STYLE MANUAL & WRITERS GUIDE

FOR INTELLIGENCE PUBLICATIONS

Eighth Edition, 2011

Foreword

Good intelligence depends in large measure on clear, concise writing. The information CIA gathers and the analysis it produces mean little if we cannot convey them effectively. The Directorate of Intelligence and the Agency as a whole have always understood that. Both have been home, from their earliest days, to people who enjoy writing and excel at it.

The Style Manual and Writers Guide for Intelligence Publications is an essential reference for the officers of our Directorate. Now in its eighth edition, it reflects an enduring commitment to the highest standards of care and precision.

This guide is designed to be helpful and convenient, sensible in organization, and logical in content. It contains, among other changes, a revised list of accepted acronyms and new tips on word usage. The world is not static. Nor is the language we employ to assess it.

In dealing with foreign policy and national security, our government has many sources of insight on which to draw. The depth of our knowledge, the strength of our thinking, and the power of our words will ensure that our customers, from policymakers to operations officers, continue to rely on the Directorate of Intelligence.

Preface

The eighth edition of the Style Manual and Writers Guide for Intelligence Publications provides guidance for English usage and writing style in the Central Intelligence Agency. It incorporates most of the improvements that appeared in previous editions but returns to the organization by chapters of the earliest versions. The chapters on capitalization, numbers, abbreviations, italics, punctuation, spelling, and compound words have numerous headings and subheadings to enable users to find specific subjects quickly within the chapters themselves or through the table of contents. Further subject indexing is provided in chapter 9—the Word Watchers List—which incorporates many of the style rules in abbreviated form; it is similar to the Word Watchers Index in the fourth edition and to the overall organization of more recent editions. The manual also includes a comprehensive Spelling and Compound Words List, as have all previous editions, and an index to the entire manual.

The counsel in this guide is derived from many sources, including the works of Barzun, Bernstein, Copperud, Follett, Fowler, the Morrises, Strunk and White, Gregg, and other recognized arbiters of English usage. It also draws on the stylebooks of press services, newspapers, publishing houses, and past and present CIA offices.

A basic reference for spelling, compounding, and other instructions for all eight editions is the US Government Printing Office's *Style Manual*, the most recent edition of which was issued in 2008. The GPO's authority for spelling and compounding words is *Webster's Third New International Dictionary*, published by G. & C. Merriam Company. That dictionary or the more up-to-date abridgments of it (the latest being *Webster's 11th New Collegiate Dictionary*) are the authorities for the preferred spellings listed in this guide that were not found in the GPO manual.

This guide is for both the creators and the processors of intelligence analysis—for the writers and for the editors of their analyses. It also serves writers and processors of administrative papers. Moreover, it has been used and will continue to be used by teachers and students of writing and publications processing.

The manual is available online in both web browser (HTML) and printer-friendly (PDF) versions; limited quantities are available in hardcopy. The browser version contains active links that take users from one related issue to another; these are indicated with the standard hyperlink convention: underlined text. The browser version may be updated as needed.

1. CAPITALIZATION

1.1. A Few Basic Rules

When deciding whether or not to capitalize a word, follow the old maxim: "When in doubt, don't." Do not, for example, capitalize the first letters of the words explaining an uppercase abbreviation unless the term abbreviated is a proper name.

LAN (local area network)

USPS (United States Postal Service)

The capitalization of abbreviations themselves is covered in chapter 3. One general rule is to avoid the all-uppercase formulations common in the military for weapon designators (use Scud, not SCUD) and for exercises. Lowercase is preferred for acronyms (such as comsat), but be aware of exceptions (notably NATO and SIGINT).

This chapter covers other areas in which uncertainty about capitalization may arise. We assume all users of this manual know that the first letter of a sentence should be capitalized, but a writer may be unsure about what to do if a number begins a sentence—spell it out, even if it is a number normally written as a figure (see sections 2.2 and 2.14), or rephrase the sentence (for example, change 1988 was a significant year for her to The year 1988 was significant for her).

1.2. Proper Nouns

Generally, capitalize a common noun when it forms part of a proper name but not when it is used alone as a substitute for the name of the place or thing or when it becomes separated from the rest of the name by an intervening word or phrase. Certain well-known short forms of specific proper names, however, are exceptions to this rule.

Social Democratic Party, the party

Catholic Church, the church

Harvard University, the university

Quebec Province, Province of Quebec; the province; Quebec, Canada's separatist province

but

the British Commonwealth, the Commonwealth

the Panama (or Suez) Canal, the Canal

the Golan Heights, the Heights

the Persian Gulf, the Gulf

the Horn of Africa, the Horn

the Korean Peninsula, the Peninsula

the Olympic Games, the Games, the Olympics, the Winter (or Summer) Olympics

the Taiwan Strait, the Strait, cross-Strait

A noun common to two or more proper names is capitalized in the plural form when preceded by the proper adjectives in those names.

Montgomery and Prince George's Counties

Harvard and Yale Universities

Red and Black Seas

1.3. Derivatives of Proper Names

Do not capitalize derivatives of proper names used with acquired independent meanings.

anglicized words

italic type

bohemian lifestyle

molotov cocktail

byzantine organization

pasteurized milk

diesel engine

roman type

draconian measures

venetian blinds

but

Castroite sympathies

Islamization

degrees Celsius

Marxist, Leninist (

degrees Fahrenheit

Morse code

Francophone

pulsed Doppler effect

Gaullist policies

Sandinista

1.4. Articles in Place Names

Capitalize the definite article, or its foreign language equivalent, when it is part of an official name. When such a name is used adjectively, an uncapitalized *the* might be used and, despite the redundancy, would precede a capitalized non-English equivalent.

The Bahamas

the Bahamas Tourist Office

El Salvador

the El Salvador situation

The Gambia

the Gambia mapping project

The Hague

the Second Hague Conference

For some country names the definite article is used but is not capitalized because it is not part of the official name (for example, the United Kingdom, the United States, the Vatican) or because the convention has been to use a lowercase t, as in:

the Philippines (The proper adjective is Philippine; the people are Filipinos.)

the Netherlands (The proper adjective is Dutch or Netherlands; the people are called the Dutch or the Netherlanders.) 1

Do not omit the article before a country name in a series if the article is used when the name stands alone.

the United States and the Netherlands (not the United States and Netherlands)

There is no the in Congo, Seychelles, Sudan, or Western Sahara (the Sahara refers to the desert).

1.5. Names of Persons

The spelling of personal names in CIA writing follows transliteration systems generally agreed upon by US Government agencies, unless officials have stated a preference for variant spellings of their names.

| Guidance on country names and the not | uns and adjectives denoting nationalit | ty is given in The World Factbook | , |
|---|--|-----------------------------------|---|
| produced by the CIA and available online | | or in hardcopy from the US | |
| Government Printing Office or the Nationa | al Technical Information Service. | - | |

1.5a. Particles in Personal Names

In certain personal names, particles such as al, d', da, de, del, della, den, di, du, l', la, le, van, and von are usually not capitalized unless they begin a sentence.

- ... achieved independence while de Gaulle was President. De Gaulle, however, did ...
- ... was opposed by the den Uyl government. Den Uyl's policy differed from that of van Agt ...

In some cases, particles are often dropped when the family name alone is used.

Iraqi Prime Minister Nuri al-Maliki; but Maliki stated . . .

Anglicized versions of foreign names vary in the matter of retaining or dropping particles and in the use of capital letters.

1.5b. Nicknames

When a nickname or a descriptive expression replaces a person's first name, capitalize it. If the nickname falls between a person's first and last names, capitalize it and enclose it in quotation marks.

the late revolutionary Che Guevara Israeli Prime Minister Binyamin "Bibi" Netanyahu

1.6. Government Bodies

Capitalize both the full proper name of a national government body and its shortened form.

the British Parliament, the Parliament, Parliament

the Argentine Congress, the Congress; the Tunisian Chamber of Deputies, the Chamber; but the Argentine legislature, the Tunisian legislature, the legislature

the French Senate, the Senate, the upper house

the Cuban Council of Ministers, the Council of Ministers

the British Cabinet, the Cabinet, the Conservative Cabinet, Cabinet member; *but* the Labor shadow cabinet (This example does not apply across the board, especially if the term *cabinet* is used in reference to a body whose formal title does not resemble the English word. If in doubt, use lowercase.)

the Ministry of Economy, the Ministry; a proposed ministry of energy, the proposed ministry, various ministries, several ministries, the economic ministries, the foreign service, the civil service; but a Secret Service agent, the Intelligence Community

the Supreme Court

the Central Bank, the Bank

the US Government, the Federal Government (US only; also Federal employee, etc.), the French Government, the French and Italian Governments, the Government of France, the Governments of France and Italy; but the government (shortened form always lowercased), the Brown government, the Tory government, the European governments; the executive, legislative, and judicial branches of government; the Obama administration, the administration; the Calderon administration

For a subnational government body, capitalize only the full proper name and avoid shortened forms that might be confused with national equivalents.

the Maryland House of Delegates, the state legislature (not the House); the Quebec Parliament, the provincial parliament; the Jerusalem Municipal Council, the council, municipal councils all over Israel

1.7. Military Forces

Capitalize the full proper name (or reasonable translations and approximations thereof) of a military force or service as well as the shortened form of that name.

the US Army, the Army

the Egyptian Army, the Army, an Army engineer

Chilean Army, division, or regiment level

the Russian Navy, the Navy, a Navy officer

the People's Liberation Army, the Army, the PLA

the Royal Air Force, the Air Force, the RAF, an Air Force pilot

The Israel Defense Forces, the IDF (not the Forces)

This rule does not apply to individual units in the matter of capitalizing the shortened form of the name.

the 3rd Army, the army

the 27th Division, the division

the 7th Fleet, the fleet

The 1028th Brigade, the brigade

Nor does it apply to a reference, other than a proper name, to military services as a group, to a general reference to one kind of service in the plural form, or to any general reference.

the Russian armed forces

the British military establishment

the infantry, the artillery, the submarine forces

US naval forces

the East European air forces

the navies of the Mediterranean NATO members

a navy (army, air force) to be proud of

Russian-supplied air force (naval, ground force) equipment

but

the German and French Air Forces, the Greek and Turkish Navies (specific services referred to by proper names in plural form)

1.8. International Organizations

Capitalize both the full proper name and the shortened form of an international organization and its subelements.

the UN General Assembly, the Assembly the World Bank, the Bank

1.9. Diplomatic and Consular Units

Capitalize the full or shortened name of a specific embassy, mission, or consulate, but not those words when used generally.

the British Embassy, the Embassy

the British Embassies in Paris and Rome

the US Mission, a spokesman for the Mission

the French Consulate, the Consulate, during Consulate hours

but
reports from African embassies
employees skilled in consulate operations
members of diplomatic missions
US embassy guards in the African states

1.10. Religious Terms

Capitalize the names of religious, religious bodies, and the terms for their adherents and writings.

the Bible

Islam

Methodist Church (but the church)

Biblical text

a Jew

a Muslim

Catholicism

Judaism the Koran

a Protestant

Christianity

uic Noian

the Talmud

an Episcopalian Koranic law

Talmudic scholar

Do not capitalize such terms when they are used in a nonreligious sense.

This style guide, which should be the bible for intelligence writers, attempts to be catholic in its approach to English usage.

1.11. Titles of Religious Leaders

The terms for and titles of religious leaders are capitalized preceding a name and occasionally following the name or when used alone.

Bishop Tutu, the Bishop; but appointment of a bishop. (In a political context simply use the name for subsequent reference: meetings between Tutu and the authorities.)

Pope Benedict XVI . . . the Pope; but election of a pope; future popes; papal, papacy

1.12. Political Parties and Similar Groups

Capitalize the full or shortened name of a political party but not the word party standing alone.

the Chinese Communist Party, the party, the CCP

the Italian Socialist Party, the Socialist Party, the PSI

the Christian Democratic Union, the party, the CDU

the British (or Australian or New Zealand) Labor2 Party, the party, Labor's chances in the election

1.13. Political Philosophies

Capitalize words referring to members of organized parties but not words referring to political philosophies and their adherents.

a Socialist, a Liberal, a Laborite, a Conservative, a Tory, a Social Christian, a Christian Socialist, a Communist (all party members)

A British socialist is likely to be a member of the Labor Party.

The socialist parties of Western Europe include the British Labor Party and the German Social Democratic Party.

²Note that, even in proper names, we always use the American spelling for English words spelled differently in the British Commonwealth.

Not all liberal European parties have the word liberal in their names.

a communist opposition party called the People's Party

The communist³ countries today are China, Cuba, North Korea, Laos, and Vietnam.

Eurocommunism

but

Christian Democracy, Christian Democrat, Christian Democratic (both the C and the D are uppercased)

1.14. Geographic Terms

1.14a. Direction

A geographic term used to denote mere direction or position on the earth4 is not a proper name and is not capitalized.

north, south, east, west, south-central, far north

northerly, eastward, western, far western

east coast, southern France, central Europe

the polar region, polar icecap; the Arctic Circle, the Arctic region (lowercase as descriptive adjective: arctic clothing, conditions, etc.)

Latitude (zero to 90 degrees) and longitude (zero to 180 degrees) continue to describe position on the earth, but context and space limitations allow for differences in format beyond the traditional symbols used to designate degrees, minutes, and seconds (when needed).

Either 55° 45' north latitude, 37° 35' east longitude or 55 45 north latitude, 37 35 east longitude may be used in the text of a paper, as long as use is consistent.

The format 55 45 N 37 35 E is preferred on a map or graphic.

Six digits set solid (554500N) is preferred in a table or matrix with latitude as a header and seven digits set solid (0373500E) with longitude as a header.

1.14b. Special Geographic Groupings

Geographic terms often become part of a proper name for a definite region, geographic feature, or political grouping and are capitalized.

the West, the East, Western countries, East-West dialogue

the Western Hemisphere, the North Pole, the Caribbean Basin, the San Andreas Fault, the Equator

the Continent (meaning continental Europe)

but

the coterminous, or contiguous, United States (meaning the first 48 states) and the continental United States (meaning the first 48 states plus Alaska)

Greater Moscow, Metropolitan Moscow (but Moscow metropolitan area)

North and South, capitalized, are often used as abbreviations of the two Koreas or to refer, respectively, to the developed and developing countries, as in "the North-South dialogue."

³Communist countries and parties often call themselves "Socialist" or "socialist." In paraphrasing communist statements, put such references in quotation marks. The same applies to *imperialism* and *imperialist* (and to *anti-imperialism* and *anti-imperialist*), which are terms communists use in describing their opponents.

⁴Capitalize *Earth, Moon,* and *Sun* only in extraterrestrial contexts. Earth orbit, Moon landing, orbit the Sun; *but* earth's topography, moonlight, sunshine.

Some capitalized geographic terms are used to divide the world into groups of countries for purposes of intelligence reporting.

Middle East or Middle Eastern (preferred over Near East, Mideast)

North Africa (occasionally North-Central Africa)

Sub-Saharan Africa

West Africa, East Africa

but

black Africa, southern Africa (South Africa refers only to the republic)

South Asia (sometimes Southwest or Southeast Asia)

East Asia (preferred over Far East)

Oceania (note also North or South Pacific, the Pacific Rim, but eastern, western Pacific)

Western Europe, West European

Eastern Europe, East European

Latin America

Middle America

Central America

Some countries fall into more than one category, depending on the context. In some reports, countries logically belonging in a geographic category are grouped separately by some other criterion, such as membership in NATO. The Arab states are often treated as a group in papers on the Middle East. And the terms Middle America and Central America are not synonymous. Be careful, therefore, to explain any such groupings or any deviations from normal geographic categories in a prefatory note or a footnote.

1.15. Nationalities, Tribes, and Other Groups of People

Capitalize the names of racial, linguistic, tribal, ethnic, and religious groupings such as the following. Check *The World Factbook* for specific groupings in a country.

| African-American | Colored ⁶ | Mongol |
|------------------------------|----------------------|----------------|
| Amerindian | Creole | Mongoloid |
| Arab | Indian | Mormon |
| Aryan | Indo-Chinese | Negro, Negroid |
| Asian | Indo-European | Nordic |
| Bedouin (ethnic population)5 | Jewish | Oriental |
| Berber | KwaZulu | Polynesian |
| Bushman | Magyar | Pygmy |
| Caucasian | Malay | Walloon |
| Caucasoid | Maori | Zulu |

Do not capitalize the following terms based on racial origin, size, and local or other usage. (Some terms of this sort can have offensive connotations and, of course, should never be used.)

| aborigine, aboriginal | bushman (general sense) | overseas (as in overseas Chinese) |
|-----------------------------|-------------------------|-----------------------------------|
| animist | mestizo | pygmy (general sense) |
| bedouin (nomadic lifestyle) | mulatto | white |
| black | • | |

⁵See bedouin in chapter 9.

⁶The capitalized term Colored is used in reporting on South Africa and (historically) other white-populated areas of Africa. Except in the way it is spelled here (Colored, not Coloured) the term conforms to local usage.

1.16. Coined Names

A coined name or short form for a military, economic, political; or other grouping is capitalized.

the Alliance, Allied (adjective), and Allies in reference to NATO (uppercasing is needed for clarity; otherwise lowercase)

the Contras

the European Union, the Union, the EU member states

the Free World (use noncommunist world in all but historical contexts)

the Group of Eight (G-8)

the Intelligence Community

Nonaligned Movement

Six-Party Talks

but

Camp David accords, Geneva accords, Helsinki accords, Amman accords, Dayton accords,

Paris accords

the establishment

fifth column

the occupied territories

Persian Gulf states, the Gulf states

stealth bomber, stealth technology, counterstealth

1.17. Holidays, Religious Feasts, and Historic and Other Significant Events

Many of the examples in this section need capitalization to give them the emphasis or prominence essential to understanding their meaning, especially when they are used out of context.

the Cold War

the Holocaust

Ramadan

the Cultural Revolution

Independence Day

the Renaissance

D-Day

New Year's Day

the Six-Day War⁷

the Depression

the October War⁷

World War II

the Feast of the Passover

the 23rd Party Congress

the Great Leap Forward

the Prague Spring

1.18. Trade Names

Trade names (such as *Velcro*, *Kleenex*, or *Teflon*) should be capitalized or replaced with a generic term.

air-cushion vehicle (ACV) or hover craft (unless it is a real Hovercraft)

fiberglass (unless it is Owens-Corning Fiberglas)

oxytetracycline (unless the physician specifically prescribed Terramycin)

a photocopy (unless it is known to be a Xerox copy or a Kodak copy)

tracked vehicles (unless they have genuine Caterpillar treads)

a canning jar (unless it is a real Ball or Mason jar)

⁷Capitalize the W in October War or Six-Day War because either term as a whole is a distinguishing coined name, but 1973 Middle East war or 1967 Arab-Israeli war is distinguishing enough without the capital W. Avoid Yom Kippur war, which is slangy. Do not uppercase the w in Korean war, which was "undeclared"; the same logic applies to Vietnam war and Falklands war, and a similar convention (if not logic) to Iran-Iraq war.

Sometimes an acceptable replacement is hard to find. For example, "Ping-Pong diplomacy," the catchphrase once used to describe the exchange of sport and cultural delegations between the United States and China, was probably not entirely accurate even with the trade name uppercased but was certainly preferable to "table tennis diplomacy." Usage eventually pushes bestselling trademarks into the generic language—and in some cases, such as jeep, the generic preceded the trade name. For instance, the following once-capitalized names are now listed in the Merriam-Webster dictionary in lowercase: celluloid, deep-freeze, dry ice, photostat, and zipper.

1.19. Titles of Persons

1.19a. Before the Name

Capitalize any valid title (or short form of it) immediately preceding a person's name. The plural form of the title preceding more than one name is also capitalized. In front of a title, the prefix ex (followed by a hyphen or an en dash) and the adjectives former and then (neither followed by a hyphen) are not capitalized; neither are the suffixes designate and elect. Do not confuse a mere description with a title by capitalizing it.

President Sarkozy, Acting President Ghimpu, Defense Minister Barak, First Deputy Premier Shuvalov

Prime Ministers Cameron and Cowen

former Prime Minister Callaghan, then Defense Minister Sharon, ex-President Lopez, ex-Foreign Minister Gromyko, President-elect Salinas, Permanent Representative-designate to the LIN Dauth

the late PLO Chairman Arafat (but former PLO leader Arafat)

Chief Justice Ramirez, Associate Justice Alberti, Justices Alberti and Ramirez

Bishop Jones, Chairman Smith, Prof. Mary Brown, Professor Brown

Mayor Black, Assistant Principal Jones

First Lady Margarita Zavala de Calderon

party Secretary Brown (uppercase any party top leader's formal title preceding the name), ruling-party Chairman Jones

vice-presidential candidate Gonzalez, pianist Ray Charles

Avoid preceding a name with more than one title. Use the more important one first, and then the other later in the text if necessary or if desired for variation.

onetime Minister of Defense Yazov . . . Marshal Yazov the late President Pinochet . . . General Pinochet

1.19b. After or in Place of the Name

Generally, a title standing alone is lowercased unless it refers to an incumbent—present or past (but not future). To indicate preeminence or distinction in certain instances, capitalize a common-noun title or shortened title when it follows the name of a person or is used alone in reference to the person to whom the title belongs or belonged. The plural form of such a title is also capitalized as appropriate. So is the word *Acting* if it is a valid part of a capitalized title. Do not capitalize such a title when it refers to the office rather than the individual or when it is used generally.

1.19b1. Head or Assistant Head of State or Government⁸; Royal Heir Apparent

Nicolas Sarkozy, President of France

the President

the Prime Ministers of Italy and France

the Premier-designate, the Vice President-elect

the woman designated as Premier, the man elected Vice President

the former Vice President, an ex-President

the then Secretary General

destined to be king

a younger head of state

the new chief of state

note also

the First Lady, the First Family (but the royal family)

1.19b2. Top Officials, National Government Unit; Principal Members, Legislative and Judicial Branches

David Wright Miliband, Secretary of State for Foreign and Commonwealth Affairs

the Acting Foreign Secretary

the Minister of Foreign Affairs, the Foreign Minister

the Deputy Minister of Foreign Affairs

Minister Without Portfolio

the Chief Justice

the President of the Senate, the President

the Speaker of the House, the Speaker

Bank of Canada Governor Carney

but

a deputy minister of foreign affairs, a first deputy premier

shadow minister, shadow chancellor of the Exchequer, shadow foreign secretary

the senator, the representative, the congressman, the assemblyman

the member of Parliament (never parliamentarian—see chapter 9)

a deputy in the National Assembly

an associate justice

chairman of the Foreign Affairs Committee

the deputy chairman

1.19b3. Officers of Party Organizations in Communist Countries

Cuban Communist Party First Secretary Fidel Castro

Hu Jintao, General Secretary of the Communist Party of China

party General Secretary Hu

the General Secretary, the party General Secretary

⁶Capitalize *Presidential* in any reference to a present or past US President (Presidential vetoes, decisions, proclamations, etc.) but not a reference to a future one (the 2012 presidential election) or to the office generally (presidential powers under the US Constitution). Outside the US context, lowercase *presidential* and other adjectives referring generally to government offices unless they are part of an official name or title: Presidential (Ministerial, Vice-Presidential) Liaison Office(r); *but* presidential action, ambassadorial courtesies, prime-ministerial caliber.

but

Politburo member Ricardo Alarcon party secretary Juan Almeida the party secretary responsible for agriculture a full member or candidate member of the party Politburo the general secretary of the Italian Communist Party

1.19b4. Top Officials of First-Order Subnational Administrative Divisions

Jean Charest, Premier of Quebec
the Vice Premier of Quebec
the Governor of Connecticut
the Lieutenant Governor of Virginia
the Acting Governor of Maryland
the Armenian Republic First Secretary

1.19b5. Top Officers in a Military Service

Commander in Chief of the Chilean Army; the Commander in Chief Chief of Staff, Brazilian Air Force
Deputy Chief of Staff
but
the quartermaster
commander, IV Corps
chief, G-2 (Intelligence Branch), Army Headquarters
the general (military title standing alone not capitalized)

1.19b6. Principal Official of an International Organization

the Secretary General
the current Secretaries General of the UN and the OAS

1.19b7. Principal Members of the Diplomatic Corps

the Ambassador, the British Ambassador⁹ the Deputy Chief of Mission the Minister, the Charge, the Consul General, Minister Plenipotentiary but

the counselor of embassy, the economic counselor, the first secretary, the US defense attache, the consul, the rank of ambassador, ambassadors at the conference (general use)

⁹There are four levels of ambassadorship. 1) Ambassador-nominee: a person who has been designated by a government as ambassador but for whose appointment the United States has not granted agreement.

