U.S.-Vietnam Economic and Trade Relations: Issues for the 113th Congress

Michael F. Martin
Specialist in Asian Affairs

August 13, 2014
Summary

Since the resumption of trade relations in the 1990s, Vietnam rapidly has risen to become a significant trading partner for the United States. Along with the growth of bilateral trade, a number of issues of common concern, and sometimes disagreement, have emerged between the two nations. Congress may play a direct role in developing U.S. policy on some of these issues.

Bilateral trade has grown from about $220 million in 1994 to $29.6 billion in 2013, transforming Vietnam into the 27th-largest trading partner for the United States. Vietnam is the second-largest source of U.S. clothing imports (after China), and a major source for footwear, furniture, and electrical machinery. Much of this rapid growth in bilateral trade can be attributed to U.S. extension of normal trade relations (NTR) status to Vietnam in 2001. Another major contributing factor is over 20 years of rapid economic growth in Vietnam, ushered in by a 1986 shift to a more market-oriented economic system.

Bilateral trade may increase if both nations become members of the Trans-Pacific Partnership (TPP), a trade agreement currently being negotiated by 12 countries, including the United States and Vietnam. Vietnam’s incentive to join the TPP largely is contingent on greater market access in the United States, particularly for agricultural goods, aquacultural goods, clothing, and footwear. Vietnam is also a party to negotiations to the Regional Comprehensive Economic Partnership (RCEP), a pan-Asian regional trade association based on the Association of Southeast Asian Nations (ASEAN) that could exclude the United States and prove to be an alternative to the TPP.

The growth in bilateral trade has not been without accompanying issues and problems. Vietnam has applied for acceptance into the U.S. Generalized System of Preferences (GSP) program and is negotiating a Bilateral Investment Treaty (BIT) with the United States. Vietnam also would like the United States officially to recognize it as a market economy.

There also have been problems with U.S. imports of specific products from Vietnam, particularly catfish-like fish known as basa or tra. In 2008, the 110th Congress passed legislation that transferred the regulation of catfish from the Food and Drug Administration to the U.S. Department of Agriculture (USDA) and authorized the Secretary of Agriculture to determine if basa and tra are to be considered catfish. The Vietnamese government strongly protested the law as a protectionist measure. On June 2, 2014, the USDA submitted to the Office of Management and Budget (OMB) proposed new catfish regulations; the proposed regulations are still pending OMB’s decision. The Agricultural Act of 2014 (P.L. 113-79) confirmed the transfer of inspection to the USDA, and explicitly included basa and tra as catfish.

An examination of recent trends in bilateral trade reveals that other product categories—such as footwear, furniture, and electrical machinery—could generate future tension between the United States and Vietnam. Other economic issues have had an indirect effect on bilateral relations, such as claims of poor working conditions in factories in Vietnam, Vietnam’s designation as a “non-market economy,” allegations of inadequate intellectual property rights (IPR) protection in Vietnam, and Vietnam’s exchange rate policy.

The 113th Congress may play an important role in one or more of these issues, as have past Congresses. H.R. 1682 would prohibit Vietnam’s inclusion in the GSP program unless certain human rights conditions are met. Also, Congress would have to consider implementing legislation if a TPP agreement is concluded. This report will be updated as circumstances require.

Introduction

For over 20 years, economic and trade relations between the United States and the Socialist Republic of Vietnam (Vietnam) remained virtually frozen, in part a legacy of the extended military conflict of the 1960s and 1970s. On May 2, 1975, after North Vietnam defeated U.S. ally South Vietnam, President Gerald R. Ford extended President Richard M. Nixon’s 1964 trade embargo on North Vietnam to cover the reunified nation. Under the Ford embargo, bilateral trade and financial transactions were prohibited.

Economic and trade relations between the two nations began to thaw during the Clinton Administration, building on joint efforts during the Reagan and George H. W. Bush Administrations to resolve a sensitive issue in the United States—recovering the remains of U.S. military personnel declared “missing in action” (MIA) during the Vietnam War. The shift in U.S. policy also was spurred by Vietnam’s withdrawal from Cambodia. President Bill Clinton ordered an end to the U.S. trade embargo on Vietnam on February 3, 1994. In 1997, President Clinton appointed the first U.S. ambassador to Vietnam since the end of the Vietnam War.

Bilateral relations also improved in part due to Vietnam’s 1986 decision to shift from a Soviet-style central planned economy to a form of market socialism. The new economic policy, known as Doi Moi (“change and newness”), ushered in a period of over 20 years of rapid growth in Vietnam. Since 1995, Vietnam’s real GDP growth has averaged over 7% per year, second only to China. Much of that growth has been generated by foreign investment in Vietnam’s manufacturing sector, particularly its clothing industry.

The United States and Vietnam signed a bilateral trade agreement (BTA) on July 13, 2000, which went into force on December 10, 2001. As part of the BTA, the United States extended to Vietnam conditional most favored nation (MFN) trade status, now known as normal trade relations (NTR). Economic and trade relations further improved when the United States granted Vietnam permanent normal trade relations (PNTR) status on December 29, 2006, as part of Vietnam’s accession to the World Trade Organization (WTO). Over the last three years, Congress has appropriated approximately $10 million each year to support Vietnam’s economic reforms. In addition, the two nations have set up a ministerial-level Trade and Investment Agreement (TIFA) Council to discuss issues related to the implementation of the Bilateral Investment Treaty (BIT) and WTO agreements, as well as trade and investment policies in general.

---

2 For more information about the thaw in U.S.-Vietnam relations, see CRS Report R40208, U.S.-Vietnam Relations in 2014: Current Issues and Implications for U.S. Policy, by Mark E. Manyin.

3 The action came after many months of high-level U.S. interaction with Vietnam in resolving MIA cases and a January 27, 1994 vote in the Senate urging that the embargo be lifted, language that was attached to broad authorizing legislation (H.R. 2333). The language was controversial in the House, but H.R. 2333 passed Congress; it was signed into law (P.L. 103-236) on April 30, 1994.

4 For more information about the BTA, see CRS Report RL30416, The Vietnam-U.S. Bilateral Trade Agreement, by Mark E. Manyin.

