READ FOR RECORD ITEMS RECORDED PRIOR TO THE MEETING

Item 2633 Page 5
Chemical Corps Sections of D/A R&D Program for FY 1955 (Secret)
Memo, CMLWH, 7 June 1954, w/inclosure, which recorded CmlC sections of the subject program.

Item 2837 Page 14
Security Classification of Cml C Project 4-16-16-013, Incendiary Warhead for MX-771 Missile (Secret)
Letter, CMLRE-FWD-4, 20 April 1954, which outlined detailed security classification of subject missile.

Item 2840 Page 17
Procurement of the ELR3 Dosimeter (Secret)
D/F, CMLWR, 21 May 1954, which inclosed Staff correspondence authorizing emergency procurement of ELR3 Tactical Dosimeter.

Item 2853 Page 24
Research and Development Work to be Conducted by the Chemical Corps (Secret)
D/F, GL/F3, 27 November 1953, which directed certain R&D work to be done under project 4-04-15-009.

Item 2854 Page 25
DOD Directive TS-3145.1, "Chemical (Toxic) and Biological Warfare Readiness," dated 5 March 1954 (Secret)
Memo, CMLWH, 23 June 1954, which reproduced Secret sections of DOD Directives TS-3145.1 (Item 2828).

Item 2855 Page 29
Dosimeters (Secret)
Letter, CMLWR-N, 8 June 1954, which outlined further details of ELR3 Dosimeter procurement.
Item 2856

Reports Concerning Testing of Chemical Corps Material for the Period March-June 1954 (Secret)

Memo, OMLWH, 25 June 1954, which recorded availability of subject reports.

Item 2859

ARDC Project No. 5139, Anti-Personnel BW Munitions (S) (Secret)

Memo, OMLWH, 13 July 1954, inclosing data sheet for the subject project.

Item 2860

ARDC Project No. 5111, BW Logistic Support Equipment (C) (Secret)

Memo, OMLWH, 13 July 1954, inclosing data sheet for the subject project.

Item 2861

ARDC Project No. 5058, Special Aircraft Equipment for BW Munitions (C) (Secret)

Memo, OMLWH, 13 July 1954, inclosing data sheet for subject project.

SUBCOMMITTEE REPORTS FOR DISCUSSION AND APPROVAL

Item 2868

Establishment of Four (4) Secret Projects in the Cml C FY 55 Program and Termination of Three (3) Consolidated Projects (Secret)

This item, identified as Report "G", was presented by the Chairman after which Mr. Ludden, OrdC, submitted correspondence which requested certain changes in paragraph 20, 21.a(3), 21.b(1) & 21.b(4) of the sheet for 4-04-15-027. The Secretary advised that these were the result of previous coordination with Chemical Corps personnel concerned and the Chairman indicated that the paper would be revised accordingly. Mr. Hedman, SigC,
requested that development of any meteorological equipment concerned with project 4-98-05-026 be coordinated with his Corps. This was so agreed and the Secretary advised that paragraph 11 of the project data sheet would be appropriately revised. With these comments and changes, Item 2868 was accepted and approved by the Committee. UK comment submitted to the Secretary, indicated interest in project 4-08-06-025 with detailed remarks in preparation. Canada noted interest in projects 4-04-15-026, 4-08-06-025 and 4-36-07-001.

Item 2873

Military Characteristics for Air Force EW and CW Detection Systems (Secret)

This item, identified as Report "M", was presented by the Chairman and accepted and approved without comment.

Item 2876

Chemical Corps EW Program for FY 55 (Secret)

This item, identified as Report "R", was presented by the Chairman after which Col Cather, OCAFF, requested that Army Field Forces be indicated as one of the requesting agencies for project 4-04-14-021. This was so agreed. The Secretary noted that Canadian comments indicated interest in all phases of the EW program with particular emphasis on the projects concerning the detection of and protection against EW agents. With these comments the Chairman indicated that the subject item was accepted and approved as revised.
Cml C, pointed out that this consolidation was considered by the Army R&D Boards where the Army Field Forces was represented and that the proposed action had been approved at that level. Col Cather, OCAFF, indicated that although this was true, his Headquarters desired to revise its prior concurrence given to the Review Boards. Dr. Berger, CmlC, noted that in this case consolidation does not meet with approval of the using agency, whereas in Item 2866 proposed Staff consolidation was contrary to suggestions of the developing agency (Chemical Corps). Col Cather stated further that Army Field Forces objected to consolidation into general projects since in many cases the projects consolidated are of major importance to AFF and that inclusion in over-all combinations of effort tends to obscure reporting and coordination from the users viewpoint. After these comments the Chairman advised that the paper was accepted by the Committee and would be forwarded to Staff for resolution.

**ADDITIONAL READ FOR RECORD ITEM**

**Item 2882**

ARDC Project No. 6042. Detection of CW Agents, Ground (U) (Secret)

Memo, CMW, 13 July 1954, inclosing data sheet for the subject project.

Complete and revised items are reproduced herewith:

Item 2837

WRIGHT AIR DEVELOPMENT CENTER
Wright-Patterson Air Force Base, Ohio

WCLGW

19 February 1954

SUBJECT: (Unclassified) Security Classification of B-61A Chemical Warhead and B-61A Chemical Warhead Test Program

TO: Commander
Chemical and Radiological Laboratories
ATTN: Mr. T. W. Tranberg
Army Chemical Center
Maryland

1. Wright Air Development Center has reviewed the security aspects of the B-61A Chemical Warheads and the B-61A Chemical Warhead Test Program and requests that the following security classification system be applied as indicated:

   a. Any statement that the Chemical Agent GB is to be used with the B-61A or in the B-61A Chemical Warhead Test Program is classified Secret.

   b. Any statement that an offensive capability with Biological Agents is required for the B-61A or is being evaluated in the B-61A Chemical Warhead Test Program is classified Secret.

   c. The requirement for an incendiary warhead for the B-61A is Unclassified.

   d. Data pertaining to specific missile performance such as guidance details, terminal trajectory and velocity, and expected CEP are classified Confidential.

   e. Data obtained from the Chemical Warhead Test Program which gives information mentioned in d. above is classified Confidential.

   f. Data obtained from the Chemical Warhead Test Program which gives specific information as to warhead burst altitude, aimability, ground dispersion pattern, or unit munition functioning which also indicates that the above is for the B-61A, the Matador, or MX-771 is classified Confidential.

