Two questions along those same lines. While there is similarity with the Yongbyon plant, there is no reprocessor, which of course is right next to the Yongbyon plant - at least that you've showed us today.

It's unclear from your presentation how they would have obtained the fuel which have been the process, I would guess, if you - you would have seen. And you note the similarity with the North Korean reactor and said no reactor like that had been made in some time, but this is a Calder Hall reactor whose design has been sort of out there for a long while, so could they have obtained the technology as opposed to needing help from individuals?

SENIOR INTELLIGENCE OFFICIAL 2: The body of evidence that we have over a period that spans a decade gives us very high confidence that, A, this is a nuclear reactor; B, that there was long-term, detailed cooperation between the North Koreans and the Syrians in terms of nuclear cooperation; and if anything, the actions since the strike that we have been able to detect reinforce our belief that North Koreans were actually involved - not just in kind of a theoretical or a broad-based nuclear cooperative effort with the Syrians, but were cooperating at this site.

Q: And the reprocessor and the fuel?

SENIOR INTELLIGENCE OFFICIAL 2: There is no reprocessing facility in the region of al Kibar.

SENIOR INTELLIGENCE OFFICIAL 1: I might add something that would helpful here. These are lessons learned that are - that came out of previous experience about how to put more rigor into our process. So there's a difference between evidence and an assessment. And when we examined this information, and what [Senior Intelligence Official 2] alluded to, let me just reinforce: very sensitive; everybody wants to know; everybody wants to have a part of the decision. So the decision was taken by the President to restrict access significantly. So we made this CIA-centric to restrict those who were aware and it worked.

The entire community participated. The entire community contributed. And you know who is in the community. You know we take pictures; you know we listen, and so on. So I'll just leave it at that. We had very rich, rich information. So when we worked through the data, in large part what you saw here, we concluded with high confidence it is a nuclear reactor of the design that was described for plutonium. We had, at that time, medium confidence that the North Koreans were and are participating.

SENIOR INTELLIGENCE OFFICIAL 2: At the reactor, not in generalized nuclear cooperation.

SENIOR INTELLIGENCE OFFICIAL 1: To go with the question you're asking - weapons - we said, we believe it. There's no other reason for it. But our confidence level that it's weapons is low at this point. We believe it, but it's low based on the physical evidence.

Q: Even at the time of the destruction of the reactor?

SENIOR INTELLIGENCE OFFICIAL 1: Even at the time. So now, what that asks is, in a nuclear program, it's complex. There are a series of steps and stages. So was that something evidence that would be uncovered at a point in time? And I'll just leave it right there as to where it is at the moment, other than to say we have reasonable confidence that we have - that the Israelis have destroyed a capability. And we are monitoring everything to see if there's anything subsequent to that.

Q: Do we have any reason to believe that the Syrians now have or are building a reprocessing capability?

SENIOR INTELLIGENCE OFFICIAL 1: Just let me leave it with what I described.

SENIOR INTELLIGENCE OFFICIAL 2: And as you say, this makes no sense without that.

Q: This does make no sense without that. And that's my hardest part with the evidence that you've shown. And I think it's interesting that you have a low-confidence level that they -

SENIOR INTELLIGENCE OFFICIAL 1: But be very specific about what I'm saying is - if you are going to make a clinical judgment that the evidence supports all the way through, you have to have the clinical evidence in hand.

Q: Did you tell the Israelis you have low confidence it was for weapons?

SENIOR INTELLIGENCE OFFICIAL 2: No, you need to understand. I'm sorry to dwell on the point. This is very, very important.

SENIOR INTELLIGENCE OFFICIAL 1: This is very important.

SENIOR INTELLIGENCE OFFICIAL 2: We told our President four things: This is a reactor; the North Koreans and the Syrians are cooperating on nuclear activities; the North Koreans and Syrians are cooperating on the construction of this reactor; and this reactor - its purpose - is to create fuel for a nuclear weapons program. Those are the things we concluded.

Now, when you look at the body of evidence of those four sentences and begin to sort out how much of that is based on an overwhelming body of evidence as opposed to a more limited body of evidence and therefore more reliant on assessment, the fact that it was a nuclear reactor - absolutely high confidence; the fact of Syrian-Korean nuclear cooperation spanning a decade at an intense level, high confidence. At the time of the strike, fact of North Korean-Syrian cooperation in the building of that reactor, medium confidence that then got higher because of events, some of which we have alluded to in the briefing, okay. The fact that that material was going to be used for a weapons program - we believe that to be true, but because we did not have, as [Senior Intelligence Official 1] points out, additional clinical evidence of other activities, we could only give it a low confidence level. But you need to - and I think you understand what I'm trying to say. That's not more or less sure; it's just that it's a way of communicating that for which you have a large body of evidence and that for which you may not.

Q: Where is that confidence level now?

SENIOR INTELLIGENCE OFFICIAL 2: In terms of -

Q: On the last one - you said a low confidence level that this was for weapons or has that changed in the aftermath of -

SENIOR INTELLIGENCE OFFICIAL 2: No. No, that has not changed. However - however - actually, David, we haven't addressed it, but I would suggest to you that the Syrian behavior after the strike - keeping it secret, destroying it, not allowing the IAEA - if anything, it certainly doesn't weaken that there were nefarious purposes for the reactor.

Q: Three questions. Did the United States military aid in any way this Israeli strike through reconnaissance or through targeting help? Did the U.S. obtain these photos or were they from another country's intelligence agency? And what is the intention of North Korea's cooperation here? Is it cash-motivated? Are they looking to get plutonium themselves for their own reprocessing?

SENIOR INTELLIGENCE OFFICIAL 2: What was one?

Q: One was did the U.S. military aid in any way the ISR with targeting or some other -

SENIOR INTELLIGENCE OFFICIAL 2: Let me talk a little bit obliquely here, okay. There is a rich intelligence exchange with a body of partners around the world that included an exchange on this information here. There is difference between a rich exchange of intelligence and providing information that would actually enable the targeting and strike of this kind of target.

Q: So you shared information. You didn't give them targeting information.

SENIOR INTELLIGENCE OFFICIAL 2: We were in A, not B on this. The second one?

Q: And the second one is did the U.S. intelligence agencies obtain these photos or did they come through another nation's intelligence?

SENIOR INTELLIGENCE OFFICIAL 2: I'm only free to say that we acquired the photos, and we have - and I tried to communicate to you under whatever guise we acquired them the confidence level we have in them.

Q: And North Korean intentions? Cash?

SENIOR INTELLIGENCE OFFICIAL 1: Cash.

SENIOR INTELLIGENCE OFFICIAL 2: It's cash.

SENIOR INTELLIGENCE OFFICIAL 1: Cash.

Q: So they weren't going to be taking this -

SENIOR INTELLIGENCE OFFICIAL 2: We don't -

SENIOR INTELLIGENCE OFFICIAL 1: We examined -

SENIOR INTELLIGENCE OFFICIAL 2: We examined that. We examined that hypothesis. This just wasn't -

SENIOR INTELLIGENCE OFFICIAL 1: Probably not.

SENIOR INTELLIGENCE OFFICIAL 2: - you know, a reactor in Syria for Syria, that it may be outsourcing. And our judgment based on the overwhelming body of evidence is it was A, not B. That it was in Syria for Syria.

SENIOR INTELLIGENCE OFFICIAL 2: I'm sorry. Yeah, you're right. [The Senior Administration Official] is correcting me. Option A was in Syria for North Korea; option B was in Syria for Syria. We think it was in Syria for Syria, although we examined both options and held it up to the light with the available evidence.

Q: How much money is it in for North Korea?

SENIOR INTELLIGENCE OFFICIAL 2: Not at liberty to say.

Q: I believe a Calder Hall reactor is fueled with naturally occurring uranium. Is there such deposits in Syria? Have you looked to see whether or not the Syrians were actually mining their own uranium, and if so, again, have you located that site? And if not, where were they going to get the uranium from?

SENIOR INTELLIGENCE OFFICIAL 2: [Senior Intelligence Official 3], is there anything that you know that we can share?

SENIOR INTELLIGENCE OFFICIAL 3: No, sir.

SENIOR INTELLIGENCE OFFICIAL 2: Okay.

Q: Can I just ask to be clear what you mean - when you're talking about low confidence present how that compares to, in the talking points here that you lay out, the nearing operational capability? Can you just walk me through what exactly that means?

SENIOR INTELLIGENCE OFFICIAL 2: That's right. Sure.

Q: And was that weeks and possibly months, as some officials have suggested?

SENIOR INTELLIGENCE OFFICIAL 2: It is weeks and possibly months, and we were at high confidence that - well, to put it another way, anything we could see about this reactor we had already seen in terms of getting it ready to throw the switch. And once they breached the wall down there in the Euphrates and filled the cooling pond and gave those pumps access to the water, as far as things we could see externally, this thing was good to go, and therefore we had to assume they could throw the switch at any time, although we know they did not know throw the switch prior to the strike. And I'm sorry, the other question?

Q: So I'm trying understand, then, okay, so they were nearing operational capability but then can you compare what that means -

SENIOR INTELLIGENCE OFFICIAL 2: Okay, I got it.

Q: - the low confidence. I want to be clear on that.

SENIOR INTELLIGENCE OFFICIAL 2: Yeah. Again, this is a bit arcane, and I'm trying to be very precise with our language here, okay. We were certain, okay, this was a reactor and that it was going to produce plutonium. We saw no other logical use for that plutonium based upon - no other use for the reactor other than creating plutonium. And then our judgment was that the Syrians would only have done this - with the great expense and perhaps political risk involved - for a weapons program, although we had not yet detected the detailed and constituent elements of such a weapons program. That is - and therefore, we said, we believe, Mr. President, that is what this is for.

SENIOR INTELLIGENCE OFFICIAL 1: It may be -

SENIOR INTELLIGENCE OFFICIAL 2: But the body of evidence on which we're basing that is more limited than some of the other things we're telling you.

SENIOR INTELLIGENCE OFFICIAL 1: It may be useful, too, to separate it in pieces. Go to the question that was asked about natural uranium. You can take natural uranium, get access to it, build a plant like this, and cause a reactor to operate, which would produce plutonium. So natural uranium in one place, a reactor to produce plutonium, and now you have to reprocess it to turn it into the kinds of material that would be used for weapon - so what we're describing to you with regard to our confidence level, plus with the regard to the reactor in the middle piece.

Q: And then what have the North Koreans said to you? Have they denied any of this? Have they admitted any of this? And for you [Senior Administration Official], what then do you do moving forward with the Six-Party talks. You suggested this will strengthen your hand, your negotiators. But what are the North Koreans telling you privately about all of this? Are they going to come forward and admit anything? And what do you think - what effect will it have on the Six-Party talks?

SENIOR ADMINISTRATION OFFICIAL: We'll have to see. We would of course like it if they would publicly admit this program and the truth of what has been laid out here. We hope as a minimum that they will not try to deny it. We hope that the fact that we have had such detailed understanding of this activity, which they tried so - that this - of this activity, which obviously they and Syria very much tried to hide, will convince them that there is no point in trying to cover up not only proliferation activity but enrichment activity and plutonium activity, and it will therefore incentivize them to make the kind of full accounting of their various activities and programs that they have undertaken to do. We will obviously have to see.

One of the reasons we think now is a good time to do this is because of those ongoing conversations - those conversations on their declaration, as you know, are ongoing. And we will hope this will give North Korea an incentive to do a full accounting and will strengthen our hands of our negotiators in insisting on it.

SENIOR INTELLIGENCE OFFICIAL 1: Can I just make a comment on Iran because I know that's eventually - if we stayed long enough, you're eventually going to get there. And I think it's useful to talk about nuclear weapons and Iran in this context because this all is potentially interrelated.

There are a couple of ways to get to nuclear weapons. One, we're describing how North Korea did it. The path that Iran is choosing to pursue is different. You enrich natural uranium to some level. If you're going to enrich it to the point that you run a nuclear power plant, you're about at the 3.8, 3.9 level. That is what they claim they are doing.

The difference between fissile material - this nuclear grade or weapons grade versus running a plant is you just keep spinning it until it gets to be 90 percent highly enriched uranium. When we did our NIE, what we announced in our unclassified key judgments, that the Iranians had a secret program, secret program to produce highly enriched uranium, and they had a program designed to - working on the design of a nuclear device; meaning, think of it as an implosion device that would result in a nuclear warhead.

When we published our NIE, we had not planned to make unclassified key judgments available to the public; therefore we wrote our estimate for a very sophisticated audience believing or understanding that they understood that in the program, it's basically three large pieces: There is pursuit of fissile material; there is a delivery system - ballistic missiles or some other; and then there is weapons design. The only thing that the Iranians halted that we had awareness of was design of the warhead. They continue with ballistic missiles and they continue with fissile material pursuit. It was a secret program that they halted. They have never admitted that. So one of our concerns is, is there a connection with North Korea? If there is, we don't know it. But is there something going on there that resembles this program that we we're talking about in Syrian in Iran.

That is a very large concern of ours, a major problem that we're attempting to address. But our unfortunate choice of words in our NIE caused you all in the press to misrepresent what we were trying to explain. Three parts of the program; they halted one narrow piece of it, which was a secret program - weapons-head design. They continue with fissile material; they continue with ballistic missile systems for delivery. So we don't know where it is at the moment.

Q: No Iran-North Korea connection?

SENIOR INTELLIGENCE OFFICIAL 1: None.

SENIOR INTELLIGENCE OFFICIAL 2: On nuclear issues.

Q: On nuclear issues.

SENIOR INTELLIGENCE OFFICIAL 2: Robust connection on -

SENIOR INTELLIGENCE OFFICIAL 1: Other places, yes.

SENIOR INTELLIGENCE OFFICIAL 2: - missile issues.

Q: Just to follow up on the Six-Party talks. The assumption now or what is being said is that the negotiators are really focusing on plutonium equation and the ATU, and the Syrian assistance is kind of being pushed down the road a little bit. Does this briefing and this information that is coming out now shift that equation? Is that no longer what the White House wants?

SENIOR ADMINISTRATION OFFICIAL: Well, we have said that North Korea needs to do a full accounting of its plutonium activities, its enrichment activities and its proliferation activities. And that's

what we are pursuing now. In addition, one of the things that this has done - and I think we'll encourage - is to supplement, in some sense, the Six-Party framework by building in a capacity to verify the disclosures that North Korea is hopefully going to make so that if, down the road, there is evidence that

suggests that disclosures are inaccurate or not full and complete that there will be a verification mechanism available in the framework of the Six-Party talks to pursue that issue. So we think we have constructed a framework in the Six-Party talks for dealing with this issue. Thank you.

MODERATOR: Thanks, everybody, for coming.

*[Sourcebook Note: The facility name used in the 24 April intelligence briefing, “al Kibar”, apparently derives from Al Falu Kibar, a small village some nine kilometers south. It is unclear that “al Kibar” is the Syrian designation of the facility, as it is common practice in the US intelligence community to assign facility names on the basis of nearby towns (e.g., “Tyuratam”).]*

## **CIA Director Hayden Announces Findings on Covert Syrian Reactor**

Statement to Employees by Director of the Central Intelligence Agency, General Mike Hayden Announcing Findings on Covert Syrian Reactor

April 24, 2008

At our town hall meeting in January, I praised the outstanding work of our officers in tackling a very sensitive counterproliferation issue, one that I could not identify at the time because it was highly compartmented. As of today, some aspects have been declassified and will be publicly released this afternoon, so I can share with you the highlights of this extraordinary story.

Last spring, we acquired information confirming that a building in eastern Syria was a covert nuclear reactor using North Korean technology. We had suspected the two nations were cooperating on nuclear technology as early as 2001, and although imagery had revealed the existence of the building, it lacked features associated with a nuclear installation. The new information included photographs of the interior and exterior that offered our first unambiguous indication that the building was a nuclear reactor. Moreover, the reactor would have been capable of producing plutonium for nuclear weapons, was not configured to produce electricity, and was ill-suited for research.

On the morning of 6 September 2007, the reactor was destroyed as it was nearing completion, but before it had been operated or charged with uranium fuel. Syrian efforts to dismantle the ruined building and remove every trace of the incriminating equipment—largely conducted at night or under tarpaulins for concealment—further underscored Damascus's less than benign intent for the facility. A video presentation summarizes our analysis of the Syrian reactor project and North Korean involvement in greater detail.

Our team effort on the Al Kibar reactor is a case study in rigorous analytic tradecraft, skillful human and technical collection, and close collaboration with our Community colleagues and liaison partners. Our officers put in long hours on this issue for many months, and their hard work paid off by directly advancing our nation's security and that of our allies. To everyone who contributed to this success, my congratulations on a job well done.

## US envoy Hill says NKorea, Syria not cooperating now

Apr 24, 2008

TOKYO (AFP) — US chief nuclear negotiator Christopher Hill said North Korea and Syria were no longer cooperating in nuclear work despite the US administration's allegations of help on a secret reactor.

President George W. Bush's administration went public Thursday with video they said showed that a nuclear reactor in Syria built with North Korea for military purposes was nearing completion when Israel destroyed it in September.

The US accusations came a day after North Korea sounded upbeat after a long stalemate in implementing a six-nation deal negotiated by Hill on ending the communist state's nuclear drive.

Hill, speaking Thursday [2008-04-24] in New Haven, Connecticut, suggested that such North Korean activities with Syria were in the past.

"It is the judgement of the United States that there is not an ongoing cooperation with Syria in this area," Hill told reporters in footage broadcast Friday on Japanese television.

"We will deal with this issue as we do with many other issues in the six parties," Hill said.

US lawmakers after being briefed on the administration's allegations said that developments could wreck the six-nation deal, hailed last year as a breakthrough by the Bush administration.

US media have suggested the timing of the Syria allegations could be an effort by conservatives within the Bush administration unhappy with Hill to bring down the deal which they see as too weak.

The six-party deal reached last year would grant North Korea energy aid and major diplomatic and security benefits in return for full denuclearisation.

But the talks have been stalled over the requirement that the North declare all its nuclear activities by the end of 2007. The North said it delivered the documentation last November but the US said it was incomplete.

Hill, in talks over the deal with his North Korean counterpart earlier this month in Singapore, reportedly offered to allow Pyongyang to keep private its reply to certain US allegations, including over cooperation with Syria, while publicly responding on other areas.

The six-party talks group the two Koreas, the US, Russia, Japan and China.

Japan has been the most critical member of the six-nation talks and has refused any funding due to a feud over North Korea's past kidnappings of Japanese civilians.

Japan has strongly opposed US offers to take North Korea off a list of state sponsors of terrorism in exchange for progress in the six-nation deal.

Hill said there was no connection between the delisting issue and the allegations of cooperation with Syria.

"The criteria for the delisting is quite a separate matter," Hill said.

## US memo: Israel bombed Syrian reactor

Cable leaked to WikiLeaks website, but yet to be published, is first and detailed confirmation of attack on Syrian nuclear facility. Document, revealed by Yedioth Ahronoth, was sent by then-Secretary of State Condoleezza Rice to US representatives worldwide

Published: 12.24.10 [2010-12-24], 06:45

A confidential cable sent on **April 25, 2008** by then-US Secretary of State Condoleezza Rice to State Department representatives worldwide states that "On September 6, 2007, Israel destroyed a nuclear reactor Syria was clandestinely constructing, we judge with North Korean assistance.."

This cable is included in documents leaked to the WikiLeaks website and revealed Friday by Yedioth Ahronoth's Ronen Bergman before its official publication on the website.

The document is in fact a first official and detailed confirmation of the attack, starting with the intelligence collected before the strike, the cooperation between Israel and the United States, the troubling and harsh conclusions shared by both countries, the Israeli government's decision to bomb Syria and the fear that President Bashar Assad would launch a war in response.

"We have delayed sharing this information with you, because our first concern was to prevent conflict," Rice explained.

The first part of the memo details unprecedented information. "I want to inform you that the purpose of that Israeli mission was to destroy a clandestine nuclear reactor that Syria was constructing in its eastern desert near a place we call al-Kibar," the secretary of state wrote.

"The Israeli mission was successful - the reactor was damaged beyond repair. Syria has completed efforts to clean up the site and destroy evidence of what was really there, constructing a new building on the old site.

"We believe - based on strong evidence - that North Korea assisted Syria with the reactor... We have now decided that the time has come to share more information on this issue," Rice wrote.

'Syria had something to hide'

Rice elaborates on the intelligence information that preceded the attack. "Our intelligence experts are confident that the facility the Israelis targeted was in fact a nuclear reactor of the same type North Korea built indigenously at its Yongbyon nuclear facility," she wrote.

"The US intelligence community conducted an intensive, months-long effort to confirm and corroborate the information Israel provided us on the reactor and to gather more details from our own sources and methods"

The secretary of state added that the intelligence information was solid. "We have good reason to believe this reactor was not intended for peaceful purposes," she wrote. "First, we assess this reactor was configured to produce plutonium: it was not configured for power production, was isolated from any civilian population, and was ill-suited for research.

"Second, Second, Syria went to great pains to keep this secret by taking very careful steps to conceal the true nature of the site. Third, by maintaining secrecy and not declaring the site to the IAEA and providing design information, as Syria's NPT-mandated IAEA safeguards agreement requires, Syria undermined the very purpose of IAEA safeguards - to provide the international community with the necessary assurance/verification that the reactor was part of a peaceful program"

Rice concluded by saying that "Syria's concealment and lies about what happened for months now after the Israeli air strike is compelling proof that it has something to hide. In fact, after the attack on the site, Syria went to great lengths to clean up the site and destroy evidence of what was really there. If there were nothing to hide, Syria presumably would have invited IAEA inspectors, other experts, and the news media to the site to prove that."

## **Bush Administration Releases Images to Bolster Its Claims About Syrian Reactor**

By DAVID E. SANGER

April 25, 2008

WASHINGTON — The Bush administration released detailed photographic images on Thursday to support its assertion that the building in Syria that Israel destroyed in an airstrike last year was a nuclear reactor constructed with years of help from North Korea.

The administration said it withheld the pictures for seven months out of fear that Syria could retaliate against Israel and start a broader war in the Middle East.

The photographs taken inside the reactor before it was destroyed in an air raid on Sept. 6 clearly show the rods that control the heat in a nuclear reactor, one of many close engineering similarities to a reactor halfway around the world where North Korea produced the fuel for its nuclear arsenal.

While the photographs were not dated, some taken on the ground seemed to go back to before 2002.

But after a full day of briefing members of Congress, two senior intelligence officials acknowledged that the evidence had left them with no more than “low confidence” that Syria was preparing to build a nuclear weapon. They said that there was no sign that Syria had built an operation to convert the spent fuel from the plant into weapons-grade plutonium, but that they had told President Bush last year that they could think of no other explanation for the reactor.

Among the photographs shown to members of Congress and reporters on Thursday was one of the manager of North Korea’s Yongbyon nuclear plant with the director of Syria’s nuclear agency. A car in the background has Syrian license plates.

When asked about North Korea’s motivation for the project, one of the senior intelligence officials said simply, “Cash.” He refused to say how much.

The revelation of the plant’s existence is not new; The New York Times reported in mid-October that Israel had brought the United States evidence that the Syrian building was a partly constructed reactor. But no more than a handful of lawmakers had ever been briefed on the attack.

A senior administration official, briefing reporters with the help of the two senior intelligence officials, said for the first time that the White House had extensive discussions with Israel before the airstrike in September. The official said the White House had raised the possibility of confronting Syria with a demand that it dismantle the reactor or face the possibility of an attack.

But that idea apparently never gained traction with the Israelis or some in the administration, and in the end, the official said, Israel cited satellite evidence to declare that the Syrian reactor constituted “an existential threat” to Israel because it might soon be ready for operation. The senior administration official, who was a central player in Mr. Bush’s deliberations, added that Israel’s attack proceeded “without a green light from us.”

“None was asked for, none was given,” the official added.

While one of the senior intelligence officials said that the United States agreed that Syria was “good to go” in turning on the reactor, it would have been years before it could have produced weapons fuel.

It is unclear how the Syrians planned to get the uranium they needed. Once they got it, the reactor would have had to run for roughly 18 months before the fuel was “cooked.” And then to turn it into weapons-grade plutonium, it would require reprocessing, presumably outside the country unless Syria found a way to build its own plant.

The announcement on Thursday closes one chapter of a secretive intelligence and military operation and opens several others that will play out over the remainder of the Bush presidency.

The crucial question now is how the North Koreans will react. Some officials said that they hoped the announcement would embarrass the North into admitting to nuclear proliferation activities, while others said it could prompt the North to walk away from the negotiating table — and collapse the deal Mr. Bush was hoping to reach by the end of his presidency. In return for North Korea’s declaration of all its nuclear activities, the United States would lift sanctions and begin to negotiate the North Koreans’ reward for turning over their fuel and weapons.

The announcement also raises the possibility of new tensions with Syria, as the White House on Thursday accused the Syrian government of a “cover-up” consistent with a government that “supports terrorism, takes action that destabilizes Lebanon” and allows militants to enter Iraq.

Last year, Mr. Bush ordered that knowledge of the Syrian project be limited to a few crucial officials, and he put the C.I.A. in charge of marshaling the assets of other intelligence agencies.

Still, the Americans were somewhat blindsided. By their own account, they suspected that North Korea and Syria were at work together in Syria, but only identified the plant at Al Kibar, named for the nearest town, after they received photos of the interior of the plant last spring from Israel, American and Israeli officials said last year.

Only selected pictures were released by the intelligence agencies on Thursday, including a video that combined still photos and drawings, and had a voice-over that gave the presentation the feel of a cold-war-era newsreel about the Korean War. In fact, it was intended in part, officials said, to try to draw that war — in which the United States and North Korea never signed a peace treaty — to a close.

But inside the administration, the battle over whether to try to strike a deal with North Korea or keep it under sanctions in hopes of setting off the collapse of its government continues into the last months of Mr. Bush’s term. Representative Peter Hoekstra, a Republican from Michigan, expressed annoyance on Thursday that the administration waited seven months to brief Congress.

“I think many people believe that we were used today by the administration,” he said.

At the C.I.A., Gen. Michael V. Hayden, the agency’s director, told employees on Thursday that they should “take heart because our team effort on the Al Kibar reactor is a case study in rigorous analytic tradecraft, skillful human and technical collection, and close collaboration.”

But even this victory, some experts note, raises questions about the agency’s focus. The reactor was built within 100 miles of the Iraqi border yet never identified even though the administration was searching for any form of such arms programs in Iraq.

Moreover, even some senior officials of the administration acknowledge that they are likely to leave Mr. Bush's successor with a North Korea with roughly 10 nuclear weapons or fuel for weapons, up from the one or two weapons it had when Mr. Bush took office in 2001.

"I'd say the score is Kim Jong-il eight, and Bush zero," said Graham Allison, a Harvard professor and author of "Nuclear Terrorism," who was in Washington on Thursday to testify about Iran's nuclear program. "And if you can build a reactor in Syria without being detected for eight years, how hard can it be to sell a little plutonium to Osama bin Laden?"

## **White House revises N. Korea nuke deal**

By Nicholas Kralev

April 25, 2008

The Bush administration is renegotiating a tentative deal with North Korea on a declaration of its nuclear activities to include better verification provisions, after the agreement upset some on Capitol Hill and even in the administration, officials said yesterday.

After insisting for months that Pyongyang disclose any nuclear exports, as well as a secret uranium-enrichment program from the 1990s, the administration agreed two weeks ago to write what it knows about those activities and have the North "acknowledge" the U.S. concerns.

"That was a major change, and many people were caught by surprise," one congressional official said.

In an attempt to address concerns about the shift on the declaration, the administration now emphasizes the importance of verification of the North's secret activities.

Congressional support for any deal with Pyongyang is crucial because it is likely to require legislative approval, and U.S. taxpayers' money will be needed to dismantle the North's nuclear programs.

In a letter to President Bush on Wednesday, 14 Republican senators expressed "concern about the present course of action on North Korea's nuclear program being pursued" by the administration.

Although they did not mention the April 7 Singapore talks between chief U.S. negotiator Christopher Hill and his North Korean counterpart, Kim Kye-gwan, the senators said that the current state of negotiations sends the wrong message to Iran and other "rogue regimes."

The administration told Congress in intelligence briefings yesterday that a nuclear facility in Syria flattened by an Israeli air strike in September was built with Pyongyang's help.

"From all appearances, Kim Jong-il believes that the United States will take whatever deal we can get, allowing him to dictate the time, place, manner and content of the fulfillment of his promises," the senators said.

The letter, a copy of which was obtained by The Washington Times, was signed by Sens. John Ensign of Nevada and Jon Kyl of Arizona, among others.

Because Congress has not yet been briefed on the Singapore agreement, officials declined to discuss it publicly. But in their private remarks, some said that, even though it seems peculiar, it is worth considering.

"What's important is to achieve removal of North Korea's plutonium program," a congressional source said. "That might require some sacrifices."

The Bush administration says that, even though Washington will write the document, it is seeking full access to any sites that might be linked to those activities, so it can verify the North Korean claim that they are not ongoing.

Secretary of State Condoleezza Rice took pains last week in a briefing to reporters to stress that, if the United States discovered that it had been "misled" by the North, any benefits it has received in the meantime would be taken away.

Miss Rice suggested that one of those benefits — removal from the U.S. blacklist of state-sponsors of terrorism — would not have to wait until all verification is completed.

She sent the director of the State Department's Korea desk, Sung Kim, to Pyongyang this week to fine-tune the Singapore agreement and make sure that the final result of the declaration does not suffer from the fact that the United States will write the part on proliferation and uranium-enrichment.

North Korea has promised to produce the main part of the declaration dealing with its plutonium program. The main facility of that program at Yongbyon has been almost disabled by U.S. experts.

In the next phase of the North's denuclearization, Yongbyon must be dismantled, again with a large U.S. role in the process. The administration, however, is barred from using taxpayers' money by a 1994 law known as the Glenn amendment, sponsored by then-Sen. John Glenn.

"Congress should swiftly enact legislation allowing the president to waive the Glenn amendment restrictions that will otherwise prevent the United States from carrying out future nuclear dismantlement operations in North Korea or verifying North Korean compliance," Sen. Joseph R. Biden Jr., Delaware Democrat and chairman of the Senate Foreign Relations Committee, said yesterday.

## UN Censures Us and Israel Over Syria Nuclear Row

Guardian News & Media 2008

Published: 4/25/2008

*[EXCERPTS]*

The UN's nuclear chief today criticized the US for the delay in publishing what Washington claims is proof that a Syrian nuclear reactor was built with help from North Korea.

*[deletia]*

Today, Syria accused the US of complicity in the Israeli bombing raid which destroyed the site. "The US administration was apparently party to the execution of the September raid by Israeli warplanes on eastern Syria," a statement said.

The White House said Israel had consulted the Pentagon before launching the strike, but that it did not give a "green light" to the air raid.

*[deletia]*

The White House added that the regime moved quickly to bury evidence of *[the reactor's]* existence, covering over the wreckage and constructing a new building on the site. US officials said the Bush administration was putting the information out in order to clear the decks before doing a deal with North Korea to dismantle its nuclear program.

*[deletia]*

One official said the Syrian plant was within weeks or months of being operational. "This thing was good to go," he said. Congress was told that the reactor was designed to produce a small amount of plutonium, which can be used to build a nuclear bomb.

*[deletia]*

A US official who had seen the video said: "We cannot move forward [on a deal with North Korea] unless you acknowledge we are doing this with our eyes wide open. And we are going ahead with our eyes wide open."

The Syrian government yesterday denied it had been building a nuclear reactor with North Korean help. Syria's ambassador to Britain, Sami al-Khiyami, described the video as ridiculous: "Unfortunately the scenario of taking and retaking pictures looks like what happened before the Iraq war, when the US administration was trying to convince the world that Iraq had nuclear weapons."

*[deletia]*

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
April 25, 2008

12:39 p.m. EDT

[EXCERPT]

QUESTION: Can you talk about the Syria-North Korea issue and the briefing that took place yesterday?

MR. MCCORMACK: No, no, not at all. (Laughter.) Sorry, not going to do it.

QUESTION: Part of the briefing was that there was a senior North Korean official that was involved in the six-party talks that was in Syria.

MR. MCCORMACK: Mm-hmm.

QUESTION: Do you have any more information about when this picture was taken? Because it looks to me as if the person that was in Syria, perhaps, was a lot younger and maybe wasn't the senior official that's involved in the six-party talks when he was actually in Syria, so --

MR. MCCORMACK: Yeah, I don't, Elise, sorry. In terms of the intelligence materials and the intelligence assessments, I'm going to have to point you to my colleagues in the intelligence community. I know that they have distributed some materials to the media yesterday and there were some background briefings. I'm just going to have to refer you either to those materials or to them for any additional follow-up questions you might have.

QUESTION: Okay. It just seems that, like, some of the -- and I'm not even talking about the kind of reactor itself and the photos --

MR. MCCORMACK: No, no. I know the one you're talking about.

QUESTION: It does seem that you're making a link between cooperation with Syria and North Korea, some of it which, you know, started at a level -- like, some of the evidence just seems to be kind of a little bit old. And I was wondering if -- if there's a concern on the part of the Administration that by bringing all this evidence out into the open, that you're opening yourselves up to the same type of criticism about the strength of the evidence that you faced after the presentation of Secretary Powell to the UN, that, like, people are going to start, you know, picking it apart and, you know, obviously, this

Administration has, you know, a reputation for, you know, not the strongest intelligence in the world. So if you -- (laughter) -- I'm being diplomatic.

MR. MCCORMACK: Is that the intelligence community or our IQs?

QUESTION: Well, maybe the IQs of the intelligence community.

MR. MCCORMACK: I see.

QUESTION: But if you could talk to your confidence that the international community may have about this.

MR. MCCORMACK: Right. Look, Elise, I can only point to the assessment of the intelligence community about this information. You know, they can -- they have presented a very compelling case in terms of the reactor and who was responsible for building it. You can look at the pictures and the similarities between Yongbyon and the facility on the ground in Syria. They've also detailed a number of other links. And they're quite confident in their analysis based on the materials that they have. I don't think they would have agreed to provide these materials and provide this assessment in public, never mind providing it also to friends and allies and others around the world, if they weren't confident in their assessment.

QUESTION: But just a quick follow-up. But you do understand that the intelligence community around the world and, you know, governments and perhaps the IAEA might take your intelligence with a grain of salt this time.

MR. MCCORMACK: Well, look, in terms of the IAEA, we briefed them yesterday. There was a team of officials from Washington who traveled to Vienna to brief officials below the level of Secretary General ElBaradei regarding the intelligence, what the -- some of the raw materials as well as their analysis of the situation. We believe that it is a case that merits investigation and follow-up by the IAEA. Ultimately that will be their decision whether or not they do follow up with Syria and try to conduct an investigation to determine more facts on the ground. But, you know, beyond that, you know, the intelligence community is really -- they can speak to their case. They can speak to their confidence in the levels -- their confidence levels in their analysis, based on the materials that they have. And from what I have seen and what I have read, what I have been briefed on, they are confident of their assessment.

QUESTION: Just a follow-up briefly?

MR. MCCORMACK: Yeah.

QUESTION: Sean, we have asked many times that -- can you trust North Korea and Iran as far as their nuclear program is concerned, that answer was yes, and we are working on that. Now, can you have some links as far as this outcome is concerned from A.Q. Khan and China, as far as helping North Korea and then going to -- spreading other countries?

MR. MCCORMACK: I don't have any information in that regard, Goyal. And I -- just to correct what you stated at the top there, the whole reason why you have a verification regime is to possibly get to the

state at which there is mutual trust among the parties in the six-party talks. That is something that is earned. It is something that is developed over time. Right now, we're working on the verification part.

QUESTION: Do you still believe and trust in six-party talks?

MR. MCCORMACK: We believe in the six-party talks, Goyal, yeah. We believe in the mechanism. We believe in the process. And as I've said before, we believe that it can lead to the goal that everybody shares, and that is a denuclearized Korean Peninsula and, ultimately, a better situation for the Korean people. But again, it's a process that is based on performance in this mechanism. We believe it's a strong mechanism. But it is also a mechanism, if there is not performance, that can deal with noncooperation.

QUESTION: Sean?

MR. MCCORMACK: Yeah, yeah.

QUESTION: Going back to Elise's point for a second.

MR. MCCORMACK: Sure.

QUESTION: I think that there is some concern that certainly the Syrians are going to be – have already and will this afternoon and will for the near future say, you know, this is – don't be gullible, America, or the world.

MR. MCCORMACK: Right. Uh-huh.

QUESTION: You know, they were wrong the last time they made a public presentation. And, arguably, the last public presentation that was made was actually more public than this. You know, you had the Secretary of State go up to the UN before the Security Council and make a compelling case. He said at the time – he since retracted that, saying that. And in this case, you have a situation where there's no official who has put their name to anything, except for that statement from the White House, which doesn't contain any of the evidence. That evidence is out there with no official's name attached to it, only as a video. Are you less confident in this information than you were in the information on Iraq, because no one is willing to put – no one is willing to go on the record and say – and make these allegations or present this intelligence?

MR. MCCORMACK: Yeah. Of course, people are going to try to draw these analogies. They aren't analogous situations. Look, you know, I don't think – I am not a person that is steeped in all of the raw materials and the analysis here, so it's – I really can't do their analysis justice.

QUESTION: Well, why not?

MR. MCCORMACK: And – but you're --

QUESTION: In 2003, it was the Secretary of State sitting at the UN Security Council –

MR. MCCORMACK: Right.

QUESTION: -- live, on worldwide television --

MR. MCCORMACK: Right.

QUESTION: -- with the Director of the Central Intelligence Agency, sitting directly behind him.

MR. MCCORMACK: Right. Yeah.

QUESTION: And now you've got two or three guys over in wherever speaking on background, presenting what some might say is, you know, similar -- a similar case, similar evidence to what was presented in public before the UN.

MR. MCCORMACK: Yeah. Matt, I just -- you know, I really don't think, in any way, the situations are analogous back in 2003 and the present in terms of the circumstances and the policies and the history leading up to all of this.

QUESTION: Okay.

MR. MCCORMACK: Look, like I said, the intelligence community has said that they stand by their analysis and they have tried to be open in terms of releasing some of the materials and talking about it, albeit on background. But again, I would encourage people who have questions about this to put it directly to the experts on this. I certainly couldn't do the case justice here, as I am not (inaudible).

QUESTION: Well, I guess -- no, no, I'm not trying to get you --

MR. MCCORMACK: No.

QUESTION: -- to repeat it on --

MR. MCCORMACK: Mm-hmm.

QUESTION: -- on camera or, you know, with your name attached to it.

MR. MCCORMACK: Mm-hmm.

QUESTION: What I'm trying to figure out is why was there a decision -- why doesn't anyone -- or why was the decision made not to have anyone attach their name, their reputation to this?

MR. MCCORMACK: Matt, you can -- as for the form --

QUESTION: (Inaudible.)

MR. MCCORMACK: In terms of the form in which the information was presented, I think you can talk to the intelligence community about that.

Okay, Param.

QUESTION: Sean, the question that's being asked after the revelation is -- very obvious question is whether the United States has raised this with North Korea and what was the response?

MR. MCCORMACK: Right. Certainly, over the past several months, this issue has been raised with North Korea. It has been in the context of the six-party talks and it has also been an issue that has been discussed. And the information, in some form, has been discussed among all the members of the six-party talks. And we believe, actually, that has been very constructive and helpful to the process of the six-party talks and, in fact, the mechanism of the six-party talks, because it has put verification really at the top of the list of the things that the six-party mechanism is trying to accomplish. You can have declarations, you can have actions, but those things need to be verified.

And this information has strengthened that case to the point where you have China that is now going to be chairing a group within the six-party mechanism on issues related to verification. And I would expect that, should the process move forward, that that is going to be an essential component of the six-party process. And also, it has had the effect of putting nonproliferation really front and center in this process.

When we talk now about the denuclearized Korean Peninsula, we talk about plutonium, we talk about highly enriched uranium, we also talk about nonproliferation as an equal component. And that is, in our view, a very significant development. It has always been part of the process, but really, the prominence of it within the six parties has been raised. And that has been a positive aspect, I think, that has come out of this.

QUESTION: And just a quick follow-up.

MR. MCCORMACK: Sure.

QUESTION: So what is the response to the North Koreans on this? I mean, this is very important because you have brought the case --

MR. MCCORMACK: Right.

QUESTION: -- across the globe. And people are interested in the sense that you're having a dialogue with North Korea.

MR. MCCORMACK: Well, the six parties -- well, the other five parties of the six parties, I'm sorry -- yeah.

QUESTION: I mean -- I mean, you have meet -- met North Korea on the sidelines and --

MR. MCCORMACK: Sure. No, yeah, exactly, but it is important and significant that it is in that context of the six parties because we, again, don't believe and continue to believe that bilateral dialogue will really not get us to where we want to go. It is really the six-party mechanism that has allowed us to get to the point where we have now, which is significant, and that will allow us ultimately to achieve the goals we all want, again, if North Korea chooses to perform.

QUESTION: But what is the response by the North Koreans when you --

MR. MCCORMACK: Well, look, you know, again, I'm not going to share every exchange within the context of those discussions, but I would leave it to them and that they're fully capable of responding in public. I have not thus far seen any response from them in public.

QUESTION: Sean?

MR. MCCORMACK: Yeah.

QUESTION: Sean, you said the issue has been raised with the North Koreans.

MR. MCCORMACK: Right.

QUESTION: But has this video presentation specifically been shown to --

MR. MCCORMACK: Information has been shared with them. I can't speak to whether the video that was prepared by the intelligence committee itself was shared with them. But certainly, enough information was shared so that they understood that we knew exactly what had happened.

QUESTION: You said this morning that they had some awareness that something would be made public.

MR. MCCORMACK: Mm-hmm.

QUESTION: Can you elaborate on that? Can you say to what extent they knew what the nature of the activities would be --

MR. MCCORMACK: No, we didn't --

QUESTION: -- or when you told them or how you told them?

MR. MCCORMACK: We didn't brief them in details about our plans, but they were aware that, in some form or fashion, this issue was going to be surfaced publicly.

QUESTION: But when did you tell them?

MR. MCCORMACK: I don't have a specific date for you, but over the past months.

QUESTION: And was this used as a leverage point in the negotiations?

MR. MCCORMACK: Well, I mean, just go back to what I said. I believe that, you know, if -- looking back on the process over the past several months, that this -- we have made effective use of this information in the context of the six parties. But again, you know, we will see, based on North Korea's behavior, whether or not this process move forwards. It gets down to their performance.

Yeah.

QUESTION: What is the next step now on a practical level in the six-party talks? What is going to be happening next? And can you say more about China's role in terms of verification?

MR. MCCORMACK: Well, in terms of verification, that's something that will, I would expect, evolve over time. The next steps practically are the five parties waiting for North Korea to provide a declaration. I suppose it shouldn't be a foregone conclusion that they will provide one. We all hope and expect that they will. Once they do, well, that'll be handed over to the Chinese as chair of the six-party

process. Once that's handed over, it'll be examined, analyzed, judged. And if it does account for all aspects of their nuclear program, then the Secretary of State and this building will have to make a recommendation to the President whether or not the process moves forward. The President will have to decide. And if it does move forward, then that declaration, of course, would be subject to verification and they would also have to carry out their outstanding obligations with respect to disabling Yongbyon. And then the other parties would be, I believe at that point, prepared to fulfill their obligations.

QUESTION: I mean, in the past, this process of getting them to provide the declaration has involved trips by Chris Hill, meetings, and so forth. Is there anything like that planned?

MR. MCCORMACK: Not at the moment. Sung Kim is expected to be back this afternoon in Washington and he will brief people back here as to what he heard from the North Koreans. And you know, perhaps, at that point, we may have some further characterization of his discussions. I'm sure it won't be very elaborate. Perhaps we'll have some further characterization of what he heard when he was in Pyongyang, and then it really gets to North Korea and what they choose to do.

QUESTION: Sean, outside of the IAEA, were the other six -- were the six parties briefed separately, individually, as a group, on yesterday's --

MR. MCCORMACK: You know, I can see if I can share with you a bit more the variety of briefings that took place through diplomatic channels over the past couple of days. But the other, what, four parties, I guess you can say, over the period of months, and I don't have specific dates for you, were briefed in some form on the information that we have.

QUESTION: The other four? Don't you mean the other five?

MR. MCCORMACK: China --

QUESTION: Maybe not as full as the other -- as the four got, but --

MR. MCCORMACK: China and South Korea, Japan and Russia.

QUESTION: So they --

MR. MCCORMACK: They received the briefing. And also the North Koreans were presented with this information as well.

QUESTION: So did --

MR. MCCORMACK: This took place over, I believe it was late last year.

QUESTION: So none of this would -- none of what came out yesterday would have been a surprise to any of the --

MR. MCCORMACK: I can't -- again, I can't speak to exactly what materials were presented to the other members of the six-party talks or to other friends and allies or friends and allies that were briefed around the world. But the substance and basically the bottom-line conclusion was -- shouldn't have come to the -- a surprise -- shouldn't have come as a surprise to any of the six-party members.

Yeah. Well, Samir -- Samir, you have one on this?

QUESTION: Yes.

QUESTION: Can I have a follow-up? I'm sorry.

MR. MCCORMACK: Kirit, yeah.

QUESTION: If you don't mind, one more.

MR. MCCORMACK: Sure.

QUESTION: Following up on that real quick, at what point did you tell the Israelis you were going to make a public rollout of this information?

MR. MCCORMACK: Like I said, we briefed a number of friends and allies around the world over the past several days or over the past period of time -- past months.

QUESTION: And did that include the Israelis?

MR. MCCORMACK: You know, I don't have the full list in front of me.

QUESTION: And the second question that I had, and I apologize if you answered it before I came in. I missed the first couple of questions. Does the State Department believe that now that this information is actually, in fact, public, it will complicate your efforts in the six-party talks to get a declaration from the North Koreans?

MR. MCCORMACK: We'll see. It shouldn't. I don't believe that it should. But that ultimately is a question that should be directed at the North Koreans. And you know, I can't tell you whether or not they are seeking a pretext to not fulfill their obligations or they fully intend to. We'll see. The proof of that will be in their actions and we'll be watching to see what they do in the coming days and weeks.

QUESTION: To put it another way, do you think this will help get a declaration from the North Koreans?

MR. MCCORMACK: Kirit, we'll see. You know, again, it's very difficult to determine what goes into the -- what calculations go into their decision making, Kirit. It's a very closed -- very closed process. We'll see.

QUESTION: But, I mean, you must have been (inaudible) with the idea, hopefully, that this would actually help the process, right?

MR. MCCORMACK: Well, I think I just talked about that, the ways in which we believe it has helped the process. And certainly, at a minimum, it has laid down a very clear line in terms of a declaration, what is required in terms of their proliferation activities. So I think they understand very clearly the bar that they need to get over on that part of the declaration.

Yeah.

QUESTION: The Syrian Ambassador was seen visiting the State Department. Did you present him a briefing about the evidence?

MR. MCCORMACK: There was a discussion here at the State Department. Jeff Feltman spoke with the Syrian Ambassador here yesterday.

Subject: syria's clandestine nuclear program

¶1. (U) This is an action request. Please see para 3.

-----

summary

-----

¶2. (SBU) On September 6, 2007, <> [*Sourcebook comment: Appears to be redacted; probably "Israel"*] destroyed a nuclear reactor Syria was clandestinely constructing, we judge with North Korean assistance. The reactor site was in Syria's eastern desert region in a location called al-Kibar. On April 24, Executive Branch officials briefed Congress and the press on evidence that lead the USG to conclude that the Syrian facility at al-Kibar was a nuclear reactor being constructed clandestinely, and therefore in violation of Syria's NPT-required safeguards agreement with the International Atomic Energy Agency (IAEA). The briefing described the basis for concluding North Korean assistance and why the reactor would have been ill-suited for any purpose other than plutonium production for a nuclear weapons program. The briefings also included information on the U.S. policy approach following the discovery of the facility and the Israeli air strike.

-----

action request

-----

¶3. (U) Posts should draw from the background information in para 4 to respond to host government inquiries on this issue and for press inquiries as background information only. The points in the White House press statement in para 5 can be used in full to address press inquiries on the record.

¶4. (sbu) begin text of background information:

#### Introduction

- You will recall reports that the Israeli air force conducted a mission over Syria on September 6, 2007.

- I want to inform you that the purpose of that Israeli mission was to destroy a clandestine nuclear reactor that Syria was constructing in its eastern desert near a place we call al-Kibar.

- The Israeli mission was successful - the reactor was damaged beyond repair. Syria has completed efforts to clean up the site and destroy evidence of what was really there, constructing a new building on the old site.

- We have delayed sharing this information with you, because our first concern was to prevent conflict.

- We believe - based on strong evidence - that North Korea assisted Syria with the reactor at al-Kibar.

- We are working with the North Koreans in the framework of the Six-Party Talks to focus on North Korea's role in this proliferation activity, including as called for in the October 3, 2007, agreement, and to provide additional explanations as necessary.

- We have now decided that the time has come to share more information on this issue.

#### Intelligence

- Our intelligence experts are confident that the facility the Israelis targeted was in fact a nuclear reactor of the same type North Korea built indigenously at its Yongbyon nuclear facility. The U.S. intelligence community conducted an intensive, months-long effort to confirm and corroborate the information Israel provided us on the reactor and to gather more details from our own sources and methods.

- We have good reason to believe this reactor was not intended for peaceful purposes.

- First, we assess this reactor was configured to produce plutonium: it was not configured for power production, was isolated from any civilian population, and was ill-suited for research.

- Second, Syria went to great pains to keep this secret by taking very careful steps to conceal the true nature of the site.

- Third, by maintaining secrecy and not declaring the site to the IAEA and providing design information, as Syria's NPT-mandated IAEA safeguards agreement requires, Syria undermined the very purpose of IAEA safeguards - to provide the international community with the necessary assurance/ verification that the reactor was part of a peaceful program.

- Finally, Syria's concealment and lies about what happened for months now after the Israeli air strike is compelling proof that it has something to hide. In fact, after the attack on the site, Syria went to great lengths to clean up the site and destroy evidence of what was really there. If there were nothing to hide, Syria presumably would have invited IAEA inspectors, other experts, and the news media to the site to prove that.

#### Violations of international obligations

- Article III of the NPT requires Syria to maintain comprehensive safeguards over all of its nuclear activities. Syria's IAEA Safeguards Agreement requires Syria to make early declaration of any new nuclear facilities. Specifically, Syria is legally obligated to inform the IAEA of such new facilities at the time a decision is taken to build them. Syria, however, failed to make such a declaration to the IAEA, or to provide design information and access during the reactor's construction intended to allow the IAEA to verify that design information.

- If North Korea provided technical training, advice, services or assistance related to the provision, manufacture, maintenance or use of nuclear-related items subject to UN Security Council resolution 1718 to the Syrian Government after the effective date of that resolution (October 14, 2006), this would constitute a violation of the resolution by both North Korea and Syria. Paragraph 8(b) of the resolution requires all member states to prohibit the procurement from North Korea of nuclear related items contained in S/2006/814 (which encompasses the control list of the Nuclear Suppliers Group).

#### Policy deliberations

- The existence of this reactor was dangerous and destabilizing for the region, and we judged that it could have been only weeks away from becoming operational at the time it was destroyed by the Israeli air force.

- Specifically, we assessed that once the pumphouse and pipe system were complete in early August, the reactor could begin operation at any time. Once operations began, certainly a military option would have been much more problematic with radioactive material present.

- We have long had indications of Syrian covert nuclear-related interaction with North Korea, and identified the al-Kibar facility in the fall of 2006 as an enigmatic site. In Spring 2007, we acquired information that enabled us to conclude that the Al-Kibar facility was a reactor.

- Information was brought to our attention at that time by Israeli officials who had conclusive intelligence that a reactor was being constructed at that site.

- The Israeli reports were confirmed by our own independent intelligence and analysis and were consistent with less definitive information we already possessed.

- At the same time, we conducted our own intensive internal policy deliberations regarding what to do about this disturbing and destabilizing development.

- We discussed policy options with the Israelis, but in the end Israel made its own decision to destroy the reactor. This decision was made by Israel alone - they did not seek our consent. Nonetheless, we understand Israel's decision.

- <> [*Sourcebook comment: Appears to be redacted; probably "Israel"*] saw this reactor, and what Syria may have intended to do with it, as an existential threat that required it to act to defend itself.

#### The way forward with Syria

- Syria's secret construction of this nuclear reactor is the latest in a series of unacceptable actions by the Asad regime.

- Syria is a state that supports terrorism, destabilizes Lebanon, and is the largest conduit for foreign fighters and suicide bombers entering Iraq to kill Iraqis, Americans, and Coalition forces.

- The Syrian Government supports terrorist groups such as Hamas, Palestinian Islamic Jihad, Hizballah, and others, including by playing host to leaders of some of these groups.

- Syria is a proliferator in every sense - of terrorism, of instability to its neighbors, including Lebanon, and now as a recipient and developer of dangerous nuclear technology.

- The Syrian regime, in going down this path, has shown a disregard for the security of the region and of its own people.

- We call upon the Syrian regime to reveal the full extent of its nuclear activities, as it is required to do under the NPT and its safeguards agreement, and verify that its covert nuclear-related activities have stopped.

- For better relations with the international community, in addition to full disclosure and cooperation regarding its covert nuclear program, Syria needs to end support for insurgents and foreign fighters in Iraq, support for Palestinian terrorists, and interference in Lebanon. If willing to do so, Syria can expect to be welcomed by the international community.

#### The way forward -- six-party talks

- In September 2007, the U.S. began raising its concerns with North Korea about nuclear cooperation with Syria. We have also raised this matter with the other participants in the Six-Party Talks.

- We have made our concerns known to North Korea in a frank and comprehensive way. The North Koreans have acknowledged our concerns.

- The North Koreans have stated that there is no ongoing nuclear cooperation with any foreign country in violation of applicable domestic and international laws and treaties, and that there will be no such cooperation in the future.
- North Korea has agreed to cooperate on verification activities in line with its past commitments on non-proliferation, including as stated in the October 3, 2007, agreement, and to provide additional explanations as necessary.
- We have been following Syrian/North Korean interactions since the destruction of the reactor, and we have not seen the same level of interaction as we did before the reactor's destruction, however we cannot be certain all cooperation has ceased.
- We continue to be on alert for signs of any nuclear cooperation, and any renewed activities.
- We remain attuned to potential North Korean relationships worldwide, especially given North Korea's continued proliferation of missiles and other weapons. We plan to follow up on North Korea's agreement to cooperate on verification and to provide further explanations as necessary.
- We are working with the Chinese to establish such a mechanism within the Six Party framework to address proliferation concerns.

#### Conclusion

- We cannot allow the world's most dangerous weapons to fall into the hands of the world's most dangerous regimes. This is the policy we have applied with respect to Iraq, Iran, and North Korea, and it is the policy that we continue to pursue. We are concerned by the cooperation between regimes that sponsor proliferation, especially when those same regimes also sponsor terrorism and foster instability.
- A Syrian nuclear weapons capability would have been a catastrophic development for the Middle East and the world. It could spark a nuclear arms race in the region, and could escalate already high tensions with unpredictable and dire consequences.
- The international community must come together to put a stop to dangerous behavior such as this. There is a consensus among nations that proliferation cannot be tolerated. This episode reminds us of the dangers of proliferation and that we must rededicate ourselves and act cooperatively to prevent the spread of weapons of mass destruction.

End text of background information.

¶5. (u) begin text of press statement:

Today, administration officials have briefed select Congressional committees on an issue of great international concern. Until Sept. 6, 2007, the Syrian regime was building a covert nuclear reactor in its eastern

desert capable of producing plutonium. We are convinced, based on a variety of information, that North Korea assisted Syria's covert nuclear activities. We have good reason to believe that reactor, which was damaged beyond repair on Sept. 6 of last year, was not intended for peaceful purposes. Carefully hidden from view, the reactor was not configured for such purposes. In defiance of its international obligations, Syria did not inform the International Atomic Energy Agency (IAEA) of the construction of the reactor, and, after it was destroyed, the regime moved quickly to bury evidence of its existence. This cover-up only served to reinforce our confidence that this reactor was not intended for peaceful activities.

We are briefing the IAEA on this intelligence. The Syrian regime must come clean before the world regarding its illicit nuclear activities. The Syrian regime supports terrorism, takes action that destabilizes Lebanon, allows the transit of some foreign fighters into Iraq, and represses its own people. If Syria wants better relations with the international community, it should put an end to these activities.

We have long been seriously concerned about North Korea's nuclear weapons program and its proliferation activities. North Korea's clandestine nuclear cooperation with Syria is a dangerous manifestation of those activities. One way we have chosen to deal with this problem is through the Six Party Framework. Through this process we are working with our partners to achieve the verifiable denuclearization of the Korean Peninsula. The United States is also committed to ensuring that North Korea does not further engage in proliferation activities. We will work with our partners to establish in the Six Party Framework a rigorous verification mechanism to ensure that such conduct and other nuclear activities have ceased.

The construction of this reactor was a dangerous and potentially destabilizing development for the region and the world. This is particularly true because it was done covertly and in violation of the very procedures designed to reassure the world of the peaceful intent of nuclear activities. This development also serves as a reminder that often the same regimes that sponsor proliferation also sponsor terrorism and foster instability, and cooperate with one another in doing so. This underscores that the international community is right to be very concerned about the nuclear activities of Iran and the risks those activities pose to the stability of the Middle East. To confront this challenge, the international community must take further steps, beginning with the full implementation of the United Nations Security Council resolutions dealing with Iranian nuclear activities. The United States calls upon the international community to redouble our common efforts to ending these activities and preventing the spread of weapons of mass destruction in this critical region.

End text of press statement.

¶7. (U) Minimize considered.

Rice

## **IAEA Press Releases**

Press Release 2008/06

Statement by IAEA Director General Mohamed ElBaradei

25 April 2008 | The IAEA Secretariat was provided with information by the United States on 24 April claiming that the installation destroyed by Israel in Syria last September was a nuclear reactor. According to this information, the reactor was not yet operational and no nuclear material had been introduced into it.

The Agency will treat this information with the seriousness it deserves and will investigate the veracity of the information. Syria has an obligation under its safeguards agreement with the IAEA to report the planning and construction of any nuclear facility to the Agency.

The Director General deplores the fact that this information was not provided to the Agency in a timely manner, in accordance with the Agency's responsibilities under the nuclear Non-Proliferation Treaty (NPT), to enable it to verify its veracity and establish the facts. Under the NPT, the Agency has a responsibility to verify any proliferation allegations in a non-nuclear weapon State party to the NPT and to report its findings to the IAEA Board of Governors and the Security Council, as required.

In light of the above, the Director General views the unilateral use of force by Israel as undermining the due process of verification that is at the heart of the non-proliferation regime.

## **Accusing N. Korea May Stall Nuclear Pact**

Both Nations Cite Progress, but Allegations About Aid to Syria Chill Lawmakers

By Glenn Kessler and Robin Wright

Washington Post Staff Writers

Saturday, April 26, 2008; A12

The Bush administration gambled this week that its detailed accounting of North Korean assistance to a Syrian nuclear program would help pave the way for a nuclear disarmament agreement with Pyongyang, but the allegations so angered Republican lawmakers that support for a deal may be seriously weakened.

To signal displeasure, Sen. Sam Brownback (R-Kan.) placed a hold on an ambassadorial nomination of a former aide to the chief U.S. negotiator with North Korea, Christopher R. Hill. "People are very mad, very angry" about the prospect of an agreement with "a regime that has repeatedly demonstrated that its word is indistinguishable from a lie," said an aide to a key Republican lawmaker.

Despite the fresh accusations of North Korean wrongdoing, U.S. and North Korean officials said this week they were making progress on key aspects of the disarmament deal, which requires North Korea to declare how much plutonium it has made for its nuclear arsenal and to turn over thousands of documents concerning the inner workings of the Yongbyon nuclear facility.

A U.S. negotiator returned yesterday from three days of talks in North Korea aimed at meeting goals set by President Bush, national security adviser Stephen J. Hadley and Secretary of State Condoleezza Rice, officials said. Hill told reporters yesterday that the discussions were "lengthy" and "productive," echoing a statement by North Korea that "the negotiations proceeded in a sincere and constructive manner, and progress was made there."

But criticism of the administration's handling of the matter did not come only from Capitol Hill. Mohamed ElBaradei, director general of the International Atomic Energy Agency, yesterday said the United States should not have waited so long before disclosing what it suspected about North Korea's assistance to Syria.

ElBaradei also reiterated his criticism of Israel for its "unilateral use of force" in a Sept. 6 bombing raid that destroyed the nuclear reactor Syria was allegedly building with North Korea's help, saying it prevented the agency from verifying whether undeclared nuclear activity had been taking place at the site.

Administration officials said yesterday that before the Israeli bombing, Rice and a majority of other senior officials had supported using information about the two countries' secret collaboration to squeeze Damascus diplomatically, with the aim of stopping its interference in Lebanon and halting the passage of insurgents through Syria into Iraq.

U.S. officials told Israel that it would benefit if Washington were able to get Syria to stop all its "nefarious activity," one official said. But Israel decided that Syria's Al Kibar facility was "an existential threat" and needed to be destroyed before reactor fuel could be loaded or processed, the official said.

Another official said the Israelis, having seen the long, inconclusive negotiations with Iran over its nuclear programs, had little interest in a solution involving the United Nations and the atomic energy agency. An Israeli official declined to comment on the U.S.-Israeli discussions.

"We looked at the possibility of talking to [the Syrians] on the diplomatic track," a senior administration official said yesterday, "using this to say, 'You need to comply with your international obligations, stop aiding foreign fighters going into Iraq, stop disrupting the situation in Lebanon, stop supporting Hezbollah and Hamas, stop repressing your own people, and stop this nuclear activity.' And telling them we would look at military options but we wanted to take the diplomatic track first. But all of our political discussions became moot when Israel acted."

Officials said they received their strongest evidence of a North Korean-Syrian connection a year ago, primarily from Israel, at about the time the North Koreans had inked a deal with the United States and its negotiating partners to proceed with dismantlement. Since then, U.S. negotiators had demanded and received North Korea's promise to acknowledge U.S. information about collaboration with Syria.

Key lawmakers nonetheless made it clear that unless the intelligence about Syria was described to them in detail, they would block funding for the deal and oppose a key waiver of a law preventing U.S. aid to a country that detonates a nuclear weapon.

Officials said the timing of the administration's disclosure was also influenced by a provision of the U.S. law governing state sponsors of terrorism, a list that has long included North Korea. Under the proposed nuclear disarmament deal, Washington has agreed to remove North Korea from the list, but the law requires that it first demonstrate that North Korea has not assisted another country on the list for at least six months. The intelligence presented this week indicated that North Korea helped Syria in removing equipment from the site through early October, meaning the six-month window only recently closed.

IAEA officials are not optimistic about the prospects for their own investigation into the Syrian facility. "It'll be very difficult to get to the truth," said a diplomat close to the U.N. nuclear watchdog agency. "If you give the IAEA information in a timely manner, as soon as you have it, and the verification body can credibly go in there and investigate on the ground, then you may someday know the truth. The way this was done, we have only their word and photographs."

North Korea, in its negotiations with U.S. officials, was told about key aspects of the U.S. intelligence on the Syrian site and had been warned that a public presentation would be forthcoming. But the State Department did not brief Syrian Ambassador Imad Moustapha until Thursday, in a session described as "cold and correct but not angry" by a senior State Department official.

At a news conference yesterday, Moustapha said the U.S. claims have no credibility at home or abroad. "This administration has a proven record of falsifying and fabricating stories about WMDs. They have done this before, they have done this yesterday, and they will continue to do this in the future," he said.

The facility was an vacant military building at the time of the Israeli airstrike and was not a secret from anyone, he said. "Every commercial satellite service available on Earth was able to provide photos of this so-called secret Syrian site for the past five, six years. I think something is very absurd and preposterous in the whole story."

## **IAEA's ElBaradei criticizes US for holding back information**

By GEORGE JAHN

1 day ago [Accessed 2008-04-27T13:00Z]

VIENNA, Austria (AP) — The head of the U.N. nuclear watchdog chastised the United States on Friday [2008-04-25] for withholding information on what Washington says was a nuclear reactor being built secretly in Syria with help from North Korea.

International Atomic Energy Agency director general, Mohamed ElBaradei, also criticized Israel for bombing the alleged nuclear facility site seven months ago.

ElBaradei issued a strongly worded statement that reflected his anger about being kept out of the loop about Washington's investigation of the site and the alleged North Korean assistance.

The IAEA said ElBaradei was not told about the information until Thursday, the day U.S. officials briefed Congress about the evidence, which they say includes dozens of photographs taken from ground level and footage of the interior of the building gathered by spy satellites after the Israeli strike in September.

"The director general deplors the fact that this information was not provided to the agency in a timely manner, in accordance with the agency's responsibilities under the nuclear Non-Proliferation Treaty, to enable it to verify its veracity and establish the facts," said a statement from the IAEA.

In Washington, the State Department brushed aside ElBaradei's complaint.

"The fact of the matter now is this is an issue that is worthy of investigation putting aside these questions of timing," spokesman Sean McCormack said.

The IAEA's mission includes trying to keep nuclear proliferation in check, and it depends on member states for information to carry out that task.

ElBaradei and the Bush administration have clashed before. In the runup to the Iraq war, he challenged U.S. claims that Saddam Hussein's regime possessed weapons of mass destruction. In 2005, Washington made a failed attempt to prevent ElBaradei's re-election.

The IAEA promised Friday to follow up on the U.S. intelligence, saying it would "treat this information with the seriousness it deserves and will investigate the veracity of the information."

ElBaradei also criticized Israel's airstrike of the site. Israel has maintained total silence on the issue since the Sept. 6 bombing.

"The director general views the unilateral use of force by Israel as undermining the due process of verification that is at the heart of the non-proliferation regime," the statement said.

The IAEA did not directly criticize North Korea or Syria, but said "Syria has an obligation ... to report the planning and construction of any nuclear facility to the Agency."

Syria denies that it was building a nuclear reactor and insists the site bombed by Israel was an unused military facility.

Syria's U.N. Ambassador Bashar Ja'afari pledged Friday to cooperate with the IAEA and suggested that "the main target of the American CIA allegations against Syria is to justify the Israeli attack against the Syrian side."

"We should be very careful and cautious with regard to all these kind of allegations. Anybody could fabricate anything these days," Ja'afari added.

Top U.S. intelligence officials who briefed reporters in Washington on Thursday said they had high confidence in the judgment that North Korea had aided Syria with its nuclear program and the intention was to produce plutonium. The officials spoke on condition of anonymity because of the sensitivity of the matter.

However, they said there was no reprocessing facility at the site — something that would be needed to extract plutonium from spent reactor fuel for use in a bomb. That gives little confidence that the facility was meant for weapons development, they said.

John Bolton, a former U.S. ambassador to the U.N., said ElBaradei's criticism was "entirely unwarranted" and defended Israel's decision to strike the Syrian site.

"The IAEA was and remains unable to deal with regimes like Syria," he told the AP. "Israel did what was necessary to defend itself, and the U.S. had no obligation to brief the IAEA in such a matter."

Associated Press writers Pamela Hess and Matthew Lee in Washington and Edith M. Lederer at the United Nations contributed to this report.

## **State Department Tells U.N. to Stop Complaining and Start Investigating Syria's Secret Nuclear Reactor Project**

**Friday, April 25, 2008**

VIENNA, Austria — The State Department had a pointed response Friday for the U.N.'s criticism that the U.S. did not come forward with information about Syria's clandestine nuclear reactor program: Get over it and start investigating.

"We would expect and hope that the IAEA (International Atomic Energy Agency) would investigate this matter," spokesman Sean McCormack told reporters. "The fact of the matter now is this is an issue that is worthy of investigation putting aside these questions of timing."

McCormack was responding to IAEA Director General Mohamed ElBaradei's complaint that the U.S. did not give his organization intelligence information sooner on what Washington says was a nuclear reactor in Syria being built secretly by North Korea.

ElBaradei's also chastised Israel for bombing the site seven months ago, in a statement whose strong language reflected anger at being kept out of the picture for so long.

The White House broke its silence about the issue on Thursday, just hours after top U.S. legislators — members of the House of Representatives Intelligence Committee — were briefed on the alleged reactor. U.S. intelligence officials said evidence included dozens of photographs taken from ground level as well as footage of the interior of the building taken by spy satellites after the Israeli strike.

The IAEA's mission includes trying to keep nuclear proliferation in check, and it depends on member states for information in trying to carry out that task. The agency is investigating allegations that Iran tried to make nuclear weapons, and it is using not only its own research but intelligence provided by the U.S. and other members of the 35-nation IAEA board.

"The director general deplors the fact that this information was not provided to the agency in a timely manner, in accordance with the agency's responsibilities under the nuclear Non-Proliferation Treaty, to enable it to verify its veracity and establish the facts," said an IAEA statement, issued a day after ElBaradei was briefed.

Additionally, "the director general views the unilateral use of force by Israel as undermining the due process of verification that is at the heart of the nonproliferation regime," it said.

Promising a follow-up, the statement said the IAEA "will treat this information with the seriousness it deserves and will investigate the veracity of the information," adding: "Syria has an obligation ... to report the planning and construction of any nuclear facility to the Agency."

John Rood, the U.S. undersecretary of state for arms control, briefed ElBaradei by telephone. Additionally, a senior U.S. official, who spoke on condition of anonymity because of the sensitivity of the matter, said a U.S. intelligence team was in Vienna to brief IAEA representatives.

A senior diplomat linked to the IAEA said ElBaradei had already let his displeasure be known to Rood, during the U.S. official's phone call, over the delay between the time the information became available

to the U.S. and when he was informed of it. U.S. Congressional Intelligence Committee members also expressed anger Thursday over the seven-month time lapse before their committee was briefed.

In Washington, the State Department brushed aside elBaradei's complaint.

"The fact now is that the IAEA is being briefed, they are being provided the information and we believe that this is certainly an issue that merits close scrutiny and investigation by the IAEA," McCormack said.

"The fact of Syria having a nuclear reactor that is in violation of their NPT obligations in our estimation is something worthy of investigation by the IAEA," McCormack said, referring to the Nonproliferation Treaty. "And, certainly the Syrians as a member of the treaty should grant access to the IAEA to the site."

John Bolton, who has served as U.S. ambassador and before that held Rood's job at a time the U.S. was considering trying to push ElBaradei out from his position, said the IAEA's chief criticism is "entirely unwarranted."

"The IAEA was and remains unable to deal with regimes like Syria," he said in an e-mail to the AP. "Israel did what was necessary to defend itself, and the U.S. had no obligation to brief the IAEA in such a matter."

While U.S. undersecretary of state for arms control several years ago, Bolton was a chief ElBaradei critic at a time Washington was lobbying for ElBaradei's replacement because of his differences with the U.S. administration over how much of a nuclear threat Iran and Saddam Hussein's Iraq posed.

ElBaradei did not criticize Syria and North Korea. And U.N. Secretary-General Ban Ki-moon said he lacked "concrete information" on the issue. But the U.N. chief told reporters while on a visit to Vienna that "as a matter of principle, this proliferation of weapons of mass destruction ... is a serious source of great concern"

"(The) international community must work hard to prevent such proliferation," he said.

Repeating its previous stance, Syria denied the allegations Thursday.

But in Seoul, Kim Sook, South Korea's top nuclear envoy, said the allegations of nuclear cooperation between North Korea and Syria were credible and urged Pyongyang to fulfill a promise to declare all its atomic programs.

"We share the concern expressed by the U.S. government about the North Korean nuclear weapons program and nuclear proliferation activities," Kim told The AP in a telephone interview Friday.

## Syrian envoy says CIA fabricated evidence

By PAMELA HESS

1 day ago [*Accessed 2008-04-27T13:35Z*]

WASHINGTON (AP) — Syria's ambassador to the United States said Friday that the CIA fabricated pictures allegedly taken inside a secret Syrian nuclear reactor and predicted that in the coming weeks the U.S. story about the site would "implode from within."

"The photos presented to me yesterday were ludicrous, laughable," Ambassador Imad Moustapha told reporters at his Washington residence.

However, he refused to say what the building in the remote eastern desert of Syria was used for before Israeli jets bombed it in September 2007.

Senior U.S. intelligence officials said Thursday they believe it was a secret nuclear reactor meant to produce plutonium, which can be used to make high-yield nuclear weapons. They alleged that North Korea aided in the design, construction and outfitting of the building.

Syria bulldozed the building's ruins a month after it was bombed and constructed a new, larger building in its place, leaving little or no evidence of what had been on the site.

Moustapha would not explain the purpose of the new building. But he said the lack of military checkpoints, air defenses or barbed wire fences around either building should show that it was not a sensitive facility.

So far, Syria has not allowed the International Atomic Energy Agency to inspect the area.

Syria's ambassador to the United Nations, Bashar Ja'afari, pledged on Friday to cooperate with the IAEA and suggested that "the main target of the American CIA allegations against Syria is to justify the Israeli attack against the Syrian side."

In a message to employees, CIA Director Michael Hayden praised the agency's "outstanding" work, calling it "a case study in rigorous analytic tradecraft, skillful human and technical collection."

But some outside nuclear experts were questioning some of the CIA's analysis, though not disputing its conclusions.

David Albright, president of the nonprofit Institute for Science and International Security, analyzed commercial satellite imagery of the bombed facility last fall and surmised then it was a nuclear reactor. He questioned the intelligence agencies' conclusion that the reactor was within months or weeks of completion.

"It's not clear-cut it was ready to turn on," Albright said.

He also took issue with the Bush administration's assertion that the reactor was solely intended to support a nuclear weapons program. Officials said Thursday the reactor was ill-suited for electrical generation — it lacked distribution wires or substations — and did not bear the hallmarks of a research

reactor. They concluded the plutonium was therefore meant for weapons but acknowledged they had no direct evidence of that.

Almost all reactors produce plutonium, even those dedicated to peaceful purposes, Albright said.

"Civilian uses are possible and cannot be dismissed out of hand," he said. "I think the CIA and the White House have not shown that the only possibility for this reactor is that it was to make plutonium for nuclear weapons."

"It very well could be true," he said, "but it is far less than ironclad, absent other information."

According to the CIA, the Syrian reactor was modeled on a small North Korean reactor built at Yongbyon. That facility produced a small amount of plutonium for nuclear weapons. Albright said that facility was also a research effort to determine if the North Koreans could scale up the model to produce electricity efficiently.

Siegfried Hecker, the co-director for Stanford University's Center for International Security and Cooperation, said the evidence strongly suggests Syria's intention was to produce plutonium. He agreed with the assessment that the plant was not well-suited for generating electricity.

"On the other hand, it was the best path to bomb-grade plutonium," he said. "That was most likely the primary purpose of this facility."

One piece of evidence that casts doubt on Syrian intentions to produce plutonium for weapons was the absence of a reprocessing facility, necessary to extract plutonium from spent nuclear fuel.

But Anthony Cordesman, a military expert with the Center for Strategic and International Studies, said that may not have been a serious impediment. Syria could quickly build such a reprocessing capability, he said.

Cordesman also said the CIA undercut its case against Syria by not explaining how a plutonium-producing reactor would fit into Syria's "long history" of suspicious activities that suggest it is trying to develop nuclear, chemical and biological weapons.

## **Doubts cast over US data on Syrian nuclear reactor**

By Demetri Sevastopulo and Daniel Dombey, Financial Times

Published: **April 27, 2008**, 00:45

Washington: When US officials on Thursday rolled out evidence to support allegations that North Korea had helped Syria construct a nuclear reactor, they said the intelligence community had "low" confidence that the purpose of the reactor was to produce plutonium for nuclear weapons.