In contrast to some other nations (for example, China), official U.S. and Vietnamese trade data are comparatively close and reflect a similar pattern in the growth of bilateral trade (see Table 1). For the first few years following the end of the U.S. embargo, trade between the two nations grew slowly, principally because of Vietnam’s lack of NTR. However, following the granting of conditional NTR in December 2001, trade flows between the United States and Vietnam grew quickly. Merchandise trade nearly doubled between 2001 and 2002, regardless of which nation’s figures one uses. Bilateral trade jumped again in 2007, following the United States granting PNTR status to Vietnam. Total trade declined slightly in 2009 as U.S. imports from Vietnam slid 4.7% because of the economic recession, but has rebounded since 2010.

Notes: U.S. data valued at F.A.S. and customs value; Vietnam data valued at F.O.B. and C.I.F.

Both nations are negotiating membership in the Trans-Pacific Partnership (TPP), a proposed multilateral trade group. For its part, Vietnam has indicated a desire to foster closer trade relations by applying for acceptance into the U.S. Generalized System of Preferences (GSP) program and
negotiating a bilateral investment treaty (BIT). The United States also has expressed an interest in closer economic relations, but has told Vietnam that it needs to make certain changes in the legal, regulatory, and operating environment of its economy to conclude either the TPP or the BIT agreement, as well as to qualify for the GSP program.

The growth in bilateral trade also has created sources of trade friction. A rapid increase in Vietnam’s clothing exports to the United States led to the implementation of a controversial monitoring program from 2007 to 2009. The growth in Vietnam’s export of basa and tra also has generated tensions between the two nations. Other economic issues have had an indirect effect on bilateral relations, such as claims of poor working conditions in factories in Vietnam, Vietnam’s designation as a “non-market economy,” allegations of inadequate intellectual property rights (IPR) protection in Vietnam, and Vietnam’s exchange rate policy.

This report will examine each of these trade issues, discussing their main elements and exploring their potential implications for the 113th Congress. Following this will be an analysis of key trends in bilateral trade to discern any potential sources of future trade friction.

Trans-Pacific Partnership (TPP)

In 2008, the Bush Administration notified Congress of its intention to enter into negotiations with the four members of the Trans-Pacific Strategic Economic Partnership Agreement—Brunei, Chile, New Zealand, and Singapore—to form a larger and more ambitious trade agreement. The U.S. announcement of interest in joining the renamed Trans-Pacific Partnership was quickly followed by similar expressions of interest by Australia, Malaysia, Peru, and Vietnam.6 The nine countries formally agreed to accept Mexico and Canada into the ongoing negotiations on June 18 and 19, 2012, respectively. Japan was accepted into the negotiations on April 21, 2013.

Vietnam’s participation in the TPP negotiations could complicate the U.S. negotiation position. Whereas the other parties involved in the negotiations are generally viewed as having comparatively open trade policies, Vietnam remains a mixed economy with considerable government intervention. Given that the apparent U.S. goal is to create a more open and comprehensive free trade area in the Asia-Pacific, Vietnam’s participation in the talks could constrain U.S. efforts to expand the scope and depth of the TPP. Backers of Vietnam’s participation in the negotiations maintain that it further opens a sizeable market to U.S. exports and investments, and could accelerate economic reforms in Vietnam. According to U.S. trade statistics, Vietnam is the fifth-largest U.S. trading partner (after Canada, Mexico, Japan, and Singapore) among the nations currently involved in the TPP negotiations.

According to a 2010 interview with key Vietnamese analysts, Vietnam is pressing for the following provisions in the TPP agreement:7

- Designation as a market economy prior to 2018;8

6 Since then, other nations—including Indonesia, the Philippines, South Korea, and Thailand—have expressed an interest in the TPP, but are not parties to the ongoing negotiations.
8 Vietnam will be granted market economy status as of 2018 under the provisions of its WTO accession agreement.
Vietnam is also interested in greater market access for its agricultural and aquacultural exports, particularly in the United States. The United States, in turn, would like Vietnam to undertake the necessary economic and regulatory reforms necessary to fulfill its obligations under the TPP agreement, which the Obama Administration hopes will be a model trade agreement for the 21st Century. The United States is particularly concerned about Vietnam’s ability to achieve the necessary TPP standards for such topics as sanitary and phytosanitary (SPS) measures, workers’ rights, IPR enforcement, and state-owned enterprises (SOEs).

According to a Vietnamese official close to the TPP negotiations, the United States is pressing the other nations for concessions in many of the proposed 29 chapters in the trade agreement, but has not offered much in exchange. Access to the U.S. market is one of the most important potential benefits of the TPP for Vietnam, particularly for Vietnam’s leading exports, such as clothing, footwear, agricultural goods, and aquacultural goods (see “Key Trends in Bilateral Trade”). Vietnam opposes the inclusion of “yarn-forward” conditions for clothing in the TPP agreement; it prefers the adoption of “cut and sew” rules (see “U.S. Clothing Imports from Vietnam”).

Another complicating factor is Vietnam’s support for ASEAN’s discussions with other nations to form a pan-Asian trade association that could exclude the United States. Over the last several years, ASEAN has organized meetings with various configurations of Asian nations—such as the ASEAN + 3 (China, Japan, and South Korea), ASEAN + 6 (Australia, China, India, Japan, New Zealand, and South Korea), and more recently, the Asian Regional Comprehensive Economic Partnership (RCEP)—to discuss the formation of a free trade area that would include only Asian nations. In an April 2010 meeting with CRS, Vietnamese trade officials indicated that Vietnam would like to see the United States take a more active role in a possible ASEAN + 8 (Australia, China, India, Japan, New Zealand, Russia, South Korea, and the United States) forming the basis for a larger regional trade association. Some observers have speculated that the U.S. decision formally to join the East Asia Summit (EAS) in 2011, which includes all the ASEAN +8 nations, may indicate a willingness to consider modes for Asian economic integration other than the TPP.

If a TPP agreement is concluded, Congress would have to consider implementing legislation to amend any U.S. law inconsistent with the terms of the agreement. Unlike the ratification of international treaties, the implementing legislation for trade agreements must be approved by both the House of Representative and the Senate.

---

9 For more about the complicated dynamics of regionalism in Asia, see CRS Report RL33653, East Asian Regional Architecture: New Economic and Security Arrangements and U.S. Policy, by Dick K. Nanto.