UNCLASSIFIED
Item 2837

Hq WADC (WCLGW) 19 Feb 1954, To Comdr. Chemical & Radiological Laboratories, Subject: "(Uncl) Security Classification of B-61A Chemical Warhead and B-61A Chemical Warhead Test Program"

2. The following terms are Unclassified:
   b. Chemical Warhead Test Program for B-61A.
   c. Fin Stabilized Chemical Warhead for B-61A.

3. This document is classified Secret since it reveals intent to obtain offensive capability in Biological Warfare. This is in accordance with the policy expressed in letter from Hq, USAF (AFOAT) to all major Commands, dated 16 December 1952, subject: "(Uncl) Classification Guide for Matters Concerning Biological Warfare and Chemical Warfare."

4. This document shall retain the security classification of Secret until such time as equipment developed under this project (task) has been used in wartime operations for a period of ninety (90) days at which time classification will be reduced to Confidential or until such time as policy expressed in the SW-CW Security Guide mentioned above has been revised.

SUBJECT: Dosimeters

TO: Chief Chemical Officer  FROM: G-4  DATE: May 20, 1954

1. References:
   b. Memorandum, Chief of R&D, OCofS, for Dep CoFS for Plans and Research, subject, "Dosimeters", dated 7 May 1954.

2. The following actions will be initiated as expeditiously as possible in order to implement the approved decisions of reference 1.b. above.
   a. Development and service test of the Tactical Dosimeter ELR3 (Mnl C) will be expedited. (Proposed target date for standardization of an acceptable Tactical Dosimeter has been established as 1 July 1955.)
   b. Emergency procurement of 100,000 Tactical Dosimeters, ELR3, should be completed as rapidly as possible.
   c. Air shipment will be arranged to USAEUR and FECom, as items are completed, in the ratio of 2 to 1 respectively until requirements are met. Total requirements for USAEUR and FECom will be furnished by G-4 prior to 15 June 1954.

3. Coordinate your requirement for funds and contract negotiation authority, where necessary, with Requirements and Procurement Divisions, G-4, as appropriate.

4. No security classification for the Tactical Dosimeter ELR3, including purchase description, drawings, specifications and process information will be required for the above procurement.

ANDREW P. O'MEARA
Brigadier General, GS
Asst. Deputy ACofS, G-4 for Research and Development
MEMORANDUM FOR: THE CHIEF OF STAFF, U. S. ARMY

SUBJECT: CBR Warfare

1. As per your verbal instructions, the following is a brief summary of the CBR training situation:

   a. Chemical

      (1) Masks - The new G-series mask has been issued to all overseas troops. In CONUS it is in the hands of Western Hemisphere defense forces and in storage for forces scheduled to leave at the outset of hostilities; 82d, 1st Armored and 44th Infantry.

      (2) The Atropine Syrette - Completely issued overseas. Sufficient in use for adequate training in the U.S. (One per 50 individuals.)

      (3) Training - There has been a considerable increase in emphasis on training in the light of Soviet G-gas capability during the past year.

   b. Radiological

      (1) Dosimeters - The individual dosimeter is still in development in two forms. The Chemical Dosimeter expects to be standardized in the 1st Qtr FY 58 and be available in quantity in the 4th Qtr FY 58. The Electronic Dosimeter will be ready at a later date. In my opinion, this is the single most critical aspect of our CBR situation. We should have Dosimeters in the hands of all units overseas now.

      (2) Training - Considerable conference work on the hazards of Radiological Warfare is being done and the subject is playing an increasingly important part in field exercises, for example, FLASHBURN. Practical experience in the use of Dosimeters and working in radio-active areas is only being gained by those individuals in the laboratories and test areas, such as the Pacific area.
c. Biological Warfare

Training on this subject is limited to conferences at our Service Schools and an occasional discussion of its potential in troop training programs.

2. Summary

The training seems to be well underway to give us a reasonable defensive-offensive capability in CER except in one single factor; the Dosimeters. We should have means of detecting radio-activity, in the hands of units now. If our forces were attacked by atomic weapons, they would operate under a great handicap for some time.

JAMES M. GAVIN
Major General, CS
Assistant Chief of Staff, G-3
MEMORANDUM FOR: DEPUTY CHIEF OF STAFF FOR PLANS AND RESEARCH

SUBJECT: Dosimeters

1. Reference is made to your query on 26 April regarding the availability and development of tactical dosimeter, attached.

2. Two types of dosimeters have been developed for use by troop units. Specifically, these dosimeters are the ELR3 chemical dosimeter and the IM-83 electrostatic dosimeter. Both items have successfully completed engineering tests and would normally be available for service test by Army Field Forces within the next five months. No significant quantities of either item are presently available for issue. I plan to expedite the development and service test of tactical dosimeters, ELR3 and IM-83.

3. The ELR3 chemical dosimeter can be procured on a "crash" basis with the following production rates: 600-1000 per week immediately and 3000-4000 per week within three months, at an approximate unit cost of $2.00. However, under normal R&D procedures, it is estimated that production would commence within one year after satisfactory completion of service tests. The IM-83 can be procured on a "crash" basis with the following production rates, 50 per week immediately, 250 per week within four months, 500-1000 per week within six months, at a unit cost of $15.00 to $20.00.

4. Two types of film badge dosimeters are currently in FECOM and CONUS stocks, but will not adequately satisfy the military requirement for a tactical dosimeter. One of these film badges, the polaroid type DT-65, may be used as an interim dosimeter until a suitable item is available. The reliability of FECOM and CONUS stocks of the DT-65 is currently being evaluated. Sufficient DT-65 dosimeters can be procured on a "crash" basis to fill existing requirements within 80 days. It will require approximately six months to provide sufficient ELR3 dosimeters to meet existing requirements. The results of this evaluation will be available for resolution of recommendations 5a and 5b below o/a 7 May 1954.