Some experts are questioning the strength of the intelligence included in the high-profile presentations that were made to more than 200 members of Congress on Saturday and later to the media.

"The end result has been far more speculation about the meaning and credibility of US reporting than should have been the case," said Anthony Cordesman at the Centre for Strategic and International Studies.

"Once again, the US intelligence community has created an unnecessary mess by rushing out a half-complete product, and failing to put the information in releases in proper context." Meanwhile, a nuclear physicist close to the International Atomic Energy Agency (IAEA) cast doubt yesterday on the veracity of US intelligence.

"When you look at the [US intelligence services] pictures, they show only raw construction," an expert close to the IAEA said.

"It was just the shell of a site, and the walls did not look like the ones needed for a plutonium reactor."

Walls of a plutonium reactor "need a lot of piping, there was nothing like that on the pictures", he added.

## **Assad says facility Israel bombed not nuclear: paper**

Sunday, April 27, 2008; 9:52 AM

DUBAI (Reuters) - The Syrian site Israel bombed in September was not part of a nuclear weapons program, but was a military facility under construction, President Bashar al-Assad said in remarks published on Sunday.

Last week, Washington released intelligence alleging Syria had built a nuclear reactor with North Korean help before an Israeli air strike destroyed the facility on September 6.

"Is it logical? A nuclear site did not have protection with surface to air defenses? A nuclear site within the footprint of satellites in the middle of Syria in an open area in the desert?" Assad asked Qatar's al-Watan newspaper in an interview conducted before the U.S. accusations were made.

At that stage, he was commenting on media reports that said the target was a nuclear site. "The truth is that the raid was at a military site under construction," Assad said in the interview. "We are against mass destruction weapons for Israel, Iran or others."

Assad said it was illogical for Syria to seek a nuclear bomb. "Where would we use it? On Israel it would kill the Palestinians. I do not see this as logical."

Speaking after the U.S. accusations, Syria's ambassador to the United States dismissed as "a fantasy" the U.S. allegations.

Assad said he did not know why Israel, officially at war with Syria since the 1973 Middle East conflict, bombed the site.

"Why did they raid it, we do not know what data they had, but they know and they see through satellites; they have raided an incomplete site that did not have any personnel or anything. It was empty," he added.

### BILATERAL RELATIONS

Asked about Syria's response, Assad said: "Retaliation does not mean a missile for a missile, a bomb for a bomb or a bullet for a bullet ... They (Israelis) understand what we mean. We do not say that we will retaliate, i.e. we will bomb."

"You have to ask a different question; had Syria not been harming Israeli policy would Israel have carried out an operation of this sort? The truth is that we have the means to respond, but in our own way."

"We understand Israel wants to provoke Syria and possibly to drag Syria into war while we do not seek war. We have been clear about this point. We have other means and we do not necessarily have to declare them."

Assad refused to answer a question about reports that Syria was seeking to acquire Russian missiles.

"If there was a door open, even if it was small, for peace you should not seek war but you should seek to defend yourself. Now are you prepared or not, psychologically we are always ready and constantly prepare ourselves, but in terms of results no one knows results until the battle itself."

Watan ran part of the interview on Thursday in which he said Damascus was ready to negotiate with Israel through Turkey to "find common ground" for peace, but any direct talks must wait until a new U.S. president is elected.

Syria says it received word from Turkey that Israel was willing to give back the occupied Golan Heights in full in return for peace with the Arab state -- a key issue that led decade-long negotiations to falter in 2000.

## US Lawmakers Criticize Bush Administration Over Intelligence on Syria

By Michael Bowman

Washington

27 April 2008

U.S. legislators of both political parties are criticizing the Bush administration for only recently disclosing intelligence it possessed about an alleged secret Syrian nuclear reactor that Israel bombed last year. From Washington, VOA's Michael Bowman reports.

Last week, senior U.S. intelligence officials revealed that they have long believed that the facility targeted by Israel was a Syrian reactor designed to produce plutonium that had been constructed with the assistance of North Korea. The revelation took many in Washington and beyond by surprise, and is causing deep concern among Republican and Democratic members of Congress.

A key ally of President Bush on Capitol Hill, the ranking Republican on the House Intelligence Committee, Representative Peter Hoekstra, says last week's briefing by U.S. intelligence officials left him with more questions than answers. Hoekstra voiced his concerns about the Syrian facility on CNN's Late Edition program.

"How close was this to being operational? Who funded this for Syria? How close was the North Korean-Syrian cooperation? And where else might North Korea have been involved in proliferation," he asked.

Hoekstra said, had the Bush administration revealed what it knew about the Syrian facility sooner, his committee and other entities could have probed the matter and possibly arrived at answers before now.

Hoekstra's words were echoed by a Democratic member of the Senate Select Committee on Intelligence. Senator Dianne Feinstein said, not only should the Bush administration have been more forthcoming about the intelligence it possessed on the Syrian facility, the intelligence should have been presented to the International Atomic Energy Agency.

"I think it should have gone immediately to the IAEA," she said. "That is why the IAEA is there [to investigate]. And by not sharing information immediately, what we do is destroy their verification potential as an independent outside agency."

Feinstein added that she was puzzled by the timing of the Bush administration's release of intelligence on Syria, coming seven months after Israel bombed the suspected nuclear facility.

In briefings with the news media, U.S. intelligence officials said the delay in disclosure was motivated by a desire to prevent confrontation and conflict in the Middle East. They said they feared Syria would feel greater pressure to retaliate against Israel for the bombing if U.S. intelligence about the facility had been made public.

Syria has steadfastly denied U.S. allegations about the purpose of the facility.

U.S. intelligence has come under greater scrutiny at home and abroad with many questioning the reliability and accuracy of the information America gathers on its adversaries since the lead-up to the 2003 the U.S.-led invasion of Iraq.

At the time, the Bush administration alleged Iraq was actively pursuing weapons of mass destruction. To date, little if any proof has come to light in Iraq that supports the administration's contention, which served as a primary justification for ousting Saddam Hussein.

[http://www.boston.com/news/world/asia/articles/2008/04/27/us\\_slow\\_in\\_voicing\\_syria\\_intelligence\\_lawmakers/](http://www.boston.com/news/world/asia/articles/2008/04/27/us_slow_in_voicing_syria_intelligence_lawmakers/)

## **U.S. slow in voicing Syria intelligence: lawmakers**

**April 27, 2008**

WASHINGTON (Reuters) - The Bush administration has made a strong case that Syria built a nuclear reactor with North Korean help but should not have waited until months after Israel destroyed the suspected facility to share its intelligence with Congress, two U.S. lawmakers said on Sunday.

Rep. Pete Hoekstra, the top Republican on the House intelligence committee, said military and security officials presented "compelling information" to lawmakers last week about the suspected nuclear site in Syria, which was struck by Israeli warplanes on September 6.

But Hoekstra said the briefing left serious questions unanswered, including whether North Korea was supporting proliferation efforts elsewhere.

"If we would have gotten this information seven months ago to the full intelligence committee, we could have spent the last seven months going through and peeling back the onion," the Michigan lawmaker said on CNN's "Late Edition" show.

The administration's depiction of the Syrian facility, which officials said was "nearing operational capability" before Israel's airstrike, comes as Washington hopes for a breakthrough in efforts to end to Pyongyang's nuclear program.

Yet Hoekstra suggested the administration's secrecy on the Syria affair could jeopardize support for any deal U.S. President George W. Bush may bring to Congress on North Korea.

"The administration has handled this very badly," he said.

The White House initially tried to keep the strike a secret in hopes of avoiding Syrian retaliation.

Sen. Dianne Feinstein, a California Democrat who sits on the Senate intelligence committee, also said the administration's intelligence was convincing.

But she said the timing of the revelation was "very suspect" and criticized the administration for failing to go immediately to the United Nations' nuclear agency.

The Vienna-based International Atomic Energy Agency, or IAEA, has promised to look into whether Syria secretly built an atomic reactor.

"By not sharing information immediately, what we do is destroy their verification potential as an independent, outside agency," Feinstein said.

"If this had been dealt with in an open way at the time ... the North Korean talks perhaps could have been more successful, and Syria might have been put in a place where an accommodation with Israel is more appropriate," she said. "Right now, it can well blow up the situation."

Israeli officials said on Sunday they would be open to a high-level meeting with Syria, brokered by Turkey, that might open the door to renewed peace negotiations.

## **Timing of North Korea revelations questioned**

A key Republican says evidence alleging North Korea's link to a site in Syria is a bid to gain leverage in nuclear talks.

By Nicole Gaouette

Los Angeles Times Staff Writer

April 28, 2008

WASHINGTON — A senior Republican congressman assailed the Bush administration Sunday for the timing and nature of its charges that North Korea helped Syria build a secret nuclear weapons facility.

Administration officials went before the Senate and House intelligence panels last week carrying satellite imagery and photos that they said linked North Korea with the desert structure that Israel destroyed in an airstrike last year.

"The administration has handled this very badly" and "has a credibility problem," Rep. Peter Hoekstra of Michigan, the ranking Republican on the House Intelligence Committee, said on CNN's "Late Edition."

The allegations come as negotiations continue between the United States and other countries and North Korea over the dismantling of the Pyongyang government's nuclear program.

In exchange for North Korea abandoning its nuclear weapons program, the Bush administration has offered to ease sanctions on the isolated country and remove it from a list of states that sponsor terrorism -- steps that conservative lawmakers see as unacceptable concessions.

Hoekstra said he believed that the administration's revelations were an attempt to gain leverage in the talks, but that the strategy might backfire with Congress, particularly among those conservatives.

"I think the administration believes it will help them get to a deal with North Korea," he said.

"The timing of it, what information they released, what information they did not release and who they released it to, is going to make it more difficult for them to reach an agreement that will be supported by Congress and supported by the American people," Hoekstra said.

Both Hoekstra and Democratic Sen. Dianne Feinstein of California, a member of the Senate Select Committee on Intelligence, said on the CNN program that based on the administration's presentation, they had little doubt the Syrian facility was related to nuclear production.

Some photos appeared to show rods that control heat in a nuclear reactor and buildings that bear strong structural and engineering similarities to North Korea's Yongbyon nuclear reactor.

"This is compelling information," Hoekstra said.

In remarks published Sunday, Syrian President Bashar Assad dismissed the allegations that the site known as Al Kibar was involved in nuclear activities.

"Is it logical?" Assad told a Qatari newspaper, insisting that Al Kibar had been a nonnuclear military

site. Assad reportedly gave the interview before the administration's April 24 presentation to Congress and was responding to media reports that the site may have housed a reactor.

"A nuclear site did not have protection with surface-to-air missiles? A nuclear site within the footprint of satellites in the middle of Syria in an open area in the desert?" Assad said.

Feinstein said the administration's information raised questions about North Korea's potential proliferation activities in other parts of the world.

She suggested that North Korea may have been the target of the administration's information campaign, and that the administration may also have been "one way or another influencing an agreement with Syria and Israel."

Hoekstra and Feinstein also criticized the White House for not sharing more information with Congress in general and the intelligence committees in particular, a recurring complaint against the Bush administration.

Despite lawmakers' repeated requests for briefings, the administration has said almost nothing about the Israeli airstrike, which took place Sept. 6, 2007.

Feinstein said she learned of the North Korean link for the first time when the administration sent CIA Director Michael V. Hayden, Director of National Intelligence J. Michael McConnell and White House national security advisor Stephen Hadley to brief Congress last week.

Lawmakers are wary because the Bush White House has been tightfisted with information, Feinstein said. When the administration does share intelligence, such as the Syrian satellite imagery and photos, she said, "it makes us very suspicious as to why are they doing it right now."

Alluding to the administration's incorrect prewar claims that Iraq had weapons of mass destruction, Hoekstra said the White House needs to build trust.

"The administration has a credibility problem. And if they're going to deal with this credibility problem, the way to deal with it is to be more open, especially with members of Congress," he said.

## **N.Koreans may have died in Israel raid in Syria: NHK**

Reuters

Monday, April 28, 2008; 3:23 AM

TOKYO (Reuters) - Ten North Koreans helping build a suspected nuclear reactor in Syria may have died in an Israeli air raid last September, Japanese public broadcaster NHK said on Monday, citing South Korean intelligence officials.

The report follows the release of photographs by the United States last week of what it said was a Syrian nuclear reactor capable of producing plutonium built with North Korean help.

Israel destroyed the suspected reactor in a September 6 air strike.

NHK said the dead included officials of the North Korea's communist party unit that exports weapons and military technology and members of the North Korean military unit which made nuclear facilities in the country.

Two or three North Koreans survived the air strike but it is not clear what happened to them afterwards, NHK reported.

Syria has denied the U.S. charge as "a fantasy."

Pyongyang has been reluctant to discuss any transfer of nuclear technology to other countries, notably Syria, as well as to account for its suspected pursuit of uranium enrichment.

(Reporting by Yoko Kubota)

## **Hayden: Syrian site could have produced fuel for 2 weapons**

By PAMELA HESS

The Associated Press

Monday, April 28, 2008; 11:00 PM

WASHINGTON -- CIA Director Michael Hayden said Monday that the alleged Syrian nuclear reactor destroyed by an Israeli airstrike in September would have produced enough plutonium for one or two bombs within a year of becoming operational.

U.S. intelligence and administration officials publicly disclosed last week their assessment that Syria was building a covert nuclear reactor with North Korean assistance. They said it was modeled on the shuttered North Korean reactor at Yongbyon, which produced a small amount of plutonium. The Syrian site, they said, was within weeks or months of being operational.

"In the course of a year after they got full up they would have produced enough plutonium for one or two weapons," Hayden told reporters after a speech at Georgetown University.

Almost all reactors produce plutonium, even those dedicated to peaceful purposes, according to David Albright, president of the nonprofit Institute for Science and International Security. Albright analyzed commercial satellite imagery of the bombed facility last fall and surmised then it was a nuclear reactor.

Neither the United States nor Israel told the International Atomic Energy Agency about the Syrian site until last week, about a year after they obtained what they considered to be decisive intelligence: dozens of photographs from a handheld camera that showed both the interior and exterior of the mysterious compound in Syria's eastern desert.

From the CIA's perspective, that intelligence was not the United States' to share with the U.N. nuclear watchdog, Hayden said.

"We've made it clear we did not have complete control over the totality of the information because obviously it was the result of a team effort," he said. "One has to respect the origin of the information in terms of how it is used."

The head of the U.N. nuclear watchdog agency chastised the United States on Friday for withholding information on the alleged Syrian reactor. One of the IAEA's missions is to try to prevent nuclear proliferation, and it depends on member states for information.

A senior administration official told reporters last week that the United States kept the information secret after the Israeli strike because it feared revealing it might provoke Syria to strike back at Israel.

## Alleged Syria-North Korea Nuclear Cooperation Raises Questions

By Gary Thomas

Washington

28 April 2008

U.S. intelligence officials last week outlined details of what they said was North Korean nuclear assistance to Syria. Syria has denied U.S. allegations that it was running a covert nuclear weapons program or that it was getting help from Pyongyang. As VOA correspondent Gary Thomas reports, the timing of the revelations has raised questions about the motivation for their release.

Alleged North Korean nuclear cooperation with Syria is not exactly fresh news. After a secret Israeli air strike destroyed a facility in Syria last September, Andrew Semmel, the top State Department official for nonproliferation, said publicly that the United States was concerned about nuclear activity in Syria and suggested Damascus was getting help from Pyongyang. When speaking to reporters off the record other officials were even more specific.

US officials said this Syrian nuclear reactor built with North Korean help, which was hit by Israeli strike

However, intelligence officials only briefed members of Congress in detail about it last week. And, in a surprising move for the usually secret intelligence community, they also briefed selected members of the media.

Semmel, now retired, says he is puzzled that it took so long to reveal the information since Congress has been pressing for details of Syria's activity since the Israeli raid.

"Congress has been pressing the administration, and others have been, too, to come clean on this or to come out some more with a little bit more information. And at this point in time maybe the feeling was, 'maybe' is the key word here, maybe the feeling was that somehow or another the intelligence community and others could not keep the lid on it any more, so they wanted to go out, I'm putting a positive spin on this, by the way, so there would be no major distortions of what actually happened, he said."

Semmel, who was Deputy Assistant Secretary of State for Nonproliferation Policy, says the message of the revelations could have been targeted at one or several countries.

"The calculation may very well have been that there are multiple positives to this, message to Iran, message certainly to Syria, message to North Korea, et cetera. What puzzles me is why we waited until now to even inform the International Atomic Energy Agency. It seems to me that if we wanted the I.A.E.A. to play a positive role as a neutral monitor of the situation that we would have shared that information with them, perhaps discreetly, much earlier," said Simmel.

The I.A.E.A., which is the U.N. nuclear watchdog agency, was only briefed by U.S. officials last week. Semmel says that when he raised with policymakers the idea of notifying the I.A.E.A., he was rebuffed.

"This was so tightly held that one didn't know whether in fact we were or not sharing that with the I.A.E.A. Some of us even at my fairly senior level raised the question in our limited circle. And

basically there was no response, this is not for discussion. It was really a bizarre policy issue," he added.

Murhaf Juejati, a Syrian-born specialist on Middle East affairs at the U.S. National Defense University, says the revelations could be aimed at getting leverage with North Korea in the six-party talks over its own nuclear program. He also thinks that they might be aimed at undercutting any potential deal between Israel and Syria over Israel's holding of the Golan Heights.

"There is a history, of course, of apparently the Bush Administration not wanting Israel to engage with the Syrians, wanting to isolate the Syrians totally. And on the other hand, again, those elements in the administration have for a long time apparently not wanted North Korea to get off as easily, they say, as this on their nuclear activities. And so both really make sense to me. Which one has more weight, I'm not really sure. They are both very plausible," he said.

Juejati also says that while Syria possesses some chemical and biological weapons capability, it has neither the money nor the infrastructure for a costly nuclear venture.

## **Syrian reactor capacity was 1-2 weapons/year: CIA**

By Randall Mikkelsen

Reuters

Monday, April 28, 2008; 9:06 PM

WASHINGTON (Reuters) - A suspected Syrian reactor bombed by Israel had the capacity to produce enough nuclear material to fuel one to two weapons a year, CIA Director Michael Hayden said on Monday.

Hayden said the plutonium reactor was within weeks or months of completion when it was destroyed in an air strike last September 6, and within a year of entering operation it could have produced enough material for at least one weapon.

"In the course of a year after they got full up, they would have produced enough plutonium for one or two weapons," Hayden told reporters after a speech.

The reactor was of a "similar size and technology" to North Korea's Yongbyon reactor, Hayden said, disputing speculation it was smaller than the Korean facility.

"We would estimate that the production rate there would be about the same as Yongbyon, which is about enough plutonium for one or two weapons per year," he said.

Hayden's comments were the first statement on the suspected reactor's capacity, and his first public remarks since the United States released photos of what it said was a secret nuclear reactor built with North Korean aid.

Syria has denied the U.S. charges and accused Washington of involvement in the air attack by Israel, which is believed to have the only nuclear arsenal in the Middle East.

A diplomat close to the U.N. nuclear watchdog and outside analysts have said the U.S. disclosure did not amount to proof of an illicit arms program because there was no sign of a reprocessing plant needed to convert spent fuel from the plant into bomb-grade plutonium.

The United Nations' International Atomic Energy Agency has also criticized the United States for waiting until this month to share its intelligence. The delay complicates the IAEA's effort to confirm whether the facility was a plutonium reactor.

'TEAM EFFORT'

Hayden said the United States lacked the liberty earlier to pass on the intelligence, which he said was acquired in a "team effort." ABC News reported in October that Israel had obtained pictures of the Syrian complex from an apparent mole and showed them to the CIA.

"We did not have complete control of the totality of the information," Hayden said. U.S. officials have declined to identify sources of the intelligence.

Asked whether Washington had eventually gotten approval to pass on the intelligence, Hayden said, "One would never share the intelligence without consultation with that nation, as a general principle."

A senior Bush administration official said at a briefing last week the intelligence was disclosed this month in part to pressure North Korea in disarmament talks to fully acknowledge its nuclear and proliferation activities, and to widen the circle of U.S. lawmakers briefed on the issue.

Congressional support is key to President George W. Bush's goal of making progress toward ending North Korea's nuclear ambitions.

Senior intelligence officials said at the briefing they told Bush the Syrian facility was a plutonium reactor built with North Korean cooperation and intended to fuel a nuclear weapons program.

They acknowledged their confidence level was relatively low over its purpose as a weapons facility, due to limited evidence.

The officials said there was no reprocessing facility in the area of the destroyed reactor, but declined to further discuss their views of any Syrian reprocessing capability.

Press Conference by the President  
Rose Garden

10:31 A.M. EDT

*[EXCERPT]*

Q Mr. President, thank you, sir. Previously when asked about Israel's September bombing of the Syrian facility, you refused aggressively to discuss it. Then suddenly last week, your administration released classified photos and details of that bombing, intelligence officials claiming that it showed that this facility was a North Korean-designed nuclear facility being actually built with the help of Pyongyang. Why the turnaround, sir? What did you hope that that would accomplish? And what do you say to lawmakers of both parties on Capitol Hill who are quite concerned that indeed if this was what this facility was, that it took some eight months for you to inform them, sir?

THE PRESIDENT: Thank you. Let me correct the record. We briefed 22 members of Congress on what I'm about to tell you. First, we were concerned that an early disclosure would increase the risk of a confrontation in the Middle East or retaliation in the Middle East. As I mentioned to you early on, we did notify 22 members of Congress, key committee chairmen. And I was -- I'm mindful that there was going to be this kind of reaction, and of course, we wanted to include more members of Congress at a time when we felt the risk of retaliation or confrontation in the Middle East was reduced, and so that moment came upon us, and then extended the briefings.

We also wanted to advance certain policy objectives through the disclosures, and one would be to the North Koreans, to make it abundantly clear that we may know more about you than you think, and therefore, it's essential that you have a complete disclosure on not only your plutonium activities, but proliferation, as well as enrichment activities.

And then we have an interest in sending a message to Iran, and the world for that matter, about just how destabilizing a -- nuclear proliferation would be in the Middle East, and that it's essential that we work together to enforce U.N. Security Council resolutions aimed at getting Iran to stop their enrichment programs. In other words, one of the things that this example shows is that these programs can exist and people don't know about them -- because the Syrians simply didn't declare the program; they had a hidden program.

And finally, we wanted to make it clear to Syria -- and the world -- that their intransigence in dealing with helping us in Iraq, or destabilizing Lebanon, or dealing with Hamas -- which is a destabilizing force in our efforts to have a Palestinian state coexist peacefully with Israel -- that those efforts are -- gives us a chance to remind the world that we need to work together to deal with those issues. So that's why we made the decision we made.

## **Bush: Revealing Reactor Was Meant to Pressure N. Korea**

By Michael Abramowitz

Washington Post Staff Writer

Wednesday, April 30, 2008; A15

President Bush said yesterday that his administration's disclosure of secret information last week about suspected North Korean assistance for a Syrian nuclear reactor was designed to pressure Pyongyang to come clean on its nuclear activities.

At a Rose Garden news conference, Bush also said he wanted to send a message to Iran to cooperate with international efforts to limit proliferation, and to Syria to help stabilize Iraq and Lebanon.

"One of the things that this example shows is that these programs can exist and people don't know about them," Bush told reporters. He added that "the Syrians simply didn't declare the program; they had a hidden program."

Bush and other senior administration officials were silent for nearly eight months about Israel's destruction last September of a building that U.S. intelligence officials said last week was a nuclear reactor, built with North Korea's assistance. Syria has denied it was building a reactor.

The discovery of North Korean ties to the facility has complicated U.S. efforts to get the country to give up nuclear weapons. Under a deal involving Pyongyang, Washington and other parties to the talks, North Korea is supposed to provide an inventory of its nuclear program, but it has yet to do so.

Bush said the disclosures last week should make it "abundantly clear" to North Korea that "we may know more about you than you think, and therefore it's essential that you have a complete disclosure on not only your plutonium activities, but proliferation, as well as enrichment activities."

In recent negotiations, the administration has pulled back on its demand for full disclosure, requesting that North Korea only acknowledge U.S. concerns and evidence on proliferation and uranium enrichment.

Bush avoided criticism of former president Jimmy Carter's recent talks with Hamas, the radical Palestinian group classified by the U.S. government as a terrorist entity. The United States refuses to engage with Hamas, which Bush said is "undermining peace."

"They're the ones whose foreign policy objective is the destruction of Israel," he said. "They're the ones who are trying to create enough violence to stop the advance of the two-party state solution."

## **CIA's Hayden: Syria was on verge of becoming nuclear power**

**Wednesday, April 30, 2008**

WASHINGTON — The U.S. intelligence community, in an about-face from an assessment of less than a year ago, has concluded that Syria was close to becoming a nuclear power.

"In the course of a year after they got full up they would have produced enough plutonium for one or two weapons," CIA director Michael Hayden said.

The new assessment was that Syria was weeks away from operating a North Korean-built plutonium production plant near the Turkish border. That facility, the intelligence community assessed, could have produced up to two bombs in the first year of operation.

On April 28, Hayden said the Syrian reactor could have begun producing sufficient amounts of plutonium for an atomic weapon. Speaking to reporters after an address at Georgetown University, the CIA director said information of the North Korean-designed nuclear reactor came from Israel and could not be shared with the IAEA until mid-April.

"We've made it clear we did not have complete control over the totality of the information because obviously it was the result of a team effort, Hayden said. "One has to respect the origin of the information in terms of how it is used."

Officials acknowledged that the U.S. assessment marked a near reversal of that in July 2007 when Israel provided aerial photographs of the plant and a video of the North Korean scientists inside. At the time, the officials said, the CIA and State Department said the North Korean facility — destroyed by the Israel Air Force in September 2007 — was years away from being completed and even tested.

"Much of the revision of the CIA assessment came after the Israeli bombing when evidence of nuclear material was found," an official said. "We also learned a lot from the Syrian refusal to the International Atomic Energy Agency to visit the site."

Officials acknowledged that the State Department, particularly Secretary of State Condoleezza Rice sought to play down the Israeli evidence. They said Ms. Rice and her aides recruited CIA analysts who asserted that the Syrian facility, termed Al Kibar, was not designed for an atomic bomb.

Ms. Rice and Assistant Secretary of State Christopher Hill were said to have argued that any determination of a North Korean nuclear facility in Syria would torpedo U.S.-led negotiations for Pyongyang to dismantle its nuclear weapons program. Officials said Israel did not report any uranium shipments to Al Kibar.

The U.S. intelligence community eventually agreed with the Israeli assessment of a North Korean nuclear program in Syria. Officials said Hayden agreed with analysts who determined that Pyongyang violated its February 2007 pledge to halt nuclear proliferation. The intelligence community suspected that North Korea had been helping Syria's nuclear program since 2001.

By June 2007, officials said, the CIA received information from Israel that North Korea was building a suspected nuclear reactor. Officials said the Israeli aerial and ground-based photographs overcame doubts that stemmed from satellite images of the facility.

At that point, Hayden said, the U.S. intelligence community dismissed arguments that the reactor could be meant for energy production. He said the Israeli photographs also showed that the building was a nuclear reactor.

"Our team effort on the Al Kibar reactor is a case study in rigorous analytic tradecraft, skillful human and technical collection, and close collaboration with our community colleagues and liaison partners," Hayden said on April 24. Our officers put in long hours on this issue for many months, and their hard work paid off by directly advancing our nation's security and that of our allies."

## **SYRIA AND NORTH KOREA CONSPIRE TO BUILD NUCLEAR WEAPONS**

### **Text From the Congressional Record**

Poe, Ted [R-TX]  
Special Orders

Begin 2008-04-30 20:12:58  
End 20:18:28  
Length 00:05:30

Mr. POE. Mr. Speaker, North Korea and Syria were working together with Pakistan rogue scientist Abdul Khan to build a nuclear reactor in Syria, capable of producing plutonium for two nuclear weapons within a year of when it was destroyed by Israeli jets in September of 2007.

Israel, by the way, has not confirmed or denied the air strikes. But Israel acted in self-defense and self-interest because of the fact that Israel is so close to Syria.

Mr. Speaker, here is a map of the area. We have Syria and, of course, we have Israel and Iraq and then, of course, Iran on the other side. And here is the location in Eastern Syria where the nuclear facility was being built, with the aid of the North Koreans. From that location, in Alkibar facility, it is only 450 miles to Tel Aviv, where the majority of the Israelis live.

[Time: 20:15]

This whole area, of course, is in somewhat of a turmoil because of the fact you have Syria and the rogue dictator in Iran working together with the North Koreans to facilitate the development of nuclear weapons for all three countries.

The CIA has reported recently that North Korea is building Syria a reactor similar to the one that they have in North Korea. And North Korea then helped the Syrians cover up the results of the bombing after the reactor was destroyed.

Here are four photographs that the CIA has released and declassified just this week. Over on the top corner here is a photograph of North Korea's nuclear reactor that is capable of producing plutonium. You will see right next to it Syria's nuclear reactor as it was being built. It was built with the same floor plan, the same design as the North Korean facility that is in North Korea. This photograph was taken of Syria's reactor shortly before it was blown up.

Here is an aerial photograph of Syria's reactor, and you can see, Mr. Speaker, it's camouflaged to the extent that it looks just like a boxed building just in the eastern part of Syria with nothing anywhere close to it. And after Israeli jets came in and bombed the facility, this photograph on the bottom corner shows the results of the Syrian reactor after it was bombed by the Israeli jets.

And what is interesting, after the Israeli jets came in and bombed this facility, the North Koreans and the Syrians started working together very quickly to destroy what was left of this facility and bury it in

the desert and then put in its place another facility, a building that looks just like this one but obviously, based on intelligence, is just a shell and not really used for any purpose whatsoever.

The purpose, of course, to build the second building was to let the world know that they didn't have anything in this area, but of course, we know that they buried all of their equipment and all of their nuclear devices or equipment, I should say, in the desert underneath the bombing that was done by the Israeli pilots.

So it's important for us to be aware of the contact and the working of North Korea with Syria. It is not a recent development. North Korea started working with Syria to build this facility in 2001, and they have continued to work with them until they started actually building this facility that would be capable of producing plutonium and at least to be able to build two nuclear weapons within a year.

North Korea is a nuclear threat and appears to help any nation with evil intentions, and the whole world needs to know about it. The countries of Iran, North Korea, and now Syria need to be known to all the world that they are nations with hearts that are fatally built on mischief and with malice aforethought. They build nuclear facilities with no redeemable, peaceful intentions. The normal, peaceful countries of our planet, especially those in the Middle East, cannot allow these three nations to have nuclear nonsense continue. They are on a path of destruction for at least somebody else, other than themselves, if their intentions are not stopped.

As for the nameless Israeli bomber pilots who flew these missions to destroy this nuclear facility capable of later being able to build nuclear weapons, they are thanked for their job well done, and the world needs to be aware that North Korea, Syria, and Iran seem to continue to work together to thwart world peace by building facilities that are capable of destruction for other countries, especially their neighbors.

And that's just the way it is.

END

For Immediate Release

May 1, 2008

Press Briefing by Tony Fratto  
James S. Brady Press Briefing Room

12:40 P.M. EDT

*[EXCERPT]*

MR. FRATTO: Good afternoon, everyone. I actually have nothing to lead off with, so we can go straight to questions. Terry, you ready?

Q The President said this week at the news conference that he wanted to make -- that one of the reasons you disclosed the North Korean program in Syria last week was to make them know that we know more than they think we might. Has there been any response from North Korea? Has there been any communication since the -- last week's disclosure?

MR. FRATTO: I'm not aware of a specific response from the North Koreans. But it's clear, as the President talked about, we want to make sure that we're transparent in this and what we're seeing with respect to proliferation activities, and that the world can see what we knew. We made it clear in our briefings to the Congress, and that's the best way to proceed on this.

Now, we've had our State Department officials who were recently in North Korea, and they continue their communications in the context of the six-party talks, and they're progressing. And we just counsel some patience, and wait to see what we get back from the North Koreans, in terms of their declaration, that it be complete and accurate. And so we're working with them on that.

Q How long is the United States willing to wait?

MR. FRATTO: I don't think it's something that you can put a time frame on. Sooner is better than later, and that's what our negotiators are working towards.

Yes, Helen.

Q When did it reach this magnificent decision for transparency when it waited eight months, or seven months to reveal it?

MR. FRATTO: Those were decisions that were made by the intelligence community and our senior officials here. And we respect the concerns of Congress, that we heard from Congress, and they thought this was the best way to proceed. And the President made the decision on that.

Q You don't call this a devotion to transparency, do you?

MR. FRATTO: I think in this case it was important to be transparent, and that's a decision we made, Helen.

Q And not to put pressure on Korea and so forth?

MR. FRATTO: I think we were clear in how -- in what the context was of that.

## OSC Analysis: DPRK-Syria Bilateral Contacts, 2005-2007

FEA20080506659592 - OSC Feature - North Korea – OSC Analysis 02 May 08

[KPNKLDLDR, KPNKECO, KPNKNUC, KPNKMIL, KPNKST Corrected version: spelling, several minor corrections made.]

*A review of available North Korean and Syrian print and online media in the period 2005-2007 has yielded the names of dozens of DPRK and Syrian officials involved in military, scientific, trade, and other aspects of bilateral relations. The media contain no clear references to collaboration regarding weapons of mass destruction (WMD), although allegations have surfaced over the years in third-country media. Indeed, media reports from 2005 through 2007 include fewer references to bilateral military and scientific contacts than in preceding years. Nevertheless, reported contacts of a high-ranking official of the Ministry of People's Armed Forces (MPAF) with Syrian diplomats, the visit to Pyongyang of a senior Syrian security officer, and certain collaborative projects in economics and trade may have some undeclared military significance. This is the fourth such review of bilateral relations. Three previous reports on officials involved in bilateral relations from 1992 through 2004, as well as five photographic reports for the same period, are available at [www.opensource.gov](http://www.opensource.gov).*

### **No Media Pointers to WMD**

No obvious indications of covert military cooperation surfaced in the highly-censored media of North Korea or Syria in this period. The visit of Supreme People's Assembly (SPA) Chairman Choe Thae Bok (Ch'oe T'ae-pok) to Syria in October 2007, coming only weeks after the Israeli air strike of 6 September against an alleged Syrian nuclear reactor site, is a case in point. Third-country media speculated on a connection between the visit and the bombing, but DPRK media never went beyond simply denouncing Israel for violating Syrian airspace and dropping "bombs in the desert in the northeastern area before fleeing" (KCNA, 11 September 2007); Pyongyang central media made no comments on allegations connecting Choe's visit to the raid.

A review of television images showing DPRK officials accompanying Choe in one meeting showed a uniformed military official, suggesting that Choe may have brought an officer from Pyongyang to discuss matters relating to the stricken Syrian site. However, a review of photographs in Syrian media unearthed a 2005 photograph apparently showing the same officer at a reception of the DPRK Embassy in Damascus, suggesting that the man was simply the military attaché, Colonel Mun Yong Nam, not a member of Choe's visiting entourage. As a member of the embassy's country team, Colonel Mun's presence may have been normal for any high-level delegation visiting Damascus, rather than evidence that Choe had come to Syria on account of the Israeli air strike.

### **Fewer Military, S&T Contacts**

Overall, DPRK and Syrian media coverage of bilateral affairs during 2005-2007 included fewer reports of contacts in such areas of interest as military affairs and science and technology than in years past. No military delegation on either side visited the other, unlike some past years. There were no reported visits of Syrian officials to the Korea Computer Center (KCC) or of Korean officials touring Syria's Scientific Studies and Research Center (SSRC), in

contrast to previous periods; both KCC and SSRC are alleged in third-country media of having military links.

#### **Military, Security, Science, Economic Contacts of Interest**

Nevertheless, the period 2005-2007 includes some contacts of interest in military and security affairs, science and technology, and economic cooperation.

- o Syrian Interior Vice Minister Ibrahim Musli led a ministry delegation to Pyongyang in December 2006 and signed a cooperation agreement there. DPRK media reported no details of his agenda but noted that People's Security Vice Minister Sin Il-nam hosted the visit and signed the agreement for the DPRK side. Sin, a career officer of the Korean People's Army, has also served as a Cabinet vice premier and chairman of the Capital Construction Committee, according to the ROK National Intelligence Service ([www.nis.go.kr](http://www.nis.go.kr)). He has reportedly been the "closest confidant" of Chang So'ng-t'aek, Kim Jong Il's brother-in-law (*Monthly Chosun*, 1 July 2004). While in Pyongyang, Musli toured sites frequented by foreign visitors, such as the captured USS Pueblo, but he also visited the College of Politics under the Ministry of People's Security. The unusual stop may point to Syrian security officers training in North Korea.
- o People's Armed Forces Vice Minister Kim Sang-ik attended receptions at the Syrian Embassy on 5 February and 18 April 2005 in honor of the respective birthdays of Kim Jong Il and Kim Il Sung. In July 2003, Vice Minister Kim had attended a Syrian Embassy reception marking the anniversary of North Korea's "victory" in the Korean war.
- o In May 2007, *Rodong Sinmun* published a KCNA article that reported the signing of an accord for scientific cooperation between the presidents of Kim Il Sung University and the University of Damascus. The Korea Central News Agency (KCNA) omitted to report any details of the agreement, or even the place and day of its signing. The report came one year after a Syrian newspaper reported the DPRK ambassador expressed to the Syrian minister for higher education a particular desire for cooperation between the two universities.

## **Syria: U.S. nuclear reactor allegations aim to create Mideast crisis**

By The Associated Press

Last update - 05:04 03/05/2008

GENEVA - Damascus on Friday [2008-05-02] accused the current U.S. administration of fabricating a report allegedly proving Syria had built a nuclear reactor in a plot to destabilize the region.

"U.S. allegations about the reactor were manufactured in order to create further crisis in the Middle East," Syrian Ambassador Faysal al-Hamoui told a conference on the Nuclear Nonproliferation Treaty in Geneva.

Earlier Friday the United States submitted a paper to the conference saying the treaty's biggest problem was noncompliance by countries like Syria and Iran which it said were seeking to develop nuclear weapons.

The United States also cited North Korea's nuclear weapons program and said reports its nuclear cooperation with other countries warranted serious vigilance.

"North Korea's clandestine nuclear cooperation with Syria ... is a dangerous manifestation," the U.S. paper said.

North Korea assisted Syria's covert work in building a nuclear reactor capable of producing plutonium and not intended for peaceful purposes, it said.

The U.S. paper made no mention of allegations that the reactor was destroyed in an Israel Air Force bombing raid in September.

Al-Hamoui said the allegations made by the administration of U.S. President George W. Bush were part of a disinformation campaign.

"We call upon member states to exercise caution and not to follow as other people have followed the vein of an administration which can only be described as madness," he told the meeting of the 190 countries signed on to the treaty.

Al-Hamoui said Australia and France lack credibility for referring to the U.S. allegations and for failing to mention Israel's own nuclear arsenal.

He said French Ambassador Jean-Francois Dobelle had twice referred to the U.S. allegations.

"France played a major and pivotal role in building the Israeli nuclear program and continues to supply Israel with nuclear technology, which is a clear infringement of the NPT," al-Hamoui said.

"We call on Syria to come clean about its past and current nuclear activities," said Dobelle, who also urged the International Atomic Energy Agency to launch a thorough investigation of the Syrian program.

Australian Ambassador Caroline Millar told the conference that the U.S. information about Syria is very disturbing.

"Syria has an obligation under its safeguards agreement with the IAEA to report the planning and construction of any nuclear facilities," she said.

## **Diplomats say IAEA chief urging more US flexibility on Iran**

By GEORGE JAHN

Associated Press Writer

May 6, 2008 – 7:09pm

*[EXCERPT]*

VIENNA, Austria (AP) - The head of the International Atomic Energy Agency urged Washington on Tuesday to show more sensitivity in dealing with Iran if it hopes to see Tehran make concessions on its nuclear program, diplomats said.

The diplomats, speaking to The Associated Press after a meeting between IAEA chief Mohamed ElBaradei and Undersecretary of State John Rood, said the American diplomat made no commitments, but promised to take ElBaradei's concerns back to his superiors.

Rood, the top U.S. official on nuclear nonproliferation, declined to go into details of his discussions with ElBaradei beyond confirming that Iran and Syria were among the topics of the meeting.

But one diplomat, who agreed to discuss the substance of the confidential meeting only on condition of anonymity, said ElBaradei urged the U.S. to broaden its approach to Iran to address Tehran's economic and security concerns in exchange for nuclear concessions.

The diplomat also said Syria still has not given IAEA inspectors permission to examine the site of an alleged nuclear reactor destroyed by an Israeli airstrike in September — something Rood said Damascus needed to do.

"Obviously Syria has a lot of explaining to do," Rood said. Asked why the U.S. withheld until recently intelligence that could have helped the IAEA press its case with Syria, he said a "concern about the potential for a military conflict" prompted Washington to keep mum at first.

He was apparently alluding to post-airstrike tensions between Israel and Syria.

*[deletia]*

## **U.S. Wants Syria to Admit Atomic Work, Won't Demand Inspections**

By Jonathan Tirone

(Bloomberg)

May 7 [2008]

U.S. diplomats want Syria to acknowledge it has a nuclear program, though they've stopped short of demanding United Nations inspections of a site where an alleged reactor was destroyed in an Israeli air strike.

"It's only very recently that we have disclosed this information," U.S. Undersecretary of State John Rood said late yesterday, referring to an April 24 report to Congress in which intelligence officials said Israel bombed a Syrian reactor that was being built with North Korean help.

"We will be watching closely to see Syria's level of cooperation with the IAEA."

While the International Atomic Energy Agency's 35-member board of governors has the authority to compel Syria to accept inspections by passing a binding resolution, as they have done with Iran, Rood said at a briefing in Vienna that it's "premature" to discuss giving the United Nations nuclear investigators that power. The U.S. wants Syria to voluntarily invite the IAEA to look at the bombed facility, he said.

U.S. diplomats didn't share intelligence with UN inspectors about the alleged atomic plant in Syria because they feared such a revelation may have sparked a regional war, he said.

"We did not want to take a risk of increasing the threat of a wider conflict," Rood said.

"Once the fear of a wider conflict had receded somewhat, we felt more at liberty to talk about this issue."

Syria's ambassador to the U.S., Imad Moustapha, described the allegations that the site was a nuclear plant as "silly" and accused the Bush administration of "fabricating" the report, according to an April 24 CNN interview.

### U.S., IAEA Rift

The IAEA "deplored" the U.S. decision to withhold information on the Syria facility, Director-General Mohamed ElBaradei said in an April 25 statement. Rood met with ElBaradei yesterday in an attempt to heal the rift and reinforce U.S. support for the Vienna-based agency, whose inspectors enforce the nuclear Non-Proliferation Treaty.

"We would like the IAEA to follow up to determine the extent of the Syrian activities," said Rood, a former Central Intelligence Agency analyst who was promoted to undersecretary in September.

"The Syrians have a lot of explaining to do, given the covert nature of this facility."

U.S. intelligence, which suspected Syria of a covert nuclear program in the 1990s, was certain that the government in Damascus, with North Korean help, was building a secret facility during the first quarter

of 2007, according to Congressional testimony given last month. An Israeli air strike destroyed the reactor on Sept. 6. Until the April 24 presentation to Congress, U.S. officials had been silent on Syria's allegation that Israeli warplanes carried out a raid on its territory. Israeli and North Korean officials have declined to discuss the matter.

## **The IAEA's dilemma with Syria's Al Kibar nuclear site**

By Fiona Simpson

6 May 2008

Although Israel's September 2007 raid on what it believed to be the Al Kibar nuclear site in Syria has often been compared to its 1981 raid on the Osirak nuclear reactor in Iraq, the aura of secrecy surrounding the Syria raid stands in stark contrast to the extensive public explanations offered by Israel 27 years ago. Further details about the Syria raid have recently been provided, but they didn't come from Israel. Instead, senior U.S. intelligence officials presented them to Congress and the International Atomic Energy Agency (IAEA) in late April--nearly eight months after the raid.

In a February Bulletin web-edition piece entitled "IAEA Special Inspections After Israel's Raid on Syria," I argued that while the IAEA had the authority to invoke special inspections in regards to Syrian activities at Al Kibar, it probably would have never done so given the lack of concrete evidence. Instead, in bilateral discussions, the IAEA asked Syria for access to the site; a request that was evidently refused.

Since then, at an April 24 briefing, senior U.S. intelligence officials brought more substantial evidence forward, identifying the raid's target as "a nuclear reactor . . . constructed by the Syrians . . . for the production of plutonium with the assistance of the North Koreans." They also asserted the presence of North Korean nationals at the reactor, apparently documented in photographs. The briefing stated that the first evidence of such activity was discovered in the late 1990s, with reactor construction estimated to have begun in 2001. In spring 2007, intelligence officials received more information about the site, including interior and exterior photographs. They maintained that this information revealed the construction of a gas-cooled, graphite-moderated reactor similar to the reactor at Yongbyon in North Korea. But they acknowledged that they didn't know how the reactor was going to be fuelled and that there weren't any indications that a reprocessing facility existed or was being built--a necessity to extract plutonium from the spent fuel rods removed from the reactor. As a result, they noted that their confidence level was "low" that the activities at Al Kibar were those of a nuclear weapons program.

The timing of the briefing has been the source of much speculation. While some, President George W. Bush included, have said the delay was to ensure that Syria wasn't unnecessarily antagonized, others believe it's a tactic by the Bush administration to affect ongoing negotiations with North Korea. More likely, the administration caved to increasing pressure from Congress to brief it before Congress needed to approve removing sanctions on North Korea. Bush has also claimed that the disclosure of intelligence was intended to send a "message" to Iran. (See "Bush Defends Syria Reactor Claim.")

### International reaction

There's speculation that Israel wasn't in favor of the briefing, as from the outset, it worried that too much public attention might bait Syria into retaliation. (See "Israelis Upset U.S. Divulged Strike Details" and "North Korea and Syria: Oh, What A Tangled Web They Weave.") Israeli Prime Minister Ehud Olmert's office turned down requests for comment, referring the media to statements he made a week earlier, when he noted, "The Syrians know what our position is, and we know what their expectations are."

Unsurprisingly, for its part, Syria has vehemently denied the charges that Al Kibar was nuclear-related, claiming the target was a vacant military building that wasn't even protected. Like Israel, North Korea has remained quiet on the matter.

The IAEA, which was briefed on the same day as Congress, spoke out sharply against the United States and Israel. It noted in a press release, "The director general deplors the fact that this information was not provided to the agency in a timely manner . . . [He] views the unilateral use of force by Israel as undermining the due process of verification that is at the heart of the nonproliferation regime." The press release reaffirmed that Syria had an obligation to inform the IAEA prior to the construction of such a facility and that the agency intended to investigate the information provided to it. But the bulk of the official reaction was devoted to a reiteration of IAEA safeguard responsibilities under the Nuclear Non-Proliferation Treaty (NPT) and the agency's displeasure with the United States and Israel over the raid and the silence that followed.

This displeasure links back to the question of special inspections. As noted above, the lack of evidence upon which to proceed effectively kept the IAEA from exercising its authority. But had the evidence been provided to the agency in the absence of a strike against Syria, it would have been under serious internal and external pressure to call for a special inspection of the site. If the IAEA failed to do so, the agency would have been risking its credibility and inviting questions about the usefulness of the special inspections provision and the circumstances needed to invoke it. How this might have then played out in the IAEA Board of Governors if Syria refused to grant the inspections is difficult to say. Also difficult to assess is how the IAEA might have proceeded had the evidence been immediately provided, but with the added complication of the strike.

#### Possible outcomes

During the briefing, U.S. intelligence officials stated that Al Kibar was "not yet part of an active weapons program." Although such a statement lends itself to misinterpretation, the use of the word "yet" assumes that the simplest explanation for an undeclared Syrian nuclear reactor is probably the correct explanation--i.e., that it was eventually intended for proliferation purposes. Nonetheless, the questions raised by the lack of a reprocessing facility, as well as the questions regarding how, when, and by whom such a reactor was to be fuelled, remain unanswered. (See "Syria Update III: New Information about the Al Kibar Reactor Site.")

Within the context of denuclearizing North Korea, renewed discussion over Syria and its links to North Korea doesn't appear to have put either the Six-Party Talks or work toward dismantling the North Korean nuclear program in any more jeopardy than would have resulted from simply failing to answer congressional questions about the raid. Although North Korea missed the December 31 deadline to provide a complete inventory of its nuclear program, the administration, which had originally insisted that North Korea detail its enrichment activities as well as reprocessing activities, was moving toward an alternative that would allow North Korea simply to acknowledge U.S. concerns about these activities and alleged nuclear cooperation with other parties. And despite the recent briefing, which deepened the hostility of some in Congress toward the administration's policy on North Korea, the House Foreign Affairs Committee approved a bill that would allow funds to be used toward North Korea's denuclearization. But the bill requires the president to demonstrate that Pyongyang isn't providing proliferation-sensitive nuclear technology to Syria or Iran before removing North Korea from the list of state sponsors of terrorism.

As part of its own investigation, the IAEA indicated that it will submit a new request to Syria to visit the site. (See "IAEA to Look Into Syria Reactor Claim.") This decision has been welcomed by several countries at the 2008 NPT Preparatory Committee, which is currently underway in Geneva.

In the raid's aftermath, Syria refused IAEA access to Al Kibar, but Damascus has now reversed that position, claiming it has "nothing to hide." In a sense, this is true; the original site has been bulldozed and new construction has started. Therefore, because of the time that has elapsed between the raid and the availability of the evidence, it seems unlikely that any on-the-ground investigations will be able to provide conclusive proof of the allegations and evidence provided at the April 24 briefing--particularly so given that no nuclear material had been introduced to the site, ruling out the utility of certain safeguards techniques (environmental sampling, for instance) that would detect the presence of such material. Indeed, the absence of nuclear material at Al Kibar seems to be one of the few things that all the parties involved agree upon.

For Immediate Release  
Office of the Press Secretary  
May 7, 2008

## **Notice: Continuation of the National Emergency Blocking Property of Certain Persons and Prohibiting the Export of Certain Goods to Syria**

On May 11, 2004, pursuant to my authority under the International Emergency Economic Powers Act (50 U.S.C. 1701-1706) and the Syria Accountability and Lebanese Sovereignty Restoration Act of 2003 (Public Law 108-175), I issued Executive Order 13338, in which I declared a national emergency with respect to the actions of the Government of Syria. To deal with this national emergency, Executive Order 13338 authorized the blocking of property of certain persons and prohibited the exportation or re-exportation of certain goods to Syria. On April 25, 2006, and February 13, 2008, I issued Executive Order 13399 and Executive Order 13460, respectively, to take additional steps with respect to this national emergency.

I took these actions to deal with the unusual and extraordinary threat to the national security, foreign policy, and economy of the United States constituted by the actions of the Government of Syria in supporting terrorism, maintaining its then-existing occupation of Lebanon, pursuing weapons of mass destruction and missile programs **including the recent revelation of illicit nuclear cooperation with North Korea**, and undermining U.S. and international efforts with respect to the stabilization and reconstruction of Iraq.

Because the actions and policies of the Government of Syria continue to pose an unusual and extraordinary threat to the national security, foreign policy, and economy of the United States, the national emergency declared on May 11, 2004, and the measures adopted on that date and on April 25, 2006, in Executive Order 13399, and on February 13, 2008, in Executive Order 13460, to deal with that emergency, must continue in effect beyond May 11, 2008. Therefore, in accordance with section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), I am continuing for 1 year the national emergency authorizing the blocking of property of certain persons and prohibiting the exportation or re-exportation of certain goods to Syria.

This notice shall be published in the Federal Register and transmitted to the Congress.

GEORGE W. BUSH  
THE WHITE HOUSE,  
May 7, 2008.

## **IAEA chief hopes for clarity on Syria facility soon**

Wed May 7, 2008 9:44pm IST

BRUSSELS (Reuters) - The head of the U.N. nuclear watchdog said on Wednesday he hoped his agency would be able to shed light in the next few weeks on whether a Syrian facility bombed by Israel last year was an undeclared atomic reactor.

The United States released intelligence last month that it said showed Syria built a reactor with North Korean help before Israeli warplanes destroyed it last September. Damascus has denied the accusations.

Mohamed ElBaradei, director of the International Atomic Energy Agency, said the IAEA was in contact with Syria to verify the U.S. intelligence and recalled Damascus's obligation to report any nuclear activities to the agency.

"I hope that in the next few weeks we will be able to shed some light on the nature of the facility that was destroyed," he told reporters after talks with EU officials in Brussels.

"Syria has an obligation to notify the agency if they are, if they were, building any nuclear reactors," he said. Damascus has not granted U.N. inspectors access to the area despite several requests since September, diplomats say.

The U.S. material included photos and other information the CIA said showed the facility's potential for nuclear weapons purposes.

Syria has said the information was forged, comparing it with U.S. reports of mass destruction weapons hidden in Iraq which were never found after U.S.-led forces toppled Saddam Hussein.

Damascus has instead accused Washington of involvement in the air attack by Israel, a staunch U.S. ally widely believed to have the Middle East's only nuclear arsenal.

Syria has repeatedly sparred with the United States and Western allies over the matter at a nuclear Non-Proliferation Treaty review meeting under way in Geneva.

The IAEA and others have criticised the United States for waiting until last month to share its intelligence, and analysts have raised questions over whether the U.S. material amounted to proof of any undeclared arms programme.

Diplomats close to the IAEA say it will be much harder to uncover evidence now than it would have been before the attack.

**‘Abduction issue not a prerequisite to removing N. Korea from list of state sponsors of terrorism’**

**[Interview] Alexander R. Vershbow, the U.S. Ambassador to South Korea**

This year, The Hankyoreh is celebrating its 20th anniversary with a series of articles and interviews in the print edition of the paper to commemorate the publication of its first issue on May 15, 1988. As a special addition to our online edition, Jang Jungsoo, The Hankyoreh’s the executive editor and the former editor of this website, met with Alexander R. Vershbow, the U.S. Ambassador to South Korea, on **May 7 [2008]** in the ambassador’s office in Seoul.

*[EXCERPT]*

Q. Question on North Korea. The 6 Party Talks are at an important crossroads. But, as the U.S. mentions the possible cooperation between North Korea and Syria, there is a concern that the 6 Party Talks may get tangled with Middle East issues.

A. **Several months ago, at a private meeting with the North Koreans, the U.S. said that we were aware of North Korea's assistance in the construction of a nuclear facility in Syria. Since then, North Korea has said they acknowledge our concern, reaffirming that they will not be involved in transferring nuclear materials, technology and know-how to a third country in the future, in accordance with the existing agreement in the 6 Party Talks. Therefore, this issue is already being addressed within the framework of the 6 Party Talks, and we are now making efforts to build a comprehensive verification mechanism that can address plutonium issues as well as this issue.**

**Remarks After Breakfast With Ministry of Foreign Affairs and Trade Minister Yu Myung-hwan**

**John D. Negroponte, Deputy Secretary of State**

Grand Hyatt

Seoul, South Korea

May 8, 2008

8:40 a.m.

QUESTION: Sir, how was your discussion this morning with the Minister?

DEPUTY SECRETARY NEGROPONTE: Very good, a chance to discuss a range of issues of bilateral interest; of course, the United States and South Korea are strategic allies, we have a very close relationship, and obviously this was an opportunity for me to come and pay my respects after the formation of a new government here.

QUESTION: Could you share some of the things that were discussed on the North Korea nuclear issue since you have a team of officials visiting today?

DEPUTY SECRETARY NEGROPONTE: Well just to say that, that process is on-going and the United States and South Korea, I think, share an interest in common in encouraging the process of denuclearization of the Korean peninsula and as a result we both have a great interest in the progress of these Six Party Talks. As you say, there is work going on as we speak.

QUESTION: Have you heard from North Korea about your evidence, the evidence you've laid out on the Syria connection?

DEPUTY SECRETARY NEGROPONTE: Well this is an issue of concern to us and it is an issue that has been discussed in our diplomatic exchanges with North Korea. It's another reason why we attach so much importance to a thorough and accurate declaration on the part of North Korea with respect to their nuclear facilities and programs.

QUESTION: So there have been discussions with North Korea?

(sorry the Secretary has to go)

DEPUTY SECRETARY NEGROPONTE: Yeah, okay. Thanks a lot. Nice to see you.

## **North Korea and Iran: An Administration Perspective**

Patricia McNerney, Principal Deputy Assistant Secretary, International Security and Nonproliferation  
Remarks at National Defense University Symposium

Washington, DC

May 8, 2008

*[EXCERPTS]*

I've been asked to discuss U.S. nonproliferation policy with regard to the two proliferators of greatest current concern -- Iran and North Korea.

Our work is not yet complete in either case. Iran, in particular, is proving resistant to the ultimate objective of the dual-track approach adopted by the P5+1. Its hallmarks have been pressure applied by the UNSC in three successive Chapter VII sanctions resolutions and the package of incentives originally offered Iran on 1 June 2006. In the case of North Korea, we continue to pursue diplomatic negotiations through the Six-Party Talks, a process that has produced some concrete results, including the shutdown and on-going disablement of three core facilities at the Yongbyon Nuclear Complex such that, once all disablement activities are completed, it is estimated that it will take North Korea upwards of one year or more to re-establish operations there.

D.P.R.K.

Let me take a moment to address the issue North Korea-Syria nuclear cooperation - a matter that was briefed to the Congress on April 24. We have long been seriously concerned about the D.P.R.K.'s proliferation activities, and North Korea's clandestine nuclear cooperation with Syria is a dangerous manifestation of those activities. The United States believes, based on strong evidence that North Korea assisted with the construction of a reactor at Al-Kibar in Syria. We have good reason to believe that the reactor, which was damaged beyond repair on September 6 of last year, was not intended for peaceful purposes.

We have chosen to address this problem through the Six Party Framework. In September 2007, the United States began raising its concerns with North Korea about nuclear cooperation with Syria. We have made our concerns known to North Korea in a frank and comprehensive way, and the North Koreans have acknowledged our concerns. The North Koreans have stated that there is no ongoing nuclear cooperation with any foreign country, and that there will be no such cooperation in the future.

We have been following Syrian-North Korean interactions since the destruction of the reactor, and we have not seen the same level of interaction as we did before the reactor's destruction; however, we

cannot be certain all cooperation has ceased. We continue to be on alert for signs of any nuclear cooperation, and any renewed activities. We remain attuned to potential North Korean relationships worldwide, especially given North Korea's continued proliferation of missiles and other weapons.

Through the Six-Party framework, we are working to address North Korea's proliferation activities, which is integral to achieving the verifiable denuclearization of the Korean Peninsula and ending the threat posed by a nuclear North Korea. We will work with our partners to establish in the Six Party Framework a rigorous verification mechanism to ensure that such conduct and other nuclear activities have ceased. We remain confident that the Six-Party process is the best mechanism to address the danger to the United States and the international community posed by the D.P.R.K.'s nuclear programs. Following completion of the Second Phase, we hope to move quickly into a final phase, which will be aimed at abandonment of North Korea's nuclear weapons and existing nuclear programs, dismantlement of all North Korea's nuclear facilities, capture of all fissile material the D.P.R.K. has produced, and a comprehensive verification of North Korea's denuclearization.

Released on May 9, 2008

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
May 8, 2008

*[EXCERPTS]*

QUESTION: On North Korea, can you comment on the Wall Street Journal report that North Korea's going to hand over this week to the U.S. boxes of documents, including Yongbyon facility's operation history?

And also, do you have any updates on the U.S. team that's in North Korea to discuss food aid to North Korea?

MR. MCCORMACK: Food aid -- the food aid team has left. They are --

QUESTION: Any updates --

MR. MCCORMACK: Their discussions -- they were inconclusive, I guess you could say. They went there to take a look at whether or not conditions had changed sufficiently so that we could, in good conscience, in good faith, provide food aid and know that it was going to get to people who need it. So at this point, those discussions are inconclusive. I don't know that they've had a chance to brief back people here in Washington, so I can't give you a more full description. But essentially, they go out there and look at, is there a need and can we effectively get food aid to people who need it. That's been an issue not only for us, but others in the international humanitarian assistance community.

In terms of Sung Kim, I expect that he's probably going to be coming back over -- into South Korea tomorrow. And I expect that he is going to bring with him -- I know that he is going to bring with him a significant number of documents related to North Korea's plutonium program. And we'll have an opportunity over the coming days -- days and weeks to assess the significance of these documents. It is a large number. I can't provide you an exact number right now. We have to take a -- you know, really go through it very carefully. And with respect to these -- you know, with respect to the documents and how they may play in the declaration process, you know, our top three priorities are going to be verification, verification, verification.

So this is part of a process that is unfolding. We will see, perhaps, North Korea providing a declaration to China, who is the chair of the six-party talks, and these documents will play a role in that process. But again, it is going to be a verification process that plays out over a period of time.

QUESTION: The documents, including the operation facility?

MR. MCCORMACK: Well, I'm not going to try to characterize them any more than to say that they relate to their plutonium program, because we haven't had a chance to get a detailed look at the documents.

*[deletia]*

Anything else on North Korea?

QUESTION: Yes.

MR. MCCORMACK: Okay.

QUESTION: What prompted the North Koreans to hand over this stack of documents? Was there -- was this in response to a request the U.S. had made or --

MR. MCCORMACK: Well, this is part of what we have been working -- we, on behalf of the six-party talks, have been working with them on. And again, it's part of the declaration process that speaks to the verification aspect of it.

Yeah.

QUESTION: On Iran -- do you have more on North Korea?

MR. MCCORMACK: You have North Korea? North Korea.

QUESTION: Yeah, I was just wondering, did you get any initial reaction from Sung Kim about the documents? Was it everything that he was hoping to get? And also, did -- when he went there, was there anything else on his agenda besides picking up these documents or was it -- was that basically --

MR. MCCORMACK: This was the main -- this -- the documents were the main reason he was going. And it's difficult to make an assessment of whether or not this is the full extent of what the North Koreans said that they were going to turn over. At this point, I don't have reason to question that. But again, let us take the time to look through the documents carefully, analyze them, and at that -- after we have done that, we'll be able to determine their full significance.

*[deletia]*

QUESTION: I see. And the second question: There is some speculation in the media in the Middle East about the meeting when Deputy Assistant Secretary Feltman invited the Ambassador of Syria --

MR. MCCORMACK: Mm-hmm.

QUESTION: -- and there's some rumors, you know. Do you have any guidance or any readout on what happened on 20 -- on that meeting which took place on the 24th of April?

MR. MCCORMACK: Oh, this is the one to inform him that we were going to be talking about --

QUESTION: Yes.

MR. MCCORMACK: -- their reactor or their former reactor? (Laughter.) The -- it was about a 15-minute meeting, Samir. It was really focused on that topic.

Yeah.

QUESTION: One more on North Korea. The assessment of the documents that Sung Kim received, will the U.S. primarily be doing the assessment or will the other four parties also receive the documents?

MR. MCCORMACK: You know, good question. Certainly, our folks are going to be doing an assessment and we are obviously going to be consulting very closely with the other members of the talks about this and sharing the information. I'll try to get you more on sort of the technical aspects of how people are going to -- how an evaluation of the documents is going to unfold.

QUESTION: And are there any additional stops to Sung Kim's trip?

MR. MCCORMACK: No. He'll be coming back here.

QUESTION: Yeah, and just to follow up on that, in terms of the declaration itself, I mean, not all of the parties are nuclear states with the kind of nuclear expertise that the United States has or Russia has, for instance. So how do you -- have you decided, like, on a mechanism for weighing the declaration? Because all five parties have to be happy with it, but not all five parties are equally, kind of --

MR. MCCORMACK: Right. Well, these are all highly developed economies with a great deal of technical expertise on issues related to nuclear technology, certainly with South Korea and in Japan, that's in civilian uses. So I think everybody brings something to the table and some level of expertise that they can apply in making their own judgments about this. But certainly, there's going to be a lot of discussion among the members of the six-party talks about the declaration once it's received. I have to emphasize, we haven't received, or the Chinese have not yet received, that declaration.

## **Powers Say Atom Control Treaty At Risk, Cite Iran**

**May 9, 2008** Filed at 5:51 a.m. ET

*[EXCERPTS]*

GENEVA (Reuters) - The five major nuclear-armed powers said on Friday the Non-Proliferation Treaty was under threat and cited Iran's uranium enrichment campaign in a rare joint call for action to shore up the NPT.

North Korea's nuclear test blast in 2006, Iran's pursuit of potentially bomb-capable enrichment and new allegations Syria covertly tried to build an atomic reactor with North Korean help spotlight mounting challenges to the treaty, analysts say.

"The proliferation of nuclear weapons constitutes a threat to international peace and security," the United States, Russia, China, Britain and France said in a joint address on the final day of a two-week meeting of 106 NPT member nations.

The five said they stood squarely behind a revised packet of economic incentives which they, along with Germany, plan to present to Iran soon to shelve its enrichment program.

They urged North Korea, which bolted from the NPT in 2003, to carry out a now-stalled six-party accord to disarm.

### **SYRIA ADDED TO NPT CONTROVERSY**

Syria, like Iran repeatedly assailed by Washington and some allies at the meeting, was omitted from the powers' statement, apparently due to reservations of some about U.S. intelligence purporting to show Damascus was close to completing a secret reactor before Israeli warplanes destroyed it last September.

Syria has rejected the findings as "forged" but is now under International Atomic Energy Agency (IAEA) investigation.

## North Korea Gives U.S. Files on Plutonium Efforts

By HELENE COOPER

May 9, 2008

WASHINGTON — North Korea has turned over to the United States 18,000 pages of documents related to its plutonium program dating from 1990, in an effort to resolve remaining differences in a pending agreement meant to begin the denuclearization of the Korean Peninsula, Bush administration officials said Thursday.

The documents contain information about North Korea's three major campaigns to reprocess plutonium for nuclear weapons, in 1990, 2003 and 2005, a senior official said. The official, like some others who agreed to discuss the documents, spoke on the condition of anonymity because of diplomatic considerations.

But the documents do not include information on two other areas about which North Korea has promised to be forthcoming — a uranium program that some officials in the Bush administration regard as another track toward weapons development, and North Korea's involvement in the proliferation of nuclear material.

State Department officials have nevertheless described the move on Thursday as an important step, saying they hope it will help to resolve a dispute over how much plutonium North Korea holds. Administration officials have not said how much plutonium North Korea has admitted to possessing, but they have criticized as incomplete a preliminary declaration it made last December.

The documents, which fill seven boxes, "will help shed light on why they have a lower figure," said an administration official who insisted on anonymity. He said one reason could be that North Korea has more nuclear waste than expected, which could have led to lower plutonium production than the United States had estimated.

Officials in Pyongyang, the capital of North Korea, gave the documents to Sung Kim, the director of the State Department's Korea office, on Thursday, and he was poring over them in his hotel before bringing them back to the United States this weekend, State Department officials said. They said that several other American diplomats would accompany Mr. Kim and the documents on a commercial flight back to Washington so they could transport the boxes as carry-on luggage. Transporting them as checked baggage would be too risky, the officials said. The acquisition of the documents is the latest step in the Bush administration's effort to complete a nuclear pact with North Korea before it leaves office in January. The nuclear deal has come under fire from some conservatives, in and out of the administration, who contend that North Korea cannot be trusted to end its nuclear program.

On Wednesday, The Wall Street Journal's editorial page, which has opposed the pact, said Christopher R. Hill, the assistant secretary of state for East Asia and Pacific affairs, had "made a mockery of the interagency process." It said he had been bypassing other Bush officials and, instead, "handpicking experts to work at Yongbyon," where North Korea is dismantling its nuclear reactor.

Mr. Hill has the backing of Secretary of State Condoleezza Rice, and they have kept President Bush's support for a pact that many foreign policy experts say is the administration's best chance at a tangible

foreign policy accomplishment — beginning the denuclearization of the Korean Peninsula — in its remaining months.

The administration has focused its efforts on getting North Korea to disclose fully information about its plutonium cache, which represents what most experts say is the bulk of its nuclear program.

In return for the information it seeks on plutonium, the administration has relaxed a demand for North Korea to admit that it supplied Syria with nuclear technology. The United States has also indicated that it will postpone a demand that North Korea provide an immediate and full accounting of its fledgling uranium program.

North Korea's plutonium program was the source of raw material for the device it tested in October 2006.

Sean I. McCormack, the State Department spokesman, said that officials would take time to review the documents to determine whether North Korea's declaration about its plutonium program is satisfactory. He said that any final agreement would include a strict verification process for all North Korean nuclear activities.

"Our top three priorities are going to be verification, verification, verification," Mr. McCormack said.

## **US awaits 'complete' NKorea report: Negroponte**

39 minutes ago [*Accessed 2008-05-09T14:05Z*]

TOKYO (AFP) — The United States is still awaiting a complete report from North Korea on its nuclear activities, Deputy Secretary of State John Negroponte said Friday [2008-05-09], after the communist state handed over documents.

"We still await more complete results and a more complete report as to exactly what happened," Negroponte told reporters after briefing Japanese Foreign Minister Masahiko Komura on developments.

US nuclear expert Sung Kim was leaving North Korea on Friday with papers which will be used to help verify an eventual declaration from North Korea on its past nuclear activities, the US State Department said.

"I know he's bringing back some records that have to do with the nuclear production programmes of North Korea," Negroponte said.

But he was cautious over the papers after North Korea in December missed a key deadline in a six-nation deal to make a declaration on all nuclear material, including stockpiled plutonium which could be used for bomb-making.

"This is part of the ongoing process connected with the six-party talks and leading hopefully to the full denuclearisation of the Korean peninsula," he said.

"So I would say this was a step in a process but it's an ongoing process," he added.

The North, which staged a plutonium-based nuclear test in October 2006, is disabling its plutonium-producing reactor and other plants under a deal reached in February 2007 with the United States, China, Japan, Russia and South Korea.

In return for total denuclearisation, the North would receive energy aid, a lifting of US sanctions, the establishment of diplomatic relations with Washington and a formal peace treaty.

In addition to the declared plutonium operation, Washington said the declaration must clear up suspicions about alleged secret uranium enrichment and about suspected proliferation to Syria.

The North denies both activities. Under a reported deal, it will merely "acknowledge" US concerns about the two issues in a confidential separate document to Washington.

## **Purchases Linked N. Korean to Syria**

Pyongyang Company Funneled Reactor Parts to Damascus, Intelligence Officials Say

By Robin Wright and Joby Warrick

Washington Post Staff Writers

Sunday, May 11, 2008; A18

When North Korean businessman Ho Jin Yun first caught the attention of German customs police in 2002, he was on a continental buying spree with a shopping list that seemed as random as it was long.

Yun, police discovered, had been crisscrossing Central Europe, amassing a bafflingly diverse collection of materials and high-tech gadgets: gas masks, electric timers, steel pipes, vacuum pumps, transformers and aluminum tubes cut to precise dimensions.

Most of these wares Yun had shipped to his company's offices in China and North Korea. But some of the goods, U.S. and European officials now say, were evidently intended for a secret project in Syria: a nuclear reactor that would be built with North Korean help, allegedly to produce plutonium for eventual use in nuclear weapons.

According to U.S. officials, European intelligence officials and diplomats, Yun's firm -- Namchongang Trading, known as NCG -- provided the critical link between Pyongyang and Damascus, acquiring key materials from vendors in China and probably from Europe, and secretly transferring them to a desert construction site near the Syrian town of Al Kibar.

It was the company's suspicious buying habits -- and the branch office it opened in Damascus -- that inadvertently contributed to the alleged reactor's discovery and later destruction in a Sept. 6 Israeli bombing raid, U.S. officials say. Joint Chiefs of Staff Chairman Michael Mullen declined in an interview to say whether Washington helped with the raid, but he strongly endorsed it.

"The reactor which was being built was not very far from being operational and needed to be hit," Mullen said.

Alerted to NCG's suspect purchases in Europe, Western spy agencies were able to track the movement of NCG employees and purchases to Syria in 2003, where the outlines of the reactor scheme eventually became apparent. The site was closely scrutinized by Western intelligence officials for months before it was destroyed by Israel. During that period, U.S. officials collected aerial images and acquired interior photos that showed apparent reactor components.

Syria has maintained that the facility was always nonnuclear, but U.S. officials say that as the government cleared the site of debris after the bombing, some telltale reactor components that had been deliberately hidden became visible.

"We judged that these interactions were probably nuclear-related . . . because of who it was we were seeing in those interactions," a senior U.S. intelligence official said at a briefing in Washington last week about the Syrian-North Korean venture. "We assessed the cooperation involved work sites probably within Syria. But again, we didn't know exactly where."

Attempts to contact Yun and other NCG officials by phone and e-mail were unsuccessful.

Syria acknowledges "a working relationship" with North Korea, but Syrian Embassy spokesman Ahmed Salkini said it does not defy any international law. "If this company conducts business with Syria, the terms of transactions would abide by, and would be within, the legal framework of the international community," he said, adding that the embassy has not heard of NCG.

U.S. officials say the Pyongyang-based NCG used an office in Beijing as a base for procuring materials and as a distribution center for items that could not be legally routed through North Korea because of trade sanctions.

A spokesperson at the Chinese Embassy denied any knowledge of the company and its activities.

"I am not aware of anything about the North Korean company mentioned. . . . China is steadfastly opposed to the proliferation of weapons of mass destruction and its deliveries, and it has been faithfully honoring its international obligations and responsibilities," Wang Baodong said in an e-mailed statement.

Proliferation experts say NCG used many methods to conceal the intended use of the items it was acquiring.

NCG has acted "as a trading agent or middleman, buying items through Chinese trading companies or directly from foreign companies," said David Albright, president of the Washington-based Institute for Science and International Security and an expert on the international black market for nuclear technology.

Because of its branch office in China, NCG can buy equipment from suppliers throughout the world, even in Europe and possibly in the United States, particularly if the companies have subsidiaries in China, Albright said. Moreover, export controls in China are poorly implemented and simple to evade.

Other North Korean companies with offices outside the country have bought militarily sensitive equipment from commercial vendors, including parts for making ballistic missiles, nuclear bombs and other advanced weapons, U.S. officials say. Over the years, they have bought metals used in uranium enrichment and chemical precursors for highly lethal nerve agents, the officials said.

"North Korea often works through these trading companies, which facilitate business deals and other activities overseas that earn foreign exchange for the government and especially for the top leadership. They have been very active in the past in facilitating missile sales in countries like Syria and Iran," said Larry Nicksch, an expert on Asia at the Congressional Research Service.

A U.S. counterproliferation official said in an interview that North Korea typically uses "one, two or more layers" of front companies so it can plausibly deny knowledge of actual intended use.

"Sometimes they can fool the supplier by saying the goods are intended for another country altogether. North Korea does this very well," said the official, who spoke on the condition of anonymity because U.S. investigations remain classified.

Over the past decade, NCG's activities have been the target of investigations spanning two continents. Its attempt to purchase hundreds of high-strength tubes from European businesses attracted the

attention of the German government in 2003. The tubes were made of a highly specialized type of aluminum used in making centrifuges for uranium enrichment, but Yun, the NCG businessman, told German companies that they were destined for an aircraft factory in China, according to court documents.

Eventually, Yun -- who earlier served as the head of North Korea's United Nations delegation in Vienna, the home of the U.N. nuclear watchdog agency -- struck a deal with a Bavarian company to obtain 22 tons of British-made tubes. They were placed on an Asia-bound ship in April 2003 and made it as far as the Suez Canal before German authorities ordered the cargo seized.

A subsequent investigation by nuclear weapons experts, including several at the International Atomic Energy Agency, concluded that the tubes were not suited for aircraft. The Chinese company named by NCG as the intended user denied ordering such tubes, U.S. and European investigators said.