2) Ambassador-designate: a person whose government has obtained agreement for appointment but who has not yet taken up the post. 3) Appointed Ambassador: a person who has presented credentials to the Secretary of State or designee but not to the President. 4) Ambassador: a person who has presented credentials to the President.

1.20. Publications

1.20a. Titles in English

Capitalize the first letter of the initial word, that of the final word, and that of any principal word in titles of publications and the like (books, newspapers, magazines, articles, series, reports, speeches, plays, movies, musical compositions, works of art, and historical documents). Principal words include all nouns, pronouns, verbs (including the to in an infinitive), adjectives, and adverbs; the preposition via, as well as per when part of a unit modifier; any other word of more than three letters; the first word following a colon or em dash within a title; and parts of compounds that would be capitalized standing alone (Long-Term, President-Elect, Re-Creation, Follow-On, Trade-Off but Balance-of-Payments Problems, Nine-to-Five Schedule, Co-op Formation). If a normally lowercased short word is used in juxtaposition with a capitalized word of like significance, it should also be capitalized (Buildings In and Near Minneapolis, Construction "On the Cheap").

1.20b. Shortened Titles

The above rule is sometimes modified to apply to accepted shortened titles of some publications and historic documents.

article in The Washington Post; quoted in the Post article
reported in The Times; from the London Times¹⁰
Quadripartite Agreement; the Agreement
Balfour Declaration; the Declaration (but a British white paper)
the Ruritanian Constitution; the Constitution
but
The 1962 Constitution was a vast improvement over earlier constitutions.
Writers of constitutions (general use) and compilers of style guides are kindred souls.

1.20c. Laws and Treaties

Capitalize the first word and all other important words in the formal titles or distinguishing shortened names of federal, state, or foreign documents. If a descriptive term is used, or if the document is still in draft form, use lowercase. The names of ratified treaties are capitalized when rendered in full. For treaties that have not been ratified, the *t* in treaty should always be lowercase.

Bill of Rights
START Treaty, the treaty, New START Treaty
Treaty of Paris, the treaty
Kyoto treaty

1.20d. Foreign Titles

Capitalization of titles that must be given in a language other than English should conform to the practice in that language.

¹⁰Always word references to the London Times so as to avoid confusion with The New York Times and vice versa.

1.21. Graphics, Tables, and Chapters

The rule in section 1.20 concerning capitalization of titles of publications and the like also applies to titles of graphics, tables, chapter and part headings, headlines, and the equivalent, but not to annotations (such as arrowed captions or callouts) on a photograph, map, or other graphic—for which only the first letter of the initial word is capitalized. If a number given as a figure begins such a caption the word following it is *not* capitalized.

200-mile limit (not 200-Mile limit or 200-mile Limit)

1.22. Cross-References

The common nouns used in numeral or letter designations of chapters, parts, graphics, tables, etc. are not usually parts of titles and are not capitalized in cross-references.

covered in chapter III, volume I refer to appendix B (see figure 13) (detailed in table A-4) disagrees with section 27

1.23. Indented Bullet or Dash Paragraphs

Capitalize the first letter of each entry in a series of blocks of text indented for emphasis and introduced by a bullet or an em dash.

1.24. Miscellany

1.24a. Seasons¹¹

Do not capitalize *spring*, *summer*, *fall* (*autumn*), or *winter*. As a general rule, use the definite article in referring to a season and use *of* before the year.

in the fall of 2009
but
her fall 2009 election triumph

1.24b. Major Storms

Capitalize hurricane and typhoon as part of a US National Weather Service name for such a storm, as in Hurricane Katrina or Typhoon Morakot. Both terms designate types of cyclones, as does tornado, but personalization has not been applied to cyclones, tornadoes, or waterspouts (tornadoes gone to sea). In view of the confusion of nomenclature, be sure of what you are talking about before you write about it.

¹¹Avoid seasonal references in any writing about the Southern Hemisphere.

2. NUMBERS

2.1. Basic Guidance

Although the reader comprehends figures more readily than numbers spelled out, particularly in technical, scientific, or statistical matter, typographic appearance and other special reasons often call for spelling out numbers rather than using figures.

2.2. Numbers of 10 or More

Except in the first word of a sentence, write numbers of 10 or more in figures, not in spelled-out words.

Her tour covered 11 countries in 16 days.

Sixteen days on the road left him exhausted. (Better: He was exhausted after 16 days on the road.)

2.3. Numbers Under 10

Spell out most numbers under 10, but use figures if such numbers are decimals, ages of persons, percentages, specific amounts of money, or numbers used with units of measure other than time.

For five years the county has provided free preschool classes for 5-year-olds.

They visited six countries in Asia, three in Africa, and two in Europe, spending an average of 1.45 days in each country.

He walked 6 kilometers every 2.5 days (but every two days).

She spent 8 percent of her time in Europe.

He overspent his daily allowance by an average of \$7.

The jet's top speed was Mach 2.2.

2.4. Mixes of Numbers Above and Below 10

Combinations of numbers on either side of 10 follow the basic rules governing numbers set forth above.

The estimate covers the period five to 10 years from now.

He packed two suits, 12 shirts, and three ties.

She had 14 children (three daughters and 11 sons).

The measure lacked three of the 34 votes needed for approval.

The attack involved about 200 troops, 12 tanks, and two aircraft.

2.5. Ordinal Numbers

The rules governing cardinal numbers generally apply to ordinal numbers, except that military units are always designated by figures (again, unless the figure unavoidably comes at the beginning of a sentence), and fractions are usually written out.

First Congress 82nd Congress
ninth century 20th century
seventh region 17th region
fifth anniversary 50th anniversary
first grade 11th grade

3rd Army 2nd Infantry Division
323rd Fighter Wing 1028th Brigade
9th Naval District 7th Fleet

VI Corps (Army usage)

2.6. Indefinite Numbers

Except with words such as about, nearly, more than, and approximately, references to quantities in an indefinite sense usually are not written with figures.

XII Corps

The project will cost the government tens of millions.

He addressed several thousand people.

She answered hundreds of questions.

but

He spent about 30 hours on his trip report and had to wait more than 15 days to be reimbursed for expenses.

2.7. Figures of 1,000 or More

Numbers with more than three digits are written with commas, except for years, radiofrequencies, military unit designators, clock time, most serial numbers, and the fractional portions of decimal numbers.

She had traveled 6,187 kilometers as of 1400 hours.

A force of 20,000 (never 20 thousand) troops was needed.

According to some sources, there were 1,076,245 US casualties in World War II.

The station operated on a frequency of 1800 kHz.

He was assigned to the 1028th Brigade.

He picked up job number 518225 10-88.

The exact weight is 3,399.243046 grams.

The next step is to multiply by 3.1416.

2.8. Millions and Billions

Numbers over 999,999 are rounded unless an exact amount must be stated. Spell out *million* or *billion* preceded by a figure rounded usually to no more than two decimal places.

The world population today is more than 6.8 billion.

The US population is about 309 million.

The number of Americans dead and wounded in World War II totaled 1,076,245.

More than 16.35 million Americans served in World War II—more than three times the 4.74 million in World War I.

Estimates range between \$10 million and \$20 million (not between \$10 and \$20 million).

The cost is estimated at \$10-20 million.

2.9. Numerical Unit Modifiers

Numerical unit modifiers are written with hyphens.

third-level decision five-year plan12

20-kilometer (or 20-km) march

105-millimeter (preferred 105-mm) guns

eleventh-hour decision

7-meter (never 7-m)¹³ limit

10-room house

.45-caliber pistol

20th-century progress

50-billion-ruble budget (but \$50 billion program) 2-million-barrel-per-day

200-million-euro loan (but \$200 million sale)

(or 2-million-b/d) output

3-million-man army

6-percent increase, 6- to 7-percent (or 6-to-7-percent)

a 1-cent increase

increase (but 6 percent short)

one- and two-bath apartments

2.10. Possessives

Numerical expressions in the possessive case require an apostrophe but not a hyphen.

After five years' planning, the project got under way.

She put 16 days' work into the project.

The new regime bought several million dollars' worth of arms (but \$20 million worth).

2.11. Ranges of Numbers

2.11a. Below the Millions

In order to prevent typographical error or misreading in ranges of numbers, use prepositions and conjunctions rather than hyphens, except for years, page or paragraph references, and values in the millions.

The march covered 10 to 15 kilometers (not 10-15 kilometers).

The league membership is between 15,000 and 20,000 (not 15,000-20,000).

Model numbers 847,312 through 873,214 were recalled (not 847,312-873,214).

This report covers the years 2005-09.

For further information, see pages 12-25.

¹²The hyphen is retained in capitalized forms of this term.

 $^{^{13}}$ Abbreviations of units of measure, including abbreviations formed by a single letter (such as m for meter), are acceptable in appropriate circumstances, such as in tables or in texts making frequent references to specific quantities. One exception, however, is a hyphenated modifier with a single-letter abbreviation, such as 7-m or 20-L. Such compounds are confusing and should be avoided. Instead, spell them out (7-meter, 20-liter) or change the unit of measure (700-cm, 20,000-mL). Potentially confusing also are the abbreviations m^2 and m^3 , which, although proper metric forms, can sometimes be mistaken for footnote references. Spelling out square meter(s) or cubic meter(s) is preferred, or sq m and cu m may be used. So may m^2 and m^3 if there is no possibility of ambiguity.

In tabular material, especially where space limitations apply, the use of hyphens in ranges of numbers is usually more appropriate.

Do not use combinations of prepositions and hyphens, such as *between 15,000-20,000* and *from 847,312-873,214*, to express a complete range of values. The final example in section 2.11b below shows the only circumstance in which such a combination would be appropriate.

2.11b. In the Millions

Hyphens may be used in ranges of numbers in the millions and multimillions.

Natural gas reserves are estimated at 20-30 billion cubic feet.

Production rose to 2.0-3.5 million tons annually during the period 1971-75.

The range of estimated construction costs has increased from \$500-600 million to \$2-3 billion. (Do not repeat the dollar sign in ranges like these. Do not write \$500 to \$600 million or \$2 to \$3 billion. Although writing \$500 million to \$600 million or \$2 billion to \$3 billion is correct, such phrasing would be awkward in the sentence above.)

2.12. Numbers in Tables and Graphics and for Pages, Paragraphs, and Footnotes

Such numbers—and sometimes those that immediately follow each bullet or "tick" in a series that highlights quantities—are not subject to the general rules for numerals, nor are numeral designators for tables, graphics, volumes, chapters, and other parts of publications. However, the text portions of footnotes and, unless space constraints dictate otherwise, of tables and graphics are governed by the same rules for numerals that are applicable to the main text.

2.13. References to Numbers as Numbers

Any number referred to as a number is given as a figure unless beginning a sentence with such a reference is unavoidable.

The estimate could be off by a factor of 2 or 3.

The data are rounded to the nearest 5.

Divide by 5 to determine your share.

His lucky number is 7.

but

Seven is his lucky number.

2.14. Numbers in Nonliteral Sense

Numbers used in a metaphorical or figurative sense are spelled out without regard for the basic rules covering numbers above and below 10.

The Minister is famous for eleventh-hour decisions.

Moreover, he is often a hundred percent wrong.

Because he is a shrewd politician he remains number two in the regime instead of number twenty.

There must be a thousand others who could run the Ministry better than he.

2.15. Decimals

Numbers with a decimal point are expressed in figures. Decimal numbers of less than 1 should have a zero before the decimal point except for designations of gun bore or ammunition. Zeros are omitted at the end of a decimal number unless exact measurement is indicated.

0.25 meter (note that the unit of measure is singular)

1.25 centimeters

silver 0.900 fine (exact measurement)

.22-caliber cartridge

2.16. Fractions

Fractions referring to reasonably specific quantities are written out, with a hyphen in both noun and adjective forms.

three-fourths (or three-quarters) of a kilometer14

a two-thirds majority; a majority of two-thirds

one-fifth of the electorate; one-tenth; one-twentieth (or a fifth, a tenth, a twentieth)

but

a quarter of a lifetime

the second quarter of 2009, the last three quarters of 2009, earnings for first quarter 2010, first-quarter earnings

2.17. Mixed Numbers

If possible, avoid a combination of a whole number and a fraction by converting the fraction to a decimal quantity.

5.5 percent (or about 5.5 percent, if you wish to avoid a suggestion of precision)

In nonstatistical contexts, written-out phrases are preferred.

two and a half (not one-half) years ago

two-and-a-half-year trial period (better in some contexts: 30-month trial period)

In statistical texts, however, precise reporting may require mixes of whole numbers and fractions $(5\frac{1}{2}, 4\frac{1}{4})$.

2.18. Expressions of Value

2.18a. US Money

Values expressed in US money are given in figures preceded by a dollar sign. Ordinarily, there is no need for the initials *US* to precede the dollar sign unless the context could allow the reader to assume that dollars other than US dollars are meant. If this is the case and the dollar amounts appear throughout the text, consider adding a footnote such as "Money values in this paper are in US dollars unless otherwise indicated." The word *dollars* is used in an indefinite expression with no figure given or if some definition of the word is needed—such as the year to which the dollar value applies. The word *cents* is used for amounts less than a dollar.

¹⁴Fractional quantities such as this one may sound plural but they take a singular verb (three-fourths of a kilometer is too far to walk). The same is true of any quantitative expression in which the emphasis is on its meaning as a single unit of measure—for example, money (\$500 is too expensive) and time (two years is too long).

Russia spent nearly \$50 million to develop the system.

Motorists in Amsterdam pay about US \$6.50 for a gallon of gasoline; those in Caracas, however, pay only 12 cents a gallon.

Each unit now costs several hundred dollars.

We estimate the system cost the equivalent of 50-60 billion 1987 dollars.

2.18b. Foreign Money

When values are expressed in foreign money, use figures except for indefinite amounts. Because they are unfamiliar to many readers, do not use symbols for foreign currency.

The Israeli-British talks set the unit price at 1,250 pounds sterling (3,065 Israeli pounds).

The construction costs averaged 5 rubles per capita.

The fare is 1 euro.

. A bottle of Japanese beer costs 230 yen in Tokyo.

bu

Meals in London will cost a few pounds more (sterling is understood).

2.19. Percentages and Times Phrases

Numbers showing the relationship of a smaller to a larger quantity are often expressed in percentages, which are always given in figures (75 percent, 6.2 percent, 1 percent, 0.5 percent).

Numbers showing the relationship of a larger quantity to a smaller one are often accompanied by the word *times* and, unless decimals are used, are governed by the basic rules for numbers on either side of 10 (five times as large, 10 times greater, 50 times more frequently, 2.5 times more powerful, two to three times greater).

2.19a. Percentage

The word *percent* is preferred in ordinary text. The percent sign (%) is acceptable in tables and graphics. Unless space is tight, the text portions of tables and graphics should use the word and not the sign to express percentage. Figures are always used for percentage except at the beginning of a sentence that cannot be reworded.

The current five-year plan projects a 20-percent increase by 2015.

Voter turnout dropped 5.7 percent in the second round.

African-Americans make up 5 percent of the student body.

Be careful to distinguish between percent and percentage point.

The inflation rate, which rose only half a percentage point last year, is expected to go up a full 2 or 3 points to 12 or 13 percent in 2010.

2.19b. Times Phrases

Various ways of expressing proportion with the word *times* are shown below. Note that careful wording is needed to avoid a wrong meaning. Sometimes the message is clearer if expressed in percentage. One can also use the suffix *-fold*, although this is somewhat archaic—and awkward when decimal factors are involved. Never use meaningless expressions such as "four times smaller," which sometimes is written by an author who means to say "one-fourth as large."

The number of tanks increased to five times the prewar level. (This is a 400-percent, or fourfold, increase.)

The number of tanks is five times greater than before the war. (This is a 500-percent, or fivefold, increase.)

The number of tanks increased five times. (The tank count went up on five separate occasions by unspecified amounts.)

There are five times as many tanks as there were before the war. (The present number is 400 percent, or four times, greater than the prewar number; is five times the prewar number; and has undergone a fourfold increase.)

If the suffix is attached to a whole number written solid and unhyphenated, spell the resulting word without a hyphen (fourfold, tenfold, twentyfold, hundredfold). Otherwise use a figure and a hyphen (21-fold, 5.75-fold).¹⁵

2.20. Expressions of Time

2.20a. Ages of Persons

These are expressed in figures except at the beginning of a sentence and in approximations by decades.

The general is almost 60 (or 60 years old, but not 60 years of age).

General Manley, 60 (or age 60, but not aged 60), is retiring at the end of the year.

The general must be in his sixties.

Five-year-olds who will reach their 6th birthday by 31 December are eligible.

(Change sentence to begin: All 5-year-olds.)

2.20b. Ages of Inanimate Things

These are given according to the basic rules for numbers above and below 10.

The program is two years old.

Those 30-year-old submarines are being scrapped.

2.20c. Dates16

Intelligence writing follows the military style of stating a date without internal punctuation and with day, month, and year in that order.

The United States declared its independence on 4 July 1776.

Switzerland's Independence Day is celebrated on 1 August.

She graduated in June 1951 (not June, 1951).

Both (word inserted to avoid starting the sentence with a figure) 11 and 26 November were holidays in 2009.

The March-April spring vacation period empties college campuses. (Use a hyphen to separate the months.)

It snowed heavily on the night of 20-21 February. (Use a hyphen to separate the days.)

The play had a three-week run (25 April – 14 May). (Use an en dash—see section 5.9—to separate these dates.)

The base rights ended on 30 April 2008.

¹⁵The principal advantage of *fold* is that it sometimes permits a more precise translation of data reported in a foreign (particularly Slavic) language. A 5.75-fold increase, however, can just as easily be expressed as a 575-percent increase, an increase of 5.75 times the previous level, or an increase to 6.75 times the previous level.

¹⁶See dates as modifiers in chapter 9.

2.20d. Years

Figures designating a continuous period of two or more years are separated by a hyphen meaning "up to and including." For two years, and may be used.

The presidencies of John Adams (1797-1801), William McKinley (1897-1901), and Bill Clinton (1993-2001) were the only ones to span two centuries.

She worked here during the period 1961-96.17

She worked here in 1961 and 1962.

Do not combine from or between with a hyphen instead of to or and. Such combinations (from 1951-77, between 1941-45) are almost always incorrect.

A hyphen may be used to date events that straddle consecutive years representing a continuous period, but do not use one to date related but separate events occurring in two consecutive years.

Training of crewmembers took place during the period 2008-09.

during the winter of 2009-10

during the Argentine summer of 2008-09

Clinton was a US Senator (2001-09) before she became Secretary of State.

The first two submarines were launched in 1960 and 1961 (not 1960-61).

Use a slash, not a hyphen, in a combining form designating a 12-month period occurring in two calendar years, such as a fiscal year or an academic year, and state the type of year and, if necessary, the period covered.¹⁸

The farm made a profit in the 2007/08 crop year (1 July-30 June)¹⁹ but not in 2008/09. Registrations for the academic year 2010/11 are being accepted.

The report covered actual expenditures during fiscal year 2008/09 and made some projections of FY 2009/10 spending. (The abbreviation FY may be used after the first mention of fiscal year, but do not drop the 20. In this illustration it would be equally clear in the second reference to write simply 2009/10, without the FY or the term it stands for.)

2.20e. Decades

Decades are usually expressed with the figure for the initial year followed by an s but not an apostrophe.

All those submarines were constructed in the 1960s (not 60s, '60s, or sixties).

Our estimates were intended to cover the early and middle 1990s. Your figures dealt with the middle and late 1980s.

2.20f. Centuries

In certain special contexts, a century may be referred to in a manner similar to that used for decades (the l800s, the eighteen hundreds), but, in most intelligence writing, ordinal numbers (in the 19th century, 20th-century progress) would be more appropriate.

¹⁷In an expression such as "during the period 1951-77," inclusion of the words "the period" is suggested. If the subject requires repeated reference to such ranges of years, as in economic reporting, the words might be omitted after the first such use. (He composed mainly for motion pictures during the period 1961-64 and twice returned to that medium in 1967-69 and 1974-75. His film music has been compared to that composed at Warners during 1935-50, the heyday of the Viennese-dominated Hollywood school.) In a text prepared for oral presentation write "from 1951 to (or through) 1977."

¹⁸In US Government practice the fiscal year is stated not in a combining form but with the calendar year representing the larger portion of the fiscal year. US fiscal year 2009 began on 1 October 2008 and ended on 30 September 2009. (Japan's fiscal year 2009, on the other hand, began on 1 April 2009 and ended on 31 March 2010.) ¹⁹Note the use of an en dash instead of a hyphen in a timespan joining compound elements; a hyphen would be used if the period were shown as July-June.

2.20g. Clock Time

The time of day is written in the 24-hour system, without internal punctuation.

The managers met at 0845 hours.

The satellite was launched at 1800 EDT (2400 GMT).

The midday break is 1300-1430.

also acceptable

The noon meal was the heaviest of the day.

Many high school students rarely get to bed before midnight.

2.20h. Other Time Expressions

Apart from the situations covered in sections 2.20a through 2.20g, references to time follow the basic rules for numbers above and below 10.

The protest lasted for eight days.

The aircraft were airborne in 11 minutes.

The pulses were seven seconds apart.

Figures are given for three fiscal years.

Some countries structure their economic activities according to five-year plans.

He resigned after his sixth year of service.

Payment is acceptable on the 29th day after the due date.

The Communist regime accounts for just six decades in China's history of more than 40 centuries.

2.21. Units of Measure

The Intelligence Community generally uses the International System of Units (metric system) to express size, specifications, or characteristics of things. Among the acceptable nonmetric units of measure are the kiloton, the nautical mile for sea distances, pounds per square inch (psi), and the knot. Other nonmetric units of measure still in use include barrels (and barrels per day) in reporting on the petroleum industry, the US bushel in reporting on grain production and trade, cubic feet in reporting on natural gas reserves or output, and short tons (not metric tons) in reporting on nuclear weapons.