5. General Gavin and General Palmer agree and I concur that:

a. Sufficient film badges, DT-65, be shipped immediately from CONUS stock to fill USAEUR requirements, provided satisfactory reliability is assured.
SUBJECT: Dosimeters

b. "Crash" procurement of film badges, DT-65, be initiated to fill USAEUR and FECOM requirements if satisfactory reliability of existing stocks is not assured.

c. "Crash" procurement of 100,000 dosimeters, E1R3, be initiated to replace the DT-65 as soon as possible.

FILE NO. G4/F3 71062 SUBJECT: Research and Development Work to be Conducted by the Chemical Corps

TO: Chief Chemical Officer FROM: ACoS, G-4 DATE: 27 Nov 53 CMT NO. 1
Lt. Colonel Lawrence/71771

1. It is requested that necessary action be taken to initiate development of a grenade in accordance with the characteristics on the Work Agenda inclosed herewith. Development will be conducted under Chemical Corps Project No. 4-04-15-009, Special Problems, Munitions, with a Security Classification of CONFIDENTIAL. The project should be established with sufficient priority to allow its completion by March 1954.

2. The plan for performing this work has been discussed with Mr. Milton Cutler, Applied Research Branch, Army Chemical Center, Edgewood, Maryland.

3. It has been estimated that $5,000 will be required to finance this project. Reimbursement in that amount will be made. Request for funds should be made on Form 1080 and directed to Finance Accounts Office, U. S. Army, 117 South Washington Street, Alexandria, Virginia, Attention: Mr. G. S. Williams. For authority, quote Letter Order 54-3775.

BY DIRECTION OF THE ASSISTANT CHIEF OF STAFF, G-4:

Department of Defense Directive

SUBJECT: Chemical (Toxic) and Biological Warfare Readiness

* * * * * * * *

II. Responsibilities

A. Responsibility for coordination of research and development in chemical (toxic) and biological warfare is a function of the Assistant Secretary of Defense (Research and Development) within the provisions of DOD Directive 5128.7, 12 November 1953.

B. Consistent with paragraph A above and in accordance with the objectives set forth herein, the Department of the Army will have responsibility for coordinating, in detail, all military research, development, testing, production, procurement, distribution and storage (storage within the United States) programs on chemical (toxic) and biological warfare munitions, defensive materiel and techniques, and for establishing its requirements for these items.

C. The Departments of the Navy and the Air Force will be responsible for establishing requirements peculiar to their individual needs and capabilities in chemical and biological warfare, for implementing their respective portions of the programs which may be assigned under coordination agreements, and for providing support to the Department of the Army to most expeditiously attain the objectives set forth herein.

III. Specific Guidance

* * * * * * * *

C. Chemical and Biological Warfare

1. The fact that chemical warfare weapons and munitions have not been used previously by this country, except in retaliation, must not deter achievement of realistic preparedness in chemical or biological warfare.

2. The military departments shall continue to maintain and improve chemical and anti-personnel biological warfare defensive readiness of the United States forces as appropriate, based upon the best estimates of potential enemy capabilities.

Incl 2
3. The military departments shall place increased emphasis on collection, evaluation and dissemination of intelligence data regarding the capabilities of potential enemy nations to employ and defend against chemical and biological warfare.

4. The military departments shall continue to develop doctrine, tactics and techniques for chemical and biological warfare as new offensive munitions and items of defensive equipment become available.

5. The military departments will insure that training in offensive and defensive CW–BW keeps pace with the development of doctrine, procedures, tactics and techniques.

G3 400 (12 May 54)                          20 May 1954

SUBJECT: Dosimeters

TO: Chief of Army Field Forces
    Fort Monroe
    Virginia

1. Reference is made to Department of the Army telegram, DA 961187, 7 May 1954, concerning tactical dosimeters.

2. Subsequent to the dispatch of the above telegram, the Signal Corps Engineering Laboratories found existing stocks of polaroid film badges, DT-65, to be generally unreliable. The decision was then made by the Chief of Staff to satisfy the immediate requirement for tactical dosimeters in FECOM and USAEUR by the following action:

   a. "Crash" procurement of polaroid film badges, DT-65, for immediate distribution to FECOM and USAEUR.

   b. "Crash" procurement of chemical dosimeters, ELR3, to replace film badge dosimeters as soon as possible.

   c. Expedited development and service test of both the ELR3 and IM-93 tactical dosimeters.

3. G4 has advised the appropriate technical services of this decision, and G3 has requested an initial basis of distribution for tactical dosimeters from USAEUR and a review of the current basis of issue from FECOM. G3 now requests that OCAFF expedite service tests of dosimeters, ELR3 and IM-93, with the proposed objective of selecting one item for standardization by 1 July 1955.

MEMORANDUM FOR RECORD

SUBJECT: ARDC Project No. 5139, Anti-Personnel BW Munitions (S)

The attached data sheet for the subject Air Force project is reproduced as information pertinent to certain portions of the Chemical Corps BW R&D program.

FOR THE CHAIRMAN, CHEMICAL CORPS TECHNICAL COMMITTEE:

[Signature]

Incl

As noted

T. S. ECKERT
Secy, CCTC
PROJECT TITLE: Anti-Personnel EW Munitions (Secret Title)

SECURITY CLASSIFICATION: Top Secret

PROJECT NUMBER: 5139

REPORT DATE: 21 May 1954

BASIS FIELD OR SUBJECT: Common Component Developments

SUB FIELD OR SUBJECT: 36 Chemical and Biological Weapons

TECH OBJECTIVE: EW-5

COGNIZANT AGENCY: ARDC

DIRECTING AGENCY: Armament Laboratory, WADC

REQUESTING AGENCY: Hq ARDC

PARTICIPATION AND/OR COORDINATION: Department of Army, Chemical Corps (P); Department of Navy (I); APAC (P); HADC (P); AMO (P)

CONTRACTOR AND/OR LABORATORY: See Individual Tasks in Item 21c.