In court documents and interviews, German officials alleged that NCG had operated as a front company for years and had sought to buy a wide range of sensitive equipment from European firms, including oscilloscopes and other electronic gear used in making and testing nuclear detonators.

Neither Yun nor NCG was charged with wrongdoing in Germany, but the owner of the company that sold the tubes was sentenced to four years in prison for his role in the sale.

The discovery of a series of attempted purchases prompted the CIA to predict that North Korea could have an operational uranium enrichment facility by 2005. But no such facility has ever been identified, and North Korea insists the tubes were meant for other programs, including missile production. North Korea has allowed U.S. officials to take smelted aluminum it purchased from other countries back to the United States for analysis.

U.N. Resolution 1718 stipulates that all member states must "prevent the direct or indirect supply, sale or transfer" to North Korea "through their territories or by their nationals, or using their flag vessels or aircraft, and whether or not originating in their territories" any material or technology that would contribute to a nuclear weapons program.

White House and State Department officials have declined to comment on whether the Bush administration is trying to get China to act against NCG.

"We have nothing to add beyond what has already been said about North Korean nuclear cooperation with Syria," said State Department press officer Gonzalo Gallegos. "As the White House said last week, the United States is . . . committed to ensuring that North Korea does not further engage in proliferation activities."

Staff writer Glenn Kessler contributed to this report.

## Experience With Syria Exemplifies Challenge That Detection Presents

By Joby Warrick

Washington Post Staff Writer

Monday, May 12, 2008; A16

Syria went to extraordinary lengths to conceal its undeclared construction of a plutonium-producing nuclear reactor from spies in the sky and on the ground in recent years, according to a draft report by independent nuclear experts briefed by Bush administration officials.

The effectiveness of the camouflage effort raises new doubts about the prospects for certain detection of future clandestine nuclear weapons-related activities, the Institute for Science and International Security concluded in its report on the Syrian facility. "This case serves as a sobering reminder of the difficulty of identifying secret nuclear activities," the report said.

U.S. intelligence officials last month released images of the Syrian facility before it was bombed by Israel last September and bulldozed by the Syrian government once the raid became public. U.S. and Israeli officials have said the facility was a nearly completed nuclear reactor built with North Korean help and fitted with a false roof and walls that altered its shape when viewed from above.

According to the ISIS report to be released this week, the fake roof was just the start. Syrian engineers went to "astonishing lengths" to hide cooling and ventilation systems, power lines and other features that normally are telltale signs of a nuclear reactor, authors David Albright and Paul Brannan wrote.

For example, the main building appears small and shallow from the air, but it was evidently built over large underground chambers -- tens of meters in depth -- that were large enough to house the nuclear reactor, as well as a reserve water-storage tank and pools for spent fuel rods, the report said.

An extensive network of electrical lines appears to have been buried in trenches. Traditional water-cooling towers were replaced with an elaborate underground system that discharged into the Euphrates River. And, instead of using smokestack-like ventilation towers prominent at many reactor sites, the ventilation system appears to have been built along the walls of the building, with louver openings not visible from the air, the authors contended.

The ISIS report noted that early skepticism that Syria was building a reactor there was based partly on the observable absence of revealing features. "The current domestic and international capabilities to detect nuclear facilities and activities are not adequate to prevent more surprises in the future," the report warned.

Albright, a former U.N. weapons inspector, said his conclusions were based not only on photographs of the Syrian site but also on interviews with government officials who closely monitored the facility while it was under construction.

Syria has repeatedly denied that the Al Kibar facility was a reactor. Its ambassador, Imad Moustapha, at a April 25 news conference in Washington described the allegations as "absurd, preposterous stories." "This administration has a proven record of falsifying and fabricating stories about weapons of mass destruction," he said.

On Wednesday, International Atomic Energy Agency director general Mohammed Elbaradei said his organization should be able to report in coming weeks whether the facility was an undeclared nuclear reactor.

Staff writer Robin Wright contributed to this report.

## **Briefing on Latest Developments in the Six-Party Talks**

Sung Kim, Director of the Office of Korean Affairs

Washington, DC

May 13, 2008

(10:30 a.m. EDT)

*[EXCERPTS]*

*[deletia]*

MR. KIM: Thanks, Tom. Good morning. As you know, I just came back yesterday from my second trip to North Korea in two weeks. We brought back, as you can see, documents from North Korea. These are operating and production records for the 5-megawatt reactor and the reprocessing plant in Yongbyon. They number 18,822 pages, 314 volumes. We believe these documents will provide an important first step in verifying the North Korea's -- the DPRK's declaration.

Our team of experts now have these documents and will be undertaking a comprehensive review of the contents. I might just, for prop's sake, this is an example of a volume of operating records. These documents are in Korean, so it will actually take some time to translate all of the documents. But we have a team of experts working on these documents and, hopefully, we'll be able to conduct at least a preliminary review of the documents in a few weeks.

In addition to receiving the documents, we had very detailed, substantive discussions with DPRK interlocutors from the Foreign Ministry as well as the General Department of Atomic Energy on all aspects of their declaration. As you know, the declaration will be submitted to the Chinese because China chairs the process, but we were able to discuss some reference materials that would form the basis for the declaration. I think those discussions were productive, and we look forward to continuing the exchange with them through the New York channel.

*[deletia]*

QUESTION: I mean, were there any more discussions while you were up there on the Syrian reactor issue? Because I think this was your first trip there since the intelligence was made public and I'm just curious if there was any more feedback or recognition from the North Koreans that they had played a role in developing it, or are they still outright denying this? Because I assume this was something you raised.

MR. KIM: We actually didn't discuss that issue during my trip.

QUESTION: You said that you talked a lot about the declaration and aspects of the declaration while you were in North Korea. Do you now feel that the declaration is on track and that, within the next few weeks, that you will have a declaration from North Korea?

MR. KIM: Our delegation's sense was that the reference materials that would form the basis for the declaration appears quite comprehensive, quite full. But it's really – I think it's too early to tell whether it would be ready anytime soon. I think we will continue our discussions with the North Koreans through the New York channel and we'll, of course, continue to consult with our six-party partners.

QUESTION: If these – if this is part of a verification process, what precisely will they be putting into the declaration in regards to the plutonium program? I mean, isn't this – would they – are they considering this to be part of their declaration? Not just the verification phase, not for – just for verification purposes, but actually, they're saying, this is what we're doing? And are they considering this their declaration on plutonium?

And secondly, what is going to be the next step for the U.S.?

MR. KIM: I don't believe this – they consider this to be the declaration itself. I think they will be submitting a separate document to the Chinese that would, I think, be their declaration. I think these documents are important supporting documents for the declaration, but not the declaration itself.

QUESTION: Can I just ask -- you said in – that the U.S. thought that what the North Koreans came out with at the end of last year was inadequate. And it's my understanding it's inadequate because they didn't address things like uranium enrichment and proliferation, but also because you thought the number was too low. To what – can you tell us why you thought what they said in the end of last year was inadequate and whether this goes any way in terms of meeting those shortcomings, in terms of the background information and possible reasons why the number was so low, for example, with (inaudible) waste?

MR. KIM: Yeah. I think it's probably inappropriate for me to go into details of the declaration and what is likely to be the declaration at this stage. I can tell you that the reference materials that we saw late last year did not have many of the details that is now included in their latest set of reference material.

QUESTION: And was that a large reason why it was inadequate?

MR. KIM: I'm sorry?

QUESTION: Is that a large reason why it wasn't good enough?

MR. KIM: Yeah. I mean, we would like to see a complete, credible declaration.

### **Syrian Ambassador to U.S. Slams Bush Administration over Syrian Nuclear Plant Allegations: 'Sometimes It Amazes Me That My Enemy Is So Naïve, Superficial, and Stupid'**

The following are excerpts from an interview with Syrian Ambassador to the U.S. 'Imad Mustafa, which aired on Al-Jazeera TV on May 5, 2008.

To view this clip, visit <http://www.memritv.org/clip/en/1763.htm> .

#### **"This [U.S.] Administration is Characterized By A Great Deal Of Recklessness, In Addition to its Capabilities for Fabricating and Lying"**

**Imad Mustafa:** "Even though this story [about a Syrian nuclear reactor] is ridiculous, we do not take it lightly. This [U.S.] administration is characterized by a great deal of recklessness, in addition to its capabilities for fabricating and lying, and of causing the utmost damage to other nations, as well as to the American nation itself. This is not propaganda. This is the reality in which the American people is living right now. Therefore, we do not take this story lightly.

"We believe that this story comes in a certain context. This story, as presented by the American administration, is another link in a continuous chain of actions, which the U.S. administration has been taking against Syria for at least four years.

"There are two very significant differences between then and now. When the U.S administration made its false claims in the past - even though some people doubted the claims about Iraqi WMDs - the American political establishment as a whole accepted the administration's account, in order to wage the war against Iraq. Both Democrats and Republicans, who form the U.S. political establishment, are very upset today because they have realized that the U.S. administration lied to them and dragged them into a war, which has turned into a muddy quagmire of blood and destruction - blood and destruction in Iraq, and a lot of blood and huge damage in the U.S.

"This war has destroyed Iraq, but it also wounded the national pride of the U.S. There was damage on both sides, even if not to the same extent. The difference is that from the moment the U.S. administration presented its fabricated story about the Syrian nuclear reactor, in both houses of Congress and in both the Republican and Democratic parties there has been great discontent." [...]

## **"The Administration Thought... It Could Once Again Increase the Tempo of the Drumbeat of War by Unleashing a New Nuclear Crisis In Our Region"**

"The current U.S. government is very upset about losing the momentum for waging a war or aggression against Iran, because political public opinion in the U.S. does not support such a war. The administration thought - this is my analysis, but I can't swear to it - that it could once again increase the tempo of the drumbeat of war by unleashing a new nuclear crisis in our region all of a sudden, and then lumping together all of us - the countries of the 'Axis of Evil,' the rogue states."

## **"Sometimes It Amazes Me That My Enemy is So Naïve, Superficial, and Stupid... The American Media, Legislative, Political, and Intelligence Establishment Has Already Begun to Pound Away At This Account "**

"Therefore, it presented the American people with a story according to which there is a great danger in that region, because evil rogue states like Syria and Iran are arming themselves with nuclear weapons, while the good, democratic, and angelic state of Israel is in terrible danger, and we have to do something in order to save Israel from the evil of those rogue states. This reckless hotheadedness of theirs... Sometimes it amazes me that my enemy is so naïve, superficial, and stupid. They did not plan it very well.

"We in Syria are expecting this new story to collapse as a result of two types of blows - internal and external blows. The American media, legislative, political, and intelligence establishment has already begun to pound away at this account, and the blows will only increase.

"You will be able to check what I am telling you very soon. Voices are beginning to be heard. They are still few, but they are constantly increasing, and they doubt this account very clearly. But there are also external blows. Over the past three days, I noticed dozens of articles published by nuclear technology experts from various countries, from Western Europe and the U.S., who analyzed and explained why this story is stupid and ridiculous, and they showed that scientifically and technologically, this account is completely unreliable."

**May 20, 2008**

*[EXCERPT]*

When the IAEA Board meets in two weeks, we will consider the nuclear activities of Iran and Syria, two IAEA members who have violated their IAEA obligations.

These are dangerous regimes on dangerous pursuits.

- Both are state sponsors of terrorism.
- Both undermine regional peace and stability.
- Both have pursued nuclear capabilities that make no civil sense but that can produce fissile material for nuclear weapons.
- Both had outside assistance, Syria from a known violator of the Nuclear Nonproliferation Treaty, Iran from an international smuggling network for nuclear weapons technology.
- Both pursued these capabilities covertly and illicitly, successfully hiding them from IAEA inspectors until exposed by others.
- Both remain actively engaged in covering up the full extent of their activities, refusing to implement the IAEA's Additional Protocol to provide added transparency.

This explosive situation poses serious risks to the security of Spain and the United States, and of the European Union and NATO. Iran's nuclear pursuits remain the most dangerous. But Syria's clandestine activities show how a determined regime can still flout the IAEA. Each underscores the risks of nuclear proliferation in one of the world's most dangerous regions.

We must confront these risks together, for our close cooperation is essential to protect our collective security.

### **Syria's Covert Nuclear Activities**

Syria's covert nuclear activities were exposed publicly only last month. On April 24, we briefed your government and other governments around the world about the nuclear reactor that Syria was building in its eastern desert near Al Kibar.

This reactor was damaged beyond repair by a military strike last September.

We believe, based on strong evidence, that North Korea assisted Syria with this reactor. Indeed, our intelligence experts are confident that the Syrian reactor near Al Kibar was the same type of reactor that North Korea built at its Yongbyon nuclear facility. The Yongbyon reactor produced the plutonium used in North Korea's nuclear weapons and is now being disabled as a result of the Six-Party Talks.

We have good reason to believe that Syria's reactor at Al Kibar, like North Korea's reactor at Yongbyon, was not intended for peaceful purposes.

- First, we assess the Syrian reactor was configured to produce plutonium. It had no capability to generate electricity and was ill-suited for peaceful research.
- Second, Syria went to great pains to keep the facility secret. It located the reactor in a remote area and built earthen berms to hide it from observation and fake walls to disguise its configuration.
- Third, Syria failed to declare the reactor to the IAEA as required under its Safeguards Agreement. After it was destroyed in September, Syria falsely claimed that it was not a reactor but a military warehouse.
- Fourth, Syria went to great lengths to cover up its activities after the reactor was destroyed. While refusing IAEA requests to visit the site, its engineers hauled away incriminating equipment, buried what remained of the reactor, and built a large structure over the top.

When we briefed governments on Syria's covert activities, we also briefed the IAEA. The IAEA's Director General, Mohammed ElBaradei, vowed to treat this information with the seriousness it deserves and to mount an investigation. He noted that Syria is obliged, by Code 3.1 under its Safeguards Agreement, to report the planning and construction of any new nuclear facility to the IAEA.

We support the IAEA's investigation of Syria's violation of this IAEA requirement and call on Damascus to provide full cooperation. Syria's construction of this covert reactor was a dangerous and potentially destabilizing development for the region and the world. The Syrian regime must come clean about its illicit nuclear activities and give the IAEA the necessary information and access to assure the world that they have stopped.

It is time for disclosure, not continuing deception. And it is time for Syria to sign and implement the IAEA's Additional Protocol, which would help Agency inspectors verify that Syria's continued nuclear activities are exclusively peaceful.

*[deletia]*

UNITED STATES MISSION TO  
**INTERNATIONAL ORGANIZATIONS  
IN VIENNA**

**Ambassador Gregory L. Schulte**

**U.S. Mission to the IAEA**

**Remarks to the Press on IAEA Investigations of Clandestine Nuclear Activities by Iran and Syria**

**May 21, 2008**

*[EXCERPTS]*

The United States strongly supports peaceful use of nuclear technology in conformity with the Nuclear Nonproliferation Treaty (NPT). But let me mention two countries that have violated their NPT commitments, Iran and Syria. The clandestine nuclear activities of both countries are under investigation by the IAEA, and one will be on the agenda of our Board meeting in two weeks.

*[deletia]*

**Syria**

Also extremely disturbing is that Syria built a reactor in secret and in violation of its Safeguards Agreement.

It was not a typical power or research reactor. It was a reactor built with extraordinary measures to conceal it and with the help of North Korea, a known NPT violator. It bore striking similarities to North Korea's Yongbyon reactor, which produced plutonium for North Korea's nuclear weapons and is now being disabled.

Syrian authorities have a lot of explaining to do. They must allow IAEA inspectors to visit the site and ensure there are no other undeclared activities.

Maybe now we understand why Syria has refused to sign the Additional Protocol. Certainly now we understand why they must sign it.

## **Syria reactor site raises concerns ahead of IAEA meet (Extra)**

May 21, 2008, 17:58 GMT

Vienna - As Israel and Syria engaged in indirect peace talks, diplomats in Vienna on Wednesday expressed their concern over Syria's lack of cooperation into the probe of its alleged reactor destroyed by Israel.

The International Atomic Energy Agency (IAEA) is still trying to get access to Syria's al-Kibar site, where Israel in September bombed what it said was a secret nuclear reactor Syria built with support of North Korea.

Attempts by the IAEA to persuade Syria to allow inspections remained without success, diplomats said.

'Syrian authorities have a lot of explaining to do. They must allow IAEA inspectors to visit the site and ensure there are no other undeclared activities,' US Ambassador Gregory Schulte said.

According to US intelligence released in late April, the reactor could have produced plutonium for nuclear weapons, making Syria the latest in a number of countries like North Korea, Libya or Iran who violated their obligations under the nuclear Non-Proliferation Treaty (NPT).

Iran always maintained that its nuclear programme, kept secret for almost two decades, was solely peaceful. After Israel's bomb raid, Syria said the al-Kibar site had conventional military uses.

Syria was unlikely to be an agenda item at the IAEA's June board of governors meeting, as the IAEA to date had little to report, diplomats said, but said there were internal discussions of how to proceed in the matter.

Several members were however expected to raise the issue and press for a more thorough investigation during the meeting, starting on June 2.

At the time of the US intelligence release on Syria's alleged reactor work on April 24, IAEA Director General Mohamed ElBaradei sharply criticised the United States for leaving the IAEA in the dark by not sharing intelligence with the UN nuclear watchdog earlier.

## **Analysis: An attempt to break the Iranian-Syrian alliance**

By YAAKOV KATZ

May 21, 2008 22:59 | Updated May 22, 2008 6:55

*[EXCERPT]*

Also of concern are the news reports that emerged on Wednesday [2008-05-21], according to which inspectors from the International Atomic Energy Agency (IAEA) were denied access to two facilities in Syria suspected of being connected to the nuclear reactor that Israel bombed and destroyed along the Euphrates River in September. The nature of the facilities has not been exposed, but it leaves open the possibility that Syria may still have operational components of its destroyed nuclear program.

**Issues regarding Committee notification of Syria's nuclear program**

In April 2008, the Director of National Intelligence (DNI) briefed the Committee on the construction of a covert nuclear facility in Syria and its subsequent destruction in September 2007.

Over the course of the preceding eight months, the Chairman and Ranking Minority Member had requested that the President brief the full membership of the Committee about these developments, which significantly impact U.S. foreign policy toward the Middle East and North Korea.

Just hours before a highly-orchestrated public roll-out of the previously classified intelligence, the President finally sent briefers to the Committee. The delay was inexcusable and violated the National Security Act of 1947, which requires that the executive branch keep Congress "fully and currently informed" of all intelligence activities. Congress should be briefed on the threats to the United States in a timely manner, not simply when it is politically expedient.

The world is more dangerous today than at any time since 9/11. There are serious challenges to U.S. national and international security that require the Administration and Congress to work together.

The Administration's clear disdain for the legitimate oversight role of Congress makes it difficult for Congress to do its part in meeting these challenges and keeping America secure.

*[deletia]*

## Syria hesitant to grant IAEA access: diplomats

By Karin Strohecker

Fri May 23, 2008 1:05pm EDT

*[EXCERPTS]*

VIENNA (Reuters) - Syria has yet to accept a request from the U.N. nuclear watchdog to visit a site where Washington says Damascus covertly built an atomic reactor, and has demanded more details about the proposed trip, diplomats said.

The head of the U.N. body, the International Atomic Energy Agency, said on May 7 that he hoped to be able to shed light "in the next few weeks" on whether a Syrian facility, bombed by Israel last year, was an undeclared nuclear reactor.

*[deletia]*

At the start of May, the IAEA wrote to Syria asking to see the targeted area. Syrian atomic energy chief Ibrahim Othman visited Vienna on May 9 for talks with the agency's chief, Mohamed ElBaradei, diplomats familiar with the matter said.

Those talks did not produce any agreement on the timing and nature of a trip by senior inspectors, they added.

One diplomat said on condition of anonymity that the agency had received a letter from Damascus earlier this week asking for more details on the proposed visit. The agency has replied and is now waiting for a further response, the diplomat added.

"NOTHING TO HIDE"

Syria's U.N. envoy said in late April that Damascus would cooperate with the IAEA inquiry and had "nothing to hide."

*[deletia]*

Gregory Schulte, the U.S. envoy to the IAEA, reiterated on Wednesday [2008-05-21] the facility at the site was not a typical power or research reactor.

"Syrian authorities have a lot of explaining to do," Schulte told journalists. "They must allow IAEA inspectors to visit the site and ensure there are no other undeclared activities."

## **The Proliferation Security Initiative (PSI)**

*[EXCERPT]*

### **What is the value of the PSI?**

The PSI provides committed states with a framework for coordinating counterproliferation activities to thwart proliferators' increasingly sophisticated tactics. In recent years, we have seen the emergence of black-market operatives who, for the right price, are willing to use their knowledge, access to materials, and personal connections to provide WMD-related goods and services to terrorists and countries of proliferation concern. Five years ago, the world became aware that an international black market network, headed by Dr. A.Q. Khan, had for many years been supplying clandestine nuclear weapons programs. Seizure of the cargo ship *BBC China* exposed the network and ultimately led to Libya's decision to end its nuclear and missile programs. Most recently, the discovery of Syria's covert nuclear reactor—believed not to be for peaceful purposes--demonstrated that proliferators are capable of pursuing their dangerous objectives even as the world is watching. And today, Iran continues its pursuit of nuclear technology and missile systems that could deliver WMD in direct violation of the UN Security Council.

<http://christiannewswire.com/news/503976737.html>

Statement by the President

Contact: White House, Office of the Press Secretary, 202-456-2580

COLORADO SPRINGS, Colo., May 28 [2008]/Christian Newswire

The following text a statement the President of the United States of America:

Members of the international community are gathered in Washington, D.C., today on the fifth anniversary of the Proliferation Security Initiative (PSI). Since former Polish President Kwasniewski and I first announced the initiative on May 31, 2003, in Krakow, Poland, PSI partner nations have been taking cooperative action to stop the proliferation trade and to deny terrorists, rogue states, and their supplier networks access to weapons of mass destruction (WMD), their delivery systems, and related materials.

Five years ago, the world became aware that an international black market network, headed by A.Q. Khan, had for many years supplied a clandestine nuclear weapons program in Libya. Recently, the discovery of Syria's covert nuclear reactor demonstrated that proliferators are capable of pursuing dangerous objectives even as the world becomes more vigilant. And today, in violation of United Nations Security Council resolutions, Iran continues to enrich uranium and develop missile systems that could eventually deliver WMD. These proliferation activities undermine peace and security and remind us of the continued need for cooperative action.

The PSI has responded to this challenge and achieved a solid record of success. Beginning in 2003 with only 11 states, the PSI has grown to more than 90 nations from every region of the world committed to conduct interdictions and deter those engaged in this dangerous trade. As a result of the collaborative efforts and training it sponsors, PSI is an increasingly effective tool to carry out real-world WMD-related interdictions, from shutting down front companies, to disrupting financial networks, prosecuting proliferators, and stopping shipments of sensitive materials from reaching their intended destination.

I commend all PSI partners for the work they have undertaken and pledge continued U.S. leadership and support for the effort. I urge all responsible nations to join this global initiative to end WMD proliferation.

<http://www.whitehouse.gov/news/releases/2008/05/20080528-3.html>

## **Remarks by National Security Advisor Stephen J. Hadley at the Proliferation Security Initiative Fifth Anniversary Senior Level Meeting**

Washington Hilton Hotel  
Washington, D.C.  
For Immediate Release  
Office of the Press Secretary  
May 28, 2008  
10:07 A.M. EDT

*[EXCERPT]*

In today's world, more states have pursued or are pursuing the capacity to develop and deploy the full range of weapons of mass destruction. Since the end of the Cold War, we have seen Libya develop an illegal nuclear program, North Korea conduct a nuclear weapons test, Iran enrich uranium, and Syria come close to completing a nuclear reactor that could have produced plutonium for nuclear weapons.

## **CIA watching for al-Qaida 'succession crisis'**

By PAMELA HESS – 12 hours ago [Accessed 2008-05-28T13:30Z]

*[EXCERPTS]*

WASHINGTON (AP) — The U.S. is making "a big and continual push" to capture or kill al-Qaida leader Osama bin Laden, but his demise won't end the organization's menace, CIA Director Michael Hayden said Tuesday [2008-05-27] in an Associated Press interview.

*[deletia]*

On other topics, Hayden said:

*[deletia]*

- Even without Israeli intelligence, the CIA would have known by last July that a building in Syria's western desert was meant to be a secret nuclear reactor when a pipe system from the Euphrates River to the building was constructed.

"That was a powerful cooling system going to a building with no visible heat source," Hayden said. Israeli jets destroyed the building in August 2007, although Syria has denied it was a nuclear facility.

North Korea's arms trade — helping Syria build a nuclear reactor, or selling missile technology to Iran — is motivated by cash. "It's a starved economy, with very, very few sources of foreign exchange," he said. "This is one of the ones where they can actually turn a profit."

## **Search Is Urged for Syrian Nuclear Sites**

### **U.S. Presses U.N. on 3 Alleged Facilities**

By Joby Warrick and Robin Wright

Washington Post Staff Writers

Thursday, May 29, 2008; A14

The Bush administration is pressing U.N. inspectors to broaden their search for possible secret nuclear facilities in Syria, hinting that Damascus's nuclear program might be bigger than the single alleged reactor destroyed by Israeli warplanes last year.

At least three sites have been identified by U.S. officials and passed along to the International Atomic Energy Agency, which is negotiating with Syria for permission to conduct inspections in the country, according to U.S. government officials and Western diplomats. U.S. officials want to know if the suspect sites may have been support facilities for the alleged Al Kibar reactor destroyed in an Israeli air raid Sept. 6, the sources said.

The U.N. nuclear watchdog, which has been seeking access to the Al Kibar site since shortly after the bombing, has acknowledged receiving requests to expand the scope of its inspections, but provided no details.

U.S. government officials declined to describe the specific sites that have drawn interest, or to discuss how they were identified. However, the United States and other Western governments have long been interested in identifying possible locations for a facility in Syria that might have supplied nuclear fuel rods for a Syrian reactor. Although the Al Kibar site was described as nearly operational at the time of the Sept. 6 bombing, it had no clear source of the uranium fuel necessary for operation, according to U.S. intelligence officials and diplomats familiar with the site.

Syria, which has denied having a nuclear weapons program, has not yet responded to IAEA requests for a firm date for inspections.

U.S. intelligence officials contend that the Al Kibar facility was built with North Korean assistance, to produce plutonium for nuclear weapons. CIA Director Michael V. Hayden said in an interview that the intelligence community's insight into Syria's nuclear ambitions has deepened since the Israeli raid.

"Do not assume that Al Kibar exhausted our knowledge of Syrian efforts with regard to nuclear weapons," Hayden said. "I am very comfortable -- certainly with Al Kibar and what was there, and what the intent was. It was the highest confidence level. And nothing since the attack last September has changed our mind. In fact, events since the attack give us even greater confidence as to what it was."

He predicted that Syria would "almost certainly attempt to delay and deceive" the IAEA. But he added: "We know what they did."

The absence of a clear fuel source for the reactor -- as well as a fuel-reprocessing facility for extracting plutonium -- has baffled experts who have studied the Syrian project. "It's like having a car but not

enough gas to run it," said David Albright, a former U.N. nuclear inspector in Iraq and the president of the Institute for Science and International Security.

But weapons experts also noted that Western intelligence has had a mixed record on the reliability of leads provided to U.N. inspectors. "U.S. intelligence has had a serious credibility problem on weapons of mass destruction for a decade," said John Pike of GlobalSecurity.org, adding that "they have been known to be right on occasions."

Weapons experts also noted that IAEA inspectors face a difficult task in assessing claims about Syria's program. After the Sept. 6 bombing, Syria bulldozed the ruins of the Al Kibar facility and erected a new building on the same spot. "I think by now they've had enough time to cover their trail," Pike said.

In recent weeks, the Bush administration has increased diplomatic pressure on Syria. Yesterday, national security adviser Stephen J. Hadley said Syria was caught last year trying to procure equipment that could have been used to test ballistic missile components.

## **Official defends US monitoring of Syrian site**

By FOSTER KLUG

The Associated Press

Thursday, May 29, 2008; 9:22 PM

*[EXCERPT]*

WASHINGTON -- A senior intelligence official on Thursday defended U.S. efforts to monitor an alleged Syrian nuclear facility that the U.S. says was built with North Korean help.

Joseph DeTrani, the national intelligence director's mission manager for North Korea, said U.S. intelligence had been watching the reactor very closely and for a number of years.

"This was not a failure," he told an audience at the Center for Strategic and International Studies think tank. "Action was taken when it was going operational, and they are now out of business."

*[Sourcebook note: The above remarks were made in a discussion between minutes 29 and 32 in the video [http://media.csis.org/csistv/?080529\\_dialogue](http://media.csis.org/csistv/?080529_dialogue)]*

## **PREVIEW: IAEA meet to focus on Iran's lack of transparency**

May 31, 2008, 5:08 GMT

*[EXCERPTS]*

Vienna - A tough IAEA report detailing Iran's unwillingness to clear up allegations of past nuclear weapons work will be at the centre of the UN nuclear organisation's Board of Governors meeting starting on Monday.

*[deletia]*

Besides Iran, the board will also discuss the alleged Syrian nuclear reactor that was bombed by Israel in 2007. Syria denies that it was building an undeclared nuclear facility.

But the board will not formally demand that Syria admit IAEA inspectors until Director General ElBaradei has reported about his attempts to be granted access to the alleged site, diplomats said.

## **In the Driver's Seat**

### **Condoleezza Rice and the jettisoning of the Bush Doctrine.**

by Stephen F. Hayes

06/02/2008, Volume 013, Issue 36 [Accessed 2008-05-31]

[EXCERPTS]

In April 2007, the director of national intelligence called the ranking members of congressional intelligence and foreign affairs committees in for a meeting. They were not told what was on the agenda--a fact that suggested it was serious. It was.

Despite strong warnings from the United States in the past, the North Koreans had provided assistance to Syria in its efforts to build a nuclear reactor. Information was sketchy, but the facility looked to be modeled after the North Korean reactor at Yongbyon and construction appeared to be in advanced stages. There was no question that the North Koreans were at least sharing nuclear technology with the Syrians. The congressional leaders were told to keep the information "close hold" and forbidden from sharing it with their colleagues on the intelligence and foreign affairs committees. They agreed, and over the course of the summer attended additional briefings.

Bush administration officials were divided about what, if anything, to do in response. The Israelis communicated a strong inclination to take out the Syrian facility that heightened the disagreements on Bush's national security team. Rice was concerned about the diplomatic consequences of approving a preemptive strike. Cheney, who once signed a photograph to Israeli general David Ivri thanking him for taking out Iraq's Osirak nuclear reactor in 1981, favored it.

On September 6, 2007, Israeli jets bombed the Syrian facility. The initial news reports were maddeningly vague and very few people understood what had happened and why. Inside the U.S. government, the debate intensified. The congressional leaders who had been briefed on the program wanted to learn more about the strikes and wanted to be able to share what they knew with their colleagues. Bush administration officials, however, continued to insist that the information be restricted to the small group that had been previously briefed.

In internal deliberations, Hill and Rice, concerned that public disclosure of North Korea's involvement could derail the six-party talks, argued for keeping the information secret. Stephen Hadley, Rice's former deputy and current national security adviser, broke the news to the lawmakers.

[deletia]

And Pete Hoekstra, the vice chairman of the House Intelligence Committee, still has lots of questions. "If they're proliferating to Syria, who else? Where else could there be a North Korea-designed reactor that we don't know about? What else might North Korea be doing?"

IAEA Board of Governors Meeting, June 2-6, 2008

Agenda Item 7 (b)

Report by the Director General on Monitoring and Verification in the Democratic People's Republic of Korea

U.S. Statement

*[EXCERPT]*

Mr. Chairman,

We continue to make progress toward the verifiable denuclearization of the Korean Peninsula through the Six-Party Talks, though there is still much to be done. The DPRK is continuing to disable the three core facilities at Yongbyon, but we are still waiting for the DPRK to provide a complete and correct declaration of all its nuclear programs, materials, and facilities, including uranium enrichment and proliferation, which was due on December 31, 2007. With regard to proliferation, we have made our concerns about North Korea's nuclear cooperation with Syria known to the DPRK in a frank and comprehensive way. The DPRK has acknowledged our concerns, and agreed to cooperate on verification activities in line with its past commitments on non-proliferation. We continue to urge the DPRK to provide its declaration as soon as possible to the Chinese, as chair of the Six-Party Talks.

**June 2-6, 2008**

**Agenda Item 11 – Any Other Business**

**Syria**

**U.S. Statement**

*[2008-06-05]*

Mr. Chairman,

On April 24, the United States provided information to the Secretariat regarding an undeclared nuclear reactor Syria was constructing in its eastern desert near a place we call Al-Kibar. We are confident this facility was in fact a nuclear reactor of the same type North Korea built indigenously at its Yongbyon nuclear facility – a graphite-moderated, gas-cooled reactor. This type of reactor is suitable for production of plutonium, which was apparently the reactor's intended purpose since it was not configured for power production, was isolated from any civilian population, and was ill-suited for research.

As the DG reminded us on Monday, Syria failed to declare to the IAEA that it was constructing a nuclear reactor, even though construction of the facility began six years ago. Instead, Syria took measures to conceal its activities, such as altering the exterior of the reactor building to disguise its similarity to the Yongbyon facility. Syria is legally obligated under its safeguards agreement to notify the IAEA of new nuclear facilities at the time a decision is taken to build them. Therefore by not declaring the site to the IAEA, Syria not only violated its safeguards agreement but also undermined the very purpose of IAEA safeguards – to provide the international community with the necessary assurance that the reactor was part of a peaceful program.

After the reactor was destroyed in September of last year, Syria went to great lengths to clean up the site and destroy evidence of what existed at Al-Kibar. Despite a request by the Director General, Syria did not allow inspectors to visit the site last fall. We now know, and have provided evidence to members of the Board, that on October 10, 2007, Syria conducted a controlled demolition of the reactor debris and promptly began removing equipment and debris from the site. Much of the work took place at night or under the cover of tarpaulins. By December, Syria had constructed a large building where the reactor once stood.

Syria's obfuscations and concealment efforts raise many troubling questions. If it were intended for a civil nuclear energy program, why not declare the reactor to the IAEA and place it under IAEA Safeguards as it was obligated to do? And, why go to such lengths to cover up its clandestine activities? What does Syria have to hide?

Mr. Chairman,

The Director General has informed us that the Secretariat has undertaken an investigation to determine the true nature of the facility. The United States strongly supports this investigation and calls on Syria to cooperate with the IAEA's investigation and to provide assurances there are no other undeclared nuclear activities. We expect that Syria will cooperate proactively during the Agency's visit later this month, providing access to individuals, documents and locations relevant to the IAEA inspection.

The existence of undisclosed nuclear facilities in Syria further underlines the limitations of the Agency in a country with a Comprehensive Safeguards Agreement but without the Additional Protocol. We have seen this before and in response have developed the Additional Protocol in order to give the inspectors the tools they need to provide us, the Member States, with the assurances we require that a country's declaration is not only correct, but is also complete, and its nuclear program is therefore exclusively for peaceful purposes. We call on Syria, and all states that have not yet done so, to sign and implement the Additional Protocol.

The United States asks that all Board members join us in seeking clarification of these suspect activities. We understand that the Secretariat will keep the Board apprised of its investigation and look forward to a report of its findings prior to the September Board.

Thank you, Mr. Chairman.

UNITED STATES MISSION TO  
**INTERNATIONAL ORGANIZATIONS  
IN VIENNA**

**Ambassador Gregory L. Schulte**

**Remarks to the Press**

**during the IAEA Board of Governors**

**June 5, 2008**

The IAEA Board of Governors just concluded its deliberations. During the course of the last three and a half days we talked about the clandestine nuclear activities of two countries, Syria and Iran.

Iran provided no substantive answers to the troubling questions that the IAEA has posed to its authorities. A broad majority of the Board members called for Iran to cooperate with the Agency and to abide by the UN Security Council resolutions.

We hope that the leadership in Tehran will listen to this call from the Board of Governors and carry out their obligation to cooperate with this very important Agency.

On Syria we discussed alarming information – that Syria was working on a clandestine program to build a covert nuclear reactor.

Board members welcomed the forthcoming visit of the IAEA inspectors to Syria. Twenty Board members, when you include those associated with the EU, made it very clear that they expect that Syria will cooperate with the IAEA in these investigations.

We look forward to the report by the DG on Syria's clandestine nuclear activities and anticipate that this will be on the agenda of the Board when it meets in September.

Statements of the Director General

2 June 2008 | Vienna, Austria

IAEA Board of Governors

## **Introductory Statement to the Board of Governors by IAEA Director General Dr. Mohamed ElBaradei**

*[EXCERPT]*

### **Implementation of Safeguards in the Syrian Arab Republic**

In April of this year, the Agency was provided with information claiming that an installation destroyed by Israel in Syria last September was a nuclear reactor. According to this information, the reactor was not yet operational and no nuclear material had been introduced into it.

It is deeply regrettable that information concerning this installation was not provided to the Agency in a timely manner and that force was resorted to unilaterally before the Agency was given an opportunity to establish the facts, in accordance with its responsibilities under the NPT and Syria's Safeguards Agreement. I should like to remind everybody that NPT States Parties have unanimously reaffirmed that the Agency is the competent authority responsible for verifying and assuring, in accordance with its Statute and the Agency's safeguards system, compliance by States with their safeguards agreements.

Nonetheless, I should emphasize that Syria, like all States with comprehensive safeguards agreements, has an obligation to report the planning and construction of any nuclear facility to the Agency. We are therefore treating this information with the seriousness it deserves and have been in discussions with the Syrian authorities since this information was provided to the Agency with a view to arranging a visit to Syria at an early date to verify, to the extent possible at this stage, the veracity of the information available to the Agency. It has now been agreed that an Agency team will visit Syria during the period 22-24 June. I look forward to Syria's full cooperation in this matter.

## **U.N. Nuclear Inquiry Planned in Syria**

Published: June 2, 2008

Filed at 6:28 a.m. ET

*[EXCERPTS]*

VIENNA, June 2 (Reuters) - A U.N. nuclear watchdog team will visit Syria on June 22-24 to pursue an investigation into U.S. intelligence alleging that Damascus secretly built an atomic reactor, the agency's chief said on Monday.

*[deletia]*

He did not say whether Syria, which had not responded for months to IAEA requests for access needed for the inquiry, would allow inspectors to examine the al-Kibar site bombed by Israel in the country's remote northeast desert.

A Western diplomat said the Vienna-based U.N. watchdog, which also has a long-running investigation into Iran's shadowy nuclear programme, wanted to inspect not just al-Kibar but two other sites with possible nuclear links.

## **Syria to allow probe of alleged nuclear site**

By GEORGE JAHN

8 minutes ago [*Accessed 2008-06-02T15:44Z*]

VIENNA, Austria (AP) — Syria will allow in U.N. inspectors to probe allegations that the country was building a nuclear reactor at a remote site destroyed in an Israeli airstrike, the International Atomic Energy Agency said Monday.

IAEA head Mohamed ElBaradei did not say whether his inspectors would be granted access to the site during the planned June 22-24 visit. But a senior diplomat familiar with the details of the planned visit said agency personnel had been told they could visit the facility. The diplomat also said agency experts were also interested in two other locations with possible undeclared nuclear facilities.

The diplomat, who spoke on condition of anonymity because of the sensitivity of the matter, told The Associated Press that agency experts will be asking for information on the possible existence of two plutonium reprocessing facilities.

Syrian officials in Damascus did not immediately return phone calls seeking comment.

Syria would need plutonium reprocessing capabilities if it were — as the U.S. and Israel charge — trying to build produce material for the fissile core of nuclear weapons.

Another diplomat familiar with the IAEA trip plans said there were three other possible nuclear sites about which the IAEA was seeking information.

A third diplomat briefed on the IAEA plans for the trip said the agency had been informed about the possible additional sites by the U.S. That diplomat said the IAEA had not seen the U.S. intelligence itself.

The Syrians have already been informed about the additional suspicions, said the third diplomat.

## **US urges Syria to cooperate with IAEA**

36 minutes ago [Accessed 2008-06-02T15:55Z]

WASHINGTON (AFP) — The United States Monday urged Syria "to cooperate fully" with UN nuclear inspectors when they visit Damascus to probe allegations that it was secretly building a military nuclear reactor.

"As a member of the IAEA Board of Governors, we would of course encourage them not only to let the inspectors in but to cooperate fully with the inspectors," said State Department spokesman Sean McCormack.

The alleged nuclear site was bombed and destroyed in an Israeli air strike in September last year. Earlier this year US intelligence unveiled photographs taken inside the reactor said to show construction of the shield for the reactor core, and control rods and refueling ports.

The head of the UN's International Atomic Energy Agency (IAEA), Mohamed ElBaradei announced Monday that inspectors would visit Syria from June 22-24.

McCormack urged Syria to allow the UN team "to do their job in a way that they need to do it in order to produce an authoritative report."

"Let's hope that the Syrian efforts have not been too effective in covering up what it is that they were trying to cover up: their nuclear facility, the reactor underground," he added, asked about apparent Syrian efforts to clean up the site after the strike.

"But there were people surely who worked on that reactor, who had intimate knowledge and can provide the IAEA important information," he added.

"Let's hope that those people not only are made available to the IAEA but are entirely forthcoming to IAEA requests."

## Syria to allow UN probe of alleged nuclear site

By GEORGE JAHN

1 hour ago [Accessed 2008-06-02T22:10Z]

[EXCERPT]

VIENNA, Austria (AP) — Syria will allow in U.N. inspectors to probe allegations that a remote building destroyed in an Israeli airstrike was a nuclear reactor built secretly with North Korean help, the International Atomic Energy Agency said Monday.

The invitation signaled the start of an international fact check of U.S. and Israeli assertions that Damascus had tried to build a plutonium-producing facility under the radar of the international community. It could turn into a wider probe of possible secret Syrian nuclear sites.

Syria has denied wrongdoing, asserting the attack destroyed a non-nuclear military building. Syrian officials in Damascus did not immediately return phone calls seeking comment on Monday.

IAEA head Mohamed ElBaradei did not say whether inspectors would be granted access to the site during the planned June 22-24 visit, but a senior diplomat with knowledge of the planned inquiry said they would be able to visit the facility.

While steering clear of a judgment of what was hit in remarks to the agency's 35-nation board of governors, ElBaradei noted Damascus "has an obligation to report the planning and construction of any nuclear facility to the agency."

Diplomats told The Associated Press that during the visit, agency officials will also ask for information on the alleged existence of at least two and possible three undeclared such facilities. The diplomats, who demanded anonymity because of the sensitivity of their information, indicated they had their knowledge either from the U.S. or from IAEA officials.

One of them said the IAEA was following up on a U.S. intelligence-based tip of alleged unreported facilities to process any nuclear material. The diplomat emphasized the IAEA had not seen the intelligence itself.

Plutonium reprocessing capabilities would be required if the U.S. and Israel are correct in their claims that Syria was trying to build the reactor leveled in Syria's eastern desert in September to gain the material needed to create the fissile core of nuclear weapons.

But a nuclear expert outside the U.S. government indicated that at least one of the facilities was suspected of processing uranium — which, like plutonium can be used for fuel or reworked into fissile warhead material. He said the IAEA asked Syria several weeks ago for access to four sites — the bombed facility and three military sites that were identified by U.S. intelligence.

Two of the military sites are operational and one is under construction, the expert said, speaking on condition of anonymity because his information came from private discussions. U.S. intelligence has linked one of the three sites, at least loosely, to fabricating nuclear reactor fuel from uranium, he said.

Of the four diplomats who spoke to the AP, two said the Vienna-based IAEA was looking for two undeclared nuclear sites. The others spoke of three. The Syrians have been informed about the suspicions, said one of the diplomats.

Neither the U.S. nor Israel told the IAEA about the bombed site at Al Kibar until late April, about a year after they obtained what they considered decisive intelligence: dozens of photographs from a handheld camera of the inside and outside of the compound.

The U.S. says the Israelis flattened the alleged reactor as it was close to startup.

Since then, Syria had not reacted to repeated agency requests for a visit to check out the allegations. Satellite photos appear to show construction crews using the interval to erect another structure over the site — a move that heightened suspicions of a possible cover-up.

Pressure on Syria to respond positively mounted with the approach of the latest meeting of the IAEA board that opened Monday.

One of the diplomats, who is familiar with the communications between Syrian and agency officials, said that Damascus apparently waited until the weekend to issue an invitation.

In announcing the Syrian visit to the board, ElBaradei repeated his criticism of Israel and the U.S., taking Washington to task for waiting so long to brief him on its suspicions, and Jerusalem for its airstrike.

Diplomats have recently suggested that the Americans may have waited even longer, telling the AP that Washington may have had indications of Syrian plans more than five years ago. They demanded anonymity because their information was confidential.

"It is deeply regrettable that information concerning this installation was not provided to the agency in a timely manner and that force was resorted to unilaterally before the agency was given an opportunity to establish the facts," ElBaradei said.

His comments to the closed meeting were made available to reporters.

## **Syria says wants nuclear energy under Arab umbrella**

Tuesday, June 3, 2008; 7:57 AM

DUBAI (Reuters) - Syria is not seeking nuclear weapons but wants to have access to atomic energy for peaceful purposes through a collective Arab project, President Bashar al-Assad said in remarks published on Tuesday.

The Dubai-based Gulf News also quoted Assad as saying that the United States should have sought an investigation of a Syrian facility suspected of housing a secret nuclear plant before it was destroyed in an Israeli air raid last September.

"Acquiring nuclear energy for peaceful purposes is an international trend that all countries are rightfully pursuing. In Syria, we want this to be done within an Arab context, which was discussed and agreed during the Arab Summit in Riyadh," he said during a visit to the United Arab Emirates.

Gulf Arabs have announced their own plans to develop nuclear energy for civilian purposes following a 2007 Arab summit that called on Arabs to develop atomic power.

U.S. intelligence officials in April said they believed Syria had built the suspected reactor with the assistance of North Korea, which later also helped in cleaning up the site after the Israeli strike.

Syria has denied having any undeclared nuclear program. It has one old research reactor subject to monitoring by International Atomic Energy Agency (IAEA) inspectors.

"If anyone had a secret dossier on nuclear facilities in Syria with a Korean role, as they claim, then why did they wait for seven months before destroying a normal military facility by the Israeli raid?" Assad said. "Why did they not resort to the UN nuclear energy organization to carry out an inspection?"

The IAEA director, Mohamed ElBaradei, said on Monday a team from the U.N. nuclear watchdog will visit Syria June 22-24 to pursue an investigation into the suspected reactor site.

The United States urged Syria to cooperate with U.N. inspectors and to allow Syrian officials to be interviewed.

ElBaradei did not say whether Syria, which had not responded for months to IAEA requests for access, would allow U.N. investigators to examine the al-Kibar site in northeastern Syria.

But a senior diplomat close to the Vienna-based IAEA said a team led by its inspections director Olli Heinonen expected to go to al-Kabir and would seek information on, or access to, three other sites with a possible nuclear link.

He suggested the point in checking other sites was to look for indications of facilities to process nuclear material -- based on the unverified U.S. intelligence -- since there was no evidence of a plutonium fuel source next to the alleged reactor site.

Heinonen's delegation will bring equipment designed to detect nuclear activity, the senior diplomat added.

(Reporting by Inal Ersan in Damascus and Mark Heinrich in Vienna; Editing by Sami Aboudi)

<http://www.washingtonpost.com/wp-dyn/content/article/2008/06/02/AR2008060200531.html>

## **Syria to Meet With Weapons Inspectors About Site Bombed by Israel**

By Robin Wright

Washington Post Staff Writer

Tuesday, June 3, 2008; A10

Nine months after Israel bombed an alleged Syrian nuclear site, the government of President Bashar al-Assad has agreed to hold talks in Damascus with the U.N. nuclear watchdog agency about the remote desert compound, the International Atomic Energy Agency announced yesterday, ending a long deadlock over access to the location.

Syria will allow international access to the al-Kibar site on the Euphrates River, but has turned down the IAEA's request to go to at least three other facilities that U.S. intelligence says may be connected to a reactor and a clandestine nuclear weapons program, said Western diplomats familiar with the talks, which are scheduled for June 22-24. The other sites include possible reprocessing facilities, which are essential for production of fissile material.

"They will only go to the bombed site," said a diplomat close to the IAEA. "They did request to go to other places. It's the first visit. There will be other visits, to be sure, and you take one step at a time."

Syria's envoy to Washington criticized the Bush administration for allegations about additional sites.

"Why should they be going anywhere else? It's an endless story," said Ambassador Imad Moustapha. "Whenever Israel wants inspectors to go visit Syria, it only has to claim it's a nuclear site. Every analyst knows it's not a nuclear site. We're not going to become slaves to the whimsical desires of this administration and Israel. When the truth is known, this administration will be ashamed."

Diplomats in Vienna said the breakthrough appears in large part tied to the first photographic evidence of the alleged nuclear site, revealed in April during Bush administration briefings to the IAEA, Congress and the news media. "It was difficult for the IAEA to request access before it had been given any information, and only recently this information came out from the U.S.," said a diplomat in Vienna close to the IAEA. "The IAEA had earlier told Syria it would be in its interest to show this site, but it had no real grounds until recently."

IAEA chief Mohamed ElBaradei criticized the United States and Israel yesterday for a "deeply regrettable" delay in providing intelligence, and for Israel's use of force before the IAEA had an opportunity to "establish the facts."

Weapons proliferation experts question whether the brief visit will be sufficient to address the volume of issues surrounding the alleged site, which Israel attacked in a late-night airstrike on Sept. 6 but still refuses to discuss publicly. Subsequent satellite images indicate that Syria leveled what was left on the site and rebuilt a new facility that it says is for military use.

The IAEA inspectors "probably won't get much done," said David Albright, president of the Institute for Science and International Security and a former U.N. weapons inspector.

"They'll want to use ground-penetrating radar to look for evidence of certain particles associated with

this kind of reactor," he said. "They'll look at water pipes from the river. But it's not something you do in a couple hours. They will have to work it out with Syria, because it's not like Iraq, where [U.N. inspectors] showed up and could demand to see things. Syria has to agree to it. It could be that they just look around and have talks about what happens next."

The Bush administration called on Damascus to allow the IAEA inspection team to have access to all sites and any people who may have worked on the reactor, which Washington says was not configured to provide electricity.

## **U.N. Nuclear Inspectors to Visit Syria**

By WILLIAM J. BROAD

Published: June 3, 2008

*[EXCERPTS]*

Syria will let nuclear inspectors visit the site of a suspected reactor that Israeli warplanes bombed last September, the International Atomic Energy Agency said Monday. The visit, to a desolate spot on the Euphrates River some 90 miles north of the Iraqi border, is to take place June 22 to 24.

*[deletia]*

The press secretary at the Syrian Embassy in Washington declined to comment specifically on the inspection visit, and other Syrian officials also did not comment. But Ahmed Salkini, the press secretary, said in a statement that Syria had always had a good working relationship with the atomic agency “and we intend to keep it that way.”

He added: “This fabricated story by the U.S. administration will deconstruct from within and without. We are working on different fronts, and with different parties, to ensure that this fabrication is exposed to the world, and this administration embarrassed, once again.”

In Vienna, a senior official close to the atomic agency, who spoke on the condition of anonymity under normal diplomatic rules, said Olli J. Heinonen, the head of the agency’s inspection arm, would lead a team to Syria. Three or four inspectors would be involved, the official said, and would bring equipment meant to check for nuclear activity.

Dr. ElBaradei, in a statement to his agency’s board of governors, noted that Syria “has an obligation to report the planning and construction of any nuclear facility to the agency.” He said the inquiry would proceed “to the extent possible at this stage” — a reference, it seemed, to possible challenges stemming from the site’s rehabilitation.

David Albright, president of the Institute for Science and International Security in Washington and a former United Nations weapons inspector, said three days at the site would be sufficient for only a preliminary appraisal by the atomic agency.

“They have to investigate the whole fuel cycle,” he said, a reference to everything from the mining of uranium, to the making of reactor fuel, to the extraction of plutonium from spent fuel that could be used to make an atom bomb. “It’s going to take months.”

At the Euphrates site, Mr. Albright said, the agency’s inspectors should look for evidence like special piping, old foundations and chemical traces of graphite, a basic reactor building material.

“If the Syrians think that a quick visit and some interviews” will clear up the nuclear suspicions, he said, “they’re sadly mistaken.”

The senior official in Vienna said the atomic agency’s inspectors were interested in two or three additional sites that American intelligence agencies had identified as suspicious, but suggested that this first visit would focus exclusively on the supposed reactor site.

The photographs released by the United States, taken inside the site before its destruction, clearly show what appear to be rows of nuclear control rods — one of many similarities to a reactor halfway around the globe where North Korea made fuel for its nuclear arms.

## **Nuclear proliferation talks with North Korea to continue, Gates says**

By Peter Spiegel

Los Angeles Times Staff Writer

8:19 AM PDT, **June 3, 2008**

*[EXCERPT]*

SEOUL — Defense Secretary Robert M. Gates said today that despite intelligence allegedly showing that North Korea aided Syria in developing a nuclear facility, the United States would continue six-party talks with the communist regime over its nuclear program.

Gates called North Korea a "serious adversary," but **he said he knew of no evidence that it was sharing nuclear capabilities with other countries besides Syria** and that the talks were the best way to confront the regime on proliferation issues.

"I think that we are dealing with the consequences of the proliferation effort we saw in Syria in the six-party talks, and I think that is the appropriate vehicle for that," Gates said.

*[deletia]*

[peter.spiegel@latimes.com](mailto:peter.spiegel@latimes.com)

## **Diplomats: 3 suspect Syrian nuke sites off limits**

By GEORGE JAHN

Associated Press Writer

Tuesday June 3 2008

VIENNA, Austria (AP) - Syria has told fellow Arab countries that it will not permit an International Atomic Energy Agency probe to extend beyond a site bombed by Israel, despite agency interest in three other suspect locations, diplomats told The Associated Press on Tuesday.

The agency's main focus during its planned June 22-24 visit to Syria is a building in the country's remote eastern desert that was destroyed by Israeli jets in September.

IAEA chief Mohamed ElBaradei announced Monday that Damascus has agreed to an agency check of U.S. assertions that target was a plutonium-producing reactor that was near completion, and thus at the stage where it could generate the fissile material for nuclear arms.

The U.N. agency is also interested in following up on information that Syria may have three other undeclared atomic facilities. Diplomats and a nuclear expert told the AP on Monday that at least one of the sites may have equipment that can reprocess nuclear material into the fissile core of warheads.

One of the diplomats said the IAEA was following up on a U.S. intelligence-based tip but emphasized the IAEA had not seen the intelligence itself. The nuclear expert said two of the military sites were operational and one was under construction. He and the diplomats asked for anonymity because their information was confidential.

On Tuesday, a senior diplomat familiar with the planned IAEA trip to Syria told the AP that expectations were Syria would gradually warm to the idea of giving agency experts access to those three sites, as well as the bombed Al Kibar facility.

But two other diplomats briefed on the Syrian stance said outside a meeting of the IAEA's 35-nation board that a senior official from Damascus had ruled that out during a meeting with chief delegates of the 10 Arab nations accredited to the IAEA.

The diplomats said Syrian atomic energy chief Ibrahim Othman told the Arab delegates his country could not open secret military sites to outside perusal as long as Syria and Israel remained technically in a state of war.

After fighting three wars and clashing in Lebanon, Israel and Syria are bitter enemies whose last round of peace talks collapsed eight years ago. Both countries recently confirmed that they are holding peace talks through Turkish mediators.

The diplomats also said Othman expressed fear that too much openness on Syria's part would lead to years of relentless international perusal of the kind Iran's nuclear program is now undergoing, despite Tehran's assertions its aims are purely peaceful.

After-hours calls to the Syrian Mission to the IAEA in Vienna for comment went unanswered.

Syrian President Bashar Assad denied once again that his country has a secret nuclear program in interviews appearing Tuesday in United Arab Emirates newspapers.

Neither the U.S. nor Israel told the IAEA about the bombed site until late April, about a year after they obtained what they considered decisive intelligence: dozens of photographs from a handheld camera of the inside and outside of the compound.

Since then, Syria had not reacted to repeated agency requests for a visit to check out the allegations.

Satellite photos appear to show construction crews using the interval to erect another structure over the site - a move that heightened suspicions of a possible cover-up.

Pressure on Syria to respond positively mounted with the approach of the latest meeting of the IAEA board that opened Monday.

In announcing the Syrian visit to the board, ElBaradei repeated his criticism of Israel and the U.S., taking Washington to task for waiting so long to brief him on its suspicions, and Jerusalem for the airstrike.

Israel has never officially confirmed September's air strike on the Al Kibar site, though it has not disputed the foreign reports, or U.S. government comments, on the incident.

## Syrian nuclear issue looms large at IAEA meet

19 hours ago [Accessed 2008-06-04T13:50Z]

[EXCERPT]

VIENNA (AFP) — The UN's atomic watchdog, already mired in a marathon investigation into Iran's nuclear programme, is set to embark on what could prove an equally contentious probe of allegations of a secret nuclear reactor in Syria.

International Atomic Energy Agency (IAEA) chief Mohamed ElBaradei announced Monday that a team of inspectors would travel to Syria later this month in the wake of US intelligence reports that a building bombed by Israel last September was a covert nuclear installation built for military purposes.

According to one western diplomat here, it is still too early to predict how the Syrian issue will pan out.

"We'll know a lot more come September, by which time the inspectors will have visited Syria," the diplomat said Tuesday, speaking on condition of anonymity.

Western diplomats say Syria has been stonewalling on the issue for months, so the announcement that Damascus has agreed to a visit from IAEA inspectors marks an important development.

The IAEA could not confirm that its team would be allowed to inspect the bombed building itself in al-Kabir -- a remote site in the Syrian desert -- but diplomats close to the Vienna-based watchdog said the agency had made access a pre-condition for the visit.

In April, the United States turned over intelligence alleging the building was an undeclared nuclear reactor, close to completion, but not yet supplied with the necessary nuclear material.

Damascus has dismissed the accusations as "ridiculous", and Syria's official press lashed out at Washington and Israel on Tuesday.

"The American and Israeli claims are false. Instead, Israel should be called on to submit its own nuclear installations to international inspection so at least we know how many nuclear weapons it possesses," Syria's official Ath-Thawra newspaper said in an editorial.

Israel is widely believed to be the only nuclear armed power in the Middle East but has a policy of neither confirming nor denying its arsenal and is not a signatory to the NPT.

ElBaradei said the IAEA was treating the information seriously and expected Syria's "full cooperation".

## **U.S. tells Syria not to restrict U.N. nuclear probe**

By Mark Heinrich

Reuters

Wednesday, June 4, 2008; 7:55 AM

VIENNA (Reuters) - The United States on Wednesday demanded Syria give free rein to U.N. nuclear investigators after diplomats said Damascus would bar access to some sites Washington believes are linked to a secret atomic reactor.

*[deletia]*

Informed diplomats said Syria would let inspectors examine the al-Kibar site in its northeast desert, but not go to three other locations believed to house facilities or equipment for producing plutonium from fuel from the reactor.

That prompted Gregory Schulte, U.S. ambassador to the IAEA, to demand that Syria not hinder agency investigators in any way.

"The United States welcomes the announcement that the IAEA will visit Syria and stands ready to support a rigorous IAEA investigation into Syria's clandestine nuclear activities," Schulte said in a statement sent to Reuters.

"It is imperative that Syria fully cooperate with the IAEA and in no way hinder the investigation either by further delaying an inspection or by refusing the IAEA unfettered access to any site requested by the IAEA," he said.

Syria, which has said the bombed site was a disused military building and that it has no clandestine nuclear program, has not confirmed publicly the IAEA visit.

### RESTRICTED VISIT

But a senior Syrian official told an Arab League meeting outside an IAEA governors' conference in Vienna on Tuesday that the IAEA trip would go ahead and inspectors would get access to the al-Kibar site, diplomats in the meeting said.

Syrian Atomic Energy Agency chief Ibrahim Othman told them, however, that Damascus would not permit checks of other sites Washington had urged inspectors to examine as possible places for processing nuclear material, diplomats said.

They said the position of Syria, which is in a state of war with Israel, was that the other sites were off-limits military installations essential to national security and irrelevant to the IAEA because they had no nuclear connection.

## **Diplomats: Syria won't let IAEA visit 3 suspected nuclear sites**

By The Associated Press

Last update - 12:59 04/06/2008

Syria has told fellow Arab countries that it will not permit an International Atomic Energy Agency probe to extend beyond a site bombed by Israel, despite agency interest in three other suspect locations, diplomats told The Associated Press Tuesday.

The agency's main focus on its planned June 22-24 visit to Syria is a building in the country's remote eastern desert that was destroyed in September by Israeli jets.

IAEA chief Mohamed ElBaradei announced Monday that Syria had agreed to an agency check of U.S. assertions that the target was a plutonium-producing reactor that was near completion, and thus at the stage where it could generate the fissile material for nuclear arms.

But the agency is also interested in following up on information that Syria may have three other undeclared atomic facilities. Diplomats and a nuclear expert told the AP Monday that at least one of the sites may have equipment that can reprocess nuclear material into the fissile core of warheads.

Gregory Schulte, U.S. ambassador to the IAEA, demanded Syria not hinder agency investigators in any way.

"The United States welcomes the announcement that the IAEA will visit Syria and stands ready to support a rigorous IAEA investigation into Syria's clandestine nuclear activities," Schulte said in a statement sent to Reuters.

"It is imperative that Syria fully cooperate with the IAEA and in no way hinder the investigation either by further delaying an inspection or by refusing the IAEA unfettered access to any site requested by the IAEA," he said.

One of the diplomats said the IAEA was following up on a U.S. intelligence-based tip but emphasized the agency had not seen the intelligence itself. The nuclear expert said two of the military sites were operational and one was under construction. He and the diplomats asked for anonymity because their information was confidential.

On Tuesday, a senior diplomat familiar with the planned IAEA Syria trip told the AP that expectations were that Syria would gradually warm to the idea of giving agency experts access to those three sites, as well as the bombed Al Kibar facility.

But two other diplomats briefed on the Syrian stance said outside a meeting of the IAEA's 35-nation board that a senior official from Damascus ruled that out during a meeting with chief delegates of the 10 Arab nations accredited to the IAEA.

The diplomats said Syrian atomic energy chief Ibrahim Othman told the Arab delegates that his country could not open secret military sites to outside perusal as long as Syria and Israel remained technically in a state of war.

After fighting three wars and clashing in Lebanon, Israel and Syria are bitter enemies whose last round of peace talks collapsed eight years ago. Both countries recently confirmed that they are holding peace talks through Turkish mediators.

As well, they said, Othman expressed fear that too much openness on Syria's part would encourage the U.S. to push for years of relentless international scrutiny of the kind Iran's nuclear program is now undergoing, despite Tehran's assertions its aims are purely peaceful.

After-hours calls to the Syrian Mission to the IAEA in Vienna for comment went unanswered.

Neither the U.S. nor Israel told the IAEA about the bombed site until late April, about a year after they obtained what they considered decisive intelligence: dozens of photographs from a handheld camera of the inside and outside of the compound.

Since then, Syria had not reacted to repeated agency requests for a visit to check out the allegations. Satellite photos appear to show construction crews using the interval to erect another structure over the site - a move that heightened suspicions of a possible cover-up.

Pressure on Syria to respond positively mounted with the approach of the latest meeting of the IAEA board that opened Monday.

In announcing the Syrian visit to the board, ElBaradei repeated his criticism of Israel and the U.S., taking Washington to task for waiting so long to brief him on its suspicions, and Jerusalem for its airstrike.

Diplomats have recently suggested that the Americans may have waited even longer, telling the AP that Washington may have had indications of Syrian plans more than five years ago. They demanded anonymity because their information was confidential.

The invitation signaled the start of an international fact check of U.S. and Israeli assertions that Damascus had tried to build a plutonium-producing facility under the radar of the international community.

Syrian President Bashar Assad denied once again that his country has a secret nuclear program in interviews appearing Tuesday in United Arab Emirates newspapers.

Israel has never officially confirmed September's air strike on the Al Kibar site, though it has not disputed the foreign reports, or U.S. government comments, on the incident.

## **IAEA debates Iran nuclear dossier**

1 hour ago [Accessed 2008-06-04T15:45Z]

*[EXCERPTS]*

VIENNA (AFP) — European countries urged Iran Wednesday to furnish all outstanding information on its disputed nuclear programme to the UN atomic watchdog to end a long-running impasse.

*[deletia]*

While the debate about Iran has dominated the board meeting this week, another equally contentious issue has also been looming large -- allegations that Syria had built a clandestine nuclear reactor until it was bombed by Israeli airplanes last September.

IAEA chief ElBaradei announced on Monday that a team of UN inspectors will travel to Syria June 22-24.

The US ambassador to the IAEA, Gregory Schulte, said it was "imperative that Syria fully cooperate with the IAEA and in no way hinder the investigation either by further delaying an inspection or by refusing the IAEA unfettered access to any site requested by the IAEA."

A diplomat, speaking on condition of anonymity, told AFP that Syria had informed other Arab League countries on the sidelines of the IAEA meeting that Damascus had agreed to let the experts inspect the bombed building itself in Al-Kabir -- a remote site in the Syrian desert.

But no other sites had been specified, the diplomat said, despite US media reports claiming the IAEA was also keen to visit two or three other suspect locations.

*[deletia]*

## Syria Addresses IAEA Board On Nuclear Allegations

By: iStockAnalyst Thursday, June 05, 2008 9:02 AM

VIENNA (AFP)--Syria addressed the board of the U.N.'s atomic watchdog at a meeting here Thursday, amid allegations that Damascus had been building a clandestine nuclear facility until the building was bombed by Israeli airplanes last September.

The contents of the Syrian delegation's speech to the closed-door session of International Atomic Energy Agency's 35-member board wasn't made available to the media.

But the allegations were the final item of the agenda on the last day of the four-day meeting, the IAEA confirmed.

A diplomat told AFP that Syria had informed other Arab League countries on the sidelines of the board meeting that Damascus had indeed agreed to let the experts inspect the remote Al-Kibar site in the Syrian desert.

But no other locations had been specified, the diplomat said.

The Syrian delegation told the entire IAEA board the same thing, another diplomat who attended the meeting Thursday, said.

"He basically said that there are no other sites related to this military installation that was bombed," the diplomat said.

The watchdog already announced earlier this week that it would send a team of experts to Damascus later this month to investigate allegations that a building at Al-Kibar had been a covert nuclear reactor built with North Korea's help.

The reactor at Al-Kibar was allegedly close to becoming operational, but was destroyed in the Israeli air attack.

The IAEA has refused to divulge any information about the trip, aside from the date, June 22-24.

U.S. media reports have said Damascus would only allow inspectors to visit the remote site in the Syrian desert at Al-Kibar, and not two or three other suspect sites that the IAEA was interested in.

In April, the U.S. turned over intelligence alleging the building at Al-Kibar was an undeclared nuclear reactor, close to completion, but not yet supplied with the necessary nuclear material.

Damascus has dismissed the accusations as "ridiculous".

However, it wiped the destroyed site clean of rubble late last year and erected a new building where the destroyed one had stood, making any possible investigation by the IAEA more difficult.

The U.S. ambassador to the IAEA, Gregory Schulte, told the IAEA board on Thursday that "Syria's obfuscation and concealment efforts raise many troubling questions."

The U.S. "calls on Syria to cooperate with the IAEA's investigation and to provide assurances there are no other undeclared nuclear activities," Schulte said, according to a copy of his speech obtained by AFP.

"We expect that Syria will cooperate proactively during the agency's visit later this month, providing access to individuals, documents and locations relevant to the IAEA inspection," he said.

The Slovenian representative to the IAEA, Bojan Bertonec, whose country holds the E.U. presidency, said the E.U. was "deeply concerned by the information pointing to a possible undeclared nuclear facility in Syria."

"The E.U. calls on Syria to cooperate fully with the agency, provide the necessary information and give all the access requested by the IAEA," Bertonec said.

The Syrian issue is likely to be a separate full item at the IAEA's next board meeting in September.

## Syria tells IAEA it will comply with reactor probe

By Mark Heinrich

Thu Jun 5, 2008 2:47pm BST

VIENNA, June 5 (Reuters) - Syria told U.N. nuclear watchdog governors on Thursday it would cooperate with an inquiry into U.S. intelligence alleging it secretly built an atomic reactor with North Korean help, diplomats said.

The United States and Europe called on Syria to let U.N. investigators go wherever and check whatever they wanted after Damascus signalled it would, however, bar access to other sites Washington believes could have been nuclear-related.

It was the first exchange on the Syrian nuclear issue by the governing board of the International Atomic Energy Agency, ahead of a IAEA inspector mission to Syria from June 22 to 24.

Damascus has denied any clandestine nuclear activity. The United States says the reactor was designed to yield plutonium for bombs.

Syria, a U.S. adversary and ally of Iran whose secretive uranium enrichment programme has been under IAEA investigation since 2003, has made no public comment on the inspector mission but confirmed its acquiescence to the closed governors' meeting.

Ibrahim Othman, Syria's atomic energy agency director, said inspectors could visit the remote desert site where Washington says the reactor was close to completion before it was destroyed in an Israeli air raid in September.

"He said Syria had displayed transparency by agreeing to let inspectors visit al-Kibar (bombed site) and had raised no obstacles so far," one diplomat there told Reuters.

"He said they would leave it up to agency experts to discover the truth, namely that the United States fabricated this evidence and such claims, if pressed, would endanger peace and security in the Middle East," he said.

"The gist from (Othman) was that Syria would cooperate with the IAEA," said a diplomat close to the agency.

Syria has said Israel's target was a disused military building. Nuclear analysts say satellite imagery since the bombing show the site was bulldozed and swept clean, possibly to purge any traces of nuclear activity.

### RESTRICTIONS ON INSPECTOR MOVEMENTS

Diplomats said earlier that Syria had rejected IAEA interest in three other locations Washington believes harboured facilities for producing plutonium from fuel generated by the reactor.

They said the stance of Syria, which is in a technical state of war with Israel, was that the other sites were military installations crucial to national security and off limits to the the IAEA because they had no nuclear connection.

That spurred the United States and European allies to demand that Syria not handicap the agency investigation in any way.

"The EU is deeply concerned by information pointing to a possible undeclared nuclear facility in Syria," the European Union said in a speech delivered by chairman Slovenia.

"We call on Syria to cooperate fully..., provide the necessary information and give all the access requested."

Summarising Washington's suspicions, U.S. Ambassador Gregory Schulte accused Syria of camouflaging the reactor for years and "going to great lengths" after the bombing to remove debris, usually at night "under the cover of tarpaulins".

"Syria's obfuscations and concealment efforts raise many troubling questions," he said.

"If it were intended for a civil nuclear energy programme, why not declare the reactor to the IAEA... as Syria was obligated to do? What does Syria have to hide?"

Schulte called for "pro-active" Syrian cooperation with the investigation and said the IAEA governors expected a report on findings before their next regular meeting in September.

A Western security source said Syria was "very afraid of intrusive inspections" because this could expose vestiges of nuclear work and therefore was likely to prevent inspectors from performing certain environmental tests at al-Kibar.

"It is clear we are heading towards a long stonewalling process, as in Iran," he told Reuters.

U.S. intelligence given to the IAEA in April included before-and-after aerial photographs of the alleged reactor and detailed interior images of what it said were key components.

Syria has one old research reactor under IAEA monitoring. (Editing by Robert Woodward)

## **A THREAT TO GLOBAL PEACE**

UN's ElBaradei Speaks of 'Historic Turning Point' in Nuclear Policies

06/07/2008

Mohamed ElBaradei, the United Nations' chief nuclear inspector, believes there is a growing threat to global peace through the build-up of nuclear arms and the increasing penchant of countries to bomb suspected nuclear facilities. "With unilateral military actions, countries are undermining international agreements, and we are at a historic turning point," ElBaradei told SPIEGEL, referring to the recent Israel bombardment of Syria's Al Kibar complex in September and the threat made by Israeli Deputy Prime Minister Shaul Mofaz to attack Iran if the country "continues with its program to develop a nuclear bomb."

Nobel Peace Prize winner Elbaradei also attacks Tehran's leadership in the interview. "The readiness on Iran's side to cooperate leaves a lot to be desired," he said. "We have pressing questions." Iran's leadership, he said, is sending "a message to the entire world: We can build a bomb in relatively short time." But the general director of the International Atomic Energy Agency also said he expected "absolute transparency" from Syria. During in inspection trip from June 22-24, he said an IAEA delegation would demand visits to a number of locations that may have delivered components to the destroyed facility.

The full interview will be published on SPIEGEL ONLINE on Tuesday [2008-06-10].

## Late U.S. Tipoff Hurts U.N. Syria Probe: ElBaradei

By REUTERS

June 9, 2008

Filed at 8:16 a.m. ET

*[EXCERPT]*

BERLIN (Reuters) - U.N. inspectors set to examine a Syrian site for signs of a secret nuclear reactor project may find little in part because of tardy intelligence-sharing by Washington, their chief said in remarks published on Monday.

But Mohamed ElBaradei, director of the International Atomic Energy Agency, said he still expected "absolute transparency" from Syria and the IAEA would insist on access to other sites which might be linked to the alleged reactor.

The IAEA began an investigation after receiving U.S. intelligence material in April, seven months after the purported reactor was destroyed in an Israeli air strike and seven years after Washington said the project began.

Syria denies the allegations. Satellite pictures taken since the bombing show the site was bulldozed and swept clean in a possible cover-up, according to nuclear analysts. Damascus has also rebuffed IAEA requests for wider access, diplomats say.

"We will do whatever is in our power to clarify (what the Syrians did)," ElBaradei told Germany's Der Spiegel magazine, referring to the June 22-24 investigative mission to be led by his deputy in charge of nuclear safeguards.

"I take these accusations very seriously. I demanded that our inspectors be able to establish a picture on the spot ... But it is questionable whether we will still find anything today, assuming something was ever there," he said.

"UNACCEPTABLE"

ElBaradei said no one had passed on suspicious information to the IAEA until well after the Israeli bombing "even though, as we now know, there was some already a year beforehand.

"Pictures of the plant and its destruction were first made available to us at the same time as to the U.S. Congress. That is unacceptable. I protested over this in the sharpest way."

Still, he said, "I expect absolute transparency from Damascus, also when it comes to other places where its components could have been delivered. If concerns remain, we will note these in our report."

Analysts say Washington chose not to release intelligence earlier because of the risk this might prompt Syria to retaliate against Israel, igniting a new Middle East war.

Damascus says Israel's target was a disused military building, whereas the United States says it was a camouflaged reactor designed to yield plutonium for atomic bombs.

## **Conference on Global Perspectives of the Proliferation Landscape: An Assessment of Tools and Policy Problems**

Patricia A. McNerney, Principal Deputy Assistant Secretary, International Security and Nonproliferation

Remarks at the Naval Postgraduate School

Monterey, California

June 10, 2008

*[EXCERPT]*

Unfortunately, though, more states are pursuing the capacity to develop and deploy the full range of weapons of mass destruction. We have seen North Korea conduct a nuclear weapons test and sell ballistic missiles to whomever will pay. We have seen Iran work to develop the capability to enrich uranium even as it develops advanced ballistic missiles and engaged in nuclear weapons development activities. We have seen Syria come close to completing a nuclear reactor that could have produced plutonium for nuclear weapons, and serve as the transfer point for arming Hezbollah with rockets used to attack Israel and destabilize Lebanon.