10 According to the Kuala Lumpur Declaration of 2005 establishing the East Asia Summit, it is “a forum for dialogue on broad strategic, political and economic issues of common interest and concern with the aim of promoting peace, stability and economic prosperity in East Asia.” The current EAS members are the 10 ASEAN members, plus Australia, the People’s Republic of China, the Republic of India, Japan, the Republic of Korea, New Zealand, Russia, and the United States.

11 The proposed TPP agreement would be presented to Congress as a Congressional-Executive Agreement, not as
Vietnam’s Generalized System of Preferences (GSP) Application

In May 2008, Vietnam formally requested to be added to the U.S. Generalized System of Preferences (GSP) program as a “beneficiary developing country” (BDC). On June 20, 2008, the office of the U.S. Trade Representative (USTR) announced that it was initiating a formal review of Vietnam’s eligibility for GSP benefits and would accept public comments on the application until August 4, 2008. Since then, there has been no formal announcement from USTR regarding the status of Vietnam’s GSP application.

The U.S. GSP program, which is currently expired, authorizes the President to grant duty-free treatment for any eligible product from any beneficiary country. Initially created by Title V of the Trade Act of 1974 (P.L. 93-618) for a 10-year period, the GSP program repeatedly has been renewed by Congress, most recently via P.L. 112-40, which extended the program until July 31, 2013. The statute also provides the President with specific political and economic criteria to use when designating eligible countries and products.

Inclusion in the U.S. GSP program is an important trade priority for the Vietnamese government. Vietnam has already been accepted into several other GSP programs, including those of Canada, the European Union (EU), and Japan. Vietnam continues to inquire about the status of its GSP application, but reportedly sees inclusion in the proposed TPP as a preferable alternative. According to sources in Vietnam’s Ministry of Foreign Affairs (MOFA), the Vietnamese government sees its acceptance into the GSP program as another step in the normalization of bilateral relations.

Status of Application

The United States has indicated to Vietnam that there are several problems with respect to its compliance with the program’s eligibility criteria. In theory, there is a question whether Vietnam is a “Communist” country. Under the provisions of the Trade Act of 1974, a “Communist” country is ineligible for the GSP program unless it meets certain additional conditions. Another area of possible non-compliance with the GSP program’s eligibility criteria is whether Vietnam has “taken steps to provide its workers with internationally recognized worker rights.” There are also indications that Vietnam’s IPR protection is not adequate to satisfy GSP eligibility. Current

(...continued)

treaty. For more information on Congressional-Executive Agreements, see CRS Report 97-896, Why Certain Trade Agreements Are Approved as Congressional-Executive Agreements Rather Than Treaties, by Jane M. Smith, Daniel T. Shedd, and Brandon J. Murrill.

12 For a more detailed examination of Vietnam’s GSP application, see CRS Report RL34702, Potential Trade Effects of Adding Vietnam to the Generalized System of Preferences Program, by Vivian C. Jones and Michael F. Martin.

13 For background information on the U.S. GSP program, see CRS Report RL33663, Generalized System of Preferences: Background and Renewal Debate, by Vivian C. Jones.

14 The conditions are: it has normal trade relation status with the United States; is a member in the World Trade Organization (WTO) and the International Monetary Fund (IMF); and it is “not dominated or controlled by international communism.”
U.S.-Vietnam Economic and Trade Relations: Issues for the 113th Congress

U.S. law allows the President to waive compliance with the worker rights and IPR protection criteria, but not the “Communist” country criterion.

Role of Congress

Under Title V of the Trade Act of 1974, Congress has no direct role in the determination of whether Vietnam is to be accepted into the U.S. GSP program; the authority to make that decision has been delegated to the President of the United States. The President is required to notify Congress of his intention.

There are, however, several ways by which Members of Congress could indicate their preferences on this issue. In addition to hearings and communications to the Administration from Members, Congress could authorize or instruct the President to designate—or not to designate—Vietnam as a beneficiary developing country (BDC),15 either as part of the legislation to reinstate the GSP program or in separate legislation. Alternatively, Congress could pass legislation stipulating additional eligibility criteria for the President to consider when deciding to confer BDC status to Vietnam. Each chamber of Congress could also pass a resolution calling on the President to approve or deny Vietnam’s application for inclusion in the U.S. GSP program. During the 111th Congress, both versions of the Vietnam Human Rights Act (H.R. 1969 and S. 1159) would have prohibited the inclusion of Vietnam in the GSP program unless the President determines and certifies that Vietnam has met certain specified workers’ rights criteria. In the 113th Congress, H.R. 1682 would deny Vietnam’s acceptance into the GSP program unless the President certified to Congress that Vietnam has met certain human rights conditions.

Bilateral Investment Treaty (BIT) Negotiations

During their June 2008 meeting, President Bush and Prime Minister Dụng announced the launch of talks to establish a bilateral investment treaty (BIT).16 BITs are designed to improve the climate for foreign investors by establishing dispute settlement procedures and protecting foreign investors from performance requirements, restrictions on transferring funds, and arbitrary expropriation. The United States currently is a party to 41 BITs in force; Vietnam has signed over 50 BITs.

Status of the Negotiations

The first round of BIT negotiations was held in Washington, DC, from December 15-18, 2008. The Vietnamese delegation included representatives from the Ministry of Planning and Investment, the Ministry of Industry and Trade, the Ministry of Finance, the Ministry of Justice, and the State Bank of Vietnam. The U.S. delegation included representatives of the U.S. Trade Representative’s Office, the Department of State, the Department of Commerce, and the Treasury Department. Since then, two more rounds of talks have been held—one on June 1-2, 2009, in Hanoi, and another on November 17-19, 2009, in Washington, DC. A proposed fourth round of

---

15 For an explanation of BDC status, see CRS Report RL33663, Generalized System of Preferences: Background and Renewal Debate, by Vivian C. Jones.

talks that was to be held in early 2010 did not happen. According to the State Department, bilateral BIT talks have not been held since the two nations joined the TPP negotiations.

The Vietnamese government appears interested in concluding a BIT with the United States, both because it could foster greater inward FDI from the United States and because it could serve as a stepping-stone to a possible bilateral trade agreement (BTA) with the United States. The U.S. government’s interest in BIT negotiations appears primarily focused on providing better protection and access for U.S. investors in Vietnam, while avoiding compromising domestic economic priorities and needlessly relinquishing national sovereignty. Representatives of the business communities in both the United States and Vietnam have expressed interest in the successful conclusion of the BIT negotiations.