2.22. Figures With Units of Measure

Figures are used with any unit of measure (excluding units of time) unless an indefinite quantity is stated, in which case the unit is never abbreviated. As a general rule, do not abbreviate units of measure unless they occur frequently in a report. They advanced several hundred kilometers (never several hundred km).

2.23. Other Number Rules

2.23a. Numbers Close Together

When a cardinal number ordinarily given as a figure precedes a numerical unit modifier that normally would use a figure, try to reword the sentence. If this is not possible, spell out one figure, preferably the smaller one.

15 six-meter trees (or 15 trees 6 meters tall) twelve 250-kilogram bombs (or 12 bombs, each weighing 250 kilograms)

2.23b. Ratios, Odds, Scores, Returns

Use numbers for each of these numerical situations.

Women were outnumbered 17 to 1.

The doctor-to-patient ratio was 1:17.

He had a 50-50 chance of winning.

The New Orleans Saints won Super Bowl XLIV, 31 to 17.

The first vote gave the Democrats 21 seats, the Socialists 9, and the Communists 5.

The measure was approved by a 90-to-3 vote.

2.23c. Indefinite Expressions Using Figures

Illustrated in the following examples are numerical expressions that may be required in certain contexts (such as a direct quotation) but are not recommended. Alternative wording is usually available.

100-odd (better: more than 100) species of insects reserves of 50-plus (better: 50 or more) vehicles

2.23d. Scientific Notation

A scientific and technical paper may require exponential expression of quantities in the multimillions: 10¹⁷ watts/cm².

^aThis table covers only a selection of the most frequently encountered nonmetric units. More comprehensive conversion tables are available elsewhere (in *The World Factbook*, for example).

^bSee footnote 13 and section 2.22 for words of caution about proper use of abbreviations of metric units. The National Bureau of Standards holds that shortened forms used to represent units of measure should be called symbols, rather than abbreviations, because no periods are used.

^cIt is best to avoid the word acreage in the metric age, but it has not really been replaced by *hectarage* in the American vernacular. Try area instead.

^dNot *tonnes*. Avoid abbreviation, however, because the *t*, like other one-letter abbreviations, sometimes gets lost in the shuffle. The best approach for metric tons is to establish early in the text of a paper that tons thereafter means *metric tons* and then just use the four-letter word. Occasionally, *MMT* is used to abbreviate *million metric tons* if frequent repetition warrants.

3. ABBREVIATIONS

3.1. General Guidance

Use abbreviations sparingly and only when their meaning is clear. When abbreviations are necessary, use standard forms such as those in the GPO Style Manual and Merriam-Webster's Collegiate Dictionary, or other forms that have gained acceptance. In CIA usage, periods are usually omitted in all but a few categories of abbreviations, such as academic degrees (B.A., Ph.D.), export/import terms (f.o.b., c.i.f.), and ranks or titles (Gen., Prof., Dr.). (Abbreviations for military ranks are in section 3.7.)

3.2. First Reference

An organization, group, international agreement, unit of measure, weapon system, or the like that is referred to throughout a report is abbreviated after it is spelled out at the first reference, often with its abbreviation following it in parentheses. (In long reports, as a convenience to the reader, repeat the full designation occasionally without respecifying the abbreviation, but continue thereafter to use the abbreviation as before.)

Non-Proliferation Treaty (NPT)
nautical mile (nm)
multiple reentry vehicles (MRVs)
airborne warning and control system (The carriers are AWACS aircraft, never AWACs, as in "one AWAC, two AWACs.")

Omit the parenthetical insertion if the first use of the abbreviation closely follows the spelled-out name or term and the connection between the two is clear. This approach is particularly applicable to long country names that, because of repeated mention, need to be abbreviated after the first reference.

The newer models, with a range of 500 nautical miles, are replacing the 400-nm versions now widely deployed.

The United Arab Emirates is . . . the UAE is . . . a UAE delegation arrived 20

Sometimes it is appropriate to give an abbreviation first, with the full title or other identification in parentheses, or set off by commas, immediately afterward.

WHO (World Health Organization) ITAR-TASS, the Russian news agency Pemex (Petroleos Mexicanos)

²⁰Note that some country names, like this one, are plural in construction but take singular verbs. Some country names are compounds, but that form is ignored for both syntactic and adjectival purposes—*Trinidad and Tobago is* (adjective: *Trinidadian*); Sao Tome and *Principe is* (adjective: Sao Tomean).

3.3. Well-Known Abbreviations

Some abbreviations are widely recognized and need no explanation. Even these, however, should be spelled out if the context suggests a need to do so or if there is any doubt about clarity.

3.4. Foreign Terms

The name of a foreign institution is spelled out in English, if possible, but the commonly used abbreviation may be used even if it is drawn from the foreign wording.

Struggle of Filipino Democrats (LDP)

3.5. Incomplete or Possessive References

Avoid wording that would put an abbreviation immediately after an incomplete or possessive form of the name abbreviated.

the ban under the Non-Proliferation Treaty (NPT), *not* the Non-Proliferation Treaty's (NPT) ban the platform of the Liberal Democratic Party (LDP), or the Liberal Democratic Party (LDP) platform, *not* the Liberal Democratic (LDP) platform

3.6. Plural Forms

If the logical place to spell out an abbreviation comes when the term is plural, the abbreviation must also be in the plural form, even though the singular is used thereafter.

multiple independently targetable reentry vehicles (MIRVs)

3.7. Military Ranks

These abbreviations for the most commonly used military ranks are used only when they precede proper names, preferably full names. In general usage, the ranks are spelled out in lowercase.

admiral Adm. Army Gen. army general Brig. brigadier Brig. Gen. brigadier general captain Capt. **CWO** chief warrant officer Col. colonel Cdr. commander Cpl. corporal ensign Ens. first lieutenant 1st Lt. fleet admiral Flt. Adm. Gen. general Lt. lieutenant Lt. Col. lieutenant colonel Lt. Cdr. lieutenant commander lieutenant general Lt. Gen. Lt. (jg) lieutenant junior grade major Maj. major general Maj. Gen. marshal Mar. Pvt. private Rear Adm. rear admiral Ret. retired 2nd Lt. second lieutenant sergeant Sgt. Vice Adm. vice admiral

3.8. Unusual Forms

3.8a. MIRVs

WO

This acronymic abbreviation is almost always plural as a noun; note the lowercase s. The term also has a verb form, which in turn has participial and negative forms.

If the Soviets had decided to MIRV all their ICBMs . . .

warrant officer

Producing an unMIRVed version of the ICBM system . . .

Stop deploying non-MIRVed missiles after a certain date . . .

3.8b. SALT, MBFR, INF21

Sometimes an abbreviation not ending in § stands for a plural term, as in SALT (strategic arms limitation talks). Note that uppercase is not used in spelling out these terms. The abbreviation SAL (strategic arms limitation) is also used and, in context, often is clear enough to preclude any need to spell out. The negotiating rounds at Geneva in the 1970s have generally been abbreviated SALT I and SALT II. Note that it is redundant to write "SALT talks." This is not the case with "MBFR talks," in which the abbreviation (less familiar than SALT and therefore probably requiring explanation) covers only the purpose of the talks—mutual and balanced force reduction. The same logic applies to "INF talks"—negotiations concerning intermediate-range nuclear forces. It is customary not to use an article with these abbreviations. Although the term that SALT stands for is plural, the abbreviation is construed as singular (SALT was a high-priority issue in Brezhnev's foreign policy).

3.9. Country Names

3.9a. US, UK

The preferred style is to use the abbreviation for our own country only in the adjective form (a US initiative, but favored by the United States). This is not a rigid rule; the abbreviation may be used in graphics or text where space constraints dictate its use. In general, neither the full name United States of America nor the abbreviation USA is used.

Our style with respect to references to the United Kingdom of Great Britain and Northern Ireland is flexible to the same degree that it is for the United States. *Britain* or *Great Britain* is often used as the shortened form of the country name, but *the United Kingdom* (note the lowercase *t* in *the*) is preferred. *UK* is acceptable as an adjective or, preceded by the definite article, as a noun, except in cases where "sparing use" obliges us to avoid it. *British* is also an acceptable adjective—according to some authorities, it is the preferred one.

3.9b. China

The full name of the People's Republic of China usually is shortened to China, although PRC may be used. Chinese is the preferred adjective and refers only to the mainland. For what we used to call Nationalist China or the Republic of China, use only Taiwan, both as a noun and as an adjective. For variation Taipei may be used in either noun or adjective form (for example, the officials in Taipei, or the Taipei authorities), but avoid Taiwanese as an adjective referring to the island's administration or its officials (and do not use the term Taiwanese government). The terms Communist China (and Chinese Communist) and Nationalist China (and Chinese Nationalist) or Republic of China should be used only in historical contexts. (See China, Taiwan in chapter 9.)

3.9c. Miscellaneous Rules

Do not abbreviate when a country is mentioned only once or twice, or when it is included in a series in which other country names are spelled out. Most countries have long official names that have been shortened to forms now preferred by the US Board on Geographic Names. Some examples are Australia (Commonwealth of Australia), Mexico (United Mexican States), and South Africa (Republic of South Africa; this full name would be preferred in some contexts to avoid confusion—for instance, a text on the situation in southern Africa as a whole).

²¹All three of these terms refer to past events and should be used only in a historical context.

3.10. Titles of Persons

3.10a. Civil or Military

Most civil or military titles preceding a name are abbreviated if followed by both a given name or initial and a surname. Senator, Representative, Commodore, and Commandant are never abbreviated. Doctor is always abbreviated as a title.

Prof. Mary Jones, Professor Jones; Gen. J. F. Smith (note space between initials), General Smith Representative Henry Brown, Representative Brown Dr. Robert Young, Dr. Young

3.10b. Complimentary

Complimentary titles (Mr., Mrs., Ms., M., MM., Messrs., Mlle., Mme.) are also abbreviated at all times but are rarely necessary in intelligence writing. Except in biographic reports, the only title we should use is an official one at the first mention of a person's name. After that, refer to the person by last name or by title, treating males and females alike.

Foreign Minister Spiknayskaya is expected to take part in the conference only long enough to deliver her government's opening position statement. After her departure the principal negotiator will be Ambassador Faytfirskiy, a protege of the Foreign Minister. He is, in fact, a strong candidate to succeed Spiknayskaya when she retires.

In a biographic report mentioning the spouse or other relatives of a person who is the subject of the report, a complimentary title might be needed to ensure clarity.

President Amigo's family will accompany her on the visit. Her husband, Luis, is a concert pianist. Mr. Amigo, while politically active, has never run for office.

3.11. Latin Abbreviations

Avoid Latin abbreviations (such as op. cit., et al., and ibid.) except in footnotes and bibliographies. For the most part, the abbreviations e.g. and i.e. can be replaced by for example or for instance (instead of e.g.) and that is (instead of i.e.)—all three phrases followed by a comma. Likewise, use namely or that is (followed by a comma) instead of viz. Another Latin abbreviation to be avoided is etc., because it is, in general, not appropriate in formal writing. [No doubt, some reader will point out that etc. is used many times in this publication. The compiler apologizes for confusing anyone but notes that style guides have a somewhat different set of rules from intelligence reports.] If these abbreviations must be used, they retain the periods and are not italicized. Nor is versus italicized, either spelled out (preferred in a title or heading) or abbreviated (vs.).

3.12. Political Subdivisions

As a general rule, do not abbreviate the names of political subdivisions such as provinces, departments, or states (US or foreign). Abbreviation of states of the United States or provinces of Canada is acceptable to distinguish cities of the same names in different jurisdictions if the names are used repeatedly. Most of the time there is no need to use political subdivisions for well-known cities such as Toronto, Montreal, New York, and Washington (the DC is almost never necessary in intelligence contexts). Do distinguish Saint John, New Brunswick, from Saint John's, Newfoundland, if the text does not make clear which one is in question; London, Ontario, from London, England; and Vancouver, Washington, from Vancouver, British Columbia.

It is not necessary to put the name of the country after that of any well-known city (Bern, Islamabad, Canberra, Brasilia), even if it is not the capital (Geneva, Karachi, Sydney, Rio de Janeiro). Use country names with cities not well known.

3.13. Months and Days

Do not abbreviate the names of months or days except to save space in tables or graphics.

3.14. Percent

Do not abbreviate *percent* except to save space in tables or graphics, where the symbol (%) may be used.

3.15. Units of Measure

Do not abbreviate a unit of measure used in a general or approximate (dataless) sense. Do not abbreviate or use symbols for one or just a few isolated units of measure²² within text even when precise quantities are given. But do abbreviate units of measure used throughout the text of a report.

This report includes for each city the temperatures (in degrees Celsius) during the trip; the hottest was Washington's (35 $^{\circ}$ C).

Ranges are given in kilometers.

The opening was several meters wide.

The system has a capacity of 3,000 Btu.

Standard Symbols for Units of Measure:

|-----|----------------------|---------|-------------------------------|
| ac | alternating current | kt | kiloton |
| AF | audiofrequency | kV | kilovolt |
| Ah | ampere-hour | : kVA | kilovoltampere |
| A/r | n ampere per meter | kW | kilowatt |

²²Note that these abbreviations (symbols) do not have plural forms. Be particularly alert to the fact that the lowercase and uppercase forms of the same letter have different meanings in metric abbreviations (*K*, *Kelvin*; *k*, *kilo*; *M*, *mega*; *m*, *meter*). Be aware also that a capital *L* now is specified as the abbreviation for *liter*.

3.16. Ambiguous Abbreviations

Do not use without explanation (if possible, avoid altogether) an abbreviation that can be construed in different ways. *NA*, for example, has been used in tables to mean *not available* as well as *not applicable*. Current practice is to use *NA* only to mean not available. The absence of an entry is assumed to mean not applicable.

Another ambiguous abbreviation is MT, which for some writers stands for metric tons (the proper abbreviation for which is t), but which others have used to mean megatons (correctly abbreviated Mt).

Still another source of confusion is the improper *kts* for *knots* (which, if abbreviated at all, should be shortened to *kn*). The *kts* is easily mistaken for *kilotons* (correctly abbreviated *kt*).

Finally, the abbreviation C^3 , C_3 , C_3 , or any of its confusing forms is discouraged—it is supposed to mean *command*, *control*, and *communications* but, in careless use, often does not. The preferred form requires a larger-than-normal superior number— C^3 —to distinguish it from the smaller variety used for, say, footnote references.

4. ITALICS

4.1. Prominence or Emphasis

The primary purpose of italic type is to give prominence or emphasis to particular words and phrases; italics should be used sparingly so as not to defeat this purpose.

All members of the working group except the representative of the Central Intelligence Agency believed that the Ruritanians would choose a phased development over the next five years. CIA held to its position that they would try to complete the project by the end of 2012.

4.2. Titles

Use italic type for titles of books, periodicals, or works of art (including the performing arts—plays, compositions, broadcasts, films, etc.).

Philip Caputo's A Rumor of War Michael Jackson's Thriller concert opening with An American in Paris the television medical drama House a subscription to *The New Yorker* a showing of da Vinci's *Mona Lisa* appearing on *American Idol Slumdog Millionaire* won the Best Picture Oscar in 2009.

Use quotation marks for titles of articles or other parts within longer works (see section 5.15a2).

"The Style Invitational" in The Washington Post

4.3. Foreign Words

The need for italicizing or translating foreign words in intelligence reports depends on whether the word or phrase has been naturalized into English, has not been anglicized but is reasonably familiar to American readers, is the title of a publication or work of art, is the name of an organization, or is otherwise governed by some special consideration.

4.3a. Familiar or Anglicized Foreign Words

Do not italicize foreign words and phrases that have been naturalized into English. Italicize but do not translate foreign words and expressions that have not been anglicized but are familiar to American readers or are easily understood by virtue of their similarity to English (an English equivalent is preferred unless the foreign expression has a special meaning).²³

He served as aide-de-camp to the general.

His experience as chef de cabinet was a factor in his nomination.

The speaker was shouted down by crowds chanting, "Democracia, democracia!"

²³See section 6.13 for guidance on the use of diacritical marks in foreign words and phrases.

4.3b. Other Foreign Words

When a non-English word not covered by section 4.3a is used in ordinary text, italicize it and follow it with a translation in parentheses. This need not be a literal translation if a freer interpretation or explanation, even an extensive one, would be more helpful to the reader. The translation is not italicized unless it constitutes a title of a publication or work of art.

The achievement of *enosis* (union)²⁴ with Greece is the all-consuming goal of one segment of the Cypriot population.

Brandt's Ostpolitik (his policy of seeking harmony with the communist world)²⁴ was a hallmark of his chancellorship.

Austria's memories of the Anschluss (annexation by Nazi Germany) in 1938 remain a factor in contemporary politics.

He earned the coveted agregation (secondary-level teaching credential) the following year.

Marcel Proust's A la recherche du temps perdu (In Search of Lost Time) is required reading for Dr. Reboussin's course in French literature.

4.3c. Titles of Publications

As stated in section 4.2, any book or periodical title is italicized. A title in a foreign language may or may not be translated, depending on the title and the context. If a translation is given, it should be in parentheses and in italics (see the final example in section 4.3b above and note that the capitalization style of the original title follows that of the French-language press, whereas the translation follows English-language style).

No translation is needed for such familiar titles as Pravda, Trud, Der Spiegel, Le Monde, Izvestiya, L'Osservatore Romano, Paris Match, and Kommunist. Some titles—People's Daily, for example—have conventionally been cited only in translated form. For this title sometimes and for other titles almost always, an explanation is more relevant and useful than a translation.

People's Daily, official organ of the Chinese Communist Party

Other titles can go either way. For example, Krasnaya zvezda (Red Star) [note that zvezda is not capitalized], the newspaper of the Russian armed forces, is sometimes cited in Russian followed by a translation, but just as often the title is given only in translated form. Either way is acceptable as long as that way is used consistently in the issuance in which the publication is cited.

4.3d. Names of Organizations

Whenever possible, use the English translation, rather than the original language, in referring to the name of a foreign organization, government body, political party, educational institution, corporation, or the like. Often, however, there are compelling reasons—including convention, wide recognition, and untranslatability—for giving such a name in the original language. In such cases, do not italicize the name. If a translation is possible, relevant, or unobvious, supply one in parentheses following the foreign-language name. If appropriate, give instead or in addition an explanation of the name or description of the organization.

the joint Bulgarian-Hungarian building enterprise, Intransmech the Cuban news agency, Prensa Latina the Portuguese-labor organization Intersyndical the Buddhist organization Soka Gakkai and its political arm, Komeito chairwoman of Yayasan Haropan Kita (Our Hope Foundation)

²⁴A translation of enosis or explanation of Ostpolitik would not be necessary in every instance.

the defunct an-Nahda (Renaissance) Party
the Parti Quebecois

4.4. Names of Craft

Do not italicize (or enclose in quotation marks) names of ships, 25 aircraft, or spacecraft.

seizure of the Pueblo launched Soyuz-3 a Yankee-class submarine the Concorde's noise level

4.5. Cited Letters, Words, and Phrases

This style guide provides numerous illustrations of another use of italic type: the citing of a letter, word, or phrase.

words ending in s nonabbreviation of *percent*

 $^{^{\}rm 25}{\rm Do}$ not use feminine pronouns to refer to ships or other craft.

5. PUNCTUATION

5.1. General Principles

Most readers of this style guide already know that punctuation is based on meaning, grammar, syntax, and custom and is used to make writing clear. Even so, there are likely to be selected instances when a writer needs guidance. Such guidance is provided in this chapter. The trend should always be toward reducing the amount of punctuation, but be careful to use phrasing that avoids ambiguity and ensures exact interpretation. The sole aim of the choice and placing of punctuation marks should be to bring out the author's thought more clearly. Omit punctuation marks if they do not aid in reading and prevent misreading.

If you would like more information than is given below, consult the GPO Style Manual, the Gregg Reference Manual, or Merriam-Webster's Collegiate Dictionary for explanation and illustration of punctuation rules that are applicable to intelligence reports..

5.2. Apostrophe

The primary functions of the apostrophe are to show possessive case and, in some cases, to create plural forms. (It is also used to indicate contractions in words such as can't and it's, but these are not appropriate in written English.)

5.2a. Possessives

The possessive case of most nouns and indefinite pronouns is indicated by some combination of the apostrophe and the letter s.

5.2a1. Words That End in an s Sound

If the singular of a word (or acronym or abbreviation) ends in an s sound, add an apostrophe and an s unless the added sibilant is not present in the word's normal pronunciation; in such cases, add only the apostrophe.

the corps' units

Paris's history26

Dickens's novels

PBS's programs

Juarez's troops

the Philippines' outer islands

Nantes' port

the United Arab Emirates' oil

the Netherlands' canals

²⁶To avoid a triple sibilant, exceptions are sometimes made for significant names that already end in a double sibilant; for example, convention favors *Jesus'* and *Moses'*. Another exception is *Achilles'* heel.

If the plural of a word ends in s, add only the apostrophe.

the boys' team

the two leaders' rift

The Joneses' address

the Russians' policy27

5.2a2. Words That Do Not End in an s Sound

If a word (either singular or plural) does not end in an s sound, add an apostrophe and an s.

the child's shoes

the children's shoes

the officer's report

that Thai's28 passport

those Thai's28 passports

the woman's book

5.2a3. Compounds

In compounds, make only the last word possessive.29

commander in chief's decision

secretary general's speech

someone else's hat

Shah of Iran's overthrow

5.2a4. Combinations Indicating Joint Possession

In a combination of two or more nouns for which joint possession is to be indicated, make only the last noun possessive; if individual possession, make both or all nouns possessive.

President Obama and Chancellor Merkel's meeting to discuss Afghanistan and international climate change occurred on 3 November 2009.

Rodgers and Hammerstein's only collaboration specifically for a film was on State Fair.

Clint Eastwood's, Hilary Swank's, and Morgan Freeman's Oscars were all for Million Dollar Baby.

5.2a5. Geographic, Firm, or Organization Names or Publication Titles

In geographic names, firm names, the names of organizations and institutions, and the titles of publications, follow the generally accepted form.

Consumers Digest

Johns Hopkins University

People's Republic

Court of St. James's

Lloyds (bank)

Reader's Digest

Harpers Ferry

Lloyd's (insurance)

Reuters (news agency)

5.2a6. Organized Bodies That End in s

Do not use an apostrophe after names of states or countries and other organized bodies ending in s, or after words more descriptive than possessive, except when the plural does not end in s.

Kansas law

Weight Watchers meeting

National Organization of

League of Nations mandate master's degree

officers club

Women's headquarters

teachers college writers guide

²⁷Use of the possessive in a phrase like this is an easy fix for one of the most frequent writing errors, the antecedentless pronoun, as in "the *Russian* policy toward *their* minorities." Change the adjective *Russian* to the possessive noun *Russians*' to give *their* an antecedent. The reference word (usually an antecedent) for a pronoun must be a noun or another pronoun, never an adjective, like *Russian* in the sample phrase. An early CIA style guide writer called the antecedentless pronoun a moose *track*, as in "There were moose tracks in the snow but none of them could be seen"—the pronoun them does not have a proper antecedent in the noun-turned-adjective moose.

²⁸Note that *Thai* is both singular and plural.