DATE APPROVED: 6 September 1949

PRIORITY: 1-A

ESTIMATED COMPLETION DATES: Dev. Continuing Test Continuing

FY FISCAL ESTIMATES: 50-53 2,673M; 54 1,858M; 55 2,004M; 56 1,653M;
57 2,395M; 58 2,016M; 59-60 3,519M; A/R 602M

SUPERSEDED PROJECTS: This project supersedes projects No. R-555-731, R-555-732, R-555-859, R-555-864 and R-555-861, dated 6 Sep 49, 6 Sep 50, 29 Feb 52, 4 Dec 52, 31 Dec 52, 15 Apr 53 respectively.

REQUIREMENT AND/OR JUSTIFICATION: There exists a requirement for a capability to kill or incapacitate enemy personnel by biological agents in the event of war. At present the M-114 bomblet in the M-33 cluster provides this capability but possesses inherent deficiencies which cannot be corrected and development of new munitions is required in order to make maximum use of anti-personnel agents. These deficiencies are:

a. The M-33 cluster is of the 500-lb. series, designed for interim use. A 750-lb. new series cluster must be developed to meet USAF requirements.

b. The M-114, because of its size and weight, must be carried in small numbers lowering the area coverage efficiency.

c. The M-114 disseminates its agent fill by explosive means, lowering the percent of viable agent recovery.

An improved bomb is required to correct these and other deficiencies.

Reference Top Secret Document No. ADTS-632 (Hq WADC) subject: (Unclassified Title) "USAF Biological and Chemical Warfare Program" dated 20 August 1952, from Hq ARDC to WADC. As a second means of providing the required capability, spherical type munitions are being developed to provide greater area coverage and increased agent dissemination effectiveness.

BRIEF OF PROJECT AND OBJECTIVES:

a. Brief: The objective of this project is to develop munitions which can be used to kill or incapacitate enemy personnel in the event of war. Specifically, it will result in two types of munitions: (1) clusters operationally interchangeable with the 750-lb. GP new series bomb, (SECRET)
and (2) Self-dispersing munitions that may be disseminated either from
a dispenser or clustered in the 750-lb. new series cluster adapter. Both
types of munitions will be capable of adequately dispensing anti-
personnel BW agents. The operational and general physical characteris-
tics are as outlined below: (SECRET)

AIRBORNE ANTI-PERSONNEL BIOLOGICAL AGENT CLUSTER (SECRET)

(1) The cluster shall be one of the new 750-lb series and shall
utilize the existing B53 cluster adapter. (UNCLASSIFIED)

(2) The cluster shall be designed for internal and external carriage
in USAF light, medium and heavy bombardment type aircraft, and
suitable for employment from these aircraft as outlined below.
(UNCLASSIFIED)

(a) Conditions of carriage to the target:
   1. Suspension on existing or future bomb stations or bomb
      racks provided for the new 750-lb. series bombs.
   2. Altitude: 0 to 60,000 feet.
   3. Speed: Mach 0.25 up to the limitation of the aircraft.
   4. Air Temperature: -65° to +100°F.
   5. Rate of Ascent, Rate of Descent and Load Factors:
      Equal to the limitations of the aircraft. (CONFIDENTIAL)

(b) Conditions of release over the target:
   1. Altitude: 500 to 60,000 feet.
   2. Speed: Mach 0.25 to 1.00.
   3. Air Temperature: -65° to +100°F (CONFIDENTIAL)

(3) The cluster shall be suitable for suspension and carriage on air-
craft in accordance with ASCC and NATO agreements. (CONFIDENTIAL)

(4) The cluster and bomblets shall be capable of emergency release
in an unarmed condition. (UNCLASSIFIED)

(5) The cluster shall cause neither damage nor contamination of the
carrying aircraft as a result of functioning under operating condi-
tions stated in paragraph 21a(2)(b) above, nor as a result of
emergency release under the conditions stated in paragraph 21a(4)
above. (UNCLASSIFIED)

(6) The circular probable error (CEP) of the cluster from the point of
release to the point of functioning in space shall not exceed
three (3) mils and the ballistic reproducibility of the center of
impact of the pattern shall not exceed five (5) mils from the
desired point of impact. (CONFIDENTIAL)

(7) The ballistic characteristics of the cluster shall be such that
it can be accurately delivered by means of existing and antici-
pated bombing systems. (UNCLASSIFIED)

(8) Ten thousand (10,000) pounds of agent filled munitions shall be
capable of infecting at least 50% of the unprotected susceptible
personnel randomly scattered over a 15 square mile circular tar-
gent area under suitable meteorological conditions. (CONFIDENTIAL)

(9) The munitions shall disseminate the agent fill uniformly at sur-
face level after release under conditions outlined in paragraph
21a(2) above. (CONFIDENTIAL)
(10) The bomblet shall disseminate its agent fill as biological particulates with the maximum amount of viable agent within the effective size range for retention within the human respiratory system (1 to 5 microns). (SECRET)

(11) The reduction in viability of the agent during the process of dissemination shall be held to an absolute minimum. (CONFIDENTIAL)

(12) The cluster and bomblet shall have predictable performance under given atmospheric conditions (i.e. temperature, humidity, and wind velocity). (UNCLASSIFIED)

(13) The bomblets shall be designed to disseminate as many different biological agents as practicable. (SECRET)

(14) Both the bomblet and the cluster shall have a minimum functioning reliability of 95%. The component munition shall function 95% of the time when dropped on soft ground and concrete. (CONFIDENTIAL)

(15) The cluster and bomblet shall have such safety features incorporated in their design as are required to preclude accidental functioning during handling, transportation, or when suspended on the aircraft. (UNCLASSIFIED)

(16) The cluster shall be protected from extremes of temperature so that the viability of the agent fill will not be significantly reduced during handling, loading, carriage, and time of fall. The cluster shall contain insulation and/or provision for electrical heating such that the agent fill will be maintained at the optimum temperature for a period of 12 hours during exposure to a bomb bay air temperature of -65°F. Where aircraft electrical power is required to heat the cluster, the power required shall not, in any way, restrict the use of other electrical equipment essential to aircraft operation. (SECRET)

(17) The bomblets shall be designed for the most efficient utilization of the space available within the cluster adapter. (UNCLASSIFIED)

(18) The bomblet shall be designed for field assembly of the agent container and field clustering. Preferred assembly methods are assembly by screwing, crimping or pressing parts together. Assembly methods such as welding, soldering or brazing should be avoided. Assembly of cluster should be limited to methods which employ hand tools only. (CONFIDENTIAL)