The United States generally has based its past BIT negotiations on a model BIT. In 2004, the Bush Administration revised the model BIT, partially in response to provisions in the Trade Act of 2002 (P.L. 107-210). In the Trade Act of 2002, Congress mandated several negotiating objectives to narrow the scope of investment protection. The act stated that the principal U.S. negotiating objective on foreign investment is to reduce or eliminate barriers to investment, “while ensuring that foreign investors in the United States are not accorded greater substantive rights with respect to investment protections than United States investors in the United States, and to secure for investors important rights comparable to those that would be available under United States legal principles and practice.” In 2012, the Obama Administration released a new model BIT, which presumably would be used in any future talks with Vietnam.

In addition, the existing 2001 Bilateral Trade Agreement (BTA) between the United States and Vietnam included provisions in Chapter 4 governing investment and the future negotiation of a bilateral investment treaty. Article 2 commits both nations to providing national and MFN (NTR) treatment to investments. Article 4 provides for a dispute settlement system for bilateral investments. Article 5 requires both nations to ensure that the laws, regulations, and administrative procedures governing investments are promptly published and publicly available. Article 11 pertains to compliance with the provisions of WTO Agreement on Trade-related Investment Measures (TRIMs). Article 13 states that both nations “will endeavor to negotiate a bilateral investment treaty in good faith within a reasonable period of time.” If the TPP negotiations appear to be running into problems, Vietnam may seek to restart the BIT talks.

The Role of Congress

If the United States and Vietnam successfully complete the negotiations of a BIT during the 113th Congress, the treaty will be subject to Senate ratification. Action on the part of Congress as a whole may be required if the terms of the BIT require changes in U.S. law.

---

17 Previous U.S. trade agreements have included language similar to that of the U.S. model BIT.
18 A copy of the new model BIT is available online at http://www.ustr.gov/sites/default/files/BIT%20text%20for%20ACIEP%20Meeting.pdf.
19 For the complete text of the 2001 BTA, go to http://www.usvtc.org/trade/bta/text/.
Non-Market Economy Designation

Vietnamese leaders would like the United States to change Vietnam’s official designation from “nonmarket economy” to “market economy.” Under U.S. trade law (19 U.S.C. 1677), the term “nonmarket economy country” means “any foreign country that the administering authority determines does not operate on market principles of cost or pricing structures, so that sales of merchandise in such country do not reflect the fair value of the merchandise.” In making such a determination, the administering authority of the executive branch is to consider such criteria as the extent of state ownership of the means of production, and government control of prices and wages. However, the General Agreement on Tariffs and Trade (GATT) implicitly defines a “non-market economy” for purposes of trade as “a country which has a complete or substantially complete monopoly of its trade and where all domestic prices are fixed by the State.”

For over 20 years, Vietnam has been transitioning from a centrally planned economy to a market economy. Under its doi moi policy, Vietnam has allowed the development and growth of private enterprise and competitive market allocation of most goods and services. Although most prices have been deregulated, the Vietnamese government still retains some formal and informal mechanisms to direct or manage the economy.

State-Owned Enterprises

For the United States, one of the main concerns about Vietnam’s economy is the continued importance of state-owned enterprises (SOEs) in the nation’s industrial sector. Between 1995 and 2012, the portion of Vietnam’s real industrial output produced by SOEs declined from 50.3% to 18.4%. However, SOEs continue to dominate key sectors of Vietnam’s economy, such as mining and energy. In addition, according to a study by the Vietnam Report Company, 46% of the 500 largest

---

20 Ad Note to Art. VI:1 of the GATT.
21 Based on data from Vietnam’s General Statistics Office.
enterprises in Vietnam are SOEs. The five largest enterprises—Vietnam Oil and Gas Group, Vietnam National Petroleum Corporation, Vietnam Electricity, Vietnam Post and Telecommunications Group, and Vietnam National Coal and Mineral Industries Group—are all SOEs.

Many of Vietnam’s SOEs have been converted into quasi-private corporations through a process known as “equitization,” in which some shares are sold to the public on Vietnam’s stock exchange, and most of the shares remain owned by the Vietnamese government. Twenty years ago, there were about 12,000 SOEs in Vietnam. By the end of 2011, the number of SOEs had been reduced to 1,309 by either restructuring or equitization. Attempt to sell shares in 25 SOEs in early 2014 via initial public offerings (IPOs) were largely rebuffed, as over 70% of the offered shares went unsold. To some analysts, however, the retention of a controlling interest in the shares of the companies provides the Vietnamese government with the means to continue to manage the operations of the equitized SOEs.

In August 2010, Prime Minister Dũng announced a plan for the reorganization of the remaining SOEs. Prime Minister Dũng called on every government agency responsible for the administration of a SOE to submit a report on its economic performance by the end of 2010. Plans for the equitization of the SOEs were confirmed during the 11th National Party Congress in January 2011. The stated goal is to restructure and reorganize all the SOEs to increase their efficiency and reduce the number of wholly owned SOEs to 692 by the end of 2015. The Asian Development Bank (ADB) is providing Vietnam with a $630 million loan to help it reform its SOEs and improve corporate governance.

The urgency to reform Vietnam’s SOEs is being driven, in part, by the financial problems of Vietnam Shipbuilding Industry Group (Vinashin). Vinashin nearly went bankrupt in 2010, after a series of poor investments in non-shipbuilding ventures. The company had run up $4.4 billion in debts by June 2010, and was having trouble servicing its debt to both Vietnamese and non-Vietnamese banks. On December 8, 2010, Planning and Investment Minister Võ Hồng Phúc stated that Vinashin was responsible for its own debt, but that the government would help lead the company back to profitability. Following Minister Phúc’s statement, the state-owned Development Bank of Vietnam offered Vinashin interest-free loans to help the company with its cash flow problems. In March 2012, nine former Vinashin executives were sentenced to up to 20 years in jail and were ordered to pay substantial fines for “intentionally violating state rules on economic management with serious consequences.”