## **INTERVIEW WITH IAEA BOSS MOHAMED ELBARADEI**

'If We Fail, Humanity's Survival Will Be on the Line'

Interview conducted by Georg Mascolo and Erich Follath.

06/11/2008 04:11 PM

*[Sourcebook note: The interview was apparently conducted on or about 2008-06-06]*

*[EXCERPT]*

IAEA Director General Mohamed ElBaradei talks to SPIEGEL about Israel's propensity for unilateral action against countries like Syria, the US's tendency to keep the IAEA in the dark and the threat of nuclear terrorism.

SPIEGEL: Mr. ElBaradei, last September Israeli bombers destroyed a Syrian compound in which plutonium was allegedly being produced for nuclear weapons. Now we could even see an attack on Iranian nuclear facilities. Is this a trend in the Middle East -- attack instead of negotiate?

ElBaradei: I hope not. Of course, the use of force can only be legitimized by the United Nations. Unilateral military actions undermine the international system of agreements. We are standing at a historic turning point.

SPIEGEL: What did you find out about the strike in Syria?

ElBaradei: Too little, and it came too late. We learned of the Israeli operation from the television news. No one shared information or any suspicions with us, suspicions that, as I now know, already existed a year before the attack. The images of the factory and its destruction were also not made available to us until recently, concurrently with their being provided to the US Congress. This is unacceptable, and I protested sharply against it. The Syrians deny that it was a nuclear facility.

SPIEGEL: You believe the government in Damascus, which is closely aligned militarily with Pyongyang? You don't see the similarities to the design of the Yongbyon reactor in North Korea?

ElBaradei: I take the accusations very seriously. If there had been anything nuclear there, the Syrians would have been obliged to inform us, of course. I asked for an explanation and demanded that our inspectors be allowed to gain their own impressions on site. Damascus has now agreed to that. The inspection trip will take place from June 22-24, and will be led by my deputy, Olli Heinonen. But it is doubtful that we will find anything there now -- assuming there was anything there in the first place.

SPIEGEL: The Syrians supposedly covered up the suspicious al-Kibar complex with concrete and cleaned it up. Under these circumstances, can you even absolve Damascus of all guilt?

ElBaradei: We will do everything within our power to clear things up...

SPIEGEL: ...take soil samples, perform groundwater analyses...

ElBaradei: ...whatever our experts recommend. I expect complete transparency from Damascus, and that also applies to places other than the destroyed complex, to which these components could have been taken. If we still have concerns, we will document them in our report.

SPIEGEL: Israel -- itself a nuclear power that refuses to submit to inspections -- has taken matters into its own hands in the case of Syria. And in the United States, the UN inspectors aren't exactly highly regarded. During his visit to Washington last week, Israel's Prime Minister Ehud Olmert threatened to use "all possible means" to prevent Iran from building nuclear weapons. Has diplomacy already failed?

ElBaradei: Of course, we could toss out everything in the way of collective security systems that we have built up since World War II and say: Let's go back to the Middle Ages and pull out our clubs. This is a decision that must depend upon the international community of nations. I am horrified by how little protest the military action in Syria has triggered.

SPIEGEL: Not even in the Arab world.

ElBaradei: It's a deafening silence. I especially regret having to say this, but the Arab world is now in a more disastrous state than ever before. There is no longer any solidarity, a common goal or regional cooperation -- just mistrust everywhere. Incompetently and corruptly governed, many countries in the Middle East are lurching from one crisis to the next, creating breeding grounds for extremism and terrorism. But the real challenge is to wipe out the roots of violence -- lack of opportunity and bitter poverty.

## **'India can bring balance to Middle East peace process'**

Siddharth Varadaraja

Thursday, Jun 12, 2008

*[EXCERPTS]*

At 42, President Bashar al-Assad of Syria is the youngest head of state in West Asia and also one of its most influential. On the eve of his visit to India, he spoke exclusively to The Hindu about Syria's relations with Israel and Lebanon, U.S. allegations about a clandestine nuclear programme and his hopes of India playing a more important role in bringing peace to the region.

*[The Hindu]* What is the Israeli compulsion to talk peace with you at this time?

*[al Assad]* The Israelis used to think that with time they are going to be stronger and any opposition to their policies will be weaker, but actually what happened was the opposite. Now, the Israelis learned that without peace they cannot live safely and Israel cannot be safe. I think this is true especially after the war on Lebanon and because of the result of that war inside the Israeli society; this is the main incentive for the Israelis to move toward peace.

*[The Hindu]* You are talking peace barely months after Israel bombed your territory at al-Kibar in September, claiming they targeted a secret nuclear facility. Did you raise this with them?

*[al Assad]* No. Of course, we have not met with them because it is an indirect negotiation. But the question is why did they announce [the bombing] seven months after the [event]? Why did they not announce it at that time in order to send a delegation from the International Atomic Energy Agency (IAEA) to see what is happening? Let me put it this way: they said there was a [nuclear] facility that they bombed and now they have the evidence. How could they not have had this evidence seven months ago? Why do they have the evidence today? Because after seven months you can say that Syria built that facility and now it is demolished and they have rebuilt it in a different way. While if they gave this alleged evidence at that time, their story would not have been proved genuine or credible.

*[The Hindu]* So what was the nature of that facility?

*[al Assad]* It is a military facility and it is not usual to announce what the content of a military facility is. But it is not nuclear. How could it be nuclear? Where is the radiation? Where is the protection for this facility? How can you build such a facility under the daily watch of satellites?

*[The Hindu]* Why did the Israelis bomb it?

*[al Assad]* Because they were suspicious about its content and could not know. I cannot answer on their behalf; you should ask them. I think they had wrong information; they were trapped. How could they explain to the Israelis and the rest of the world why they bombed it? This is where they created a story of a nuclear facility.

*[The Hindu]* So the photographic and video evidence indicating this was a plutonium-producing reactor made with North Korean help is fabricated?

**[al Assad]** 100 per cent fabricated.

**[The Hindu]** One of the reasons the world got suspicious is that Syria quickly cleaned up the site. What was the need for that? You could have been proactive even in September to invite the international community to see what the Israelis did.

**[al Assad]** They did not say in the beginning that it was a nuclear site. Second, it was attacked; you don't keep [a destroyed facility] as it is. So a few days after the attack, we started rebuilding the site. It is normal to remove the debris.

**[The Hindu]** You've invited the IAEA to visit the site. The U.S. has said al-Kibar is not enough and the inspectors should be allowed to visit other sites.

**[al Assad]** Syria has an agreement with the IAEA and every procedure implemented here should be according to this treaty. You cannot just come and visit any place according to intelligence information because everyday they may come to the IAEA and say, 'We have this information'. So, it is a never-ending problem... Actually, the Americans did not bring any convincing evidence [to the IAEA] about [the bombed facility] being a suspicious place but we said we have an interest in bringing the Agency to this site. Talking about other sites is not within the purview of the agreement. We have to be very precise; it is not a political but technical issue. We have a Nuclear Commission that has an agreement with [the IAEA] and they work within this agreement.

## Interview with President of Syria - Full Text

Complete transcript of interview with President Bashar al-Assad of Syria to Siddharth Varadarajan of The Hindu at the Presidential Office, Damascus, June 8, 2008.

[EXCERPT]

Q: What do you think is the Israeli compulsion to talk peace with you at this time? It seems that the Americans themselves are not very happy with what Israel is doing. What do you think is motivating Israel to take this step right now?

A: The Israelis used to think that with time they are going to be stronger and any opposition to their policies will be weaker, but actually what happened was the opposite. Now, the Israelis learned that without peace they cannot live safely and Israel cannot be safe. I think this is true especially after the war on Lebanon and because of the result of that war inside the Israeli society; this is the main incentive for the Israelis to move toward peace. This is our analysis.

Q: As an outside observer, it seems strange that you can be talking peace with Israel a few months after Israel bombed your territory at al-Kibar, claiming they targeted a secret nuclear facility. Is this one of the issues you raised with them – that how could they have bombed your territory?

A: No we did not. Of course, we have not met with them because it is an indirect negotiation. But, the question here is why did they announce it seven months after the bombing? Why did they not announce it at that time in order to send a delegation from the IAEA to see what is happening? Let us put it this way: they said there was a facility and they bombed this facility and now they have the evidence. How could we not have this evidence seven months ago? Why do they have the evidence today? Because after seven months you could say that Syria built that facility and now it is demolished and they rebuild it in a different way; this is their excuse. While if they gave this alleged evidence at that time, their story would not have been proved genuine or credible. So, this is their ploy, and we did not raise this issue, and we said that time that this is an evidence for us that the Israelis are not serious about peace. That is why we talked about indirect not direct negotiations. It is like probing the intention of the Israeli side; are they serious in giving back the Golan Heights to Syria or is it just a tactic or maneuver for internal Israeli politics. That is why we did not raise the issue and we did not have the chance anyway to meet with them. But we raised it with the IAEA.

Q: So what was the nature of that facility?

A: It is a military facility, and I announced this, but what the content of that facility is, you do not usually announce a military content. But it is not nuclear; how could it be nuclear, where are the radiations, where are the protections of this facility? How can you build such a facility under the daily watch of satellites? We know that. So it is not nuclear but completely a different issue.

Q: Why did the Israelis bomb it?

A: I think because they did not know about it; they were suspicious about its content and they could not know. I cannot answer on their behalf; you should ask them. I think they had wrong information; they were entrapped. How they should explain to the Israelis and the rest of the world why they bombed it?

This is where they created this story of a nuclear facility. At the beginning they said that this is a site where they can bring armaments to Hizbollah, but how? It is in the middle of Syria and you have Turkey in the north and Iraq in the east. How can you bring the armaments to Hizbollah? From Turkey, or from Iraq where the Americans operate? This is not logical. Then they said that this is where the Turks used this site, but later; I think a month ago, they said it is nuclear. So, it was clear that they did not have any evidence that it is a nuclear site; they created this evidence through manipulation on the computer that this is a copy of the North Korean plants.

Q: So, this so-called photographic evidence and video evidence which indicated that this was a plutonium producing plant made with North Korean help – all of this is fabricated?

A: Yes it was fabricated 100%. Of course, they talked about photos of Koreans in Syria, but we have normal relations with North Korea; we receive them formally and publicly, and I receive them and other levels in the government. I received North Korean officials, scientists and whatever. So, this is not true.

Q: One of the reasons why the world got a little bit suspicious about this issue is that the Syrians moved quickly to clean up the site. What was the need for that? I mean you should have actually been proactive even in September last year to invite the international community to see the Israeli aggression, for example. Why did you keep quiet for so long and why was this site cleaned up?

A: First of all, they did not say at the beginning it was a nuclear site and there were few weeks. Second, it was attacked by missiles; you do not keep it as it is, so we rebuilt it. We did that right away; after the attack by few days, we started rebuilding the site. So, it is something normal to remove the debris and have another site.

Q: So the facility was rebuilt basically? What about the debris?

A: May be in a different or the same site; it is a military issue and we do not usually announce what it is. May be it is different building for another purpose.

Q: I know you invited IAEA to visit the site. Now the US has said that that site is not enough and they should be allowed to visit other sites. Why would the Americans make that demand and what is your response to that?

A: We have an agreement between Syria and the Agency and every procedure implemented in Syria should be according to this treaty. According to this treaty, you cannot just come and visit any place according to intelligence information; you cannot. Because every day they may come to the Agency and say we have this information. So, it is a never-ending problem. So, we usually come with certain evidence to see the suspicious place. Actually, they did not come because it is a suspicious place; they did not bring any convincing evidence, I mean the Americans, but we said that we have an interest to bring the Agency to come to this site, but talking about other sites is not within the purview of the agreement. So, we have to be very precise; it is not political but technical issue. And we have a nuclear board or commission that has an agreement with them and they work within this agreement.

Q: So, do you think that the US is trying to create an atmosphere of suspicion against Syria?

A: Yes, because this is the image of this administration; everybody in the world still remembers what happened in Iraq when they had all that evidence, but then it was proved that everything was fabricated; even Colin Powell confessed in an interview that he was not truthful, and we all know the same, and most of the countries know about the problem between Syria and the US, and they always try to find traps for Syria. This is reality.

Q: One of the speculations is that this Israeli attack was linked to judging their own preparedness for an attack on Iran? Have you heard this story?

A: Yes, but nobody can tell what is the real intention of that attack.

## McCormack vs. Hayes, and more

06/23/2008, Volume 013, Issue 39 [Accessed 2008-06-15T16:00Z]

### RICE'S LEADERSHIP

[EXCERPT]

I *[Sean McCormack]* WANT TO CORRECT several major factual errors in Stephen F. Hayes's June 2 piece on Secretary Rice's role in formulating and executing foreign policy in President Bush's second term ("In the Driver's Seat"). I'll limit my comments to areas where Hayes's facts about key moments strayed from the record; I'll leave differences over historical interpretation and philosophy for another day.

[deletia]

On the North Korean-Syrian nuclear reactor, Hayes argues that we stayed silent to protect the Six Party Talks. In fact, we stayed silent in order to prevent a regional war in the Middle East. Far from wanting to conceal from the world information about the facility, Secretary Rice favored public disclosure of information concerning the reactor prior to its destruction. Immediately after the reactor was destroyed, Secretary Rice was part of a consensus among the National Security Council principals that the U.S. government not discuss in public what we knew about the reactor for fear of sparking a regional conflict in the Middle East. It was only after all agreed that public discussion of what we knew would not begin a war in the Middle East that the president gave the green light to public discussion of the matter.

[deletia]

SEAN MCCORMACK  
Assistant Secretary for Public Affairs  
U.S. Department of State  
Washington, D.C.

**STEPHEN F. HAYES RESPONDS:** Sean McCormack complains about "several major factual errors" and cites three. None of his examples withstands scrutiny. Let's take them in order.

[EXCERPT]

On the Syrian-Korean nuclear reactor, officials inside the administration and on Capitol Hill understood that the cause of the delay was the Six Party Talks. Not only did Bush administration officials tell me that Secretary Rice and Chris Hill wanted to keep the information secret to save the Six Party Talks, two of the congressional leaders who had been briefed on the issue made the same claim in public. In a May 1 op-ed in the Washington Times, Ileana Ros-Lehtinen and Peter Hoekstra questioned the national security rationale that they were given by the Bush administration, writing that the delay was "unfortunately influenced by the desire of some within the administration to create a 'legacy' of denuclearizing North Korea before the end of President Bush's term."

## **U.S. Policy Toward Asia**

Secretary Condoleezza Rice

Address at the Heritage Foundation

Washington, DC

June 18, 2008

*[EXCERPTS]*

Verifying an agreement with North Korea will be a serious challenge. This is the most secretive and opaque regime in the entire world. Consequently, our intelligence is far from perfect or complete. We therefore need to be very clear about what we know and what we do not know about North Korea's programs and activities and, as importantly, we need to know what we must still learn. We know, for instance, that North Korea has had an active plutonium program for many years. We know it has produced enough fissile material for several nuclear devices, one of which has already been tested. We know that North Korea has proliferated nuclear technology to Syria. But we do not know the full extent of North Korea's proliferation activities. We also know that North Korea has pursued a uranium enrichment program, but we do not know its full extent or exactly what this effort has yielded.

*[deletia]*

QUESTION: Thank you, Madame Secretary. Is there an agreement between North Korea and the other five parties on what is entailed in a complete and correct declaration, for example, number of weapons, UEP proliferation; and secondly, is there an agreement on what phase three entails, whether the dismantlement of the nuclear weapons is included in that? Recent comments by a former U.S. official who returned from North Korea suggest North Korea may have a different understanding of phase three. Thank you.

SECRETARY RICE: Thank you. Well, let me get first to phase three. North Korea has an understanding that it signed on to that the abandonment of all of its weapons and weapons programs is the endpoint for this agreement. Not the abandonment of some of them, not showing us what they've done in the past, but the abandonment, dismantlement. That is very clear.

Now, I've read and I've heard people say, well, they don't have any intention to do that. Well, if they have no intention to do that, then we will not move forward in phase three. That's why this is in phases.

Now, the parties have only begun to discuss how phase three will unfold, what the obligations of the five will be to North Korea if it indeed begins to and then is prepared to complete the verifiable elimination of its nuclear programs. But those are discussions that will begin very shortly.

As to phase two, which is to end with the declaration and disablement, the parties are in agreement that the declaration must address the North Korean programs and facilities and that it must provide the means to know whether that declaration is complete and accurate. Obviously, we're not going to take the word of the North Koreans that what they say on the piece of paper is a full representation of what they have. We will make a judgment as to whether or not we think, in accordance with what we know, it is, but we have to go and we have to verify...

## **ElBaradei doubts Syrians had nukes**

**Published: 06/18/2008**

The U.N. nuclear watchdog voiced doubt as to whether Syria could have operated a secret atomic reactor.

"We have no evidence that Syria has the human resources that would allow it to carry out a large nuclear program. We do not see Syria having nuclear fuel," International Atomic Energy Agency chief Mohamad ElBaradei told Al-Arabiya television Tuesday [2008-06-17].

The remarks came as the IAEA prepares to inspect next week a site in northern Syria which was bombed by Israeli warplanes in September. The Bush administration has said the target was a North Korean-designed reactor, something denied by Damascus. Israel has not given details on the raid.

The Egyptian-born ElBaradei, who has criticized Israel for the attack and the United States for not being more forthcoming with its intelligence assessments, said the only evidence the IAEA currently has indicating a possible secret nuclear program in Syria is satellite photographs of the bombed site.

Syrian bulldozers ploughed up the area soon after the sortie in an apparent cover-up. Damascus has refused the IAEA permission to inspect three other suspect Syrian sites.

## Une filière nucléaire secrète nord-coréenne en Syrie

VIENNE, ENVOYÉE SPÉCIALE

Natalie Nougayrède

LE MONDE | 18.06.08 | 11h41 • Mis à jour le 18.06.08 | 12h37

Que se tramait-il à Al-Kibar? Détruit le 6 septembre 2007 par un raid de l'aviation israélienne, ce site au milieu du désert, dans l'est de la Syrie, doit être pour la première fois visité, du 22 au 24 juin, par des inspecteurs de l'Agence internationale de l'énergie atomique (AIEA). Ayant la forme d'un bâtiment cubique de 21 mètres de haut, il abritait, selon une présentation faite le 24 avril par les agences de renseignement américaines, un réacteur nucléaire clandestin construit selon le modèle du réacteur nord-coréen de Yongbyon.

D'après nos informations, l'AIEA détient des données, provenant de plusieurs sources non américaines, qui appuient cette analyse.

Certaines de ces informations sont des photographies satellite fournies par différents pays. D'autres sont tirées des investigations que l'AIEA a effectuées par le passé sur les activités nucléaires de la Corée du Nord. D'autres encore viennent des recherches menées par l'AIEA sur les réseaux clandestins d'acquisition d'équipements nucléaires dans le monde.

Après la Libye et l'Iran, la Syrie, dont le président Bachar Al-Assad est invité à Paris en juillet, est le troisième cas de prolifération au Proche et au Moyen-Orient.

Le dossier Al-Kibar – qui s'annonce comme l'une des grandes énigmes nucléaires de ces dernières années – survient à un moment particulièrement délicat dans les enjeux diplomatiques au Proche-Orient. La Syrie est engagée dans des pourparlers indirects avec Israël. Son président, Bachar Al-Assad, a récemment envoyé des signaux aux Occidentaux suggérant qu'il cherche à rompre son isolement international.

Le cas syrien a une particularité : alors que la Libye et l'Iran s'étaient adressés, pour leurs fournitures secrètes en technologie nucléaire, au réseau clandestin du Pakistanais Abdul Qadeer (A.Q.) Khan (le "père" de la bombe atomique pakistanaise), c'est à la Corée du Nord que la Syrie a fait appel pour se doter clandestinement de ses équipements. L'enquête de l'AIEA sur la Syrie pose ainsi la question de l'existence d'un "marché noir" nord-coréen du nucléaire. Le périmètre exact de la coopération nord-coréenne avec la Syrie et la possibilité que d'autres pays aient pu bénéficier de ce genre d'assistance fournie par Pyongyang sont au centre des inquiétudes.

Deux questions centrales vont occuper les inspecteurs de l'AIEA : d'où le combustible pour le réacteur d'Al-Kibar était-il censé venir? Et y a-t-il en Syrie une installation secrète de retraitement du combustible usé? Le retraitement est une technologie qui permet de produire du plutonium utilisable dans la fabrication d'une arme nucléaire. C'est par cette méthode que les Nord-Coréens se sont dotés de l'arme atomique qu'ils ont testée en 2006.

L'enquête sera d'autant plus compliquée que les puissantes bombes israéliennes qui se sont abattues sur le site d'Al-Kibar ont laissé une montagne de débris que les Syriens ont, par la suite, partiellement évacués. Un nouveau bâtiment a été construit à cet endroit, rendant difficile tout travail d'excavation. L'AIEA pourrait, dans un premier temps, prélever des échantillons dans le sol, à la recherche de traces de graphite semblable à celui utilisé dans le réacteur de Yongbyon.

Les liens entre la Syrie et la Corée du Nord sont intenses depuis des années. Le régime nord-coréen a joué un rôle central dans l'acquisition par la Syrie de missiles balistiques. Or les méandres du trafic du nucléaire suivent souvent ceux de la prolifération en matière balistique, observent des experts.

Une photographie diffusée par la CIA en avril montre le chef de l'Agence syrienne de l'énergie atomique, Ibrahim Othman, aux côtés d'un des responsables du programme nucléaire nord-coréen, Chon Chibu. Le cliché aurait été pris en Syrie. Selon nos informations, Chon Chibu – avec lequel l'AIEA a été en contact dans les années 1990 – a subitement disparu de Corée du Nord à cette époque. L'une des hypothèses retenues aujourd'hui est qu'il a pu travailler en Syrie, aux côtés d'autres ingénieurs nucléaires et techniciens nord-coréens.

La construction d'Al-Kibar, sur les rives de l'Euphrate, a commencé vers 2001. Elle semble avoir été décidée par Hafez Al-Assad, le père et prédécesseur de l'actuel président syrien. Pour tenter de se doter d'une filière nucléaire, la Syrie s'était adressée, dans les années 1990, à des groupes en Russie, et aussi en Chine. Ces tentatives n'ont pas abouti. De l'aveu même de Damas, le Pakistanais A. Q.Khan s'est rendu en Syrie à la même époque, mais l'offre qu'il formula fut rejetée.

C'est par la suite seulement que la Syrie s'est tournée vers la Corée du Nord. Les motivations de cette dernière auraient été de deux ordres : d'une part l'attrait du gain financier lié à la vente d'un réacteur nucléaire; d'autre part, la perspective d'accroître sa marge de manœuvre au moment où l'accord de 1994 passé avec les Etats-Unis – dans lequel Pyongyang renonçait à son programme nucléaire militaire en échange d'aides – semblait vaciller.

Alors qu'Israël a observé un grand silence sur les circonstances et les raisons de la frappe aérienne de septembre 2007, la Syrie a varié dans ses déclarations au fil du temps. Elle a d'abord affirmé que des avions israéliens avaient lâché, au-dessus du désert, des munitions qui avaient explosé. Puis reconnu qu'Al-Kibar avait bel et bien été bombardé, mais qu'il ne s'agissait que d'une simple installation militaire. Fin avril, elle qualifiait de "ridicules" les données présentées par le renseignement américain.

Mais lors de la réunion du Conseil des gouverneurs de l'AIEA à Vienne, début juin, le représentant syrien, Ibrahim Othman, s'est gardé de dire qu'Al-Kibar n'était pas un site nucléaire. Cette omission a beaucoup attiré l'attention des diplomates occidentaux et des experts de l'Agence, qui pensent que Damas se ménage une position de repli au cas où de nouveaux indices de travaux nucléaires seraient découverts.

M.Othman a dit espérer que l'AIEA travaillerait "sans préjugés", assurant qu'il n'y aurait pas d'entraves à sa mission. Toutefois, selon des diplomates, l'AIEA n'a pas été autorisée à se rendre sur trois autres sites, en Syrie, qui éveillent des soupçons. Al-Kibar a été soigneusement dissimulé par la Syrie pendant des années. Une partie importante de l'installation était souterraine. Un toit et des murs de camouflage avaient été dressés, lui conférant un aspect cubique qui le banalisait. Les révélations sur Al-Kibar placent la Syrie en violation de ses obligations au regard du traité de non-prolifération nucléaire (TNP) qu'elle a ratifié en 1969, et des textes qui s'y rattachent : tout début de construction d'un site nucléaire civil doit en effet être déclaré à l'AIEA.

L'AIEA est elle-même placée dans une position délicate car l'affaire Al-Kibar peut être perçue comme une nouvelle illustration – après les cas libyen et iranien – d'une incapacité de l'Agence à détecter à temps des programmes nucléaires clandestins dans le monde. Signe des tensions que ce dossier suscite,

le directeur de l'AIEA, Mohamed ElBaradei, a vivement protesté contre le bombardement israélien et contre la lenteur de la transmission de certains renseignements à l'Agence. Il a aussi déclaré, mardi 17 juin, que la Syrie n'avait pas "les ressources humaines qui lui permettraient de mener un programme nucléaire d'envergure".

## **IAEA Has Evidence of North Korean Connection to Syria 's Secret Reactor**

Report by Natalie Nougayrede: "Disclosures about Secret North Korean Nuclear Connection in Syria"  
"LeMonde.fr

Wednesday, June 18, 2008 T14:21:41Z

Journal Code: 2165 Language: ENGLISH Record Type: FULLTEXT

Document Type: OSC Translated Text

Word Count: 1,148

Vienna -- What was being planned at Al-Kibar? Destroyed by an Israeli aviation raid on 6 September 2007, this facility in the middle of the desert, in eastern Syria, is due to be visited for the first time 22-24 June by inspectors of the International Atomic Energy Agency (IAEA.) In the form of a 21 m-high cubic building, it housed, according to a presentation made by US intelligence agencies 24 April, a clandestine nuclear reactor modeled on the North Korean reactor at Yongbyon.

According to our information, the IAEA has intelligence from various non-US sources that supports this analysis. Some of this information consists of satellite photographs supplied by various countries. Some is taken from investigations that the IAEA conducted in the past into North Korea's nuclear activities. And some comes from research conducted by the IAEA into clandestine networks for the purchase of nuclear equipment around the world.

After Libya and Iran, Syria, whose president, Bashir al-Asad, has been invited to Paris in July, is the third instance of proliferation in the Near and Middle East.

The Al-Kibar dossier -- which promises to be one of the major enigmas of recent years -- is emerging at a particularly delicate moment in the diplomatic interplay in the Near East. Syria is involved in indirect talks with Israel. Its president, Bashir al-Asad, has recently sent signals to the West suggesting that he is trying to break out of his international isolation.

The difference with Syria is that, whereas Libya and Iran turned to the clandestine network organized by Pakistan's Abdul Qadeer (AQ) Khan (the "father" of the Pakistani nuclear bomb) for their secret supplies of nuclear technology, Syria turned to North Korea secretly to acquire its equipment. The IAEA investigation into Syria thus raises the question of the existence of a North Korean nuclear "black market." The exact extent of North Korea's cooperation with Syria and the possibility that other countries may have benefited from this kind of assistance provided by Pyongyang are the focus of concerns.

Two crucial questions will occupy the IAEA inspectors: where was the fuel for the Al-Kibar reactor supposed to come from? And is there a secret facility in Syria for reprocessing spent fuel? Reprocessing is a technology that makes it possible to produce plutonium that can be used in the manufacture of nuclear weapons. This is how the North Koreans acquired the nuclear weapon that they tested in 2006.

The investigation will be all the more complicated inasmuch as the powerful Israeli bombs that fell on the Al-Kibar facility left a mountain of rubble that the Syrians have subsequently partially removed. A new building has been erected on the site, making any excavation work difficult. The IAEA could initially take soil samples, in the search for traces of graphite similar to those used at the Yongbyon reactor.

There have been intensive links between Syria and North Korea for years. The North Korean regime performed a crucial role in Syria's acquisition of ballistic missiles. But the twisting paths of nuclear trafficking often follow those of proliferation of ballistic equipment, experts point out.

A photograph published by the CIA in April shows the head of the Syrian atomic energy agency, Ibrahim Othman, flanked by one of the heads of North Korea's nuclear program, Chon Chibu. The photograph was apparently taken in Syria. According to our information, Chon Chibu -- with whom the IAEA was in contact in the 1990s -- suddenly disappeared from North Korea at that time. One of the hypotheses being considered now is that he could have been working in Syria, alongside other North Korean nuclear engineers and technicians.

The construction at Al-Kibar, on the banks of the Euphrates, began in around 2001. It was apparently decided on by Hafiz al-Asad, the father and predecessor of the current Syrian president. In order to try to acquire a nuclear system of its own Syria turned, in the 1990s, to groups in Russia, and also China. These attempts were not successful. As Damascus itself admits, Pakistan's AQ Khan visited Syria at the same time, but the offer that he made was rejected.

It was only later that Syria turned to North Korea. The latter's motives were of two kinds -- on the one hand, the attraction of financial gain linked to the sale of a nuclear reactor; and on the other hand the prospect of increasing its leeway at a time when the 1994 agreement with the United States -- under whose terms Pyongyang relinquished its military nuclear program in exchange for aid -- seemed unsteady.

Whereas Israel has been completely silent about the circumstances of, and the reasons for, the September 2007 aerial strike, Syria has varied its statements over time. First, it said that Israeli aircraft dropped munitions that exploded above the desert. It then admitted that Al-Kibar had indeed been bombarded, but that it was simply a military facility. At the end of April, it described the information presented by US intelligence as "ridiculous."

But at the meeting of the IAEA Board in Vienna at the beginning of June, the Syrian representative, Ibrahim Othman, omitted to say that Al-Kibar was not a nuclear facility. This omission greatly attracted the attention of Western diplomats and Agency experts, who believe that Damascus is fostering a fallback position in case further evidence of nuclear work should be discovered.

Mr Othman says that he hopes that the IAEA will work "without preconceptions," adding that there are no obstacles to its mission. However, according to diplomats, the IAEA has not been authorized to visit three other sites in Syria that are raising suspicions. Al-Kibar was carefully concealed by Syria for years. A large part of the facility was underground. A camouflaged roof and walls were constructed, giving it a cubic form that made it less noticeable. The revelations about Al-Kibar mean that Syria has violated its obligations under the terms of the Nuclear Nonproliferation Treaty, which it ratified in 1969, and associated documents: any start to the construction of a civilian nuclear facility must indeed be declared to the IAEA.

The IAEA is itself put in a delicate position, because the Al-Kibar affair could be perceived as a further admission -- following the Libyan and Iranian cases -- of the Agency's inability promptly to detect secret nuclear programs around the world. One sign of the tensions that the issue is generating was IAEA Director Mohamed ElBaradei's sharp protest at the Israeli bombardment and the slowness in conveying certain information to the Agency. He also declared Tuesday 17 June that Syria did not have "the human resources that would enable it to conduct a major nuclear program."

## **U.N. atom watchdog faces tough search mission in Syria**

**Thu Jun 19, 2008 5:00am EDT**

By Mark Heinrich

VIENNA (Reuters) - U.N. inspectors go to Syria on Sunday to probe allegations of covert nuclear work at a site where Israeli warplanes destroyed a desert complex at the heart of Western suspicions.

But ferreting out the truth may be hard nine months after the attack.

The International Atomic Energy Agency added Syria to its proliferation watch list in April after the United States passed on intelligence imagery said to show a nascent reactor that could have yielded plutonium for atom bombs.

Washington said Syria, an ally of Iran whose shadowy uranium enrichment program has been under IAEA investigation for five years, almost completed the plant with North Korean know-how.

Satellite pictures show the site was razed after the Israeli bombing in a possible cover-up, nuclear analysts say.

But the IAEA's chief says there is no evidence Syria had the skills or fuel to run a major nuclear complex, and that a U.S. failure to alert inspectors before Israel's air strike last year would make it hard to verify what the target actually was.

"We will do everything in our power to clear things up. I take these accusations very seriously," Mohamed ElBaradei, referring to the June 22-24 mission headed by his deputy, said in a German media interview on June 7.

"But it is doubtful that we will find anything there now, assuming there was anything there in the first place."

Follow-up IAEA missions will be necessary to get to the bottom of the mystery, Western diplomats say.

Washington took issue with ElBaradei's suggestion Syria, whose only declared nuclear facility is an old research reactor under IAEA monitoring, looked unable to develop atomic power.

"The reality here is that there's some pretty strong evidence out there about what Syria was doing...It's important that the IAEA be allowed to fully investigate that facility and any other one that they might find of interest to them," State Department spokesman Tom Casey said on Tuesday.

Syria has denied concealing anything from the U.N. nuclear watchdog in possible violation of the Non-Proliferation Treaty.

Damascus has said the U.S. photos were fabricated or doctored and that Israel's target in remote northeast Syria near the Iraq border was a military building under construction.

## LIMITED COOPERATION?

Syria told a meeting of the IAEA's 35-nation governing board in Vienna two weeks ago it would cooperate with the inquiry and grant access to the al-Kibar site struck by Israeli warplanes.

Satellite photographs taken since then show the area was bulldozed and cleansed of the remains, with a new building erected there, independent U.S. nuclear analysts say.

Arab diplomats at the IAEA meeting briefed separately by Syria said it refused agency requests to examine three other sites on national security grounds, asserting these were conventional military bases only and off-limits.

Other diplomats said IAEA wanted to check these places for a possible source of fuel for the alleged reactor, or relevant equipment, as none was found in U.S. pictures of al-Kibar.

The IAEA team will be led by Olli Heinonen, head of its global inspectorate, and include two nuclear technology experts familiar with Syria, diplomats said. They were set to have a range of talks in Damascus around a day trip to al-Kibar.

"The delegation will want Syria to explain what was at the (bombed) site. If Syria still says it was no reactor, they will want information to substantiate that. There is a plan to take samples on the spot," said a senior diplomat close to the IAEA.

"They will explain why the agency wants to see other sites. That doesn't have to happen (on this trip). If the IAEA doesn't get acceptable answers now, inspectors can go back next month and try again, and so on. This will be a process."

ElBaradei has demanded "absolute transparency" from Syria.

"Don't expect much from this trip, given Syria's extensive efforts to remove incriminating evidence and the restrictions they will put on where the IAEA can go," said Mark Fitzpatrick at the International Institute for Strategic Studies.

"But the IAEA in the past has found things that the hosts didn't expect, as in North Korea... So it's possible Syria will be surprised. If the IAEA doesn't find anything (this time), it shouldn't be taken as any exoneration of Syria."

Middle East World News | Home

Vienna - As inspectors from the UN nuclear watchdog prepare to travel to Syria for the first time Sunday to investigate whether the country was building an undeclared nuclear reactor, diplomats say that Damascus has yet to agree to all the inspectors' demands. International Atomic Energy Agency (IAEA) chief inspector Ollie Heinonen and two of his specialists plan to go to Syria from Sunday to Tuesday to investigate whether the al-Kibar site that was bombed by Israel last year was indeed a reactor geared towards producing plutonium.

IAEA inspectors will take samples at the site that could reveal whether there was any nuclear material at al-Kibar, diplomats say.

In addition, samples could show whether any graphite, a material used in reactor cores, was present at the location.

Syria maintains that there was no nuclear facility, but only a military site.

The IAEA hopes to see the rubble that was taken away from the site, a Western diplomat told Deutsche Presse-Agentur dpa, but details of what the inspectors will be allowed to do still have to be worked out between the IAEA team and Syrian officials.

"There is still going to be negotiating when they get there, which is not very encouraging," the diplomat said.

In April, the IAEA received US documents and photographs indicating that the site was a reactor being built with the help of North Korea.

"According to this information, the reactor was not yet operational and no nuclear material had been introduced into it," IAEA Director General Mohamed ElBaradei said in early June.

Since the Israeli air raid in September 2007, Syria has razed the site, satellite images show.

Although only the al-Kibar visit is confirmed, the inspectors are expected to press for access to other sites that may have been related to a nascent Syrian nuclear programme, two diplomats said.

At the beginning of this month, Syrian President Bashar al-Assad said in press remarks that his country would cooperate with the UN nuclear watchdog.

Under its agreements with the IAEA, Damascus is obliged to report nuclear projects to the Vienna-based agency as early as the planning stage.

There was no clear evidence Syria had the fuel or the human resources to operate a large-scale nuclear facility, ElBaradei said in an interview with the Dubai-based al-Arabiya television station on Tuesday.

The head of the IAEA said his organization had only pictures of a site in Syria bombed by Israel last year that resembles a nuclear facility.

He has repeatedly criticized the US and Israel for not involving his agency before the bombing.

"He doesn't think there is 100 per cent credible assurance it is a reactor," an official close to the IAEA said.

Images released to the public by the US government include detailed ground-level photographs of the of the al-Kibar site, closely resembling the inside of the North Korean Yongbyon reactor.

The IAEA did not expect definitive answers from this first visit, sources close to the agency said. "This is really the beginning of a process: no-one knows how long it will take," one source said.

It depended on whether Syria would allow further inspections, and on whether the findings of the first visit would show the need for more investigations, he said.

## **UN nuclear chief tells Arab TB he hopes Syria will show transparency during inspectors' visit**

2008-06-20 23:50:08 -

CAIRO, Egypt (AP) - The U.N. nuclear watchdog chief urged Syria on Friday to show «transparency» and cooperate with inspectors from the world agency due to visit the Mideast country this weekend.

The visit will be the start of an international fact check of U.S. and Israeli assertions that Damascus had tried to build a plutonium-producing facility under the radar of the international community.

Mohamed ElBaradei, who heads the Vienna-based International Atomic Energy Agency, told the pan-Arab Al-Arabiya Television that he hoped Syria will let IAEA inspectors visit «all locations» they are interested in.

Syria said earlier this month it won't allow IAEA to probe beyond a site bombed by Israel last September, despite IAEA's expressed eagerness to visit three other suspect locations.

«We will go (to Syria) with open eyes and we will observe the facts ... All I ask of Syria is to show absolute transparency and help» the IAEA probe, ElBaradei said in the interview, aired late Friday.

«I hope that Syria will take us to all the locations,» where allegedly there could be other reactors, ElBaradei added.

His remarks reflected IAEA hopes that Syria could still warm to giving IAEA access to the three other sites. The main focus on the agency's June 22-24 visit is the Al Kibar facility \_ a building in the country's remote eastern desert that was destroyed in September by Israeli jets.

Syria in early June agreed to an IAEA check of U.S. assertions that the target was a plutonium-producing reactor, nearly complete and thus at the stage where it could generate the fissile material for nuclear arms.

Neither the U.S. nor Israel told the IAEA about the bombing until late April, about a year after they obtained what they considered decisive intelligence: dozens of photographs from a handheld camera of the inside and outside of the compound.

The satellite photos appeared to show construction crews using the interval to erect another structure over the site \_ a move that heightened suspicions of a possible cover-up.

ElBaradei again rebuked Israel for the bombing, condemning its «use of solo military force» and for not sharing its information with the IAEA.

«Before (Israel's) hitting Syria ... we could have had the time to go to Syria to investigate and learn of any covert Syrian reactor,» ElBaradei said.

ElBaradei stressed that he had told the Syrians that, «if they, as they claim, don't have any covert nuclear program, they have to practice absolute transparency.» But he also cautioned that the probe of

the bombed site will be «very difficult because the body (of evidence) is gone, that reactor has been destroyed.

In the interview, part of which was aired earlier this week, ElBaradei also said that his agency doesn't have evidence Syria possesses the fuel or technical know-how for a large-scale nuclear plant.

«We have no evidence that Syria has the human resources that enable it to initiate a large-scale nuclear program,» he said. «We did not see nuclear fuel in Syria that facilitates it to operate this reactor; we don't have any information telling us that it (Syria) has nuclear fuel.

But he did point out that Syria has a nuclear system that is similar to North Korea's. Of the three other sites IAEA is interested in, at least one is thought to possibly contain equipment that can reprocess nuclear material into the fissile core of warheads.

Syrian President Bashar Assad has repeatedly denied that his country has a secret nuclear program.

Israel has never officially confirmed September's air strike on Al Kibar, though it has not disputed the foreign reports, or U.S. government comments, on the incident.

## **Syria, NKorea helped Iran develop nuclear programme: German report**

by Staff Writers

Berlin (AFP)

June 21, 2008

Damascus and Pyongyang helped Iran to develop its nuclear programme through the construction of a suspected nuclear site in Syria that Israel destroyed last September, Der Spiegel reported.

But the Syrian president Bashar al-Assad is considering withdrawing his support for the Iranian programme, added the German newsweekly in its next edition out Monday, quoting German secret service reports.

According to those intelligence reports, it said, a joint plan by Syria, North Korea and Iran for a nuclear reactor for military use was to have been developed at the Al-Kibar site in the east of Syria.

The site -- to be inspected next week by the International Atomic Energy Agency (IAEA) -- was destroyed by Israeli warplanes with Washington's support. Syria denied it has military purposes.

The reports cited by Der Spiegel claimed that North Korea was to help Iranian scientists to advance their nuclear programme, and that Al-Kibar was to have been used as a temporary site for Iran to develop a nuclear bomb until it was able to do so on its own territory.

The plan was discussed during a visit by Iranian President Mamhoud Ahmadinejad to Syria in 2006, according to the magazine.

The three countries also cooperated in the production of chemical weapons, said Der Spiegel, quoting the same source. At the time of an explosion at a chemical site in July 2007, 15 Syrian soldiers, 12 Iranian engineers and three North Koreans were among the victims.

Ten months after the destruction of the Al-Kibar site, on the basis of allegations that a nuclear reactor was being built there with the aid of North Korea, the IAEA said it was sending experts to Syria to investigate.

Documents and detailed photographs supplied in April by Washington to the IAEA backed up the suspicions, but Syria rejected the allegations describing them as "ridiculous."

Iran and Syria, both parties to the nuclear non-proliferation treaty, signed a memorandum of cooperation at the end of May on the two countries' "independence and territorial integrity."

The alliance between the two neighbours, which goes back to the 1979 Iranian revolution, was strengthened in 2006 with the signing of an agreement on military cooperation.

## **SYRIA TURNING TOWARD THE WEST?**

### **Assad's Risky Nuclear Game**

**06/23/2008**

Syria and Iran may be better friends than many thought. Reports indicate that the two might have been cooperating on nuclear weapons research. Now, though, Damascus may be rethinking those ties and looking for friends in the West.

Things are taking a dramatic turn in Syria these days, just as a team of United Nations nuclear weapons inspectors arrives to probe allegations that Damascus is hiding secret atomic activities. And as information emerges that Syria may have been cooperating with both Iran and North Korea on the development of nuclear weapons.

Yet even as pressure increases on Damascus, many Western leaders see a chance that Syrian President Bashar Assad may sever contacts with Iran. Indeed, some say that Assad's decision could determine whether or not a new war in the Middle East could be on the horizon.

Assad, as a result, is being courted as never before. German Foreign Minister Frank-Walter Steinmeier is pursuing talks with the Syrian leader. French President Nicolas Sarkozy has invited him to Paris and even the usually critical Bush Administration would like to improve contacts. Meanwhile Israeli Prime Minister Ehud Olmert has made it clear that he wants to intensify peace talks with Damascus, and is no longer refusing to discuss the issue of the Golan Heights, seized by Israel during the six-day war in 1967.

The background to this surprising flurry of diplomatic activity is the fact that, according to intelligence reports, Syria has been working alongside North Korea for years to support Iran in the development of a military nuclear program. However, there are strong indications that Assad is now rethinking this policy.

According to intelligence reports seen by SPIEGEL, the Syrian facility at Al Kibar that Israeli jets bombed last September was the site of a secret military project. The report states that North Korean, Syrian and Iranian scientists were working side by side to build a reactor to produce weapons-grade plutonium. Sources say that the Iranians were using the facility as a "reserve site" and had intended sending the material back to Tehran. While the Iranians had made great progress in the development of uranium, it is alleged that they required the help of the North Korean experts when it came to plutonium technology.

Iran, Syria and North Korea are also alleged to have cooperated on the production of chemical weapons. Indeed, in July 2007 an explosion near the Syrian city of Aleppo killed 15 Syrian military officials as well as dozens of Iranian rocket scientists and, according to information obtained by SPIEGEL, three North Koreans. According to Jane's Defence Weekly, the accident released quantities of mustard gas and the nerve agent Sarin.

Meanwhile weapons inspectors from the International Atomic Energy Agency (IAEA) arrived in Syria on Sunday to investigate whether the bombed site at Al Kibar was in fact a nuclear facility, something Damascus has vehemently denied. Although the inspectors face strict limits on where they can go, the fact that Syria is allowing the inspectors in at all is a sign of something of a thaw between Damascus and the West.

Assad's attitude seems to have become far more conciliatory. As well as allowing in the IAEA team, he has used his contacts with Hamas to persuade the Palestinian militant group to call a six-month cease-fire with Israel in Gaza. And he has used his influence to rein in Hezbollah militants in Lebanon. The fact that he has said he would consider opening an embassy in Beirut is also a significant sign that Syria is at last recognizing Lebanese sovereignty after years of treating the neighboring state as little more than a province.

Assad's moves are now being rewarded, with the West welcoming anything that would further isolate Tehran. Sarkozy has invited the Syrian leader to visit Paris for Bastille Day, when Israel's Prime Minister Olmert will also be in attendance. The French president has one precondition: He has demanded that "Syria break as much as possible with Iran in its quest to develop a nuclear weapon."

## **Will Syrian site mystery be solved?**

By Paul Reynolds

World affairs correspondent, BBC News website

07:53 GMT, Monday, 23 June 2008 08:53 UK

UN nuclear weapons inspectors have started a mission to Syria where they are trying to solve the mystery of the building attacked by the Israelis last September and which, according to the CIA, was a nuclear reactor under construction.

However, since the structure has since been completely demolished, the evidence might be elusive.

The head of the International Atomic Energy Agency (IAEA), Mohamed ElBaradei, said: "It is doubtful we will find anything there now, assuming there was anything in the first place."

Mr ElBaradei has also cast doubt on Syria's ability to construct and run such a complex nuclear process.

"We have no evidence that Syria has the human resources that would allow it to carry out a large nuclear programme," he told al-Arabiya television.

He has also said that "no nuclear material" had been introduced at the site. So it is highly unlikely that there will be signs of any radioactivity there.

"Don't expect too much from this trip," said Mark Fitzpatrick, nuclear expert at the International Institute for Strategic Studies in London. "But the IAEA has in the past found things that the hosts didn't expect, as in North Korea, so it's possible Syria will be surprised."

### **Relying on Syria**

The inspectors do have photos provided by the Americans. These allegedly show the inside of the building and the suspected reactor. But a lot will also depend on what the Syrians say.

### **SEQUENCE OF EVENTS**

- \* 6 Sept 2007: Israel bombs site in Syria
- \* 1 Oct: Syria's President Assad tells BBC site was military
- \* 24 Oct: New satellite images show site now bulldozed clear
- \* 24 April 2008: US claims Syrian site was nuclear reactor
- \* 22 June: IAEA due to visit Syria to investigate

Led by the IAEA chief inspector Olli Heinonen, the inspectors arrive in Syria on Sunday and will stay until Tuesday.

They could ask to see the architect's drawings for the building, and ask to question the architect and the construction engineers. They could ask to see rubble from the building, and take samples, especially from any surviving parts of the suspected nuclear reactor.

They will in any case ask the Syrians what the building was for, if it was not, as the Bush administration claimed, "a covert nuclear reactor in its eastern desert capable of producing plutonium". Plutonium can be used to construct a nuclear bomb.

"We are convinced, based on a variety of information, that North Korea assisted Syria's covert nuclear activities. We have good reason to believe that reactor, which was damaged beyond repair on 6 September of last year, was not intended for peaceful purposes," the White House said in April this year.

### **Syrian denials**

Syria has said that the site, at al-Kibar, was a military building under construction and was not a nuclear facility.

Syrian President Bashar al-Assad has said that Syria does not have a nuclear weapons programme.

Syria is a member of the nuclear Non-Proliferation Treaty (NPT), which bars it from making nuclear weapons.

"The IAEA has in the past found things that the hosts didn't expect... so it's possible Syria will be surprised "

Mark Fitzpatrick  
IISS

A test of Syrian co-operation will be whether the inspectors gain access to three other sites. Syria has reportedly told other Arab countries that these are military bases not connected with the suspect site at al-Kibar.

One site is said by diplomatic sources, who spoke to the Associated Press news agency, to be suspected of having "equipment that can reprocess nuclear material into the fissile core of warheads".

### **Wider worries**

Behind the IAEA visit, there is the wider issue of what to do if a country is suspected of trying to develop nuclear weapons secretly. The IAEA is furious that it was not alerted by Israel or the United States about evidence concerning the al-Kibar site before it was bombed. The IAEA thinks it could have established what was going on there.

The IAEA is anxious to preserve its leading role in the investigation of possible violations of the NPT.

The Americans are doubtful that the IAEA can do the job properly. It took US and British intelligence operations to get Libya to admit to secret nuclear activities and abandon them in 2003.

*[deletia]*

<http://www.whitehouse.gov/news/releases/2008/06/20080623-6.html>

For Immediate Release

June 23, 2008

Press Briefing by Dana Perino  
James S. Brady Press Briefing Room

12:43 P.M. EDT

*[EXCERPT]*

Q Dana, is the United States preparing to remove North Korea from the terrorism list?

MS. PERINO: Well, we'll -- what we've been waiting for is for North Korea to issue to the Chinese, as the chairman of the six-party talks, its complete and accurate and verifiable declaration. And there is word that they would try to do that by Thursday. This is a deadline that the North Koreans themselves have put out there. We'll see if they decide to do that. And from there, as you can see from the agreements that we've had, there is action for action.

But the key is we want a denuclearized North Korea, but part of getting there is getting this declaration. Before any other actions are taken, that declaration has to be reviewed and considered verifiable.

Q Do you have any reason to believe that they won't do it on -- by Thursday, as they --

MS. PERINO: Only based on past experience, that deadlines have been kicked down the road before. But I couldn't say either way whether or not they'll meet this one. We hope that they do, but when they do and if they do, it has to be one that is correct and verifiable.

Laurent.

Q To follow up on that, will you consider any declaration acceptable if it does not address the issue of North Korean cooperation on nuclear --

MS. PERINO: Well, I'll refer you to the State Department on that. Obviously, Secretary Rice spoke at length about this last week, and what we know is that there was cooperation between the two. And so we all know that, and we made it clear that we would let the whole world know that, so the world is operating from the same perspective. So we'll see what the declaration says, but the bottom line is, all of us know it.

Q But again, will this -- any declaration be acceptable if this issue is not addressed?

MS. PERINO: What we want to see is a correct declaration and one that is verifiable, but I'm not going to prejudge it before we see it.

## **U.N. nuclear team inspect bombed site in Syria**

By Karin Strohecker

Reuters

Monday, June 23, 2008; 1:24 PM

VIENNA (Reuters) - U.N. nuclear inspectors on Monday examined an alleged nuclear site in Syria that the United States says housed a secretly built reactor nearing completion when it was bombed by Israel nine months ago, a diplomat said.

Syria denies it has any covert nuclear weapons program and says the Israelis hit an ordinary military structure being built at al-Kibar, in the northeastern desert.

Neither Syria nor the Vienna-based International Atomic Energy Agency (IAEA) has issued any information about the visit of the inspectors since they arrived in Damascus on Sunday.

"The visit (to the alleged nuclear site) is today," said a senior diplomat in Europe familiar with the IAEA.

The diplomat later told Reuters the inspectors had reached the site and examined it.

The source gave no further details but diplomats said earlier they were expecting to spend the day at al-Kibar.

The team led by Olli Heinonen, head of the U.N. nuclear watchdog's global inspectorate, was also due to hold talks with Syrian officials before returning to Vienna on Wednesday.

Syria's silence on the visit, which it agreed with the IAEA on June 5, indicates how sensitive the issue is for President Bashar al-Assad, who has yet to retaliate for the Israeli raid.

The IAEA put Syria on its proliferation watch list in April after receiving intelligence photographs from the United States said to show a reactor that could have yielded plutonium, a nuclear bomb fuel.

Washington said Syria, an ally of Iran whose own nuclear program has been under IAEA investigation since 2003, had almost completed the plant with North Korean help. Pyongyang evaded IAEA checks and test-exploded a nuclear device in 2006.

Syrian officials have accused the United States of fabricating evidence in collusion with Israel, believed to be the Middle East's only nuclear-armed power.

U.S. nuclear analysts say satellite images since the Israeli strike show the bombed site had been razed and a new building erected there, perhaps to cleanse traces of nuclear activity.

Syria has resisted IAEA requests to visit three other sites to check for facilities that would be necessary for the alleged reactor but which are missing from the U.S. images of al-Kibar, diplomats in Vienna say. Damascus describes the three sites as conventional military bases irrelevant to the IAEA inquiry.

Damascus has denied concealing anything from the IAEA in possible violation of its Non-Proliferation Treaty obligations.

IAEA chief Mohamed ElBaradei has condemned the Israeli raid and criticized the United States for failing to share its intelligence material on Syria with his agency much earlier.

But he has dampened expectations that the IAEA will find conclusive evidence so long after the September 6 bombing.

"It is doubtful that we will find anything there now, assuming there was anything there in the first place."

ElBaradei said last week there was no evidence that Syria, whose only declared nuclear facility is an antiquated research reactor subject to IAEA monitoring, had the skills or fuel to run a major nuclear complex. Washington disputes this.

## Syria keeps silent over UN nuclear inspectors

Arab Times, Kuwait

10 hours ago [Accessed 2008-06-24T17:00Z]

DAMASCUS (Agencies): Syria kept silent on Monday [2008-06-23] about a visit by UN nuclear officials to inspect a mysterious site bombed by Israel last year, with no official announcements a day after the team's arrival. There was no acknowledgement in the state-owned media that the inspectors were even in the country to investigate US allegations that the Al-Kibar site in the northeastern desert was a nuclear reactor nearing completion. Just one privately owned daily, Al-Watan – like all Syrian media close to the government – made any mention of the inspection mission by the UN nuclear watchdog, carrying a commentary published by the Russian news agency RIA Novosti. The commentary highlighted Syria's strong denial of the US allegations and recent statements by International Atomic Energy Agency chief Mohamed ElBaradei that the watchdog had no evidence of Syrian nuclear foul-play.

“We believe therefore that the IAEA team's mission is a routine visit aimed at putting an end to the rumours over a Syrian nuclear programme,” the commentary said. It added that it remained unclear however whether “the United States will be satisfied with such an outcome or will press on with its accusations to create a Syrian nuclear issue similar to the Iranian or North Korean ones.” Washington has circulated photographs it says show that the Al-Kibar facility was a nuclear plant similar to the Yongbyon reactor in North Korea and being built with Pyongyang's assistance. Syria says Al-Kibar was a disused military facility. The IAEA team is scheduled to leave Syria on Tuesday evening after completing its inspection of the site. But the mission's leader, IAEA deputy chief Olli Heinonen, said he would not be returning to the watchdog's headquarters in Vienna until Wednesday evening. It was not immediately clear how the inspectors would be spending the additional time.

The team is to submit its findings to the UN watchdog's next regular board meeting in September.

A Syrian newspaper accused the United States on Monday of making false nuclear accusations against Damascus and expressed hope that a fact-finding trip by UN nuclear inspectors to Syria won't turn into a “prolonged affair.”

The editorial in Syria's independent but government-guided Al-Watan newspaper was the only mention so far in Syria of the UN nuclear inspection under way. Otherwise, Syria has placed strict bans on media reporting the IAEA visit to the country.

On Sunday, officials at the International Atomic Energy Agency in Vienna confirmed its team had left for Syria for the visit – which is to examine US allegations that Syria has secret nuclear sites.

Neither Syria nor the IAEA has confirmed any details since, or even said whether the delegation has arrived. But a woman at Vienna airport flight information, who declined to identify herself on the phone because she was not authorized to speak to the media, said the Austrian Airlines flight carrying the inspectors landed in Syria on Sunday afternoon, a few minutes ahead of schedule.

Damascus denies working on a secret nuclear program but Washington hopes the UN agency team will find evidence backing US intelligence that a structure destroyed by Israeli war planes in September was a nearly completed plutonium-producing reactor.

If so, the IAEA visit could mark the start of massive investigation similar to the agency's five-year probe into Iran's activities. It could also draw in countries such as North Korea, which Washington says helped Damascus and Iran. Media reports also have linked Iran with Syria's nuclear efforts.

Syria agreed after months' delay to allow IAEA inspectors to visit the bombed Al Kibar, but not three other locations suspected as secret nuclear sites. The agency has little formal inspection rights in Syria, which has declared only a rudimentary nuclear program using a small 27-kilowatt reactor for research and the production of isotopes for medical and agricultural uses.

Al-Watan said Syria, by allowing the IAEA visit, wished to demonstrate "its transparency and desire for peace and nuclear nonproliferation."

"However, the inspections should not turn into a series with protracted episodes similar to the Iraqi and Iranian" cases, it said, referring to IAEA's protracted probe during late Iraqi leader Saddam Hussein's rule, and the agency's tussle with Iran.

While Al-Watan does not officially reflect government thinking, in a country where state security generally monitors and controls the flow of news, an editorial on such a sensitive matter indicates at least tacit government consent.

Al-Watan also said the US nuclear accusations aim to turn the nuclear issue into a "sword hanging over Syria ... in what resembles a blackmail policy that might later turn into direct targeting."

The editorial also blasted Washington for "protecting" Israel's alleged nuclear program while going after countries whose policies it opposes, such as Iran, Syria and North Korea.

"While everything is possible against countries that oppose US policies ... Washington provides full protection for Israel although that country has close to 200 nuclear heads," the editorial said.

Israel is widely believed to have developed nuclear weapons though the Israeli government has never officially acknowledged them.

## **Can Syria avoid sanctions with a U.N. nuclear inspection?**

An IAEA team visits the site of an alleged nuclear weapons facility bombed by Israel in September.

By Julien Barnes-Dacey | Correspondent of The Christian Science Monitor

from the **June 25, 2008** edition

**26 minutes ago** [*Accessed 2008-06-24T18:30Z*]

Damascus, Syria - International nuclear detectives are at work in the Syrian sands following American allegations of covert nuclear activity, in a trip that could well determine Syria's international fate.

In Damascus, the inquiry has been met with both a sense of foreboding and cautious optimism. While the country fears Iran-like isolation, it hopes that by opening its doors to the International Atomic Energy Agency (IAEA) it can prevent any global sanctions.

"What's driving Syria right now is an anxiety about becoming a pariah," says Joshua Landis, a Syria expert at the University of Oklahoma.

According to the US government, the remote desert site in northeastern Syria, which was bombed by Israeli planes last September, was a nuclear facility being built with North Korean assistance. The IAEA placed Syria on its proliferation watch list in April following US photographic evidence showing the construction of an alleged reactor. Syria has granted inspectors access to the area, but it razed the site after it was bombed.

On Sunday, Der Spiegel, a German news weekly, reported that Syria, North Korea, and Iran were jointly developing a nuclear reactor to build weapons-grade plutonium at the location.

The allegations have been fervently denied by Syria – a party to the Nuclear Non-Proliferation Treaty – which says the site was a military location with no nuclear activity. Syrian President Bashar al-Assad said the evidence was "fabricated 100 percent."

Nonetheless, the IAEA visit comes at a precarious time for Syria and risks undermining recent diplomatic gains after a long period of international condemnation.

Following the Doha agreement in May that temporarily settled Lebanon's internal political disputes, the resumption of Turkish-mediated peace talks with Israel, and most recently the Hamas-Israeli cease-fire, which Syria says it helped broker using influence over Damascus-based Hamas leaders, Syria is slowly breaking out of isolation.

Most significantly, France resumed diplomatic ties and has invited Mr. Assad to Paris in July to attend a Euro-Mediterranean conference and Bastille Day celebrations.

With claims of illicit nuclear activity continuing to swirl over Syria's head however, Syrians are concerned that it could yet become a pariah state like Iran. An editorial in Syria's Al-Watan newspaper Monday said America's nuclear claim is a "sword hanging over Syria ... in what resembles a blackmail policy that might later turn into direct targeting."

It is these fears that prompted Syria, against all expectations, to cooperate with the IAEA, say analysts.

"Iran can afford to thumb their nose at the West because they have so much money coming in from oil that will help insulate them from sanctioning," says Mr. Landis. "Syria doesn't have a cushion like that."

Already suffering severe economic difficulties, the Assad regime, which trades economic provision for domestic legitimacy, can ill-afford international sanctions in addition to those already put in place by the US.

But even as Syria has opened the bombed site to IAEA inspectors, it has maintained a tight grip over proceedings, drawing comparisons to Iran, which in recent years has provided the UN nuclear watchdog only limited access to its nuclear facilities. A request by the IAEA to visit three other sites was denied by Syrian officials, and local and international press have been given no access.

"The reality here is that there's some pretty strong evidence out there about what Syria was doing.... It's important that the IAEA be allowed to fully investigate that facility and any other one that they might find of interest to them," State Department spokesman Tom Casey said last week.

While calling on Syria to show "absolute transparency," IAEA chief Mohamed El Baradei says it is unlikely investigators will discover any evidence so long after the September bombing. He criticized the US and Israel for withholding intelligence from his agency and taking unilateral action against the site.

Syrian government officials say they are confident that they will weather the political storm, which they see as the Bush administration's attempt to scuttle the country's world standing.

"America has tried and tried to put pressures on Syria ... but it is all false," says Suleiman Haddad, chairman of the parliament's foreign affairs committee. "We will not respond to this pressure. We are in full cooperation with the IAEA to prove to the world that Syria has nothing to hide."

Like many Syrian analysts, Mr. Haddad says that Syria will only be able to fully return to the fold once a new American administration comes to power.

## **Syria planned to supply Iran with nuclear fuel, Israel says**

Ian Black, Middle East editor

The Guardian,

Wednesday June 25, 2008

Israel believes that Syria was planning to supply Iran with spent nuclear fuel for reprocessing into weapons-grade plutonium from the site it bombed last September, and which is currently being inspected by the UN's nuclear watchdog.

The claim from an adviser to Israel's national security council, came yesterday as speculation mounts about a possible Israeli attack on Iran. The Israeli government officially backs UN sanctions to force Tehran to halt its uranium enrichment but has little faith they will succeed.

Details about the alleged Syrian reactor and the Israeli raid remain shrouded in secrecy. Syria denies it has or had a covert nuclear weapons programme and insists the Israelis hit an ordinary military structure being built at al-Kibar, in the country's north-eastern desert.

The US claimed in April that Syria had almost completed the plant with the help of North Korea, which evaded the International Atomic Energy Agency (IAEA) checks and tested a nuclear device in 2006. Officials in Damascus accused the US of fabricating evidence in collusion with Israel, which unlike Syria and Iran is not a signatory to the nuclear non-proliferation treaty and is the Middle East's only nuclear power. Washington did not mention any link to Iran's nuclear ambitions.

The Israeli adviser told the Guardian: "The Iranians were involved in the Syrian programme. The idea was that the Syrians produce plutonium and the Iranians get their share. Syria had no reprocessing facility for the spent fuel. It's not deduction alone that brings almost everyone to think that the link exists."

On Monday the German magazine Der Spiegel quoted "intelligence reports" as making similar claims. A Syrian government spokesman dismissed them as "nonsense". But Der Spiegel said that the Syrian president, Bashar al-Assad, was considering withdrawing support for the Iranian nuclear programme. Tehran and Damascus have had close relations since the 1979 Islamic revolution. Both support Hizbullah, which fought Israel in 2006.

Amos Yadlin, head of Israel's military intelligence, told MPs last Sunday that the Syrians were "concerned" about the inspection by the IAEA and were trying to conceal their actions.

The IAEA team, led by Olli Heinonen of Finland, reached al-Kibar on Monday and was due to hold talks with Syrian officials before returning to Vienna today.

The IAEA put Syria on its proliferation watch-list in April after receiving intelligence photographs from the US, said to show a reactor that could have yielded plutonium. Mohamed ElBaradei, director general of IAEA, condemned the Israeli raid and criticised the US for failing to share intelligence on Syria sooner. Last week ElBaradei cast doubt on his inspectors' ability to establish the nature of the site. "It is doubtful that we will find anything there now, assuming there was anything there in the first place," he said.

The Israeli adviser said the US "implored" Israel for months to agree to release details of the September attack, which Israel has never officially acknowledged. Israel was reluctant to do so to avoid Syrian retaliation. Since then, the two countries have begun peace talks brokered by Turkey.

Earlier this month 100 Israeli fighter aircraft reportedly rehearsed an attack on Iran's nuclear facilities. The jets flew more than 870 miles, roughly the distance between Israel and Iran's main uranium enrichment plant at Natanz. An attack would "turn the region into a fireball," ElBaradei warned.

## North Korea nuclear accounting won't include bombs

By BURT HERMAN

31 minutes ago [Accessed 2008-06-25T18:05Z]

SEOUL, South Korea (AP) — North Korea is expected this week to turn over its long-delayed accounting of its nuclear weapons activities, part of a chain of events leading to a unique photo opportunity: the destruction of the cooling tower at Pyongyang's main reactor.

One item that won't make the declaration, which the White House says is due Thursday, will be North Korea's nuclear bombs. The omission means the world will have to wait for an answer to the question at the heart of the nearly six-year-old standoff: Is the North ready to give up its nuclear weapons?

North Korea has invited foreign TV stations to broadcast the toppling of the cooling tower to demonstrate its plan to give up its nuclear ambitions. Sung Kim, the top State Department expert on Korea, will travel to North Korea for the planned destruction of the cooling tower at its Yongbyon nuclear reactor, an official at South Korea's Foreign Ministry said. He spoke on condition of anonymity, citing ministry policy.

U.S. officials who earlier insisted North Korea's declaration should be "complete and correct" have repeatedly scaled back expectations for the document in the wake of resistance from Pyongyang, which failed to meet a deadline for submitting the list at the end of last year.

Already, the declaration that the White House says is due Thursday is not expected to include details of the North's alleged attempts to enrich uranium — the dispute that sparked the nuclear standoff in late 2002. The list also will not describe how the North allegedly helped Syria build a nuclear plant.

Instead, those thorny issues will simply be "acknowledged" by Pyongyang, with the U.S. hoping that it can get more information in later discussions with the North, given that it has few other ways to dig for intelligence from the world's most closed country.

The main U.S. envoy to nuclear talks with North Korea affirmed this week that the communist nation's bombs also will not make the cut for the declaration. Instead, details on the bombs will be left to the next stage of the talks, when Pyongyang is supposed to abandon and dismantle its nuclear weapons program.

"The North Koreans have acknowledged that we have to deal with the weapons," Assistant Secretary of State Christopher Hill said in Beijing. "We're going to deal with it as soon as we sit down again to begin to map out the remaining piece of this negotiation."

The White House said Wednesday it will move quickly to lift sanctions and remove North Korea from the U.S. blacklist of state sponsors of terrorism in exchange for handing over the declaration.

The North is expected in the declaration to say how much plutonium it has produced at its main reactor facility. The next step in the disarmament talks will be to verify that claim, through procedures that Hill said would be set up within 45 days.

That verification will not mean the U.S. or any other country will yet actually see the weapons-grade plutonium, or that nuclear inspectors will roam the countryside peeking into the North's vast network of secret underground tunnels to track down traces of radioactive material.

Instead, Secretary of State Condoleezza Rice said this month that verification at first will simply mean reviewing documents and inspecting the reactor to infer how much plutonium was produced, to be compared with the amount that the North claims in the declaration.

"Once we have a clearer view of how much plutonium has actually been made, I think we'll also have a clearer view of what might have happened to it," Rice told an audience at the Heritage Foundation in Washington.

In a report earlier this year, the Washington-based Institute for Science and International Security estimated the North has between 61 and 110 pounds of plutonium, which could be enough to build from six to 10 bombs. The North proved it could build a working nuclear bomb when it carried out an underground nuclear test blast in October 2006.

The fireworks at the reactor will be a mostly symbolic move signaling that North Korea does not intend to make more plutonium for bombs. The reactor was shut down last year and already largely disabled so that it cannot easily be restarted.

What happens next with the bombs and fissile material the North already has stockpiled will be the real test of Pyongyang's commitment to disarm.

## Syrian nuclear probe off to 'good start': IAEA chief inspector

1 hour ago [Accessed 2008-06-25T20:55Z]

[EXCERPT]

VIENNA (AFP) — The UN nuclear watchdog's probe into an alleged covert nuclear facility in the Syrian desert has gotten off to "a good start," a top official said on Wednesday.

"It was a good start, but there's still work that remains to be done," Olli Heinonen, deputy director general of the International Atomic Energy Agency, told reporters on returning from a three-day trip to Syria.

"For this trip we did what we agreed to. We achieved what we wanted on this first trip. We took samples which we wanted to take. Now it's time to analyse them," Heinonen said after getting off a flight from Damascus to Vienna.

Asked whether he expected to return to Syria in the near future for follow-up investigations, the IAEA's number two said: "It's too early to say. The work will continue. We'll see in days and weeks to come what happens next."

Heinonen and two other inspectors had flown to Syria Sunday to investigate allegations that a mysterious site bombed by Israel last year had been a covert nuclear reactor nearing completion.

Observers expect the trip to serve as merely the start of a long investigation, similar to the IAEA's five-year probe into Iran's disputed nuclear activities.

Diplomats told AFP that the IAEA experts visited and inspected the site, at Al-Kibar in a remote desert area of northeastern Syria on the Euphrates River.

Washington claims Al-Kibar, razed to the ground by Israeli planes in September, was a nuclear facility built with North Korean help and close to becoming operational. It has provided intelligence and photographic evidence to support its claims.

Syria has denied the allegations as "ridiculous," saying the edifice was simply a disused military building.

The problem is Damascus has wiped clean the site, making the IAEA inspection more difficult, adding to suspicions within elements of the international community about the exact nature of the site.

Heinonen said he was generally satisfied with the degree of cooperation shown by the Syrian authorities so far.

## UN team says deeper Syrian nuke probe needed

By GEORGE JAHN

15 minutes ago [*Accessed 2008-06-25T20:45Z*]

VIENNA, Austria (AP) — An initial probe of U.S. allegations that a Syrian site hit by Israeli warplanes was a secretly built nuclear reactor is inconclusive and further checks are necessary, a senior U.N. atomic inspector said Wednesday.

Olli Heinonen, a deputy director general of the International Atomic Energy Agency, said he was satisfied with what was achieved on his four-day trip but "there is still work that needs to be done" in following up on the claims that Syria was hiding elements of a potential nuclear arms program.

Heinonen spoke to reporters after arriving on a flight from Damascus back to Vienna, headquarters of the IAEA. He met in the Syrian capital with officials in charge of the nation's nuclear program and senior Syrian generals. Damascus claims that the building flattened by Israel was a non-nuclear military structure.

With Syrian authorities imposing a virtual news blackout on his trip, few details had surfaced beyond the fact that Syrian authorities allowed the three-man inspecting team to visit the Al Kibar site targeted in September.

Washington hopes that the U.N. agency team is carrying persuasive evidence backing U.S. intelligence that the structure hit by Israel in September was a nearly completed plutonium-producing reactor.

If so, the trip could mark the start of an investigation similar to the probe Iran has been subjected to over the past five years. The process could draw in countries like North Korea, which Washington says helped Damascus, and Iran, also linked by media reports to Syria's nuclear strivings.

But Heinonen declined to tip his cards on what he and his team had been able to see and do beyond acknowledging they were able to take environmental samples in the large area where material from the site may have been spread by the exploding Israeli ordnance.

"We achieved what we wanted on this first trip," he said. "We continue our discussions, we took the samples we need to take and now it's time to analyze them and also look at the information we got from Syria.

"We will see in the days and weeks what will happen next," he said when asked about the chances of another visit.

Syria agreed to allow the nuclear inspectors to visit the bombed Al Kibar site in early June only after months of delay. And even before the IAEA team left for Damascus on Saturday, Syrian authorities had already said three other locations suspected of possibly harboring secret nuclear activities were off limits.

IAEA officials had sought to play down heightened expectations ahead of the trip. The agency has little formal inspection rights in Syria, which has only a rudimentary declared nuclear program revolving around research and the production of isotopes for medical and agricultural uses, using a small, 27-kilowatt reactor.

Ahead of the trip, a Vienna-based senior diplomat briefed on the inspection team's agenda said they would ask for information related to allegations of secret Syrian nuclear procurements, either from North Korea or the nuclear black market headed by Pakistani scientist A.Q. Khan.

A traditional method at suspected nuclear sites — taking swipes in the search for radioactive traces — should be of no use at Al Kibar. That's because none had been introduced into the alleged reactor before it was struck by Israel, according to intelligence given the agency, both by the U.S and Israel and subsequently by other sources.

So the inspectors focused on other telltale signs — minute quantities of graphite, for instance, which is used as a cooling element in the type of North Korean prototype allegedly being built with help from Pyongyang. Such a reactor contains hundreds of tons of graphite, and any major explosion would have sent dust over the immediate area.

But — if the Syrians are interested in a cover-up — they could have scoured the region to bury, wash away and otherwise remove any such traces.

And although U.S. intelligence says the reactor was close to completion, it is possible any graphite elements were not yet installed at the time of the Sept. 6 bombing.

The inspectors also were expected to have looked for traces of other metals and substances commonly contained in the type of reactor that the Syrians were suspected of building.

## Syrian VP: Syria allowed UN probe to prove US wrong

Associated Press

Published: 06.26.08, 00:00 / Israel News

Syrian Vice President Farouk al-Sharaa said his country allowed UN nuclear inspectors to visit the Al Kibar site in the remote eastern desert, destroyed by Israeli jets last year, to prove US allegations of a covert Syrian nuclear program are false.

Olli Heinonen, a deputy director general of the International Atomic Energy Agency (IAEA) told reporters in Vienna on Wednesday that the initial probe was inconclusive and further checks are necessary.

He said he was satisfied with what was achieved on his three-day trip but "there is still work that needs to be done" in following up on the claims that Syria was hiding elements of a potential nuclear arms program.

However al-Sharaa warned that the IAEA inspectors will not be allowed to probe beyond the Al Kibar site, despite the UN request to visit three other suspect locations.

His comments in an interview with the Hizbullah-owned Al Manar TV station were the first from Syria on the UN visit.

### 'Achieved what we wanted'

Heinonen met in the Syrian capital with officials in charge of the nation's nuclear program and senior Syrian generals, in keeping with claims by Damascus that the building flattened by Israel was a non-nuclear military object.

With Syrian authorities imposing a virtual news blackout on his trip, few details of the visit had surfaced beyond the fact that Syrian authorities had allowed the three-main inspecting team to visit the Al Kibar site.

Washington hopes that the UN agency team is carrying persuasive evidence backing US intelligence that the structure was a nearly completed plutonium-producing reactor. If so, the trip could mark the start of massive atomic agency investigation similar to the probe Iran has been subjected to over the past five years. What's more, the process could draw in countries like North Korea, which Washington says helped Damascus, and Iran, also linked by media reports to Syria's nuclear strivings.

But Heinonen declined to tip his cards on what he and his team had been able to see and do beyond acknowledging that they were able to take environmental samples in the area designed to capture traces of material that were likely spread over a large area by Israeli ordinance.

"We achieved what we wanted on this first trip," he said. "We continue our discussions, we took the samples we need to take and now it's time to analyze them and also look at the information we got from Syria. We will see in the days and weeks what will happen next," he answered when asked about the chances of a follow-up visit.

## **U.S. says Syria must not hinder IAEA nuclear probe**

By Mark Heinrich

Thursday, June 26, 2008; 7:15 AM

VIENNA (Reuters) - The United States on Thursday welcomed a U.N. check of a Syrian site said to have harbored an almost-built secret nuclear reactor before Israel destroyed it, but called on Damascus not to restrict the investigation.