(19) The munition should be designed with an agent container which can readily be inserted into the bomblet during field clustering operations. The agent container shall be capable of being shipped, handled and stored independently of the bomblet. (CONFIDENTIAL)

(20) The bomblet shall be suitable for use in guided missile warheads if practicable. (CONFIDENTIAL)

(21) The munition shall be so designed that production will be as economical as possible consistent with other requirements. (UNCLASSIFIED)

(22) The munition shall be designed to facilitate visual inspection for gross leakage or simple tests to insure rejection of unserviceable items. (UNCLASSIFIED)

(23) The unfilled cluster adapter shall be capable of being stored in the open for six months or under normal service storage conditions for an indefinite period of time and remain serviceable. (UNCLASSIFIED)
(24) This cluster will be suitable for use against both strategic and tactical targets. (CONFIDENTIAL)

(25) The cluster shall be capable of being handled with existing and anticipated bomb handling equipment provided for the 750-lb new series of bombs. (CONFIDENTIAL)

(26) All safety features required for safe ground operation shall be incorporated in each bomblet and/or bomb cluster. (UNCLASSIFIED)

AIRBORNE SPHERICAL ANTI-PERSONNEL BIOLOGICAL AGENT MUNITION (SECRET)

(1) The series of spherical anti-personnel munitions are being developed to increase dispersion over a large area and to increase viable agent recovery rate. (SECRET)

(2) The sphere will be so designed as to be clusterable as described in paragraph 21a above. (CONFIDENTIAL)

(3) The sphere will also be capable of being disseminated from high-speed, high-altitude aircraft by means of a dispenser. (CONFIDENTIAL)

(4) When the sphere is used without the cluster, and is disseminated by a dispenser, it shall have such characteristics as stated in 21a(8) thru (15) and (21), (22), and (26) above. (CONFIDENTIAL)

b. Approach

(1) 750-lb multipurpose cluster adapters of the "new series" of bombs will be used with the E-61 and E-99 bomblets. (CONFIDENTIAL)

(a) The E-61 bomblet will provide effective air contamination by explosive dissemination of liquid biological agent in particulates of 1 to 5 micron size with a high percentage of viable agent recovery. (SECRET)

(b) Since the E-61 bomblet is smaller, more efficient, and weight less than the M-114, it will, when clustered in the E-53 type cluster adapter, provide an increased number of bomblets per cluster, increased dispersion and increased dissemination. (CONFIDENTIAL)

(c) The E-99 bomblet will provide effective air contamination by the two-fluid atomization principle, of liquid slurries of biological agents. The two-fluid atomization principle results in higher viable agent recovery than with explosive dissemination. It also has the advantage of smaller size as stated in (b) above. (SECRET)

(2) In order to obtain increased dispersion of the bomblets clustered in the 750-lb series bombs, two tasks were set up to develop a means of dispersing the clusters prior to their functioning and releasing the bomblets. (CONFIDENTIAL)

(a) The "Deveron" cluster was conceived to increase the cluster dispersion radius by affixing tail surfaces, of sufficient area to the existing cluster adapter to enable the cluster to glide for a considerable distance before reaching the opening altitude. The device is so designed that the clusters may be preset to glide to the right or left of the line of flight of the aircraft, and for the distance of lateral glide desired, and then rotate to obtain more uniform distribution. (CONFIDENTIAL)
(b) The Glide Cluster is in parallel development with the Deveron. If the existing cluster adapter cannot be modified for use with Deveron "tail surfaces" to obtain the required dispersion radius, the glide cluster, of an original design, will be developed as an end item. (CONFIDENTIAL)

(3) Another approach to the dispersion problem is the use of a spherical munition. The spherical munition is ribbed to produce rotation in flight and aid in the dispersion of the bomblets. Spheres when released from clusters have a greater tendency to stabilize themselves than when they are released from an aircraft hopper type dispenser and allowed to pass through the air flowing into and around the bomb bay. (CONFIDENTIAL)

(a) The E-96 spherical two-fluid BW aerosol generator is being developed to disseminate liquid biological agents in the slurry form by the two-fluid atomization principle. (SECRET)

(b) The E-119 sub-cluster is spherical in configuration and contains six (6) E-93 bomblets. The E-119 will be barometrically fused to open at a preset altitude and eject the E-93 bomblet. The E-93 will disseminate dry, pressurized BW agent in aerosol form, with an increased agent to munition weight ratio, a higher degree of air contamination and it will maintain a higher level of visibility of the agent under extremes of temperature. (SECRET)

c. Tasks
The following tasks are assigned to this project:
Task 50462: (Secret Title) 750-lb Cluster of 1/2-lb BW Bombs. (TOP SECRET TASK)

Contractor: Department of Army, Chemical Corps
Principal Investigator: Mr. Miehle Chertoff.
Biological Labs, Chemical Corps

Objective and Nature of Task: This task is required to develop a cluster of BW anti-personnel munitions (E-133 cluster) and will result in the development of a 1/2-lb (nominal weight) particulate bomblet of the base ejection type (E-61 bomb). (SECRET)

Completion of Development - Jan 56, Completion of Tests - Mar 56

Coordination: AMC
Directorate of Supply and Services, MCSWB
AFAC, ACOPP
HADC, HADC
Department of Army, Chemical Corps

Task 50463: (Secret Title) 750-lb Cluster of Two-Fluid Aerosol Generators. (TOP SECRET TASK)

Contractor: Department of Army, Chemical Corps
MIPR 50-033, 51-518, CSQ&A 51-518, 52-3
Principal Investigator: Mr. Milton A. Tulis
Biological Labs, Chemical Corps

Objective and Nature of Task: This task will result in a 750-lb cluster of bomblets (E-137 cluster) capable of dissemination, in aerosol form, of anti-personnel biological
agents in slurry form with a high percent of agent recovery using the two-fluid atomization principle (E-99 bomb). (SECRET)

Completion of Development, Jan 56, Completion of tests, Jan 57.