---

26 For details, see ADB’s webpage—http://www.adb.org/projects/project.asp?id=39538&p=vieproj.
28 Following Minister Phúc’s statement, the state-owned Development Bank of Vietnam offered Vinashin interest-free loans to help the company with its cash flow problems. In March 2012, nine former Vinashin executives were sentenced to up to 20 years in jail and were ordered to pay substantial fines for “intentionally violating state rules on economic management with serious consequences.”
Price and Wage Controls

The doi moi process has led to the gradual deregulation of most prices and wages in Vietnam. However, the Vietnamese government maintains controls over key prices, including certain major industrial products (such as cement, coal, electricity, oil and steel) and basic consumer products (such as meat, rice, and vegetables). In December 2010, Prime Minister Dũng tightened controls on various products to reduce inflationary pressure.31

The Vietnamese government also maintains control over some wages. Government workers are paid according to a fixed pay scale, and all workers are subject to a national minimum wage law. Workers for private enterprises, foreign-owned ventures and SOEs receive wages based largely on market conditions. Vietnam’s recent inflation has given rise to upward pressure on wages. The Prime Minister’s anti-inflation policy is supposed also to curb wage increases.

The Vietnamese government asserts that most of the prices and wages in Vietnam are market-determined, especially the prices of goods exported to the United States. In addition, Vietnamese exports face strong competitive pressure from other Asian nations, such as Bangladesh, China, Malaysia, and Thailand. As such, the Vietnamese government maintains that it should be considered a market economy, particularly in anti-dumping and countervailing duty cases.

Vietnam’s View

The Vietnamese government maintains that its economy is as much a market economy as many other nations around the world, and actively has sought formal recognition as a market economy from its major trading partners. A number of trading partners—including ASEAN, Australia, India, Japan, and New Zealand—have designated Vietnam a market economy for purposes of international trade. Under the terms of its WTO accession agreement with the United States, Vietnam is to remain a non-market economy for up to 12 years after its accession (i.e., 2018) or until it meets U.S. criteria for a “market economy” designation.32

Designation as a market economy has both symbolic and practical value for Vietnam. The Vietnamese government views market economy designation as part of the normalization of trade relations with the United States. In addition, Vietnam’s designation as an NME generally makes it more likely that antidumping and countervailing duty cases will result in adverse rulings against Vietnamese companies. In theory, the 113th Congress could consider legislation weighing in on the designation of Vietnam as a market or non-market economy by amending or superseding existing U.S. law.

Catfish

Catfish have been a regular source of trade friction between the United States and Vietnam for over a decade. Vietnam is a major exporter of frozen fish fillets using certain varieties of fish—known as basa and tra in Vietnamese—that are commonly referred to as catfish in the global fish

32 Other countries considered non-market economies by the United States include Armenia, Azerbaijan, Belarus, China, Georgia, Kyrgyz Republic, Moldova, Tajikistan, and Uzbekistan.
market.\textsuperscript{33} Since 1999, Vietnamese exports of \textit{basa} and \textit{tra} frozen fish fillets have secured a growing share of the U.S. market, despite the objections of the U.S. catfish industry and the actions of the U.S. government. In 2013, the United States imported over $339 million of \textit{basa} and \textit{tra} from Vietnam.\textsuperscript{34}

Over the last 12 years, the United States has taken several actions that have had an impact on the import of Vietnamese \textit{basa} and \textit{tra}. In 2002, Congress passed legislation that prohibited the labeling of \textit{basa} and \textit{tra} as “catfish.”\textsuperscript{35} In August 2003, the U.S. government imposed antidumping duties\textsuperscript{36} on “certain frozen fish fillets from Vietnam,” including \textit{basa} and \textit{tra}.\textsuperscript{37} Despite these measures, U.S. imports of \textit{basa} and \textit{tra} from Vietnam continued to rise.

The ongoing tensions around catfish trade were heightened by the passage of the 2008 Farm Bill (P.L. 110-246) by the 110\textsuperscript{th} Congress in March 2008, and the ITC’s determination in June 2009 to keep in place the antidumping duties on certain frozen fish fillet imports from Vietnam “for the foreseeable future.” The Agricultural Act of 2014 (P.L. 113-79) confirmed the 2008 Farm Bill transfer of catfish inspection to the U.S. Department of Agriculture, including \textit{basa} and \textit{tra}.

In the eyes of the Vietnamese government, the U.S. response to the growth of Vietnam’s \textit{basa} and \textit{tra} exports constitutes a case of trade protectionism designed to shelter U.S. catfish producers from legitimate competition. Vietnam also points to U.S. anti-dumping measures on Vietnamese shrimp and plastic bags as an indications of U.S. protectionism (see “Non-Market Economy Designation”).\textsuperscript{38} Supporters of U.S. trade policies against Vietnam’s exports of \textit{basa} and \textit{tra} say the measures are designed to defend U.S. consumers and businesses from the unsafe products and unfair business practices of Vietnam. In November 2010, the Vietnam Association of Seafood Exporters and Producers (VASEP) cautioned Vietnam’s seafood processors about carcinogenic residuals from herbicides in shrimp, after Japan tightened its inspections of Vietnamese exports.\textsuperscript{39}

\textsuperscript{33} \textit{Basa} (pangasius bocourti) and \textit{tra} (pangasius hypophthalmus) are fresh-water fish from the Mekong River basin of Vietnam. U.S. catfish (ictalurus punctatus)—also known as channel catfish—are also fresh-water fish, typically raised for commercial purposes in aquaculture ponds. All three species are siluriformes, with the characteristic barbels (whiskers) from which the name catfish was derived.

\textsuperscript{34} Based on U.S. International Trade Commission (USITC) online trade database (http://dataweb.usitc.gov/).

\textsuperscript{35} Language was introduced into the Farm Security and Rural Investment Act of 2002 (P.L. 107-171) that restricted the legal definition of catfish to the family Ictaluridae, effectively banning the use of the term “catfish” for \textit{basa} and \textit{tra}.

\textsuperscript{36} Antidumping duties are penalties imposed on goods imported at what is determined to be less than “fair value.” For more about antidumping duties in the United States, see CRS Report RL32371, \textit{Trade Remedies: A Primer}, by Vivian C. Jones.