Syria gave International Atomic Energy Agency sleuths a good look at the isolated desert site during a four-day fact-finding trip, but results were inconclusive and further investigation is needed, they said on their return from Syria on Wednesday.

"We welcome the inspection as a first step and stand ready to support the IAEA as it continues its investigation into Syria's clandestine nuclear activities," said Gregory Schulte, U.S. ambassador to the U.N. nuclear watchdog.

"We call on Syria to fully cooperate with the IAEA and in no way hinder the investigation by refusing the IAEA unfettered access to any site or information needed for the investigation," he said in a statement emailed to Reuters.

Syria denies concealing anything from the IAEA in violation of its non-proliferation treaty commitments, saying Israeli warplanes bombed an ordinary military building last September.

Washington says Syria built a camouflaged graphite reactor based on a North Korean design, with Pyongyang's assistance.

U.S. nuclear analysts say satellite images show the Syrians swiftly razed the site, removed debris and put up a new building after the bombing in what they regard as a possible cover-up.

The initial scope of the IAEA inquiry was limited by what diplomats said was Syria's refusal to let the inspectors search two or three other sites for any signs of a source of fuel for the reactor, or relevant equipment or facilities.

Syria denied access on national security grounds, asserting such sites were conventional military bases only and off-limits.

Asked about other sites, the IAEA's inspections chief Olli Heinonen said on Wednesday the issue would be addressed later.

### **IAEA MANDATE LIMITED**

Syrian Vice President Farouq al-Shara told Lebanon's Al-Manar television that Damascus opened al-Kibar to the IAEA so it could see for itself "the allegations are forged and false."

But he said the IAEA had a mandate to "visit the site in question only." Al-Manar did not say when Shara's remarks were taped. Syria imposed a news blackout on the inspectors' visit and was maintaining official silence on Thursday.

Heinonen said his team was able to take extensive samples in search of traces of evidence at the remote desert location and the sensitive inquiry was off to "a good start," with Syria's cooperation generally satisfactory at this stage.

He said it would take some time to evaluate initial findings and talks with Syrian officials to get explanations would go on. He hinted further visits would be needed to resolve the mystery.

Mark Fitzpatrick, non-proliferation scholar at London's International Institute for Strategic Studies, said Heinonen's remarks were diplomatically phrased to obscure the true level of Syrian cooperation which appeared to be little.

"Environmental samples that would show the presence of uranium particles have little meaning at a site where there apparently was no uranium fuel to begin with," said Fitzpatrick.

"It would be useful to know whether Syria allowed the inspectors to use sonar equipment to judge what is below the surface at the site, including the buried pipes for cooling and discharge to the Euphrates River," he said.

"And did Syria allow the inspectors to look for graphite particles in the areas outside the land that was bulldozed after the Israeli attack? I suspect that the inspectors were tightly restricted in what they were allowed to observe and measure."

The IAEA dispatched nuclear detectives to Syria after receiving satellite and ground photos from U.S. intelligence of the al-Kibar site in April.

Damascus is an ally of Iran, whose secretive nuclear program has been under IAEA investigation since 2003. Damascus has accused the United States of doctoring evidence in collusion with Israel, believed to be the Middle East's only nuclear-armed power.

### **Statement by the Press Secretary on North Korea**

The United States welcomes the North Korean declaration of its nuclear programs. Today's development is an important step in the multi-step process laid out in the Six Party Talks between North Korea, China, Japan, Russia, South Korea and the United States.

The Six Party Talks are based on a principle of "action for action." North Korea has pledged to disable all its nuclear facilities and tomorrow will destroy the cooling tower of the Yongbyon reactor. North Korea also pledged to declare its nuclear activities. This information will be essential to verifying that North Korea is ending all of its nuclear programs and activities.

The United States will respond to North Korea's actions by lifting the provisions of the Trading with the Enemy Act as well as announcing our intent to rescind North Korea's designation as a State Sponsor of Terror in 45 days. During this period, the United States will carefully assess North Korea's actions particularly with regard to verification.

There is still more work to be done in order for North Korea to end its isolation. It must dismantle all of its nuclear facilities, give up its separated plutonium, and resolve outstanding questions on its highly enriched uranium and proliferation activities. It must end these activities in a fully verifiable way.

Multilateral diplomacy is the best way to peacefully resolve the nuclear issue. North Korea should seize this moment of opportunity to restore its relationship with the international community.

The President will make a statement on this subject in the Rose Garden at 7:40 am EDT today.

### **President Bush Discusses North Korea**

Rose Garden  
7:40 A.M. EDT

THE PRESIDENT: Good morning. The policy of the United States is a Korean Peninsula free of all nuclear weapons. This morning, we moved a step closer to that goal, when North Korean officials submitted a declaration of their nuclear programs to the Chinese government as part of the six-party talks.

The United States has no illusions about the regime in Pyongyang. We remain deeply concerned about North Korea's human rights abuses, uranium enrichment activities, nuclear testing and proliferation, ballistic missile programs, and the threat it continues to pose to South Korea and its neighbors.

Yet we welcome today's development as one step in the multi-step process laid out by the six-party talks between North Korea, China, Japan, Russia, South Korea, and the United States.

Last year, North Korea pledged to disable its nuclear facilities. North Korea has begun disabling its Yongbyon nuclear facility -- which was being used to produce plutonium for nuclear weapons. This work is being overseen by officials from the United States and the IAEA. And to demonstrate its commitment, North Korea has said it will destroy the cooling tower of the Yongbyon reactor in front of international television cameras tomorrow.

Last year, North Korea also pledged to declare its nuclear activity. With today's declaration, North Korea has begun describing its plutonium-related activities. It's also provided other documents related to its nuclear programs going back to 1986. It has promised access to the reactor core and waste facilities at Yongbyon, as well as personnel related to its nuclear program. All this information will be essential to verifying that North Korea is ending its nuclear programs and activities.

The six-party talks are based on a principle of "action for action." So in keeping with the existing six-party agreements, the United States is responding to North Korea's actions with two actions of our own:

First, I'm issuing a proclamation that lifts the provisions of the Trading with the Enemy Act with respect to North Korea.

And secondly, I am notifying Congress of my intent to rescind North Korea's designation as a state sponsor of terror in 45 days. The next 45 days will be an important period for North Korea to show its seriousness of its cooperation. We will work through the six-party talks to develop a comprehensive and rigorous verification protocol. And during this period, the United States will carefully observe North Korea's actions -- and act accordingly.

The two actions America is taking will have little impact on North Korea's financial and diplomatic isolation. North Korea will remain one of the most heavily sanctioned nations in the world. The sanctions that North Korea faces for its human rights violations, its nuclear test in 2006, and its weapons proliferation will all stay in effect. And all United Nations Security Council sanctions will stay in effect as well.

The six-party process has shed light on a number of issues of serious concern to the United States and the international community. To end its isolation, North Korea must address these concerns. It must dismantle all of its nuclear facilities, give up its separated plutonium, resolve outstanding questions on its highly enriched uranium and proliferation activities, and end these activities in a way that we can fully verify.

North Korea must also meet other obligations it has undertaken in the six-party talks. The United States will never forget the abduction of Japanese citizens by the North Koreans. We will continue to closely cooperate and coordinate with Japan and press North Korea to swiftly resolve the abduction issue.

This can be a moment of opportunity for North Korea. If North Korea continues to make the right choices, it can repair its relationship with the international community -- much as Libya has done over the past few years. If North Korea makes the wrong choices, the United States and our partners in the six-party talks will respond accordingly. If they do not fully disclose and end their plutonium, their enrichment, and their proliferation efforts and activities, there will be further consequences.

Multilateral diplomacy is the best way to peacefully solve the nuclear issue with North Korea. Today's developments show that tough multilateral diplomacy can yield promising results. Yet the diplomatic process is not an end in itself. Our ultimate goal remains clear: a stable and peaceful Korean Peninsula, where people are free from oppression, free from hunger and disease, and free from nuclear weapons. The journey toward that goal remains long, but today we have taken an important step in the right direction.

I'll take a couple of questions.

Mike.

Q Mr. President, thank you very much. After declaring them a member of the "axis of evil," and then after that underground nuclear tests that North Korea conducted in 2006, I'm wondering if you ever doubted getting to this stage. And also, I'm wondering if you have a message for the North Korean people.

THE PRESIDENT: I knew that the United States could not solve, or begin to solve, this issue without partners at the table. In order for diplomacy to be effective, there has to be leverage. You have to have a -- there has to be consequential diplomacy.

And so I worked hard to get the Chinese and the South Koreans and the Japanese and the Russians to join with us in sending a concerted message to the North Koreans, and that is, that if you promise and then fulfill your promises to dismantle your nuclear programs, there's a better way forward for you and the people. In other words, as I said in the statement, it's action for action.

It took a while for the North Koreans to take the six-party talks seriously, and it also took there to be concerted messages from people other than the United States saying that if you choose not to respond positively there will be consequences.

And so I'm -- it's been a -- multilateral diplomacy is difficult at times. It's hard to get people heading in the same direction, and yet we were able to do so along -- our partners helped a lot, don't get me wrong.

The message to the North Korean people is, is that we don't want you to be hungry; we want you to have a better life; that our concerns are for you, not against you; and that we have given your leadership a way forward to have better relations with the international community. This is a society that is regularly going through famines. When I campaigned for President, I said we will never use food as a diplomatic weapon. In North Korea, we have been concerned that food shipments sometimes don't make it to the people themselves -- in other words, the regime takes the food for their own use.

So my message to the people is, is that we'll continue to care for you and worry about you, and at the same time, pursue a Korean Peninsula that's nuclear weapons free. And today we have taken a step, and it's a very positive step, but there's more steps to be done.

Deb.

Q Mr. President, what do you say to critics who claim that you've accepted a watered-down declaration just to get something done before you leave office? I mean, you said that it doesn't address the uranium enrichment issue, and, of course, it doesn't address what North Korea might have done to help Syria build its reactor.

THE PRESIDENT: Well, first, let me review where we have been. In the past, we would provide benefits to the North Koreans in the hope that they would fulfill a vague promise. In other words, that's the way it was before I came into office.

Everybody was concerned about North Korea possessing a nuclear weapon; everybody was concerned about the proliferation activities. And yet the policy in the past was, here are some benefits for you, and we hope that you respond. And, of course, we found they weren't responding. And so our policy has changed, that says, in return for positive action, in return for verifiable steps, we will reduce penalties. And there are plenty of restrictions still on North Korea.

And so my point is this, is that -- we'll see. They said they're going to destroy parts of their plant in Yongbyon. That's a very positive step -- after all, it's the plant that made plutonium. They have said in their declarations, if you read their declarations of September last year, they have said specifically what they will do. And our policy, and the statement today, makes it clear we will hold them to account for

their promises. And when they fulfill their promises, more restrictions will be eased. If they don't fulfill their promises, more restrictions will be placed on them. This is action for action. This is we will trust you only to the extent that you fulfill your promises.

So I'm pleased with the progress. I'm under no illusions that this is the first step; this isn't the end of the process, this is the beginning of the process of action for action. And the point I want to make to our fellow citizens is that we have worked hard to put multilateral diplomacy in place, because the United States sitting down with Kim Jong-il didn't work in the past. Sitting alone at the table just didn't work.

Now, as I mentioned in my statement, there's a lot more verification that needs to be done. I mentioned our concerns about enrichment. We expect the North Korean regime to be forthcoming about their programs. We talked about proliferation. We expect them to be forthcoming about their proliferation activities and cease such activities. I mentioned the fact that we're beginning to take inventory, because of our access to the Yongbyon plant, about what they have produced, and we expect them to be forthcoming with what they have produced and the material itself.

So today I'm just talking about the first step of a multi-step process. And I want to thank our partners at the six-party talks. It's been incredibly helpful to achieve -- the beginnings of achieving a vision of a nuclear-free Korean Peninsula to have the Chinese to be as robustly involved as they are. You notice that the North Koreans passed on their documents to the Chinese; after all, we're all partners in the six-party talks.

The other thing I want to assure our friends in Japan is that this process will not leave behind -- leave them behind on the abduction issue. The United States takes the abduction issue very seriously. We expect the North Koreans to solve this issue in a positive way for the Japanese. There's a lot of folks in Japan that are deeply concerned about what took place. I remember meeting a mother of a child who was abducted by the North Koreans right here in the Oval Office. It was a heart-wrenching moment to listen to the mother talk about what it was like to lose her daughter. And it is important for the Japanese people to know that the United States will not abandon our strong ally and friend when it comes to helping resolve that issue.

Today is a positive day; it's a positive step forward. There's more work to be done, and we've got the process in place to get it done in a verifiable way.

Thank you.

For Immediate Release  
Office of the Press Secretary  
June 26, 2008

**Press Briefing by National Security Advisor Stephen Hadley**

James S. Brady Press Briefing Room  
9:23 A.M. EDT

*[EXCERPTS]*

MR. HADLEY: Good morning. I think you probably all heard the President's statement this morning about developments in the six-party talks involving the denuclearization of the Korean Peninsula. I wanted to provide a little more detail on some of the things that the President talked about, and then I'd be delighted to answer questions.

*[deletia]*

We appreciate the declaration, obviously, that North Korea has provided to China today, and that will be ultimately circulated to the six parties. That said, we have some concerns that will be addressed as part of this verification and monitoring process that we talked about today.

One of those, of course, is just exactly how much plutonium has North Korea produced, and the access to records and personnels and to sites that the North Koreans have said the six parties will have will help answer that question, because understanding how much plutonium North Korea has produced, of course, is the step to ultimately having that plutonium removed from North Korea as part of the denuclearization of the Peninsula to which North Korea has agreed.

Secondly, there's concerns about the uranium enrichment program. This was something that was really discovered in 2001-2002 time frame. The North Koreans initially affirmed the program; they subsequently denied it. They have basically said that they are not now engaged in any enrichment activities, and they will not be engaging in uranium enrichment activities in the future.

That said, our intelligence community has some concerns about their past activities and has some concerns about potentially ongoing activities. And we have been learning more about these potential activities, as part of this six-party process. That's one of the things that has been useful about it. And the second thing is that it provides a framework for us to be able to pursue these concerns with North

Korea and to get to the bottom of this issue of the uranium enrichment program, because it would be one of the programs that North Korea has agreed to end as part of the six-party process -- because, remember, it is a denuclearization of the Korean Peninsula, and the ending of all nuclear programs and activities by North Korea. That's what North Korea has agreed to; that's what this process is about.

Obviously we're concerned about their proliferation activities. Everybody knows about the activity with respect to Syria and North Korea assistance in building a nuclear reactor in Syria. We want to get to the bottom of that so we understand what that activity was to make sure there is not continuing activity going on between North Korea and Syria, or activity with respect to other locations as well.

And that is why, of course, the verification and monitoring regime that we talked about -- the verification and monitoring protocol is so important, and we believe it will -- using the access that North Korea has agreed to give us, will allow us over time to get to the bottom of these questions. But I want to emphasize the "over time." This is a process. It is going to take time. This is an important step today. I think it marks some real progress in this process that we have had -- not had before, but as the President emphasized, it needs to be followed by a series of other steps. And this is going to take some time.

So a good day. More to do. And I'd be delighted to answer any questions. Terry.

Q Could you clarify -- does North Korea come clean about its cooperation with Syria on its nuclear program? Does it document how many nuclear bombs, nuclear weapons that it has? And does it come clean about uranium enrichment? You said that these are things you need to get to the bottom of.

MR. HADLEY: Right.

Q Are they not in this accounting?

MR. HADLEY: What they -- the accounting they have given is, we are not now engaged in any enrichment program or any proliferation activities and will -- we will not in the future. But, of course, part of being able to confirm that they're not now engaging in these activities is to be able to understand what they did in the past, because that is the only way we can be able to say we understand what was done in the past, we have seen that being wound down, and we therefore have confidence that they are not undergoing that activity.

So the declaration they've made, what the disclosure they made is, we're not engaged in this activity now, will not engage it in the future. We've made it very clear in this process and in the documents that constitute the declaration, that we have concerns about their past activities in Syria and in the enrichment area, and that raises questions about whether they have, in fact, are engaging in none of that activity today.

We've made those concerns clear. The North Koreans acknowledge those concerns. They know we are going to want to be pursuing them in this six-party process, and that's, of course, what is ahead of us.

*[deletia]*

Q You say that you are aware, or that they are aware of your concerns about these other issues not addressed today.

MR. HADLEY: Well, addressed in the sense, Bill, of they say they're not engaged in these activities now and won't in the future. They also have acknowledged in writing that we have raised concerns about their enrichment activities in the past and their actions with respect to Syria. And they have, as you've noticed, have not been out publicly denying that -- or discounting these concerns. So we're in a situation of not quite admitting, not denying, but opening the door for us to be able to try and get greater clarity.

Q Is this, does anything in the present agreements obligate them to come clean on these issues? You know what your critics are saying, that they will continue to evade, prevaricate and otherwise avoid full answers.

MR. HADLEY: Well, we will see. We've made it clear that in order for this process to go forward, which has further obligations by them, but also further benefits for them in terms of ultimately moving to normalization of relations and the like, we've made it very clear that for us to move forward, we are going to need to be able to get to the bottom of these issues with respect to plutonium enrichment and proliferation.

Q But they're not obliged to give you all of these answers.

MR. HADLEY: Well, we've -- they've set up a process; they've said we will have access. We've said we were going to be making the questions, and that we need to get answers and be satisfied or we aren't going to be able to move forward. It's pretty clear.

Sir.

Q Secretary Rice said that the U.S. has the information to verify the dismantlement of the nuclear program, but isn't nonproliferation a different issue? Isn't that something that's going to be very difficult to monitor in the future, as it has been in the past?

MR. HADLEY: Yes. Yes. This is a very closed regime. And part of this process is to see if we can get this regime to open up with respect to the nuclear issues. And our hope, of course, is that -- and it's in the September '05 document -- that the opening up that we hope the regime will do on the nuclear issues in order for us to get satisfaction on these three issues will be part of a gradual process of opening this regime, because we think that is the way, ultimately, we're going to be able to do something which is something all of us would like to do, and that the President talked about today -- have this regime open up and provide a better life to their people.

Q Is there anything in this process that makes pursuing their proliferation in the future easier for you to follow on?

MR. HADLEY: Yes, there is a monitoring mechanism, and we have the commitments from the North Koreans for the kind of access that I described. One of the things, for example, that will be very important is to get a better understanding of their uranium ore and processing activities up front, how much uranium ore were they able to pull out of the ground, because that will tell you how much they might have had available for proliferation for a plutonium program, for an enrichment program, and potentially, proliferation overseas, which, of course, would be extremely troubling.

The thing that will be difficult to get our hands around is other arrangements like they had with Syria, other facilities either in Syria that we have suspicions about, perhaps, or other facilities and patterns of cooperation with other countries. That's why access to the people involved in the nuclear program is going to be very important, because in the end of the day, those are programs driven less by material and more by brains, and brains are in the hands of their people. And so that's why we think access to their personnel is going to be very important.

*[deletia]*

Q What is your response to criticism that, in effect, a term paper is being accepted that isn't complete because the most contentious issues -- the highly enriched uranium and the proliferation activity with regard to Syria -- are not in this report?

MR. HADLEY: Well, I think the most serious issues are front and center. Because, remember, as best we can understand, it is the plutonium program that produced plutonium that was in the weapons that North Korea tested in 2006. And it is the plutonium infrastructure that can, if it is not dismantled, churn out additional nuclear materials for nuclear weapons. So we think getting our hands around that program, knowing exactly how much plutonium was produced, getting that at some point given up, or as we say, abandoned by the North Koreans, and getting that infrastructure disabled and dismantled is the most immediate source of nuclear material for North Korea and the most threatening source.

So we think that's a priority. But at the same time, we have recognized that we do have a declaration by the North Koreans on these other items -- that is to say their assertions that they're not engaged in either proliferation or uranium activity and will not in the future. But we also have a mechanism that will allow us to get satisfaction, we hope, over time, of the concerns we have.

So this is not accepting a passing grade. In some sense it is we're passing the paper back and asking the student to come in and work with us cooperatively to resolve the questions we have about their draft. That's what we're trying to do.

END 10:04 A.M. EDT

## **Diplomacy Is Working on North Korea**

Secretary Condoleezza Rice

Op-Ed

The Wall Street Journal

June 26, 2008

*[EXCERPTS]*

North Korea will soon make a declaration of its nuclear programs, facilities and materials. This is an important, if initial, step and we will demand that it be verifiable as complete and accurate.

Amidst all the focus on our diplomatic tactics, it is important to keep two broader points in mind. One, we are learning more about Pyongyang's nuclear efforts through the six-party framework than we otherwise would be. And two, this policy is our best option to achieve the strategic goal of verifiably eliminating North Korea's nuclear weapons and programs.

*[deletia]*

Getting a handle on North Korea's uranium-enrichment program is harder, because we simply do not know its full scale or what it yielded. And yet, because of our current policy, we now know more about North Korea's uranium-enrichment efforts than before, and we are learning more still – much of it troubling. North Korea acknowledges our concerns about its uranium-enrichment program, and we will insist on getting to the bottom of this issue.

Similarly, we know that North Korea proliferated nuclear technology to Syria, but we do not know whether that is the end of the story. Rather than just trying to address this threat unilaterally, we will be more effective in learning about North Korean proliferation and preventing its continuation through a cooperative effort with Japan, South Korea, China and Russia.

## **NKorea mum on past proliferation, enrichment: US**

by Staff Writers

Washington (AFP) June 26, 2008

The White House on Thursday acknowledged that North Korea's nuclear accounting did not meet past US demands for a full detailing of alleged uranium enrichment or shared atomic know-how overseas.

"The accounting they have given is: 'We are not now engaged in any enrichment program or any proliferation activities and we will not in the future,'" said US national security adviser Stephen Hadley.

Repeatedly pressed on whether the secretive communist regime in Pyongyang had spelled out its past activities on both fronts, Hadley gave reporters variations on the same answer and said Washington still had concerns.

"The declaration they've made, with the disclosure they've made, is 'we're not engaged in this activity now. We'll not engage it in the future,'" and pledged to work on a structure for verifying their past activities, he said.

"And they have, as you've noticed, have not been out publicly denying that or discounting these concerns.

"So we're in the situation of not quite admitting, not denying, but opening the door for us to be able to try and get greater clarity," Hadley said.

The outstanding issues include Washington's charges that North Korea helped Syria start construction on a suspect nuclear site, which Israel destroyed in an air strike in September, he said. Syria denies the allegation.

"We want to get to the bottom of that so we understand what that activity was to make sure there is not continuing activity going on between North Korea and Syria or activity with respect to other locations, as well," said Hadley.

The State Department said however in a statement that North Korea had handed China "a package" of nuclear declarations which "addresses North Korea's uranium enrichment and proliferation activities" without giving any details.

North Korea will not be removed from the US terrorism list until a verification system is put in place and verification itself begins, the statement said.

"After a period of 45 calendar days and absent the enactment of a joint resolution blocking the proposed rescission, the secretary of state may rescind North Korea's designation as a state sponsor of terrorism on August 11," it said.

Asunto: Breaking News: Al-Kibar, In Syria, Was Nuclear Reactor For Iran....

**6/24/2008: Intel News Brief: Breaking News: Al-Kibar, In Syria, Was Nuclear Reactor For Iran:**

According to German intelligence reports, a joint plan by Syria, North Korea and Iran for a secret nuclear reactor for military use was to have been developed at the Al-Kibar site in Syria, which was destroyed by Israel last September, Der Spiegel is reporting.

The report claimed that Al-Kibar was to have been used as a temporary site for Iran to develop a nuclear bomb until it was able to do so on its own territory.

The plan was discussed during a visit by Iranian President Mamhoud Ahmadinejad to Syria in 2006. The report comes as a team of IAEA inspectors arrived in Syria on Sunday for a first-hand look at the al-Kibar site.

Damascus quickly buried the bombed-out structure in hopes such a UN inspection would not detect its nuclear use.

Syria denies it has any covert nuclear weapons program and says the Israelis hit an ordinary military structure being built at al-Kibar, in the northeastern desert.

## **Analysis: Nuclear papers leave many questions open**

By ANNE GEARAN

The Associated Press

Friday, June 27, 2008; 3:29 AM

WASHINGTON -- The Bush administration breathed easier when the prickly and unpredictable North Korean government stuck to its script and handed over long-delayed nuclear paperwork as planned.

But if the documentation provided Thursday were a college term paper, the grade would be "incomplete."

The documents do not spell out the number of plutonium bombs in storage or make promises about what happens to them. That could come in the next phase of the often-troubled talks with North Korea, when the reclusive communist country is supposed to destroy its weapons and facilities.

Missing are details about an alleged parallel program to seek weapons fueled by enriched uranium. Also missing is a complete account of North Korea's role in helping Syria develop what the U.S. alleges was a nuclear facility. The site was destroyed by Israel last year.

Those activities are addressed in a separate two-page document turned over to the U.S. in April, a senior U.S. official told The Associated Press. That previously secret document, known as a "confidential minute," probably will be attached to the longer declaration.

In the attachment, the U.S. outlines its concerns about uranium enrichment and the nuclear cooperation with Syria. North Korea acknowledges those concerns and says it will cooperate to work out differences to "mutual satisfaction," said the official, who spoke on condition of anonymity to describe the agreement before the documents were released Thursday.

In fact, the papers awaited by the world for months leave unanswered the biggest questions about North Korea's nuclear work and will tell investigators little they didn't already know.

The chief unanswered question almost surely will outlast the Bush administration: Is North Korea serious about giving up nuclear weapons that have proved a valuable bargaining chip?

"How this process will work out in the end and whether they will give up their nuclear weapons, frankly, I think nobody knows the answer right now," Defense Secretary Robert Gates said at the Pentagon.

The document and the underlying deal it solidifies provide no assurance that the North Korea, which cheated on an earlier agreement with the U.S., will not do so again.

The roughly 60-page document is less precise than what the U.S. once demanded, opening the administration to conservatives' charge that President Bush wanted a deal so badly that he settled for a bad one.

For the administration, the main value of the handover is that it happened at all. It is a small but important marker that Bush did not misplace his newfound confidence in a country he once branded as part of an "axis of evil."

Bush tried to inoculate himself against criticism from the right with a Rose Garden announcement that rapped North Korea even as he delivered on a promise of economic and political goodies in return for the nuclear accounting.

"The United States has no illusions about the regime in Pyongyang," Bush said, and will only trust North Korea to the extent it shows it can be trusted.

Washington says it will retaliate if North Korea reneges on a promise to eventually get rid of all its weapons, and that even North Korea's sometime protectors in Asia will do the same.

The carefully orchestrated handover is of little practical consequence to North Korea. It gains no immediate benefit from the lifting of some trade penalties or from Bush's promise to remove the country from the U.S. list of nations that sponsor terrorism.

Those are symbolic political victories for impoverished and isolated North Korea, however, and ruler Kim Jong Il is expected to make the most of them. He offered a symbolic gesture of his own \_ the televised destruction of the distinctive conical cooling tower at the shuttered Yongbyon plutonium complex.

The papers themselves document the work of Yongbyon, an aging facility some analysts think was nearly obsolete anyway.

Still, the paperwork emerged as a linchpin for the nuclear disarmament deal the North has worked out over three years with the United States, Japan, South Korea, China and Russia. During that time, the talks stopped and started several times, and North Korea exploded a nuclear device in an underground test.

North Korea missed an end-of-2007 deadline to turn over the inventory, and complained that the United States was moving the goal posts. Assistant Secretary of State Christopher Hill worked out a painstaking compromise that culminated in Thursday's handover.

Had the clock run much longer, Bush would have had little chance of getting the more significant prize \_ the destruction of actual bombs \_ before he leaves office. As it is, Hill has said it will be difficult to complete the deal by the end of this year.

The declaration details the amount of plutonium the North produced, down to the gram. A senior U.S. official says North Korea claims to have produced an amount of plutonium in the low 40-kilogram range (about 88 pounds), including estimates of waste.

That is enough to construct at least a half-dozen nuclear bombs and is in line with U.S. intelligence estimates.

North Korea stopped making plutonium and has partly disabled its nuclear facilities so they cannot be quickly restarted. But it has its stockpile of radioactive material for now.

"I'm pleased with the progress," Bush said. "I'm under no illusions that this is the first step; this isn't the end of the process, this is the beginning."

*[Sourcebook note: a "confidential minute" was also part of the North Korea – US nuclear agreement of October, 1994. See Strategic Implications of the U.S.-DPRK Framework Agreement by Thomas L. Wilborn: <http://www.milnet.com/korea/usdprkp1.htm#N2> . According to Honey and Vinegar: Incentives, Sanctions, and Foreign Policy by Richard Haass and Meghan L. O'Sullivan, "[the] confidential minute barred nuclear reactors or related facilities at other sites." ]*

## Syrian minister laments Israel's nuclear edge

Mon Jun 30, 2008 9:03am EDT

By Khaled Yacoub Oweis

DAMASCUS (Reuters) - Syria's foreign minister said on Monday he wished his country could match Israel's atomic arsenal, but denied U.S. allegations that it had been building a secret nuclear reactor at a site bombed by Israel last year.

Walid al-Moualem, making Syria's first official comments on last week's visit to the site by U.N. nuclear investigators, said it had been handled solely by Syrian security officials.

"Syria would not have allowed the inspectors in if it had such a secret (nuclear) program," Moualem told reporters after meeting his Norwegian counterpart, Jonas Gahr Stoere.

"As a private citizen, I wish Syria had this program quite simply because Israel has made huge advances in its manufacturing of nuclear bombs," the foreign minister said.

Syria has accused the United States of helping Israel conduct the September 6 raid that Washington said destroyed a reactor built with the help of North Korea. Syria said the site was a normal military complex. Israeli officials have kept quiet on the nature of the target.

Unlike Syria, Israel has not signed the Non-Proliferation Treaty. It is widely believed to have the only nuclear arsenal in the Middle East, developed over decades with Western help.

Investigators from the International Atomic Energy Agency (IAEA) said after a four-day visit to Syria last week that they had examined the bombed site, but that more checks were needed.

Chief inspector Olli Heinonen said the inquiry was off to a good start, with Syria's cooperation satisfactory so far.

Syria said it was not hiding anything and urged the world to hold Israel accountable for what it described as a massive Israeli nuclear arms program.

The IAEA sent Heinonen's team after receiving U.S. photos of the al-Kibar site that prompted the U.N. nuclear watchdog to put Syria on its proliferation watch list in April.

The IAEA inspectorate is expected to report to the agency's board of governors before its next meeting in September.

Syria and Israel began indirect peace talks months after the raid. Moualem said the Turkish-mediated talks had their "ups and downs" but he expected a third round of negotiations to take place in Turkey soon.

"The present negotiations process aims at establishing the basis to launch direct talks. We have an opportunity to reach a just and comprehensive peace. I hope the Israelis do not waste it by their internal wrangling," Moualem said.

*[deletia]*

**Syria denies bombed site was nuclear reactor;  
minister says he wishes Syria had such a program**

The Associated Press

Monday, June 30, 2008

*[EXCERPTS]*

DAMASCUS, Syria: Syria's foreign minister on Monday repeated his country's denials that a site bombed by Israel last year was a nascent nuclear reactor but said he wished his country had such a program to counter Israel's nuclear might.

*[deletia]*

"As a Syrian citizen, I think that had Syria had such a secret program, it wouldn't have allowed inspectors to visit the site. ... This is logic," Foreign Minister Walid al-Moallem said at a joint news conference in Damascus with his Norwegian counterpart, Jonas Gahr Stoere.

"But as a citizen, I wish that Syria would have such a program because Israel simply has made strides in manufacturing nuclear weapons," he said.

Syria's vice president, Farouk al-Sharaa, said Wednesday his country allowed U.N. inspectors to visit the site destroyed by Israeli jets to prove that U.S. allegations of a covert Syrian nuclear program were false.

Al-Sharaa said, however, that the inspectors from the IAEA, the U.N.'s nuclear monitoring agency, will not be allowed to investigate beyond the Al Kibar site, despite a U.N. request to visit three other suspect locations.

Damascus strongly denies U.S. allegations that it is involved in any nuclear activities and fears that Washington could use the accusations to rally international pressure against it.

*[deletia]*

## **U.S. Government Nonproliferation Priorities & Asia**

Friday, 4 July 2008, 5:37 am

Press Release: US State Department

Patricia A. McNerney, Principal Deputy Assistant Secretary, International Security and Nonproliferation

Remarks at the Sydney Institute

Sydney, Australia

July 1, 2008

*[EXCERPT]*

### **North Korea**

The threat posed by North Korea's nuclear program has proven uniquely challenging as a threat to Asian and global security, and to the global nonproliferation regime. We continue to seek the verifiable denuclearization of North Korea in the Six-Party Talks, as agreed in the September 19, 2005 Joint Statement, and have met with some success in moving toward this goal. On February 13, 2007, the Six Parties agreed to an Initial Actions Agreement to implement the commitments made in the 2005 Joint Statement. Under this agreement, the DPRK shut down and sealed the Yongbyon nuclear facility, with a view to its eventual abandonment. Since July 2007, IAEA personnel have been on the ground in the DPRK monitoring and verifying the shut down status of Yongbyon. And, in October 2007, the Six Parties agreed to a joint statement on Second-Phase actions, where North Korea committed to disable all existing nuclear facilities, beginning with the three core facilities at Yongbyon. Additionally, North Korea agreed to provide a complete and correct declaration of all its nuclear programs and reaffirmed its commitment not to transfer nuclear materials, technology, or know-how.

Currently, U.S. personnel are at Yongbyon monitoring disablement activities. To date, eight of eleven agreed disablement actions at the three core facilities have been completed. In addition, the DPRK has taken additional action at Yongbyon by collapsing the cooling tower.

North Korea has now begun to fulfill its commitment to a complete and correct declaration by submitting a declaration to China, the Chair of the Six-Party Talks. In return, President Bush issued a proclamation lifting provisions of the Trading With the Enemy Act with respect to North Korea, and notified the United States Congress of his intent to rescind North Korea's designation as a state sponsor of terror within 45 days.

As part of its declaration package, North Korea has acknowledged our concerns about the DPRK's uranium enrichment and nuclear proliferation activities, specifically with regard to Syria. North Korea's declaration, including its claims about uranium enrichment and proliferation activities, must now be subjected to a comprehensive and rigorous verification process aimed at resolving any discrepancies and verifying the accuracy and completeness of the declaration. Additionally, an accounting of its weapons for eventual abandonment must occur in the next phase.

The United States has repeatedly noted that with denuclearization of the Korean Peninsula, many things are possible. The abandonment of North Korea's nuclear programs and weapons would open the

way for eventual normalization of U.S.-North Korea relations, and a permanent peace regime on the Korean Peninsula. This process, however, cannot move forward without the full implementation of the Joint Statement, leading to the verifiable denuclearization and North Korea's return to the NPT and IAEA Safeguards as a non-nuclear weapons state. In addition, UN Security Council Resolution 1718 will remain in effect until such time as those obligations have been met ensuring North Korea's access to the international community will be restored only upon its nuclear weapons abandonment.

## **Syria**

I cannot talk about the threats posed by North Korean proliferation without mentioning the North Korea-Syria relationship. The United States has long had concerns about North Korean proliferation activities, and in particular their clandestine nuclear cooperation with Syria. Based on strong evidence, the United States believes North Korea assisted with the construction of a reactor at Al-Kibar in Syria. The reactor, which was damaged beyond repair on September 6 of last year, appeared intended to produce plutonium for nuclear weapons.

We strongly support the IAEA's investigation into this cooperation. We certainly do not believe that this one inspection closes the book on Syria's clandestine nuclear cooperation. It will take time and we urge Syria to admit to the IAEA all of its nuclear activities.

In addition to supporting the IAEA's ongoing investigation of Syria's activities, we have sought to address North Korea's proliferation activity through the Six Party framework. We have made our concerns known to North Korea and it has acknowledged our concerns. The North has stated that there is no ongoing nuclear cooperation with any foreign country, and that there will be no such cooperation in the future. As we begin a verification process for North Korea's nuclear declaration, we will seek to verify that this cooperation has ceased. We will continue to be on the alert for signs of possible renewed cooperation.

## **Progress Made on N. Korea Disarmament Talks**

By Edward Cody

Washington Post Staff Writer

Saturday, July 12, 2008; 9:02 AM

BEIJING, July 12 -- Diplomats from six nations agreed in principle Saturday to set up an intrusive inspection program to verify that North Korea has genuinely dismantled its plutonium-based program to produce fissile material for nuclear weapons.

After three days of talks in Beijing, the negotiators were unable to complete a detailed inspection schedule, however, and decided to refer specific issues back to their capitals in hopes of working out an itemized inspection regime in September, according to the chief U.S. negotiator, Assistant Secretary of State Christopher R. Hill.

"All this kind of stuff requires a lot of scrutiny," Hill said.

The limited progress -- agreement in principle but still bogged down in details -- was typical of the tortuous path followed during the past five years of Chinese-sponsored six-party negotiations designed to eliminate North Korea's nuclear weapons program. It left in suspension such key questions as when North Korea will, as it has pledged several times, reveal whether it has any completed nuclear weapons and where they are stored.

The slow pace increased the probability that the Bush administration will come to an end before complete resolution of one of its main foreign policy goals, ridding North Asia of the threat of nuclear weapons under the command of Kim Jong Il, the unpredictable North Korean leader.

In addition, North Korea has yet to respond in detail to U.S. questions about whether it was seeking to produce material for nuclear weapons through a separate program based on highly enriched uranium and whether it cooperated with Syria in a nuclear development project that was destroyed by Israeli warplanes in September.

For the moment, China announced in a statement, North Korea has agreed to finish by October dismantling its Yongbion nuclear reactor, the facility near Pyongyang where the plutonium-based program was carried out. Wu Dawei, a vice foreign minister who headed China's delegation to the talks, said the North Korean government also agreed that inspections to verify the dismantlement will include visits by experts, perusal of official documents and interviews with key scientists.

At the same time, the other parties to the negotiations -- which include Japan and Russia in addition to China, the United States and the two Koreas -- agreed to make sure that promised fuel deliveries, amounting to the equivalent of 1 million tons, arrive in North Korean ports before the same deadline, he said.

The United States and Russia agreed to shoulder the main financial burden of providing the heavy fuel oil required by North Korea, the Chinese statement said. China and South Korea said they would combine for other kinds of economic aid, including equipment for the country's rickety electricity grid and transport system, it added.

Despite its wealth, Japan has refused to provide aid until it gets an acceptable accounting of Japanese citizens kidnapped by North Korean intelligence in the 1970s and 1980s to train North Korean spies.

North Korea has said it refuses to move forward on revealing the full extent of its nuclear program, as promised in February 2007, until the fuel and other economic aid it was promised is actually delivered. So far, the North Korean government complained, only about 40 percent has been provided.

## **Israel's airstrike on Syria still creating political puzzlement**

Talk Radio News Service

Staff

July 14, 2008

The United States Institute of Peace (USIP) held a discussion on "Israel's Airstrike on Syria's Nuclear Reactor: Preventive War and the Nonproliferation Regime." In September of 2007, Israel attacked what was rumored to be a partially constructed nuclear facility in Syria, and this facility has remained a subject of speculation in the months following the attack. Daryl Kimball, the executive director of the Arms Control Association, explained that there was very little information pertaining to this Syrian site immediately after the raid. Now, seven months after the fact, Kimball said U.S. intelligence believes that the site was a small nuclear facility under construction for Syrian military purposes.

David Albright, the president of the Institute for Science and International Security, said that Israel's airstrike on Syria is a very strange and almost bizarre issue. Albright said that there was no doubt in his mind that a plutonium producing nuclear reactor was being constructed in Syria. He explained that there had been too much debate on whether a reactor was present and not enough discussion on whether Israel should have attacked the site in the first place. Albright also said that The International Atomic Energy Agency (IAEA) has not been paying enough attention to illicit nuclear trading; evidence had been obtained showing that Syria had used a North Korean trading company in order to get ahold of the nuclear materials needed for the facility.

Avner Cohen, a senior fellow at USIP, agreed with Albright and said the situation was "quite bizarre" and caused a lot of political puzzlement. Cohen explained that this attack was similar to Israel's attack on Iraq in 1981, but also very different. In 1981, Cohen said that Israel attacked the Iraqi site on their own and acknowledged, defended, and justified their actions after the fact. The 2007 attack on Syria, however, was accomplished with communication with North Korea, and was not acknowledged. Cohen explained that not only did Israel not acknowledge the attack, but Syria also said nothing and made no complaints other than an air space violation. According to Cohen, this response of a "very loud silence" is the main difference between the two Israeli-an attacks.

Leonard Spector, the deputy director of the James Martin Center for Nonproliferation Studies, talked about the attacks correlation with Iran. He said that the deliberate silence following the incident does not serve as a "green light" for taking action in Iran. Spector also talked about the Six Party talks and explained that though these talks are making progress, they are still "a far way from home." Spector said that construction of the nuclear site in Syria was under way during the Six Party talks and nuclear exports with North Korea were taking place during these talks.

**Press Briefing by Senior Director for Asian Affairs at the National Security Council,  
Dennis Wilder, on President's Trip to Asia**

James S. Brady Press Briefing Room

July 30, 2008

4:20 P.M. EDT

*[EXCERPT]*

*[deletia]*

Q And on North Korea?

MR. WILDER: North Korea -- we are obviously all aware that the President talked about the de-listing of the North Koreans from the state sponsors of terrorism if the North Koreans agree to a verification protocol that included the plutonium program, the highly enriched uranium activities, and the proliferation efforts. At this point, we don't have that agreement yet. We are still in discussion with the North Koreans on this issue. The six-party -- all the members of the six-party are in these discussions, and we are looking for the North to come back to us and agree to the kind of protocol that all of the rest of the six-party participants believe is necessary.

We have a little more than 10 days left before the first opportunity for the President to open that window and de-list the North. We hope to hear from the North in this period of time that they will agree to the kinds of measures that are absolutely essential to verify what they have done in the nuclear area. So we are waiting to hear the North's response.

Q Would the President like that to happen while he's in South Korea?

MR. WILDER: The President would like to hear that the North accepts, whenever they accept, whether he's in Thailand, South Korea, or Beijing. I will say that without this action, which we hope the North will take, the de-listing will not occur on that time line.

Q I think it's the 11th is the end of the 45-day notification period.

MR. WILDER: Right.

Q But you just referred to, I believe, is the first opportunity for the President to de-list them. I mean, wouldn't, at the end of that period, if they hadn't agreed to this verification, wouldn't that be the end of the opportunity?

MR. WILDER: No.

Q Okay. Can you explain it?

MR. WILDER: No, the window for doing this remains open. The President has notified the Congress of his intent to de-list, but there is no sort of closure on that. Once he has given the notification, and Congress has acceded to -- then the President -- actually, it's the Secretary of State who will ultimately send this notification to Congress that we have actually de-listed, but the President will instruct the Secretary of State. But he can wait on that notification. There is no -- I'm not aware of any deadline on that.

Q What's the purpose of the 45 days then?

MR. WILDER: The 45 days is to give Congress a chance to comment, and to react to the President's decision.

*[deletia]*

## **North Korean Six-Party Talks and Implementation Activities**

Christopher R. Hill, Assistant Secretary for East Asian and Pacific Affairs

Statement before the Senate Committee on Armed Services

Washington, DC

July 31, 2008

*[EXCERPT]*

### **Current Status of Six-Party Actions**

So what is the status of the implementation of these agreements? The Initial Phase was concluded in July 2007. We are currently completing Second Phase actions and moving into the Third Phase of implementing the September 2005 Joint Statement. In the first two phases, we have made important progress. Under the February 13, 2007 agreement on "Initial Actions for the Implementation of the Joint Statement," the DPRK shut down and sealed core nuclear facilities and invited back the International Atomic Energy Agency (IAEA) to conduct monitoring and verification activities. IAEA personnel have remained in place, monitoring the shut-down and sealing of the Yongbyon nuclear facility, since July 2007. Under the October 3, 2007 agreement on "Second Phase Actions for the Implementation of the Joint Statement," the DPRK has taken significant steps to disable three core Yongbyon nuclear facilities, and on June 26, it provided a declaration of its nuclear programs to the Chinese chair. On June 27, in an important symbol of its commitment to the disablement process, North Korea collapsed the cooling tower at Yongbyon before the international media.

Since November 2007, a rotating team of U.S. experts has been on the ground overseeing disablement of the three core nuclear facilities at Yongbyon, and North Korea is no longer able to produce weapons-grade plutonium at Yongbyon. As of today, the DPRK has completed eight out of 11 agreed disablement tasks, and has discharged more than half of the 8,000 spent fuel rods from the 5-MW(e) reactor. Upon completion of all 11 steps, the DPRK would have to expend significant effort, and time -- upwards of 12 months -- to reconstitute all of the disabled facilities. Our experts continue to report good cooperation with DPRK experts at the site.

The declaration package that the DPRK provided to the Chinese on June 26 addresses its plutonium program, and acknowledged our concerns about the DPRK's uranium enrichment and nuclear proliferation activities, specifically with regard to Syria. The DPRK's declaration is not an end point in our efforts to understand North Korea's nuclear programs, but rather is the basis for a rigorous process of verifying all of the DPRK's nuclear programs. Review of the copies of 19,000 pages of documents, consisting of copies of operating records from its 5-MW(e) reactor at Yongbyon and the reprocessing facility, that the DPRK provided to the United States in May, is already producing results. The Six Parties have agreed to general principles for verification that are guiding ongoing discussions of a

verification mechanism. These principles include access to facilities, documents, and interviews with personnel, and other measures as agreed by the Six Parties. The verification process would include participation by experts from the Six Parties and the IAEA.

In response to the DPRK's actions to fulfill its Second Phase commitments, the United States has also moved forward on fulfilling our Second Phase commitments. On June 26, President Bush announced that he was terminating the exercise of authorities under the Trading with the Enemy Act with respect to the DPRK, and notified Congress of his intent to rescind designation of the DPRK as a State Sponsor of Terrorism (SST) following the 45-day Congressional notification period. The President made clear that we would use this 45-day period to assess the DPRK's cooperation, including on reaching agreement on a verification protocol, and respond accordingly.

## **Sniper Assassinates Top Syrian General With Links To Hizbullah and North Korea**

**08/03/2008**

A top Syrian general who served as the country's liaison officer to Hizbullah was shot dead by a sniper in the Syrian port city of Tartous on Friday. Sources in Damascus said that General Mohammed Suleiman was a key orchestrator in the sharing of nuclear information and technology between Iran, Syrian and North Korea. According to reports he was also responsible for securing the Syrian Al-Kibar nuclear reactor which was destroyed in an Israeli Air Strike last year. The sources said that Syrian authorities had been trying to prevent news of Suleiman's death from being published.

### Summary

-----

1. (S/NF) Syrian Presidential security aide Brigadier General Muhammad Sulayman was assassinated by a sniper late on the evening of August 1 in the coastal city of Tartous. Sulayman enjoyed a reputation among Embassy contacts as having special status and proximity to Bashar. Sulayman was said to have managed special projects for Asad, some of which may have been unknown to the broader Syrian military leadership. Our expectation is that the SARG will try to keep this incident under wraps as long as possible, but that will become more difficult as regional and international press run with the story. End summary.

-----

### Details Murky After Official News Blackout

-----

2. (S/NF) On August 3, the Israeli daily Ha'aretz cited "senior sources in Damascus" in reporting Sulayman's assassination on its website, identifying Sulayman as Asad's "liaison" to Hizballah. Al Hayat and the news ticker Al Bawaba also reported the story. A reliable Embassy press contact said that he had heard of the attack yesterday, and said that the version of the story he had heard was that Sulayman's entire family had also been killed. According to the contact, Syrian security services quickly cordoned and searched the entire beach neighborhood where the shooting had occurred. Other Embassy sources would say little except that Syria-based reporters are under instructions not to report the story. As of late August 3, all Syrian-based press remains silent.

-----

### Pointing the SARG Finger

-----

3. (S/NF) As in other recent assassinations in Syria, speculation about who could have done it will likely be rampant. The most obvious suspects are the Israelis. SARG security services are well aware

that the coastal city of Tartous would offer easier access to Israeli operatives than would more inland locations such as Damascus. Sulayman was not a highly visible government official, and the use of a sniper suggests the assassin could visually identify Sulayman from a distance. As Tartous is also close to the northern-most part of the Syrian-Lebanese border, the SARG might blame pro-Saudi Islamist militants from Tripoli or the Nahr al-Barid camp. Some may even go so far as to suggest the (comment: unlikely) possibility that this was an inside job to prevent Sulayman from damaging the Syrian regime.

-----

#### Implications

-----

4. (S/NF) Although officially just a Brigadier General, Sulayman was considered President Asad's top security aide and was known to manage several special projects for Bashar -- some of which may have been unknown to the broader Syrian military leadership. Sulayman's proximity to Asad granted him special status in the eyes of senior Syrian military officials.

5. (S/NF) If the SARG were to suspect an Israeli role in the assassination, it may be reluctant to level public accusations as (1) they may not know who did it; (2) such accusations could impair or end Syria's nascent peace negotiations with Israel; and (3) publicizing the event would reveal yet another lapse in Syria's vaunted security apparatus. Syria could seek to retaliate against Israel via proxies and allies in Lebanon or elsewhere. If terrorist groups are suspected, this may prompt a domestic crackdown or counterstrikes on targets within the suspected group.

6. (S/NF) Although unlikely, elements within the SARG may suspect or allege a U.S. role. Possible responses could include staged demonstrations against U.S. interests in Syria, retaliatory diplomatic or security measures, or the threat of targeting U.S. installations via proxies. To date, Post has no indications that the SARG is seeking to blame the USG for the assassination, impose retaliatory measures, or retreat from its commitment to ensure security for our facilities and personnel. Additionally, core country team assesses that no immediate, new threats have been identified as a result of post-incident reporting.

-----

#### Probable Short-term Reaction

-----

7. (S/NF) For now, the most likely default SARG response will be to clamp down on information and say nothing while the various security services scramble to identify a culprit and avoid being blamed. However long the Syrians can hold out without saying anything, they will. SARG leaders will likely view any publicity of the assassination as a net loss for the regime.

-----

#### Comment

-----

8. (S/NF) As press in Lebanon and elsewhere in the region reports Sulayman's assassination, it will be increasingly difficult for the SARG to keep a lid on this high-profile attack. Coinciding with Bashar's trip to Tehran and on the heels of the latest round of indirect talks with Israel, the assassination will likely weaken advocates of the peace negotiations, including Bashar himself.

Subject: The assassinated Syrian general was in charge of securing the al Kibar reactor

**The assassinated Syrian general was in charge of securing the al Kibar reactor –  
www.debka.com**

DEBKAFfile's intelligence sources report that Gen. Muhammad Suleiman, whom a sniper shot dead in the Syrian port town of Tartus early Saturday, Aug. 2, was a shadowy figure who acted for Bashar Assad in the regime's four most sensitive and confidential spheres:

1. He was the president's liaison man with the North Korean government. On his frequent trips to Pyongyang, Gen. Suleiman organized the consignment of components for the plutonium reactor in northern Syria, which Israeli demolished last September, and the security of the North Korean scientists and technicians who accompanied them.

2. Muhammad Suleiman was also the president's private channel of communication with Iranian military and intelligence chiefs; in this capacity, he most probably facilitated the Syrian-Iranian-North Korean connection. The Syrian reactor was designed to produce nuclear fuel for the Iranian program and radioactive weapons for Syria.

3. The late general also acted as the president's contact man with Hizballah's leaders. He worked directly with Imad Mughniyeh, head of Hizballah's security apparatus, who was killed in Damascus last February.

4. His key function was the management of Assad's personal interaction with the Syrian chief of staff, generals and heads of military intelligence. There was no state secret from the powerful general. He was to have accompanied the Syrian president on his state visit to Tehran Saturday; instead he was laid to rest in his home village of Driekesh in the north.

Damascus has done its utmost to keep the general's death under wraps, but word has spread and theories abound: Speculation ranges from an outside hand, or a jealous rival to an internal element who felt the concentration of so much power in one hand was a threat to the regime.

*[Sourcebook note: See 2008-09-26 sourcebook entry concerning an apparent reference to Suleiman by IAEA head Mohammad ElBaradei.]*

## **Syria rules out new IAEA visit to bombed site**

Foreign ministry justifies act; country denies it has hidden nuclear facilities

The Associated Press

updated 2:24 p.m. PT, Sat., Aug. 9, 2008

DAMASCUS, Syria - Syria on Saturday declared that U.N. nuclear sleuths were barred from revisiting the site of a suspected atomic reactor that was bombed by Israeli jets last year.

The decision dealt a blow to efforts by the International Atomic Energy Agency to follow up on intelligence made available to its experts asserting that Syria was hiding a nuclear program that could be used to make weapons.

Justifying the move, a Syrian Foreign Ministry official told reporters that its agreement with the U.N. agency — which already toured the site in June — allowed only one visit. The official, who was not authorized to talk to the media, spoke on condition of anonymity.

The Syrian statement appeared to be prompted by comments made by diplomats accredited to the Vienna, Austria-based IAEA, who told The Associated Press earlier Saturday that Damascus late last month turned down a request from the agency for a follow-up trip.

A return to the bombed facility — alleged by the U.S. to have been a nearly completed plutonium-producing reactor — would have been on the IAEA agenda. Plutonium can be used as the fissile core of warheads.

But a second trip also was meant to focus on the broader issue of whether North Korea was involved in building the alleged Syrian program.

As well, IAEA officials would have pressed for permission to visit three other sites purportedly linked to the alleged reactor destroyed by the Israelis — although Syria has already said that those locations are off limits because they are in restricted military areas.

The diplomats said the agency investigation is based on intelligence provided to the IAEA by the U.S., Israel and a third country they declined to identify.

## **Syria denies hidden nuclear facilities**

In Vienna, a senior diplomat told the AP that "the Syrians said that a visit at this time was inopportune." He and two other diplomats agreed to discuss the issue on condition of anonymity because their information was confidential.

That appeared to leave open the possibility of a later inspection tour. But one of the other diplomats said members of the Syrian mission to the IAEA were spreading the word among other missions that additional trips beyond the one in June were unlikely.

Syria fears the IAEA probe could lead to a massive investigation similar to the probe Iran has been subjected to for more than five years — and to related fallout. Iran is under three sets of U.N. sanctions because of its refusal to heed Security Council demands to curb its nuclear activities.

The diplomats also said Washington had circulated a note among members of the IAEA board opposing a Syrian push for a seat on the 35-nation board. The board normally works by consensus and if Damascus gained a seat it would likely use it to try to hinder further investigation into its alleged secret nuclear activities.

"Syria's election to the board while under investigation for secretly ... building an undeclared nuclear reactor not suited for peaceful purposes would make a mockery" of the Nuclear Nonproliferation Treaty, said the note, as read to the AP.

The diplomats said that the U.S. was encouraging Kazakhstan to challenge Damascus for the seat, but the Kazakhs apparently are reluctant to do so, fearing lack of support from its nominating group of Mideast and Central Asian nations.

IAEA experts came back June 25 from a four-day visit, carrying environmental samples from the Al Kibar site hit by Israel in September. Those are now being evaluated but the results might be inconclusive.

Because intelligence suggests that radioactive material had not yet been introduced into the alleged reactor before it was hit by Israel, swipes taken in search of radioactive traces were unlikely to have been of use.

So, the inspectors also looked for minute quantities of graphite, a cooling element in the type of North Korean prototype that was allegedly being built with help from Pyongyang. Such a reactor contains hundreds of tons of graphite, and any major explosion would have sent dust over the immediate area.

But — if the Syrians were interested in a cover-up — they would have scoured the region to bury, wash away and otherwise remove any such traces. And although U.S. intelligence says the reactor was close to completion, it is possible that graphite elements were not yet installed at the time of the Sept. 6 bombing.

Such uncertainties — and IAEA hopes of being able to visit the other suspected sites — dictated the need for a follow-up mission.

More broadly, IAEA experts were looking to put questions to Syrian officials based on the intelligence made available to them alleging years of extensive cooperation between the Syrians and teams of visiting North Korean nuclear officials.

North Korea detonated a nuclear device in 2006 in a test. The North is believed by experts to have produced enough weapons-grade plutonium to make as many as 10 nuclear bombs before agreeing to dismantle its weapons program early last year.

But the diplomats said Syria was strenuously denying any concerted North Korean presence in the country — despite intelligence alleging that the building bombed was a reactor of the type only built by the communist state.

They said Syrian officials described meetings between nuclear officials from Pyongyang and their Syrian counterparts as occasional and informal, despite intelligence information to the contrary.

## Official Source Comments on Reports about Visit of International Atomic Energy Agency (IAEA) to Syria

Saturday, August 09, 2008 - 07:25 PM

Damascus, (SANA)- An official source at the Foreign Ministry said that Damascus, commenting on reports circulated by some news agencies on the visit of the delegation of the Atomic Energy Agency (IAEA) to Syria, clarifies that it had already reached a memo of understanding with the IAEA on only visiting the site of al-Khobar which had been bombed by Israel and just for one time.

The source added that Syria had carried out what it had committed to in this regard, and also stressed that if the IAEA, after visiting the site, wants any other clarifications then Syria can give answers to them.

The source added that Syria stresses that all these allegations circulated by the U.S. at this very time to justify the Israeli aggression on al-Khobar site from one side, and to dissuade the countries from supporting the nomination of Syria to a at the IAEA Governing Board from the other, are false allegations because Syria had never sought to establish a nuclear reactor in cooperation with the Democratic Republic of Korea or with any other country.

The source said Syria is committed to the Nuclear Non-Proliferation Treaty and its record in cooperation with the IAEA proves that, and if the U.S. enjoys the minimum level of credibility it should have drawn the attention to the nuclear weapon possessed by Israel and threats the regions' security and stability.

Ahmad Fathi ZAHRA

## **Syria says ready to answer IAEA questions**

Sat Aug 9, 2008 6:52pm EDT

DAMASCUS (Reuters) - Syria is willing to answer questions by the U.N. nuclear watchdog about an alleged nuclear complex but has not agreed with the agency to allow more visits to the site, a foreign ministry statement said on Saturday.

In June, experts from the International Atomic Energy Agency (IAEA) visited the al-Kibar complex, which Israeli warplanes raided last year. Syria says the site is a military complex under construction and denies any nuclear activity.

The United States, Israel's chief ally, said the site was an unfinished nuclear reactor that was being built with the help of North Korea. The IAEA team said more checks were needed before they could say whether there was a reactor in Kibar.

Responding to media reports about a possible second visit by the inspectors, the foreign ministry said Syria had only agreed with the IAEA to the one visit that took place in June.

"A memorandum of understanding was reached between Syria and the IAEA that stipulated a visit exclusively to the Kibar site and for one time only," the statement said.

"Syria has honored this and affirmed that if the agency had any queries after the visit it could present them to the Syrian side to answer," the statement added.

The statement repeated Syrian denials that no nuclear facility had been constructed at Kibar and that Damascus has not violated the non-proliferation treaty.

"Syria did not work on setting up a nuclear reactor with the Korean Democratic Republic or any other country," it said.

Israel, which began indirect peace talks with Syria under Turkish auspices several months after bombing Kibar, kept quiet about the target. IAEA inspectors are expected to issue a report to the agency's board of governors ahead of their next meeting in September.

## Syrian sources confirm death of Assad confidential aide and his nuclear link

DEBKAFfile Exclusive Report

August 11, 2008, 10:30 AM (GMT+02:00)

IAEA Dep. Dir. Olli Heinonen - last Westerner to see Gen. Suleiman alive

Damascus Sunday broke its silence about the mysterious assassination of Gen. Muhammad Suleiman in Tartus early Saturday, Aug. 2 and confirmed DEBKAFfile's disclosure that the general played an important role in administering the al Kibar plutonium reactor. Officials in Damascus leaked to Middle East media that Suleiman was a member of the Syrian Research Commission, the government body in charge of missile, chemical and biological weapons and nuclear development.

They said he had met the team of nuclear watchdog monitors, headed by Olli Heinonen, which visited Syria in late June to check out US and Israeli charges that Syria had been building a plutonium reactor at al Kibar.

Those sources also stressed his murder was unrelated to the 2005 assassination of Lebanese ex-prime minister Rafiq Hariri in Beirut, or any internal rivalries in the ruling regime in Damascus.

DEBKAFfile reported earlier:

Gen. Muhammad Suleiman was a shadowy figure who acted for Bashar Assad in the regime's four most sensitive and confidential spheres:

1. He was the president's liaison man with the North Korean government. On his frequent trips to Pyongyang, Gen. Suleiman organized the consignment of components for the plutonium reactor in northern Syria, which Israeli demolished last September, and the security of the North Korean scientists and technicians who accompanied them.
2. Muhammad Suleiman was also the president's private channel of communication with Iranian military and intelligence chiefs; in this capacity, he most probably facilitated the Syrian-Iranian-North Korean connection. The Syrian reactor was designed to produce nuclear fuel for the Iranian program and radioactive weapons for Syria.
3. The late general also acted as the president's contact man with Hizballah's leaders. He worked directly with Imad Mughniyeh, head of Hizballah's security apparatus, who was killed in Damascus last February.

4. His key function was the management of Assad's personal interaction with the Syrian chief of staff, generals and heads of military intelligence. There was no state secret from the powerful general. He was to have accompanied the Syrian president on his state visit to Tehran Saturday; instead he was laid to rest in his home village of Driekesh in the north.

Damascus has done its utmost to keep the general's death under wraps, but word has spread and theories abound: Speculation ranges from an outside hand, or a jealous rival to an internal element who felt the concentration of so much power in one hand was a threat to the regime.

## **Doubts About Nuclear Verification Keep N. Korea on List of Terrorist States**

By Dan Eggen

Washington Post Staff Writer

Tuesday, August 12, 2008; A09

North Korea missed its first chance yesterday to be removed from the State Department's list of terrorist states, U.S. officials said, because it has not provided a way for international inspectors to verify claims about its nuclear program.

President Bush said in June that the United States would begin the process of taking North Korea off its terrorism blacklist, and yesterday was the earliest that Pyongyang could have been removed. But U.S. officials said that North Korea has not followed through on allowing outside verification of its nuclear program, which the Bush administration has set as a condition for action.

"We need to have a strong verification regime in order to remove North Korea from the list," said State Department spokesman Kelley Osterthaler. "They know what they need to do on a verification package, and we're continuing to work with them."

The possible removal is part of ongoing six-party talks -- made up of China, Japan, Russia, the United States, and North and South Korea -- aimed at persuading Pyongyang to give up its nuclear weapons program in return for aid and the end to sanctions, including those that come with being listed as a state sponsor of terrorism.

North Korea is listed alongside Cuba, Iran, Sudan and Syria as state sponsors of terrorism, and thus faces bans on defense sales and other restrictions on trade, foreign aid and financial transactions. The last incident tying its government to an act of terrorism came in 1987, when its agents planted a bomb on a South Korean commercial jet.

Pyongyang turned over a 60-page declaration in June that included details of plutonium production in its nuclear program. It also dynamited a cooling tower at its deactivated Yongbyon nuclear facility in an attempt to convince the world that it is serious about abandoning its nuclear weapons program.

But the declaration contained less detail than the Bush administration had sought, and negotiations continue over how to verify North Korea's claims. Pyongyang has yet to disclose how many weapons it has or to provide details about its involvement in the construction of a Syrian reactor that was destroyed by Israel last year.

Dennis Wilder, the Asia director on the National Security Council, told reporters traveling with Bush in China over the weekend that the administration was "in discussions with the North" over the issue.

"We continue to try to work with them on this question of a robust verification regime," Wilder said. "But we aren't at the point where we are satisfied with what they have put on the table thus far."

Michael J. Green, who handled Asia issues for Bush on the National Security Council from 2001 to 2005, said the administration is correct to demand more before removing North Korea from the terrorism list or eliminating sanctions. "If the administration lifted sanctions anyway, without verification, it would have just shot our credibility in the whole region," he said.

Green said it is likely Pyongyang decided to "run out the clock" on the Bush administration, in order to wait for a new president in January.

## **A CIA Standing-O for President Bush**

August 15, 2008 11:54 AM ET

Paul BedardIt's named for his dad, but if his visit to Langley on Thursday was any indication, current President Bush owns the CIA.

In advance of vacationing at his ranch in Crawford, Texas, Bush visited the CIA HQ to receive briefings on the war on terror and the situation in Georgia. But instead of a quickie stop, he stayed for over two hours and met with many of the agency's workers during lunch. In his fifth visit to the CIA since becoming president, Bush was joined by CIA Director Mike Hayden and Deputy Director Steve Kappes to meet with counterterrorism experts and then political and military analysts on Georgia and Russia.

Bush then walked into the agency's cafeteria where he was greeted with a standing ovation by the 2,000 employees inside. Clearly pleased, he told them, "I appreciate your service more than you could possibly know."

Bush then took a seat at a table with two dozen junior employees. They included analysts, clandestine operatives, scientists and engineers, and support personnel. In between bites, he asked them about their jobs and where they have served overseas. One analyst, who played a key role for the CIA in identifying the nuclear reactor that was being built in Syria with North Korean assistance, gave the president a bronze commemorative coin that Hayden had presented to each agency employee who was directly involved in that intelligence effort.

The 3-inch diameter coin was inscribed with, "Syria-North Korea Project" and the words, "No Core, No War."

During the visit, which went two hours longer than scheduled, we hear that the president shook hands, gave hugs, and signed autographs, even on \$5 and \$10 bills some employees gave him for signature because they didn't have another piece of paper handy.

As he left, Bush praised the agency. "It's really important for the people who work here to understand the significant — the significance of the contributions they're making to secure the homeland. The people here work long and hard hours. They're smart, capable, and they deserve the nation's thanks," said Bush.

Hayden issued his own inside memo to employees: "Supporting our government with timely, accurate intelligence is our job 24/7, but it isn't every day that we hear directly from our top customer just how important our work is—and that he stays two hours longer than scheduled. Thank you for ensuring that CIA remains central to the security of our nation, and for making this visit such a great success."

## **KCNA Slams U.S. Provocative Act to Scuttle Denuclearization Process of Korean Peninsula**

Pyongyang, **August 18 [2008]** (KCNA) -- The United States is again raising the "human rights issue" of the DPRK.

This is clearly evidenced by the fact that U.S. President Bush during his junket to Asian countries blustered that he would handle the "human rights issue" as "an element for negotiations with north Korea."

We categorically dismiss this as a premeditated act of the U.S. to deliberately throw a hurdle in the process of the six-party talks and, furthermore, go without implementing points of the October 3 agreement on denuclearizing the Korean Peninsula.

As far as the "human rights issue" touted by the U.S. is concerned, it is a trite method it employed whenever it felt it necessary to delay or scuttle the talks in a bid to pursue its hostile policy toward the DPRK.

This is clearly proved by the whole process of the six-party talks.

At the third session of the six-party talks held in June 2004 all the parties to the talks agreed in unison to abide by the principles of "words for words" and "action for action".

But no sooner had the talks come to an end than the U.S. enacted and put into force the "North Korean Human Rights Act". It went the lengths of peddling the story of the "test of poisonous gas on human bodies" based on "testimonies made by defectors from the north", thus branding the DPRK as a "human rights abuser".

Even after the adoption of the September 19 joint statement in 2005 the U.S. escalated "human rights offensive" against the DPRK, talking about "counterfeiting" and "drug smuggling", thus throwing a big hurdle in the progress of the six-party talks and the implementation of the joint statement.

It even cooked up the story of "illegal trafficking" and applied sanctions against the dialogue partner, thus completely scuttling the already scheduled six-party talks and putting the talks in a stalemate for more than one year.

The "human rights" ruckus again kicked up by the U.S. is a product of its deliberate scheme to deter the six-party talks from making progress and completely scuttle the denuclearization process on the Korean Peninsula.

As already known, the DPRK submitted an accurate and complete nuclear declaration according to the October 3 agreement of the six-party talks.

The U.S., however, has not honored its commitment to write the DPRK off the list of "state sponsors of terrorism", a key political compensation in concluding the implementation of the agreement, although the date it promised to do so has already passed.

This is obviously a violation of the principle of "action for action" essential for realizing denuclearization.

The implementation of the agreed points of the six-party talks has been delayed due to the U.S. perfidious attitude.

However, the U.S. raised the "human rights issue" before the deadline it set as regards the delisting of the DPRK as a "state sponsor of terrorism". Lurking behind this is its sinister intention to shirk off the responsibility for the delayed implementation of the agreement on to the DPRK.

This proves that the U.S. has sought the sinister purpose of putting pressure upon the DPRK while letting the talks to drag on without any results, showing no interest in settling the nuclear issue between the DPRK and the U.S. through the talks from their outset.

Explicitly speaking, there is no "human rights issue" much touted by the U.S. in the DPRK.

The Korean people fully enjoy genuine freedom and rights under the socialist system where all people form a big family. It is the consistent popular policy of the DPRK government to fully guarantee the rights of the citizens in a responsible manner.

In the DPRK based on the man-centered Juche idea all working people do labor according to their abilities and wishes and lead a genuine life, given ample opportunity of learning.

It is absolutely illogical for the U.S. to talk about the "human rights issue" while ignoring such reality.

There is the most serious human rights issue in the U.S. as it is a rogue state that exterminated tens of millions of native Indians and accumulated wealth through slave trade and flesh traffic and a country where the almighty dollar principle and the fin de sickle lifestyle based on the law of the jungle prevail.

The impoverishment of Americans in the mental and cultural lives is actively fostered institutionally, driving them into the abyss of corruption, despair and crimes. This is a true picture of the American society today.

The U.S. administration fabricated the "Cuban Adjustment Act", thus causing huge casualties and preventing independent countries from making progress for the past more than four decades. It even infringed upon the sovereignty of Iraq by force of arms on the basis of false information and indiscriminately dropped bombs upon heads of innocent and peaceable citizens and children. This was the most vivid manifestation of human rights abuses.

The U.S. cursed and censured as the kingpin of human rights abuses is still behaving as if it were a "human rights judge". This is nothing but a poor charade of the U.S. which does not know where it stands and does not feel ashamed of itself.

The "human rights" piffle made by the U.S. high-ranking officials indicates that they have no stand to recognize and respect the dialogue partner.

The U.S. is persisting in the politically motivated provocations as evidenced by the ruckus kicked up over the non-existent "human rights issue" in the DPRK, an indication of its deep-rooted hostility and inveterate enmity toward the DPRK. This attitude leaves the DPRK and the countries concerned skeptical about the U.S. intention to implement the points of the October 3 agreement.

Such provocative acts of the U.S. as slandering and pulling up its dialogue partner can never help the talks make any progress in the positive direction.

## **No Progress in Nuclear Verification Protocol**

By Jung Sung-ki

Staff Reporter

08-20-2008 17:22

A compromise is unlikely soon between the United States and North Korea on verifying the communist country's nuclear disarmament, a senior government official said Wednesday.

Pyongyang remains stubborn on the verification system, and this has delayed its removal from the U.S. list of terrorism sponsoring states, the Foreign Ministry official said on condition of anonymity.

North Korea's foreign ministry said it will increase vigilance against unjust U.S. demands over talks on ending the North's nuclear programs, claiming the ongoing South Korea-U.S. military exercises are aimed at launching a preemptive nuclear attack against the communist state, according to the Yonhap News Agency.

"The U.S. and North Korea are consulting on the verification protocol, but it seems difficult for the two sides to reach a compromise soon," the official told reporters.

"But I don't want to describe this situation as pessimistic since these kinds of difficulties are a kind of ritual when it comes to negotiations with North Korea."

He said North Korea agreed in principle to cooperate with the establishment of a protocol for international inspectors to verify its nuclear declaration made in June, but failed to implement it by refusing to cooperate on drawing up the protocol.

Chief nuclear envoys from the United States, South Korea and Japan recently discussed how to persuade the North to accept a U.S.-proposed verification protocol, he added, referring to Seoul envoy Kim Sook's recent trips to Washington and Tokyo for talks.

South Korea wants the second-phase denuclearization process to be completed and the third and final phase on the full disablement of North Korea's nuclear facilities to begin by year's end, said the official.

In a meeting with reporters, Kim said now is the time for "patience" in talks on the verification system.

"I think more time is needed for the U.S. and North Korea to narrow their differences," he said.

"China could play a constructive role in this process."

China is the host nation for the six-party forum involving the United States, the two Koreas, Japan and Russia aimed at ending the North's nuclear ambition.

Negotiators from the six nations have stepped up meetings on breaking the deadlock over the verification.

North Korea in June submitted an inventory of its nuclear materials and programs, prompting U.S. President George W. Bush to give the minimum 45-day notice to Congress of his intent to remove the North from the list of terrorism sponsors. That deadline passed Aug. 11.

The delisting is crucial for Pyongyang since Washington has banned the impoverished communist country from receiving foreign aid and loans. North Korea was put on the list in 1988 after its agents blew up a South Korean passenger plane, killing all 115 people aboard.

The Bush administration cited insufficient progress made in finding ways to verify the nuclear declaration. The declaration contains less detail on the North's alleged secret uranium enrichment program and nuclear proliferation, it said.

Washington also wants to know how many nuclear weapons Pyongyang has.

The North has threatened to break its earlier promise to disable its nuclear facilities by the end of October unless Washington delists it and lifts sanctions. Instead, Pyongyang is urging other six-party members to provide energy aid under the denuclearization accord by that time.

Under the Feb. 13 agreement, North Korea is required to abandon its nuclear programs in return for economic aid and political concessions from the other five parties. On the economic front, the North will receive one million tons of heavy fuel oil or its equivalent in aid.

Japan has refused to provide aid and opposes the North's delisting over Pyongyang's kidnapping of Japanese nationals in the 1970s and 80s.

Pyongyang and Tokyo last week agreed on procedures for a reinvestigation into the fate of the abductees.

Israel and Iran

**At each other's throats**

From The Economist print edition

Sep 4th 2008

[Review of

***The Secret War with Iran***

Ronen Bergman

Simon & Schuster, London, 2008

ISBN 9781416558392]

IF THIS murky tale of spies and their doings can be reduced to a single proposition it is this: Iran and Israel are locked in mortal clandestine combat and for the most part the Iranians, together with their allies in Lebanon's Hizbullah, are running circles around their flatfooted Israeli adversaries. That in itself lifts Ronen Bergman's book above the ordinary. Too many accounts of spying in the Middle East dwell on the high reputation of Israel's Mossad, a reputation which may just conceivably be out of date.

[deletia]

If Lebanon has been the main arena of conflict between Iran and Israel, the main issue between them has long been Iran's presumed quest for nuclear weapons. Here too Mr Bergman argues that the Iranians have consistently deceived and outwitted Israel and its Western allies. But this story is not yet over" and for those who want it there is reason to wonder whether Iran's defeat of Israeli intelligence has been quite as comprehensive as Mr Bergman claims. One example is the assassination" by Israel, according to Hizbullah" of Mughniyeh in Damascus in February, just as Mr Bergman's book was about to go to press. Another was Israel's discovery, and destruction in September 2007, of what appears to have been a secret Syrian nuclear reactor, which Mr Bergman claims Iran was helping to pay for.

But was Iran really involved? One of this reviewer's own intelligence sources says that Iran was not complicit in and seemed to know nothing about the Syrian venture. Another, who has reason to know about such things, doubts Mr Bergman's claim that a crucial tip-off came from Ali Reza Askari [also transliterated as *Asgari and Asghari*], an Iranian general who disappeared and is thought to have defected to the CIA. Still, spying is a rum business. Sometimes, as Winston Churchill said, the truth is so precious it must be protected by a bodyguard of lies. Not every juicy detail in this book is necessarily correct, and few can be easily verified. Mr Bergman's portrayal of Israel's confrontation with Iran will also strike some non-Israeli readers as excessively Manichaeic. But it makes nonetheless for an enthralling read.