Coordination: AMC
  Directorate of Supply & Services, MCSWB
  AFAG, ACPFP
  ADC, HDOR
  Department of Army, Chemical Corps

Task 50464: (Secret Title) BW Dry Agent Disseminator (TOP SECRET TASK)

Contractor: Department of the Army, Chemical Corps
  C506 A 53-139, 54-18
  Principle Investigator: Mr. Frank Stecker
  Biological Labs, Chemical Corps

Objective and Nature of Task: This task will result in the development of a spherical munition capable of disseminating dried BW agent in aerosol form (E-119 sub-cluster). The bomblets clustered in the spherical munition will contain the agent to be disseminated (E-93 bomb). The spherical Munition will be capable of being released from high-speed, high-altitude aircraft by means of a dispenser. (SECRET)

Completion of Development, Jan 59, Completion of tests, July 59.

Coordination: AMC
  Directorate of Supply & Services, MCSWB
  AFAG, ACPFP
  ADC, HDOR
  Department of Army, Chemical Corps

Task 50465: (Secret Title) Spherical Two-Fluid BW Aerosol Generator (TOP SECRET TASK)

Contractor: Department of the Army, Chemical Corps
  C506 A 54-81
  Principle Investigator: Mr. Ralph Cunningham
  Biological Labs, Chemical Corps

Objective and Nature of Task: This task is required to develop a spherical anti-personnel BW munition utilizing the two-fluid atomization principle (E-96 bomb). The end munition will be droppable from a dispenser from high-speed, high-altitude bomber aircraft and will provide an infective aerosol of biological particulates over a large area from a slurry of such agents. (SECRET)

Completion of Development, Jan 57, Completion of tests, Jan 58

Coordination: AMC
  Directorate of Supply & Services, MCSWB
  AFAG, ACPFP
  ADC, HDOR
  Department of Army, Chemical Corps

Task 50466: (Unclassified Title) Glide Cluster (SECRET TASK)

Contractor: Department of the Army, Chemical Corps
  C506 A 53-145, 54-17
  Principle Investigator: Mr. Frank Trentacost
  Biological Labs, Chemical Corps
Objective and Nature of Task: This task will result in the development of methods and equipment for producing large area bombing patterns from single aircraft when used in conjunction with conventional cluster and the "Deveron cluster." (CONFIDENTIAL)

Completion of Development, Jan 58, Completion of tests, July 59

Coordination: AMC
   Directorate of Supply & Services, MCSWE
   AFAC, ACOPP
   HADC, HDOR
   Department of Army, Chemical Corps

Task 50467: (Confidential Title) Deveron Control Cluster (SECRET TASK)

Contractor: Summers Gyroscope Co., Department of the Army, Chemical Corps
   Contract No. AF33-600-22945
   CSO&A 54-19
   Principle Investigator: Mr. Frank Trentacosti
   Biological Labs, Chemical Corps

Objective and Nature of Task: This task will provide a missile
   for delivery of BW munitions which can be deflected
   laterally up to five (5) miles (with wing) and then
   caused to rotate before opening to obtain a maximum
   dispersion pattern from a single aircraft. (SECRET)

Completion of Development, July 57, Completion of tests, Jan 58

Coordination: WADC
   Aircraft Laboratory, WCLL
   Equipment Laboratory, WCLC
   Materials Laboratory, WCRT
   Weapons Systems, WCS
   AMC
   Directorate of Supply & Services, MCSWE
   AFAC, ACOPP
   HADC, HDOR
   Department of the Army, Chemical Corps

Task 50573: (Secret Title) Ultrasonic Generator (TOP SECRET TASK)

Contractor: None

Objective and Nature of Task: This task is required to develop
   a munition for aerosol dispersion of BW anti-personal agents utilizing the ultrasonic or Hartman Whistle method. The munition will be capable of being release
   by high-speed, high-altitude aircraft by means of a
dispenser or by clustering. Development is planned to
   start in FY 57 assuming satisfactory completion of investigations under Project 5135 during FY 56. (SECRET)

Completion of Development - Jan 59, Completion of Tests, July 59

Coordination: AMC
   Directorate of Supply & Services, MCSWE
   AFAC, ACOPP
   HADC, HDOR
   Department of Army, Chemical Corps
Task 50574: (Unclassified Title) Self Dispersing Explosive Type Munition: (TOP SECRET TASK)
Contractor: None
Objective and Nature of Task: This task will result in the development of a spherical munition that is of the self dispersing explosive type (E-94) for the dissemination of BW anti-personnel agent aerosols. The end munition will be droppable from a dispenser or capable of being clustered and dropped from high-speed, high-altitude bomber aircraft. Development is planned to start FY 57, assuming satisfactory completion of investigations under Project 9135 during FY 56. (SECRET)
Completion of Development, Jan 60, Completion of Tests, Sept 60
Coordination: AMC
Directorate of Supply & Services, MCSWB
AFAC, ACOPP
HADC, HDOR
Department of Army, Chemical Corps

Task 50575: (Unclassified Title) Advance Design Munitions and Components. (TOP SECRET TASK)
Contractor: None
Objective and Nature of Task: This task will result in the development of methods and equipment for improved performance as well as increased dispersion and agent-munition ratio for producing large area bombing patterns of anti-personnel biological agents. The task will be more specifically defined as requirements for new designs are evolved during development and test stages of above tasks.
Completion of Development - Continuous, Completion of tests - Cont.
Coordination: AMC
Directorate of Supply & Services, MCSWB
AFAC, ACOPP
HADC, HDOR
Department of Army, Chemical Corps

d. Other Information:
The Army Chemical Corps will furnish technical personnel, equipment and facilities to accomplish this project except for Task No. 720W-5139-50467. WADC will furnish guidance and funds to the Chemical Corps. Task No. 720W-5139-50467 will be accomplished by WADC with limited test support from the Chemical Corps. (UNCLASSIFIED)
In view of the fact that the Navy may carry these munitions on their aircraft, they are interested in the progress of this project. (UNCLASSIFIED)
AFAC and HADC will furnish facilities for these munitions for Phase I through Phase VI testing, as prescribed by ARP 80-14. AMC will furnish required funding for service test items procured for the testing phases. (UNCLASSIFIED)

e. Background History:
The M-33 cluster was developed for use as an alternate load for the 500-lb GP bomb. With the USAF change in military characteristics, the M-33 no longer was adequate and the M-114 bomblet required modification
and revision. Hence, the tasks established under this project were initiated to meet the requirements of a BW anti-personnel cluster to be used as an alternate load for the 750-lb GP bomb and to improve the dissemination of BW agents in component bomblets. Task 72FW-5139-50462 will be the first completed under this plan.