²⁹If the compound is plural (see section 6.5b), use the of possessive (section 5.2b) unless the plural is formed in the final word of the compound: decisions of the attorneys general, *but* the general counsels' decisions.

5.2a7. Personal Pronouns

Do not use the apostrophe with the possessive form of personal pronouns.

his

ours

vours

hers

theirs

its (Do not confuse with the contraction it's [it is].)

5.2b. Possessives With Persons or Inanimate Bodies

As a general rule, the possessive form made up of an apostrophe and an s (the Minister's) is used for nouns denoting persons, and the form combining the preposition of and a noun object is applied to organizations or inanimate things (a decision of the Ministry). However, the s possessive is commonly used for the inanimate in expressions that indicate time (moment's notice, year's labor, two hours' work, a day's pay) and in other familiar phrases (heaven's sake, heart's content, for pity's sake, for old times' sake).

Which possessive form to use often depends on sound or rhythm: the s possessive is more terse than the longer, more sonorous of phrase (morning's beauty, beauty of the morning). In some of phrases, idiom calls for a sort of possessive redundancy—always for a pronoun (friend of his), usually but not necessarily for a proper noun (friend of John's; friend of John Jones), and optionally for a common noun (friend of the author, friend of the author's).

5.2c. Noun or Pronoun Preceding a Gerund

The possessive case is used for a noun or pronoun preceding a gerund if this syntax is unavoidable (try to rephrase).

London announced it had no objection to Rome's taking part: (*Better:* London announced it would not object if Rome took part.)

Economy was one reason for George's buying a small car. (Better: Economy was one reason George bought a small car.)

5.2d. Plurals

The apostrophe is inserted before a lowercase s to form the plurals of single letters and digits and of abbreviations ending with a period. (*Note:* an abbreviation of a unit of measure has neither a period nor a plural form [1 km, 2 km].) It is not inserted before the s in the plurals of groups of letters or hyphenated letter-number combinations unless needed to enhance comprehension—for example, if the combination ends with a lowercase letter (SS-N-3a's). It is omitted in the plurals of groups of digits designating decades or centuries.

³⁰ Academic degrees are in lowercase when spelled out: doctor of philosophy, doctorate, master of arts, bachelor's degree.

To form the plurals of spelled-out numbers, of most words referred to as words, and of words already containing an apostrophe, add just s or es. But, add 's to indicate the plural of words referred to as words if the omission of an apostrophe would cause difficulty in reading.

One of Theodore M. Bernstein's best style books is *Dos, Don'ts & Maybes of English Usage*, but it fails to point out that most incorrect *due to*'s can be remedied by changing them to *because* of's. (Note that the 's is not italicized when attached to form the plural forms of the italicized *due to and because of* in this example.)

5.3. Brackets

5.3a. Inside Parentheses

Brackets are used to enclose a parenthetical word or expression within a set of parentheses.

He was well educated (by tutors in Portland [Maine]).

5.3b. Editorial Remarks

Brackets are used to set off such remarks within quoted material.

The Minister said, "The election [of 3 March] will be reexamined."

5.4. Bullets (Ticks)

Bullets—usually solid circular symbols—are used to introduce a list of two or more items set off within a column of text. They may be used instead of or in combination with *em dashes* (sometimes called *ticks*), as in a series of indented, itemized blocks of text in which some blocks are subsets of more important ones. Never use a single bullet or tick simply for emphasis; rather, use boldface or italic type.

Capitalize the first letter of all material introduced by a bullet or an em dash and end each phrase with a period (or a question mark, if appropriate). Introduce the material with a colon at the end of the introductory sentence or phrase.

The following are examples of bullets used with em dashes:

- This would be a primary bullet phrase (or clause).
- This would be another primary bullet phrase.
 - —This would be a secondary phrase subordinate to the bullet phrase above.
 - -This would be another secondary phrase.
- · This would be the next primary phrase.
 - -Phrases pertinent to this phrase would be listed under it like this.
 - -And this.
- · This would be the last primary bullet phrase.

5.5. Colon

5.5a. Summaries or Expansions

Use a colon before a final clause or phrase that summarizes or expands preceding matter. A single space is used after a colon.

Food, clothing, fuel, and building materials: these are the critical items.

The delegation visited four European cities: London, Paris, Dublin, and Rome.

Jones served in three Ministries: Economy; Communications, Power, and Industry; and Agriculture.

5.5b. Separation of Clauses

A colon is used to separate two main clauses if the second amplifies or explains the first. Otherwise, use a semicolon (see section 5.16b).

Railroading is not a variety of outdoor sport: it is a service.

He is well qualified to serve as Foreign Minister: he has held posts in the Ministry since 1995 and has served abroad many times.

5.5c. Titles and Subtitles

Use a colon to separate subtitles from titles.

The Tragic Dynasty: A History of the Romanovs Editorial Consistency: An Agency Goal

5.5d. Ratios

Figures (not spelled-out words) are always used for ratios, but use hyphens if the ratio is used adjectively.

20:1, but a 20-to-1 chance

5.5e. Indented Material

Use a colon to introduce lengthy material set off from the rest of the text by indentation. If the material is a quotation, do not use quotation marks.

5.6. Comma

The comma is the punctuation mark that is both most often used and most often misused. There is a general tendency to use too many commas, but the sin of omission is almost as common as the sin of commission.³¹

5.6a. For Comprehension

Use a comma to separate two words or figures that might otherwise be misunderstood.

Of the total, production was the greatest single item.

To his younger brother, Murray was a paragon whose every action was to be imitated. Instead of thousands, hundreds were built.

In 2009, 523 units were completed. (but In 2009 about 500 units . . .)

³¹One "sin of commission" is the so-called comma splice, in which a comma is used instead of a semicolon or period to denote cessation rather than pause, as in "Rain is forecast, however, we intend to hold the event anyway." The first comma should be a semicolon (or a period, followed by a new sentence), or the two elements of the compound sentence can be "spliced" properly with *but*: "Rain is forecast, but we intend to hold the event anyway."

5.6b. Separation of Coordinate Modifiers

Use a comma to separate from each other the parts of a series of coordinate modifying words (the words are coordinate if you can substitute and for the comma).

short, swift streams

long, slender, brittle stems

Do not use a comma if the modifying words are cumulative (cannot be separated by and), rather than coordinate—that is, if one modifies another or a unit of which another is a part.

illegal drug traffic

short tributary streams

If the modifying words are neither coordinate nor cumulative, they probably constitute a unit modifier (see section 7.3).

5.6c. With Nonrestrictive Words

Use a comma to set off nonrestrictive (nonessential) words, phrases, or clauses.

The chairman, George Smith, spoke last.

The work was, in fact, completed.

The manager, who was dismissed in 2008, was reappointed in 2009.

His brother, Joseph, was appointed. (He had only one brother.)

Mitchell's novel, Gone With the Wind, was a bestseller. (She wrote only one novel.)

Actual production, however, was lower.

Whether the element is nonrestrictive is determined by the intent of the sentence. Note that in the following sentences each of the elements that are nonrestrictive in the sentences above is necessary to the meaning of the sentence in which it appears, is therefore restrictive, and is not set off by commas. Compare these examples with the ones above.

Cochairman Smith spoke last (not Cochairman Jones).

The idea must work in fact as well as in theory.

The manager who was dismissed in 2008 was rehired in 2009. (The who clause identifies the particular manager being discussed.)

His brother Joseph was appointed. (He had more than one brother.)

James Michener's novel *Tales of the South Pacific* won the Pulitzer Prize for fiction. (He wrote many other novels, but none of them won Pulitzers.)

However hard they tried, production stayed low for several years.

5.6d. With Contrasting Statements

Use a comma to set off contrasting statements in a sentence.

Obama, not Bush, made the decision.

5.6e. Serial Comma

Use a comma after each element except the last in a series of three or more words, phrases, clauses, letters, or figures used with and or or (as long as none of the elements in the series is a phrase or clause with internal commas). Opinion is divided about whether to use the serial comma, as the comma after the next to last element in a series is called: many publications, especially newspapers, generally omit it so as to save space but sometimes insert it to avoid ambiguity. The question does not arise if the serial comma is always used. Most authorities on English usage recommend that policy, and it is the rule for CIA publications.

Copper, lead, zinc, and tin were mined.

The contestants may dance, play an instrument, or sing.

The data were collected, estimates were made, and conclusions were drawn.

Complete forms A, B, and C by writing 1, 2, or 3.

If one or more of the elements in the series is a phrase or clause with internal commas, use semicolons instead of commas between the elements, rearranging the sentence if necessary to put the series at the end. No matter how short the elements, use the serial semicolon before the *and* or *or*.

The chief exports were brass, which is an alloy; platinum, which is a precious metal; and tin. (never Brass, which is an alloy; platinum, which is a precious metal; and tin were the chief exports.) (See also section 5.16a.)

5.6f. Compound Sentences

Use a comma before the coordinating conjunction in a compound sentence (a sentence that contains at least two independent clauses).

He served in the Army until 1996, and then he went to work for the telephone company. The country imports copper, iron, and lead, but domestic tin is available.

In a simple sentence with a compound predicate do not use a comma before the coordinating conjunction unless it is needed for clarity.

He served in the Army until 1996 and then went to work in a bank.

He went to Russia to study but decided not to stay.

but

He goes to sleep the minute he hits the mattress, and springs out of bed in the morning always eager to begin a new day.

5.6g. Numbers in the Thousands and Higher

Use a comma to separate digits of most numbers in the thousands and unrounded millions.

1.000 250.000

3,399.243046 5,752,194 (if rounded, 5.75 million, 5.8 million, or 6 million)

6,201

5.6h. Introductory Phrases

Use a comma to separate from a main clause an introductory clause or phrase that is long or that might cause confusion without a comma.

Because the corporation derived much of its 2008 income from suburban outlets, it established several new ones in 2009. (but After his defeat he retired from public life.)

Use a comma to set off a beginning participial phrase modifying the subject or an absolute phrase before the subject; and, if it contributes to easier reading, an opening adverbial phrase stating a year.

To begin with, Smith worked as an engineer.

In 1986 the tragedy at Chernobyl occurred.

In 1987, Gorbachev formulated his policies of glasnost and perestroika.

Note that, whereas no comma is needed after 1986 in the second example, in the next one, when the year is followed by an *uppercased* word, insertion of a comma aids quick comprehension; such a comma is nevertheless optional.

5.6i. Title of Person and Name of Organization

In the absence of the words of or of the, use a comma to separate a person's title and the name of an organization.

director, Coal Division, Ministry of Mines

5.6j. Omission of a Word or Words

Use a comma to indicate omission of a word or words, unless the construction is clear enough without commas.

In spring and fall there is hiking in the area; in summer, sailing; in winter, skiing. (but The data were collected, estimates made, and conclusions drawn.)

5.6k. Before Direct Quotations

Use a comma to separate an introductory phrase from a short direct quotation (for long quotations, use a colon instead).

He said, "Now or never."

5.61. With Geographic, Personal, or Corporate Names

Use a comma to set off a province, state, or country name from a city name; Jr. (but not, say, III or IV) following a personal name; and sometimes (follow the subject's preference) Inc., Ltd., or S.A. after a corporate name. If the setting off occurs in midsentence, a comma must be used after as well as before.³²

He lives in Vancouver, Washington, but visited Vancouver, British Columbia, for the Winter Olympics in 2010.

John Jones, Jr., heads Dictionaries, Inc., and his son John Jones III runs the Georgetown branch (not his only son, or the name would be set off by commas—see 5.6c).

5.7. Dash (or Em Dash)

The dash (or *em dash*, not to be confused with the *en dash*—see section 5.9) should be used only when it is needed, and not when such punctuation as a comma, a colon, or parentheses would suffice. Excessive use presents a visual barrier to the reader and interrupts the flow of thought. The dash should never be used immediately after a comma, a semicolon, or, except as described in section 5.4, a colon.

5.7a. Parenthetical Matter

The dash is sometimes used to set off parenthetical matter, although a pair of dashes can often be replaced by parentheses and should be if there would otherwise be two pairs of dashes within a sentence. If the dash is used to set off material at the end of a sentence, only one dash, at the beginning, is needed. If the material is set off within the sentence, only another dash (not a comma or a semicolon) can be used to end the setoff phrase or clause.

He was a key figure in the successes—as well as the problems, both domestic and international—of Japan's trade policies.

He has three sons-Thomas, 29; Richard, 19; and Henry, 16.

³² Failure to do this results in what usage and style authority Roy Copperud dubs a "one-legged comma." Such an omission can also occur before a setoff clause or phrase.

He goes home twice a year—at Christmastime and on his birthday—and he never stays for more than two days. (In this example, the necessary second dash supersedes the comma that would ordinarily divide the two clauses of this compound sentence.)

The report for 2009 (the calendar, not the fiscal, year) led to an angry exchange—unusual for January—in the legislature.

5.7b. Before a Final Summarizing Clause

The dash is often used interchangeably with the colon to introduce a final summarizing clause.

Freedom of speech, freedom of worship, freedom from want, freedom from fear—these are the fundamentals of moral world order.

5.7c. In Place of a Bullet

The dash is sometimes used instead of a bullet to mark the beginning of each part of a block of material (other than quotations) set off by indentation from the rest of the text. If used in this way, it may be called a *tick*. (See section 5.4.)

5.8. Ellipsis

An ellipsis (the omission of words within quoted material) is represented by three spaced periods. When in the middle of a quotation an ellipsis occurs at the end of a sentence, a fourth period (or other punctuation, if appropriate) precedes the spaced periods. When only part of a sentence is quoted, periods to show omission are required only within the quotation, not at the beginning or the end.

The President began his address with the observation that in 1776 "our fathers brought forth a new nation, conceived in liberty and . . . dedicated to the proposition" of equality for everyone. In his words, "we [cannot] consecrate . . . this ground. The brave men . . . who struggled here . . . have consecrated it. . . . The world . . . can never forget what they did here."

5.9. En Dash

The en dash (not to be confused with the dash, or em dash) is, in effect, a superhyphen, used to "hyphenate" a compound modifier that includes one or more compound elements. It is effective with capitalized compounds but is less so with lowercase compounds, for which use of multiple hyphens is better, even though the lowercase compound is one not normally hyphenated. (The en dash can usually be avoided by rewording.)

Winston-Salem-Pointe Claire telephone call (or call between Winston-Salem and Pointe Claire) Saudi Arabia-United Arab Emirates border (or border between Saudi Arabia and the United Arab Emirates)

Health Department-sponsored program (or program sponsored by the Health Department) post-World War II policies (or policies after World War II)

SS-19-type silos (or silos of the SS-19 type)

bu

Echo-II-class submarine (Use two hyphens, *not* a hyphen and an en dash, because this is a special category. See section 7.6e.)

defense-industry-based engineers (not defense industry-based engineers, which is confusing) also

a vice-president-elect, but the Vice President-elect

a prime-minister-designate, but the Prime Minister-designate

5.10. Exclamation Point

Because intelligence reports are expected to be dispassionate, this punctuation mark should rarely, if ever, be used.

5.11. Hyphen

Use of the hyphen is well illustrated in the chapters on numbers, spelling, and compound words.

5.12. Parentheses

Parentheses are used as shown in 5.12a through 5.12d. (See also section 5.3 on the use of brackets in functions similar to but distinct from those served by parentheses.)

5.12a. With Comments

Use parentheses to set off a word, phrase, clause, or sentence that is inserted by way of comment or explanation within or after a sentence but that is structurally independent of it.

This style guide (unclassified) will be widely disseminated.

He graduated from Stony Brook University (part of the State University of New York system).

Three old destroyers will be scrapped. (All three have been out of commission for some time.)

Note that the placement of the period above depends on whether the parenthetical insertion is part of the sentence that occasioned it or is an independent, complete sentence (see the last two examples above). In the following example, note that the comma follows the parentheses enclosing an insertion made in the middle of a series separated by commas.

He visited Portland (Maine), Philadelphia, and Baltimore.

5.12b. With Cross-References

Use parentheses to enclose cross-references.

Japan's exports have risen steadily for the past 10 years (see figure 3).

- ... or (annex A).
- ... or (see the table).
- ... or (See figure 3.) as a separate sentence.

5.12c. With Numbers or Letters in a Series

Use parentheses to enclose numbers or letters that set off parts of a series.

We must set forth (1) our long-term goals, (2) our immediate objectives, and (3) the means at our disposal. (Be sure to use a set of parentheses with each number, not just a single one after it.)

5.12d. With Foreign Words

Use parentheses to enclose translations or explanations—if necessary—of foreign words or to enclose the original language following the English version (see section 4.3).

He referred to the document as an estimate (otsenka).

Sagan's best known novel is Almez-vous Brahms? (Do You Like Brahms?). [Italicize the translation because it is still a title.]

Pointing to the skyline as we neared the capital, he trumpeted the nation's new *grandeza*—even as we passed one of the *favelas* (shantytowns) outside the city.

5.13. Period

The use of the period is so elementary that it hardly needs to be discussed in this guide except to point out that it is not generally used in CIA for abbreviations and that a single space is used between sentences. The placement of the period in its principal function, to terminate a nonexclamatory or noninterrogative sentence, is discussed and illustrated in other parts of this chapter on punctuation—under "Parentheses" and "Quotation Marks," for example. (See section 5.8, which discusses one of the period's sidelines.)

5.14. Question Mark

As with the period, a discussion of the function of the question mark borders on stating the obvious. Note, however, that, apart from its principal function of terminating interrogative sentences, the question mark is used:

5.14a. To Show Uncertainty

A question mark may be used to show uncertainty (or ignorance), as when it is placed next to (or instead of) a figure in a tabulation. Similar application can be made within the text, but this should be kept to a minimum.

The paper was a hodgepodge, trying to deal with poets as diverse as Omar Khayyam (?-1132?) and Geoffrey Chaucer (1340?-1400).

5.14b. In a Title

A question mark may be used as part of an appropriate title.

Moscow and the Eurocommunists: Where Next? A Credible Nuclear Deterrent?

5.15. Quotation Marks

Quotation marks may be double or single and must always be used in a pair. Single quotation marks never appear in American usage unless double marks are present.

5.15a. Double Quotation Marks

5.15a1. Direct Quotations

Use a set of double quotation marks around a short direct quotation. (If the quotation is long—say, half a dozen lines or more—set it off by indentation within the text column and omit the quotation marks.)

"The President," he said, "will veto the bill."

Who asked, "Why?"

Why label it a "gentlemen's agreement"?

The citation read: "For meritorious service beyond the call of duty."

5.15a2. Titles That Do Not Merit Italicization

Use quotation marks to set off titles of poems, songs, short stories, and other parts of a longer work (see section 4.2).

Many people consider "Billie Jean" to be the most influential song in Michael Jackson's album *Thriller*.

Who wrote the article "Thermonuclear Processes" in that issue of Survey?

Have you read Robert Frost's poem "Fire and Ice"?

"Punctuation" is one of the chapters in the GPO Style Manual.

5.15a3. Selected Words or Phrases

Use quotation marks to set off words or phrases—but usually not letters, for which italic type is better—used or cited in a special sense. (For this function, quotation marks are sometimes used interchangeably with italic type.)

Do not capitalize the s in socialist in the phrase "most British socialists join the Labor Party." The North Korean press put the blame on "US imperialism."

If this is a "working" vacation, why are you lying there doing nothing?

Do not italicize, or use quotation marks for, the T in "the inverted-T-shaped building.".

Be careful not to overuse or misuse quotation marks. Use them to enclose words used in a special sense (such as communist jargon), but do not use them to apologize for acceptable English words or in an attempt to redeem slang. Never allow the reader to wonder why they were used. For example, the wording "the Russians took a 'pragmatic' approach" is obscure; it probably means "the Russians took what they called a pragmatic approach," but the reader may assume that the quotation marks around pragmatic connote some "special" meaning and may waste time looking for an explanation.

5.15b. Single Quotation Marks

A pair of single quotation marks is used to enclose a quotation within a quotation. But, if a quotation is set off by indentation, rather than by quotation marks, a quotation within it would use double, not single, quotation marks.

He said, "I used the term 'gentlemen's agreement."

He asked, "Why label it a 'gentlemen's agreement'?"

"Remember," she said, "what Grandfather used to advise: 'When other people run, you walk.'"

"Do you remember," she asked, "that Grandfather used to advise: 'When other people run, you walk'?"

5.15c. Punctuation With Quotation Marks

Also illustrated in the examples already given are the positions of various punctuation marks with relation to quotation marks;³³

- Commas and periods always go inside quotation marks (single or double).
- Semicolons and colons always go outside the final quotation mark.
- Other punctuation marks are placed inside quotation marks at the end of a sentence only
 if they are part of the matter quoted.

³³An asterisk or a superior reference number or letter normally follows all punctuation marks except a dash but falls inside a closing parenthesis or bracket if it applies only to the matter within the parentheses or brackets.

5.15d. Terms Precluding Need for Quotation Marks

Quotation marks are usually not necessary to enclose expressions following terms such as known as, called, or so-called.

Aluminum is known as aluminium in Canada.

Your so-called investigating body has not done much investigating.

If this is called profit and loss, when do we start profiting?

They may be used even here, however, to give special emphasis to the quoted or verbatim nature of the expression given, especially if sarcasm or bad grammar is involved:

He criticized what he called the "looks funny" school of editing.

They are following the so-called "where it's at" lifestyle.

Other such terms—entitled, named, endorsed, and signed or their equivalent—clearly call for either italicizing or enclosing in quotation marks the word or words that follow them.

The card was signed "You know who."

His housemates named him "chief cook and bottle washer."

The word radar is an acronym derived from the term "radio detecting and ranging."

5.16. Semicolon

The semicolon can be regarded to some extent as a supercomma because it supersedes the comma in cases where a comma is not clear enough for the function intended.

5.16a. Series

Use a semicolon to separate the elements in a series that falls at the end of a sentence and cannot be separated by commas without risk of making the sentence difficult to understand. If such a series is in midsentence, reword the sentence to put the series at the end. (See section 5.6e.)

The major inputs are iron ore, which comes from Poland; nitric acid, which is imported from the Czech Republic; and nickel, which is furnished in adequate quantities by domestic producers.

The principal legatees were a niece, Jane Wilson; a longtime friend, Samuel Jones; and the city library.

5.16b. Compound Sentence

Use a semicolon to separate the clauses of a compound sentence when a coordinating conjunction is not used.

He received a degree from the University of Vermont in 1976; later he attended Dartmouth College.

A fool babbles continuously; a wise man holds his tongue.

5.16c. With Conjunctive Adverbs

Use a semicolon before an independent second clause introduced by a conjunctive adverb (accordingly, also, consequently, furthermore, hence, however, indeed, moreover, nevertheless, otherwise, so, still, then, therefore, thus, yet).

Some Americans spend millions of dollars for junk food; consequently, the national obesity rate is growing rapidly.

Smith speaks English, French, German, and Russian well; moreover, he understands Persian, Urdu, and Vietnamese.

In monsoon season you should take your umbrella with you; otherwise, you may get soaked.

5.17. Slash

The slash (also called diagonal, oblique, shill, slant, solidus, and virgule) should be used sparingly and never in place of a hyphen or dash.