UNITED STATES MISSION TO  
**INTERNATIONAL ORGANIZATIONS  
IN VIENNA**

Iran's Nuclear Program:  
What Threat Does It Pose?

Remarks by Ambassador Gregory L. Schulte  
U.S. Permanent Representative to the International Atomic Energy Agency  
and the United Nations in Vienna

Nobel Institute  
Oslo, Norway

September 9, 2008

*[EXCERPT]*

I am here today to discuss to discuss a dark subject: the threat posed by Iran's nuclear pursuits as well as our concerns about Syria's clandestine nuclear activities.

But let me start on a more positive note.

Two historic events took place last weekend.

First, Norway and the United States joined the other members of the 45-country Nuclear Suppliers Group in agreeing to allow civil nuclear cooperation with India.

This was an important and positive decision for all of our relations with India and for India's relationship with the world's nuclear nonproliferation regime.

This decision helps India meet its growing energy needs with less greenhouse gas.

This decision brings India into the mainstream of our efforts to avert the spread of nuclear weapons.

Second, Secretary Rice went to Libya.

Her visit was the first by a U.S. Secretary of State since 1953.

As the Secretary said, "this demonstrates that the United States has no permanent enemies."

Instead, as she explained, "when countries are prepared to make strategic changes in direction, the United States is prepared to respond."

What do these positive developments mean for the subject of today's discussion?

They mean that concerted international diplomacy can succeed in bolstering the world's efforts to confront the dangers posed by nuclear weapons.

We also hope the weekend's developments send a clear message to Tehran and Damascus:

Meet your obligations. Act to build confidence. This is the way to earn the world's respect and cooperation.

### **The Dangerous Pursuits of Two Dangerous Regimes**

In two weeks, the IAEA Board of Governors will meet.

Among other items on our agenda, we will consider the nuclear activities of Iran and Syria.

Iran and Syria are two IAEA members who have violated their IAEA obligations.

They are two dangerous regimes on dangerous pursuits.

- Both are state sponsors of terrorism.
- Both are opponents of regional peace and stability.
- Both have pursued nuclear capabilities that make no civil sense but that can produce fissile material for nuclear weapons.
- Both had outside assistance, Syria from a known nuclear violator, Iran from an international smuggling network for nuclear weapons technology.
- Both pursued these capabilities covertly and illicitly, successfully hiding them from IAEA inspectors until exposed by others.
- Both remain actively engaged in covering up the full extent of their activities.

This dangerous situation poses serious risks to the security of Norway and the United States, Europe and NATO.

- Iran's nuclear pursuits remain the most threatening.
- But Syria's clandestine activities show how a determined regime can flout the IAEA.
- Each underscores the risks of nuclear proliferation in one of the world's most dangerous regions.

### **Syria's Covert Nuclear Activities**

Syria's covert nuclear activities were exposed last April when we briefed your government and others on the construction of a nuclear reactor in the eastern desert of Syria.

This was not a typical reactor that a country might build for medical research or power production.

Instead, our intelligence experts are confident that the Syrian reactor was built with the assistance of North Korea and was of the same type that North Korea built at Yongbyon to produce plutonium for its nuclear weapons.

We have good reason to believe that Syria's reactor, like North Korea's, was not intended for peaceful purposes.

- First, we assess the Syrian reactor was configured to produce plutonium.

It had no capability to generate electricity and was ill-suited for peaceful research.

- Second, Syria went to great pains to keep the facility secret.

It located the reactor in the remote desert.

It built earthen berms and fake walls to hide it from observation.

It hid the pipelines bringing cooling water to and from the Euphrates.

It did not declare the reactor to the IAEA as required by Code 3.1 of its safeguard agreement.

- Third, Syria went to great lengths to cover up its activities after a military strike destroyed the reactor one year ago.

While putting off IAEA requests to visit the site, Syrian engineers hauled away incriminating equipment, buried what remained of the reactor, and built a large structure over the top.

Under mounting pressure at our Board meeting in June, Syria eventually allowed IAEA inspectors to visit the reactor site.

But the IAEA inspectors also did what IAEA inspectors do well:

They gathered information from multiple sources, they asked for additional access, and they probing questions.

Syria allowed one visit but has yet to provide the full access and information that the inspectors have requested.

Whether in the Board room in June, or with IAEA inspectors since, Syria is using stalling tactics striking similar to those of Iran.

Instead of looking to Iran, Syria should follow the example of Libya.

Now that it has been caught, Syria should admit its illicit nuclear activities and give IAEA inspectors the necessary information and access to assure the world they have stopped.

It is time for disclosure, not continuing deception.

## Japan: 'Source' Says Reprocessing Facility for Syrian Plutonium Built in Iran

By Takashi Arimoto in Washington:

### "Reprocessing Facility of Bombed Nuclear Base in Iran; Intimate Ties Between Syria and North Korea"

Sankei Shimbun (Internet version-WWW)

Friday, September 12, 2008 T07:05:27Z

Journal Code: 2949 Language: ENGLISH Record Type: FULLTEXT

Document Type: OSC Translated Excerpt

Word Count: 552

On the facility in Syria believed to be pivotal to the nuclear development that was bombed by the Israeli military last September, a source familiar with the Syrian nuclear issue revealed that the reprocessing facility to extract plutonium from spent nuclear fuel is in a military facility in Iran, and not in Syria. Another information source revealed that Iran's Revolutionary Guards are planning to deploy small North Korean-made submarines in a military port in Syria. It highlighted once again the collaborative relationship among North Korea, Iran, and Syria even a year following the air strike.

In order to produce plutonium -- a raw material required to make nuclear bombs -- a facility is required to reprocess spent nuclear fuel, as well as a nuclear reactor. However, when the US Government revealed at the end of April that the nuclear reactor was built through cooperation between Syria and North Korea, the picture released only revealed the nuclear reactor but not the reprocessing plant.

It has been said that US President George W. Bush revealed the picture to sound out the alarm on nuclear proliferation in the Middle East and he criticized Iran in particular by name. However, there are some experts who are casting doubts (about the picture) because there is no explanation about the reprocessing facility.

The source of the information commented on the reason that the reprocessing facility was built in Iran: "I think it was built in Iran because Syria did not have the reprocessing technology." On the specific location, he only said: "It is in a secret Iranian Revolutionary Guards base."

A high-ranking Iranian official twice inspected a facility in the desert near Al Kibar in the eastern Syria in 2005 and 2006. Spiegel, a German magazine, said that according to a German intelligence report, the nuclear reactor was built by Syria and North Korea to support Iran's nuclear development program.

Meanwhile, another source said that Iran and Syria agreed to establish a base in the port of Latakia, a city along the coast of the Mediterranean in Syria, to support Hezbollah, Lebanon's Shiite Muslim organization. Reportedly, a few small North Korean submarines as well as five or six small boats will be dispatched.

Compared with Tartus, another Syrian port, Latakia is far from Lebanon but the same source says: "Latakia was chosen because there are Russian military personnel in Tartus."

North Korea , Iran and Syria have also cooperated in the development of chemical weapons. During the chemical plant explosion in northern Syria last July, many scientists and military related personnel of the three countries died, including three North Korean military experts.

All three countries have denied that there is a collaborative relationship on nuclear development. A spokesperson of the US Embassy in Syria commented on the facility in Al Kibar: "It is an unused military base under construction." On the military relationship with Iran , he said: "Everything has been made public and there is no secret agreement."

(passage omitted on the Iranian Embassy in Japan sharply criticizing this article and denying a military relationship between Iran and North Korea ).

## 'Barak the worst defense minister ever'

Sep. 13, 2008

JPost.com Staff , THE JERUSALEM POST

Defense Minister Ehud Barak "was bold until the day he failed as prime minister, and then he lost his political courage," Kadima MK Isaac Ben-Israel, a retired major-general, said on Saturday.

Addressing a cultural event in Beersheba, Ben-Israel lashed out at Barak on a plethora of issues, including the September 6, 2007, strike on a suspected nuclear plant in Syria and IDF operations against terrorists.

"I do not know of a worse defense minister than Barak," he said. "The guideline he follows is 'sit and do nothing.'

"No politician has ever paid for not going to war," Ben-Israel said, referring to the limited IDF activity against terrorists in the Gaza Strip and Hizbullah's reemergence on the northern border.

Barak "even opposed the strike on September 6" last year, he said.

Turning to Iran, Ben-Israel said the Islamic Republic was facing some difficulties and was still at least a year, or even two, from acquiring a nuclear bomb.

Israel might eventually come to the difficult conclusion that it had to attack Iran on its own, he said. Ben-Israel said this was within Israel's military capabilities.

There was no immediate response from Barak's office.

## **A year on, Israel still won't discuss Syria strike**

By Dan Williams

14 Sep 2008 14:01:13 GMT

JERUSALEM, Sept 14 (Reuters) - A year after its jets bombed a Syrian facility which U.S. officials openly described as a secret nuclear reactor, Israel still refuses to give an account -- not even formally confirming the raid ever happened.

Such reticence is unusual for a country steeped in military myth. Israel's fractious politics, dominated by ex-generals, has long made war stories a staple part of the national discourse.

For Prime Minister Ehud Olmert, going public about the Sept. 6, 2007, sortie might be the last chance to craft a legacy: He is due to tender his resignation later this week, haunted by graft scandals and the setbacks of Israel's 2006 war in Lebanon.

But Olmert has made clear the muzzle will remain.

"Over the past year, we have taken care not to comment on, respond to, confirm or deny, and to act with the necessary restraint and responsibility, regarding security issues of the highest order," he told his cabinet on Sunday.

Olmert appeared to be criticising televised remarks by a lawmaker from his Kadima party who suggested Defence Minister Ehud Barak, a former top general whose Labour party props up the coalition government, had been slow to approve the Syria strike.

"It is inconceivable that somebody -- for whatever reasons, be they political or personal -- allows himself to say things that I unequivocally reject," said Olmert.

Those Israeli officials who agree to speak -- on condition of anonymity -- as well as independent analysts attributed Olmert's silence to a desire to see progress in Turkish-mediated peace talks with Syria which were unveiled in May.

They say that Israeli assertions about the target of the raid would risk humiliating Syrian President Bashar Assad, who has denied allegations by the CIA and White House that his government pursued nuclear weapons with the help of North Korea.

There may also be operational considerations.

Assumed to have the Middle East's only atomic arsenal, Israel has hinted it could attack Iran as a last resort to deny its arch-foe access to nuclear technologies with bomb-making potential.

Should that happen, Israel formally giving details about the Syrian raid could help Iran better prepare its defences.

Some Israeli officials voiced quiet dismay at the American disclosures in May about the Syria strike, though CIA director Michael Hayden said intelligence on the targeted facility was being published as part of a "team effort".

"Any discussion of what happened in Syria carries the danger of divulging information on tactics we may have to reuse," said one Israeli official. (Editing by Mariam Karouny)

## **Iran: Secret memo reveals Khamenei plan for nuclear arms, says report**

Tehran, **15 Sept. [2008]** (AKI) - Iran's Supreme Leader, Ayatollah Ali Khamenei, reportedly has a secret plan to accelerate nuclear arms production by simulating a breakdown at the nuclear reactor of Bushehr.

That is according to a memorandum circulated among several western intelligence services cited in the Italian daily, La Stampa.

**The Khamenei initiative dates back to the day after 6 September 2007 when Israeli warplanes struck an alleged nuclear reactor that was allegedly being developed in northern Syria.**

The effectiveness of that attack frightened Khamenei who feared the same could happen to Iranian nuclear plants.

A few weeks later in Iranian capital Tehran, Khamenei gathered a group of senior officials responsible for national security and nuclear power, including Mohsen Fahrizadeh, entitled Project III - the programme suspected of planning the development of nuclear arms.

On that occasion, according to the memorandum, Khamenei spoke of the need to accelerate the military project in such a way that it did not run the risk of breaching the rules of the United Nations' nuclear watchdog, the International Atomic Energy Agency.

During the meeting several proposals were discussed and at the end of the talks, "Khamenei called for a plan to be drawn up to exploit the nuclear material of the Bushehr plant to obtain plutonium".

According to sources cited in the document, there were moments of tension during the meeting because several of the officials there "warned Khamenei repeatedly" that if they took this course, Iran would "pay a serious political price".

But Khamenei reportedly decided nevertheless to approve details of the plan that had been presented to him.

Under the plan submitted, options included heating bars of material for 300 days, producing plutonium but of an inferior quality to military fuel to produce 600 kilogrammes to make 75 bombs of low quality.

Under a second option, the reactor would be activated to its maximum power for two months to produce 120 kilogrammes of material for 15 nuclear bombs.

All would have been done in secret to coincide with a fake accident at the reactor - an incident that would justify to the international community why its normal activities had stopped.

The memorandum is in marked contrast to the many official pronouncements by the Iranian government that it only intends to use nuclear material for peaceful purposes.

## Strike on Syria reactor a joint spy victory: CIA

Tue Sep 16, 2008 4:44pm EDT

By Randall Mikkelsen

*[EXCERPT]*

WASHINGTON (Reuters) - The destruction of a suspected Syrian nuclear reactor last year was the result of an intelligence collaboration that included a "foreign partner" who first identified the facility's purpose, CIA Director Gen. Michael Hayden said on Tuesday.

The reactor at the desert outpost of Al-Kibar was flattened in an air strike on September 6, 2007 that senior U.S. intelligence officials have said was carried out by Israel on its own initiative.

"Our foreign partnerships ... were critical to the final outcome," Hayden said in a speech for delivery to the World Affairs Council of Los Angeles.

A U.S. intelligence official declined to specify the partner Hayden referred to or to say whether it was Israel. He said there have been no signs that Syria was trying to replace the destroyed reactor.

Israel has never given an account of the strike or formally confirmed that it took place and some Israeli officials have quietly voiced dismay at U.S. disclosures about the strike.

"We were able last year to spoil a big secret, a project that could have provided Syria with plutonium for nuclear weapons," Hayden said.

Syrian President Bashar al-Assad has denied U.S. allegations that his government pursued nuclear weapons with the help of North Korea.

Hayden said a report from the unnamed foreign partner first identified the facility as a reactor similar to one in North Korea, although U.S. intelligence had identified it as suspicious.

"When pipes for a massive cooling system were laid out to the Euphrates River in the spring of 2007, there would have been little doubt this was a nuclear reactor," Hayden said.

"We would have known it was North Korean, too, given the quantity and variety of intelligence reports on nuclear ties between Pyongyang and Damascus."

*[EXCERPT]*

Pyongyang's WMD programs present a double threat. As part of North Korea's arsenal, they endanger the peace and stability of northeastern Asia. As a source of global proliferation, they have been without equal since a joint operation with our British partners took down A.Q. Khan earlier this decade. Like Khan, whose network had been the world's most dangerous black market supplier of nuclear technology, North Korea asks only two things of its customers: first, can they pay, and second, can they keep a secret.

Thanks to some outstanding intelligence work, we were able last year to spoil a big secret, a project that could have provided Syria with plutonium for nuclear weapons. I'd like to cover it here because it's an excellent example of how CIA and our Community colleagues attack the problem of nuclear proliferation.

It was reported in the press last April, and you're probably familiar with its outlines. We knew that North Korea and Syria had been cooperating since the late 1990s in the nuclear field. The depth of that relationship was revealed in the spring of last year, when we identified a nuclear reactor at Al-Kibar in the eastern desert of Syria. It was similar to the one at Yongbyon in North Korea, but with its outer structure heavily disguised.

The situation became critical late last summer, when we judged the facility could be nearing operation. The Al-Kibar reactor was destroyed the morning of 6 September 2007. The Syrians immediately cleared away the rubble and every trace of the building, stonewalling the IAEA when asked to explain. Their cover-up only underlined the intense secrecy of this project and the danger it had posed to a volatile region.

I want to focus briefly on two important aspects of this intelligence effort: the quality of tradecraft, in terms of collection and analysis, and the value of collaboration, both with colleagues in our government and with foreign services.

More than anything else, our work was a classic example of multidisciplinary, blue-collar analysis. We had a group of officers who started working overtime on this issue in April 2007 and kept at it for months. Virtually every form of intelligence—imagery, signals, human source, you name it—informed their assessments, so that they were never completely dependent on any single channel.

For instance, a report from a foreign partner initially identified the structure at Al-Kibar as a nuclear reactor similar to one in North Korea. But even without that piece of the puzzle, it wouldn't have been long before we reached the same conclusion. We had previously identified the facility on imagery as a suspicious target. When pipes for a massive cooling system were laid out to the Euphrates River in the spring of 2007, there would have been little doubt this was a nuclear reactor. We would have known it was North Korean, too, given the quantity and variety of intelligence reports on nuclear ties between Pyongyang and Damascus.

Still, our analysts were open to alternative possibilities at every juncture. Early on, they applied a methodology that laid out the inconsistencies in each competing hypothesis. They carefully examined whether the building might be for another purpose, like a conventional power plant, or a water treatment facility. In each case, the arguments simply didn't add up. The reactor hypothesis was the most difficult to refute with the available evidence.

We then stepped back and tried to turn the basic premise on its head: OK, we've got a nuclear reactor in Syria built with North Korean help, but is it necessarily for a Syrian program? Might it have been built by North Korea for its own use, to secretly replace the Yongbyon reactor they had pledged to shut down? We took that hypothesis and worked very hard on it, but the mainstream theory held sway.

Finally, this was a success reached through close collaboration across agencies, departments, and governments. Dedicated officers at CIA, DIA, the Department of Energy, the National Geospatial Intelligence Agency, and NSA came together as a team, each bringing a specific expertise to the table. And this was an intelligence problem that required a wide range of knowledge. I already mentioned all the different forms of collection, but it also drew from a remarkable diversity of analytic firepower—everyone from nuclear technology and weapons experts to political and leadership analysts.

Our foreign partnerships too were critical to the final outcome. These relationships aren't a matter of occasionally passing along a report that may or may not be useful. They're more akin to working together on a complex equation over a long period. Each tries to solve a variable that in turn helps a partner solve another, and so on until we've cracked the case. That's what good intelligence is all about.

I hope my remarks today have given you a better idea of how CIA is meeting the counterproliferation challenge. The Intelligence Community as a whole has taken great strides since the pre-war NIE on Iraq to strengthen our tradecraft, and I think it shows with both the Iran estimate and the Al-Kibar effort. The rigor of our sourcing, the emphasis on alternative analysis, and the integration of our expertise with those of our colleagues have never been greater.

## **No reply from Syria to IAEA over suspect sites: diplomat**

VIENNA, Sept 19 (AFP)

Sep 19, 2008

Syria has yet to reply to a request from the UN atomic watchdog to let it inspect three or four sites allegedly involved in clandestine nuclear activities, diplomatic sources said Friday.

In June, Syria allowed a three-member team from the International Atomic Energy Agency to visit Al-Kibar in a remote desert area of northeastern Syria on the Euphrates River.

The United States claims the site, razed to the ground by Israeli planes in September 2007, was a nuclear facility built with North Korean help and was close to becoming operational.

But Syria has since ruled out a follow-up trip, saying it had agreed to one visit only.

At the time, diplomats had said the nuclear watchdog was also interested in two or three other sites, allegedly used to store the debris of the destroyed building.

A diplomat close to the IAEA told AFP on Friday that an official request by the IAEA to visit "three or four other sites" had so far gone unanswered by Damascus.

The request was apparently made after the IAEA received new information, probably from western secret services, the diplomat said, speaking on condition of anonymity.

The findings of the initial visit, which was led by the nuclear watchdog's deputy director general Olli Heinonen, have still to be evaluated.

So the Syrian dossier is not officially on the agenda of next week's meeting of the IAEA's 35-member board.

But IAEA Director General Mohamed ElBaradei is expected to talk about Syria in his opening address to the assembly on Monday, diplomats said.

And the dossier could be discussed in greater detail at the IAEA's next board meeting in November, by which time the findings of the first trip might be known, diplomats added.

## **Diplomats say initial probe of alleged Syrian secret nuclear site comes up empty**

By GEORGE JAHN | Associated Press Writer

4:38 PM EDT, September 20, 2008

VIENNA, Austria (AP) — Partial results of samples from a Syrian site bombed by Israel show nothing to back up U.S. assertions that the target was a secret nuclear reactor, diplomats said Saturday.

The diplomats cautioned that the results from the International Atomic Energy Agency probe are preliminary because findings of more detailed environmental tests are still outstanding.

Still, two of the three who spoke to The Associated Press said that IAEA officials did not expect the results from the samples still being tested to strongly contradict the first results.

All three diplomats were informed of the status of the IAEA probe but demanded anonymity because their information was confidential.

Washington says that the Al Kibar site that Israel destroyed last year was a near-finished plutonium-producing reactor built with North Korean help, and that Damascus continues to hide linked facilities. Syria denies that.

While allowing a small IAEA team to visit the bombed structure in a remote part of the Syrian desert earlier this year, Damascus subsequently turned down an agency request to revisit that and other suspect sites. That, and no evidence of a nuclear program from the rest of the samples, could spell the end of the investigation into the U.S. allegations.

IAEA inspectors looking for unreported nuclear activity usually test for radioactivity. But in this case, their mission was more difficult.

According to intelligence given to the Vienna-based agency by the U.S., Israel and a third, unidentified country, the alleged reactor was not yet completed at the time of the Sept. 6, 2007, bombing. That meant no nuclear material would have been present.

So, the inspectors looked for minute quantities of graphite, which is used as a cooling element in the type of North Korean prototype that was allegedly being built. Such a reactor contains hundreds of tons of graphite, and any major explosion would have sent dust over the immediate area.

But — if they were interested in a cover-up — the Syrians would have scoured the region to bury, wash away and otherwise remove any such traces. Long before the time of the June IAEA visit to the site, it had been encased in concrete that served as the foundation of a new building erected by the Syrians.

Former U.N. nuclear inspector David Albright, whose Washington-based Institute for Science and International Security closely tracks suspect secret proliferators, said another possibility was that the Israeli bombs did not penetrate deeply enough into the building to disperse the graphite.

While it is possible that none of the samples will yield traces of graphite, Albright said it was important to wait for the second batch of results, which "are more sensitive and can pick up smaller quantities."

Beyond Al Kibar, the agency is also interested in going to three other locations suspected of harboring other secret nuclear activities — sites the Syrians insist are off limits because opening them up would expose military secrets.

More broadly, IAEA experts want to use a follow-up visit to put questions to Syrian officials based on intelligence they have been given outlining years of extensive cooperation between the Syrians and teams of visiting North Korean nuclear officials.

North Korea exploded a nuclear device in 2006. It is believed by experts to have produced enough weapons-grade plutonium to make as many as 10 nuclear bombs before agreeing to dismantle its weapons program early last year. It recently threatened to restart its nuclear reactor because of alleged U.S. failure to fulfill obligations under an international disarmament-for-aid deal.

Diplomats say Syria is strenuously denying any concerted North Korean presence in the country — despite U.S. intelligence alleging that the building bombed was a reactor of the type only built by the communist state.

They said Syrian officials described meetings between nuclear officials from Pyongyang and their Syrian counterparts as occasional and informal.

## **UN: Syria may have buried nuclear traces**

Reuters

Published: 09.21.08, 20:47 / Israel News

IAEA investigators suspect Damascus may have ordered traces of alleged reactor bulldozed, covered with concrete after Israel bombed site in order to hide evidence of nuclear activity – causing UN probe to come up empty-handed

UN investigators believe Syria may have buried under concrete traces of what Washington suspects was a covert nuclear reactor at a site bombed by Israel a year ago, diplomats said on Sunday.

The International Atomic Energy Agency began probing Syria in April based on US Intelligence suggesting a remote desert complex targeted by Israel was a reactor almost completed with North Korean help and designed to make plutonium for atom bombs.

Satellite pictures indicated Syria swiftly bulldozed the area, removed debris and erected a new building in a possible cover-up, US nuclear analysts say.

Syria has denied hiding nuclear activity from the UN watchdog and said the bombed site at al-Kibar was an ordinary military building. It gave IAEA inspectors access in June.

Partial results of environmental swipe samples showed no traces of carbon or maraging steel, an especially strong alloy of the metal, that would have indicated a graphite reactor, diplomats familiar with the inquiry told Reuters.

The diplomats said Syria has rebuffed IAEA requests to revisit al-Kibar and examine three military sites seen as interlinked, citing grounds of national security.

Full test results from the June mission may not be available until November and may not prove conclusive either, they said.

US intelligence indicated the reactor had not begun to process material before Israel's attack, so there would have been no radioactive material to detect.

"This doesn't mean there was nothing there, just that the inspectors did not (or could not) search the right places," said a senior Vienna diplomat versed in the matter.

"Syria laid a big slab of concrete over it (ground where the alleged reactor stood) after digging a hole. Ideally the IAEA should be able to examine the chunks of debris but the feeling is that the Syrians may have dumped all of it down the hole.

### **Inconclusive results**

IAEA Director Mohamed ElBaradei, opening a regular meeting of the agency's 25-nation board of governors on Monday, was expected to say the Syria inquiry remained inconclusive and inspectors needed more cooperation from Damascus.

Unlike Iran's disputed nuclear work, Syria was not on the board's official agenda because inspectors, lacking substantive findings, submitted no written report for debate.

Still, the United States and Western allies were expected to call in statements for Syrian transparency and full cooperation.

ElBaradei has rebuked the United States and Israel for not alerting the IAEA of their suspicions before the bombing, saying a "shoot first and asking questions later" approach would make it much harder for the UN watchdog to establish the truth.

A European diplomat said Syria's tough posture and slowness reacting to requests for access reminded some of ally Iran's stonewalling of IAEA probes into whether Tehran has tried to adapt explosives and missile cones for nuclear weapons.

Statements of the Director General  
22 September 2008 | Vienna, Austria

IAEA Board of Governors

**Introductory Statement to the Board of Governors  
by IAEA Director General Dr. Mohamed ElBaradei**

Our agenda for this meeting covers a broad range of Agency activities. I will limit my remarks to a few key areas.

*[deletia]*

**Implementation of Safeguards in the Syrian Arab Republic**

In April this year, the Agency received information claiming that an installation destroyed by Israel in September 2007 at Al Kibar in Syria was a nuclear reactor. The Syrian authorities have repeatedly stated that the alleged site was not involved in any nuclear activities.

With Syria's cooperation, the Agency was able to visit Al Kibar in June 2008. Samples taken from the site are still being analysed and evaluated by the Agency, but so far we have found no indication of any nuclear material.

In order to assess the veracity of information available to the Agency, we asked the Syrian authorities in July to provide access to additional information and locations. Syria has not yet responded to this request but has indicated that any further developments would depend on the results of the samples taken during the first visit.

I trust that Syria will show maximum cooperation and transparency and provide all the information needed by the Agency to complete its assessment.

*[deletia]*

## **Contact man's murder delays Syria nuclear probe: IAEA**

17 hours ago [Accessed 2008-09-26T12:10Z]

VIENNA (AFP) — The UN atomic watchdog's probe into alleged illicit nuclear work in Syria has been delayed because the agency's contact man in Syria was murdered, IAEA chief Mohamed ElBaradei revealed Thursday.

"The reason that Syria has been late in providing additional information (is) that our interlocutor has been assassinated in Syria," ElBaradei told a closed-door session of the International Atomic Energy Agency's 35-member board. A recording of his remarks was obtained by AFP.

He did not provide any further details about the identity of the man or circumstances of the assassination.

But according to Arab media reports last month, a brigadier general thought to be the Syrian regime's liaison with Hezbollah in Lebanon was assassinated.

The Saudi-owned pan-Arab daily Al-Hayat said the victim was a senior Syrian officer "in charge of sensitive files and closely linked to the Syrian top brass."

Al-Bawaba, an Arab news website, named the officer as Mohammed Sleiman, saying he was "Syria's liaison officer with Lebanon's Hezbollah movement."

*[Sourcebook note: See sourcebook entries for 2008-08-03 and 2008-08-11 concerning Mohammed Suleiman.]*

The Lebanese anti-Syrian daily al-Mustaqbal quoted a Syrian news site as saying Sleiman was the head of security at the presidential palace in Damascus and President Bashar al-Assad's "right-hand man."

ElBaradei's revelation came on the fourth and final day of the IAEA board meeting, where Syria was the final matter of debate.

During the discussions, Western countries, and the United States and Australia in particular, complained that Syria was dragging its feet in the IAEA investigation.

Washington claims that Damascus had been building a clandestine nuclear facility at Al-Kibar, a remote desert area of northeastern Syria on the Euphrates River, until it was bombed by Israeli planes in September 2007.

Syria has denied the allegations as "ridiculous," saying the edifice was simply a disused military building.

While Syria allowed a three-member IAEA team to visit the site in June, it has since refused any follow-up trips.

ElBaradei said the IAEA was still evaluating samples taken from the site, but that inspectors had found "no indication" so far of any nuclear material.

He also said that Syria had not yet responded to IAEA requests for additional access to individuals, sites and information.

During the debate, the US envoy to the IAEA, Gregory Schulte, called for "a comprehensive report" by agency inspectors in time for the next board meeting in November.

The report should "detail, in writing, the status of the investigation in Syria and Syria's cooperation with that investigation," Schulte said.

ElBaradei replied that a report would be submitted as soon as possible.

"We have not provided a report and we will provide a report as and when we have enough facts assessment to provide a report," he said.

"Our decision on the report will be based, not on politics, but on when we are ready with assessment and facting (sic)," ElBaradei said.

He insisted that he was not trying to be evasive.

"I'm just telling you how difficult, how complex the situation has become, particularly after the evidence has been eliminated and if we were not to find nuclear material."

Washington claims the facility was being built with North Korean help and resembled Pyongyang's Soviet-type nuclear reactor at Yongbyon used to produce plutonium for nuclear weapons.

US officials allege that Damascus undertook extensive efforts to clean up the site after it was bombed and has since constructed a large building where the reactor stood.

ElBaradei said the cooperation shown by Syria so far was "good" and criticised the Israeli decision to bomb the site.

"I am, as I said last time, quite concerned that with the gratuitous use of force before we have been able to get access to the evidence and once the evidence has been eliminated, it is becoming quite difficult for us to establish the facts," he said.

"We are in a very awkward situation, because the corpse has gone, and we are now at a stage when we have to reconstruct a facility that is not there," he said.

## **Assad aide killing hurts U.N. probe in Syria: diplomats**

Thu Sep 25, 2008 3:10pm EDT

By Mark Heinrich and Sylvia Westall

*[EXCERPTS]*

VIENNA (Reuters) - An International Atomic Energy Agency inquiry into Syria's nuclear activity has been set back by the August assassination of the IAEA's main Syrian contact, the U.N. watchdog's chief said on Thursday.

Diplomats familiar with the matter identified the official as Brigadier General Mohammad Suleiman, 49, a senior security adviser to President Bashar al-Assad. A sniper shot him dead on a Mediterranean beach, Syrian opposition websites said.

"The assassination of the IAEA's main interlocutor has made our inquiry more difficult," agency Director Mohamed ElBaradei said during a closed-door meeting of the IAEA's 35-nation governing board on the status of the Syria investigation.

ElBaradei did not identify the interlocutor. But a senior diplomat with knowledge of the inquiry said it was Suleiman who had escorted U.N. inspectors during their first and so only investigative visit to Syria in June.

"His murder made the IAEA's job that much harder. Suleiman knew what was what and had the ability to deliver things," the diplomat said, alluding to access and answers to questions.

Israeli media said Suleiman was a central figure in an alleged secret nuclear program the United States accused Syria of pursuing after Israeli warplanes destroyed a desert complex that Washington said was a nascent plutonium-producing reactor.

Damascus did not comment. But officials have said the site was only an ordinary military building and accused the United States of doctoring intelligence including satellite photos suggesting Syria had hidden nuclear activity from the IAEA.

The IAEA, whose six-year effort to resolve questions about Iran's secretive nuclear activity has reached an impasse, began probing Syria in May after Washington forwarded intelligence suggesting that the site targeted by Israel was an almost-completed reactor built with North Korean expertise.

Earlier, U.S. Ambassador Gregory Schulte urged ElBaradei to give a full written report on an inquiry into allegations Syria had a covert program to produce bomb-grade plutonium.

*[deletia]*

ElBaradei said the first set of environmental swipe samples taken at the bombed site in June turned up no indications of nuclear material. Full results were due in 2-3 weeks.

Syrian Ambassador Badi Khattab denied Damascus had been obstructing IAEA access or dodging questions.

"It took us less than a month to invite inspectors to the site after the first request came," he said in an interview.

"We reached an understanding with the IAEA that they would take samples at al-Kibar and then once they delivered to us the final analysis, we will discuss further developments," he said.

## **U.S. Envoy to Travel to N. Korea for Nuclear Talks**

By Glenn Kessler

Washington Post Staff Writer

Saturday, September 27, 2008; 3:12 PM

A top U.S. envoy is planning to travel to North Korea shortly in a last-ditch effort to salvage a faltering accord to end Pyongyang's nuclear weapons programs, sources said Saturday.

Assistant Secretary of State Christopher R. Hill is seeking to arrange the rare visit in the wake of North Korea's statement last week that it plans to begin reprocessing spent fuel rods into the raw material needed for nuclear weapons. The announcement was a setback for the Bush administration's efforts to claim progress in restraining North Korea's nuclear ambitions.

State Department spokesman Sean McCormack did not respond to a request for comment on Hill's travel plans. During meetings at the United Nations last week, Hill and Secretary of State Condoleezza Rice met with key officials from countries involved in the six-nation negotiating group on North Korea's weapons.

"We all are sending strong messages to the North Koreans that they should stop any reversals that they are carrying out," Rice told Reuters in an interview on Friday.

Hill visited North Korea in June and last December, after a long period in which U.S. officials were barred from substantive bilateral contacts with North Korean officials.

With great fanfare in June, North Korea blew up the cooling tower attached to its nuclear reactor in Yongbyon as a way of signaling its commitment to ending its weapons programs. North Korea also provided a declaration on the extent of its plutonium production, a key demand of the United States.

In the preceding eight months, North Korea had also taken steps to disable key parts of the reactor and related facilities, which U.S. officials had claimed would take as long as a year to restart.

But North Korea appears able to more quickly begin the reprocessing process -- possibly in a matter of weeks. This would allow it to add to its stockpile of nearly 40 kilograms of weapons-grade plutonium, enough for at least a half dozen weapons.

The talks have faltered because North Korea has refused to accept U.S. proposals for verifying its declaration and answering questions about a possible separate uranium-based program and North Korea's links to a Syrian reactor destroyed last year by Israel. Because of the dispute, Bush has not followed through on a pledge to remove North Korea from the State Department list of state sponsors of terror, infuriating Pyongyang.

Some officials argue that the initial verification plan was too harsh and spooked North Korea. Others say North Korea never seriously sought to negotiate an alternative, with its counterproposal failing to meet the bare minimum for verification, such as allowing environmental sampling.

Under one idea being considered by Hill and his aides -- though not yet approved by more senior officials -- North Korea would give China, the host of the talks, a plan that include sampling, access to

key sites and other provisions sought by the United States. Bush would then provisionally delist North Korea from the terror list, and after that China would announce North Korean acceptance of the verification plan. This would allow North Korea to save face and claim that the delisting occurred before the verification plan was in place.

"We have to have a verification protocol that is going to give us confidence that we are able to verify the declaration and that we're able to answer certain unresolved questions," Rice told Reuters.

SEPTEMBER 30, 2008

## Transcript: Syria's Walid Moallem

Syrian Foreign Minister Walid Moallem talked to The Wall Street Journal's Jay Solomon Monday [2008-09-29] in New York.

[EXCERPT]

**WSJ:** What's Syria's view on Israel's attack last September on an alleged nuclear reactor?

**Mr. Moallem:** The American side admits they were collecting information, supplied by a third country in the Middle East... Israel... to attack this location, claiming it's a nuclear reactor, which is totally untrue. We agreed with the...IAEA. They sent their observers to this location. They took biological samples, and we are waiting for them to give us their report on the result. **The important issue is that this is a military location, not a nuclear location.**

At the same time, we want to tell the American side we would not repeat their experience and lies on Iraq's weapons of mass destruction before the war in Iraq. You can't be partners in an aggression against a target in a sovereign country, and you're a member of this Agency. And after destroying this target you go to the Agency and say this is a nuclear target. You should have done this before.

## **Clash looms as Syria bids for seat on IAEA panel**

Tue 30 Sep 2008, 15:28 GMT

By Mark Heinrich

(Adds Afghan envoy, paragraphs 10-11)

VIENNA, Sept 30 (Reuters) - Syria said on Tuesday it would pursue its bid for a seat on the U.N. nuclear watchdog's governing body despite U.S.-led opposition to Damascus, which is under investigation for alleged covert atomic work.

The International Atomic Energy Agency (IAEA) has been investigating Syria since May over U.S. intelligence allegations that it almost built a secret, plutonium-producing reactor before Israel destroyed the site in an air strike a year ago.

Damascus has denied having a secret nuclear programme and the IAEA said last week preliminary findings from an inspectors' visit to the site in June showed no evidence of one.

Syria is competing with U.S. ally Afghanistan for the nomination to a seat on the IAEA's 35-country Board of Governors reserved for a representative of the Middle East and South Asian group in the IAEA's assembly of 145 member states.

Known as MESA, the group must agree on one candidate by consensus to win automatic approval by the assembly, whose annual General Conference opened in Vienna on Monday.

Arab diplomats said Afghanistan was clinging to its candidacy with U.S. encouragement, despite scant support within MESA, while Syria had broad backing within the group, where fellow Arab League countries predominate.

If MESA cannot settle on a single candidate, the assembly will hold a vote later this week on both candidates, unprecedented and highly divisive in a body that prides itself on consensus. The winner would be chosen by a simple majority.

### **NO REASON TO DROP OUT**

Mohammad Badi Khattab, Syria's ambassador to the IAEA, said Damascus saw no reason to drop out because it had official Arab League support and Afghanistan was isolated in MESA.

"The matter is not yet settled. Syria and Afghanistan are still in the race. But nobody in MESA backs Afghanistan, they are alone," Khattab told Reuters.

Afghanistan's IAEA envoy told Reuters Kabul would not back out because it could count on majority backing in the assembly.

"We are the better candidate. We'll represent Islamic interests and improve understanding between the Islamic world and the West, and being on the board will contribute to the progress of democracy in Afghanistan," said Wahid Monawar.

A senior Western diplomat said consultations showed some 89 members of the assembly would oppose Syria in a vote, including all European Union members, Japan, Canada, Australia and some African, Asian and Latin American states.

The diplomat said Syria's backing in MESA was not as solid as it seemed and that some in the group would turn against Damascus in a secret ballot.

"Some who back Syria publicly won't do it privately."

A second Western diplomat said: "A matter of principle is at stake here -- we can't have countries on this (policy-making) board who are not IAEA members in good standing."

Arab diplomats said Syria was unlikely to back out because its candidacy was endorsed at an Arab League summit in March.

"The Americans lobbied almost every other Arab country that was not on the board, mainly (pro-Western) Gulf countries, to go for the seat but failed," one Arab diplomat said.

"Why block Syria? There is no proven proliferation problem there. Libya was on the board for a year recently even though it remained under IAEA investigation."

Libya renounced an illicit atomic bomb programme in 2003 and an IAEA report this month certified that the North African state had indeed eliminated its nuclear weapons capacity.

## **People of the Year: Lt.-Gen. Gabi Ashkenazi: Rehabilitating the IDF**

By YAAKOV KATZ

Sep 25, 2008 9:36 | Updated Oct 1, 2008 12:12

In the almost two years since he became chief of General Staff, the public has yet to really get to know Lt.-Gen. Gabi Ashkenazi. Unlike his predecessor Dan Halutz, Ashkenazi keeps his distance from the media and even after 19 months on the job has yet to give a single interview.

*[deletia]*

While his public image is of a gruff infantry soldier, Ashkenazi is an intelligent tactician and strategist. It was his decision, for example, to clamp a complete media blackout on last September's air strike against what turned out to be a Syrian nuclear reactor. His decision, defense officials admit today, spared the country an unnecessary war.

## **Syria, Afghanistan battle for seat on IAEA board**

3 hours ago [*Accessed 2008-10-01T19:45Z*]

VIENNA (AFP) — Despite opposition from the West and the United States in particular, Syria appears determined to pursue its bid for a seat on the UN atomic watchdog's board, now that Iran is officially out of the running.

But in a looming clash at the International Atomic Energy Agency's general conference here this week, Afghanistan -- a US ally -- also announced its candidature on Wednesday.

Diplomats said Kabul enjoys the support of most of the IAEA's 145 member countries.

The matter comes up for discussion on Friday and could be forced to a vote.

Members of the IAEA's 35-strong board of governors are designated and elected each year by the body's highest policy-making body, the General Conference.

Decisions are traditionally adopted by consensus, but if no consensus is possible, it goes to a vote.

A seat has become free for the so-called Middle East and South Asia (MESA) group with the expiry of Pakistan's one-year term.

Iran had also been seen as a potential candidate, but it pulled out in favour of its staunch regional ally Syria.

If MESA cannot agree on a single country, it will be up to the general conference to vote between the different candidates.

For the US and others, however, Syria would be unacceptable because of current allegations it was building a covert nuclear facility at a remote desert site called Al-Kibar until it was destroyed by Israeli bombs in September 2007.

Damascus has yet to clear up the allegations, which it has simply dismissed as "ridiculous".

Apart from allowing IAEA experts to inspect the suspect site in a one-off visit in June, Syria has not undertaken any further action to actively disprove the accusations.

"Having Syria on the board would be like having a suspected arsonist oversee the fire brigade," one conference participant told AFP on condition of anonymity.

Syria, for its part, refuses to withdraw its candidacy, in spite of US-led opposition, saying it has the support of the Arab League.

But Afghanistan had the wider backing of other Islamic countries, a diplomat close to the IAEA said.

"In the OIC (Organisation of Islamic Conference), you can go through the list and you'll see the majority of people would vote for Afghanistan," the diplomat said.

"Albania is an Islamic country, so is Azerbaijan. There are countries in Africa that are Islamic and members of OIC that would certainly support Afghanistan, because we are an Islamic republic with a better, progressive constitution," the diplomat said.

The hope was that "by Friday, Syria will come to an understanding" and back down, the diplomat continued.

"It's simple maths. If 89 are for Afghanistan, out of a total 145, that's 56 countries there for Syria."

The diplomat said Afghanistan had approached numerous delegations and had already received great many letters of support from various capitals.

A conference participant, who also spoke on condition of anonymity, said Syria was running into a great deal of resistance.

"The Syrian ambassador is frantically canvassing IAEA members -- and learning that he will lose," the participant said.

Kabul's permanent representative to the IAEA, Wahid Monawar, told AFP that he thought the time was right for Afghanistan to take a seat on the board.

"We believe that as a progressive nation, and a developing nation (we will) bring a better understanding of Islamic countries, the Islamic understanding, to the West and articulate the issues that need to be articulated," Monawar said.

"We believe this opportunity is right, the year is right. It's an opportunity for the Afghan people to benefit from the technology that is afforded by the agency."

## **Report: Damascus renews nuclear activity**

Roe Nahmias

Published: **10.02.08**, 11:06 / Israel News

Asharq Al-Awsat quotes Israeli officials as saying Damascus, with North Korea's help, constructing military nuclear plants according to Iranian model. 'Nuclear Syria red line that must not be crossed,' one source says

Israeli security officials have accused Syria of resuming the construction of nuclear facilities in its territory for military purposes, the London-based Arabic-language newspaper Asharq Al-Awsat reported Thursday.

In a briefing to reporters on Wednesday, Israeli military sources said the country would not allow a repeat of the Iranian model in Syria and would not wait for Damascus to complete the construction of a nuclear reactor before using all means at its disposal to stop the program.

According to the report, following last year's bombing of the alleged Syrian nuclear facility near Dir A-Zur, Damascus resumed the construction of a number of new plants. The Israeli military sources were quoted as saying that the Syrians are following the Iranian nuclear model, meaning the simultaneous construction of a number of nuclear facilities in different locations.

The sources said North Korea was behind the project, adding that experts from Pyongyang visited Syria last month to begin planning the project.

"The past year has seen three incidents indicating that Syria's nuclear armament is a red line that must not be crossed," Asharq Al-Awsat quoted one of the Israeli officials, who was apparently referring to the bombing at Dir A-Zur, the assassination of Syrian President Bashar Assad's top security advisor Brigadier General Mohammed Suleiman and Saturday's deadly car bomb explosion near a Syrian intelligence facility.

Israel believes General Suleiman was in charge of Syria's nuclear program and the cooperation with North Korea. The military officials also alluded to the possibility that Israel was operating inside Syria. Israel has never admitted to bombing the nuclear facility in Dir A-Zur.

According to one report, among those killed in Saturday's car bomb attack near Damascus was Brig.-Gen. George Gharbi, another top Syrian military official involved in the country's nuclear program, and his son, who held the rank of lieutenant.

Another report said the senior officer killed in the blast was Abed el-Karim Abbas, deputy head of the Palestine Division in Syrian intelligence.

The Italian news agency AKI quoted Syrian opposition figures as saying that Abbas was among the officers interrogated over the assassination of former Lebanese Prime Minister Rafik Hariri.

Asharq Al-Awsat further quoted western officials in Israel as saying that the car bomb attack has heightened tensions between Jerusalem and Damascus. Syria has not directly accused Israel of involvement in the attack, but hinted that the 'terrorists' came from abroad.

The western sources told the newspaper that Israel was looking to damage Syria's relations with a number of European countries.

## **Syria Reportedly Renews Its Nuclear Pursuits**

Thursday, October 02, 2008

By Julie Stahl

Jerusalem (CNSNews.com) – Israel would not allow a nuclear-armed Syria any more than it would a nuclear-armed Iran, an Israeli official said on Thursday.

The senior Israeli official spoke following reports that Damascus has restarted its nuclear program, apparently undeterred by a reported Israeli air strike on a nuclear facility deep inside Syria a year ago.

The Arabic Asharq Alawsat quoted unnamed Israeli military sources on Thursday as saying that Syria had patterned its renewed program on Iran's model of building a number of facilities throughout the country.

According to the London-based newspaper, the new facilities are being built with North Korean backing, just as the bombed reactor had been. **And a group of Iranian experts joined the endeavor last month in Syria, reports said.**

The sources said three separate events proved that Israel would not tolerate a nuclear-armed Syria.

They named the reported bombing of the first reactor; the assassination of a top Syrian official Brig-Gen. Muhammad Suleiman in August, who was believed to be responsible for Syria's nuclear program; and a car bomb explosion in Damascus last weekend in which another senior official involved in the nuclear program was reported to be among the fatalities.

The article appeared on the front page of the Saudi-owned newspaper. One analyst said whether the report is true or not, the Saudis wanted to deliver a message to Syria, with whom tensions have been high for years because of Syria's role in Lebanon and close ties with Iran.

The Israeli army would not respond to the report, saying that it does not comment on reports that quote anonymous Israeli sources.

The Israeli government would not comment on the report, either. But a senior Israeli official said that Israel is not likely to allow a nuclear Syria.

“We don't appreciate Iran's nuclear race. It's not reasonable to believe we would allow Syria to provide itself with nuclear weapons,” said the official who asked not to be named.

Dr. Ephraim Asculai, from the Tel-Aviv based Institute for National Security Studies, said that while the article didn't contain good references and it seemed out of character for Israeli military sources to be quoted by the paper, it was still plausible that Syria was developing a nuclear program.

“I think it is possible,” said Asculai, who worked for more than 40 years at the Israel Atomic Energy Commission and a number of years with the International Atomic Energy Agency in Vienna.

Asculai told CNSNews.com he is not certain that Syria would try to build a reactor but they could go the other route of enriching uranium, which is “easier to hide.” With 25 kilos (about 55 pounds) of enriched uranium, it is possible to construct a bomb, he said.

According to Asculai, no one knows for sure if North Korea is working to enrich uranium but it is highly likely that they are and they could be helping Syria. Tehran (which has strategic alliances with Damascus) could also be helping Syria, he said.

Last week, the U.S. called for a full report on the allegations that Syria had been building an undeclared nuclear facility, reports said.

IAEA inspectors visited the site in June and took soil samples for analysis, IAEA chief Mohamed ElBaradei said. So far they have not found any indication of nuclear material, he said.

Syria has denied that it was building a nuclear facility and said the bombed site was a military installation. It has refused subsequent visits to the site by the IAEA.

Washington says that North Korea was helping to build the site, which resembled its reactor, which was used to produce plutonium for nuclear weapons.

## Syria rejects opening military sites to atom probe

By Mark Heinrich

Fri 3 Oct 2008, 10:07 GMT

VIENNA, Oct 3 (Reuters) - Syria said on Friday it was cooperating fully with a U.N. inquiry into its nuclear activity but would not go as far as opening up military sites because this would undermine its national security.

Diplomats say the International Atomic Energy Agency (IAEA) has asked to examine several Syrian military installations, but the comments from Damascus clearly ruled this out.

The Vienna-based U.N. nuclear watchdog has been probing Syria since May over U.S. intelligence allegations that it almost built a secret, plutonium-producing reactor before Israel destroyed the site in an air strike a year ago.

Syria -- an ally of Iran, which is the subject of a much longer-running, and now stalled, IAEA investigation -- has denied having a secret nuclear programme.

The IAEA said last week that preliminary findings from test samples taken by inspectors on a visit granted by Damascus to the desert site in June showed no evidence of one. Syria says all that was there was a disused military building.

Western countries accused Syria at the annual meeting of the IAEA's 145-nation assembly this week of denying the IAEA full access to documentation, officials and sites that they said was needed to get to the bottom of the allegations.

IAEA Director Mohamed ElBaradei credited Syrian cooperation so far but said he looked for Damascus to show "maximum transparency" and provide all information needed for the agency to draw conclusions.

### NATIONAL SECURITY

"We would like to underline that my government is cooperating with the agency in full transparency and will follow suit all along the way," Ibrahim Othman, Syria's Atomic Energy Commission director, told the IAEA's assembly on Friday.

"However, this cooperation will not in any way come at the expense of exposing our military sites or causing a threat to our national security," said Othman.

Diplomats close to the IAEA have said Syria has ignored agency requests to check three military installations believed linked to the alleged reactor site.

"We regret statements by some countries calling on us to show more transparency. I would like you here to recall what (ElBaradei) said, namely that Syria has cooperated and complied with implementation of the measures agreed to by the agency."

Othman also urged the gathering to back Syria's candidacy for a two-year seat on the IAEA's 35-nation, policymaking Board of Governors, strongly opposed by Western nations since Damascus is under investigation over proliferation concerns.

He said Syria played a "positive role" during an earlier tenure on the board and had a record of "fruitful cooperation" with the IAEA in peaceful applications of nuclear know-how. Syria's only declared nuclear site is an older research reactor.

Syria is competing with U.S. ally Afghanistan for the nomination to a seat on the board reserved for a representative of the Middle East and South Asian (MESA) group in the assembly.

Diplomats said MESA had been unable to come to the usual consensus on one candidate and the assembly therefore was expected to vote on both candidates later on Friday -- a rare and highly divisive step in a body that prides itself on consensus.

The winner would be chosen by a simple majority.

Western diplomats said they had a majority for Afghanistan, including all European Union members, Japan, Canada, Australia and some African, Asian and Latin American countries. (Editing by Mark Trevelyan)

## **Under Western pressure, Syria drops bid for IAEA board – Summary**

Posted : **Fri, 03 Oct 2008** 15:36:33 GMT

Author : DPA

Vienna - **Facing Western opposition, Syria dropped its bid for a rotating seat on the International Atomic Energy Agency (IAEA) board Friday, according to diplomats. The United States and other Western nations opposed board membership for the Middle Eastern nation as it is alleged to have built a secret nuclear reactor with North Korean help.**

Instead of Syria, rival candidate Afghanistan was set to take a seat on the 35-member steering committee of the IAEA after the agency's general conference officially adopts the decision later on Friday.

Diplomats said Afghanistan would likely have won the vote for the board membership, although a number of developing countries would have supported Syria, as the nuclear allegations have not yet been proven

"This is a clear victory for the credibility of the IAEA," a senior Western diplomat said. "It would have been absurd to have on the board a country that is under investigation for suspended nuclear activities."

Syria's last-minute backing down prevented a split among agency members, who are used to adopting board candidates without a vote.

In April, Washington provided the Vienna-based agency with intelligence indicating Damascus was close to completing a reactor that was bombed by the Israeli air force last year.

A first visit of IAEA inspectors to the alleged site in the Syrian desert yielded inconclusive results.

Damascus maintains the site was a conventional military installation.

Western nations have criticized Syria for not having allowed further visits by inspectors, and for banning access to additional sites.

"We would like to underline that my government is cooperating with the agency and we will follow suit all along the way," Ibrahim Othman, director general of Syria's Atomic Energy Commission, told the general conference earlier on Friday.

"However, this cooperation will not be in any way at the expense of disclosing our military sites or causing a threat to our national security," he said.

<http://www.washingtonpost.com/wp-dyn/content/article/2008/10/04/AR2008100400646.html>

## **N.Korea has helped arm 6 Mideast nations: Israel**

By Mark Heinrich

Saturday, **October 4, 2008**; 7:18 AM

VIENNA (Reuters) - Israel accused North Korea on Saturday of providing weapons of mass destruction to six countries in the Middle East that ignored arms-control commitments.

The Jewish state spoke as the 145-nation assembly of the U.N. nuclear watchdog, the International Atomic Energy Agency, adopted a resolution unanimously urging North Korea to reverse steps it has taken to revive its shutdown atom bomb program.

Israel itself is the target of two hotly disputed Arab-sponsored draft resolutions in the assembly urging it to give up its nuclear arms monopoly in the Middle East, join the Non-Proliferation Treaty (NPT) and accept full IAEA inspections.

Israel said there were six Middle Eastern countries which had obtained the means produce doomsday weapons and ballistic missiles covertly from North Korea while ignoring commitments as members of the NPT and other arms-control regimes.

"At a time when the international community concentrates on North Korea's nuclear activities and its non-compliance with safeguards agreements, the Middle East is at the receiving end of North Korea's reckless practices," Israeli envoy David Danieli told the global meeting in Vienna.

"North Korea has long become a source of proliferation of dangerous weapons of mass destruction and ballistic missiles in the Middle East," he said.

### SIX COUNTRIES

"At least half a dozen countries in the region who do not even pay lip service to control regimes and are acting in bad faith regarding their stated policy and their undertakings regarding non-proliferation conventions have become eager recipients of North Korea mostly through black market and covert network channels." Danieli did not name the six nations.

Western intelligence officials and non-proliferation experts have said that Iran, Syria, Libya and Iraq under Saddam Hussein were believed to have received North Korean military aid, some applicable to mass-destruction weaponry, in the past.

"No due attention is paid to this dark aspect of North Korean behavior which has become a matter of great concern to my government and others," Danieli said.

He said there was growing evidence that such states were "emulating the dangerous unlawful practices" of North Korea, which left the NPT in 2003 and developed atom bombs.

"(We) call the attention of the international community to these dangerous developments and their consequences," he said.

Iran is under IAEA investigation over intelligence allegations of secret atomic bomb research. Syria is under IAEA scrutiny over U.S. reports it almost built a plutonium-producing reactor before Israeli warplanes bombed the site a year ago.

Iran and Syria, adversaries of Israel, deny the allegations. Libya scrapped a covert nuclear arms program in 2003.

U.S. envoy Chris Hill ended three days of meetings in North Korea on Friday meant to salvage the collapsing denuclearization deal, calling the talks substantive but not saying if he swayed Pyongyang to give up plans to restart its nuclear complex.

The resolution passed by the IAEA assembly underlined the need for denuclearization fully verifiable by IAEA inspectors -- a demand resisted by Pyongyang and at the heart of disputes that have crippled its denuclearization deal with five powers.

[http://www.boston.com/news/world/asia/articles/2008/10/09/us\\_to\\_take\\_nkorea\\_off\\_terrorist\\_list\\_in\\_oct\\_report/](http://www.boston.com/news/world/asia/articles/2008/10/09/us_to_take_nkorea_off_terrorist_list_in_oct_report/)

## **U.S. to take N.Korea off terrorist list in Oct: Kyodo**

**October 9, 2008**

TOKYO (Reuters) - The United States has told Japan that it will remove North Korea from its terrorist blacklist this month, Kyodo news agency reported on Thursday, quoting unidentified Japanese government sources.

The report follows talks in Tokyo on Wednesday between Japan's top negotiator on North Korean nuclear issues and U.S. special envoy Sung Kim.

A Japanese foreign ministry spokesman said he could not immediately comment on the report.

Kyodo reported that U.S. envoy Christopher Hill, in talks in North Korea earlier this month, agreed that Washington would not make verification of Pyongyang's uranium enrichment program or proliferation activities a condition of delisting.

Hill also agreed that first verification of the North's plutonium-related activities listed by Pyongyang in June would be conducted, Kyodo reported.

The United States agreed to continue food support begun in June and asked Japan to consider helping with such humanitarian aid, Kyodo said.

Prime Minister Taro Aso had been informed of the U.S. decision and that Sung Kim had apparently conveyed it to Japan's top negotiator on North Korean nuclear issues, Akitaka Saiki, in talks on Wednesday in Tokyo, Kyodo said.

Japan was prepared to accept the delisting but would decline the request for food aid, taking into consideration that it plans to extend economic sanctions on Pyongyang because of a lack of progress in settling a feud over Japanese citizens kidnapped to the North decades ago, it reported.

Washington said it would take North Korea off the terrorism list, bringing economic and diplomatic benefits, once a system had been agreed to verify Pyongyang's nuclear program.

## **Exclusive interview with the Syrian head of state Bashar Assad**

Monday Morning, Lebanon - 17 hours ago [Accessed 2008-10-11T14:00Z]

[with Melhem Karam of Monday Morning]

[EXCERPT]

### **No Syrian nuclear reactor**

**Monday Morning:** Mr. President, reports and rumors have been spread about the Israeli piracy against the Kobar position in the Syrian Desert. What exactly were the airplanes targeting, and were the installations targeted intended for the manufacture of nuclear products despite the IAEA chief Baradei's recent announcement?

**President Assad:** Mohammad El-Baradei, the head of the International Atomic Energy Agency [IAEA], has denied the existence of nuclear installations or of a nuclear reactor, as the IAEA has also. This naturally corresponds to what Syria announced earlier several times following the Israeli raid. It's a question of a military position, and we didn't say it was a civilian position, but it has never been a nuclear site. The statements of Baradei have settled the matter. Before the visit of the IAEA's inspectors we were giving continuous explanations and after the inspectors took samples from the river and the building itself and performed analysis and tests, none of the Israeli and US pretexts and lies turned out to be true.

## **Ros-Lehtinen Criticizes U.S. Decision to Remove North Korean Regime from List of State Sponsors of Terrorism**

Posted : Sat, 11 Oct 2008 13:49:37 GMT

Author : House Committee on Foreign Affairs (Republican Office)

WASHINGTON, Oct. 11 DC-ForeignAffairsComm

WASHINGTON, Oct. 11 /PRNewswire-USNewswire/ -- U.S. Rep. Ileana Ros-Lehtinen (R-FL), Ranking Republican on the House Foreign Affairs Committee, strongly criticized today's decision by the U.S. Government to remove North Korea from the list of State Sponsors of Terrorism without first requiring full verification of the dismantlement of all nuclear facilities. In June, Congress received notification that such a decision was possible, following an understanding between the regime and other members of the "Six Party Talks." In recent weeks, North Korea has denied international inspectors access to suspected nuclear sites. Earlier this year, Ros-Lehtinen successfully included an amendment in the Security Assistance and Arms Export Control Reform Act (H.R. 5916) requiring North Korea to take verifiable action to end its proliferation activities, such as ceasing to provide nuclear assistance to Syria and Iran, before it can be considered for removal from the list. Statement of Ros-Lehtinen:

While I am not surprised by today's decision, I am profoundly disappointed. Given the regime's decision to restart its plutonium reactor at Yongbyon and actions barring access to the site by inspectors from the

International Atomic Energy Agency, it is clear that North Korea has no intention of meeting its commitment to end its nuclear program.

North Korea should not be rewarded with removal from the list of State Sponsors of Terrorism when it continues to engage in activities that threaten critical U.S. interests, including proliferation of nuclear material, technology, and expertise to extremist regimes. We know that it provided crucial assistance to Syria's illicit nuclear program which was revealed by an Israeli air strike last year on a clandestine facility. This assistance was flowing even as the regime was assuring our negotiators that all such efforts had stopped and was demanding that it be removed from the list.

The plutonium reactor at Yongbyon is only one part of the problem. The regime's continued denial of its secret uranium program and its refusal to allow inspectors to adequately verify that claim have been central issues in the impasse.

With today's action, the Administration has given up a critical instrument of leverage. By rewarding North Korea before the regime has carried out its commitments, we are encouraging this regime to continue its illicit nuclear program and violate its pledge to no longer provide nuclear assistance to extremist regimes. We are also sending a strong message to other rogue nations, such as Iran and Syria, that we will not hold them to their commitments, even as we give in to their demands.

Special Briefing  
Sean McCormack, Spokesman  
Washington, DC  
October 11, 2008

On the Record Briefing: Special Envoy for the Six-Party Talks Ambassador Sung Kim, Assistant Secretary of State for Public Affairs Sean McCormack, Assistant Secretary of State for Verification, Compliance, and Implementation Paula DeSutter, and Acting Assistant Secretary of State for International Security and Nonproliferation Patricia McNerney on North Korea

2008/869

*[EXCERPTS]*

MR. MCCORMACK: Good morning, everybody. I want to thank you for coming in on a **Saturday morning**. I see a few faces that we don't normally see in the briefing room.

You have a couple of pieces of paper in front of you. One of them is a fact sheet that I'm going to read here just for the record. You also have in front of you a fact sheet called Existing Sanctions and Reporting Provisions Related to North Korea. I think that's a useful reference for part of our discussion a little bit later on. So let me get started here. I'm going to read a couple of statements which we'll have in paper form for you, and we're also going to invite a couple of other guest speakers up here: Ambassador Sung Kim from the EAP Bureau, Acting Assistant Secretary Patty McNerney, Assistant Secretary Paula DeSutter. They're going to make brief statements and then we can get into a Q&A session and talk about this morning's events.

The participants in the Six-Party Talks have, for some time, been discussing the importance of verification measures that will allow the parties to reliably verify North Korea's denuclearization as the process moves forward. The Six-Party heads of delegation met in July to discuss verification measures and draft papers were exchanged among the parties. On July 12th, China, the chair of the Six-Party Talks, released a press communiqué stating that verification measures would include visits to facilities, review of documents, and interviews with technical personnel as well as other measures unanimously agreed among the Six Parties.

Upon the invitation of the North Korean Government, a U.S. negotiating team, on behalf of the Six Parties, visited Pyongyang from October 1st to the 3rd for intensive talks on verification measures, and Ambassador Sung Kim was part of that delegation. He can talk a little bit in depth and from firsthand accounts about those negotiations.

Based on these discussions, the United States and North Korea negotiators agreed – and I have to emphasize this is an agreement – on a number of important verification measures, including agreement that experts from all Six Parties may participate in verification activities including experts from non-nuclear states; agreement that the IAEA will have an important consultative and support role in verification; agreement that experts will have access to all declared facilities, and based on mutual consent, to undeclared sites; agreement on the use of scientific procedures, including sampling and forensic activities, and agreement that all measures contained in the verification protocol will apply to the plutonium-based program and any uranium enrichment and proliferation activities. In addition, the monitoring mechanism already agreed by the Six Parties to monitor compliance with the Six-Party documents applies to proliferation and uranium enrichment activities.

So at this point, what I'd like to do is turn it over to Ambassador Kim and then we'll go through our other speakers and then we can get right to questions.

*[Massive deletions from this point forward.]*

MR. MCCORMACK: Charlie.

QUESTION: Yes, probably for Sean, but can you take us back and tell us when the President signed off on this, when the Secretary actually signed it upstairs? Is this a document that'll --

MR. MCCORMACK: Right. I don't have exact times for you. The President, late yesterday afternoon, early evening made the decision to move forward on this. And the Secretary actually signed the document, I think, somewhere shortly after 7:30 this morning.

QUESTION: Here in the building?

MR. MCCORMACK: No, I think she was at her residence.

MR. MCCORMACK: All right. Let's just take a couple of more questions here. I know there's a lot of demand.

Kirit.

QUESTION: Could one of you give us just a sense, going forward, on the timeline of when you expect the verification to begin, if you could, and then how long you think it might take? I mean, I understand maybe that's an open-ended process, but just to give us a sense of when you might expect people to get there on the ground and start working.

ASSISTANT SECRETARY DESUTTER: Let me tell you that how long it will take is going to depend very largely on North Korea and its level of cooperation. Remember in the Libya case, they took us to facilities that we didn't know about, that they hadn't originally declared. That makes it faster.

And remember that – and another exciting part of this agreement is that they have agreed that the verification activities apply not just to plutonium, not just to Yongbyon, but to HEU and to the

proliferation activities. And so what – each piece that we do, we hope that that will be additive and make it more efficient. I mean, we don't – we're going to want to conduct an efficient and smart verification regime because that makes more sense for everybody. But if the North Koreans are, you

know, ready, willing and able to add facilities – okay, functional facilities, for example – we know that material leaves Yongbyon, and at some point, it becomes a pit in a bomb. We know that happens in one or more places. So where are those places, how are we going to get to them?

So again, we're going to have to conduct verification activities at a number of facilities, make sure that everything that we've discovered that's relevant is added to the declaration so that at the end of the day, we can say – and remember, we're verifiers. We're never – there's never going to be a hundred percent confidence that we're done. There will be questions. There will be ambiguities. The best we can do is say, here are the activities we have undertaken; these are the things that we have discovered; these are the things that we have gotten declared; here is the analysis that we have; and we want to attain a reasonable degree of confidence that we've done that.

At that point, you decide, are there any follow-on measures that you need to have. Like with Libya, we set up a trilateral consultative group so that if we had ongoing issues, we had a venue that we could raise them in. And so, you know, I think I would say probably years. But they could surprise us.

QUESTION: Just to clarify on that answer, the declaration that they gave earlier this year was focused mostly on a plutonium program.

ASSISTANT SECRETARY DESUTTER: Right.

QUESTION: And so is it fair to say that the verification that's going to proceed is going to basically start with the plutonium program, or will you be moving on parallel tracks at the same time with uranium enrichment – possible uranium enrichment and the proliferation activities related to Syria? Or is it you first get through --

ASSISTANT SECRETARY DESUTTER: We will --

QUESTION: -- this plutonium declaration?

ASSISTANT SECRETARY DESUTTER: We will be starting with plutonium, okay? That's not an insignificant challenge, okay? You have to know – we know basically where it's made. We don't know the other places that it goes to. You need to know, you know, what are the test activities. You know, there's an awful lot about the plutonium. You need to follow the material from when it comes out of a uranium mine and goes all the way through the process until it becomes a pit. And so that would be quite a bit. Now will we learn things about the uranium program by virtue of that? I hope so. I haven't – so those are going to be hard.

QUESTION: But that's --

ASSISTANT SECRETARY DESUTTER: The plan is to start with a materials approach and try to follow the material to see where it's been. We just think that that makes the most sense. We're not going on a fishing expedition.

QUESTION: Okay. But – so the uranium enrichment and proliferation is the second order of magnitude at this time?

MS. MCNERNEY: I wouldn't say it's – yeah.

MR. MCCORMACK: We have time for one last question. Jay, you're going to be it – no --

MS. MCNERNEY: I wouldn't say it's the second order of magnitude. On the proliferation, for example, one of the key things the Secretary laid out is we need access to facilities, to people, to documents. And when you start having that kind of access, building a record, you start to determine, was there proliferation of material, did – were people involved in any kind of engagement outside of North Korea. So all of that will be part and parcel of this larger process. Same with uranium enrichment; when you start talking to some of these individuals, you start raising questions across the board. But obviously, the largest program that we all are aware of is the plutonium program, so it makes sense to start there.

Fact Sheet  
Office of the Spokesman  
Washington, DC

### **U.S.-North Korea Understandings on Verification**

\* The participants in the Six-Party Talks have for some time been discussing the importance of verification measures that will allow the Parties to reliably verify North Korea's denuclearization as the process moves forward.

\* The Six-Party Heads of Delegation met in July to discuss verification measures, and draft papers were exchanged among the Parties.

\* On July 12, China, the Chair of the Six-Party Talks, released a Press Communiqué stating that verification measures would include visits to facilities, review of documents, and interviews with technical personnel as well as other measures unanimously agreed among the Six Parties.

\* Upon the invitation of the North Korean government, a U.S. negotiating team on behalf of the Six Parties visited Pyongyang from October 1 – 3 for intensive talks on verification measures.

\* Based upon these discussions, U.S. and North Korean negotiators agreed on a number of important verification measures, including:

- o Agreement that experts from all Six Parties may participate in verification activities, including experts from non-nuclear states;

- o Agreement that the IAEA will have an important consultative and support role in verification

- o Agreement that experts will have access to all declared facilities and, based on mutual consent, to undeclared sites;

- o Agreement on the use of scientific procedures, including sampling and forensic activities; and

- o Agreement that all measures contained in the Verification Protocol will apply to the plutonium-based program and any uranium enrichment and proliferation activities. In addition, the Monitoring Mechanism already agreed by the Six Parties to monitor compliance with Six-Party documents applies to proliferation and uranium enrichment activities.

\* The U.S.-DPRK agreement on these verification measures has been codified in a joint document between the United States and North Korea and certain other understandings, and has been reaffirmed

through intensive consultations. The agreement and associated understandings have been conveyed to the other parties.

\* These measures will serve as the baseline for a Verification Protocol to be finalized and adopted by the Six Parties in the near future.

\* Verification of the North Korea declaration submitted on June 26 has already begun with review of the over 18,000 pages of operating records from Yongbyon that North Korea provided on May 8.

U.S. Department of Defense  
Office of the Assistant Secretary of Defense (Public Affairs)  
Speech

Carnegie Endowment for International Peace (Washington, D.C.)

As Delivered by Secretary of Defense Robert M. Gates, Washington, D.C.

Tuesday, October 28, 2008

*[EXCERPTS]*

*[deletia]*

In 2001, after a thorough review of our strategic posture, President Bush announced a New Triad. It consists of: First, our strike capabilities, including our traditional nuclear deterrent and conventional capabilities; second, defenses, including limited ballistic missile defenses; and finally, an infrastructure to support the other two. The goal of the New Triad is to reduce our emphasis on nuclear weapons for deterrence and provide the President more non-nuclear deterrence options and responses to potential crises.

Even so, we must be realistic about the world around us – about the challenges we face and about our ability to predict what other nations will do. President Clinton called his nuclear arms reductions part of a “lead and hedge” strategy: We’ll lead the way in reducing our arsenal, but we must always hedge against a dangerous and unpredictable world.

That is still true today, and maybe even more so. Rising and resurgent powers, rogue nations pursuing nuclear weapons, proliferation, international terrorism – all demand that we preserve this “hedge.”

There is no way to ignore efforts by rogue states such as North Korea and Iran to develop and deploy nuclear weapons, or Russian or Chinese strategic modernization programs. As long as other states have or seek nuclear weapons – and potentially can threaten us, our allies, and friends – then we must have a deterrent capacity that makes it clear that challenging the United States in the nuclear arena – or with other weapons of mass destruction – could result in an overwhelming, catastrophic response.

There is little doubt that some nations will continue to think that possession of nuclear weapons is the best way to preserve their regime or threaten their neighbors. We remain concerned that this is the case with North Korea and Iran today, as it was with Libya and Iraq in the past.

*[deletia]*

I've spent most of my time talking about our nuclear arsenal. Before closing, I want to take a step back and discuss, briefly, some of the broader implications of deterrence in the 21st century.

There can be little doubt that the post-Cold War world offers a new strategic paradigm for nuclear weapons, and particularly for the concept of deterrence. As our 2008 National Defense Strategy puts it, "the challenge is one of deterring or dissuading a range of potential adversaries from taking a variety of actions."

Deterrence has a specific policy goal – and, in this sense, deterrent strategies can be applied to many situations.

A few examples come to mind.

Rogue regimes that threaten their neighbors and our allies, potentially with nuclear weapons, are a problem today and will be in the future. Our goal is, in part, to reduce their ability to hold other nations hostage, and to deny them the ability to project power. The New Triad I mentioned earlier, with a conventional strike force and ballistic missile defense, helps achieve this. A conventional strike force means that more targets are vulnerable without our having to resort to nuclear weapons. And missile defenses reinforce deterrence and minimize the benefits of rogue nations investing heavily in ballistic missiles: They won't know if their missiles will be effective, thus other nations will feel less threatened. And let's not forget the deterrent value of other parts of our conventional military forces.

We also still face the problem of weapons passing from nation-states into the hands of terrorists. After September 11th, the president announced that we would make no distinction between terrorists and the states that sponsor or harbor them. Indeed, the United States has made it clear for many years that it reserves the right to respond with overwhelming force to the use of weapons of mass destruction against the United States, our people, our forces, and our friends and allies. Today we also make clear that the United States will hold any state, terrorist group, or other non-state actor or individual fully accountable for supporting or enabling terrorist efforts to obtain or use weapons of mass destruction – whether by facilitating, financing, or providing expertise or safe haven for such efforts. To add teeth to the deterrent goal of this policy, we are pursuing new technologies to identify the forensic signatures of any nuclear material used in an attack – to trace it back to the source.

## **Transcript of Interview with IAEA Director General Mohamed ElBaradei**

CNN Late Edition with Wolf Blitzer

Aired 28 October 2007 - 11:00 ET

**This is a rush transcript. This copy may not be in its final form and may be updated.** [Accessed 2008-11-11T18:10]

[EXCERPT]

**BLITZER:** As you know, the Israelis, in early September, bombed some sort of facility in Syria that was suspected of being a nuclear reactor, maybe a nuclear reactor built on a North Korean model. I know you've seen these pictures. You've seen the before and the after. What's your conclusion? Was this a nuclear reactor that the Syrians were building in their country based on a North Korean model?

**ELBARADEI:** Wolf, I'm very distressed, frankly, about this Syrian bombing because nobody - there had been chatter for the last few years. John Bolton three years ago went to testify before Congress and said there is concern about Syria. And yet, until today, we have not received information about any nuclear-related activities, clandestine nuclear-related activities in Syria. The bombing, again, happened, and we never, until today, received any piece of information. That to me is very distressful because we have a system. If countries have information that the country is working on a nuclear-related program, they should come to us. We have the authority to go out and investigate. But to bomb first and then ask questions later, I think it undermines the system and it doesn't lead to any solution to any suspicion, because we are the eyes and ears of the international community. It's only the agencies and inspectors who can go and verify the information.

If Syria were working on a nuclear program, a clandestine program, then we'd obviously be able to draw the consequences. But today I don't know where to go. I didn't get any information. I contacted the Syrians. They said this is a military facility, has nothing to do with nuclear. And I would hope if anybody has information before they take the law into their own hands, to come and pass the information on.

**BLITZER:** So what you're suggesting, Dr. ElBaradei, is neither the Israelis nor the U.S. government - or for that matter, any other government - gave you any hard evidence to back up this claim that this was a North Korean modeled nuclear reactor.

**ELBARADEI:** Or any evidence at all. Not only hard evidence, Wolf.

**BLITZER:** I know you've seen some commercial satellite photos though of the before and after. Are there any conclusions you can draw based on what you've seen in those satellite photos?