(1) Letter from Hq USAF APDRD-AP/2 to CG, AMC dated 26 October 1950, subject: (Confidential Title) "Assumption of Responsibility for Air Force Ordnance, Chemical Warfare, and Biological Warfare Research and Development". (SECRET DOCUMENT)

(2) Statement of Military Characteristics dated 7 August 1950, subject: (Secret Title) "Generator, Aerosol, Medium/High Altitude, Anti-Personnel Biological Agent Airborne". (SECRET DOCUMENT)

REASON FOR SECURITY CLASSIFICATION

This document is classified Secret since it reveals intent to obtain offensive capability in biological warfare. This is in accordance with the policy expressed in letter from Hq USAF (AFOAT) to all major Commands, dated 16 December 1952, subject: (Unclassified Title) Classification Guide for Matters Concerning Biological Warfare and Chemical Warfare.

DOWNGRADING OF SECURITY CLASSIFICATION

This document shall retain the security classification of Secret until such time as equipment developed under this project has been used in wartime operations for a period of 90 days at which time classification will be reduced to Confidential or until such time as policy expressed in the BW-CW Security Guide mentioned above has been revised.

19. SUPERSEDING REPORTS: This project supersedes project No. R-552-658 dated
    8 December 1952 in part. (Unclassified)
20. REQUIREMENT AND/OR JUSTIFICATION:
    To properly store, assemble and deliver BW munitions to strike aircraft, development of adequate storage and transport equipment is required. To determine that the agents contained in BW munitions are in an effective condition a field laboratory must be developed which will provide a means of testing viability of agent samples. Equipment suitable for the above purposes does not now exist. BW munitions require temperature controlled conditions from the time of fill in the production plant until they are delivered to strike aircraft. Because fresh supplies of munitions must be maintained available for strike missions and because the agent in current types of BW munitions constitutes as little as 1/10 the total weight of the complete cluster, field clustering of new agent in prepositioned cluster hardware provides major savings in air lift in time of emergency. To meet these special conditions and to provide effective and efficient equipment for BW logistic support, development of specially adapted delivery, field clustering, and surveillance equipment is required. (Secret)
b. The EW operational capability requirement has been delineated in ARDC Letter to WADC, dated 20 August 1952, Subject: (Confidential Title) USAF Biological and Chemical Warfare Program (ADIS 823). (Top Secret Letter).

21. BRIEF OF PROJECT AND OBJECTIVES:

a. Brief: This project will result in a temperature controlled shipping and storing container for EW clusters or agent containers in C-124 or similar aircraft, an insulated shipping container for EW bombs in C-97 or smaller cargo aircraft, a sealed can for EW bomb lot shipment, a EW clustering facility (consisting of a clustering semi trailer, a prefabricated shelter, and a special handling boom for fork lifts) and a EW surveillance facility (consisting of a laboratory semitrailer, mobile power source, shower and change provisions, and decontamination equipment). This project will further provide for adaptation of above equipment to new types of EW munitions not yet standardized. (SECRET)

b. Approach: It is anticipated that shipping and storage containers now used for M-33 clusters can be modified for use with E77, E66, E133 and E137 clusters and unclustered EW agent containers. An insulated container and a sealed can will be developed by commercial sources. For the surveillance laboratory, AMC is to buy air conditioned vans, and supply laboratory furniture, appliances, utensils, dishware and chemicals. WADC will arrange and install furnishings and supplies and make such modifications as are necessary. Shower and change facilities will be developed as a knock down type of assembly. Decontamination equipment will be adapted from equipment now available. (SECRET)

c. Tasks: Task No. 50472: (Unclassified Title) Shipping Container for Bombs and Clusters (Top Secret Task)

Contractors: East Coast Aeronautics Inc. AF 33(616)2053
Standard Container Corp. AF 33(616)2106

Principal Investigator: R.C. Smith, F.J. Kendell

Objective and Nature of Task: To design and develop a temperature controlled shipping container for large aircraft (C-124) and for ship deck, flat rack, or truck shipment and an alternate insulated shipping container for smaller aircraft, reefer ship, box car or trailer, with tie down, internal handling and sealing provisions so that EW agents and EW bomb clusters can be delivered from production plant to strike aircraft with interim storage as required. Development will consist of a hermetically sealed can for the agents, a 30 foot temperature controlled van, and an insulated box with a capacity of 616 M-114 bombslettes.

Completion of Development: September 1956
Completion of Test: March 1957 (SECRET)

Coordination: WADC Development Operations Division, WCCES
Aircraft Laboratory, WCLS
Equipment Laboratory, WCLE

Department of the Army, Chemical Corps
AMC Directorate of Supply and Services, MGSWB

Task No. 50472: (Unclassified Title) Mobile Field Surveillance Laboratory Facility (Top Secret Task)

Contractor: Brown Trailers Inc., AF 33(F00)-21443 S.A. #1
Principal Investigator: Robert Plagan

Objective and Nature of Task: To develop methods and equipment which will provide a means of maintaining field surveillance on agents contained in
EW Munitions. Methods will include viability count and investigation of other assessment procedures to obtain a system of proven reliability. Facility will consist of a 30-foot air-conditioned trailer, equipped with necessary laboratory equipment, electrical power supply in the form of a 30kW generator mounted on a suitable trailer, a shower and change facility for operating personnel, and decontamination equipment. The facility will be self-sufficient, designed for remote location, and operative under -20° to 120°F temperatures. (SECRET)

Task No. 50559: (Unclassified Title) Adaptation of Logistic Equipment for New Munitions.
Contractor: None
Principal Investigator: N/A
Objective and Nature of Task: To develop modified equipment for use in storage, transport, field assembly, and agent visibility surveillance on new EW agents and munitions. The equipment will consist of modified shipping and storing containers for 2-fluid types and dry agent types of spherical and cylindrical bombs, field filling, assembly and clustering equipment for these bombs, and surveillance equipment for determining visibility and other characteristics of the agents used therein. (SECRET)