5.17a. To Show a 12-Month Period Occurring in Two Calendar Years

fiscal year 1965/66 marketing year 1973/74 crop year 2005/06 academic year 2009/10

5.17b. To Represent Per in Abbreviations

km/h (kilometers per hour) b/d (barrels per day)

5.17c. To Separate Alternatives

These designs are intended for high-heat and/or high-speed applications. (Usage guides generally discourage and/or and encourage one or the other of the two words instead. In this example and alone would suffice.)

She sat at her computer for hours in a catatonic/frenzied trance trying to cover every possible contingency of style usage in the Agency. (And in this one, or could replace the slash with no confusion of meaning.)

5.17d. To Show Combination in Certain Instances

Russian support was pivotal for this Japanese/US-backed proposal. (Use of an en dash or another hyphen would be awkward.)

Insurgent forces were armed with Cuban/Russian-supplied weapons. (Use of a slash here could indicate either a combination or alternatives, the latter reflecting Moscow's practice of sometimes using surrogates to supply its clients.)

The goal of one-man/one-vote was never forgotten. They campaigned on a one-man/one-vote platform. (Keep the hyphen and slash whether a noun form or an adjective form.)

The group endorsed the Christian Democratic Union/Christian Social Union platform.

6. SPELLING

6.1. General Principles

The majority of the words given as examples in this chapter are also found in chapter 8 (Spelling and Compound Words List), where all entries are listed in alphabetical order. A writer seeking the correct spelling or hyphenation of a word or words may find it easiest to look there first.

The GPO Style Manual and Webster's Third New International Dictionary, published by the G. & C. Merriam Company—or the abridged version, Merriam-Webster's Collegiate Dictionary—are the authorities for the guidance provided in this chapter and in chapters 7 (Compound Words) and 8. Where there is a difference, the GPO version usually prevails over Merriam. For a word not given in this style guide, consult first the GPO manual and then the Merriam dictionary. For guidance on the spelling of proper names—geographic, personal, and organizational—see sections 6.11 and 6.12.

6.2. Preferred and Difficult Spellings

Words frequently misspelled and the preferred forms of words with variant spellings are included in the list in chapter 8. Many other such words are dealt with in special categories in this chapter.

6.3. British Terms

When the American and British spellings of common English words differ, the American spelling is always used, even when these common words form part of a proper name usually spelled with British English.

Industrialization (not Industrialisation) Board Labor (not Labour) Party Minister for Defense (not Defence)
Programs (not Programmes) Chairman

6.4. Anglicized Foreign Words

Many foreign words and phrases have been thoroughly anglicized. Others are not as easily comprehended by American readers and should not be used unless there is no equivalent English expression (for example: *ad hominem*, *passim*). Still other foreign expressions should be avoided because they sound hackneyed (apropos, confrere, faux pas, inter alia, piece de resistance, tete-atete). Foreign-derived words sufficiently common or functional to be used (without italic type) can be found in chapter 8.

6.5. Plural Forms

6.5a. O Endings

Nouns ending in o preceded by a vowel add s to form the plural; most nouns ending in o preceded by a consonant add es to form the plural. Following are selected exceptions.

| commandos | magnetos | solos |
|-----------|----------|---|
| dynamos | mementos | tobaccos |
| egos | mestizos | Tornados (aircraft name), but tornadoes (common noun) |
| escudos | octavos | twos |
| ghettos | provisos | virtuosos |
| kimonos | salvos | zeros |

6.5b. Compound Terms

For the plurals of compound terms, whether hyphenated or not, use the plural form of the significant word or words. If there is no significant word, the plural is formed on the last word.

| adjutants general aides-de-camp also-rans ambassadors at large assistant comptrollers general attorneys general brothers-in-law charges d'affaires chiefs of staff commanders in chief | courts-martial deputy chiefs of staff directors general general counsels gentlemen farmers go-betweens goings-on governors general grants-in-aid hangers-on | inspectors general major generals ministers-designate passers-by pick-me-ups presidents-elect rights-of-way secretaries general trade unions under secretaries |
|--|---|--|
| commanders in chief | nangers-on | under secretaries |
| consuls general | higher-ups | vice chairmen |

6.5c. Other Difficult Plurals

Other words with plural forms that might cause difficulty are listed in chapter 8. If you are unsure of a word's plural, look there.

6.6. Endings -yze, -lze, and -lse

A verb whose last three letters are pronounced like eyes is usually spelled in one of three ways. The letter l is followed by -yze if the verb expresses an idea of loosening or separating. The related

noun ends in -lysis. analyze (analysis) paralyze (paralysis)

Most other words in this class end in -ize. Common exceptions are the following.

| advertise | disguise | incise |
|------------|-------------|-------------|
| advise | enfranchise | merchandise |
| arise | enterprise | revise |
| chastise | excise | rise |
| comprise | exercise | supervise |
| compromise | exorcise | surmise |
| despise | franchise | surprise |
| devise | improvise | televise |

6.7. Endings -sede, -ceed, and -cede

A verb with a final syllable that sounds like *seed* is usually spelled in one of three ways. As shown below, only one such word ends in *-sede*, only three end in *-ceed*, and the others end in *-cede*.

supersede

exceed

accede

proceed succeed concede intercede

precede

6.8. Endings -ible and -able

If you are not sure whether a word ends in -ible or -able, look it up in chapter 8.

6.9. Doubled Consonants

There is no firm rule about whether to double a single consonant following a single vowel at the end of a word before adding a suffix beginning with a vowel. For one-syllable words the consonant is almost always doubled (rob, robbed, robber, robbing; kiss, kissed, kisses, kissing). For words of more than one syllable the consonant is usually not doubled unless the accent in the derivative falls on a syllable containing the troublesome consonant or its double (cancel, canceled, canceling, but cancellation; refer, referred, referring, but reference).

Inevitably, however, there are exceptions to both the rules stated above. The derivatives of bus, for example, break the rule for one-syllable words (bus, bused, buses, busing). The derivatives of handicap run counter to the formulation for words of more than one syllable (handicap, handicapped, handicapping). The Merriam dictionary sometimes gives first spelling preference to a doubled-consonant derivative (programmed) but also approves a single-consonant variation (programed).

Spelling preferences in this guide usually accord with the tendency in American (as opposed to British) usage to use a single consonant in most cases where there is a choice. The first order of preference is the GPO choice if there is one; otherwise, our spelling is taken from Merriam. If Merriam gives a choice, the single-consonant version is generally preferred.

6.10. Indefinite Articles

6.10a. With Consonants and Vowels

The indefinite article a is used before a consonant and an aspirated h; the article an is used before a silent h and all vowels except u pronounced as in usual and o pronounced as in one.

a historical review

a once-over

an honor

a hotel

a union

an hour

a humble man

an herb, but a herbicide

an onion

6.10b. With Initials That Begin With a Consonant Sound

When a group of initials pronounced as letters begins with b, c, d, g, j, k, p, q, t, u, v, w, y, or z, each having a consonant sound, use a.

a BGN compilation

a DVD player

a TV program

a CIA position

a GPO Style Manual chapter

a UPI dispatch

a DC tax form

a PBS special

a VCR tape

6.10c. With Initials That Begin With a Vowel Sound

When a group of initials pronounced as letters begins with a, e, f, h, i, l, m, n, o, r, s, or x, each having a vowel sound, use an.

an FDA recall

an ICBM silo

an NBC program

an HHS report

an MRV system

an SLBM system

6.10d. With Acronyms

When initials form an acronym that is pronounced as a word, the use of a or an is determined by the sound, according to the guidance given in section 6.10a.

a HAWK missile

a NASA launch

a UN mission

a MIRV system

an NREM sleep

an UNCTAD report

6.10e. With Abbreviations That Have Variable Pronunciations

If pronunciation of an abbreviation is variable or borders on slang, use the article appropriate to sounding the group of initials as letters.

an AAA battalion, not a AAA (pronounced "triple A") battalion

an SLBM system, not a SLBM (pronounced "slubbum") system

but

because of entrenched Pentagon and State Department usage: a SLCM (pronounced "slikkum") system

6.10f. With Numerical Expressions

The rule on use of a or an also applies to numerical expressions and letter-number designators.

an 11-year-old

a onetime winner

an VIII classification

a IV-F category

an Su-20 Fitter aircraft

a MiG-21 Fishbed

In the text, however, use the more familiar spelling, with the other version following it in parentheses at the first reference. 6.14. Transliteration Guidance

Under the guidance of the DNI Foreign Language Program Office, the Intelligence Community has approved standards for the transliteration into the Latin alphabet of personal names originally rendered in a language that uses another alphabet. The transliteration standards are an agreed-upon set of symbols to represent non-Latin alphabets. They are not meant to be a pronunciation guide, and they assume that the audience does not know the foreign language. They are designed to be easy to apply, readable, and recognizable to the educated English reader. As a result, transliterated names may contain ambiguities (for example, "Samir" may refer to two distinct Arabic names). IC guidelines require that variant transliterations for an individual already encountered be noted in parentheses or footnotes in order to ensure that vital forensic information is not lost.

For transliteration of place and personal names, consult first the authorities named in sections 6.11 and 6.12.

It is mandated that these standards be used in official intelligence reports and finished intelligence products. Other standards may be employed in other cases (for example, technical standards for transcription), although widespread use of the IC standards may help facilitate name retrieval and linkage.

When names of individuals from cultures outside the language in question are encountered (for example, "Hillary Clinton" appearing in Russian Cyrillic), use the established spelling for that person's culture rather than transliteration.

For organizational names, transliterate proper nouns according to the IC standards. Translate common nouns and other words: for example, Al-Nakhl Sugar Company, *not* Sharikat al-Nakhl lil-Sukkar or Palms Sugar Company. For well-known entities, use the established English name and spelling: for example, Arab League.

For terms that are not personal or place names, adhere to the following guidance: use the IC standard for terms not translated into English, as in intifada. Use the dictionary spelling for words in general use in English, as in minaret. If there is a good English translation of a word, use it: pilgrimage, not hajj, for example.

7. COMPOUND WORDS

7.1. General Rules

When an idea cannot be expressed in a single word, we use a compound—the combination of two or more words—to express the thought. A compound can be created by writing the words in unconnected sequence, by hyphenating them, or by connecting them to form a solid, single word. This chapter summarizes various rules governing the formation of compounds. Chapter 8 lists thousands of compounds, so look there if you need to find the preferred spelling of a particular one.

7.1a. Separate Words

One may write two words in sequence, without connecting them with a hyphen or merging them into a single word, if this formulation causes no ambiguity in sense or difficulty of comprehension.

blood pressure

living costs

real estate

eye opener

music teacher

word combination

7.1b. Joined or Hyphenated

Often, words have to be joined into a solid form or connected with a hyphen to express an idea that would not be as clear if they were not so compounded.

18-year-olds

bookkeeping

need-to-know

right-of-way

afterglow

cross-reference

newsprint

whitewash

Derivatives of a compound usually retain the hyphenated or solid form of the original.

coldbloodedness

footnoting

praiseworthiness

stick-to-it-iveness

cost-effectiveness

ill-advisedly

railroader

X-rayed

7.2. Solid Compounds

7.2a. Combinations of Nouns

When two nouns form a compound that then has a primary accent, it is written solid (joined without a hyphen), especially when the prefixed noun consists of only one syllable or when one of the elements loses its original accent.

bathroom

bookseller

pipeline

7.2b. Combinations of Verbs and Adverbs

A noun formed by combining a short verb and an adverb is usually written solid, but it is hyphenated when the solid form risks misinterpretation. The verb (v) forms of such combinations usually remain two words.

buildup (v build up)

giveaway (v give away)

setup (v set up)

cut-in (v cut in)

run-in (v run in)

tie-in (v tie in)

7.2c. Compounds Beginning With Certain Nouns

Compounds beginning with the following nouns are usually solid.

book (bookstore)

house (housekeeping)

shop (shopworn)

eye (eyeglasses)

school (schoolteacher)

work (workday)

7.2d. Compounds Ending With Certain Words

Compounds ending in the following words are usually solid when the prefixed word consists of one syllable, but are less often so written when the prefixed word has several syllables (spaceborne, but satellite-borne, helicopter-borne).

boat (rowboat) time (halftime) man (lobsterman) book (textbook) master (harbormaster) ward (homeward) borne (spaceborne) mistress (choirmistress) way (seaway) bound (landbound) wide (worldwide) owner (homeowner) hearted (halfhearted) person (salesperson) wise (edgewise) holder (shareholder) piece (mouthpiece) woman (chairwoman) house (boathouse) power (airpower) work (artwork) keeper (beekeeper) proof (blastproof) worker (pieceworker) light (moonlight) room (chartroom) working (woodworking) like (boxlike) shop (toolshop) writer (speechwriter) maker (steelmaker) tight (airtight) yard (shipyard)

7.2e. Any, Every, No, or Some Combined With Body, Thing, Where, or One

Write solid a combination of any, every, no, or some and body, thing, or where. When one is the second element, write as two words if the meaning is a particular person or thing; to avoid mispronunciation, write no one as two words at all times.

anybody

everything

nowhere

someone

but

Some one choice must be made, and any one of you can make it. Will no one volunteer?

7.2f. Self or Selves

Pronouns ending in self and selves are always solid compounds.

herself itself

oneself ourselves themselves yourself

7.2g. Compass Directions

Write as one word a compass direction consisting of two points, but use a hyphen after the first point when three points are combined.

northeast

north-northeast

7.3. Unit Modifiers

A unit modifier functions as an adjective. It contains more than one word but acts on the noun it modifies as a unit. Examples are civil defense plan, wholly owned subsidiary, policymaking level, and most-favored-nation clause. Unit modifiers always precede the word they modify; if a modifier is located elsewhere in the sentence, it cannot be a unit modifier.

Unit modifier: The Secretary of State occupies a policymaking position. Not a unit modifier: A decision is policy making only if effective.

If the modifiers are coordinate (see section 5.6b) or cumulative—that is, if either word could serve as a single modifier—they do not constitute a unit modifier. In "migrant construction workers," for example, the modifiers are cumulative because *migrant* or *construction* alone could modify *workers*. In "40-horsepower engine," however, neither 40 nor *horsepower* could logically serve as a single modifier. In "carefully prepared report" only the second word could modify *report*. Both of these phrases are unit modifiers.

7.3a. Hyphenated

Unit modifiers immediately preceding the word or words modified are usually hyphenated but sometimes are written as one word.

| 1-meter-diameter pipe | low-priced model | Six-Day War |
|-------------------------|----------------------------|----------------------|
| 4-percent increase | most-favored-nation clause | Third Five-Year Plan |
| drought-stricken area | number-one priority | UN-initiated talks |
| English-speaking nation | part-time job | US-owned property |
| high-level post | policymaking level | value-added tax |
| longtime friend | rightwing group | well-known name |

7.3b. Unhyphenated

When the meaning is clear and readability is not aided, hyphens may be omitted from a compound that precedes the word modified, especially if the compound is an established or familiar phrase. But refrain from an accumulation of modifiers that defies comprehension and impedes readability.

| atomic energy program | flight test program | human rights position |
|-----------------------------|------------------------|-------------------------|
| ballistic missile submarine | free enterprise system | life insurance company |
| civil defense plan | ground attack aircraft | natural gas exports |
| current account deficit | hard currency loan | surface ship deployment |
| hut | • | |

no-hyphen rule (readability aided; *no hyphen rule* would be ambiguous) areas in which ballistic missile submarines normally operate (readable); *not* normal ballistic missile submarine operating areas (difficult to comprehend) ballistic missile early warning radar (established use)

7.3c. With Ordinal Numbers

In general, the omission of hyphens is not recommended in a compound containing an ordinal number used in its literal sense, no matter how familiar and frequent the expression.

first-quarter report

second-half performance

fourth-grade class

third-country involvement

but

first aid station

Third World delegates

Similarly, in a unit modifier containing a prepositional phrase, comprehension is enhanced if hyphens are used for even the best known expressions.

balance-of-payments problem

right-to-work law

cost-of-living study

under-the-counter sales

No hyphen is required if the compound preceding the word or words modified is already tied together with a conjunction.

cold but sunny day

medium and high altitude

command and control echelons middle or late 1970s

An improvised compound (euphemism for cliche) such as that in "hard-and-fast rule" or "bread-and-butter issue" is an exception (see section 7.6c).

7.3d. Predicates

A unit modifier must be distinguished from a compound predicate adjective, in which the hyphen is usually omitted.34

His future was still undetermined while he was a student.

Most of the transactions in that deal were foreign financed, and the exchanges were under the counter.

The talks were US initiated, and the agenda well prepared.

The increase was 4 percent in 2008 and 5 percent in 2009.

The majority of the population was English speaking.

The government has been socialist leaning in recent years.

7.3e. Comparatives and Superlatives

The hyphen is usually—although not always—omitted in a two-word unit modifier in which the first word is a comparative or superlative. For clarity's sake, however, it should be retained in certain three-word modifiers.

best liked books

highest level meeting

lower income group

worst case scenario

bestselling novel (derived from bestseller)

lighter-than-air craft

higher-than-market price

most-favored-nation clause

lighter-colored paper

most-sought-after tickets

³⁴In this sense, do not confuse a unit modifier with a hyphenated compound formed by adding a prefix or suffix (see sections 7.4b to 7.4g). Such a compound (for example, self-educated or rent-free) would retain its hyphen in the predicate form. Also, note that entries in chapter 8 labeled um (unit modifier) generally conform to section 7.3d, but entries labeled adj (adjective) do not. Was the call local or long-distance? This approach was low-key.

7.3f. Adverbs Ending in -ly

Do not use a hyphen in a two-word unit modifier in which the first word is an adverb ending in -ly.

recently designed logo

wholly owned subsidiary

but

lonely-hearts club

only-child complex

7.3g. Three-Word Modifiers

Do not use hyphens in a three-word unit modifier in which the first word is an adverb modifying the second word.

unusually well preserved specimen

very well defined line

exceptions

extremely-low-frequency

very-high-frequency

very-low-frequency

communications

transmissions

If the first word of a three-word unit modifier modifies the other two, the hyphen is used between those two.

a formerly well-known person

a nearly right-angle bend

a virtually self-educated man

7.3h. Foreign Phrases

Do not use a hyphen in a unit modifier consisting of a phrase of foreign origin.

bona fide transaction

ex officio member

per capita tax

carte blanche policy

per diem allowance

prima donna behavior

7.3i. Proper Nouns

Do not use a hyphen in a compound proper noun or in a capitalized coined name used as a unit modifier, in either its basic or derived form.

Cold War tensions

Latin American states

French Revolutionary period

World War II period

Do, however, use one if the proper noun is normally a combined form.

Afro-American program

French-English descent

Franco-Prussian War

Indo-Pakistani relations

This rule does not apply to numerical compounds in an expression such as *Fifth Five-Year Plan*, nor would it apply entirely in an expression incorporating an already-hyphenated coined name (*Six-Day War euphoria*).

7.3j. En Dash in Proper Noun Compounds

In a unit modifier made up of proper adjectives or proper nouns of which one or more is a compound, the en dash is used between the parts.

North American-South American sphere Dominican Republic-Haiti border

Ulan-Ude-Chita-Ulaanbaatar triangle

7.3k. Quotation Marks

Do not use a hyphen in a unit modifier enclosed in quotation marks unless it is normally a hyphenated form, and do not use quotation marks in lieu of hyphens.

a "spare the rod" approach to parenthood the "one-man woman" plots of many operas a "damn it all" attitude toward writing style

7.31. Chemical Terms

The hyphen is not used in a unit modifier composed of chemical terms.

carbon monoxide poisoning

7.3m. Letter or Number Elements

Do not use a hyphen in a unit modifier containing a letter or numeral as its second element (but see section 7.6e).

annex B maps

level 4 alert

Article III provisions

Mod 3 missile

This rule does not, however, apply to certain terms established by long usage for military aircraft and naval ships.

Kresta-I

Osa-II

7.3n. Common Basic Elements

When two or more hyphenated compounds have a common basic element and this element is omitted in all but the last or first term, the hyphens are retained.

the British- and French-produced Concorde

two- or three-year period

first-, second-, and third-grade students

US-owned and -operated companies

ground- and air-launched missiles

but

firsthand and secondhand (not first- and secondhand)

twofold or threefold (not two or threefold)

oil and gas fields, or oilfields and gasfields (not oil and gasfields)

mid- and late 1990s (but mid-to-late 1990s)35

early or mid-1990s (but early-to-mid-1990s, 35 better: early-to-middle 1990s)

³⁵Use of the hyphenated prefix *mid*- in the examples shown is not incorrect, but the hyphen makes it awkward to combine *mid*- with the other, unhyphenated elements, early and late. For this reason it is recommended that *middle* rather than *mid*- be used when a combination is involved: middle and late 1990s, early and middle 1990s, early or middle 1990s, early-to-middle 1990s.

7.4. Prefixes and Suffixes

7.4a. Unhyphenated

Prefixes other than ex, self, quasi, and vice and suffixes other than free, designate, and elect usually form a solid compound with a noncapitalized word.

| afterhours | clockwise | multicolor | semiofficial |
|--------------|---------------------|-------------|--------------|
| antedate | counterintelligence | neofascist | subcommittee |
| antiaircraft | fourfold | nonferrous | transship |
| biweekly | hydroelectric | northward | ultramodern |
| byproduct | lifelike | partnership | unofficial |

7.4b. Hyphenated36

A hyphen is used in compounds formed with the prefixes and suffixes noted as exceptions in the preceding section.

| ex-serviceman | rent-free |
|-----------------------|---------------------------------------|
| minister-designate | self-control |
| President-elect Jones | vice-chairmanship (but vice chairman) |
| quasi-academic | |

7.4c. Doubled Vowels or Tripled Consonants

Except after the short prefixes co, de, pre, and re, which are generally written solid, a hyphen is used to avoid doubling a vowel when adding a prefix or tripling a consonant when adding a suffix.

| anti-inflation | nuii-iess | snell-like | • |
|----------------|------------------|---------------|-----------------|
| brass-smith | semi-independent | ultra-atomic | |
| but | | | |
| cooperation | nonnuclear | posttreatment | reestablishment |
| deemphasize | overreact | preelection | subbasement |

7.4d. To Avoid Confusion

A hyphen is used with a prefix that normally forms solid compounds if omission of the hyphen would lead to mispronunciation or cause confusion with a word spelled identically but without a hyphen.

| co-op (but cooperative) | re-cover (cover again) | re-treat (treat again) |
|------------------------------------|----------------------------|------------------------|
| multi-ply (several plies) | re-create (create again) | under-ice |
| pre-position (position in advance) | re-form (form again) | un-ionized |
| pro-state | re-present (present again) | |

³⁶The hyphenated compounds discussed in sections 7.4b through 7.4g are not subject to the rule in section 7.3d and would retain their hyphens in the predicate form.