\textsuperscript{38} Starting in 2005, the United States began imposing anti-dumping duties on “certain frozen and canned warmwater shrimp” from Vietnam after the International Trade Administration (ITA) determined that they were being sold at “less than fair market value.” Because Vietnam is a non-market economy, the ITA used cost estimates from Bangladesh to determine “fair market value.” In November 2010, the United States extended the anti-dumping duties for another five years. Vietnam is appealing this determination to the World Trade Organization, citing the U.S. use of “zeroing,” a controversial method for calculating anti-dumping duties. In March 2010, the ITA issued a final determination on antidumping and countervailing duties on polyethylene retail carrier bags from Vietnam. For this decision, the ITA used India as the surrogate nation to determine fair market value.

2008 Farm Bill

The legal status of Vietnam’s *basa* and *tra* exports to the United States was brought into question by the provisions of Section 11016 of the 2008 Farm Bill (P.L. 110-246) in June 2008. The section, entitled “Inspection and Grading,” established a voluntary fee-based grading program for “catfish (as defined by the Secretary).” The law also stipulated specific aspects of the examination and inspection of catfish, including the conditions under which the fish were raised and transported. By these provisions, the 2008 Farm Bill effectively transferred the regulation of imported catfish from the Food and Drug Administration (FDA) to the USDA, which is generally viewed as maintaining stricter inspection standards than the FDA.

The possibility that the Secretary of Agriculture could have redefined catfish to include *basa* and *tra*, thereby making them subject to the stricter USDA inspection standards, brought forth objections from Vietnam’s Ambassador to the United States, its Minister of Agriculture and Rural Development, and Vietnam’s catfish industry (including VASEP). Ambassador Le Cong Phung sent a letter to nearly 140 Members of Congress, suggesting that a reclassification of *basa* and *tra* as catfish would call into question the U.S. commitment to the WTO and endanger the jobs of more than 1 million Vietnamese farmers and workers. In addition, an opinion article in the *Wall Street Journal* referred to the possible reclassification of *basa* and *tra* as catfish as “protectionism at its worst.”

Supporters of the provisions of the 2008 Farm Bill state that it provides greater protection to U.S. consumers.

Potential New Catfish Regulations

Draft regulations for catfish food safety inspection were delivered to the Office of Management and Budget (OMB) by the USDA in November 2009. On February 24, 2011, the USDA published in the *Federal Register* its proposed rule for mandatory inspection of catfish and catfish products. The USDA is “proposing to apply the requirements for the inspection of imported meat products (21 U.S.C. 620) to the inspection of imported catfish products…” The proposed rule, however, left some of the key issues related to Vietnamese imports unresolved, including the definition of catfish. The USDA requested public comments on the proposed rule, to be delivered on or before June 24, 2011.

The catfish controversy reemerged after the passage of the Agricultural Act of 2014 (P.L. 113-79). Section 12106 amended Section 1(w) of the Federal Meat Inspection Act (21 USC 601(w)) to require “all fish of the order Siluriformes” be inspected by the USDA, confirming the change made in the 2008 Farm Bill, and effectively including *basa* and *tra* under the definition of catfish, and superseding the 2002 law. In addition, the Agricultural Act of 2014 requires that the FDA and the USDA coordinate their inspection activities to avoid duplication of efforts.

Based on the provisions of P.L. 110-246 and P.L. 113-79, the USDA submitted the final version of the catfish inspection regulations to OMB on June 2, 2014. OMB has 90 calendar days—or until September 1, 2014—to complete its review of the final rule. If OMB clears the regulations, they will be published and go into effect on the date specified in the regulation.

---

If adopted, the proposed new regulation would require all imported catfish and catfish products come from a facility that complies with USDA sanitation standards. To qualify for import into the United States, foreign countries would have to demonstrate that their laws, regulatory administration, evaluation system, and standards are equivalent to U.S. standards administered by the USDA Food Safety and Inspection Service (FSIS). As drafted, the FSIS would review the inspection systems of other nations to determine their equivalency with U.S. standards; these reviews may include periodic onsite visits to overseas catfish facilities.

The preliminary catfish regulations call for the new inspection program to be implemented in four phases. During Phase One, foreign countries exporting catfish to the United States would have to document that they have the legal authority to regulate catfish. In addition, FSIS would conduct onsite audits of foreign countries. By Phase Three, foreign (and domestic) establishments will have to be in compliance with USDA sanitation requirements. By Phase Four, foreign countries will have to have implemented a catfish inspection program that is the equivalent of the U.S. inspection program. The proposed rule did not set a timeline for the four phases. It is not known if the final regulations include the same phased implementation.

As a possible preparation for heightened U.S. inspection requirements, Vietnam’s Ministry of Agriculture and Rural Development (MOARD) tightened export hygiene standards for *basa* and *tra*. Effective April 12, 2010, all *basa* and *tra* exported from Vietnam will need certificates for hygiene and food safety issued by the National Agro-Forestry-Fisheries Quality Assurance Department. In addition, MOARD and the Ministry of Industry and Trade have contracted U.S.-based Mazzetta Company to train Vietnamese fish breeders how to comply with U.S. standards. Prime Minister Dũng reportedly has approved a 10-year, $2 billion “master plan” for the development of Vietnam’s fish farming industry that will promote infrastructure and technological development, disease control, and environmental improvement.

**The Antidumping Sunset Review on Catfish**

While the USDA prepared the new catfish rule, the ITC issued on June 15, 2009, a final determination in its five-year (sunset) review of the existing antidumping duties on “certain frozen fish fillets from Vietnam.” In a unanimous decision, the six ITC commissioners voted to continue the antidumping duties “for the foreseeable future.” The Vietnamese government and the Vietnam Fishery Association expressed their opposition to the ITC’s decision. Vietnam’s deputy minister of trade and industry, Nguyen Thanh Bien, was quoted as saying, “in this economic context, this decision shows the heavy protectionism of the U.S. judicial and executive agencies.”