**ELBARADEI:** These are commercial satellite photos that we procured ourselves, has not been providing to us. And we're still investigating them. We're still comparing the pre and after. But in addition to us buying commercial photos, I would very much hope that countries will come forward if they have information so we'll do - go through a due process.

**BLITZER:** We're almost out of time, but based on the commercial photos that you've seen from these satellite reconnaissance, are there any conclusions that you and your team have been able to come up with?

**ELBARADEI:** Not at this stage, Wolf. Not at all.

**BLITZER:** All right, and so it would be premature to allege that North Korea was proliferating in cooperation with the Syrians? Is that what you're saying as well?

**ELBARADEI:** That's correct.

**BLITZER:** Because I want to play a little clip of what the ranking Republican on the House Intelligence Committee, Peter Hoekstra, told me here on "Late Edition" last Sunday. Listen to this.

[Begin Video Clip]

**[REP. PETER HOEKSTRA, R-MICH.:** If North Korea or if Iran or other countries were involved in Syria, it, again, will be an indicator of what kind of agreement they will make and whether they would be willing to adhere to the agreements that they make in public.]

[End Video Clip]

**BLITZER:** Because he certainly seemed to be concerned, and he's among a handful of members of the U.S. Congress who have been briefed by the Bush administration on what the Israelis did in Syria. He seems to suggest that you can't trust the North Koreans at all because they've been cheating on their promises. I take it you're not willing to go that far by a long shot.

**ELBARADEI:** I can't because I don't have any evidence to support that assumption, Wolf.

**BLITZER:** Would you like the Israelis to brief you on what they know?

**ELBARADEI:** Absolutely, or anybody who has information. But you can't trust anybody. We don't work on the base of trust. But we - as President Reagan said, "trust and verify." And what I want very much is to be able to verify whether Syria, in fact, were working on a nuclear power program in a clandestine way or not. And the only way to do that is get information and to go out and verify.

**BLITZER:** You have a lot of credibility in these areas, Dr. ElBaradei, because before the war started with Iraq and the removal of Saddam Hussein, you were contradicting the Bush administration, insisting there was absolutely no evidence that Iraq under Saddam Hussein was reconstituting its nuclear weapons program. Do you feel vindicated as a result of that, as you go into this next round of fears that Iran may be developing some sort of nuclear weapons program?

**ELBARADEI:** Well, Wolf, I don't necessarily feel vindicated. I feel relieved that we discovered that Iraq did not have nuclear weapons. I feel also that people now should listen to us, because we have no hidden agenda. All we want to do is bring the facts out. We should not take decisions that has to do - that crucial to war around peace before we are able 100 percent to make sure that the information on the basis we are working are accurate and professional.

[http://www.upi.com/Top\\_News/2008/10/29/Official\\_wants\\_probe\\_of\\_Syrian\\_nuke\\_site/UPI-95871225303857/](http://www.upi.com/Top_News/2008/10/29/Official_wants_probe_of_Syrian_nuke_site/UPI-95871225303857/)

## **Official wants probe of Syrian nuke site**

Published: Oct. 29, 2008 at 2:10 PM

VIENNA, Oct. 29 (UPI) -- Diplomats in Vienna say there is enough evidence to justify further investigation of a suspected Syrian nuclear site bombed by Israel in September 2007.

Experts from the The International Atomic Energy Agency, the U.N. nuclear watchdog, want to revisit the site and also to follow up on allegations North Korea was helping Syria build a plutonium reactor at the El Kibar site, DEBKAFfile reported Wednesday.

The military intelligence Web site says it has learned that IAEA director Mohammed ElBaradei and his deputy Olli Heinonen have been at odds for months over whether the U.N. agency should push ahead with its probe against Syria.

Sources say Heinonen wants to continue the investigation and has submitted a list of dates that Syrian officials are suspected of meeting secretly with North Korean nuclear physicists.

DEBKAFfile reported exclusively Oct. 4 that Syria had resumed its nuclear program.

## **Diplomats: IAEA says Syrian nuke info needs probe**

By GEORGE JAHN

18 hours ago [Accessed 2008-10-29T14:40Z]

VIENNA, Austria (AP) — Freshly evaluated soil and air samples from a Syrian site bombed by Israel on suspicion it was a covert nuclear reactor provide enough evidence to push ahead with a U.N probe, diplomats said Tuesday.

The findings are important after months of uncertainty about the status of the investigation by the International Atomic Energy Agency.

Preliminary results regarding environmental samples collected from the site by an IAEA team and made public earlier this year were inconclusive, adding weight to Syrian assertions that no trips beyond the initial IAEA visit in June were necessary. But the diplomats told The Associated Press that the IAEA's final evaluation, completed a few days ago, has the agency convinced it needs to press on with its investigation.

The agency feels "there is enough evidence there to warrant a follow-up" said one of the diplomats. He, and a colleague from another IAEA country demanded anonymity in exchange for divulging confidential information, which is not meant to be made public until the IAEA's meeting of its 35-nation board of governors next month.

Damascus denies running a covert program. On Tuesday, Ambassador Mohammed Badi Khattab — his country's chief IAEA delegate — told the AP he was unaware that the evaluation had been completed and could not comment until his country was told of the findings.

Ibrahim Othman, Syria's nuclear chief, has said his country would wait for final environmental results before deciding how to respond to repeated IAEA requests for follow-up visits to the one in June, when the samples were collected. Khattab repeated that stance, saying "further developments will depend on us receiving the final result."

In an oral report to an IAEA board meeting last month, IAEA chief Mohamed ElBaradei told the board meeting that preliminary results from the environmental samples came up with "no indication" to back the claims that the destroyed target was a nuclear facility.

Alluding to Othman's stance, he said Syria would decide on whether to provide more information and allow further IAEA visits depending "on the results of the samples taken during the first visit" — implying that Damascus could shut the doors on the probe if the all the samples came up empty.

A diplomat attending that closed meeting told the AP Khattab suggested Syria would not allow further visits under any circumstances because it was still technically at war with Israel and was concerned any additional IAEA probe would expose some of its non-nuclear military secrets.

Another cited ElBaradei as saying "the corpse is gone" — alluding to the difficulty of investigating the bombed site months after it was hit last year by Israel and subsequently cleaned up and altered by the Syrians.

But — while the diplomats queried Tuesday had no specifics on what the samples contained — one of them said it convinced the IAEA it needs to press on with its probe.

Another said that ElBaradei was planning a written report on Syria for the upcoming board meeting starting Nov. 27 — something he had said he would do only if he had substantive developments to share.

Beyond wanting to revisit the site bombed nearly 14 months ago by Israel, IAEA experts also want to follow up on U.S, Israeli and other intelligence that North Korea was involved in building the alleged Syrian program.

As well, IAEA officials have been seeking permission to visit three other sites purportedly linked to the alleged reactor destroyed by the Israelis — although Syria has already said that those locations are off limits because they are in restricted military areas.

Syria fears the IAEA probe could lead to a massive investigation similar to the probe Iran has been subjected to for more than five years — and to related fallout. Iran is under three sets of U.N. sanctions because of its refusal to heed Security Council demands to curb its nuclear activities.

IAEA experts came back June 25 from a four-day visit carrying environmental samples from the Al Kibar site hit by Israel. But intelligence suggests that radioactive material had not yet been introduced into the alleged reactor before it was destroyed, so swipes taken in search of radioactive traces were unlikely to have been of use.

That left the inspectors looking for other components, including minute quantities of graphite, a cooling element in the type of North Korean prototype that was allegedly being built with help from Pyongyang. Such a reactor contains hundreds of tons of graphite, and any major explosion would have sent dust over the immediate area.

But — if the Syrians were interested in a cover-up — they would have scoured the region to bury, wash away and otherwise remove any such traces.

[http://canadianpress.google.com/article/ALeqM5hdIJpStT2jiOw5jm\\_o5e7Ddaiug](http://canadianpress.google.com/article/ALeqM5hdIJpStT2jiOw5jm_o5e7Ddaiug)

## **Syria would consider another UN nuclear agency visit, foreign minister says**

59 minutes ago [Accessed 2008-10-29T20:00Z]

DAMASCUS, Syria — Syria's deputy foreign minister said Wednesday that Damascus would consider a request by the UN nuclear watchdog to revisit a site bombed by Israeli jets last year.

The official, Fayssal Mekdad, spoke to The Associated Press a day after diplomats at the International Atomic Energy Association said freshly evaluated soil and air samples from the site provide enough evidence to push ahead with a UN probe.

Israel bombed the Al Kibar site in Syria on suspicion it was a covert nuclear reactor, a claim Syria denies.

The United States has said the facility was a nearly completed reactor that, when on line, could produce plutonium, a pathway to nuclear arms.

Mekdad said Syria was still waiting for an official report on findings from the IAEA visit to the site in June.

Preliminary results made public from that visit were inconclusive, adding weight to Syrian assertions that no trips beyond the initial visit by the Vienna, Austria-based IAEA were necessary.

However, diplomats told the AP on Tuesday that the IAEA's final evaluation, completed a few days ago, has the agency convinced it needs to press on with its investigation.

"They should make a request and we will study it," Mekdad said.

But despite willingness to consider a request for a revisit, three other sites the IAEA has wanted to visit - supposedly because they are linked to the bombed location - will remain off limits because they are in restricted military areas, Mekdad said.

"There isn't a country in the world that allows inspections of its military sites," Mekdad added.

Still, his remarks were a turn from a Syrian statement two months ago that UN investigators were barred from revisiting Al Kibar.

Syria fears the IAEA investigation could lead to a massive investigation similar to the probe Iran has been subjected to for more than five years, and to related fallout. Iran is under three sets of UN sanctions because of its refusal to heed Security Council demands to curb its nuclear activities.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
October 29, 2008

*[EXCERPTS]*

10:39 a.m. EDT

*[deletia]*

QUESTION: Also on Syria, a different subject. Do you have any comment on the IAEA yesterday talking about going back to Syria, wanting to go back and do more work in Syria on the nuclear site?

MR. MCCORMACK: Clearly, the book isn't closed on the questions the IAEA has on these allegations of Syria having, at one point, a nuclear reactor, building a nuclear reactor outside of the declarations to the IAEA. So if they're going to continue their work, I'll let them comment on how they see the situation or the status of their work. But I think one can take from those comments that clearly the book isn't closed on it.

*[deletia]*

(The briefing was concluded at 11:09 a.m.)

## **Transcript of Conversation with IAEA Director General Mohamed ElBaradei**

Charlie Rose Show with Charlie Rose

30 October 2007

[EXCERPT]

ROSE: Someone said that you see your role - this was in a New York Times piece, I think, Lynn Schwinn and others, whoever wrote it, I've forgotten - that you see your role as a secular pope, making sure that people don't kill each other.

ELBARADEI: I think that's correct. I mean, I think - people misunderstand that. I mean, it is not self-aggrandizement. "Secular pope" means I have to remind people of the basic principles they subscribe to. You know, I have to remind the weapons states that they committed themselves to move to nuclear disarmament. I have to remind everybody that they committed to resolve issues through peaceful means. I have to remind people that there is an inspection process at work, so we don't go and bomb, like the Israelis did in Syria, before at least going through the process. So this is.

ROSE: Wait, wait, wait. I don't want to go too far past that, because I meant to bring that up. So what impact did that have? The Israelis say that they had material from North Korea, that they were beginning to build a nuclear reactor, I guess they thought. Were they?

ELBARADEI: I don't know. I mean, I never - I never got a shred of information from anybody, Charlie.

ROSE: Did anybody ask you to find out for them?

ELBARADEI: No, no. And that's why I said, I got very disturbed because that's really undermining the system which we continued to build over the years, that if you have information that a country is building a clandestine program, you give that information to us, and we go and check it, you know. But - but you don't go and take the law in your own hands before you use the system, because you are simply undermining the system. And I hope that was not nuclear related, because nobody came to us. Until today, I don't have any piece of information. I have to check with the Syrians. The Syrians said this is just simply a military installation. But I need - if I get any information, I certainly will send our...

ROSE: Have the Israelis given you information?

ELBARADEI: No.

ROSE: Has the U.S. given you any information?

ELBARADEI: No. We didn't get any.

ROSE: Did you ask for it?

ELBARADEI: Of course, we did.

ROSE: I thought so, but I had to ask.

ELBARADEI: No, we did. We did.

ROSE: And the U.S. and the Israelis are not giving you any information. The Syrians and...

[Crosstalk]

ELBARADEI: We did not get any information. And I find that, you know, frankly, is not helpful, because if you have - if you have a system, you know, you can make use of that system, and the system probably could be much more efficient. Because then we go on the ground, then we see what's going on. Then we bring the facts out.

ROSE: There is also this, though. The Israelis will say, look what happened when we - whenever it was - that we bombed Saddam. Saddam was trying to develop a nuclear capacity. If we hadn't done that, he would probably have a nuclear weapon by now, because nobody else was doing anything about it. Do they have a point?

ELBARADEI: I don't think they do. Again, they bombed Saddam Hussein's research reactor at that time, again, on the fear that Saddam Hussein might walk out of the system, might develop nuclear weapons. But what happened is that Saddam Hussein immediately, year after, went underground and built a huge - a clandestine nuclear weapon program which we...

ROSE: Discovered after '91.

ELBARADEI: ...discovered after '91, because we didn't even have the authority to look after it at that time. But in many cases, and that's why I say, when I go back to Iran, I said nuclear use of force is no solution, because in many - in Iran today, for example, all the facilities are just nascent facilities. They are not fully-fledged working facilities. So the knowledge is there. You cannot bomb the knowledge. And if you go and bomb them, all what you are going to do is simply mobilize everybody to support the regime.

## **North Korean Plane Was Grounded at U.S. Request**

By JAY SOLOMON, KRISHNA POKHAREL and PETER WONACOTT

NOVEMBER 1, 2008

*[EXCERPTS]*

India blocked a North Korean plane from delivering cargo to Iran in August, responding to a U.S. request based on fears about the spread of weapons of mass destruction.

The secret action, described by Western and Asian officials, took place nine weeks before President George W. Bush removed North Korea from Washington's list of terrorism sponsors, as part of an agreement to declaw the North's nuclear program.

*[deletia]*

According to the Western and Asian officials, the North Korean plane, an Ilyushin-62 long-range jet owned by the North Korean state airline, made a stop in Myanmar on Aug. 7 and sought permission from Indian air-traffic controllers to fly over Indian airspace. India eventually blocked the flight at Washington's behest, the officials said.

Neither the White House nor the Indian prime minister's office would comment on the operation or describe the cargo believed to be aboard the plane. But officials familiar with the matter said the move was part of the Bush administration's Proliferation Security Initiative, which aims to block the spread of weapons of mass destruction. Any action under the initiative would be ordered only if the plane was suspected of carrying nuclear materials, long-range missile components or other potentially lethal cargo, they said.

The U.S. has long charged Pyongyang with supplying missile technologies to countries like Iran, Syria and Libya. In June 2007, the Bush administration worked with allies to block a Syrian aircraft from landing in Pyongyang on the belief it was engaged in the missile trade. A 2006 United Nations Security Council resolution bars North Korean involvement in long-range missile sales or purchases.

"We never saw nuclear cooperation" between North Korea and Iran, "but ballistic-missile cooperation is a key part of the process of delivering a nuclear payload," said John Bolton, who started the antiproliferation initiative and helped to oversee it as a State Department official during President Bush's first term.

*[deletia]*

On Oct. 23, the State Department blacklisted two North Korean companies, Korea Mining Development Corp. and Korea Taesong Trading Co., for violating U.S. bans on the sale of equipment used in building missiles or other weapons of mass destruction to Iran and Syria.

*[deletia]*

In the August incident, the North Korean Air Koryo jet, which had stopped in Mandalay, Myanmar, was initially given permission by air-traffic control in Kolkata to fly through Indian airspace.

At 6:35 a.m. Greenwich Mean Time on Aug. 7, India's Directorate General of Civil Aviation in New Delhi sent a message to the Kolkata controllers canceling permission, according to D. Guin, a supervisor at Kolkata Air Traffic Control. Mr. Guin reviewed the flight records of Air Koryo Flight 621 at the request of The Wall Street Journal. Mr. Guin said the denial was then passed on to air traffic control officials in Yangon, Myanmar's capital, who turned back the flight.

A Western official working on antiproliferation activities who was briefed on the Indian action said the U.S. requested the move in support of its antiproliferation program. The official didn't specify the cargo but said the Air Koryo flight was scheduled to fly to Iran.

"North Korea has been supplying missiles to Iran and Syria for some time," said the official. "North Korea has never agreed to stop selling arms to anyone," despite the nuclear accord, he said.

## Formal report drafted on Syria atom probe

By Mark Heinrich

Mon 10 Nov 2008, 15:31 GMT

*[EXCERPTS]*

VIENNA (Reuters) - The U.N. nuclear watchdog is drafting an investigative report on Syria for the first time, suggesting to Western diplomats the agency has found some sign of undeclared activity at a site bombed by Israel last year.

Moreover, Syria has been made an official agenda item at the year-end November 27-28 meeting of the International Atomic Energy Agency's board of governors, unlike previously when IAEA officials said initial inquiries were inconclusive.

*[deletia]*

A restricted copy of the 35-nation meeting's agenda said Syria was added to address a pending report by IAEA Director Mohamed ElBaradei, similar in format to those issued quarterly on an agency probe into Iran's secretive nuclear programme.

"The agency clearly thinks it has something significant enough to report to put Syria on the (nuclear safeguards) agenda right after North Korea and Iran," said a senior diplomat with ties to the Vienna-based U.N. watchdog.

"We do not have firm word on what the inspectors found (at the site), only that the findings suggest there are more questions to pursue," said another senior diplomat accredited to the agency.

The diplomats asked for anonymity in exchange for discussing politically sensitive and confidential information.

Syria -- an ally of Iran, which is subject of a much longer-running, and now stalled, IAEA investigation -- has one declared nuclear site -- an old research reactor.

ElBaradei told an IAEA board meeting in September that preliminary findings from test samples taken by inspectors granted a visit in June to the desert location hit by Israel bore no traces of atomic activity.

Diplomats said the IAEA apparently had now evaluated all the environmental swipe samples but exactly what the sleuths found remained unclear and would be laid out in the report.

*[deletia]*

Diplomats close to the IAEA say Syria has ignored agency requests to check three military installations that may have harboured materials connected to the alleged reactor site.

(Editing by Dominic Evans)

## **IAEA finds uranium traces at Syrian site: diplomats**

By Mark Heinrich

Mon Nov 10, 2008 12:09pm EST

*[EXCERPTS]*

VIENNA (Reuters) - U.N. investigators have found traces of uranium at a Syrian site Washington says was a secret nuclear reactor almost built before Israel bombed the target last year, diplomats said on Monday.

They said the uranium contamination turned up in some environmental swipe samples U.N. inspectors took at the site in a visit last June. They said the finding was not enough to draw conclusions but raised concerns requiring further clarification.

The International Atomic Energy Agency had no immediate comment. But word of the finding leaked hours after IAEA officials confirmed Director Mohamed ElBaradei was preparing a formal written report on Syria for the first time.

Moreover, Syria has been made an official agenda item at the year-end November 27-28 meeting of the U.N. watchdog's 35-nation board of governors, unlike previously when IAEA officials said initial inquiries were inconclusive.

*[deletia]*

### "MAN-MADE" TRACES

Diplomats accredited to the Vienna-based nuclear watchdog said a wider range of samples had now been analyzed by its sleuths and some had traces of a certain uranium compound.

"It isn't enough to conclude or prove what the Syrians were doing but the IAEA has concluded this requires further investigation," said one diplomat accredited to the IAEA.

"It was a man-made component, not natural (ore). There is no sign there was already nuclear fuel or (production) activity there," another diplomat told Reuters.

This diplomat noted that such traces could have been carried to the site inadvertently on the clothes of scientists or workers or on equipment brought in from elsewhere.

That could echo a key, past finding made in the IAEA's longrunning investigation of Iran's secretive nuclear program.

Diplomats close to the IAEA have said Syria has ignored agency requests to check three military sites for equipment or other evidence possibly linked to the alleged reactor site.

"The agency clearly thinks it has something significant enough to report to put Syria on the (nuclear safeguards) agenda right after North Korea and Iran," said a senior diplomat with ties to the Vienna-based U.N. watchdog.

"It's been made clear to us that the samples raise further questions," said a fourth diplomat who like others asked for anonymity in exchange for discussing confidential information.

## **Uranium found in Syria by UN nuclear inspectors**

by Damien McElroy, Foreign Affairs Correspondent

Last Updated: 6:03PM GMT 10 Nov 2008

Uranium traces have been retrieved from a suspected Syrian nuclear plant that was bombed in an Israeli cross-border airstrike last year.

Syria has vehemently rejected Israeli and American claims that it was constructing a secret nuclear plant at the destroyed facility. However Damascus failed to bring its protests over the violation of its sovereignty during the attack to the United Nations Security Council.

Instead it razed the site, which was located near the Euphrates River near the border with Iraq, before granting access to inspectors from the International Atomic Energy Agency (IAEA).

Diplomats in Vienna reported that inspectors had found uranium particles, despite the Syrian clean-up.

The composition of the material indicated that the facility was designed to process nuclear materials. "It was a man-made component, not natural (ore)," said one official accredited to the UN agency.

A second official said that Syria would have to accept the formal restrictions imposed on states suspected of pursuing a covert nuclear activities. He said: "The agency clearly thinks it has something significant enough to report to put Syria on the (nuclear safeguards) agenda right after North Korea and Iran."

Israeli intelligence material appeared to show that Syria had relied on imported North Korean scientists to provide the technical expertise to construct the plant.

There is no evidence of Iranian involvement despite the close alliance the countries established in other security realms. Western diplomats have reported that exposure of the Syrian plant caused strains in the relationship with Iran, which was unaware of the project.

The rational *[sic]* for Syria's apparent pursuit of a nuclear capability has puzzled most regional observers but suspicions centre on its heightened fear of a US invasion in the wake of the 2003 Iraq war. Syria's Ba'athist regime curtailed co-operation with Western governments as Damascus sought to guarantee its own survival.

Syria's grudging acceptance of the UN-sanctioned inspections and its failure to officially protest the Israeli raid stands in marked contrast to its angry denunciation of a US anti-terrorist operation in the same region last month.

## **INTERVIEW WITH SYRIA'S FOREIGN MINISTER**

'America's Role Is Central'

Interview conducted by Bernhard Zand.

11/10/2008

Syria has great hopes that President-elect Barack Obama can help push the Middle East peace process forward. "This truly is the time to come to a comprehensive peace," Syrian Foreign Minister Walid al-Moallem tells SPIEGEL ONLINE in an interview. He also wants to see direct talks with Iran.

*[EXCERPT]*

**SPIEGEL ONLINE:** The situation would improve even further if Damascus gave the International Atomic Energy Agency (IAEA) access to all the facilities in Syria it wants to inspect.

**Moallem:** Seven months after an aggression against a Syrian military position near Deir al-Zor, Israel went to the IAEA and claimed that Syria intended to build a nuclear reactor. This is totally untrue. We have allowed inspectors to visit the site. They spent three days there, they took samples and analyzed them. I assure you: They did not find the materials needed to build a reactor -- graphite, for example. They came to Damascus fulfilling a memorandum of understanding between Syria and the agency in which we allowed them to visit the site once.

**SPIEGEL ONLINE:** The IAEA would like to see three other sites as well.

**Moallem:** We do not want Syria to experience what Iraq has experienced. You remember the big American lies before the war in Iraq. Now they want to see this location, then they want to see three other locations and then, maybe, another four. We are not ready to repeat this. This will harm our national security.

**SPIEGEL ONLINE:** Part of Iraq's tragedy was that Saddam Hussein failed to clear up any doubts.

**Moallem:** We assure the world that we do not have any nuclear intention, no intention to build a nuclear military capability. It costs a lot of money, it is useless -- and the only country in the world that ever dared to use nuclear weapons was the United States.

## The Press Association

### 'Uranium found' at Syrian site

6 hours ago [Accessed 2008-11-11T13:35Z]

Samples taken from a Syrian site bombed by Israel on suspicion it was a covert nuclear reactor contained traces of uranium combined with other elements that merit further investigation, diplomats said.

The diplomats said the uranium was processed and not in raw form, suggesting some kind of nuclear link.

But one of the diplomats said the uranium finding itself was significant only in the context of other traces found in the oil or air samples taken by International Atomic Energy Agency experts during their visit to the site in June.

Syria has a rudimentary declared nuclear programme revolving around research and the production of isotopes for medical and agricultural uses, using a small, 27-kilowatt reactor, and the uranium traces might have originated from there and inadvertently been carried to the bombed site.

But taken together, the uranium and the other components found on the environmental swipes "tell a story" worth investigating, said the diplomat.

The second diplomat said the findings would figure in a report on Syria that will be presented to the IAEA's 35-nation board next week before a scheduled two-day meeting starting on November 24.

Diplomats already said late last month that air and soil samples taken at the site bombed last year by Israeli warplanes had turned up traces of elements that the agency felt needed to be followed up.

The findings are important after months of uncertainty about the status of the investigation by the International Atomic Energy Agency.

Preliminary results of the environmental samples collected from the site by an IAEA team were inconclusive, adding weight to Syrian assertions that no trips beyond the initial IAEA visit in June were necessary.

The US says the facility hit by Israeli warplanes more than a year ago was a nearly-completed reactor that - when on line - could produce plutonium, a pathway to nuclear arms.

## 'Uranium traces' at Syrian site

Page last updated at 12:56 GMT, Tuesday, 11 November 2008

The IAEA has been investigating claims of secret Syrian nuclear activity

Traces of uranium have been found at a Syrian installation suspected of being a nuclear plant, diplomats linked to the UN's nuclear watchdog have said.

The traces could have come off equipment or inspectors' clothes, but still needed more investigation, the diplomats told journalists at the IAEA.

The leak by unofficial sources was denounced by the Vienna-based watchdog which is due to report on its findings.

Syrian officials had no comment. The site was bombed by Israel in 2007.

Since then the International Atomic Energy Agency has been examining claims of secret nuclear activity at the al-Kibar desert site in northern Syria.

The IAEA has not confirmed the findings, saying evaluation was still under way, but it was "regrettable" that people were trying to prejudge the IAEA's technical assessment.

The agency is for the first time preparing a formal written report on its investigations in Syria, ahead of its next board meeting at the end of November.

## IAEA taking Syria nuclear allegations seriously

By KAREL JANICEK

34 minutes ago [Accessed 2008-11-11T16:25Z]

PRAGUE, Czech Republic (AP) — The chief U.N. nuclear inspector said Tuesday his agency is taking allegations of a secret Syrian atomic program seriously and urged the country to cooperate fully with his investigation.

Mohamed ElBaradei, the head of the International Atomic Energy Agency, also urged other nations with information that could help the investigation to share what they know.

He spoke a day after diplomats told The Associated Press that IAEA samples taken from a Syrian site bombed by Israel on suspicion it was a covert nuclear reactor contained traces of uranium combined with other elements — a finding that merits further information.

Syrian officials had no comment Tuesday. Syria has previously denied any covert nuclear program. Deputy Foreign Minister Fayssal Mekdad has said Damascus would consider a request by the nuclear watchdog to revisit the bombed site.

Elbaradei, who spoke to reporters in the Czech capital after meeting Foreign Minister Karel Schwarzenberg, declined to comment on what the diplomats said, telling reporters only that his agency still has "a number of questions" linked to the allegations.

Indirectly criticizing Israel for launching the strike more than a year ago, ElBaradei said "the fact that we were not allowed to investigate that issue before the facility was destroyed" had made the probe "much more complicated for us."

The U.S. says the facility was a nearly completed reactor that — when on line — could have produced plutonium, a pathway to nuclear arms.

In the IAEA's Vienna headquarters, agency spokeswoman Melissa Fleming said the latest findings on Syria are "still being drafted and our assessment and evaluation is still under way."

"Once it is finished, the report will be submitted to the IAEA Board of Governors ahead of its next meeting, which is scheduled to take place on 27-28 November."

For his part, Elbaradei urged "Syria to give us maximum transparency."

"But I also continue to call on all these countries who have any information including satellite imageries to share it with the agency," Elbaradei said.

Ibrahim Othman, Syria's nuclear chief, has said his country would wait for final environmental results before deciding how to respond to repeated IAEA requests for follow-up visits to the one in June, when the samples were collected.

But a diplomat attending a closed IAEA meeting in September told the AP that Syrian Ambassador Mohammed Badi Khattab suggested his country would not allow further visits under any circumstances because it was still technically at war with Israel and was concerned any additional IAEA probe would expose some of its non-nuclear military secrets.

Beyond wanting to revisit the site bombed by Israel, IAEA experts also want to follow up on U.S, Israeli and other intelligence that North Korea was involved in building the alleged Syrian program.

Also, IAEA officials have been seeking permission to visit three other sites purportedly linked to the alleged reactor destroyed by the Israelis — although Syria already has said that those locations are off limits because they are in restricted military areas.

Syria fears the IAEA probe could lead to a massive investigation similar to the probe Iran has been subjected to for more than five years — and to related fallout. Iran is under U.N. sanctions because of its refusal to heed Security Council demands to curb its nuclear activities.

Associated Press Writer George Jahn contributed to this report from Vienna, Austria.

## **IAEA irked at "premature" Syria nuclear disclosures**

**Tue Nov 11, 2008 9:30am EST**

By Mark Heinrich

VIENNA (Reuters) - The U.N. nuclear watchdog criticized on Tuesday diplomatic disclosures that it had found uranium traces at a Syrian site under investigation, saying this was an effort to prejudge the agency's conclusions.

It was a rare open expression of irritation within the agency about news leaks, which some say risk putting a political spin on its technical findings in probes of nations suspected in the West to be illicit nuclear proliferators.

Several diplomats tracking the International Atomic Energy Agency said on Monday that particles of processed uranium turned up in some test samples IAEA inspectors took at the site. These were not enough to draw conclusions about any undeclared nuclear activity but warranted further investigation, they told Reuters.

IAEA spokeswoman Melissa Fleming confirmed the agency was drafting a report on Syria and had put it on the agenda of the agency's November 27-28 governors meeting -- both firsts, in what diplomats said hinted inspectors had found something serious.

But she said the IAEA's evaluation of findings from a June visit to the site, which Washington says was a secret nuclear reactor almost built before it was bombed by Israel in 2007, was not finished and a public verdict was unwarranted until then.

"We regret that people are trying to prejudge the IAEA's technical assessment. We are, however, accustomed to these kinds of efforts to hype and undermine the process before every meeting of the IAEA board (of governors)," Fleming said.

The IAEA did not challenge the substance of Monday's revelations about the uranium traces.

A diplomat close to the agency said its concern was that the leaks could not reflect the full picture and that circulating highly confidential information before an official report could discourage Syrian cooperation with the IAEA.

### **SYRIA MUM**

Syria's ambassador to the IAEA did not return messages asking for comment. There was also no comment from Damascus. It has dismissed U.S. intelligence pointing to a nascent plutonium-making reactor at the site as fabricated.

Diplomats said the question was the provenance of the contamination, since intelligence from Washington and other nations contained nothing to suggest nuclear fuel was stored at the site.

The particles retrieved from some environmental swipe samples were of processed uranium -- which could include the enriched version that in large quantities would fuel power plants or bombs, not of raw uranium ore, they said.

Such traces, they said, could have been carried to the site inadvertently on scientists or workers or on equipment trucked in. Syria has one declared atomic site, a research reactor.

A remote source could resemble a finding made in a long IAEA investigation of Iran's secretive nuclear program.

Bomb-grade uranium particles found by IAEA sleuths there were assessed to have come with used equipment obtained from Pakistan, not from any undeclared domestic production facility.

Iran says its expanding uranium enrichment program is for electricity only, but is under IAEA scrutiny and U.N. sanctions for refusing to suspend the work and curbing IAEA access meant to verify there is no parallel military nuclear activity there.

Iran and Syria have balked at granting IAEA investigators' access to military sites. Both are adversaries of the United States and Israel and do not want to reveal possible targets.

(Editing by Elizabeth Piper)

## **Syria blames Israeli bombs for uranium traces**

The Associated Press

Wednesday, November 12, 2008

*[EXCERPTS]*

DAMASCUS, Syria: Syria's foreign minister suggested Wednesday that Israeli bombs may be the source of uranium traces that diplomats at the U.N. nuclear agency said were found at a suspected nuclear site.

Walid al-Moallem said the leaks by the diplomats about the traces found at the site that was targeted by Israeli warplanes in September 2007 were politically motivated and aimed at pressuring Syria.

"No one has ever asked himself what kind of Israeli bombs had hit the site, and what did they contain?" he went on, adding that the United States and Israel had "similar acts" of using bombs containing depleted uranium in Iraq and Afghanistan.

"These media leaks are a clear-cut signal that the purpose was to pressure Syria. This means that the subject is not technical but rather political," al-Moallem said at a news conference with Iraqi Foreign Minister Hoshyar Zebari.

*[deletia]*

Al-Moallem said the original U.S. contention was that the alleged Syrian reactor was under construction, and not operational. "So the question is: From where the traces of enriched uranium came?"

Syria has previously denied any covert nuclear program, and al-Moallem said Wednesday Damascus was waiting for ElBaradei's report to respond.

<http://mathaba.net/news/?x=611562>

## **ElBaradei's written Iran report to be released mid next week**

Posted: 2008/11/14

From: MNN

The International Atomic Energy Agency's 'IAEA' Director General Mohammed ElBaradei's written report on Iran will be released in the middle of next week.

An IAEA official told on Friday that ElBaradei's written Syria report too will be released in the midst of next week.

The IAEA usually prepares the Director General's report one week before quarterly meeting of its Board of Governors and puts it at the disposal of the Board members for study.

## **West queries IAEA aid for Syria during atomic probe**

Fri Nov 14, 2008 1:42pm EST

By Mark Heinrich

VIENNA (Reuters) - Western powers have questioned an International Atomic Energy Agency offer to help Syria look into building a nuclear power plant while it is under investigation for alleged covert atomic activity, diplomats said on Friday.

But they said that whether the United States and close allies act to bar the "technical cooperation" project at an IAEA governors meeting in two weeks -- a rare and politically divisive step -- will depend on the findings of the agency's first investigative report on Syria due next week.

Diplomats tracking the U.N. nuclear watchdog said on Monday that traces of uranium turned up in some test samples taken by IAEA inspectors from a Syrian site Washington says was a nascent atomic reactor before it was bombed by Israel in 2007.

The IAEA declined comment pending the report.

Syria has said the site was a disused military building and that U.S. intelligence driving the IAEA investigation is fabricated. It suggested that the uranium particles came with munitions Israel dropped on the site.

Some diplomats and analysts said the traces were more likely to have come from uranium that was at some stage of processing for fuel, but the origin remained unclear.

The IAEA was expected to caution that the findings warranted further investigation before conclusions could be drawn.

Vienna diplomats, who asked for anonymity, said the mere fact Syria was being probed over nuclear proliferation concerns meant that approving the nuclear power plant study now could send the wrong message.

A restricted IAEA document obtained by Reuters listed a proposal for a "technical and economic feasibility study and site selection" for a power station at a cost of \$350,000 from 2009 through 2011.

### **OTHER PROJECTS NOT IN DISPUTE**

This was one of eight draft technical cooperation (TC) projects in Syria of the sort the IAEA does in many member states seeking to develop peaceful uses of nuclear energy.

TC plans come up for ratification by the IAEA's 35-nation board of governors every November. Such projects must be approved by consensus.

The other seven projects listed for Syria had innocuous medical, farming or safety applications and diplomats said these would face no objections.

The United States, Britain and France -- among the biggest contributors of funding for IAEA aid projects -- aired the issue of power plant study in a meeting of Western diplomatic missions accredited to the IAEA, diplomats said.

"Eyebrows were raised and questions were posed about the timeline for this power plant study, whether it's premature before other issues are resolved," said one European diplomat.

"There was some question as to whether it would be appropriate first to assess Syria's energy needs," said another.

But diplomats said many delegations on the global governing body were loath to "politicize" IAEA technical aid without urgent reasons and Western powers were awaiting the IAEA report before deciding a course of action.

In a rare step, the board stripped Iran of some TC projects two years ago. But, unlike Syria, Iran had already been found by the IAEA to have hidden proliferation-sensitive activity and had come under U.N. sanctions which prohibited such IAEA aid.

## **ElBaradei says Syria uranium traces not conclusive**

By John Irish

November 17, 2008 - 3:16 PM

*[EXCERPT]*

DUBAI (Reuters) - Traces of uranium found at a Syrian site bombed by Israel last year were not sufficient evidence of nuclear activity there, the head of the U.N. nuclear watchdog said Monday.

"We won't be able to reach a quick conclusion unless we have credible information," Mohamed ElBaradei, told a news conference in Dubai. "There was uranium but it does not mean there was a reactor."

Diplomats in Vienna told Reuters earlier this month that particles of processed uranium were found in samples taken by International Atomic Energy Agency inspectors from the site in eastern Syria, and said the findings warranted further investigation before any conclusions were drawn.

Syrian Foreign Minister Walid al-Moualem has dismissed as politically motivated the disclosures about the uranium traces and said the uranium could have come from munitions used by Israel to bomb the site in September last year.

ElBaradei said a report on Syria's alleged covert atomic activity which the IAEA will release later this week will also not be conclusive.

"The report will say that there is still a lot of work to do. (There will be) no conclusion on whether there was a reactor or not," he said.

Both Syria and Israel should cooperate with the IAEA's investigation of Syria's alleged covert program, he said.

"We need cooperation from Syria; we need cooperation from Israel," he said. "I would still like more transparency from the Syrians," he added.

*[deletia]*

## **Syria nuclear clues 'not damning'**

Page last updated at 15:40 GMT, Monday, 17 November 2008

*[EXCERPT]*

The director of the UN atomic watchdog, has said a report he is due to present later this week on Syrian nuclear activity will "not be conclusive".

"We still have work to do," the head of the International Atomic Energy Agency, Mohamed ElBaradei, said in Dubai.

"We need more co-operation from Syria... We need also co-operation from Israel," Mr ElBaradei told reporters.

Recent unconfirmed reports said the IAEA had found traces of atomic material on a site bombed by Israel.

"We won't be able to reach a quick conclusion unless we have credible information.

"There was uranium but it doesn't mean there was a reactor... It's not highly enriched uranium," Mr ElBaradei added.

*[deletia]*

<http://www.alertnet.org/thenews/newsdesk/LH654856.htm>

## **IAEA urges Syria transparency in probe -ElBaradei**

17 Nov 2008 13:50:36 GMT

DUBAI, Nov 17 (Reuters) - The head of the U.N. nuclear watchdog urged Syria on Monday to be more transparent in dealing with inspectors looking into the country's alleged atomic activity.

Mohamed ElBaradei, director of the International Atomic Energy Agency, said that a report expected later this week from the IAEA on the country's alleged covert nuclear programme would not be conclusive.

"We are still in discussions with Syria, still not conclusive. I call on Syria to be as transparent with us so we can form our assessment," ElBaradei said at a conference in Dubai.

(Reporting by John Irish; Editing by Inal Ersan)

## **IAEA Chief: Uranium Found in Syria**

Monday, November 17, 2008

AP

DUBAI, United Arab Emirates —

*[EXCERPTS]*

The head of the U.N.'s nuclear watchdog said Monday the agency needs more transparency from Syria and other nations to determine whether traces of uranium found at a site bombed by Israeli planes indicate Damascus was building a nuclear reactor there.

International Atomic Energy Agency chief Mohamed ElBaradei confirmed that the radioactive material was found at the site, but said the source was inconclusive.

"It's not highly enriched uranium. It could have come from so many different ways," he told reporters in Dubai. "That's why we're looking at so many different scenarios."

*[deletia]*

"We still have a lot of work to do. We haven't yet reached a conclusion whether that was a reactor or not a reactor," ElBaradei said.

*[deletia]*

The IAEA chief called specifically for more cooperation from Damascus, saying it needs "a lot of transparency on the part of Syria." He said he was hopeful that Syria would allow inspectors back into the country to carry out further tests.

But he also said Israel needs to provide more information to address Syrian allegations that the uranium may have come from Israeli bombs dropped on the site during the September 2007 raid.

[Syrian foreign minister] Al-Moallem last week said it was unclear what type of bombs targeted the site, adding that the United States has used bombs containing depleted uranium in Iraq and Afghanistan. The Israeli Foreign Ministry had no comment on the matter when asked last week.

ElBaradei also called on countries that have satellite images of the site to cooperate with the investigation.

"We need cooperation from everybody," he said. "We are not going to be able to reach a quick conclusion or jump the gun unless we have absolutely credible information."

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
November 17, 2008

10:45 a.m. EST

*[EXCERPT]*

MR. MCCORMACK: Yeah, why don't we let Nina have a crack and --

QUESTION: Can I just ask about these IAEA findings that uranium – traces of uranium were found at this Syrian suspected nuclear site? Any reaction to that?

MR. MCCORMACK: Well, the IAEA will speak for itself in terms of what it has found, and it's a continuing investigation. But if accurate, certainly, that would indicate that there was some basis for this investigation and that it should continue until a full picture is able to be drawn by the IAEA as to what exactly happened at that site.

QUESTION: But it doesn't necessarily prove they were enriching uranium at the site. I mean, it could have been that some other Syrian officials who were working at other sites in the country were enriching uranium there.

MR. MCCORMACK: Yeah, at other undeclared sites in the country, right. Look, the IAEA is investigating this, and, you know, we'll let them investigate it. Quite clearly, this is a serious effort on their part which we as well as others support.

(The briefing was concluded at 11:05 a.m.)

## **EI Baradei says Syria uranium traces not conclusive**

By John Irish

Monday, November 17, 2008; 7:44 PM

*[EXCERPTS]*

DUBAI (Reuters) - Uranium traces found at a Syrian site bombed by Israel were not sufficient evidence of undeclared nuclear activity but Syria must be more open to help clarify the issue, the head of the U.N. atomic watchdog said on Monday.

"We won't be able to reach a quick conclusion unless we have credible information," International Atomic Energy Agency Director Mohamed ElBaradei told a news conference in Dubai. "There was uranium but it does not mean there was a reactor."

*[deletia]*

Israel has kept silent on what it targeted. Syria said the site was a disused military building. "We have certainly nothing to hide," Syrian presidential adviser Bouthaina Shaaban told CNN later when asked about ElBaradei's remarks.

ElBaradei said the uranium particles were not highly enriched -- the type used to fuel atomic bombs. "It could have come in so many different ways .... We are looking at so many different scenarios," he said.

Both Syria and Israel should do more to help the IAEA's investigation, he said. "We need cooperation from Syria; we need cooperation from Israel. I would still like more transparency from the Syrians."

*[deletia]*

### ORIGIN OF URANIUM TRACES KEY

They said the traces appeared to be of a processed form of uranium, possibly at the stage at which it would be loaded into a reactor for enrichment as fuel for civilian energy or for weapons. The origin of the traces was unclear.

"We just need to know what is the source of this low-level, or man-made uranium," ElBaradei told a CNN interviewer.

"It could have come in peoples' clothes, for example. It could have come through some nuclear material stored somewhere. It could have come, as Syria says, through the bombings."

Syria said last week the disclosures about uranium particles were politically motivated and they could have been on munitions used by Israel to bomb the site.

What would be helpful for investigators, ElBaradei told CNN, was any satellite imagery of the site taken immediately after the September 2007 bombing, before Syria razed the site and built another building on it.

He suggested some member states should have such pictures and urged them to provide them to the IAEA.

"Now that we showed the sampling to (Syria), I hope they will allow soon another IAEA visit and (to) other sites where we would like to visit," he said. Syria has said it will not permit further IAEA trips to military sites on security grounds.

ElBaradei will issue his first investigative report on Syria later this week. "(It) will say that there is still a lot of work to do. (There will be) no conclusion on whether there was a reactor or not," he told the news conference.

## Uranium at Syria site come from Israeli missiles: FM

1 hour ago [Accessed 2008-11-18T18:00Z]

[EXCERPTS]

DAMASCUS (AFP) — Traces of uranium on a site in northern Syria were residue from Israeli missiles used to bomb the area in September 2007, Syrian Foreign Minister Walid Muallem said on Tuesday [2008-11-18].

"The traces of uranium found on the site come from Israeli missiles launched during the destruction of the building. It is the only plausible explanation," Muallem said.

The facility destroyed by Israel "was a military building that had no nuclear vocation," Muallem said at a joint news conference with visiting British Foreign Secretary David Miliband.

[deletia]

"We are having a report by the end of this week with regards to Syria... It's still not conclusive," [IAEA Director] ElBaradei told reporters at an economic conference in Dubai. "We are taking the issue very seriously."

[deletia]

Muallem also insisted it was soon to pre-empt the IAEA report.

"Syria has signed the Nuclear Non-Proliferation Treaty and will wait for Mr ElBaradei's report," Muallem said.

Miliband said he discussed the issue with the Syrian authorities but that Britain will issue no comments before the IAEA report is published officially.

Diplomats: IAEA to circulate Syria, Iran reports

By GEORGE JAHN

1 hour ago [*Accessed 2008-11-19T13:45Z*]

VIENNA, Austria (AP) — Diplomats say that the U.N nuclear watchdog agency is expected to circulate reports on Syria and Iran later in the day.

The Syrian investigation was sparked by U.S. allegations that a building destroyed last year by Israeli jets was a nearly completed nuclear reactor meant to produce plutonium. Iran is suspected of past efforts to make nuclear arms and is under U.N sanctions for refusing to stop uranium enrichment.

The diplomats say the Iran report will reflect failed efforts by the International Atomic Energy Agency to investigate the weapons program allegations and show that enrichment continues. They say the Syria document will expand on IAEA findings of processed uranium at the bombed site.

They diplomats demanded anonymity because their information was confidential.

## **Latest Iran and Syria Safeguards Reports Circulated to IAEA Board**

Staff Report

19 November 2008

IAEA Board of Governors

IAEA Director General Mohamed ElBaradei circulated his latest reports on nuclear safeguards in Iran and Syria to the Agency's Board of Governors, the 35-member policymaking body. The Iran report outlines developments since the Director General's report of 16 September. Dr. ElBaradei last reported on safeguards in Syria in his statement to the Board in September 2008.

The IAEA Board of Governors will discuss the reports when it next convenes in Vienna on 27 November. The reports are entitled [Implementation of the NPT Safeguards Agreement and Relevant Provisions of Security Council Resolutions 1737 \(2006\), 1747 \(2007\), 1803 \(2008\) and 1835 \(2008\) in the Islamic Republic of Iran](#), and [Implementation of the NPT Safeguards Agreement in the Syrian Arab Republic](#).

Their circulation is restricted and cannot be released to the public unless the IAEA Board decides otherwise.

## Board of Governors

**GOV/2008/60**

Date: 19 November 2008

**Restricted Distribution**

Original: English

### For official use only

Item 6(d) of the provisional agenda  
(GOV/2008/57)

# Implementation of the NPT Safeguards Agreement in the Syrian Arab Republic<sup>1</sup>

*Report by the Director General*

1. On 2 June 2008, the Director General informed the Board of Governors that, in April of this year, the Agency had been provided with information alleging that an installation destroyed by Israel in the Syrian Arab Republic (Syria) last September was a nuclear reactor. According to this information, the reactor was not yet operational and no nuclear material had been introduced into it.<sup>2</sup> The Director General also informed the Board of Governors that Agency inspectors were scheduled to visit the site of the installation (Dair Alzour<sup>3</sup>), in order to verify, to the extent possible, the veracity of the available information. Syria has stated that the Dair Alzour site was a military site and was not involved in any nuclear activities. On 22 September 2008, the Director General provided an update on the events in his introductory statement to the Board of Governors.
2. The purpose of this report is to inform the Board of Governors of developments related to the Agency's ongoing inquiry into the allegation.

## A. Chronology of Events

3. In a letter dated 2 May 2008, the Agency informed Syria that, in accordance with the Agency's safeguards responsibilities and Syria's safeguards obligations, the Agency intended to send a team of inspectors to Syria to review all available information and to visit the Dair Alzour site and three other locations alleged by some Member States to be of relevance.<sup>4</sup>

In a letter dated 31 May 2008, Syria agreed to a visit by the Agency to the Dair Alzour site and to the taking of environmental samples at that site. The Agency's visit to Syria, which took place between 22 and 24 June 2008, involved meetings with Syrian authorities in Damascus on 22 and 24 June 2008, and a visit to the Dair Alzour site on 23 June 2008.

4. During the Agency's 23 June 2008 visit to the Dair Alzour site, Syria provided unrestricted access to all of the buildings on the site, as a transparency measure, and reiterated that the site was a military installation which had not been, and was not, related to any nuclear applications. Syria has not yet acceded to the Agency's request to provide any documentation relevant to the destroyed building, or any of the other buildings, to support its statements.

5. During the meeting on 24 June 2008, the Agency reiterated its request for supporting documentation concerning the past and current use of the buildings at the Dair Alzour site and at the three other locations. The Agency also requested clarification about certain procurement activities by Syrian entities. During the meeting, Syria stated that the destroyed building could not have been a nuclear facility because of, inter alia, the unreliable and insufficient electricity supplies in the area, the limited availability of human resources in Syria and the unavailability of large quantities of treated water.

6. In a follow up letter to Syria dated 3 July 2008, the Agency reiterated its request for the information and documentation referred to in previous correspondence and discussions, and proposed dates for another Agency visit to Syria. In its reply of 21 July 2008, Syria responded that the visit should be postponed until "the necessary arrangements have been made with the bodies concerned in Syria". The Agency wrote to Syria on 15 August 2008, again reiterating its request, in response to which Syria, in a letter dated 24 August 2008, replied that any further developments must be based on the results of the sample analyses.

7. On 22 October 2008, the Agency provided the results of the environmental sample analyses to Syria, and requested a meeting with Syria with a view to discussing the results, obtaining the requested information and securing a visit to the three other locations. The Agency has not received a response to this request.

8. In a letter dated 11 November 2008, Syria confirmed its compliance with the Treaty on the Non-Proliferation of Nuclear Weapons (the NPT) and provided the following clarifications<sup>5</sup>:

- "The American allegation presented to the Agency for verification referred to a building under construction and not in operation;"
- "The analysis results of the samples taken from the destroyed site do not show any materials belonging to the construction of a nuclear reactor, confirming that the site which was under construction was for military purposes;"
- "We find it strange that there are a very limited number of humanly modified uranium particles in the analysis results of some samples, taking into consideration that the site was destroyed by Israeli missiles, the component parts of which are not known;"
- "It is necessary to draw attention also to the fact that the result of the analysis of one sample points to three uranium particles, whereas the results of four other samples taken from the same place within a 30 metre range contained no uranium particles;"

- “The only explanation for the presence of these modified uranium particles is that they were contained in the missiles that were dropped from the Israeli planes onto the building to increase the destructive power. Based on this, we hope that the Agency will verify the nature of the materials used in these missiles.”

## **B. Agency’s Verification**

9. The Agency has conducted a thorough analysis of all information available to it as a result of the visit to the Dair Alzour site as well as information from other sources, including commercially available and other satellite imagery, open source photographs said to have been taken at the Dair Alzour site before the building was destroyed, information regarding procurement and the results of environmental sampling analyses.

10. Analysis of the available satellite imagery shows that construction activities were started at the Dair Alzour site between 26 April 2001 and 4 August 2001. The images show ongoing construction until August 2007. Imagery taken prior to and immediately after the bombing indicates that the destroyed box-shaped building may have had underground levels. Its containment structure appears to have been similar in dimension and layout to that required for a biological shield for nuclear reactors, and the overall size of the building was sufficient to house the equipment needed for a nuclear reactor of the type alleged.

11. As part of its assessment, the Agency has conducted an evaluation of the water pumping infrastructure observed by it during the June 2008 visit to Dair Alzour. The results of that evaluation indicate that the pumping capacity is adequate for a reactor of the size referred to in the allegation (25 MWth). During its visit to the site, the Agency observed sufficient electrical capacity to operate the pumping system.

12. Analysis of the environmental samples taken from the Dair Alzour site carried out by a number of the Agency’s Network of Analytical Laboratories revealed a significant number of natural uranium particles. The analysis of these particles indicates that the uranium is anthropogenic, i.e. that the material was produced as a result of chemical processing. As indicated above, Syria stated that the only explanation for these particles was that they were contained in the missiles used to destroy the building.

13. The Agency continues to assess the information related to efforts by Syrian entities to procure materials and equipment which could support the construction and operation of a nuclear reactor. It should be noted that it is possible that the procurement of such items was for non-nuclear use. The Agency has not yet received the requested information from Syria.

14. Satellite imagery and other information available to the Agency concerning installations at the three other locations in Syria referred to above suggest that those locations may be of relevance to the activities at the Dair Alzour site. As indicated above, the Agency requested access to the three locations on 2 May 2008. Analysis of satellite imagery taken of these locations indicates that landscaping activities and the removal of large containers took place shortly after the Agency’s request for access. While these activities may be unrelated to the Dair Alzour site, it would be helpful if Syria were to provide an explanation for these activities and to permit the Agency to visit the three locations.

## **C. Current Assessment**

15. The Director General emphasizes that the Agency was severely hampered in discharging its responsibilities under the NPT and under Syria’s Safeguards Agreement by the unilateral use of force

and by the late provision of information concerning the building at the Dair Alzour site. In light of the destruction of the building and the subsequent removal of the remains, the Agency's verification of the situation has been made more difficult and complex, as well as more time and resource consuming.

16. The information provided by some Member States to the Agency includes satellite imagery of the Dair Alzour site and the three other locations. For its assessment of the site immediately after the bombing, the Agency used satellite imagery provided by Member States, as there was no high resolution imagery for that period available to the Agency from commercial vendors. The first commercial images that the Agency was able to obtain after the bombing on 6 September 2007 were taken on 24 October 2007; these images indicate large scale clearing and levelling operations had taken place at the Dair Alzour site after the bombing. To the extent it has been recently authorized by the providers to do so, the Agency intends, during its next meeting with Syria, to share with Syria that satellite imagery which is of relevance to the Agency's assessment.

17. While it cannot be excluded that the building in question was intended for non-nuclear use, the features of the building, as described above, along with the connectivity of the site to adequate pumping capacity of cooling water, are similar to what may be found in connection with a reactor site. Syria has not yet provided the requested documentation in support of its declarations concerning the nature or function of the destroyed building, nor agreed to a visit to the three other locations which the Agency has requested to visit.

18. The Agency is assessing Syria's explanation of the origin of the uranium particles found at the Dair Alzour site and intends to request Syria to permit the Agency to, inter alia, visit the locations where the debris from the building and any equipment removed from the Dair Alzour site are, for the purpose of taking samples. The Agency also intends to request Israel to provide information pertaining to Syria's claims regarding the origin of the uranium particles.

19. The Director General has called on Syria to provide the necessary transparency, including allowing visits to the requested locations and access to all available information, for the Agency to complete its assessment. The Director General also calls on other States that may possess relevant information, including satellite imagery, to make this available to the Agency and to authorize the Agency to share the information with Syria.

20. The Director General will continue to report as appropriate.

---

<sup>1</sup> INFCIRC/407.

<sup>2</sup> GOV/OR.1206, paras 26 and 28.

<sup>3</sup> Also referred to in open sources as "Al Kibar".

<sup>4</sup> The locations are alleged to have been functionally related to the Dair Alzour site.

<sup>5</sup> In the letter, Syria also expressed dissatisfaction with the leaking of the environmental sampling results to the media and concern that this was an indication of other parties attempting to use the Agency's activities for political purposes.

## **IAEA unable to say if bombed Syrian site was nuclear reactor**

2 hours ago [Accessed 2008-11-19T18:40Z]

[EXCERPTS]

VIENNA (AFP) — The UN atomic watchdog said Wednesday it could not yet determine if a building in a remote site in the Syrian desert bombed by Israeli planes last year was a nuclear reactor, as the United States claims.

Nevertheless, puzzling anomalies had been found at the site, the International Atomic Energy Agency said.

"We are not in a situation to say that it was a nuclear reactor," an official close to the IAEA said, adding at the same time that "we cannot exclude that it was" one.

The watchdog addressed the matter in a restricted report circulated to the agency's board of governors on Wednesday, a copy of which was obtained by AFP.

"While it cannot be excluded that the building in question was intended for non-nuclear use, the features of the building ... along with the connectivity of the site to adequate pumping capacity of cooling water are similar to what may be found in connection with a reactor site," the IAEA said.

Furthermore, traces of uranium had been found by IAEA investigators in environmental samples taken from the site, known alternatively as either Al-Kibar or Dair Alzour, which was razed to the ground by Israeli planes on September 6, 2007.

"The analysis of these particles indicates that the uranium is anthropogenic. ie. that the material was produced as a result of chemical processing," the report said.

"No such nuclear material had so far been declared in Syria's inventory ... In principle, that sort of nuclear material should not exist there. It's not usual to find man-made uranium in sand," a senior UN official said.

[deletia]

The IAEA's inspectors had "not been able to establish the exact origin, because the particles were fairly small," the senior UN official said.

A second official said the report -- the IAEA's first since it dispatched a team of experts to investigate Dair Alzour in June -- was "not conclusive."

The IAEA was "assessing Syria's explanation of the origin of the uranium particles."

It added that it "intends to request Syria to permit the agency to, inter alia, visit the locations where the debris from the building and any equipment removed from the Dair Alzour site are, for the purpose of taking samples."

"The Agency also intends to request Israel to provide information pertaining to Syria's claims regarding the origin of the uranium particles."

IAEA Director General Mohamed ElBaradei urged Syria "to provide the necessary transparency," including permission for follow-up visits to Dair Alzour, plus visits -- so far denied -- to three other related locations "and access to all available information".

But he also called on "other states that may possess relevant information, including satellite imagery, to make this available to the agency and to authorise the agency to share the information with Syria."

ElBaradei complained that the IAEA's work had been "severely hampered ... by the unilateral use of force and by the late provision of information concerning the building at the Dair Alzour site."

"In light of the destruction of the building and the subsequent removal of the remains, the agency's verification of the situation has been made more difficult and complex, as well as more time and resource consuming," the report said.

## **Syrian site 'resembled reactor'**

Published: 2008/11/19 18:07:19 GMT

*[EXCERPTS]*

A Syrian site bombed by Israel last year had features resembling those of a nuclear reactor site, the UN nuclear watchdog says in a report.

But the International Atomic Energy Agency did not exclude the possibility the site was being used for purposes unrelated to nuclear activity.

In the first report on its findings in Syria, the IAEA said "significant" quantities of uranium were also found.

*[deletia]*

"While it cannot be excluded that the building in question was intended for non-nuclear use, the features of the building, along with the connectivity of the site to adequate pumping capacity of cooling water, are similar to what may be found in connection with a reactor site," said the IAEA report, sent to its 35-nation board of governors ahead of a meeting next week.

It added that IAEA inspectors had found "a significant number of natural uranium particles" in environmental samples taken from the site.

### **'Israeli residue'**

IAEA inspectors visited the bombed al-Kibar site in June, where they took samples that appear to have contained the radioactive material, but Damascus has blocked any follow-up trips.

According to the confidential report, a copy of which was obtained by the BBC, Syria says the uranium found there was residue from the Israeli missiles used in the air-raid.

The IAEA says it wants to visit three locations in Syria to take further samples.

It also says it will ask Israel to provide information about Syria's claims about the uranium particles.

But a senior official close to the IAEA said the type of uranium found was not that usually found in munitions.

*[deletia]*

The IAEA also noted that Syria had not produced requested documentation to support its declarations about the nature of the building.

*[deletia]*

## **Iran, Syria Fail on UN Nuclear Cooperation, IAEA Says (Update1)**

By Jonathan Tirone

Last Updated: November 19, 2008 12:07 EST

*[EXCERPTS]*

Nov. 19 (Bloomberg) -- Iran and Syria have failed to provide sufficient assistance with two separate investigations into suspected clandestine nuclear work, the United Nations atomic agency said.

*[deletia]*

### Uranium Particles

The agency said it wants to talk with Israel about what kinds of munitions were used to bomb the Syrian facility. Syria says that uranium particles found at the site came from Israeli weapons.

"The agency is assessing Syria's explanation of the origin of the uranium particles" found at the site, the IAEA reported. Inspectors have requested access to shrapnel and equipment removed from the location.

Any amount of man-made uranium at such a site is highly unusual, UN officials said. The uranium may have come from conventional munitions, and there's no declared facility on Syrian soil from which such uranium could have come, they added.

The site's "containment structure appears to have been similar in the dimension and layout to that required for a biological shield for nuclear reactors, and the overall size of the building was sufficient to house the equipment needed for a nuclear reactor," the IAEA said.

### Tensions

Four IAEA requests for further visits since an initial June 23 trip by inspectors have gone unheeded by Syrian authorities, the IAEA said.

*[deletia]*

## **Syria site hit by Israel resembled atom plant: IAEA**

By Mark Heinrich

Wed Nov 19, 2008 1:24pm EST

*[EXCERPTS]*

VIENNA (Reuters) - A Syrian complex bombed by Israel bore features resembling those of an undeclared nuclear reactor and U.N. inspectors found "significant" traces of uranium at the site, a watchdog report said on Wednesday.

But the International Atomic Energy Agency report said the findings gleaned from inspectors' visit to the site in June were not enough to conclude a reactor was once there. It said further investigation and greater Syrian transparency were needed.

The confidential nuclear safeguards report said Syria would be asked to show to inspectors debris and equipment whisked away from the site after the September 2007 Israeli air raid.

*[deletia]*

"While it cannot be excluded that the building in question was intended for non-nuclear use, the features of the building, along with the connectivity of the site to adequate pumping capacity of cooling water, are similar to what may be found in connection with a reactor site," said the IAEA report, sent to its 35-nation board of governors ahead of a November 27-28 meeting.

It noted Syria had not produced requested documentation to support its declarations about the nature of the building nor agreed to follow-up IAEA visits to three other locations seen as harboring possible evidence linked to Israel's target.

The IAEA intended to ask Syria to let inspectors take swipe samples from rubble and any equipment removed from the site.

### **SYRIAN TRANSPARENCY NEEDED**

It said IAEA Director Mohamed ElBaradei had urged Syria to "provide the necessary transparency including allowing visits to the requested locations and access to all available information for the agency to complete its assessment."

"Without such cooperation, we will not be able to make progress," said a senior U.N. official familiar with the report.

The IAEA will ask Israel to answer Syria's remarks about the provenance of the uranium. Syria should also produce shrapnel from the bombing for testing purposes, he said.

U.N. officials said the uranium traces retrieved from soil samples at the site were a "chemically processed" form of the mineral that was not the enriched variety used to run nuclear power plants or in the core of atomic bombs.

But the element found was also not depleted uranium, the kind used to boost the penetrating power of munitions -- but primarily anti-tank shells, not aerial bombs, analysts say.

"There's enough uranium here to raise questions. The onus of this verification is on Syria," said a senior U.N. official. He said the uranium compound that turned up in environmental swipe samples was not in Syria's declared nuclear inventory.

Syria's only declared nuclear plant is an old research reactor. The IAEA has said Syria seems to lack the sophisticated technology and infrastructure needed to produce nuclear energy.

The report said Syria had told inspectors the site could not have been a nuclear facility because of unreliable, insufficient electricity supplies locally, limited available manpower and the lack of large quantities of treated water.

Another senior U.N. official said the investigation had urgent need of high-resolution pictures of the site he said must have been taken in the immediate aftermath of the bombing.

He said eight countries, which he declined to identify, had access to such imagery but had not turned it over to date.

The report complained that the investigation had been "severely hampered by (Israel's) unilateral use of force" and by a U.S. failure to hand over relevant intelligence until seven months after the bombing -- after Syria swept the area clean and erected a new building on the spot.

"In light of (that), the agency's verification of the situation has been made more difficult and complex, as well as more time- and resource-consuming," the report said.

## **Bombed Syrian Site Appears to Have Been Nuclear Reactor**

By Joby Warrick

Washington Post Staff Writer

Wednesday, November 19, 2008; 3:10 PM

The Syrian facility bombed by Israeli planes last year bore multiple hallmarks of a nuclear reactor, and the ruined site was contaminated with uranium, United Nations nuclear inspectors confirmed today in a report that largely backed Bush administration accounts of a secret atomic program in the Syrian desert.

The report stopped short of declaring the Syrian facility to be a nuclear reactor, noting that Damascus had taken extensive steps to sanitize the site before officials of the International Atomic Energy Agency were allowed to visit. But agency officials said Syria had failed to provide blueprints or other documents to support its claim that the destroyed building had a non-nuclear purpose.

In a separate report, the agency also heaped new criticism on Iran for failing to cooperate with U.N. inspectors in clearing up questions about past nuclear research that appears linked to a military weapons program. The report said Iran continues to expand its capacity for making enriched uranium, a key ingredient in both commercial nuclear power and nuclear weapons.

The IAEA has been engaged in a contentious negotiations with both Syria and Iran as it seeks to assess claims that both countries were secretly planning to make nuclear weapons. Syria has denied having nuclear ambitions, while Iran contends that its nuclear program is exclusively for electricity production.

The Syrian facility, on the banks of the Euphrates River near the village of Al Kibar, was obliterated by Israeli bombs Sept. 6, 2007. Although the Bush administration previously released photographs and other evidence suggesting that the building was a partly completed nuclear reactor, the new IAEA report provides independent support for the U.S. claim.

The report said the IAEA's analysis of satellite photos taken before and immediately after the bombing revealed numerous features suggestive of a nuclear reactor, including a containment shield, an extensive power supply and large water pumps for cooling.

But more provocative was the IAEA's discovery, during a visit to the site in May, of traces of uranium in soil recovered from the site. A senior U.N. official, describing the finding, said the soil samples contained "significant" amounts of uranium in a form that clearly suggested human manipulation. The uranium was not enriched but had been "chemically processed," official said.

Some nuclear reactors, such as the Yongbyon reactor built by North Korea, use a form of processed uranium that has not been artificially enriched. U.S. intelligence officials say North Korea assisted Syria in constructing the al Kibar facility, which closely resembled the Yongbyon reactor.

Last week, after news accounts surfaced about the discovery of uranium traces at the Al Kibar site, Syrian officials suggested the uranium might have come from Israeli bombs. Some munitions used in attacking fortified structures are coated with depleted uranium, which is known for its density.

However, the senior U.N. official said IAEA inspectors had found no trace of depleted uranium at the site. He said the agency is evaluating new documents provided by Syria that attempt to explain the presence of the uranium.

## **IAEA's Syria report brings more speculation over radioactive traces**

By Borzou Daragahi

7:18 PM PST, November 19, 2008

*[EXCERPT]*

*[deletia]*

Diplomats first reported the existence of the uranium last week. Syrian officials have said that not even U.S. officials claim that they were already operating a plutonium plant.

"The only explanation for the presence of these modified uranium particles is that they were contained in the missiles dropped from the Israeli planes," the report said.

But officials close to the IAEA said the uranium samples found were not the depleted type used in some weapons and have few practical applications. Nor do they match any Syrian uranium samples previously declared to the IAEA. Nor are they compatible with the reactor suspected of being planned for the site.

*[deletia]*

## **IAEA Issues Tough Report on Alleged Syrian Nuclear Site**

By Greg Webb

Global Security Newswire

Wednesday, Nov. 19, 2008

*[EXCERPTS]*

*[deletia]*

"The jury is out and we are working busily to resolve what sort of installation it was, whether it was nuclear or military, as the Syrians have claimed," a senior official close to the U.N. nuclear watchdog said today. On that question, "you have to wait for a while."

*[deletia]*

### **Natural Uranium Found**

That activity might have hidden some of the most damning evidence of all: samples of uranium that turned up in soil samples.

"There was quite a lot of landscaping after cleaning the place, so most of these particles were found in places where there was no landscaping," the senior official said today.

Some soil samples included "a significant number of natural uranium particles," the report says, ending media speculation about the nature of the material. Experts had questioned whether the uranium had been enriched or depleted, but the report makes clear it was neither.

Furthermore, the uranium was clearly processed and was not in a chemical form found in nature. It was man-made, the report says.

"This type of material should not be there. It's not part of [the] declared inventory of Syria," the senior official added.

Natural uranium is the fuel used by a North Korean reactor that U.S. officials have claimed served as the design basis for the alleged Syrian reactor.

The finding would also appear to undermine Syrian claims that the uranium must have been part of the Israeli weapons used to destroy the site. Some antitank ammunition uses depleted uranium to penetrate thick armor, but defense experts have told Global Security Newswire that they are unaware of depleted uranium being used in air-delivered bombs (see GSN, Nov. 12).

"Not one single depleted uranium particle has been found so far," the senior official said.

*[deletia]*

### **The Rebuilt Site**

Syria has built a new structure where the old one was bombed, but the senior official refused to describe it in detail.

"I can tell as a former army soldier what is inside, but I cannot tell to you," the official said.

## **Senior IAEA Official: 'Severe' Report Means Syria Must Cooperate**

Posted at: 2008-11-20

A senior official from the International Atomic Energy Agency has called a report it released yesterday "severe."

The report states that the site attacked in Syria in September 2007 looks like a nuclear reactor.

He said that Syria had no choice but to cooperate with IAEA inspectors and to allow them to revisit the site, or else "the Syrian dossier will become like the Iranian one."

Source: Al-Sharq Al-Awsat, London, November 20, 2008

UNITED STATES MISSION TO  
**INTERNATIONAL ORGANIZATIONS  
IN VIENNA**

Statement

Ambassador Gregory L Schulte  
Permanent U.S. Representative to the IAEA  
Vienna, November 21, 2008

Earlier this week, Director General Mohamed ElBaradei released reports on the IAEA's investigation of Iran and Syria.

The Director General reports that Iran continues to enrich uranium – this despite the absence of an obvious civil requirement. At the same time, Iran refuses to explain its past activities relevant to fashioning highly enriched uranium into nuclear weapons. This is deeply troubling. It is deeply troubling because Iran's actions violate multiple resolutions of the IAEA Board and the UN Security Council. It is deeply troubling because it is only a small step from the low enriched uranium that Iran is now stockpiling to the highly enriched uranium that Iran would need to build a bomb.

This week's report on Syria is the first written report on the IAEA's investigation. At the September meeting of the IAEA Board, the Director General said that he would issue a written report if he has something of substance to report. Reading the report makes clear that he does. Indeed the report raises real, substantive concerns that deserve careful consideration by the IAEA Board and continued investigation by the Agency's inspectors.

The Director General's report reinforces the assessment of my government that Syria was secretly building a nuclear reactor in its eastern desert and thereby violating its IAEA safeguards obligations. The report sharply contradicts a number of Syria's claims and catalogues Syria's repeated refusal to answer IAEA questions. We strongly support the IAEA's continued investigation and encourage Syria's authorities to give Agency inspectors necessary access to facilities, individuals, and information. **The IAEA needs to understand what Syria was building in secret then buried under meters of earth and a new building. The IAEA also needs to be confident that there are no other undeclared activities in Syria.**

Syria is not Iran, and we do not seek to make Syria into Iran. But this requires Syria to cooperate with the IAEA. We hope that it will not adopt the tactics of hindrance and unhelpfulness that Tehran has so finely honed and that remain so evident in the Director General's latest report.

The IAEA Board will consider both of these reports at its meeting next week. We expect Board members to call on both countries to cooperate with the IAEA and meet their international obligations.

## **IAEA report hardens suspicions against Syria: US**

20 minutes ago [Accessed 2008-11-21T15:25Z]

[EXCERPTS]

VIENNA (AFP) — The UN atomic watchdog's first report on Syria's alleged nuclear activities has hardened suspicions that it had been building a nuclear reactor at a remote desert site, a top US envoy said Friday.

The International Atomic Energy Agency's report "reinforces the assessment of my government that Syria was secretly building a nuclear reactor in its eastern desert," Washington's ambassador to the Vienna-based watchdog, Gregory Schulte, said.

"The report sharply contradicts a number of Syria's claims and catalogues Syria's repeated refusal to answer IAEA questions."

[deletia]

Schulte said in a statement: "We strongly support the IAEA's continued investigation and encourage Syria's authorities to give Agency inspectors necessary access to facilities, individuals, and information.

"Syria is not Iran, and we do not seek to make Syria into Iran. But this requires Syria to cooperate with the IAEA. We hope that it will not adopt the tactics of hindrance and unhelpfulness that Tehran has so finely honed ..."

In a separate report on Wednesday, the IAEA said Iran was still stonewalling a long-running probe into alleged atomic bomb research by Tehran.

[deletia]

Both reports are scheduled to be discussed by the board of governors at a two-day meeting next week.

Schulte he expected board members to "call on both countries to cooperate with the IAEA and meet their international obligations."

## **U.S. says IAEA hardens fear of covert Syria atom site**

By Mark Heinrich

Fri Nov 21, 2008 5:41pm IST

*[EXCERPTS]*

VIENNA (Reuters) - The United States said on Friday the first independent monitoring report on an alleged Syrian nuclear site had hardened suspicions that Syria was building a covert reactor and would raise pressure on it to come clean.

*[deletia]*

"The report reinforces the assessment of my government that Syria was secretly building a nuclear reactor in its eastern desert and thereby violating its IAEA (non-proliferation) safeguards obligations," said Gregory Schulte, U.S. ambassador to the U.N. nuclear monitor.

"The report sharply contradicts a number of Syria's claims and catalogues Syria's repeated refusal to answer IAEA questions," he said in a statement, the first official U.S. response.

*[deletia]*

"The IAEA needs to understand what Syria was building in secret then buried under meters of earth and a new building," Schulte said.

"Syria is not Iran and we do not seek to make Syria into Iran. But this requires Syria to cooperate with the IAEA.

"We hope that it will not adopt the tactics of hindrance and unhelpfulness that Tehran has so finely honed and that remain so evident in the (IAEA's) latest report," he said.

*[deletia]*

Schulte said members of the IAEA's 35-nation Board of Governors would press Iran and Syria to cooperate at the body's end-of-year meeting on Nov. 27-28.

## **US: Syria should not mimic Iran nuclear probe block**

Posted : Fri, 21 Nov 2008 15:27:39 GMT

Author : DPA

*[EXCERPT]*

Vienna - A senior United States diplomat in Vienna called on Syria on Friday to answer the International Atomic Energy Agency's (IAEA) questions about an alleged secret nuclear programme, and not to follow Iran's path of stalling a probe of its nuclear activities. "Syria is not Iran, and we do not seek to make Syria into Iran," Gregory Schulte, the US ambassador to the IAEA in Vienna, said in a statement. "But this requires Syria to cooperate with the IAEA," he said.

On Wednesday, the IAEA Director-General Mohamed ElBaradei issued his first report after his organisation's inspectors visited the al-Kibar site in Syria in June, where the US alleges Syria was constructing a nuclear reactor that was bombed by the Israeli air force in September 2007.

"The Director General's report reinforces the assessment of my government that Syria was secretly building a nuclear reactor in its eastern desert and thereby violating its IAEA safeguards obligations," Schulte said.

## Syria dismisses IAEA report, says probe should end

By Mark Heinrich

Fri Nov 21, 2008 12:54pm EST

*[EXCERPTS]*

VIENNA (Reuters) - Syria said on Friday a U.N. watchdog report on an alleged secret Syrian nuclear site bombed by Israel proved nothing and the investigation should be closed.

Syrian nuclear energy chief Ibrahim Othman said his country would stick by a written agreement with U.N. inspectors that allowed only one visit to the Al-Kibar site -- which took place last June -- and "we will not allow another visit."

*[deletia]*

Othman, speaking after a closed IAEA briefing to members of its 35-nation board of governors, repeated Syria's position that Israel's target was only a conventional military building.