7.4e. Duplicated Prefixes

A hyphen is used to join duplicated prefixes.

counter-countermeasures

sub-subcommittee

7.4f. Prefixes or Suffixes in Compounds With Capitalized Words

A hyphen (unless an en dash is called for) is used to join a prefix or a suffix in a compound with a capitalized word.³⁷

Africa-wide

un-American

exceptions

nonMIRVed

7.4g. Unit Modifier Containing a Multiword Compound

A prefix (except un) normally forming a solid compound is often followed by a hyphen when joined with a two-word or hyphenated compound to form a unit modifier.

anti-guided-missile

non-nuclear-powered

pre-martial-law

non-missile-equipped

post-target-tracking

but

antiballistic missile

For many of the terms used above to illustrate the rule in this section, rephrasing of the sentence might be preferable to insertion of the extra hyphen.

defense against guided missiles (instead of anti-guided-missile defense)

aircraft not equipped with missiles (instead of non-missile-equipped aircraft)

a system that is partially land mobile (instead of a semi-land-mobile system)

Do not insert a hyphen after a prefix joined to a solid (unhyphenated, one-word) compound.

antigunrunning

nonoceangoing

submachinegun

nonlifelike

postreentry

ultrarightwing

7.5. Numerical Compounds³⁸

7.5a. Spelled Out

Use a hyphen between the elements of compound numbers from 21 to 99 when they must be spelled out (bear in mind that figures, rather than spelled-out words, are generally used for numbers of two or more digits).

twenty-one

ninety-nine

one thousand one hundred forty-one

twenty-first

one hundred forty-one

³⁸See chapter 2.

³⁷For similar reasons, retain the hyphen if it is part of an established formal name such as Non-Proliferation Treaty (abbreviated NPT) and Multi-Fiber Arrangement (MFA), even though the spelling differs from our normal style (nonproliferation, multifiber).

7.5b. Adjective Compounds With Numerical First Element

10- to 20-year period (or 10-to-20-year period) eight-time Olympic medalist

18-year-old student

medium-to-high altitude

20th-century progress

medium-to-high-altitude interceptors

3-meter (never 3-m) railing

multimillion-dollar loan

5-to-4 vote

the Six-Day War

8-kilogram (or 8-kg) turkey

Third Five-Year Plan

but

\$20 million loan

7.5c. Fractions

Use a hyphen between the elements of a fraction whether it is a noun or an adjective.

a two-thirds majority

two-thirds of the legislature

7.6. Other Compound Words

7.6a. Titles

Do not use a hyphen in a compound title denoting a single civil or military office, but do use one in a double title.

ambassador at large

manager-director

secretary-treasurer

commander in chief

minister-counselor

under secretary

editor in chief

secretary general

vice president

but

under-secretaryship

vice-presidency

7.6b. Noun Compounds Containing a Prepositional Phrase

Apart from titles, hyphens are used in some noun compounds containing a prepositional phrase.

government-in-exile

man-of-war

grant-in-aid

mother-in-law

but

next of kin

state of the art

prisoner of war

state of war

7.6c. Improvised Compounds

bread-and-butter issue

hard-and-fast rule

need-to-know

first-come-first-served basis

technical know-how

7.6d. Verb Forms of Noun Forms Written as Two Words

turn a cold shoulder (to cold-shoulder an idea) proof with blue pencils (to blue-pencil galleys) missile in flight test (to flight-test a missile)

7.6e. Single Capital Letter Plus a Noun or Participle

H-bomb

L-shaped room

T-shaped

I-beam

T-ietty

X-ray

Use hyphens (not en dashes) in the compounds designating Russian submarine classes when the compounds are used adjectively.³⁹ If the meaning is clear, refer to these submarines by the class designator alone.

Yankee-class, Delta-class, Victor-class, etc.

Echo-II-class, Charlie-I-class (two hyphens, not hyphen and en dash)

submarines of the Yankee class (no hyphen)

a Delta-class unit, a Delta-II-class unit

Delta and Yankee units (acceptable to omit word class)

a Victor tracking a Yankee

Four Yankees, two Delta-IIs, and a Victor have been observed in the submarine yard.

The characteristics of the Delta-I and -II were compared.

The same rules apply essentially to surface ship classes (Komar, Osa) and non-Russian submarine classes (Han, Xia).

³⁹In CIA publications the full designator, not just its first letter, is preferred: Delta-class (*not* D-class), Yankee-class (*not* Y-class). Note, however, that the designator is spelled with only the first letter capitalized, not in all capital letters, as seen in military usage. Designators for Russian submarines, according to DIA, are as follows: Akula, Alfa, Bravo, Charlie, Delta, Echo, Foxtrot, Golf, Hotel, India, Juliet, Kilo, Lima, Mike, November, Oscar, Papa, Romeo, Sierra, Tango, Typhoon, Uniform, Victor, Whiskey, Yankee, and Zulu. (All are phonetics except Akula and Typhoon.)

8. SPELLING AND COMPOUND WORDS LIST

Including inflections, plurals, and other word forms, there are more than 13,000 words listed in this chapter. Many are familiar and are not likely to cause a problem for any writer. Others may be unfamiliar or confusing.⁴⁰ Rules for spelling and compounding may be found in chapters 6 and 7, but if you want only to determine the correct spelling or compound form of a word or phrase, you are likely to find your answer below. Note that a word followed by (s) (antibiotic[s]) and marked as both n and adj or um, takes the s only in the noun form. Similarly, if a word is shown with several inflections (airmail[s], airmailed, airmailing) and is marked as both n and n0, usually only the first form (airmail[s]) is the noun, although sometimes the present participle is also a noun (back[s], backed, backing) or an adjective (wind[s], wound, winding).

9. WORD WATCHERS LIST

9.1. What's in This Chapter?

The Word Watchers List contains an alphabetized compilation of entries dealing with possibly troublesome words, word types, and word problems. It is intended to help writers and processors of the written word find quickly the answers to questions likely to arise most often in their work. Most of the entries provide answers on the spot. Others direct the user to other entries in this chapter (such references are highlighted in red) or to parts of earlier chapters referred to by section or footnote number.⁴²

9.2. Who Are the Word Watchers?

This compilation is meant to provide guidance for writers of intelligence publications as well as writers of intelligence-related administrative papers. All are assumed already to possess the three essentials of intelligence analysis: knowledge, clarity of thought, and good judgment. No writing, however skilled, can conceal deficiencies in these requisites.

9.3. Some Helpful Precepts

Written English is the analysts' and administrators' main vehicle for conveying their studied evaluations to consumers. Mastery of the language adds force, precision, and grace to these presentations. Writers who want to compose English prose devoid of jargon and easy to comprehend should bear in mind these concepts:

- Keep the language crisp and pungent; prefer the forthright to the pompous and ornate.
- Do not stray from the subject; omit the extraneous, no matter how brilliant it may seem or even be.
- Favor the active voice and shun streams of polysyllables and prepositional phrases.
- Keep sentences and paragraphs short, and vary the structure of both.
- Be frugal in the use of adjectives and adverbs; let nouns and verbs show their own power.
- Make sure that subject and verb agree in number; do not be tricked by intervening words.
- Be just as sure that every pronoun has a clearly identifiable antecedent and that the two agree in number and gender.
- Be aware of your reading audience; reserve technical language for technical readers.
- Be objective; write as a reporter or analyst or administrator unless you are entitled to write as a policymaker.

⁴²Note that a section number always begins with the number of the chapter in which the section appears—section 7.3, for example, is the 3rd section of chapter 7. Footnotes, however, are numbered in one sequence throughout—from footnote 1 in chapter 1 to footnote 42 in chapter 9.

| a, an before h | Use an when the next word begins with a silent h (an herb); use a when the h is pronounced (a historic occasion). |
|------------------------------|--|
| aboard, on board | Aboard can be an adjective (the crew is aboard), an adverb (they went aboard), or a preposition (they are aboard the ship). The prepositional phrase on board can be used adjectively (they are on board) or adverbially (they went on board) but preferably not prepositionally—avoid they went on board the ship. |
| about, approximately, around | Around is acceptable in approximations of time: around three o'clock. In other contexts it is a questionable synonym for about or approximately. Given a choice between those two words, choose about most of the time; it saves space and sounds less stuffy. Do not use about (or approximately, around, or estimated) when a figure is stated precisely. Do not say during the attack, about 3,041 troops were killed if you are sure of the number. If you are not sure, replace the 3,041 figure with about (or an estimated) 3,000. |
| absolutes | Some adjectives convey an absolute: it is the whole thing or nothing. They do accept modifiers that take away their absoluteness—almost, for example—but they do not accept limiting modifiers such as somewhat, totally, more, and less. The Preamble to the US Constitution is out of bounds grammatically when it speaks of a more perfect Union, and, as the common saying puts it, a woman cannot be somewhat pregnant. Other words in this category are eternal, fatal, incessant, maximum, minimum, ultimate, unique, and universal. Absolute maximum is overkill: maximum says it all. |
| accelerate | See escalate, accelerate, intensify. |
| acquiesce, agree | Acquiesce takes the preposition in, not to (acquiesce in the decision); to is used with agree (agree to the plan). |
| acronyms | Explain them as you would any other abbreviation. But be aware that acronyms do not always seem to follow conventions about capitalization or other matters (<i>Aramco</i> , <i>NATO</i> , <i>agitprop</i>). Usually, when an acronym is made up solely from the first letter of the major words in the expanded form, render the acronym in all capitals (<i>North Atlantic Treaty Organization</i> , or <i>NATO</i>). |
| | We write <i>comsat</i> when speaking generally of a communications satellite but <i>Comsat</i> in reference to the corporation. The term <i>Landsat</i> should refer only to the US Earth resources satellite, but <i>landsat</i> might be used in a less specific reference. |
| active voice | In formal writing, prefer the active voice. <i>Lifeguards clear beaches when forecasters predict storms</i> . Only if your focus is beach clearing rather than lifeguards would the passive be preferred. The beaches are cleared when storms are forecast. |
| activity | See condition, situation, activity. |
| additionally | Prefer in addition if you must use something. |
| adverbs | When modifying a verb, adverbs usually go between the auxiliary (or auxiliaries) and the main verb. (The Prime Minister has finally announced her decision.) |

| adverse, averse | sound alike, and both express opposition, but adverse applies to something working against a person or program (adverse weather conditions), and averse applies to a person who is against something. (He is averse to traveling by plane.) |
|--------------------------|--|
| affect, effect | Affect as a verb means to influence, to produce an effect upon. (The blow on the head affected John's vision.) Effect, as a verb, means to bring about. (The assailant effected a change in John's vision by striking him on the head.) Effect, as a noun, means result. (The effect of the blow on John's head was blurred vision.) |
| agree | with a person, to a proposal, on a plan. (See acquiesce, agree.) |
| AIDS | See HIV/AIDS. |
| all ready, already | are not interchangeable. The first means everybody is set to do something; the second means by or before a specified or implied time. (Fortunately, the employees are all ready for the 3:00 meeting because it is already 2:45.) |
| all right | never alright. |
| all together | See altogether, all together. |
| already | See all ready, already. |
| almost | See most, mostly, almost. |
| along with | See together with. |
| also | When used as a direct modifier of a negative verb—he also does not favor import quotas—also sounds awkward and unidiomatic. Do one of three things: move the word to modify the whole sentence or clause (also, he does not favor import quotas), replace it (he does not favor import quotas either or moreover, he does not favor import quotas), or make the verb positive (he also opposes import quotas). Be sure, moreover, that also is intended to modify the verb directly and not some other word in the sentence; also, like even and only, is a notorious "floating modifier." (See fill-ins.) |
| alternate, alternative | Alternate means rotating, following by turns; alternative pertains to a choice between possibilities. Alternate, as an adjective, does overlap alternative by conveying the idea of a second choice. |
| altogether, all together | Altogether means all told or completely. All together means in unison. |
| always | means on every occasion or forever. Be sure that you do not use always when you mean habitually or usually. The President always leaves his office at noon on Saturday. Are there no exceptions? (See absolutes.) |
| ambiguous, ambivalent | Use ambiguous if you wish to point out inconclusiveness or lack of clarity in a situation. Ambivalent applies to mixed feelings, the simultaneous operation in the mind of two different and usually conflicting desires. |
| American | is certainly acceptable as a noun meaning a US citizen, but for the adjective describing our country the preferred term is US. |
| among | See between, among. |
| amused | See bemused. |

| anathema | means both a curse or denunciation and the thing or person cursed |
|------------------------|---|
| | or denounced. In the former case the article and plural are used. The anathemas of the losers, to pronounce an anathema. In the latter they usually are not. He was anathema to his enemies, they were anathema to their enemies. |
| and, but, however | may be used at the beginning of a sentence when emphasis is desired, but use this construction sparingly; overuse blunts its effect and leans toward the informal. |
| and/or ` | Do not use in DI writing. See section 5.17c. |
| and so forth | See etc., and so forth. |
| anticipate, expect | When you anticipate an event, you generally make some preparation for it; when you expect an event, you simply await developments before acting. They anticipated a hostile crowd, so they mobilized the National Guard. Had they expected a hostile crowd, they would not have been surprised, but the National Guard would not have been there. |
| anxious, eager | Both connote a strong interest or desire; use eager unless you want to add a dimension of worry or fear. |
| any | as a pronoun, can take either a singular or a plural verb. Any [any one] of her options is suitable. Are any [some] of them practicable? |
| apparently | See qualifiers. |
| appraise, apprise | Appraise means to set a value on; apprise, to inform. Apprise, however, is considered a pretentious word and should be avoided. |
| approximately | See about, approximately, around. |
| apt | See likely. |
| around | See about, approximately, around. |
| as | in positive comparisons, is followed by another as. She is as clever as her adversary. Watch out for mismatches. As good as or better than, not as good or better than. In negative comparisons, so may be substituted for the first as. She is not so clever as her adversary. (See like, as and compare, contrast.) |
| as far as | Confusion arises with the construction as far as is concerned. This is an indissoluble unit; as far as by itself is incorrect. As far as football teams are concerned, I like the Redskins is correct. As far as football teams, I like the Redskins is not. |
| as noted | See fill-ins, |
| assure, ensure, insure | Assure applies to persons (to assure a leader of one's loyalty). It alone has the sense of setting a person's mind at rest. Use ensure to mean make certain (to ensure a nation's security). Insure means to cover with insurance. |
| as well as | See together with. |
| as yet | Most of the time as can be dropped. |
| asylee | a permissible word, even though not in many dictionaries, meaning a person seeking asylum or one given asylum. |
| at the same time | See fill-ins. |
| augur, auger | Augur is a verb meaning to predict from signs or omens. An auger is a tool for boring holes. |

| averse | See adverse, averse. |
|-----------------------------------|--|
| awhile | is not preceded by for. He stayed awhile; but he stayed for a while. |
| based on, due to, owing to | These word sets are almost always awkward and often introduce dangling phrases: Due to (or owing to) illness, the meeting was postponed. You can usually produce something smoother by reworking the sentence: We had to postpone the meeting because almost everyone was sick. |
| basically | See fill-ins. |
| because | See reason, because. |
| bedouin | Capitalize Bedouin when referring to an ethnic population, as in Jordan (see The World Factbook). When referring to a nomadic lifestyle, lowercase is suitable (the bedouin belief in afreets [powerful evil demons]). |
| beef up | Avoid this overused term. (See metaphors.) |
| before | See prior to, before. |
| bemused | means confused or bewildered and is not synonymous with amused. |
| between, among | Between expresses the relationship of two persons or things (between the devil and the deep blue sea); among, the relationship of three or more (The spoils of victory were divided among the four winning parties). Use between, however, if you are considering more than two things in pairs as well as in a group. (We see major differences between the policies of Country A, Country B, and Country C.) |
| biannual, biennial, semiannual | Both biannual and semiannual mean twice a year; biennial means every two years. To avoid confusion between biannual and biennial, avoid the former and use semiannual. Even better, say twice a year and every two years. |
| bits, bytes | are considered units of measure and are quantified in figures, not spelled-out words (a 7-bit byte, 5 bytes of 7 bits each; but five 7-bit bytes—see section 2.23a). |
| blatant, flagrant | Both words describe glaringly antisocial behavior. <i>Blatant</i> denotes the obvious, the offensive, the obtrusive: a blatant lie. Flagrant carries a stronger overtone of malice; it denotes deliberate, obtrusive wrongdoing. One who willfully violates a pledge commits a flagrant act. Both words convey subjectivism in many contexts. (See subjective words.) |
| bloc | is usually not capitalized, except for references to the former Soviet Bloc. |
| blog | A blog is a type of website, usually maintained in an online journal format, containing commentary, descriptions of events, or other material such as graphics or video. As a verb, blog means to maintain or add content to a blog. Blog is short for weblog, but the longer term is rarely used. |
| boat, ship | Boats, nautically speaking, are usually small craft that can be carried on a ship, a larger vessel suitable for crossing the high seas. The exception is a submarine, which is most often referred to as a boat. All take the pronoun it, not she. |
| both | is redundant in expressions such as they both agree or they both share. With three, however, both might be used: Both London and Paris agree with Washington that the arrangement is sound. |
| both and | Be sure that the material that follows is in balance. He was deaf to both argument and entreaty, not he was both deaf to argument and entreaty. (See parallelism.) |

| boycott, embargo | A boycott is a refusal, usually by an organized group, to buy or use a particular product or service. It is not synonymous with embargo, which is a legal restriction on trade. |
|-----------------------|---|
| breach, breech | As a noun, <i>breach</i> is a violation, a gap, or a rift in a solid structure. Do not confuse it with <i>breech</i> , which is acceptable only in reference to ordnance and to human anatomy. |
| burgeoning | Originally descriptive of something newly emerging, burgeoning has become accepted for something growing and expanding rapidly. |
| burnish | means to make shiny or lustrous; it is not correct to say someone burnished his credentials. |
| but | See and, but, however. |
| bytes | See bits, bytes. |
| cadre | Cadre was originally a military term for a group around which a larger unit is formed but now, under the influence of communist terminology, may denote any core group, as well as a member of such a group. Use in a nonmilitary context seems to be dying out as the Cold War era fades further into history. Use an English term if possible. Always add an s when the word is plural. (See cohort.) |
| calculate | See feel. |
| capital cities | in intelligence writing are generally legitimate stand-ins for the names of national governments. Moscow's position is clear is fine, but be sure not to use capital cities when you are referring to the country as a whole. Do not write, for instance, Moscow is reinforcing its borders. |
| casualties | include persons injured, captured, or missing in action as well as those killed in battle. In formulating casualty statistics, be sure to write "killed or wounded," not "killed and wounded." (See injuries, casualties.) |
| celebrity copycatting | can lead one up the garden path because those emulated are not always pure of speech. A venerable newscaster persists in mispronouncing February (without the first r sound) and has misled a whole generation. Another Pied Piper of TV is given to saying "one of those who is"—joining many others who are deceived by the one and forget that the plural who is the subject of the verb (see one). The classic copycat phrase, at this point in time, grew out of the Watergate hearings and now is so firmly entrenched that we may never again get people to say at this time, at present, or simply now (see presently). |
| center | as a verb is used with on, upon, in, or at, but not around. The dispute centers on the fairness of the election. The dispute can, however, revolve around the fairness of the election. |
| charisma | is a Greek word denoting divine grace or endowment. Its use should be limited to those rare and gifted persons who attract exceptional devotion from great numbers of followers. |

| China, Taiwan | The full name of the People's Republic of China is usually shortened to China. PRC may be used. Hong Kong has been a Special Administrative Region of China since July 1997. Chinese is the preferred adjective and |
|---------------------|---|
| | refers only to the mainland. For what was once called Nationalist China or the Republic of China, use only <i>Taiwan</i> , both as noun and as adjective. For variation, <i>Taipei</i> may be used in either noun or adjective form (for example, the officials in <i>Taipei</i> , or the <i>Taipei</i> authorities), but avoid <i>Taiwanese</i> as an adjective referring to the island's administration or its officials (and do not use the term <i>Taiwanese</i> government). |
| | The terms Communist China (and Chinese Communist) and Nationalist China (and Chinese Nationalist) or Republic of China should be used only in historical contexts. |
| citizenry | See pretentious words. |
| clearly | See qualifiers. |
| climactic, climatic | Climactic refers to climax or high point, climatic to weather. The climactic moment of the President's trip came at Bonn. The climatic changes in the area are being studied. |
| clout | is best confined to fights and baseball or golf. It can be used occasionally in the metaphorical sense of influence or power, but it always sounds colloquial. (See colloquialisms.) |
| cohort | always refers to a group of people. Emphasis is on the trait or traits common to all members. <i>Cohort</i> should not be used as a synonym for comrade or comrades. Mr. X may belong to a cohort, but neither he nor his buddies are cohorts. (Compare cadre.) |
| colloquialisms | are words or phrases suitable for conversation or other informal situations but not for intelligence writing. |
| colored | See footnote 6. |
| combined, joint | When referring to military exercises or operations, a combined exercise involves the forces of more than one country, a <i>joint</i> exercise two or more services of the same country. |
| communication(s) | In military/security terminology communication usually adds s as an adjective: communications equipment, communications intelligence. As a noun it sometimes drops the s: sea lines of communication (sometimes abbreviated SLOCs and pronounced as an acronym). |
| communism | See section 1.13 and footnote 3. |
| comparatively | See relatively, comparatively. |
| compare, contrast | Compare to points out likenesses; compare with points out both likenesses and differences; contrast with points out only differences. He compared his cabinet with Kennedy's. (He pointed out similarities and differences.) He compared his cabinet to Kennedy's. (He showed how much alike they were—and by implication, how praiseworthy his cabinet was.) He contrasted his cabinet with Kennedy's. (He emphasized the differences.) When using compared as a participle, preceding it with as will ensure better comprehension and in some cases avoid the appearance of a dangling participle. This year's output, as compared with last year's, is more export oriented. |

| compel, impel, propel | Compel means to force, drive, or constrain; impel to urge to action through moral pressure; propel to impart motion to. |
|---|--|
| comprise, compose, include | Comprise views a collection as a whole; it means to contain or to consist of. Use comprise when referring to all components; use include when mentioning only some of them. The statement comprises all he has to say on the topic. The statement includes a cogent summary of his thoughts. |
| | Compose emphasizes the elements of a collection; it means to constitute or to make up. Unless accompanied by a modifier, it, too, refers to all components. The parts compose the whole. The committee is composed of Sue, Jim, and Andy, among others. |
| · | The real problem with compose/comprise comes with the passive form. Compose in the sense of contain generally requires a passive construction: is composed of. Comprise lacks a meaningful passive form, but (partly because comprise sounds fancier than compose) we try to fill the gap with a parallelism: is comprised of. Never use this phrase. Something can be composed of a, b, and c. It can include a, b, and c. It can comprise (be made up of, be composed of) a, b, and c. It can never be comprised of a, b, and c. |
| concern | takes different prepositions for different senses. He is concerned with computers (he is so occupied or employed). He is concerned about computers (he is worried about them). When used in the sense of worry, concern sounds limp: The government of Country A is concerned about US policy. Focus whenever possible on what the government calculates, on what it might do. |
| concerted | meaning combined, requires a plural subject or object to make sense. Only we or they (never I, he, she, or it) can make a "concerted effort." |
| conclave | is a secret meeting, not just any gathering. |
| concrete steps | In nonliteral use this phrase raises awkward connotations of literalness. Say concrete measures or specific steps. |
| condition, situation, activity | often intrude into sentences for no reason. Good writers will say the famine is worsening, not the famine conditions are worsening. The deteriorating economy reads better than the deteriorating economic situation. Likewise, the Russian Navy continued its exercises, not its exercise activities. |
| consensus | is an opinion held collectively, not simply by a majority. Note the spelling: one c, three s's. |
| consider, regard | Regard, in the sense of coming to a belief after careful deliberation, is usually followed by as; consider, in the same sense, is not. He considered the vote a defeat. He regarded the vote as a defeat. |
| consul | See council, counsel, consul. |
| continual, continuous, continuing, continued | Continual applies to something that occurs intermittently or is repeated at intervals, continuous to something that is uninterrupted in time or space. Continuing can be used in either sense. Continuing and continued are most often seen in government prose as pallid filler words. When tempted to use either, ask yourself whether there is a more effective word or whether you can do without the adjective. His continuing efforts (persistent efforts? fruitless efforts? Do you need any adjective at all?) |
| contractions | are not acceptable in formal writing. |
| contradistinction | See pretentious words. |
| contrast | See compare, contrast. |