---

45 Under the provisions of the Uruguay Round Agreements Act (P.L. 103-465), antidumping duties must be revoked after five years unless the DOC and the ITC determine that revoking the duties would lead to the continuance or recurrence of dumping and cause material injury within a foreseeable time period.
Implications for the 113th Congress

Two of the previous five Congresses passed legislation containing provisions that critics assert are designed to restrict or prevent the import of basa and tra from Vietnam and protect the U.S. catfish industry from foreign competition. In the 112th Congress, legislation was introduced—H.R. 4296 and S. 496—to return the inspection of catfish back to the FDA. The inclusion of Section 12106 in the Agricultural Act of 2014 has renewed discussion of the alleged U.S. trade protectionism. According to some observers, congressional action on the treatment of catfish imports could have broader implications for bilateral trade relations with Vietnam, as well as the success of the TPP negotiations.

Other Economic Issues

The preceding issues are topics where there has been or continues to be direct bilateral interaction. In addition, there are several economic issues that indirectly influence relations between the United States and Vietnam. Of these, the most prominent issues for the 113th Congress likely include clothing imports from Vietnam, workers’ rights, IPR protection, and Vietnam’s exchange rate policy.

U.S. Clothing Imports from Vietnam

Vietnam’s clothing exporters to the United States were among the greatest beneficiaries of the U.S. decision to grant Vietnam conditional NTR status in December 2001 (see Figure 1).47 Vietnam has become a major source of U.S. clothing imports, second only to China. Up until 2002, U.S. imports of clothing from Vietnam were small both in value (below $50 million) and as a share of total imports from Vietnam (below 10%). Following the U.S. extension of conditional NTR to Vietnam, U.S. clothing imports from Vietnam shot up in value and share. As a share of total imports, clothing peaked in 2003 at 51.4%. The value of U.S. clothing imports from Vietnam continued to rise every year until 2009, with the largest year-on-year increases occurring in 2003 and 2007—the first full years after the U.S. granted Vietnam conditional and permanent NTR status, respectively. Following a slight decline in 2009, the value of clothing imports from Vietnam once again began to rise. However, since its peak in 2003, the share of clothing in total U.S. imports from Vietnam has declined.

The two spikes in clothing imports gave rise to efforts to restrict clothing trade with Vietnam, first in the form of a separate bilateral textile agreement and later in the form of a unilateral monitoring program that expired in January 2009.48 In both cases, Vietnam initially protested U.S. efforts to restrict clothing trade, but in the end complied with the U.S. policies. Several Members of Congress, and in particular Members with significant clothing and textile manufacturing in their districts or states, voiced concern that a “surge” in Vietnamese clothing exports to the United States could cause damage to U.S. textile companies and workers. However, major U.S.

47 For purposes of this section of the report, clothing imports and exports will be defined as commodities traded under chapters 61 and 62 of the U.S. Harmonized Tariff System (HTS), unless otherwise noted.

48 For more information on the bilateral textile agreement and the monitoring program, see CRS Report RL34262, U.S. Clothing Imports from Vietnam: Trade Policies and Performance, by Michael F. Martin.
retailers and importers maintained that these two programs would restrict trade from Vietnam, causing harm to U.S. companies and consumers.

There continues to be congressional and commercial interest in the growth of clothing imports from Vietnam. For the TPP negotiations, supporters of the U.S. textile industry are advocating using a “yarn-forward” rule in the clothing and textile chapter of the proposed agreement. Backers of major U.S. retailers and apparel distributors, as well as the Vietnamese government, would prefer a more liberal approach, such as a “cut and sew” rule in the agreement.

**Figure 1. U.S. Clothing Imports from Vietnam**

Value ($ billions) and Share of Total U.S. Imports from Vietnam

Note: Imports valued using General Customs method.

---

49 A yarn-forward rule would require that the production of the yarn and all subsequent manufacturing activity for the item of apparel occur in a TPP-member country.

50 A cut and sew rule would require that the cutting of the fabric and the sewing of the fabric into an item of apparel occur in a TPP-member country. The fabric and/or the yarn could come from other non-TPP nations.
Workers’ Rights

The U.S. government and a number of non-governmental organizations (NGOs) such as Human Rights Watch have been critical of Vietnam’s restrictions on workers’ rights. There is a general recognition that Vietnam has made significant improvements in its labor laws, but that local government enforcement and business compliance remain ongoing problems. The State Department’s 2013 human rights report on Vietnam singled out problems with suppression of independent labor unions, failure to enforce laws governing the right to organize, forced or compulsory labor, child labor, and unacceptable working conditions.51

Workers in Vietnam have the legal right to collective bargaining. At present, all labor unions in Vietnam must be a member of the Vietnam General Confederation of Labor (VGCL). The VGCL is supposed to organize a union within six months of the establishment of any new business, regardless of its ownership—state, foreign, or private.

Vietnamese workers are not legally allowed to form unions independent from the VGCL, and efforts to organize independent unions in Vietnam reportedly have been thwarted by government suppression, including the arrest and imprisonment of union leaders. Some analysts have argued that restrictions of the right of association in Vietnam have impeded the improvement of labor rights in other areas. Other observers, however, counter that since the launch of doi moi, worker rights have made progress despite the restrictions on their independent right to organize. These observers point out that hundreds of unaffiliated (and therefore unofficial) “labor associations” have sprouted without significant repression, that the VGCL has evolved into a more aggressive advocate for workers, and in many recent cases, Vietnamese workers have gone on strike reportedly because they felt that they were not well-represented by the official union. Human Rights Watch, however, has raised concern about the ability of Vietnamese workers to call an official strike, especially at state-owned enterprises (SOEs).52

The Vietnamese government appears to tacitly accept that it has problems with the enforcement of its labor laws. Vietnam’s official news agencies—Thanhnie News, Vietnam Net, and Voice of Vietnam News—ran a series of reports in 2008 and 2009 describing problems with Vietnam’s protection of workers’ rights, the flaws of the VGCL, and efforts to improve working conditions in Vietnam.53 The humanitarian aid agency of the Australian Council of Trade Unions, which has worked closely with the VGCL on workers’ education, wrote in a letter to Human Rights Watch, “Our experience in workers’ education in Vietnam also leads us to believe that the government, far from trying to lower workers’ conditions or repress workers, is sensitive to the needs of women and men workers.”54

The Vietnamese government is working with various international organizations to improve its labor laws, regulations and enforcement. Vietnam’s Ministry of Labour, Invalids, and Social Affairs (MOLISA) and the VGCL worked with the International Labor Organization (ILO) to finalize a new Labour Code and Trade Union Law. In June 2012, Vietnam’s National Assembly approved the new law, which took effect on May 1, 2013. The ILO and MOLISA are also working with Spain’s Agency for International Development Cooperation on a program to eliminate child labor in Vietnam. In addition, the United Nations is providing $2 million for a program to help the VGCL improve its grassroots relations.