"What they are now saying about uranium particles -- collecting three particles from the desert is not enough to say there was a reactor there at all," he told reporters, speaking English in Syria's first public reaction to the report.

"Now, I think to follow up there should be a good reason to say there is something there. In our opinion this file should be closed," said Othman, head of Syria's atomic energy commission.

Syria has one declared atomic facility, an old research reactor.

*[deletia]*

Pressed on whether Syria was slamming the door to further contact with the IAEA over the probe, Othman said, "No, no. If the information required belongs to the accusation, then we will supply it," suggesting there could be more discussions.

But he poured cold water on the prospect of intrusive inspections of more sites he said were military installations Syria could not afford to expose given its official state of war with Israel, which has an undeclared nuclear arsenal.

"If our authorities find it is possible to visit, it's not myself who will decide. But I'm pointing out these are military positions, buildings, activities, and remind you all we are still in a war in the Middle East," Othman said.

He said Syria would continue cooperation with the IAEA but according to its agreement with the agency, which provides for inspections only at declared atomic sites.

## **ElBaradei hits Western challenge to Syria nuclear aid**

By Mark Heinrich

Reuters

Monday, November 24, 2008

The U.N. nuclear watchdog chief objected to Western moves on Monday to block aid for a planned Syrian nuclear power plant, saying U.S. intelligence pointing to secret Syrian atomic weapons programme remained unproven.

Diplomats at a 35-nation meeting of International Atomic Energy Agency governors said the United States, Canada and the European Union signalled it would be prudent to halt the project while Syria is under IAEA investigation over the U.S. reports.

China, Russia and developing nations, which together comprise the majority on the governing body, rejected the Western challenge as "political interference" undercutting the IAEA's aid programme for civilian atomic energy development.

Western nations were alarmed by an IAEA report last week saying a Syrian building demolished in an Israeli air raid last year bore similarities to a nuclear reactor and inspectors later found striking amounts of uranium particles in the area.

The findings were not enough to prove a covert reactor of North Korean design meant to yield plutonium for atom bombs was there, as U.S. intelligence indicated, the report said.

But further checks at the site and visits to three others as well as full Syrian cooperation, including documentation about their uses, were essential to draw conclusions, it said.

U.S. State Department spokesman Sean McCormack said the IAEA report showed it would be wrong to give technical information to Syria to build a nuclear power station.

"It's wholly inappropriate, we believe, given the fact that Syria is under investigation by the IAEA for building a nuclear reactor outside the bounds of its international legal commitments," he said.

Syria has said all four locations are conventional military sites, the uranium came from missiles Israel used in the bombing and that wider, intrusive IAEA access was unacceptable on national security grounds, noting its state of war with Israel.

### **'INNOCENT TILL PROVEN GUILTY'**

IAEA Director Mohamed ElBaradei urged the agency governors to approve the Syrian aid project, saying it would be wrong to curb Damascus's IAEA membership rights based on unverified reports that it had violated non-proliferation commitments.

"There are claims against Syria, which we're looking at. There were claims against Iraq, which were proven bonkers (mad), and after, the result was a terrible war," he said in remarks to the closed gathering relayed to Reuters.

U.S. assertions Saddam Hussein had a mass-destruction weapon programme led to the 2003 invasion of Iraq but proved unfounded.

"So we have to be very careful when we talk about an investigation," ElBaradei said. "Even people who are not a lawyer would know that people and countries are innocent until proven guilty. And we continue to act on that basis."

The proposal stirring the governors was a "technical and economic feasibility and site selection" study drafted by the IAEA Secretariat for a nuclear power station in Syria. It would cost \$350,000 and run from 2009 to 2011.

Syria applied for the study in August 2007, three weeks before Israel's air raid, according to an IAEA briefing paper circulated to the governors. It certified that the project did not undercut IAEA safeguards standards in Syria.

The IAEA conducts "technical cooperation" (TC) projects in member states worldwide seeking to develop peaceful nuclear energy. The Syrian study was among 629 projects up for approval later this week at the governors' year-end meeting.

An EU statement to the meeting said it would have been preferable to suspend the project for a year to give time to resolve the accusations against Syria. It did not say where the EU would stand if the matter came to a vote later this week.

Diplomats said there were some internal EU differences over whether to join the U.S.-led bid to block the project.

If a vote happens, it would be rare and divisive and erode the IAEA's board's tradition of taking decisions by consensus.

In 2006, governors decided by consensus to strip Iran of an IAEA safety design study at a heavy-water reactor project over concerns the plant could be secretly used to make plutonium. Iran says it will make radio-isotopes for medical care there.

But that decision was legally clearcut as Iran was under U.N. sanctions over non-compliance with IAEA rules for failing to declare proliferation-sensitive uranium enrichment work and denying the IAEA full access to verify it was for peaceful ends.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
November 24, 2008

*[EXCERPT]*

QUESTION: Sean, please, anything on the latest clash between the United States and the IAEA about providing nuclear information to Syria?

MR. MCCORMACK: I hadn't seen the word "clashing." What were we clashing about? Fill me in.

QUESTION: That ElBaradei thinks that the – his organization should proceed and provide technical information to Syria, and the United States is opposing that.

MR. MCCORMACK: Oh, right. I understand the issue. I hadn't seen his particular comments, but I know – I'm familiar with the issue, it's wholly inappropriate, we believe, given the fact that Syria is under investigation by the IAEA for building a nuclear reactor outside the bounds of its international legal commitments, and then for the IAEA to be involved in providing technical information concerning nuclear activities would seem to be contradictory, if not ironic.

## In US defeat, UN agency approves Syria nuclear aid

By GEORGE JAHN

1 hour ago [*Accessed 2008-11-26T20:30Z*]

VIENNA, Austria (AP) — The U.N. nuclear agency on Wednesday overrode U.S. concerns and approved sensitive technical aid for Syria, despite allegations the country has a secret atomic program that could be used to make weapons.

In the end, Washington and its allies agreed to the deal, which provides IAEA expertise and equipment to help Syria build a power-producing reactor.

But they did so only after three days of deadlock at a closed meeting of the International Atomic Energy Agency. The dispute pitted Western nations against backers of Syria, which included Iran, Russia and China.

Agreeing to approval appeared to have been a painful concession for the U.S., Canada, Australia, France and Britain — the nations that at the start of the meeting spearheaded the effort to deny Syria the aid.

Beyond helping the Syrians develop expertise, the \$350,000 aid project would send the wrong signal about a country under investigation by the IAEA, critics argued.

A Western diplomat sought to depict approval of the project in a positive light.

"We've made our point," she said, demanding anonymity because she was not authorized to discuss the closed meeting. "The one Syrian project is now under the spotlight and will remain under the spotlight."

But Syria portrayed the decision as vindication.

Approval by the 35-nation board of the International Atomic Energy Agency showed an "understanding of the position of Syria," Ibrahim Othman, head of Syria's nuclear agency, told The Associated Press.

An IAEA report last week said satellite imagery and other information suggested a site bombed last year by Israel was a nuclear reactor, adding that agency inspectors had found traces of processed uranium on location. The U.S. says the target was a nearly completed reactor built with North Korean help that would have produced plutonium, a possible fissile warhead component.

But Syria denies running a secret nuclear program. And on Wednesday [*2008-11-26*], Othman dismissed Western assertions that a country being probed by the IAEA should not be privy to sensitive nuclear technological aid — and even denied his country was being probed.

"We are not under investigation," he said, calling the case against his country "accusations without any proof."

Reluctant Western acceptance of the aid project came only after a spirited endorsement by IAEA chief Mohamed ElBaradei earlier in the week that appeared strengthen pro-Syria sentiment.

The U.S. and its allies could have forced a vote. But the outcome would have been uncertain. And it would have further charged the tense atmosphere of a meeting that normally decides by consensus and without controversy on projects to IAEA members meant to help them master civilian nuclear projects.

The last project denied was two years ago for Iran, which is under U.N. sanctions for defying Security Council demands to curb uranium enrichment and other activities that could be used in a weapons program.

Nations opposed to the Syria package settled for language Wednesday allowing to voice their concerns in the restricted document approving the deal.

That text, made available to The Associated Press, noted that "a number of states expressed strong reservations" and committed the IAEA to "monitor the project closely ... and ensure that any equipment provided is used only for the purposes intended."

## **Statements of the Director General**

27 November 2008 | Vienna, Austria

IAEA Board of Governors

### **Introductory Statement to the Board of Governors by IAEA Director General Dr. Mohamed ElBaradei**

*[EXCERPT]*

#### **Implementation of Safeguards in the Syrian Arab Republic**

In June this year, I informed the Board that the Agency had been provided with information alleging that an installation destroyed by Israel in Syria in September 2007 was a nuclear reactor. Syria has stated that the Dair Alzour site was a military site and was not involved in any nuclear activities.

The Agency has, in accordance with its responsibility under comprehensive safeguards agreements, conducted a thorough analysis of all information available to it. As I mentioned in my report, the Agency was severely hampered in its assessment by the unilateral use of force and by the late provision of information about the destroyed building. The destruction of the building and the subsequent removal of the debris made the Agency's verification work quite difficult and complex, rendering the results so far inconclusive.

For its assessment of the site immediately after the bombing, the Agency was unable to obtain commercial satellite imagery. It is regrettable, and indeed baffling, that imagery for this critical period, which would have been most valuable in helping to clarify the nature of the building that was destroyed, was not available. The Agency has recently been able to secure agreement to show Syria imagery from Member State satellites of the site shortly after the bombing, and will do so at the earliest opportunity.

Analysis of environmental samples from the Dair Alzour site revealed a significant number of natural uranium particles, which had been produced as a result of chemical processing. Syria stated that the only explanation for these particles was that they were contained in the missiles used to destroy the building. The Agency is assessing Syria's claim. We have asked Syria to permit the Agency to visit the locations of debris and equipment removed from the site in order to take samples that would help us to assess the origin of the uranium and also to ascertain the possible existence of any nuclear grade graphite that is normally associated with the type of alleged reactor. The Agency has also asked Israel to provide detailed information concerning Syria's claims regarding the origin of the uranium particles.

As stated in the report, while it cannot be excluded that the building in question was intended for non-nuclear use, the features of the building, along with the availability of adequate pumping capacity of cooling water, are similar to what may be found in connection with a reactor site. In light of this, it is important that Syria provide the Agency with documentation in support of its statements concerning the nature and function of the destroyed building.

Syria should also agree, as a transparency measure, to let the Agency visit other locations. As I mentioned in the case of Iran, I am confident that modalities can be developed which will protect the confidentiality of military information while enabling the Agency to continue with its assessment.

For the Agency to complete its assessment, maximum transparency by Syria and the full sharing with the Agency of all relevant information which other States may have are essential.

### **General Verification Issues**

Finally, I would like to clarify a number of important general verification issues that have been raised recently in Board discussions and Secretariat briefings.

First, it is the Agency's obligation to assess the veracity of any information made available to it and to assure itself at all times, in accordance with its obligations under comprehensive safeguards agreements, that there are no undeclared nuclear material or activities in a given country. This clearly requires full cooperation by the State concerned.

Second, in certain situations, the Agency has to rely on transparency measures by the State concerned that go beyond the Agency's rights under comprehensive safeguards agreements and the additional protocol in order to be in a position to complete our assessments, since our legal authority to address certain issues is limited. It is in the interests of the State concerned to engage in such cooperation in order to assist the Agency in clarifying any allegations made against it. As I have said many times, our effectiveness depends on the legal authority and tools we have and the cooperation we receive. The more legal authority, tools and cooperation we have, the more effective we can be.

Third, several Member States have raised questions concerning the Agency's reliance on laboratories in Member States in assessing environmental samples. As the Deputy Director General for Safeguards noted during the informal briefing last week, we take all necessary measures to ensure the anonymity of samples and we rely on more than one lab for results. The fact remains, however, that in some cases we are not able to independently validate the results of sample analysis on our own because of the lack of certain analytical capabilities at our Safeguards Analytical Laboratory (SAL).

You have received a report on the current status of plans to refurbish SAL and transform it into an advanced, state of the art facility. This is key to the Agency's capability, and independence, with regard to environmental sample and nuclear material sample analysis. We estimate the overall cost at around €35 million. With the exception of Japan, which pledged €2 million, no additional pledges of support have been received. If sufficient funds are not forthcoming, it will be necessary to request supplementary budget appropriations. The sooner SAL is operating with the high capabilities required, the greater will be the confidence of all Member States in our ability to independently validate the results of samples analysed by Member State laboratories. This is a matter which I have highlighted in the past and which has been clearly spelled out in the Report of the Commission of Eminent Persons. So the ball really is in your court.

Fourth, concerning satellite imagery, which has proven to be a useful tool, in particular in contributing to the assessment of claims of undeclared nuclear activities, it is of course unfortunate that the Agency, like the United Nations as a whole, does not have an independent satellite capability, as was proposed some years ago by France. As that is unlikely to change any time soon, we will continue to make use of available commercial and Member State satellite imagery. But I should stress that, because the Agency cannot verify the authenticity of such imagery, we rely on it only as an auxiliary source to corroborate other information which we can authenticate, and it is never the sole basis of our assessments. Depending on the availability of other information, this may mean that the Agency's assessments in some cases are inconclusive.

## IAEA chief baffled over lack of Syria nuke info

The Associated Press

Thursday, November 27, 2008

1 hour ago [Accessed 2008-11-27T15:15Z]

VIENNA, Austria: The chief U.N. nuclear inspector said Thursday [2008-11-27] that his agency's Syria probe has been hampered because key satellite images of an alleged nuclear reactor bombed by Israel are inexplicably unavailable on the market.

International Atomic Energy Agency chief Mohamed ElBaradei did [*sic; should be "did not"?*] point any fingers in the "baffling" failure of his agency's efforts to obtain the images of the Syrian site hit last year by Israel immediately after the bombing.

But diplomats familiar with the IAEA's Syria probe said agency officials were considering two scenarios -- that either Syria had bought the photos as part of its cover-up or that seven nations with commercial satellite networks covering the struck had ordered them withdrawn.

One of the diplomats said the five U.N. Security Council nations -- the U.S., Russia, China, France and Britain were among the seven countries that had such networks. Both diplomats who spoke on the issue asked for anonymity because of the sensitive nature of the allegations.

Another suggested the comments by ElBaradei were at least partially out of date. He said the agency had "very recently" been able to locate commercial images showing the site after the Israeli strike.

All of the diplomats asked for anonymity in exchange for speaking to The Associated Press because their information was privileged.

ElBaradei's comments at the start of a two-day full meeting of the IAEA's 35-nation board partially reflected the focus of the gathering -- Syria and Iran and suspicions about their nuclear activities.

"For its assessment of the site immediately after the bombing, the agency was unable to obtain commercial satellite imagery," ElBaradei told the meeting. "It is regrettable, and indeed baffling, that imagery for this critical period ... was not available."

An IAEA report last week drew on what satellite imagery was available and other information in suggesting the bombed site was a nuclear reactor, adding that agency inspectors had found traces of processed uranium on location. The U.S. says the target was a nearly completed reactor built with North Korean help that would have produced plutonium, a possible fissile warhead component.

Syria denies running a secret nuclear program. It has signaled it will not permit IAEA inspectors to return to the country after their initial visit to the bombed site in June, despite repeated agency requests for renewed access both to the facility hit by Israel and initial visits to three others allegedly linked to the bombed structure.

If on-ground inspection is barred by the Syria, satellite images become even more important in the IAEA probe.

ElBaradei, in comments to the closed meeting made available to reporters, also repeated criticism of Israel -- for bombing the site -- and the U.S. for waiting months before providing his agency with intelligence backing up its allegations of a secret Syrian nuclear program.

"The agency was severely hampered in its assessment by the unilateral use of force and by the late provision of information about the destroyed building," he said. The Israeli attack contributed to making the results of the Syria probe "inconclusive" so far, added ElBaradei.

## **IAEA Chief: Will Confront Syria With Imagery Of Suspect Site**

Thursday November 27th, 2008 / 13h15

VIENNA (AFP)--The U.N. atomic watchdog hopes to confront Syria soon with satellite imagery of a suspect nuclear site bombed by Israeli planes last year, International Atomic Energy Agency chief Mohamed ElBaradei said Thursday.

The IAEA "has recently been able to secure agreement to show Syria imagery from member state satellites of the site shortly after the bombing, and will do so at the earliest opportunity," ElBaradei told the agency's board of governors at the start of a two-day meeting.

He didn't specify which member states had come forward with the imagery.

But ElBaradei said no commercial satellite imagery - as opposed to intelligence imagery - of the site was yet available.

"For its assessment of the site immediately after the bombing, the agency was unable to obtain commercial satellite imagery," ElBaradei said.

"It is regrettable, and indeed baffling, that imagery for this critical period, which would have been most valuable in helping to clarify the nature of the building that was destroyed, was not available."

## **EI Baradei prods Syria on atom probe, cites pictures**

By Mark Heinrich

Thu Nov 27, 2008 10:31am EST

*[EXCERPTS]*

VIENNA (Reuters) - The U.N. nuclear watchdog chief prodded Syria on Thursday to open up military sites to investigators and said he would soon show Damascus satellite images which Washington says indicate covert atomic activity.

*[deletia]*

"For the agency to complete its assessment, maximum transparency by Syria and the full sharing with the agency of all relevant information which other states may have are essential," IAEA Director General Mohammed ElBaradei said.

He was alluding in particular to Israel, which has never commented on the nature of the site its air force took out.

"Syria should also agree, as a transparency measure, to let the agency visit other locations. I am confident modalities can be developed which will protect the confidentiality of military information," he told a meeting of the IAEA governing board.

*[deletia]*

### "BAFFLING" LACK OF KEY SATELLITE PICTURES

Inspectors believe these sites could harbor items, possibly for fabricating nuclear fuel, linked to the bombed site, or which may have been whisked away from it soon after the attack -- and after the IAEA asked for access to examine it.

ElBaradei said it was "regrettable, indeed baffling" why there was no high-resolution satellite imagery of the site available for the period right after the bombing.

That would have been before Syria carted away potentially relevant evidence like rubble and equipment, diplomats say.

Diplomats close to the inquiry said it was possible that the seven states with commercial satellite networks pulled pictures for that period from circulation for undetermined security reasons, or Syria had bought them up to impede investigators.

The seven countries are the United States, Israel, France, Russia, China, India and Japan, said a senior diplomat, who like others, asked for anonymity because they were discussing restricted information.

ElBaradei said the IAEA recently won permission to show Syria some pictures from member state satellites taken of the site "shortly after the bombing" to elicit a response. He did not say what they showed or how sharp the images were.

One diplomat said the IAEA recently had found some pictures from the attack aftermath but they were not high-resolution.

ElBaradei cautioned that satellite pictures were no panacea in difficult nuclear investigations. "Because the agency cannot verify the authenticity of such imagery, we rely on it only as an auxiliary source to corroborate other information ... It is never the sole basis of our assessments," he told the governors.

UNITED STATES MISSION TO  
**INTERNATIONAL ORGANIZATIONS  
IN VIENNA**

## **November 28 U.S. Statement to the IAEA Board of Governors**

<http://vienna.usmission.gov/081128syria.html>

IAEA Board of Governors Meeting  
November 27-28, 2008

### **Implementation of NPT Safeguards Agreements in the Syrian Arab Republic**

U.S. Statement  
Ambassador Gregory L Schulte  
Permanent U.S. Representative to the International Atomic Energy Agency

Madam Chairwoman,

On Wednesday I heard encouraging words from the distinguished representative of Syria. He told the Technical Assistance and Cooperation Committee, in this room, that Syria will cooperate with all aspects of IAEA activities. Let us hope that he meant it.

Indeed we would welcome hearing the same commitment under this new item on our agenda. We would welcome such a commitment because, as the Director General reports, Syria has not yet demonstrated the cooperation and transparency needed by the IAEA inspectors to conduct their investigation.

As we have read, Syria has repeatedly refused to answer the questions of IAEA inspectors or to give them access to three other sites. **At Friday's technical briefing, we saw dramatic evidence that Syria took immediate steps to sanitize the three sites after the IAEA requested access.** This was in addition to Syria's efforts to conceal Al-Kibar, both before and after the facility was destroyed. Furthermore, the report sharply contradicts a number of Syria's claims about the nature of the facility and the origin of the uranium particles found at the location.

The Director General's report reinforces the assessment of my government that Syria was secretly building a nuclear reactor in its eastern desert with the assistance of North Korea. This is a serious violation of Syria's safeguards obligations. **But it is all the more serious because the reactor's characteristics -- not configured for power production, isolated from civilian population, ill-suited for research -- suggests it was not intended for peaceful purposes. Indeed we believe that the reactor under construction was of the same type that North Korea built at Yongbyon to produce plutonium for nuclear weapons.**

Madame Chairperson,

Given the gravity of this situation, we join other Board members in strongly supporting the IAEA's continued investigation and encouraging Syria's authorities to grant all access requested to facilities, individuals, and information.

The IAEA needs to understand what Syria was building in secret and then buried under meters of earth and a new building. The IAEA needs to be confident that there are no other undeclared activities in Syria. The IAEA needs to determine the procurement routes and networks that were involved. And finally, the IAEA needs to demonstrate that illicit nuclear activities, whether in Syria or elsewhere, will be caught and investigated.

This case underlines the limitations of the Agency in a country without an Additional Protocol. The Additional Protocol was developed to give inspectors information and access to help detect undeclared activities. Syria is one state that declined to adopt the Additional Protocol. Perhaps we now understand why.

We join other members of the Board in calling on Syria to sign and implement the Additional Protocol and undertake whatever additional transparency measures the Agency deems necessary.

Madame Chairperson,

Under the last agenda item, I recalled sitting through fifteen Board sessions on Iran. By failing to cooperate with the IAEA and comply with the UN, Iran's leaders have inscribed their case on our agenda, and eventually the agenda of the Security Council, on a near-permanent basis.

Syria's leaders need not make the same choice. They can avoid becoming a permanent topic of critical discussion like Iran and North Korea.

But this requires Syria to cooperate with the IAEA. So far Syria seems to be testing the tactics of hindrance and unhelpfulness that Iran has so finely honed. We hope that Syria's leadership does not persist in these tactics.

Instead, we hope that Syria will look elsewhere in the Arab world, specifically to Libya. Libya was just on our agenda, but in a good sense -- to welcome its cooperation, cooperation based on the Additional Protocol but also going well beyond it, and to return its case to routine verification.

Libya shows that a government, through cooperation and transparency, can remove itself from the IAEA agenda and gain international respect after a serious safeguards violation. We hope that the government of Syria has taken note, and we call on it to cooperate openly and transparently with the IAEA's investigation.

Madame Chairperson,

We thank the Director General for his written report and look forward to a second written report for our meeting in March.

## **US: Alleged Syrian reactor had no peaceful uses**

Deutsche Presse Agentur

22 minutes ago [Accessed 2008-11-28T13:15Z]

The United States' ambassador at the International Atomic Energy Agency (IAEA) said Friday [2008-11-28] in Vienna that the alleged Syrian nuclear reactor that Israel bombed in 2007 seems not to have been intended for peaceful purposes.

The suspect al-Kibar site in Syria's eastern desert was not configured for energy production, was located in a remote area and was ill-suited for research purposes, Ambassador Gregory Schulte told the 35 countries represented on the IAEA's governing board.

Last week, IAEA Director General Mohamed ElBaradei issued a first report on Syria, in which he did not draw conclusions but noted that the features of the building were similar to what may be found at a reactor.

Inspectors of the Vienna-based agency also found a significant amount of uranium particles when they visited al-Kibar for the first time in June.

In a joint statement, the EU said the report was "troubling in many regards."

In April, the US provided the IAEA with intelligence indicating Syria had almost completed construction of the reactor, possibly with help from North Korea.

"Given the gravity of this situation, we join other Board members in strongly supporting the IAEA's continued investigation and encouraging Syria's authorities to grant all access requested to facilities, individuals, and information," Schulte said.

Syria has stated that al-Kibar was a conventional military installation, and that the uranium found was part of munitions used in the Israeli attack in September 2007.

The country has so far not allowed further IAEA inspections.

## Syrian Official Reiterates Refusal To Allow IAEA To Visit 'Military Sites'

Report by Buthaynah Abd-al-Rahman in Vienna: "Syrian Atomic Energy Agency Director to 'Al-Sharq al-Awsat': We Will Cooperate But, Like Others, We Will Not Allow Visits to Military Sites"

Al-Sharq al-Awsat Online

Friday, November 28, 2008 T12:13:14Z

Journal Code: 1431 Language: ENGLISH Record Type: FULLTEXT

Document Type: OSC Translated Excerpt

Word Count: 514

Dr. Mohamed ElBaradei, the director general of the International Atomic Energy Agency (IAEA), reiterated yesterday morning the agency's demands from Syria to allow the international inspectors to visit several Syrian sites in addition to examining and getting more samples of the remains and debris Syria had removed from Al-Kubar site, which Israel had destroyed, so that the IAEA can complete the investigations and inspections of that sites which it had already started so as to verify whether it was a nuclear reactor, as Israel claims, or a military site, as Syria is asserting. He underlined the IAEA's desire to maintain the secrecy of all the sites that the agency is demanding to visit.

This followed a day of a decisive meeting which approved the IAEA's technical and technical cooperation programs for the years 2009-2011, including aid costing \$350,000 to Syria to prepare the economic technical feasibility study and select the site for a nuclear plant to generate electricity. There was strong Western opposition to this project from the United States, the EU countries, Canada, and Australia on the pretext that Syria was under IAEA investigation and inspection. But ElBaradei refuted these allegations and underlined the need for dealing with Syria in accordance with the legal principle which asserts that the defendant is innocent unless otherwise proven guilty, and was strongly supported in this by the Nonaligned countries' group, Russia, and China.

On his part, Dr. Ibrahim Uthman, director of the Syrian Atomic Energy Agency, asserted in reply to an "Al-Sharq al-Awsat" question yesterday morning that Syria would start work on building the above plan in full cooperation with the IAEA and in accordance with the usual rules and regulations. In reply to another "Al-Sharq al-Awsat" question about the fate and future of the IAEA's investigations and inspections of al-Kubar site, Dr. Ibrahim pointed out that this was something else, adding that the site was destroyed and then asked: Why did the parties which say they have information disclose this only seven months after the site's bombardment? He pointed out that Syria stressed that the site was an old military one and denied that Syrian statements had said at first it was an agricultural center belonging to the Arab League and said: "An Israeli journalist said this."

He went on to say that "Syria did not prevent at all and will not prevent the IAEA from making any visits but at the same time will not allow any visits to military sites, as every other country does." He added: Who allows his country to become open for tourism by all. The tourism sites are known. (Passage omitted on ElBaradei's speech at opening session and deliberations)

## Syria 'sanitized' suspected nuclear sites: US

1 day ago [*Sic; Accessed Friday, 2008-11-28T13:25Z*]

VIENNA (AFP) — The United States and Europe expressed concern here Friday that Syria had cleaned up sites that a UN watchdog had asked to see as part of its probe into alleged illicit nuclear work by Damascus.

At a closed-door briefing by International Atomic Energy Agency inspectors last week [*sic*], "we saw dramatic evidence that Syria took immediate steps to sanitize the three sites after the IAEA requested access," US envoy Gregory Schulte told the agency's 35-member board of governors on Friday.

Syria was the main topic of debate on the second and last day of the IAEA's end-of-year meeting here.

The United States claims that a remote site in the Syrian desert called Al-Kibar had been a covert nuclear reactor close to completion, until it was razed to the ground by Israeli bombs in September 2007.

Damascus has repeatedly dismissed the allegations, insisting that Al-Kibar was a disused military facility.

But in its first report on the matter -- issued after inspectors visited the site in June -- the IAEA found that Al-Kibar appeared to share some of the characteristics of a nuclear reactor and that traces of uranium had been found there, even if it was too early to draw any definitive conclusions.

IAEA inspectors have since made multiple requests to visit additional sites, all to no avail.

The 27-member EU also insisted that Damascus explain why "landscaping" work had been undertaken at the three sites in question immediately following the IAEA's request to inspect them.

"The EU appreciates the fact that Syria granted the IAEA access to (Al-Kibar)", French ambassador Francois-Xavier Deniau said.

"But it regrets, on the other hand, that Syria has not yet granted access to the other sites that interest the IAEA. The EU calls on Syria to cooperate with the IAEA without reservation, to supply plans of the site of Dair Alzour (also known as Al-Kibar) and to answer questions on procurement," Deniau said.

## **Othman, Political Use of the Destroyed al-Kubar Site Does Not Serve IAEA Objectives on Nuclear Non-Proliferation**

**Nov 29, 2008**

Vienna, (SANA) \_ Syria said Friday the building in al-Kubar site, in Deir Al-Zur, bombed by Israeli planes last year wasn't a nuclear reactor.

" The building was a military building and invested by the armed forces. Some countries are trying to exploit this issue for political purposes that do not serve the Agency objectives on the preservation of prevention of nuclear Non-Proliferation,"

Director-General of Syria's Atomic Energy Commission Dr. Ibrahim Othman said. In his statement before the International Atomic Energy Agency Board of Governors in Vienna, Othman added that what inspectors of the Agency has got, doesn't prove that the destroyed building in al-Kubar site is a nuclear reactor.

" Israel to violate airspace of a UN member state and destroy facilities within its territories under suspicion pretext, is a flagrant contradiction to all international legislations and deserves to be seriously studied by the international community to take a deterrent measures to such behaviors." Othman said.

" Syria, fully, cooperated with the IAEA delegation when it visited the site last June in accordance with what was agreed upon in the Memorandum of Understanding signed between the two parties in May 2008," Othman noted, affirming that the delegation's report denied any clear signs on existence of a nuclear reactor or material.

" Syria was one of the first countries that worked at the regional and international levels in order to make the Middle East a region free of nuclear weapons and all weapons of mass destruction," The Director said.

He indicated that the IAEA inspectors, annually, visit the research reactor in the Syrian Atomic Energy Commission as does the Agency experts within the technical cooperation projects. Othman concluded by saying that Syria had never put any conditions on the experts' visits.

Moreover, It allows all the trainees from many countries to enter laboratories and all sites that use the applications of nuclear energy that matter which asserts nonexistence of undeclared activities in Syria.

## IAEA chief baffled over lack of Syria nuclear info

By GEORGE JAHN

4 days ago [Accessed 2008-12-02T15:50Z]

[EXCERPTS]

VIENNA, Austria (AP) — The chief U.N. nuclear inspector said Thursday that his agency's Syria probe has been hampered because key satellite images of an alleged nuclear reactor bombed by Israel are inexplicably unavailable on the market.

International Atomic Energy Agency chief Mohamed ElBaradei did not point any fingers in the "baffling" failure of his agency's efforts to obtain the images of the Syrian site immediately after it was bombed by Israel last year.

But diplomats familiar with the IAEA's Syria investigation said agency officials were considering several scenarios, including the possibility that Syria or other nations with an interest in a cover-up had bought the photos and all rights to them from commercial satellite companies.

ElBaradei's comments at the start of a two-day full meeting of the IAEA's 35-nation board partially reflected the focus of the gathering — suspicions about Syria's and Iran's nuclear activities.

[deletia]

In the case of Syria, ElBaradei noted that his "agency was unable to obtain commercial satellite imagery" of the site immediately after the bombing, adding: "It is regrettable, and indeed baffling, that imagery for this critical period ... was not available."

Syrian nuclear chief Ibrahim Othman was dismissive, telling The Associated Press: "The theory that we bought all the photos is nonsense."

The IAEA often turns to commercial images beyond any spy satellite photos shared by governments.

But the two nations most likely to have satellite intelligence were unlikely to have provided it with immediate information. Israel still has not confirmed it was behind the strike, while the United States waited for more than six months before sharing knowledge with the IAEA.

The possibility that commercial companies simply did not know where to look immediately after the bombing was raised by David Albright, whose Washington-based Institute for Science and International Security closely tracks suspected secret proliferators.

[Sourcebook comment: As detailed in Appendix B, on 5, 10, 15, 18 and 28 August, 2007, the DigitalGlobe QuickBird satellite imaged the site of the impending strike. The circumstances leading to that coverage are as yet unknown, but indicate knowledge of at least the approximate location of the site.]

"The United States and Israel went to great lengths to prevent others from finding out where the site was," said Albright, whose institute was the first to publish commercial satellite images of the site more than a year ago and identify it as a likely North-Korean-model nuclear reactor.

"No one knew where the site was immediately after the bombing," said Albright, whose institute published photos taken nearly a month before the Sept. 6, 2007, Israeli strike.

Albright also noted that ElBaradei was initially skeptical of the U.S. assertions, which could have led to Washington and Israel to withhold satellite photos.

"Why would U.S. intelligence give photos to ElBaradei if he was predisposed not to believe" that they showed a secret nuclear reactor, Albright said in an interview.

Meanwhile, a senior diplomat familiar with the Syria probe suggested that the comments by ElBaradei were at least partially out of date. He said the agency had "very recently" been able to locate commercial images showing the site after the Israeli strike.

IAEA spokeswoman Melissa Fleming said the agency would not comment on the issue.

All of the diplomats asked for anonymity in exchange for speaking to The Associated Press because their information was privileged.

While the agency was unable to find satellite images immediately after the bombing, it acquired photos showing the building at other stages. An IAEA report said those images and other information showed the bombed building had the features of a reactor, adding that agency inspectors had found traces of processed uranium on location. The U.S. says the target was a nearly completed reactor that would have produced plutonium, a possible fissile warhead component.

Syria has signaled it will not permit IAEA inspectors to return to the country after their initial visit to the bombed site in June, or permit initial visits to three other suspicious locations. Such a ban would make satellite images become even more important in the IAEA probe.

## **IAEA Broadens Probe of Syria Plans To Build Up Its Nuclear Program**

By JAY SOLOMON

NOVEMBER 29, 2008

VIENNA -- The United Nations nuclear watchdog, the International Atomic Energy Agency, is broadening its probe of Syria's suspected nuclear program and pushing for information from its alleged collaborator, North Korea, as well as from Israel, officials said this past week.

Despite signs that the U.S. and Israel aren't in a punitive mood toward Damascus, the suspected nuclear program is emerging as a major international issue.

The IAEA's probe places the incoming Obama administration in a difficult spot diplomatically. President-elect Barack Obama has indicated his desire to engage Syria, but he also backs global antiproliferation efforts.

Israeli jets destroyed a suspected Syrian nuclear facility in September 2007. U.S. intelligence agencies said that at the time, the facility was weeks from being operational. Syria has denied it was building a nuclear reactor, and suggested that uranium particles found there by U.N. inspectors in June came from Israeli bombs.

Earlier this week, the IAEA sent a letter to Jerusalem seeking clarification on whether Israeli bombs could have been the source of the uranium particles, U.N. officials and Western diplomats said. An Israeli official declined to comment.

The Central Intelligence Agency has alleged that North Korea was the principal designer and builder of the Syrian facility, known as Al Kibar.

A senior U.N. official close to the investigation said the IAEA is hoping to learn more through the disarmament talks between North Korea, the U.S. and other powers. North Korea's alleged role in exporting nuclear technologies to third countries is a principal focus of the talks.

Damascus has refused to allow the IAEA to visit at least three other sites suspected of being linked to the Al Kibar complex. It has so far ruled out additional visits to Syria by agency officials.

"We will not allow another visit," Ibrahim Othman, the head of Syria's Atomic Energy Commission, told reporters at IAEA headquarters in Vienna on Nov. 21. "No other country would allow any person to visit a restricted military site, just because he would like to see it."

U.N. officials said the investigation has been hampered by the August assassination of Syrian Brig. Gen. Mohammed Suleiman, the IAEA's principal contact in Damascus. The officials said Gen. Suleiman oversaw the IAEA's access to suspected Syrian sites, as well as briefings by Syria to the IAEA inspectors. "We don't have a new source" of contact inside Syria, said the senior U.N. official.

Another snag was cited by IAEA Director General Mohamed ElBaradei this week. He said the agency has had trouble obtaining commercial satellite images of the Syrian site in the weeks after the Israeli attack, perhaps because someone bought them up. "It is regrettable, and indeed baffling, that imagery for this critical period...was not available," Mr. ElBaradei told the IAEA's board of governors on Wednesday.

Israel has neither confirmed nor denied its role in the Syria attack. A U.N. official said investigators found no traces of depleted uranium -- the normal form of uranium found in munitions -- at Al Kibar, but said he couldn't rule out that other forms of uranium may have been used in the Israeli bombs dropped on the site.

U.N. officials said the IAEA hasn't found evidence so far that uranium from a North Korean nuclear facility at Yongbyon was diverted to Syria. The IAEA hasn't ruled out that the uranium could have come from a separate North Korean site, and is looking into whether it came from a third country.

The Bush administration has regularly stated its desire to cooperate with Damascus on the nuclear issue and avoid the type of U.N. sanctions imposed on Iran in response to Tehran's dispute with the IAEA over nuclear inspections.

"Syria is not Iran, and we do not seek to make Syria into Iran," said Gregory Schulte, the U.S. representative to the IAEA, last week. "But this requires Syria to cooperate with the IAEA."

## **Covert marine operation uncovers Syria's return to plutonium production**

DEBKAFfile Exclusive Report

December 5, 2008, 1:21 PM (GMT+02:00)

In the face of Damascus' refusal to allow UN inspectors access to three suspect "research laboratories, Western agents recently carried out a daring covert operation to collect water samples from the Orontes river in Syria where it drains into the Mediterranean, DEBKAFfile's intelligence sources reveal. Their discoveries were presented to a closed session of the Vienna-based International Atomic Energy Agency's board on Nov. 27-28.

Situated on the river bank near Homs is one of the three research institutes where Syrian, Iranian and North Korean technicians and scientists are suspected of reprocessing plutonium for Syria's clandestine military nuclear program. The Orontes samples confirmed the suspicion that Syria has gone back to the plutonium project which was cut short when Israeli destroyed its reactor at Al Kibar in September 2007.

The Orontes rises at Tal al Musa north of Damascus and south of Homs. It flows into the sea near Antakya, which is north of Latakia and west of Aleppo, not far from the Turkish border.

The IAEA board meeting was told in general terms how the tainted river samples were obtained. DEBKAFfile's military sources add that western nuclear technicians collected them from a boat which sailed surreptitiously up to the river mouth in Syria. To make sure of their finding, they collected river water on three different dates in the last two months.

Their discovery tied in with a separate report reaching the nuclear watchdog board that Iran and North Korea were frantically drafting in nuclear specialists to help Syria revive its plutonium reprocessing project. The product is to be stored in protected hideouts.

It was the view of some board members that Tehran and Pyongyang had determined to prove that the Israeli attack had not put Syria off its nuclear program. Both were even more insistent on showing the world that the Iranian nuclear program of which the Syrian project was a part was unstoppable.

Syria and North Korea accordingly renewed their clandestine nuclear cooperation accord on Oct. 22, so making sure of an uninterrupted flow from Pyongyang of nuclear materials, technology and experts for Syria's covert nuclear facilities.

Daily Press Briefing  
Sean McCormack, Spokesman  
Washington, DC  
December 11, 2008  
10:34 a.m. EST

*[EXCERPT]*

MR. MCCORMACK: Good morning, everybody. Sorry for being a little bit late. I don't have anything to start with. We'll get right to your questions. Sure.

QUESTION: Can you explain exactly what was – what this document means?

MR. MCCORMACK: I can't read it. Sorry.

QUESTION: This would be the Chairman's statement of the Six-Party Talks.

MR. MCCORMACK: Okay, all right. Sure, let me --

QUESTION: Because it doesn't really --

MR. MCCORMACK: It doesn't address the issue at hand. Right. Let me try to – I'm prepared to try to do that. I'll let you be the judge as to how precise my explanation is.

Chris is on his way back. And I guess the best way to put this is that, you know, from our point of view, and I think this is a shared point of view certainly among the five parties, North Korea perhaps being the exception, but the objective of this Six-Party round was to formalize the understandings that the U.S. and North Korea had previously reached verification, just to "Six-Party-ize" this so everybody – so everybody could initial it, everybody could put all of these understandings down on paper.

Just to rewind the tape a little bit, in terms – with our – in our negotiations with the North Koreans, we had agreed upon many things on pieces – on a piece of paper that both sides could initial, if you will. Some of the understandings that we reached were part of an oral understanding that we took very precise and careful notes on. In subsequent conversations with other members of the Six-Party Talks, they affirmed that this was their understanding of our conversation with the North Koreans based on their separate interactions with the North Koreans.

So the whole – the idea was to put all of this on a piece of paper so that everybody could understand what was – what had been agreed to in the verification discussions. And part of this – two important points in this were that the reference to scientific – the scientific procedures meant sampling. I know that that is something that there's been a lot of discussion about. **And it also covered not just plutonium, but HEU and proliferation activities. So the scope of the agreement covered all three of those areas,** and that one of the agreed upon verification members – one of the agreed upon verification measures was sampling.

So that's to kind of bring you up to the present date. The draft – and this is an interesting point. The draft that North Korea said it could not sign onto at this round of the Six-Party Talks was a Chinese draft. We had signed onto the draft, so what – North Korea wasn't – you know, wasn't rejecting – rejecting is not the right word – didn't want to sign onto an American draft. This was a Chinese draft. And I think it's safe to say that all the other members of the Six-Party Talks supported this draft. So in that sense, North Korea, on this question, is isolated.

And where we stand now is that North Korea said it could not, at that meeting, accept the draft, it could not initial the draft. All the parties said okay, let's – let's adjourn the meeting, go back to capitals, think about it, and we'll keep working this process. But this is, I think, an indication – it's a public indication of how central to this process we view verification. Verification is absolutely essential to this process. Quite frankly, it is not going to be able to move forward without agreement on a verification protocol. So we will – in terms of our obligations, I don't see those moving forward until we have an agreement on this verification protocol.

## US demands Syria cooperate on nuke plan

Roe Nahmias

Published: 12.13.08, 09:26

Israel News

**A warning to Syria:** US Ambassador to the International Atomic Energy Agency (IAEA) Gregory Schulte says Syria has three months – until the United Nations nuclear watchdog's next governors' meeting in March – to start cooperating on its nuclear program, or it will be punished. A failure to do so, he warns, will lead to "punishment measures".

In an interview published Saturday [2008-12-13] with the London-based Arabic-language al-Sharq al-Awsat newspaper, Schulte said that "the Damascus authorities must decide whether they wish to follow in Iran's footsteps or cooperate."

Schulte also noted that North Korea has neither denied nor confirmed its involvement in the construction of the Syrian nuclear reactor allegedly bombed by Israel.

"I hope the Syrians reach the conclusion that they should cooperate, for the sake of their own interests," he said.

According to Schulte, if Damascus failed to cooperate "this would lead to a negative response, and serious questions would be raised".

Schulte refused to discuss the sanctions which would be imposed on Syria if it continued its policy, saying that the IAEA's goal at this time is to convince Damascus to cooperate.

"No one is talking about sanctions today. The only thing we are talking about is a probe. The international agency is giving the Syrians an opportunity to cooperate, and they have an extension until the next meeting to cooperate."

He added that this was not an official extension, but a date on which the nuclear watchdog would reexamine the Syrian nuclear issue, after the matter was discussed in the council's latest meeting two weeks ago.

Despite his reservations, Schulte added that "Syria is engaging in a tactic used by Iran in recent years – the failure to cooperate. This is not the road we want Syria to take. We hope Syria cooperates fully with the agency in regards to what happened in the Syrian desert. If they fail to cooperate, there will be consequences."

Only two weeks ago, the IAEA decided to provide Syria with technical support as part of its efforts to develop a nuclear reactor for peaceful purposes. This decision was a serious blow to the United States and Israel, who have been working in the past year to thwart this move, claiming Damascus is trying to develop nuclear weapons.

The UN nuclear watchdog has been probing Syria since May, following American intelligence reports which stated that Damascus was close to completing the Pyongyang-supervised construction of a nuclear reactor for the production of plutonium, at the site bombed by Israel.

According to reports published last month, IAEA inspectors discovered uranium traces at the secret site attacked by Israel in September 2007. Syria denied claims that it had tried to attain nuclear energy for military purposes, violating the Nuclear Non-Proliferation Treaty it had signed.

**Situation in Somalia**  
**Secretary Condoleezza Rice**  
**Remarks Following the UN Security Council Meeting on the Situation in Somalia**

New York City, New York  
December 16, 2008

*[EXCERPT]*

QUESTION: On the Six-Party Talks, the last round of meetings last week ended with no new declaration from North Korea. How do you leave this to your successors, and how do you respond to those who say that this has been a failure?

SECRETARY RICE: Well, we leave in place – first of all, we are going to continue to work on it until the very last day. But we leave in place a Six-Party framework in which at least five parties are completely agreed as to what the verification mechanism has to look like. I might just note that we have an agreement with the North Koreans about a verification protocol, but there were a number of issues that had to be clarified in order to make sure that that verification protocol was going to be workable. And those assurances were given to us by the North Koreans. We, in fact, reported those assurances to the Chinese chair before this Six-Party round took place. And what happened in Beijing was that the North Koreans at the – at this last session wouldn't write them down. And at some point, those assurances are going to have to be written down. But there is, in fact, a verification protocol and a set of assurances that the five are agreed to and that the North Koreans, at least privately, before we lifted the terrorist designation, had also agreed to. And so we'll just have to work through this.

I might note, too, that the disabling – first, the shutdown of the reactor and then the disabling of the reactor has been an important step forward in dealing with the plutonium program. But we have a lot of questions about the highly enriched uranium route for North Korea. We have a lot of questions about proliferation. And we believe that the mechanism of the Six Parties and an associated verification protocol will be the best way to resolve those questions and to get to the bottom of the entire nature of the North Korean program.

And I just might note, too, that the September 19th agreement of a couple of years ago lays out a path for the completely denuclearization of North Korea and of the Korean Peninsula, and that agreement is an agreement among the Six Parties. So I think we leave a pretty good framework, but we'll continue to see if we can get the North Koreans to write down the assurances that they gave us.

## Israel bites back at UN watchdog over alleged strike on Syria reactor

By Yossi Melman

Thu., December 18, 2008 Kislev 21, 5769

Israel is assisting the International Atomic Energy Agency in its efforts to determine what Syria planned to manufacture in the nuclear reactor it was building that was destroyed in an Israeli Air Force strike in September 2007.

An Israeli source said that although the state neither confirmed nor denied that it carried out the attack on the reactor, "We are finding our own ways to relay the information that needs to be relayed."

Israel apparently "laundered" the intelligence at its disposal about the Syrian reactor via the United States. In April the Central Intelligence Agency released a multimedia presentation featuring satellite images as well as photographs taken inside the reactor. The agency declared that the bombed site was a nuclear reactor in the final stages of construction.

This is the background to the serious accusations traded between the Israel Atomic Energy Commission and the International Atomic Energy Agency. Recently Israel's representative to the IAEA, Israel Michaeli, sent a sharply worded letter of protest to Director General Mohammed ElBaradei.

The crisis began in May, when the IAEA began claiming that Israel was not providing satellite images of the reactor that was hit, hurting the investigation. The agency's spokeswoman, Melissa Fleming, later sent a letter to The Wall Street Journal reiterating claims made by ElBaradei.

On a number of occasions the agency head argued that by bombing the reactor instead of first reporting its suspicions to the IAEA Israel harmed the organization's ability to thoroughly investigate what was in the reactor.

The letter to the Wall Street Journal stated that "information was withheld from the IAEA for more than six months" - the satellite images and perhaps also important intelligence information - "by which time Syria had cleaned away the rubble and built a new facility." On the same occasion Fleming strayed from the ostensible topic, the Syrian reactor, to charge that Israel, together with Iraq, Iran and North Korea, was "in violation of [IAEA] rules and [to have] restricted [its] IAEA technical cooperation projects." This was a reference to Israel's refusal to permit the agency's inspectors to visit the Dimona nuclear reactor.

Israel's Atomic Energy Commission, which is one of the most secretive and silent organizations in the country, generally prefers to stay out of the headlines. But this time it decided not to hold back. It is still unclear whether this was a one-time response to a specific situation or a change in approach related to the change in leadership. A year ago Dr. Shaul Horev replaced Gideon Frank as the commission's director general after 12 years.

In any event, a decision was made early this month, with the approval of Prime Minister Ehud Olmert, to launch a frontal assault against the IAEA. In addition to the letter of protest to the agency, commission spokeswoman Nili Lifshitz sent her own letter to the Wall Street Journal.

"The claim that Israel is withholding critical information on the site is nothing but a smoke screen," Lifshitz wrote, adding, "Nothing should stand in the way of the agency's search for evidence" regarding

the purpose of the destroyed Syrian installation. Lifshitz argued that the IAEA should obtain commercial satellite images to back up its findings if it needs them. She noted a recent IAEA report on Syria that stated that the agency is examining uranium particles found at the Syrian site where some features are similar to what may be found in connection with a reactor site, and has asked Syria to allow visits to locations containing the debris and any equipment removed from the site for the purpose of taking samples.

"Each time the agency comes under political criticism for handling of a Middle Eastern country's flagrant breaches of its obligations under the Nuclear Non-Proliferation Treaty or its safeguards agreement, the agency immediately resorts to publicly invoking Israel's name," Lifshitz wrote. According to the Israeli source: "We are fed up with the IAEA's attacks on us. This time they went too far."

## UN atomic chief calls for Syria to cooperate

By ZEINA KARAM

19 hours ago [Accessed 2008-12-22T15:05Z]

BEIRUT, Lebanon (AP) — The head of the U.N. nuclear monitoring agency warned Syria to cooperate with the investigation of its nuclear activities or face deeper confrontation with the international community.

In an interview with the London-based Al Hayat newspaper published Sunday [2008-12-21], International Atomic Energy Agency chief Mohamed ElBaradei said his agency expects clarifications from Syria and Israel on issues related to a Syrian site bombed by Israel last year.

In a visit this year, IAEA inspectors found traces of processed uranium at the Al-Kibar site, which U.S. officials say was a nearly completed reactor of North Korean design that could have produced plutonium, a pathway to nuclear arms.

Syria denies having nuclear ambitions and says the site was an unused military installation.

Syria's foreign minister has suggested that the traces may have been from Israeli bombs dropped in the Sept. 6, 2007, airstrike.

ElBaradei said the agency has requested clarifications from Israel on the Syrian claim. "We are also looking into technical aspects to see whether it really was from the Israeli attack," he told the pan-Arab newspaper.

"We have not received a reply from the Israeli or Syrian side," he added.

Syria has signaled it will not permit IAEA inspectors to return after their initial visit to the bombed site in June. Syria is also refusing to allow visits to three other locations the IAEA regards as suspicious.

"I hope Syria will cooperate with us because that will be in its best interest. Lack of cooperation will ... lead to more confrontations and a negative reaction from the international community," the IAEA chief was quoted as saying.

"If it (Syria) has nothing to hide, I don't see any reason for not being 100 percent transparent with the agency," ElBaradei added.

ElBaradei also said the August killing of the Syrian government's representative participating in the agency's investigation has complicated the agency's work.

Arab media have said Brig. Gen. Mohammed Suleiman was killed by a sniper on a yacht at a beach resort in the northern port city of Tartous. Syrian officials have confirmed his death but gave no other details.

ElBaradei said Suleiman was the IAEA's contact on the Syrian side.

"Yes, he was our contact, and he was killed. ... His death of course has further complicated matters," he said.

## **Text of a Letter from the President**

To the Chairmen and Ranking Members of the House and Senate Committees on Armed Services, House Committee on Foreign Affairs, and Senate Committee of Foreign Relations

**December 30, 2008**

Dear Mr. Chairman: (Dear Representative:) (Dear Senator:)

I have considered the Protocol Additional to the Agreement between the United States of America and the International Atomic Energy Agency for the Application of Safeguards in the United States of America, with Annexes, signed at Vienna on June 12, 1998 (the "U.S.-IAEA Additional Protocol") (T. Doc. 107-7), along with the views, recommendations, and statements of all interested executive branch agencies. In accordance with the first condition of the March 31, 2004, Senate resolution of advice and consent to ratification of the U.S.- IAEA Additional Protocol, I hereby certify that not later than 180 days after the deposit of the United States instrument of ratification:

1. all necessary regulations will be promulgated and will be in force regarding the use of the National Security Exclusion under Article 1.b of the U.S.-IAEA Additional Protocol, and such regulations shall be made in accordance with the principles developed for the application of the National Security Exclusion;
2. the managed access provisions of Articles 7 and 1.c of the U.S.-IAEA Additional Protocol shall be implemented in accordance with the appropriate and necessary interagency guidance and regulation regarding such access; and
3. the necessary security and counterintelligence training and preparation will have been completed for any declared locations of direct national security significance.

In accordance with the second condition of the March 31, 2004, Senate resolution of advice and consent to ratification of the U.S.-IAEA Additional Protocol, I hereby certify that the necessary site vulnerability assessments regarding activities, locations, and information of direct national security significance to the United States will be completed not later than 180 days after the deposit of the United States instrument of ratification for the initial United States declaration to the International Atomic Energy Agency under the U.S.-IAEA Additional Protocol.

Sincerely,

GEORGE W. BUSH

## **Bush signs nuclear inspection pact with U.N. Watchdog**

Wed Dec 31, 2008 2:47am IST

CRAWFORD, Texas (Reuters) - President George W. Bush signed a nuclear safeguard agreement on Tuesday with the International Atomic Energy Agency that the United States hopes will prompt other countries to follow suit.

Mohamed ElBaradei, director of the IAEA, said earlier this year that the U.N. nuclear watchdog was hampered in its duties by the failure of countries like Syria to ratify the "Additional Protocol" that would allow short-notice visits to ensure no bomb-related work was taking place at secret sites.

The pact was signed in Vienna on June 12, 1998, and the U.S. Senate approved it on March 31, 2004. To date, 118 countries have signed the protocol with the IAEA and 89 countries have ratified, the White House said.

The pact improves the IAEA's ability to detect clandestine nuclear weapons programs in non-nuclear weapons states, the White House said.

The United States as a nuclear weapons country and party to the Nonproliferation Treaty was not obligated to accept IAEA safeguards on its nuclear activities, the White House said.

But wide acceptance of the protocol would contribute significantly to U.S. nonproliferation objectives, it added.

Media Note  
Office of the Spokesman  
Washington, DC  
December 31, 2008

## **The President Approves Ratification of the U.S. - IAEA Additional Protocol**

On December 30, 2008, the President signed the instrument of ratification for the Protocol Additional to the Agreement between the United States of America and the International Atomic Energy Agency for the Application of Safeguards in the United States of America ("The Additional Protocol"). Ratification will be completed with deposit of the instrument with the IAEA in Vienna next week.

Additional Protocols with non-nuclear weapon states improve the IAEA's capability to detect clandestine nuclear weapons programs by providing it with increased information about and access to nuclear fuel cycle activities. By adopting an Additional Protocol for the United States, the President has underscored the U.S. commitment to combating nuclear proliferation.

The President's action gives us a stronger foundation from which to encourage other states to adopt the Protocol. The President has spearheaded international efforts to bring about universal adoption of the Additional Protocol. To date, 118 countries have signed an Additional Protocol and 89, including the United States, have ratified it.

## CQ Transcript: Vice President Cheney Interviewed by the Associated Press

SPEAKERS: VICE PRESIDENT DICK CHENEY  
DEB RIECHMANN, ASSOCIATED PRESS

[EXCERPT]

REICHMANN: Okay, let's go back to this question about what would the axis of evil be today. Obviously Iraq is not in there anymore.

CHENEY: I'm going to pass on that, partly because I don't want the headline, Cheney announces new axis of evil. (Laughter.) I can talk about problem areas that need to be watched and addressed, and I'll try to be brief. But North Korea continues to be a problem partly because they haven't kept their commitment to give us a full and complete declaration, partly because it looks like they have a continuing, ongoing program to produce highly enriched uranium, in addition to what they were doing in Yongbyon at their plutonium reactor. They helped the Syrians build a nuclear reactor, which is a major problem.

REICHMANN: For sure?

CHENEY: I'm going to leave North Korea at that point. Move on to --

REICHMANN: You said they helped them build one?

CHENEY: They did, yes.

REICHMANN: For sure?

CHENEY: Yes.

REICHMANN: Okay. Okay.

CHENEY: Yes, I'm confident of that statement.

REICHMANN: Okay, can we move -- go ahead.

[Sourcebook note: The above interview took place on Thursday, 2009-01-08:

Cheney: NK helped Syria build reactor

By DEB RIECHMANN, 01.08.09, 06:18 PM EST

[EXCERPT]

In an interview with The Associated Press on Thursday, Cheney outlined reasons North Korea remains a trouble spot...]

## Hillary Clinton Nomination Hearings To Be Secretary of State

Testimony  
Secretary of State-Designate Hillary Rodham Clinton  
Senate Foreign Relations Committee  
Washington, DC

[2009-01-13]

[EXCERPT]

**SENATOR MURKOWSKI:** Well, I'm very pleased, very encouraged to hear that, and truly look forward to the opportunity to be working with you to advance these very important issues. And as we look to some of the basics that we're lacking up in the Arctic, whether it's the capacity for search and rescue, you know, what we need to be prepared for in this ever-evolving world without borders is quite a concept to think.

One more question, another that Alaskans look to with great interest because of our proximity to North Korea. As we look to the hot spots in the world, we certainly appreciate all of the other threats that you will be dealing with as Secretary of State. But you kind of get most nervous about those that are more proximate to you, and North Korea is certainly to us. In that vein, what do you see the future of the Six-Party Talks under your tenure? How do you anticipate that you'll be able to, whether it's jumpstart the process or -- how do you see that moving forward?

**SECRETARY-DESIGNATE CLINTON:** Senator, I've had several lengthy conversations with Secretary Rice who has brought me up to date on the status of the Six-Party Talks. It is a framework that the President-elect and I believe has merit. But it also provides an opportunity, as Secretary Rice has testified before this Committee, for bilateral contact as well between North Korea and the United States. Again, this is under review. We're looking at all of the record of the negotiation up to this date.

Our goal is to end the North Korean nuclear programs, both the plutonium reprocessing program and the highly enriched uranium program, which there is reason to believe exist, although never quite verified. And it is our strong belief that the Six-Party Talks, particularly the role that China is currently playing, along with our close allies South Korea and Japan, is a vehicle for us to exert pressure on North Korea in a way that is more likely to alter their behavior. Again, I have no illusions about that. I think it takes tough reality-based diplomacy to determine what is doable. We have got to end North Korea as a proliferator. There is certainly reason to believe that North Korea has been involved with Syrian efforts. We know that it was involved with Libyan efforts.

So it's not only preventing the threat from North Korea, which is of particular interest to Hawaii, Alaska, and the West Coast of the United States, but it is their role as a proliferator. So we will embark upon a very aggressive effort to try to determine the best way forward to achieve our objectives with them.

## **Israel denies Syria claim it left traces of uranium at nuclear site bombed by IAF**

By Reuters

Last update - 23:58 13/01/2009

*[EXCERPT]*

An Israeli official, who could not be identified by name, said Israel had replied to the IAEA since Jan. 1.

"Our ambassador to the IAEA told them, in essence, that there was no possibility that the uranium found at the site could have originated with the Israel Air Force," the official said.

"The response, as I understand it, basically said, 'It wasn't us', full stop," a senior Western diplomat said. "It was not a detailed response ... The nature of the response is not hugely surprising."

An IAEA spokeswoman could not confirm the exchange with Israel but said IAEA Director General Mohammed ElBaradei would give an update on the Syria investigation in February.

SUBJECT: IAEA; WIDE-RANGING DISCUSSION WITH DIRECTOR GENERAL ELBARADEI  
UPON ENTRY-INTO-FORCE OF U.S. ADDITIONAL PROTOCOL

REF: A. A: SECSTATE 246 B. B: UNVIE 005 Classified By: Ambassador Gregory L. Schulte for reasons  
1.4b and d ----- Summary -----

[EXCERPTS]

4. (C) Turning to priorities at the IAEA, Ambassador began by noting that both Syria and Iran are blocking the safeguards investigations in their respective countries. While clearly the onus is on them to cooperate, the Secretariat and member states could not sit idly by and wait for that to happen, he said. Noting a recent conversation with Senator Specter shortly after his visit to Syria, ElBaradei said both Iran and Syria have decided to "play it by the book," but accepting only those safeguards activities for which they are explicitly obligated under their respective safeguards agreements. The DG said "of course we" in the Secretariat "will continue to do our jobs" and "go through the motions" to try to take forward the investigations. He said "our people are hard on them," but he doubted Tehran or Damascus would move without a political package deal that addresses broader issues of security and "face-saving" as well. On Syria, the DG said he believes such a package would have to address Syrian security concerns and offer "incentives," and at the same time assure Syria that coming clean on its nuclear activities would not be used by others as a premise for punitive sanctions. The Ambassador noted the imperative for the IAEA, regardless of any political package, to verify whether Syria has any continuing or reconstituted covert nuclear activities. The DG responded by saying he "didn't think they had the capability." (Comment: He did not offer any basis for this judgment.) When Ambassador Schulte noted that the EU has some leverage via the pending EU-Syria Association Agreement, the DG agreed, but noted it would only be effective as part of a broader package.

[deletia]

7. (C) ElBaradei's comments on Iran and Syria are familiar fare and reflect how important it will be to stay closely engaged with key safeguards staff to help encourage internal upwards pressure on the DG not to accept the status quo "stalemate." Our diplomacy should remain geared to ensuring others remain similarly engaged and that Board members make clear to the DG that he must do more than "go through the motions." On both files -- Syria in particular - we need to keep pounding the theme that the the IAEA's institutional credibility is at stake. ElBaradei's comments on the political environment in the Board, however, resonate with Mission's own analysis of the current Board dynamic. Unfortunately, ElBaradei is likely to remain part of the problem, rather than solution, if he becomes increasingly unwilling toward the end of his term to hold in check his proclivity to take a NAM-like view on key issues like the Middle East and fuel assurances. SCHULTE

SPIEGEL INTERVIEW WITH SYRIAN PRESIDENT BASHAR ASSAD

**'Peace without Syria Is Unthinkable'**

01/19/2009

[EXCERPTS]

Editor's note: The following interview was conducted on Thursday [2009-01-15] with Syrian President Assad prior to the announcement of unilateral cease-fires by Israel and Hamas.

**SPIEGEL:** Nevertheless, Washington counts Syria among the rogue states, partly because of your close relations with Tehran and Iran's nuclear bomb ambitions.

**Assad:** I don't believe that Iran is seeking to develop the bomb. Syria is fundamentally opposed to the proliferation of nuclear weapons. We want a nuclear-free Middle East, Israel included.

[deletia]

**SPIEGEL:** You yourself experienced what Israel is capable of in the summer of 2007, when the Israeli air force leveled a complex of buildings in northeastern Syria. You reacted to this attack with great restraint. Why?

**Assad:** We could have struck back. But should we really allow ourselves to be provoked into a war? Then we would have walked into an Israeli trap. The facility that was bombed was not a nuclear plant, but rather a conventional military installation.

**SPIEGEL:** But inspectors from the International Atomic Energy Agency found traces of uranium during their inspection. How do you explain this?

**Assad:** That uranium did not come from us. Perhaps, the Israelis dropped it from the air to make us the target of precisely these suspicions. If we had in fact had something to hide, we would not have allowed any inspectors into the country.

**SPIEGEL:** The inspectors would like to take additional samples and inspect other Syrian facilities. Why are you no longer allowing the experts into the country?

**Assad:** We gave them the opportunity to conduct their research. This is a political game. They are trying to pillory us. We will not let that happen.

**SPIEGEL:** So you have no ambitions to produce weapons of mass destruction, not even chemical weapons?

**Assad:** Chemical weapons, that's another thing. But you don't seriously expect me to present our weapons program to you here? We are in a state of war.

**SPIEGEL:** Do you work closely together with countries like North Korea and Iran as part of these weapons programs?

**Assad:** We work trustingly together with many countries on research programs.

[deletia]

Interview conducted by Dieter Bednarz, Erich Follath and Mathias Müller von Blumencron. Translated from the German by Christopher Sultan.

## **Israeli ammo in Gaza had depleted uranium**

Published Date: **January 20, 2009**

*[Excerpts]*

VIENNA: Arab nations accused Israel yesterday of blasting Gaza with ammunition containing depleted uranium and urged the International Atomic Energy Agency to investigate reports that traces of it had been found in victims of the shelling. In a letter on behalf of Arab ambassadors accredited in Austria, Prince Mansour Al-Saud, the Saudi Ambassador, expressed "our deep concern regarding the information ... that traces of depleted uranium have been found in Palestinian victims.

*[deletia]*

Syria, which is being investigated by the Vienna-based agency for alleged secret nuclear activities, says traces of uranium found by IAEA experts at a site bombed by Israel jets Sept 6, 2007 likely came from bombs or missiles used by the Israelis.

The Israelis have denied using such weaponry in that raid, and yesterday two diplomats accredited to the IAEA and familiar with its Syria investigations told the AP that the agency has virtually ruled out Israeli munitions as the source of the uranium. They asked for anonymity for discussing confidential information. The IAEA investigation is based in part on intelligence from the US, Israel and a third, unidentified country, alleging that the bombed site was a nearly completed nuclear reactor built with North Korean help and meant to produce plutonium - which can be used as the payload of nuclear weapons. The uranium traces were revealed by an analysis of environmental samples collected by IAEA experts during a visit to the site, in a remote part of the Syrian desert. Since that initial trip in June 2008, Syria has refused or deflected requests for follow up inspections both to the site and others allegedly linked to it.

<http://www.telegraph.co.uk/news/worldnews/northamerica/usa/barackobama/4331776/Syria-will-be-first-rogue-state-to-get-Barack-Obama-charm-offensive.html>

## Syria will be first rogue state to get Barack Obama charm offensive

Barack Obama will seek to befriend Syria and enlist the rogue state's help in fighting terrorism, in what US officials see as the first test of his plans to talk to America's enemies.

By Tim Shipman in Washington

Last Updated: 4:50PM GMT 24 Jan 2009

Diplomats and Democrats in Washington have confirmed that Mr Obama wants to persuade the Syrian leader, Bashar Assad, to cooperate with the West, in the hope that he will loosen his country's close ties to Iran, forcing Tehran to the negotiating table as well.

During his presidential campaign, Mr Obama pledged to speak to states like Iran and Cuba without imposing preconditions as the Bush administration did on any contacts.

But in conversations with allies since his election, Mr Obama has made clear that he believes the key to improving the political situation in the Middle East is to peel Syria away from its longstanding alliance with Iran, rather than to immediately start negotiations with Tehran over its nuclear weapons programme.

US officials believe it will be more palatable for American voters for Mr Obama to launch his rogue nation outreach effort with Damascus rather than Iran and that dealing with the mullahs in Tehran would be much easier if they could no longer rely on knee-jerk support from Syria.

Both countries are accused of arming and sponsoring the terrorists groups Hamas and Hezbollah, funneling extremists and weapons into Iraq and attempting to purchase and develop nuclear technology. A Syrian nuclear plant was destroyed in an Israeli air attack last year *[sic]*.

One source, who has discussed foreign policy directly with Mr Obama in the last two weeks, has revealed that the president "is spending a lot of time thinking about Syria and how to improve relations".

During the election campaign, Mr Obama expressed support for tentative peace talks between Israel and Syria, which are still technically at war. While better relations with Syria could be key to improving the prospect of an Israeli-Palestinian peace deal in years to come, Mr Obama's decision to sanction direct talks with Damascus has another short term goal.

A Western diplomat, who has discussed the Middle East with members of Mr Obama's team, told The Sunday Telegraph: "It's really about Iran. If you can isolate Iran, it makes it much more difficult for Tehran to continue with its hard line approach.

"Obama seems to have decided to go after Syria first before he tackles Iran or Cuba, which are much more emotive subjects in the US."

And Mr Obama does not seem to be alone in wanting to bring Syria back from the brink of the axis of evil to the diplomatic mainstream. President Assad sent him a message of congratulations after his election, a rare gesture.

A British official in Washington added: "Syria has shown the odd sign of wanting to build up a broader relationship with the West. The fact that Syria doesn't want to totally disengage and that it does not want to be seen as a bloc with Iran is an opening."

Other senior sources in Washington say that there will be a "Syrian track" to American diplomacy under Mr Obama.

British officials believe that Syria is prepared to cooperate because they don't want al Qaeda getting a foothold in their country and they are keen to wean themselves from their dependent relationship with Iran. Those who have studied Mr Assad say he is uncomfortable being so reliant on Iran and that encouraging him to go his own way will decisively change the balance of power in the entire Middle East.

British officials see an opportunity in Mr Obama's plans to cement close relations with the new US administration, since the UK has for several months been working to improve the dialogue with Damascus, an enterprise that culminated in a trip to Syria by Foreign Secretary David Miliband in November. Britain has resumed intelligence sharing with Syria and Mr Obama is likely to have been briefed on information MI6 has shared with the CIA.

The British ambassador in Washington, Sir Nigel Sheinwald, is also an old Syria hand, having made a trip as a secret envoy to Damascus when he was Tony Blair's chief foreign policy trouble shooter. He is well versed on negotiating tactics and potential pitfalls.

The hope is that if Syria is treated as a serious player in the region it is more likely to play a constructive role and be less reliant on the security blanket of its relationship with Tehran.

But dealing with Syria is a diplomatic minefield, as former prime minister Tony Blair discovered to his embarrassment during a previous thaw. On a visit to Damascus after the September 11 attacks, Mr Blair had to stand side by side with President Assad at a press conference while the Syrian dictator lectured the West about terrorism and praised Hamas, which has its political headquarters in Damascus, as freedom fighters.

## **ANALYSIS-Syria eyes strategic gains after Gaza war**

By Khaled Yacoub Oweis

Mon Jan 26, 2009 10:07am EST

*[EXCERPTS]*

DAMASCUS, Jan 26 (Reuters) - Syria is trying to capitalise on Israel's failure to crush its Islamist ally Hamas to enhance its regional clout in peace talks with the Jewish state and forge good ties with the new U.S. administration.

The Syrian government, which has recently emerged from years of isolation, is now advocating a role for the Islamist group in Middle East peacemaking, Syrian officials and diplomats say.

*[deletia]*

Damascus is also hoping for a thaw in relations with Washington, and sees President Barack Obama as more amenable to supporting Israeli-Syrian peacemaking than his predecessor George W. Bush, who imposed sanctions on Syria and expanded them during his last year in office.

Damascus suspended the indirect talks with Israel during the Gaza crisis. But neither side has ruled out a resumption of the talks which have focused on the occupied Golan Heights and Syria's ties with Hamas, Lebanon's Hezbollah and Iran.

"Syria has benefited from the renewed international awareness that the Arab-Israeli conflict is crucial to any broader Middle East settlement. Obama will have to engage Syria if he wants to attenuate regional divisions and radicalism," wrote Professor Joshua Landis on his Syria Comment Web site.

But Obama's Middle East envoy's first trip to the region will exclude Syria and recent statements by President Bashar al-Assad declaring a 2002 Arab peace initiative dead were unlikely to go down well with the new U.S. administration.

Continuing to be on the wrong side of Washington will not help Syria, with a tribunal to try suspects in the assassination of former Lebanese Prime Minister Rafik al-Hariri due to start work in March and the International Atomic Energy Agency probing an alleged nuclear site bombed by Israel, the diplomats said.

"The Gaza war lowered the standing of Syria's regional rivals a notch, but the Syrians cannot continue to get away with playing the rejectionist card while pursuing peace with Israel," one of the diplomats said in the Syrian capital.

Christopher DeMuth, AEI

*[EXCERPTS]*

Eliot Cohen: The second thing is I think we have to be very careful about turning the State Department into a monolith. It's not. There are different people. I knew people in the State Department who were, from my point of view, way too soft on Iran, and there were some who were just as hard as I was, which is pretty doggone hard. On particular set of issues, and I'll just name three that I was involved in: the North Korean nuclear reactor in Syria, the Russian invasion of Georgia, and then the brand [sounds like] of the administration dealing with piracy in Somalia. The Senior State people, and I mean, the Career people, were a lot tougher, a lot more hardheaded, a lot less accommodationist than their counterparts in the Defense Department, for a variety of reasons.

*[deletia]*

Eliot Cohen: With regard to secrecy, this, in a way, speaks to my first comment about the league of the likeminded. I participated in one episode where I was astounded that everything was kept entirely secret, and this was the North Korean nuclear reactor in Syria. No matter what you think about the policy outcome, and there was a lot of very severe disagreement about whether we should take that thing out ourselves, we should try some sort of diplomatic overture, and in the end of the course, we decided simply, or the President decided simply to be quiet and let the Israelis do it. There was real debate. There was real disagreement. There was a small deputies' committee. There were no leaks, which astounded all of us. This was argued out among the principals and with the president, and the president made the decision.

Again, whether it was the right policy outcome, I think reasonable people can disagree. In terms of process, it was just fine and it was confidential. And I suspect that the largest part of the reason for that was that the team at the very top, at the principal's level, but also the team at my level or the undersecretary level trusted one another and there was room to have a spirited disagreement on both personal and institutional grounds without anybody wanting to blow this publicly.

## **The Middle Powers Initiative's Berlin Article VI-Forum „New Imperatives and Openings for a Nuclear Weapons-Free World“ - Opening address by Minister of State Gernot Erler**

29.01.2009

Check against delivery

[EXCERPT]

Mr Chairman,  
Excellencies,  
Ladies and Gentlemen,

Let me cordially welcome you in the name of the German government. I am very pleased that with the support of the German Foreign Office this year's Article VI forum on nuclear disarmament takes place in Berlin, at the Rathaus Schöneberg. When US President Kennedy held his famous speech here in 1963, underlining the determination of the free world to stand up for Berlin, the existential threat of nuclear weapons was present in everybody's mind. Today, almost twenty years after the end of the Cold War, the acute feeling of insecurity of those times has faded. The menace of nuclear weapons being used has receded. But we must not be deluded: it has not gone away. In fact, stemming the proliferation of nuclear weapons continues to be one of the most pressing questions in international security policy. In today's world with complex and new evolving security threats, the need for action has actually increased:

\* In spite of important reductions since the end of the Cold War, the estimated number of nuclear warheads is still at an incredible 25.000, more than 90 per cent of which are held by the USA and Russia. Several of the nuclear armed states continue to expand or modernize their nuclear arsenal and delivery systems.

\* The world stockpile of weapons-usable fissile material is roughly 2.500 tons. This material could be used to produce an incredible further 200.000 nuclear bombs. Obviously it must be kept safely under lock and key. The risk of terrorists trying to get hold of fissile material has emerged as a new, unprecedented threat.

\* Thanks to the Nuclear Non-Proliferation Treaty, the international community has managed to limit the number of possessor states of nuclear weapons. Let me mention again President Kennedy who in the early 1960's pointed at the possibility that the number of nuclear-weapon states might rise to 15 or 20 within a decade. While this prediction thankfully proved incorrect the danger is far from banned. We have witnessed the development of clandestine nuclear programmes. We are confronted with the risk of countries breaking out of the NPT and striving for nuclear weapons. In spite of the endeavours made by the international community, the proliferation threats of the Iranian nuclear programme as well as the North Korean case remain unsolved. Both are major challenges to the international non-proliferation regime. We expect North Korea to follow through with the dismantling of its nuclear installations and the verification of its nuclear activities.

\* Iran must, in order to restore confidence, suspend critical activities, as requested by the UN Security Council, and fully cooperate with the IAEA.

\* If the international community does not succeed here, there is a real risk of new arms races that threaten regional and world security. The questions concerning Syria and the nature of the facility bombed by the Israeli air force illustrate the seriousness of this threat.
