Taxation of Unemployment Benefits

Julie M. Whittaker

February 7, 2013
Summary

Unemployment compensation (UC) benefits have been fully subject to the federal income tax since the passage of the Tax Reform Act of 1986 (P.L. 99-514). Under tax law, unemployment compensation is a broad category that includes regular state UC benefits, extended benefits (EB), trade adjustment assistance benefits, disaster unemployment assistance, and railroad unemployment benefits. The temporary Emergency Unemployment Compensation (EUC08) benefit is also included within this category.

Individuals who receive UC benefits during a year may elect to have the federal (and in some cases state) income tax withheld from their benefits. The American Recovery and Reinvestment Act of 2009 (P.L. 111-5 §1007) included a temporary exclusion on the first $2,400 of UC benefits for the purposes of the federal income tax. This exclusion existed only in 2009. The Joint Committee on Taxation estimated this would reduce federal receipts by approximately $4.7 billion.

There is no current exclusion on UC benefits for the purposes of federal income tax.

This report provides an overview of the taxation of UC benefits and legislation related to taxing UC benefits. This report will be updated as legislative activity warrants.

Overview

Unemployment benefits are subject to the federal income tax. This tax treatment, which has been in place since 1987, puts all Unemployment Compensation (UC, as defined by tax law) on an equal basis with wages and other ordinary income with regard to income taxation. Unemployment benefits are not subject to employment taxes, including Social Security and Medicare taxes, because the benefits are not considered to be wages. For tax year 2009 only, the first $2,400 of unemployment benefits was excluded from the federal income tax. In all subsequent tax years no UC benefits were excluded.

In addition to being subject to federal income taxes, in most states that have an income tax, unemployment benefits are taxed. Most other industrial nations also tax unemployment benefits.

State UC agencies must give UC beneficiaries the opportunity to elect federal income tax withholding at the time the claimant first files for UC benefits. Benefits claimants wishing to have federal income tax withheld from their UC benefits must file form W-4V, Voluntary Withholding Request. The current withholding rate for federal income tax is 10% of the gross UC benefits payment. Federal law does not require that states offer state income tax withholding to UC beneficiaries, although many do offer such services. Beneficiaries may opt to pay quarterly estimated taxes if a state does not offer state income tax withholding.

Impact of Taxing Unemployment Benefits

Table 1 shows the number of federal income tax returns that reported unemployment benefits and the amount of unemployment benefits for tax years 1998 through 2010. The increases in the number of tax returns claiming unemployment benefits as income filed in 2001 through 2003 are attributable to the 2001 economic recession and the policy responses, including the temporary extension of unemployment benefits (the Temporary Emergency Unemployment Compensation program) and providing additional benefits for individuals affected by the 2001 terrorist attack.

The most recent recession that began in December 2007 is reflected in the sharp increases in 2008 and 2009 tax returns with an estimated additional 3.7 million tax returns claiming unemployment benefits as income in 2009 as compared with tax filings for 2007. For tax year 2009, the American Recovery and Reinvestment Act of 2009 (P.L. 111-5 §1007) excluded the first $2,400 from income taxes. Thus, number of persons who had reportable unemployment insurance income was less than it would have otherwise been. Likewise, the amount reported in 2009 was less than it would have otherwise been absent the temporary measure in P.L. 111-5. The difference in the number of taxpayers reporting UC income in tax year 2010 as compared with 2009 was large, with an additional 3.6 million returns in 2010. The difference in returns is

---

1 Under tax law, unemployment compensation is a broad category that includes regular state UC benefits, extended benefits (EB), trade adjustment assistance benefits, disaster unemployment assistance, and railroad unemployment benefits. The temporary Emergency Unemployment Compensation (EUC08) benefit is also included within this category.

2 The federal and state unemployment taxes (FUTA and SUTA) on employers also do not apply to these benefits.

3 Although most states tax UC benefits, some states exempt the benefits from state income taxes. A few states impose a lowered tax rate on unemployment benefits. Information on a particular state tax treatment of unemployment benefits should be available at the appropriate state tax authority.
Taxation of Unemployment Benefits

Attributable to both the increase of potential weeks of unemployment insurance available in 2010 (P.L. 111-92, enacted in November 2009) and the termination of exclusion of the first $2,400 of UC income from income tax calculations.

Source: Table prepared by the Congressional Research Service (CRS) from data contained in the Internal Revenue Service, Statistics of Income Bulletins, various years.

Note: Tax year 2009 does not include the first $2,400 of unemployment benefit income and thus both the number of tax filers and the amount of benefits are understated as compared with years when all unemployment benefits were taxable.

Under tax law, “Unemployment Compensation” is broad category that includes regular state UC benefits, extended benefits (EB), trade adjustment assistance benefits, disaster unemployment assistance, and railroad unemployment benefits.