**IPR Protection**

The U.S. government remains critical of Vietnam’s record on intellectual property rights (IPR) protection. Vietnam was included in the “Watch List” in the U.S. Trade Representative’s 2013 Special 301 Report, an annual review of the global state of IPR protection and enforcement. Vietnam remained on the Watch List because of its continuing problems with IPR piracy and trademark infringement. The report states, “Although Vietnam took certain steps to improve its regulatory framework in the last two years by passing decrees and issuing circulars to strengthen copyright protection and enforcement, significant areas of concern remain.” The perceived continuing problems with Vietnam’s IPR protection may play a role in the TPP and BIT negotiations, as well as any consideration of Vietnam’s GSP application.

**Vietnam’s Exchange Rate Policy**

One aspect of Vietnam’s economic system that has not been changed by doi moi is its exchange rate policy. Vietnam continues to maintain a government-managed exchange rate relative to the U.S. dollar. The State Bank of Vietnam (SBVN) sets a range in which the value of the Vietnamese dong can fluctuate relative to the U.S. dollar. In March 2009, the SBVN has widened the daily band to ±5% from the official exchange rate, and has devalued the dong several times. In addition, the SBVN has taken steps to reduce downward pressure on the dong, including tightening the regulation of foreign exchange transactions and raising interest rates.

**Key Trends in Bilateral Trade**

The preceding sections of the report have focused on current and past issues in U.S.-Vietnam trade relations. The final section of the report attempts to identify potential sources of future trade friction by examining trends in bilateral trade figures. The focus will be on three aspects of recent trade relations—merchandise trade, trade in services, and foreign direct investment (FDI).

---

55 The new labor law was to have been submitted in October 2010 (see “Labour Law Reform to Boost Integration,” Vietnam News, April 2, 2010), but MOLISA and the VGCL requested a postponement from the National Assembly to permit more consultation with stakeholders. MOLISA is overseeing the drafting of the proposed law, but has assigned VGCL the responsibility of preparing the law’s trade union provisions.

Merchandise Trade

About a decade has passed since trade relations between the United States and Vietnam have opened. As previously mentioned, the rapid growth in Vietnam’s export of two types of products—clothing and catfish—quickly made them sources of trade tension between the two nations. However, other commodities that contribute more to U.S.-Vietnam trade flows could also become touch points for trouble in bilateral trade relations.

According to U.S. trade statistics, the top U.S. imports from Vietnam in 2013, besides clothing and fish, were (in order) footwear; furniture and bedding; electrical machinery; machinery and mechanical appliances; spices, coffee, and tea; articles of leather; and articles of iron and steel (see Table 2). The top U.S. exports to Vietnam included (in order) machinery and mechanical appliances; electrical machinery; oil seeds; cotton; meat; residuals and waste from food industries; iron and steel; edible fruit and nuts; wood and articles of wood; and plastic and plastic articles. The juxtaposition of these two lists reveals product categories that may warrant watching, as well as a connection between some of the top trade commodities.

### Product Interplay

There is also a discernable interplay between Vietnam’s top exports to the United States and the top U.S. exports to Vietnam. Vietnam imports substantial amounts of cotton from the United States, which is then used to manufacture clothing to be exported to the United States. Similarly, Vietnam imports wood from the United States that may end up in the furniture that is imported by the United States from Vietnam. There is also a significant amount of cross-trade in electrical machinery—a top-10 export item for both countries—as parts and components are shipped back and forth across the Pacific Ocean. The implication is that efforts to curtail the growth of certain top exports of Vietnam to the United States could result in a decline in U.S. exports to Vietnam and possible job losses in the United States.

### Furniture and Bedding

Over the last 10 years, Vietnam has risen from being the 62nd-largest source for furniture and bedding imports for the United States to being the fourth-largest source—surpassing past leaders such as Italy, Malaysia, and Taiwan. Furniture and bedding provided over 10% of total U.S. imports from Vietnam in 2013.

### Footwear

While most of the focus has been on clothing imports from Vietnam, footwear constituted nearly 12% of total U.S. imports from Vietnam in 2013. Vietnam was the second-largest source of footwear imports for the United States in 2013, more twice the size of imports from Italy.

### Electrical Machinery

Vietnam’s electrical machinery exports to the United States grew more than 1,500-fold since 2001, exceeding $1.9 billion in 2013 and nearly 8% of total U.S. imports from Vietnam.
According to interviews with foreign investors in Vietnam, there is great potential for growth in this sector because of Vietnam’s inexpensive, skilled workers.

**Trade in Services**

The United States perceives a trade advantage in several of the services sectors, especially financial services. In the latest U.S. National Trade Estimate (NTE), the Office of the U.S. Trade Representative indicated that as part of the implementation of the BTA, Vietnam has committed to greater liberalization of a broad array of its services sectors, including financial services, telecommunications, express delivery, distribution services, and certain professions. Vietnam committed to allowing 100% foreign ownership of securities firms and express delivery service providers by 2012. It is likely that the United States will press Vietnam for more access during the BTA talks, as well as during the BIT negotiations.

**Foreign Direct Investment**

In 2012, Vietnam licensed 1,287 foreign direct investment (FDI) projects worth $16.3 billion. The leading source of FDI in 2012 was Japan, with 317 projects worth $5.6 billion. The United States was the 13th-largest source of FDI in 2012 with 45 projects worth $160 million. The accumulated value of FDI in Vietnam for the period 1988-2012 is $210.5 billion. Japan was the leading investor during this period, followed by Taiwan and Singapore. The United States was the 7th-largest investor, with 648 projects worth $10.5 billion.

Growing U.S. interest in investment opportunities in Vietnam could have an impact on the BIT negotiations and, by implication, have an effect on the 113th Congress if the negotiations are completed in 2014 or 2015. In addition, as more U.S. companies invest in Vietnam, there is the possibility of more business-to-business disagreements between U.S. and Vietnamese companies, and more constituent pressure on Congress to address perceived shortcomings in Vietnam’s treatment of foreign-owned enterprises.