| convince, persuade | are not interchangeable. A person is convinced of a need after he has been persuaded to recognize the need. They convinced him of the importance of his participation and persuaded him to join. If convince is followed by to, it usually is incorrect. |
|-------------------------------------|---|
| could, may, might | In the DI these words are used more or less interchangeably in a predictive mode: Country A could (may, might) invade Country B. Strictly speaking, however, they are not predictive at all. They are conditionals, and conditionals carry little analytic weight without the anchor of a limiting condition: Country A may invade country B if Country B's leader leaves the scene. |
| | Moreover, the three words are not synonymous. Could means would be able to and should be confined to statements dealing with capability. Country A could invade Country B if it achieved air superiority. Without a limiting condition, could carries the connotation that the capability exists but will not be used. Country A could invade Country B (but we do not think it will). |
| | Both may and might deal with possibility. For many, might carries an implication of greater uncertainty on the part of the writer. Again, the construction provides little enlightenment unless it offers further analysis. Country A may invade Country B If President X gets the support of Country C. Country A might invade Country B If President X can persuade the legislature to back him. |
| | Note the logical constraints imposed by <i>may</i> and <i>might</i> when they are properly yoked to a limiting condition. The last two examples not only warn about a possible invasion if certain conditions are satisfied; they also tell the reader by implication that the invasion <i>will not</i> occur <i>unless</i> the conditions are satisfied. If that is not what we want to say, the sentence needs reworking. |
| council, counsel, consul | Council is a noun that refers to a deliberative assembly, its work, or its membership. Counsel may be either a noun or a verb; it applies to advice and the person proffering that advice. Consul is the title of an officer in the foreign service. |
| countries, nations | Even La Belle France and Mother Russia are neuter and, like boats, take neuter pronouns (it, they). For information on country names and nationality designators, consult <i>The World Factbook</i> . (See footnote 1.) |
| credence, credibility, credulity | Credence means belief or mental acceptance. Credibility is the quality of being believable; something is credible when it is worthy of belief and judged plausible. One receives information that lends credibility to a rumor; one gives credence to the rumor upon being convinced that the information is valid. One who gives credence too easily is likely to stray over into credulity, which is next to gullibility. |
| crisis | In international affairs, a <i>crisis</i> is a situation involving significant actual or potential conflict. Similarly, in a country's domestic politics, reserve the word for major turning points. <i>Crisis</i> should not be used to describe lesser disruptions. |
| criteria | See data, media, criteria, phenomena. |
| culminate | takes the preposition in and is used intransitively. The concert culminated in a sing-along, not a sing-along culminated the concert. |
| | the electronic medium of computer networks in which online |

| dangling participles | See participles. |
|-------------------------------------|--|
| data, media, criteria, phenomena | are plural and therefore require plural verbs. The singulars are datum, medium, and (because they come from Greek rather than Latin) criterion and phenomenon. Datum and medium rarely have a place in DI writing, but we do use criterion and phenomenon. One never satisfies a criteria or observes a phenomena. (Note: Gregg points to a few instances when data and media might appropriately take a singular verb in formal writing; see section 1018. In the DI, you still are safer sticking with a plural verb.) |
| | The majority of -um nouns, of course, appear most often in the singular form. When pluralizing them, the DI generally uses English rather than Latin endings—for example, forum(s), curriculum(s). See also Gregg, section 614, for lists of the preferred pluralizations of foreign words. |
| dates as modifiers | A date should be used adjectivally only if you are distinguishing one event from another. Thus, the 1973 Middle East war differentiates that conflict from others in other years. In contrast, the 1901 assassination of President McKinley and the 1991 Iraqi invasion of Kuwait need to be recast because they refer to unique events. Ending the phrases with in 1901 and in 1991, respectively, would be a quick solution, but more creative choices may be available. |
| decimate | originally meant to select by lot, and then to kill, one out of every 10 in a group of enemies. Now it is used (and overused) to encompass heavy losses of many kinds. Use it only when referring to people, most often military people, and only when actual deaths are involved. Troops and units can be decimated. By extension, a disease can decimate a population. But buildings, tanks, and crops are damaged or destroyed, not decimated; and government economizing does not, one hopes, decimate the relief rolls. |
| definitely | See very, definitely. |
| defuse, diffuse | Defuse means to remove a fuse (or fuze—see the spelling and compounding list in chapter 8) from a weapon or, nonliterally, to deintensify, as in to defuse a crisis. Diffuse means to spread around, to scatter. |
| depart, leave | Depart requires a preposition; leave does not. She will depart from Dulles today and will leave London on Tuesday. |
| deploy | applies to military movement—in its narrowest definition, to military movement in preparation for battle. Avoid using it in the service of nonmilitary activity. |
| deprecate, depreciate | Deprecate means to express disapproval of something. Besides its application to prices and values, depreciate means to belittle something. If you depreciate someone's public-speaking skills, you are saying they do not amount to much; if you deprecate a speech, you are criticizing it. |
| developing countries | See less developed countries. |
| die | is something we all do, even writers who relegate world leaders to a sort of Immortality Club with phrasing like the President has taken steps to ensure a peaceful transition if he should die. Reality can be recognized by inserting in office or before the end of his term, or even by saying simply when he dies. |
| Dietmen | Avoid this term for members of the Japanese legislature; rather, use <i>Diet members</i> or members of the <i>Diet</i> . |

| different from | is correct; different than is not. Her opinion is different from his. Better yet, differs from. |
|-----------------------------------|--|
| diffuse | See defuse, diffuse. |
| dilemma | involves a choice between two equally unsatisfactory courses of action. It is not the proper word to use when you mean simply a predicament or a troublesome decision. The general had a dilemma: he had to decide whether to surrender or to face almost certain defeat on the battlefield. |
| diplomatic corps | comprises all foreign diplomats assigned to a particular city; it is not synonymous with a country's diplomatic (or foreign) service. Jones, a member of the British Foreign Service since 1983, is currently dean of the diplomatic corps in Ouagadougou. |
| disburse, disperse | Disburse refers to the release of funds. The payroll office disbursed the funds on Friday. Disperse means to scatter. The air force dispersed all its aircraft on Friday. |
| disclose | See reveal, expose, disclose, divulge. |
| discreet, discrete | Discreet means cautious, prudent. Discrete means separate, distinct. |
| disinformation, misinformation | Disinformation refers to the deliberate planting of false reports. Misinformation equates in meaning but does not carry the same devious connotation. |
| disinterested, uninterested | Disinterested means impartial, not swayed by self-interest. He attended the conference as a disinterested observer. Uninterested connotes indifference. She was uninterested in the film on management techniques. |
| disperse | See disburse, disperse. |
| divulge | See reveal, expose, disclose, divulge. |
| domestic, indigenous | These words are synonymous in some senses but not all: Modifying production, for example, both define it as homegrown, or related to the country concerned. Modifying animal, on the other hand, the words diverge in meaning, domestic meaning domesticated or tamed, indigenous connoting native to or naturally occurring in the country or region concerned. In a phrase like domestic political opponents domestic is unnecessary because political opponents are always domestic unless otherwise stipulated; you may not need political either. |
| downbeat | See upbeat, downbeat. |
| due to | See based on, due to, owing to. |
| during | See more than, fewer than, over, under, during, while. |
| each | As a subject, each takes a singular verb and singular related pronouns. Each has his own duties. If, however, each follows a plural subject, the verb is plural. The President and the Vice President each have an Interest in the outcome. |
| eager | See anxious, eager. |
| East Asia | Prefer to Far East. |
| East-West | East-West relations refers to those between the United States and its allies on one side (the West) and the Soviet Union and its allies on the other (the East) between World War II and the breakup of the Soviet Union in 1991. |
| economic growth | DI publications do not use the term <i>negative rate of economic growth</i> . Say instead that gross domestic product (or gross national product) is declining. |

| effect | See affect, effect. |
| effectuate | See pretentious words. |
| either | as a subject, takes a singular verb and pronoun. For either or constructions, see neither nor. |
| election | Singular in most cases: usually there is only one election at a time (national election, general election, presidential election). But presidential and legislative elections, municipal elections in several parts of the country. |
| e-mail | a way to transmit messages electronically, or a message or messages so transmitted. |
| e-ticket | a paperless electronic document used for ticketing passengers, usually on an airline. |
| e-trade | electronic stock trading. |
| embargo | See boycott, embargo. |
| emigrate, immigrate, migrate | Emigrate is to leave a place permanently and is usually followed by from. Immigrate is to come to a place permanently and is usually followed by to. Migrate embraces both. The doctor migrated in the 1950s. He emigrated from Sweden. He immigrated to Italy. When a sentence includes both the place of departure and the place of arrival, immigrate is usually omitted. He emigrated from Sweden to Italy. |
| enormity, enormousness | Enormity means great wickedness. The enormity of his attempts to conceal the facts led to his ouster. Enormousness, the noun form of enormous, means great size. |
| ensure | See assure, ensure, insure. |
| enthuse | should not be used. (See colloquialisms.) |
| enunciate | See pretentious words. |
| equal, equivalent | Equal emphasizes precise quantitative likeness. The three countries have equal numbers of submarines. Equivalent applies to two or more things that have a qualitative similarity. The military capabilities of the three countries are roughly equivalent. |
| equally, as | Do not use these two words together in the same sentence (equally as) when you are making comparisons. Drop equally when you are comparing two persons or groups or two things. He is as ineffective as his predecessor (not equally as ineffective). Drop as when you name only one person or group or one thing in the sentence. They are equally ineffective. |
| equivalent | See equal, equivalent. |
| escalate, accelerate, intensify | Escalate means to increase by successive stages. A confrontation can escalate from border skirmishes to raids to invasion to all-out war; pensions can escalate with annual cost-of-living increases. Do not use escalate when you mean simply accelerate or intensify. His political problems are escalating is poor usage. |
| essentially | See fill-ins. |
| estimated | See about, approximately, around. |
| | Rarely appropriate in DI writing. Enumerating the additional instances is |
| etc., and so forth | usually more helpful. |

| even | a notorious floating modifier when used as an adverb. If it ends up in the wrong place it can distort meaning, and proper placement in a sentence requires care. Even the Secretary was not disturbed by the threats (and, if anybody would be, it would be he). The Secretary was not even disturbed by the threats (in fact, he was more or less unaffected). The Secretary was not disturbed even by the threats (much less by other things). |

| evidence | is not a synonym for information or reporting. For the most part, avoid the word and get on with the analysis. Such phrases as available evidence indicates are essentially meaningless. |
| evidently | See qualifiers. |
| evince | See pretentious words. |
| exacerbate | Avoid this word; try weaken, worsen, heighten, intensify, widen, or deepen instead. (See pretentious words.) |
| exile | Except for diplomatic exile, a person is exiled <i>from</i> a country, not to a country. (See asylee.) |
| expect | See anticipate, expect. |
| expose | See reveal, expose, disclose, divulge. |
| extra words | See verbal overkill. |
| fake analysis | Phrases like the following betray sloppy thinking and detract from any serious presentation: |
| · · · · · · · · · · · · · · · · · · · | anything can happen it is not possible to predict further developments are to be expected it is too early to tell it remains to be seen only the future will tell |
| Far East | See East Asia. |
| farther, further | Farther refers to physical or literal distance; further conveys the notion of additional degree, time, or quantity. A person hits a ball farther; he pursues a subject further. |
| fatal | See absolutes. |
| fear | Use only to describe a strong emotion, not a vague concern, an uneasy feeling, or an ill-defined skepticism. |
| feel | carries tricky emotional overtones. If a piece of analysis says the leaders of another country feel a certain way, the policymaking reader may conclude that the writer is identifying with those leaders—and perhaps criticizing the policymaker. You are on safer ground with calculate or estimate, whose relationship to the policymaker's operational world is unambiguous. |
| fewer, less | Fewer applies to numbers or units considered individually, less to quantities taken collectively. Fewer dollars, less money; fewer months, less time; fewer miles, less distance. |
| fewer than | See more than, fewer than, over, under, during, while. |

| flagrant | See blatant, flagrant. |
| flammable, inflammable | Flammable is the preferred word when you are describing a combustible substance. However, a situation or a temperament is <i>inflammable</i> , not <i>flammable</i> . |
| flaunt, flout | Flaunt means to display ostentatiously; flout means to disobey openly, to treat the rules with contempt. The starlet flaunted her physical assets in hopes of getting a good role. George flouted community association rules when he built a glass house. |
| flounder, founder | As a verb, flounder means to stumble about clumsily; founder means to go lame (as with horses), to sink (as with boats), to collapse, or to fail utterly. |
| flout | See flaunt, flout. |
| forceful, forcible | Forceful means vigorous, strong, effective. If you want to connote the exertion of force, use forcible. |
| forego, forgo | Forego is to go before in time or place. Instead of using it we would usually write go before or precede. If you are doing without something, forgo the e. |
| foreword, forward | Foreword is the name for something written, usually by someone other than the author, to appear at the beginning of an article or book—whose author ordinarily writes the <i>preface</i> . Do not confuse with <i>forward</i> , which means near, at, or moving toward the front. |
| forgo. | See forego, forgo. |
| former | See latter, former. |
| forthcoming | See upcoming, forthcoming, coming. |
| fortuitous, fortunate | Fortuitous describes something that happens by chance or accident. Do not confuse with fortunate. A fortuitous event can be either fortunate or unfortunate. |
| fortunately | See subjective words. |

| include | See comprise, compose, include. |
| incident, incidence | Incident applies to a minor occurrence or an event of only momentary importance. A border incident took place yesterday when a small patrol entered the neutral zone. Incident is not the proper word to use in cases of major conflict or catastrophe. An invasion is not an incident; neither is an earthquake. Be careful also to distinguish between incidents (occurrences) of civil unrest and the incidence (frequency) of civil unrest. |
| incessant | See absolutes. |
| in addition to | See together with. |
| important | When you want to introduce a second and more worthy consideration, use more important rather than more importantly. Retail sales were up last month; more important, interest rates fell for the first time this year. Similarly, use most important, rather than most importantly, in a context requiring the superlative. (See relevant, important.) |
| imply, infer | Implying occurs when the writer or the speaker states something indirectly. Inferring occurs when the reader or the hearer draws a conclusion on the basis of indirect evidence. |
| impending | See pending, impending. |
| impel | See compel, impel, propel. |
| impact | Verbs such as affect or hit are preferable to impact. If you do use it as a verb, you should always use it intransitively. A missile does not impact a target; it impacts on a target or in a target area. |
| immigrate | See emigrate, immigrate, migrate. |
| hypertext markup language | on hyperlinks. a special language used to write pages and sites for the Internet. |
| hypertext | a computer-based text retrieval system that enables a user to access particular locations in webpages or other electronic documents by clicking on by marking. |

| injuries, casualties | are suffered or sustained, not received or taken. (See casualties.) |
|----------------------|---|
| in order to | often begins an adverbial phrase in the middle of a sentence, but at the beginning of the sentence you can usually do without the first two words. He brought his lunch in a bag in order to save money. But: To save money, he brought his lunch in a bag. Be careful of negative verbs followed by phrases beginning with in order to or because of. He did not go out to lunch in order to save money and He did not go out to lunch because he wanted to save money are both ambiguous, leading the reader to ask then why did he go out to lunch? The problem is usually solved by putting the in order to or because of phrase at the beginning of the sentence. A better plan is to rephrase and change the negative verb to a positive one with negative connotations. He avoided restaurant lunches in order to (because he wanted to) save money. |
| insure | See assure, ensure, insure. |
| intensify | See escalate, accelerate, intensify. |
| inter, intra | Inter indicates something that is between or among or together; intra, a prefix, means within. International competition (competition among nations), intramural competition (competition within an institution). |
| Internet | a communications network that connects computer networks and organizational computer facilities around the world. |
| interestingly | See hopefully and subjective words. |
| in terms of | a pretentious and often unnecessary phrase that can usually be deleted along with what it introduces—or at least replaced by at, in, for, or by. |
| in this context | See fill-ins. |
| intra | See inter, intra. |
| ironically | involves a sharp contrast between the apparent and the expected. Do not use ironically when referring to a trivial oddity. Ironically, the senator, a professed atheist, goes to church every Sunday is fine. Ironically, the senator wears tennis shoes to church is not. |
| Islam | the religious faith of Muslims. (See Muslims.) |
| issues | are resolved, not solved. |
| its, it's | Its is the possessive of the personal pronoun it. It's is the contraction of it is. |
| -ize words | appeal to many misguided writers. Seek synonyms for conceptualize, finalize, optimize, prioritize, and their ilk—a recent, particularly egregious example is rumorize. |
| jibe | See gibe, jibe. |
| joint | See combined, joint. |
| kind | See type. |
| kudos | is a Greek word meaning glory. In English it means praise or credit for an outstanding achievement. In both Greek and English it is singular and has no plural. Kudos goes to someone, kudos never go to anyone. |
| lack | as a transitive verb, is not followed by for. The French do not lack (omit for) a sense of their grandeur. |
| laid, lain | See lay, lie. |

| late | When referring to someone who is deceased use the before the word late. He succeeded the late President Smith, not He succeeded late President Smith. |
|---------------------------------|--|
| Latin abbreviations | See section 3.11. |
| latter, former | Both words refer to one of only two persons or things or collections. In a series of three or more, repeat the subject referred to or, if repetition is a problem, use <i>last-named</i> (or <i>first-named</i>). |
| lay, lie | Lay means to put, place, or prepare. It always takes a direct object. Both the past tense and the past participle are laid. (The President ordered his aide to lay a wreath at the unknown soldier's tomb. The aide laid the wreath two hours later. Yesterday a wreath was laid by the defense minister.) Lie means to recline or be situated; it never takes a direct object. Confusion arises because the past tense of lie is lay (the past participle is lain). He lies (or lay, or has lain) down. |
| lead, led | Lead (rhymes with reed) means to go ahead of; led is its past tense and participle. Lead (rhymes with red) is the metal. |
| leave | See depart, leave. |
| led | See lead, led. |
| LDCs | See less developed countries. |
| lend, Ioan | Use lend when you need a verb; loan as a verb is colloquial. |
| less | See fewer, less. |
| less developed countries (LDCs) | Developing countries is preferred. (Do not say "lesser developed countries." (See Third World.) |
| liable | See likely. |
| lie | See lay, lie. |
| like, as | Both like and as can properly be used in making comparisons, but like, a preposition, governs nouns, pronouns, and incomplete clauses, while as, a conjunction, governs full clauses. He behaves like a child. He behaves as a child would behave. Sometimes you can omit the verb in the clause after as. In this case the verb is understood: When I was a child, I thought as a child [would think]. Leaving out the verb will often produce smoother prose, but you need to ensure that the omission does not sound stilted or foster ambiguity. |
| likely | As an adverb, likely must be preceded by a qualifier like quite, more, most, or very. (She will very likely win the election.) As an adjective, it needs no qualifier. He is likely to blow the operation (not He will likely blow the operation). She is a likely candidate. |
| | Apt and liable sometimes crop up as synonyms for likely. Neither, however, has the same predictive connotation. Apt suggests a tendency, usually unfortunate: He is apt to lie at the drop of a hat. Liable connotes vulnerability rather than probability: He is liable to arrest. |
| likewise | is an adverb, not a conjunction, and cannot properly be used as a substitute for and. |
| links | See relations, ties, links. |
| loan | See lend, loan. |

|--------------------------|---|
| loath, loathe, loathsome | Loath, an adjective, means reluctant. He is loath to break the agreement. Loathe, a verb, means to dislike intensely. He loathed the long train ride. Loathsome means abhorrent or repulsive. The bloody murder was loathsome. |
| logistic | in the sense of moving, quartering, and supplying troops, is the adjective; logistics is the noun. Logistical is discouraged. |
| lower | is both the comparative degree of the positive adjective low (superlative lowest) and the antonym of the positive adjective upper, which, like the antonymous lower, has no comparative or superlative. This consideration is significant only when deciding whether to put a hyphen after lower (as always after upper) in a unit modifier. (See footnote 34.) |
| majority | means more than 50 percent. Majority takes a singular verb when the sense is oneness. The majority of the Senate supports the measure. When the individuality of the members is stressed, the verb is plural. The majority of the Senators are from rural districts. When no one has achieved a majority, someone still will have a plurality (the group that, while falling short of a majority, is larger than any other). Neither majority nor plurality can be modified by terms like "one-vote" or "one-seat." (See plurality, consensus, and margin.) |
| margin | Margin, not majority, is what you call the number of legislative seats by which the majority exceeds the minority. The Prime Minister's party, with 220 seats, has a 20-seat margin over the opposition's 200 seats. (See majority and plurality.) |
| masterful, masterly | Careful writers distinguish between these adjectives. A masterful person is overpowering, overbearing, or imperious; he or she is capable of mastering others. A virtuoso performance is masterly, the work of a master artist. |
| material, materiel | Material is any substance from which something is made. Material refers to equipment, especially military supplies. |
| may | See could, may, might. |
| maximum | See absolutes. |
| meaningful | is a vacuous word that is too often used by analysts to mean significant. The results of the meeting were meaningful is meaningless. |
| meantime, meanwhile | The former serves mainly as a noun. In the meantime, he waited. You can express the same idea in fewer words by using meanwhile. Meanwhile, he waited. |
| measures, units of | See sections 2.21, 2.22, and 3.15 as well as the conversion chart on page 25. |
| media | See data, media, criteria, phenomena. |
| mercifully | See hopefully and subjective words. |
| metaphors | are figures of speech used to describe something in terms of something else. Approach them with caution. Even experienced writers, seeking to add a flourish to their prose, sometimes make the mistake of mixing |