Typically, the loss of a job, even with unemployment benefits, results in a decline in earned income and often in total income. Unemployment benefits are not considered earned income for purposes of computing the earned income tax credit, and the earned income tax credit is not available if adjusted gross income\(^4\) (AGI) exceeds a certain level or if investment income (interest, dividends, and capital gains distributions) exceeds a certain level.\(^5\)

---

\(^4\) The IRS defines AGI as taxable income from all sources including wages, salaries, tips, taxable interest, ordinary dividends, taxable refunds, credits, or offsets of state and local income taxes, alimony received, business income or loss, capital gains or losses, other gains or losses, taxable IRA distributions, taxable pensions and annuities, rental real estate, royalties, farm income or losses, unemployment compensation, taxable social security benefits, and other income minus specific deductions including educator expenses, the IRA deduction, student loan interest deduction, tuition and fees deduction, Archer MSA deduction, moving expenses, one-half of self-employment tax, self-employed health insurance deduction, self-employed SEP, SIMPLE, and qualified plans, penalty on early withdrawal of savings, (continued...)

Congressional Research Service 2
Table 2 shows Congressional Budget Office (CBO) estimates of the effect of taxing unemployment compensation at various income levels. Families that reported an income of less than $10,000 in 2005 received an estimated $1.8 billion in UC benefits but only paid $6 million in taxes on those benefits. In comparison, families reporting an income between $50,000 and $100,000 received an estimated $7.3 billion in unemployment benefits and paid $1.2 billion in taxes on those benefits.

<sup>a</sup> Income is defined as AGI plus statutory adjustments, tax-exempt interest, and nontaxable social security benefits.

Legislative History

Before 1979, UC benefits were not subject to the federal income tax. In the Revenue Act of 1978 (P.L. 95-600), UC benefits were made partially taxable for benefits received after December 31, 1978. Benefits were taxable only for tax filers whose AGI exceeded $20,000 (single filers) or $25,000 (joint filers).<sup>6</sup> Taxation was applied to the lesser of (1) UC benefits or (2) one-half of AGI (with UC benefits included) in excess of the above-mentioned AGI thresholds.<sup>7</sup>

(...continued)

and alimony paid by the tax payer.

<sup>5</sup> For example, for tax year 2005, an adjusted gross income of more than $11,750 would disqualify a single taxpayer with no children, an adjusted gross income of more than $37,263 would disqualify a married couple with two children. Investment income of more than $2,700 would disqualify any taxpayer.

<sup>6</sup> If the thresholds were adjusted for inflation, the comparable 2007 values would be $57,120 and $71,400.

<sup>7</sup> Joint Committee on Taxation, General Explanation of the Revenue Act of 1978 (H.R. 13511. 95th Congress, P.L. 95-600), March 12, 1979, p. 23.
During the 1970s, some policy studies had shown that the proportion of wages replaced by UC benefits on an after-tax basis was large enough to erode a claimant’s work incentive. Taxation of UC benefits served to reduce the degree of after-tax wage replacement and reduce the work disincentive effect. However, UC benefits of lower-income claimants remained untaxed because their total income was under the tax threshold (i.e., their standard deduction and personal exemptions offset their income).

In 1982, Congress lowered the AGI thresholds for taxation of UC benefits. The Tax Equity and Fiscal Responsibility Act of 1982 (P.L. 97-248) reduced those thresholds to $12,000 for single filers and $18,000 for joint filers. A primary motivation of this legislation was to raise revenue, but it left in place a policy of protecting lower-income claimants from taxation of UC benefits.

Congress made UC benefits fully taxable in the Tax Reform Act of 1986 (P.L. 99-514), effective for benefits received after December 31, 1986. Although this action reversed the original policy of taxing UC benefits only above an AGI threshold, it occurred in the context of a law that removed many low-income filers from the tax rolls, lowered the marginal tax rates for the majority of taxpayers, and expanded eligibility for the earned income credit. The rationale for full taxation of UC benefits was to treat UC benefits the same as wages and to eliminate the work disincentive caused by favorable tax treatment for UC benefits relative to wages.

Concern about claimants’ cash flow problems caused by the lack of tax withholding from UC benefits arose during the 1990-1991 recession. P.L. 102-318 required states to inform all new claimants of their responsibility to pay income tax on UC benefits and to provide them with information on how to file estimated quarterly tax payments. In 1994, P.L. 103-465 required states to withhold federal income tax from UC benefits if a claimant requested withholding, and permitted states to withhold state and local income taxes. P.L. 103-465 set the federal withholding rate at 15% of the gross benefit payment amount. The federal withholding rate was changed to 10% by the Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA; P.L. 107-16) effective August 7, 2001.

Recent Legislation

The American Recovery and Reinvestment Act of 2009 (P.L. 111-5 §1007) included a temporary exclusion on the first $2,400 of UC benefits for the purposes of the federal income tax. This exclusion applied only for the 2009 tax year. The Joint Committee on Taxation estimated that this exclusion would reduce federal receipts by approximately $4.7 billion.

At this time, no relevant legislation in the 113th Congress has been introduced.

---

8 For example, see Martin Feldstein, “Unemployment Compensation: Adverse Incentives and Distributional Anomalies,” National Tax Journal, June 1974.

9 If the thresholds were adjusted for inflation using the All Items Consumer Price Index for All Urban Consumers (CPI-U), the comparable 2011 values would be $28,132 and $42,198.