| military | as a noun can be singular or plural—be consistent within a paper. If in doubt, consider it plural. |
| militate | See mitigate, militate. |
| minimum | See absolutes. |
| misinformation | See disinformation, misinformation. |
| mitigate, militate | Mitigate means to moderate or alleviate. He did what he could to mitigate his minister's wrath. Militate means to have weight or effect, either for or against but more frequently the latter. The facts militate against his interpretation. |
| Mod | is an abbreviation-derived jargon word (capitalized) that is acceptable in formal writing about weapons to designate different versions (models) of a weapon system: the SS-II Mod 2, all Mods of the SS-11. |
| modifiers, floating | See also, even, and only. |
| momentarily | applies to a fleeting instant; it does not mean at any moment. |
| monetary | See fiscal, monetary. |
| more than, fewer than, over, under, during, while | Over and under describe location; use more than and fewer than with numbers. For time, use during, from, or while except when the time reference is indefinite or vague. The system has improved during the past year. Inflation is up 10 percent from a year ago. But: Relations between the two nations have improved over time. Living conditions have changed over the centuries. |
| most, mostly, almost | Most is not a proper substitute for almost in formal writing. Almost every one, not most everyone. Most, not mostly, is the correct word when you mean to the greatest degree. Those most affected, not those mostly affected. |
| Muhammad, Mohammed | See Muslims. |
| Muslims | are adherents of Islam. They are followers of the prophet Muhammad, not Mohammed. |
| nations | See countries, nations. |
| naturally | See subjective words. |
| neither nor | When the elements in a neither nor construction are singular, the verb is singular; when they are plural, the verb is plural. When the elements differ in number, the verb is determined by the number of the nearer (or nearest) element. Neither Bob nor Joe is going to the conference. Neither the French nor the Italians are attending this year. Neither Bob nor his neighbors are planting gardens. |
| never | Think before writing that something has never happened: are you sure that there has not been even one occurrence in all of history? (See absolutes.) |
| newly industrializing countries or economies | See Third World. |
| noisome | means either offensive and disgusting, like a <i>noisome odor</i> , or harmful; it has nothing to do with noise. |
| nonaligned countries | do not belong to alliances of West or East, but they often are not practitioners of neutrality, like Switzerland. Instead, they are advocates or opponents of selective policies of both sides. Most of them are grouped in the Nonaligned Movement. |

| nonconventional, unconventional | Nonconventional refers to high-tech weaponry short of nuclear explosives. Fuel-air bombs are effective nonconventional weapons. Unconventional means not bound by convention. Shirley Chisholm was an unconventional woman. |
|------------------------------------|---|
| none | is singular when used in the sense of no one or not one. None of those delegates was elected party chair. If none applies to more than one person or thing, use a plural verb. None of those delegates were expected to be nominated. The object of the of phrase following none is usually the best indicator of whether none is singular or plural. None of the cake was eaten. None of the cookies were eaten. |
| North-South | refers in international politics to relations between industrialized and developing nations. <i>North</i> and <i>South</i> also can mean the two Koreas. |
| not only but also | In not only but also constructions, be sure that the parts of the sentence are parallel. He is aware not only of the political consequences but also of the military dangers. He not only is aware of the political consequences but also recognizes the military dangers. (See parallelism.) |
| number of | a phrase that is too imprecise in some contexts. A number of troops were killed. (If you do not know how many, say an unknown number.) Number of, when preceded by the, usually takes a singular verb. The number of mistakes is small. When preceded by a, number of generally takes a plural verb and means several. A number of the mistakes were due to carelessness. |
| numerical order designators | First, second, third, and other designators of numerical order are preferred to firstly, secondly, thirdly, and the rest. |
| obviously | See qualifiers. |
| of | turns up as an unnecessary hanger-on in conjunction with words like outside and off. The latter are prepositions in their own right and need no reinforcement. One gets off one's high horse or off the fence, not off of them. Out of, on the other hand, cannot do without of. |
| of course | See fill-ins. |
| offload | Use the less pretentious word unload. |
| offput | is not a word. If you are offended, you are put off. |
| older, younger | refer to only two persons or things or collections of either; oldest and youngest are the proper adjectives when more than two are involved. |
| on · | See upon, on. |
| on board | See aboard, on board. |
| one | has a way of intruding into a sentence. The congress was an obstreperous one reads better as The congress was obstreperous. In constructions where one is the subject, use a singular verb. One in every 10 senators is uncommitted. But beware: He is one of those who were (not was) uncommitted; in this construction, those who, not one, controls the verb. |
| only | is a floating modifier that can be attached to almost any word in a sentence. Anchor it carefully to ensure that you are conveying the meaning |
| | you want to convey. Even, primarily, and mainly pose similar challenges. Only he attended the meeting. (The others did not show up.) He only attended the meeting. (He did not make a speech.) He attended only the meeting. (He skipped the dinner.) |

| opine | See pretentious words. |
|----------------------------------|--|
| opposition, opposed, opponent | Opposition takes the preposition to, as does opposed; opponent is followed by of. |
| optimize | See -ize words. |
| oral | See verbal, oral. |
| organ, organism, organization | An organ is a musical instrument, a part of the body, or a medium of communication. An organism is a living plant or animal. An organization is a society or association or business consisting of people united in some way for a specific purpose. Do not use these three words interchangeably. |
| over | See more than, fewer than, over, under, during, while. |
| owing to | See based on, due to, owing to. |
| parallelism | To make a parallel clear, repeat a preposition, an article, the to of the infinitive, or the introductory word of a phrase or clause. Technology to boost production and to exploit natural resources. |
| parameter, perimeter | Parameter is a legitimate word for mathematicians and scientists, but it is easily misused, for example when dimension or characteristic would be better. Save parameter for the times you really mean a limiting factor, especially when the thing limited is abstract rather than concrete. Do not confuse with perimeter, which is the outer edge of a physical area; the emphasis is on shape and extent rather than on the limits being set. |
| parliament | Use only if it is the actual name of the body. Otherwise, use <i>legislature</i> or the precise name: <i>National Assembly</i> , <i>Diet</i> , <i>Congress</i> . |
| parliamentarian | A parliamentarian is an expert on parliamentary rules and procedures, not a member of parliament. People who pass laws are legislators. Or use the specific title of the legislators in question (senator, delegate). Refer to a Japanese legislator as a Diet member, not a Dietman. |
| participles | must not be left dangling, where they often lead to ambiguity and illogicality. Turning the corner, the view was much changed is clearly wrong. The sentence should read: Turning the corner, he found the view much changed. General guide: participles are adjectives, so watch what they modify and keep them close by. (A memorable dangler from a travel brochure: You can see the Statue of Liberty sailing into New York harbor.) |
| party | should be applied to a person only in telephone and legal contexts. For guidance on when to capitalize party, see section 1.12. |
| passive voice | See active voice. |
| PC | means personal computer. |
| pending, impending | Pending means yet to come or not yet settled; impending adds a hint of threat or menace. |
| people, persons, personnel | The word people usually applies to sizable groups imprecisely enumerated (several thousand people showed up for the demonstration), persons to smaller, usually explicit numbers (217 persons were interviewed, nine persons were hired). Personnel is a collective noun (usually plural) referring to employees of an organization or to members of the armed services as a group. Do not use it as a substitute for people or persons. Many people applied. Three persons remain in the running. All company personnel have to be trained. |
| perimeter | See parameter, perimeter. |

| personnel | See people, persons, personnel. |
|---------------------------------------|---|
| persons | See people, persons, personnel. |
| persuade | See convince, persuade. |
| phenomena | See data, media, criteria, phenomena. |
| plurality | The largest single group (of votes, opinions, and the like) when no one has a majority. (See majority and consensus.) |
| plurals of <i>-um</i> nouns | To pluralize nouns that began life as neuter Latin words (ending in -um), the DI generally adds s rather than following the Latin rules: forums rather than fora, for instance. See Gregg, section 614 for lists of the preferred pluralizations of foreign words. For Latin (and Greek) words that appear most commonly in the plural, see data, media, criteria, phenomena. |
| possible | See probable, possible. |
| possibly | See could, may, might. |
| practicable, practical | Practicable means capable of being carried out in action; practical connotes useful. It was practicable to build a highway (it could be done), but it was not practical (because it would receive little use). |
| precipitate, precipitant, precipitous | Precipitate applies to rash or hasty human actions. Precipitant is used in the same general sense, but with stress on rushing or falling headlong. Precipitous refers to physical steepness. |
| preclude, prevent | Generally, preclude applies to events as its object, prevent to persons. The bad weather precludes a departure today. The bad weather prevents me from leaving today. |
| predominant, predominate | Predominant is the adjective; predominate is the verb. His predominant influence is evident in party pronouncements. His views predominated in party pronouncements. |
| preface | See foreword, forward. |
| presently | means in a short time, not at present, currently, or now. |
| pressure | As a verb, press is preferred. |
| pretentious words | Avoid words like apprise, citizenry, contradistinction, effectuate, enunciate, eventuate, evince, and opine and use simpler synonyms. |
| prevent | See preclude, prevent. |
| primarily | See only. |
| principal, principle | Principal is an adjective meaning most important, or a noun referring to a leader or to money. Principle is a noun only. It means basic truth, rule of conduct, fundamental law; principled is its related adjective. |
| prioritize | See -ize words. |
| prior to, before | Prior to is appropriate when a notion of requirement is involved. The law must be passed prior to 1 July. Otherwise, before is the better word. |
| pristine | describes something that is in its original condition, or primitive. It should not be used as a synonym for <i>new</i> or <i>clean</i> . |
| probable, possible | Analysts, particularly military analysts, are tempted to use <i>probable</i> or <i>possible</i> when <i>what probably</i> is or <i>what possibly</i> is is the proper formulation: the attache saw what probably is a missile, not the attache saw a probable missile. Could the officer have seen an improbable (or impossible!) missile? |

| propel | See compel, impel, propel. |
|------------------|---|
| protagonist | the leading or principal character, not necessarily a champion of an idea or course of action. <i>Chief protagonist</i> is redundant. (See redundancies.) |
| proved, proven | Proved is preferred as the participle, proven as the adjective except for energy contexts such as proved reserves or proved fields. |
| purportedly | See qualifiers. |
| qualifiers | Do not weaken judgments supported by direct evidence by inserting words like apparently, evidently, seemingly, purportedly. Conversely, you cannot strengthen judgments based on weak evidence by using words like obviously, undoubtedly, clearly. These adverbs are an instance of modifiers that do little or no work. Often you will find adjectives that are open to the same criticism. (See subjective words and the discussion of adjectives and adverbs in section 9.3.) |
| reason, because | After an opening like the reason for, the clause containing the reason should begin with that, not because or why. The reason for his failure was that he was ill. Better still would be He failed because he was ill. |
| rebound | See redound, rebound. |
| rebut, refute | If you rebut a point of view, you argue to the contrary; if you refute a point of view, you win the argument. New evidence can sometimes refute an earlier report or a piece of intelligence analysis; otherwise, rebut is generally the appropriate word in DI writing. |
| redound, rebound | Redound means to have an effect. The plan redounds to his credit. Rebound means to bounce back. The economy rebounded last month. |

are phrases that succumb to repetition. They expose bad habits or, worse, redundancies carelessness. The author who writes It is a true fact that they are offering free gifts is not watching his words. Below are selected examples observed over the years by the "redundancy police": accidentally misfired military troops adequate enough mutual cooperation advance reservation naval marines as has been mentioned previously old adage both agree own personal build a new house , past career bureaucratic redtape past history chief mainstay personal autograph church seminarians personal charisma close confidant past custom close personal friend personal popularity combine together piecemeal on a piece basis completely surrounded professional career consensus of opinion rally together could possibly relocate elsewhere current status separate isolation cells established tradition separate out share together exact same exile abroad single greatest exports beyond their borders single most eyewitness at the scene small cottage small village first began final vestiges sound logic foreign imports still continues free gift still remains future potential still retains future prospects sufficient enough future successor sum total historical monuments tandem couple historical past temporary respite holy shrine temporary suspension in close proximity thin veneer interact together top business magnate joint coalition true facts trusted confidant little booklet live studio audience underlying premise long litany unexpected surprise major crisis unite together major milestone well-known reputation meet personally young baby

| refute | See rebut, refute. |
|-------------|--|
| regard | See consider, regard. |
| regime | has a disparaging connotation and should not be used when referring to democratically elected governments or, generally, to governments friendly to the United States. |
| regretfully | See subjective words. |
| regrettably | See subjective words. |

| relations, ties, links | Relations should be followed by the preposition with. This country is about to establish relations with that one. Ties (or links) should be followed by to. That country has ties (links) to this one. |
|--------------------------------------|--|
| relatively, comparatively | Relatively should be used only when the intended comparison can be easily grasped. He has a relatively heavy workload has, by itself, little meaning. Relative to what? Last year? Last week? His colleagues? The same stricture applies to comparatively. (See compare, contrast.) |
| relevant, important | Relevant refers to something that has a bearing on the matter at hand and should be followed by to. His speech was relevant to the problem. Do not use relevant when you mean important. |
| reluctant, reticent | Reluctant means hesitant, unwilling to act and should not be confused with reticent, which means uncommunicative or reserved. |
| represent | means to depict or symbolize, not constitute. The red line on the map represents the boundary between France and Germany is proper usage. South African gold represents most of the world's output is not. |
| reticent | See reluctant, reticent. |
| reveal, expose, disclose, divulge | Reveal implies an unveiling of something not previously known; expose, to the making public of something reprehensible; disclose, to the making public of something that has been private; divulge, to the making public of something that has been secret. |
| Russian submarines | See section 7.6e for information on Russian submarine designators and footnote 39 for a list of submarine names. |
| sanction | as a noun, has meanings that are almost in opposition: from approval and encouragement to penalty and coercion. It should therefore be used only when the context makes its meaning clear. As a verb, sanction picks up only the approval aspect of the noun. |
| sanguinary, sanguine | Sanguinary means accompanied by carnage or bloodthirsty. Sanguine means ruddy or optimistic and cheerful. |
| seemingly | See qualifiers. |
| semiannual | See biannual, biennial, semiannual. |
| shall, will | Grammar purists tell us there are fine distinctions to be made between shall and will. Today, these distinctions are not closely observed even in serious writing. For devotees of grammatical history, the distinctions are: in the first person, shall denotes simple futurity; in the second and third persons, shall denotes promise, inevitability, command, or compulsion. Will is the other way around. In our publications, use will. The same distinctions are true for should and would. |
| she/her/hers | See gender. |
| ship | See boat, ship. |
| should | Except when used to connote moral obligation, should is a fuzzy word. Use more precise language in presenting intelligence judgments. (See shall, will.) |
| significantly | See fill-ins. |
| single | See redundancies. |
| situation | See condition, situation, activity. |

| smartphone | a mobile phone that offers advanced capabilities, often with PC-like functionality. | |
|-------------------|---|--|
| sort | See type. | |
| spam | unsolicited e-mail, sent indiscriminately to multiple mailing lists, individuals, or newsgroups; as a verb it means to send such junk e-mail. | |
| strategy, tactics | Strategy is an overall plan of action, usually military action; tactics are specific plans or maneuvers designed to advance strategic goals. Nuclear weapons can be included in both strategic and tactical planning. | |
| subjective words | The DI is not in the business of deciding whether something is good or bad; therefore, words like fortunately and unfortunately should not appear in DI writing. Discerning the subjective overtones sometimes requires a keen ear: naturally, for example, may give the reader a sense of being talked down to. Regretfully, regrettably, mercifully, interestingly, and other subjective words are vulnerable to the same kind of abuse. Stick with terms that focus on the world of our operational readers: motives and the actions that flow from them, choices, strengths and weaknesses, capabilities and intentions. Most of the time you can find a better way to express the thought. (See hopefully, feel, regime, and upbeat, downbeat.) | |
| surveil | If you must use it, confine it to the military or intelligence sense. | |
| table | As a verb, <i>table</i> can mean to put a bill aside. In British usage it can also mean to introduce a bill for consideration. Use the word only when the meaning is unmistakable. | |
| tactics | See strategy, tactics. | |
| Taiwan | See China, Taiwan. | |
| technical terms | For the most part, DI analysts are writing for generalists. Generalists may have deep expertise in specific areas, such as missile technology or a country's tribal politics; nonetheless, the analyst's goal is to do away with the specialist's jargon and to put everything into layman's language. If your audience consists of just a few people who thoroughly understand the subject (or who cannot be trusted to follow the reasoning without jargon to guide them), by all means sprinkle your piece with technical terms. Most of the time, however, write for the nonexpert. | |
| that, which | That, as a relative pronoun, introduces clauses containing information necessary for the full comprehension of a sentence. Such defining or restrictive clauses are not set off by commas. The report that was on the general's desk needed revision suggests that there were several reports, but only the one on the general's desk needed to be revised. Which introduces clauses that are not essential to the meaning of a sentence. These nonrestrictive clauses are set off by commas. The report, which was on the general's desk, needed revision suggests that there was a report in need of revision, and it happened to be on the general's desk. The distinction between the two types of clauses is not always easy to make. In crisp prose, that can, and probably should, often be deleted. The information that he needs goes faster as the information he needs. When persons are involved the pronoun is who, whether the clause is restrictive or nonrestrictive. | |

| there is, there are | Try to avoid using there is or there are to start a sentence; look for a more illuminating verb than is. If you do lead off with such a construction, be sure the number of the verb agrees with the subject that follows. Acceptable but minimally informative: There is an artillery regiment on the border. Better: The government has moved an artillery regiment to the border. Grammatically correct but hard to comprehend: There are a headquarters building for each unit and numerous other structures. Better: The army has built a headquarters building for each unit as well as numerous other structures. |
|---------------------|---|
| Third World | refers to the economically underdeveloped or developing nations in Africa, Asia, and Latin America. These nations are also known as less developed countries, or LDCs, or, preferably, developing countries. Some countries within the Third World are more advanced than the others; they are called newly industrializing countries, or NICs. Among the NICs are Singapore and South Korea. When a reference to such a grouping embraces "noncountries" such as Hong Kong and Taiwan, the more appropriate term is newly industrializing economies (avoid the abbreviation NIEs). Note that we capitalize (for clarity) the abbreviations LDC and NIC but not the literal terms they stand for; however, we do capitalize (for distinction or contrast) certain nonliteral terms like Third World, Cold War, North-South, East-West, and, if unavoidable, Free World. |
| this | Often used as a demonstrative pronoun, representing in a single word a situation or a thought expressed earlier. Be sure, however; that <i>this</i> has a clear antecedent; if it does not, either rework the sentence to make the antecedent unmistakable (proximity is the best solution), add the appropriate word or words after <i>this</i> , or devise a formulation that makes the connection without using <i>this</i> . |
| ties | See relations, ties, links. |
| together with | is often found immediately after the subject of a sentence. Together with phrases do not affect the verb. Lower productivity, together with higher interest rates, is hurting the economy. The same is true of along with, as well as, in addition to, and like. |
| too | in the sense of very, is not acceptable in formal writing; in the sense of excessively, however, it is likely to be the best word. |
| torturous, tortuous | Torturous means extremely painful. Tortuous means twisting, devious, or highly complex. Many accidents have occurred on the tortuous mountain road. |
| traditions | long-established practices or elements of culture passed down from generation to generation. Do not use to describe practices developed over the past few years. |
| try | is followed by to, not and. |
| type | As a noun, type should be followed by of in constructions like that type of plane or, in the plural, those types of planes. Never omit the preposition. The same holds true for kind and sort. |
| ultimate | See absolutes. |
| unconventional | See nonconventional, unconventional. |
| under | See more than, fewer than, over, under, during, while. |

| upcoming, forthcoming, coming | When you are looking for an adjection forthcoming or just coming instead to when: tomorrow, next week, next | of <i>upcoming</i> . Better yet, give a clue as |
| upon, on | In almost all cases you can substitu (bearing on the case), but not as an and put upon). | |
| URL | is the abbreviation for uniform resonant addresses on the Internet. | urce locator, a protocol for specifying |
| US | The preferred adjective for our country is <i>US</i> , not American. <i>United States</i> (written out) is the preferred noun, but <i>the US</i> may be used when repetition or space is a problem. You can also use <i>Washington</i> as the noun when it is clear that you are referring to the US Government, not the capital city. Never use we, us, our, or ours when referring to the United States. <i>US</i> (not our) allies disagree. The first person plural is reserved in intelligence writing for the analysts/estimators/writers themselves. | |
| usage, use | Usage means either a manner of us practice creating a standard, as in g | |
| variety of | takes a plural verb when conveying the sense of several or various. A variety of sources report high casualties. When the emphasis is on the singular variety, rather than on the plural object of of, the verb is singular. A variety of meals is better than eating the same food all the time. | |
| verbal, oral | A verbal message can be either spo always spoken. | ken or written. An <i>oral</i> message is |
| verbal overkill | Extra words are burdensome to the reader and should be avoided. Here are some samples of verbal overkill and a simple substitute for each: | |
| | are in a position to (can) at that point in time (then) at the present time (now) currently in progress (going on) due to the fact that (because) in regard to (about) in the event that (if) in the near future (soon) (See fill-ins and redundancies.) | it is highly likely that (probably) it is possible that (may) never before in the past (never) subsequent to (after) the majority of (most) the manner in which (how) whether or not (whether) |
| very, definitely | Use these and other ambiguous intensifiers sparingly. | |
| viable | denotes the capacity of a newly created organism to maintain a separate existence. It is often mistakenly used when durable, lasting, workable, effective, or practical is the appropriate adjective. | |
| vicious circle | is correct. Although <i>vicious cycle</i> is now seen almost as often, it is not accepted in DI writing. | |

| war | See footnote 7 for guidance on capitalization. |
|-------------------|--|
| whether | Whether does not always need or not. He still has not decided whether to go. She is going whether or not he does. |
| which | See that, which. |
| while | as a conjunction, usually has reference to time. While the President was out of the country, the Army staged a coup. It can, with discretion, also be used in the sense of although or but. While he hated force, he recognized the need for order. Avoid using while in the sense of and. (See more than, fewer than, over, under, during, while.) |
| who, whom | Most of the time the issue of whether to use who (nominative case) or whom (objective case) is straightforward. |
| | Subject: Who is his boss? Object of a verb: Whom did the committee choose? Object of a preposition: Whom does she work for? |
| | The nominative case in the objective slot, as in <i>Who did the committee choose?</i> or <i>Who does she work for?</i> , has become acceptable in casual English, spoken or written, but it is not acceptable in formal writing. The main difficulty comes in subordinate clauses, when the syntax sometimes gives who and whoever an objective cast even though structurally they are nominative. The voters will pick the candidate who they think will do the best job. (Who is the subject of will do in the subordinate clause. Do not be thrown off by the interjection they think.) The voters will turn against whoever they think is responsible for their economic hardships. The voters will turn against whomever they blame for their economic hardships. (In the first of the last two sentences, it might seem that whoever is the object of against, however, is not a single word but the entire clause whoever economic hardships. Thus, whoever, the subject of the verb in the subordinate clause, is correct. In the second sentence, whomever, the direct object of blame in the subordinate clause, is properly in the objective case.) |
| whose | functions as the possessive of both who and which. Of which, though grammatically correct, sometimes sounds stilted. |
| will | See shall, will. |
| with | Do not use with in the conjunctive role of and. Sometimes this sort of use has unintended consequences. They are married and have three children. (Not: They are married, with three children.) He is married and has a child. (Not: He is married with one child.) |
| , | Too often, with is used to attach an additional thought that would be better treated as an independent clause following an and or a semicolon. Economics and history are his mainstays; knowledge of linguistics is an additional qualification. (Not: Economics and history are his mainstays, with knowledge of linguistics an additional qualification.) |
| with reference to | See fill-ins. |
| would | See shall, will. |
| younger | See older, younger. |

youth

as the opposite of old age is always singular; when it means young persons (male or female) collectively it is always plural; when the word refers to an individual young male it is, of course, singular, and its plural is youths. The nation's youth were encouraged to enroll. A gang of youths started the riot. Nowadays, rioting young persons probably include females as well as males, and reports of their activities are more likely to say youths rather than young persons—a trend that we probably should join until someone comes up with a better unisex term.