Completion of Development: Continuing
Completion of Test: Continuing
Coordination: WADC
Development Operations Division, WCOES
Equipment Laboratory, WOLE
Aero Medical Laboratory, WCRD
AMC
Directorate of Supply and Services, MCSWB
Air Surgeons Office, MCBI
Department of the Army, Chemical Corps
AFAC, MCOPP

d. Other Information: Design of the mobile field surveillance facility is being developed with the coordination of AMC (MCSWB), the Air Force Field Office at Camp Detrick, and the Chemical Corps. Selection of laboratory appliances and layout in the trailer are being determined with the assistance of these offices on the basis of results of tests conducted at APGC (see Item 21F below, reference No. 3). (Unclassified)

Shipping container development is being coordinated by the Chemical Corps to assure suitable cluster shipping rings are installed at the plant, and to insure proper loading and tie-down arrangement. (Unclassified)

Field clustering facility development will be coordinated by the Chemical Corps to assure compatibility of equipment with bombs and clusters being handled. (Unclassified)

Funds required by the Chemical Corps for participation in this development will be derived from the USAF weapons development funds.

AMC funds of $190,000 will be required in FY 1954 to cover purchase of surveillance laboratory trailer, laboratory furnishings, shipping containers for support of tests, inert clusters and bombs for test fitting, live clusters for surveillance tests, portable electric power supply, shower and change provisions, decontamination equipment, and M-108 type hoist truck. Approximately 20 to 25 percent of these funds will cover expendable items. The main items listed here will not be expended, but, upon completion of tests, will be available for service use.

Also, $30,000 of AMC funds will be required in FY 1955 for laboratory equipment, electric forklift, portable electric power supply, and an air-conditioning unit for a prefabricated building. In FY 56, $110,000 will be required for shipping containers, live agent clusters, and inert clusters. In FY 57 and beyond $25,000 will be required annually for inert agents and materials for adoption of containers and laboratory. AFAC and APGC will be called on to perform and support engineering tests. (SECRET)

e. Background History: The logistical support problem for EW was first presented to WADC in March 1952 in a request by ARDC to prepare military characteristics covering necessary items of support equipment.
WADC complied by forwarding, in June 1952, military characteristics covering equipment to provide transport of agent filled bomb cases and field assembly and clustering of munitions, and equipment to provide transport of bulk agent and field filling, assembly, and clustering of the munitions. The latter system was not recommended by WADC. The above military characteristics were later expanded in a WADC letter to Hq ARDC calling out specific items and production schedules, and also covering transport means for the complete BW cluster. Hq USAF directed adoption of transporting the assembled cluster, so far as the M33 cluster capability was concerned. No further guidance has been received from Hq ARDC. (SECRET)

REASON FOR SECURITY CLASSIFICATION

Since this document reveals intent to obtain offensive capability in EW Warfare, it is classified Secret in accordance with policy outlined in letter from Hq USAF (AFOAT) to all major commands, dated 16 December 1952, Subject: "(Unclassified) Classification Guide for Matters Concerning Biological Warfare and Chemical Warfare".

DOWNGRADING OF SECURITY CLASSIFICATION

This document shall retain the security classification of Secret until such time as equipment developed under this project has been used in wartime operations for a period of 90 days at which time classification will be reduced to Confidential or until such time as policy expressed in the EW-CW Security Guide mentioned above has been revised.
MEMORANDUM FOR RECORD

SUBJECT: ARDC Project No. 5058, Special Aircraft Equipment for BW Munitions (C)

The attached data sheet for the subject Air Force project is reproduced as information pertinent to certain portions of the Chemical Corps BW R&D program.

FOR THE CHAIRMAN, CHEMICAL CORPS TECHNICAL COMMITTEE:

T. S. EKERT

T. S. ECKERT
Secy, CCTC
1. **PROJECT TITLE:** Special Aircraft Equipment for BW Munitions (Conf)
2. **SECURITY CLASSIFICATION:** Top Secret
3. **PROJECT NUMBER:** 5058
4. **REPORT DATE:** 21 May 1954
5. **BASE FIELD OF SUBJECT:** Common Component Development 100A, 101A
6. **SUB FIELD OR SUBJECT SUB GROUP:** 36, Chemical & Biological Weapons
7. **TECHNICAL OBJECTIVE:** BN-5
8. **COGNIZANT AGENCY:** ARDC
9. **DIRECTING AGENCY:** Armament Laboratory, WADC
   WADC Tp 28252
10. **REQUESTING AGENCY:** HQ ARDC
11. **PARTICIPATION, COORDINATION, INTEREST:** Navy (I), Army Chemical Corps (P)
    AFAC (P)
12. **CONTRACTOR AND/OR LABORATORY:** None
13. **RELATED PROJECTS:** Essential - 100A (B-47) and 101A (B-52)
    Related - 307A(B-57B) and 305A(B-66B)
14. **DATE APPROVED:** 4 December 1952
15. **PRIORITY:** 1-B
16. **ESTIMATED COMPLETION DATES:** See Tasks, Item 21c.
17. **FY FISCAL ESTIMATES:** 51-53 - 222M 56 - 412M
    54 - 356M 57 - 206M
    55 - 109 56 - 1305M
18. **SUPERSEDES PROJECTS:** R555-862 and R555-820.
19. **REQUIREMENT AND/OR JUSTIFICATION:** This project is required to develop
    an improved method and new equipment for the dissemination of tempera-
    ture sensitive, spherical, BW munitions over enemy territory using sub-
   sonic and supersonic bombardment type aircraft. The authority for this
    project is contained in letter from HQ, ARDC to HQ WADC, ADTS-832, dated
    20 Aug 52, Subj: "(Unclassified) USAF Biologic and Chemical Warfare
    Program". (Top Secret Document)(SECRET)
20. **BRIEF:** This project will result in the development of a means for
    providing proper temperature environment for the delivery of certain
    temperature sensitive BW munitions to the target area. An interim method
    and a final production method will be developed. The interim method
    will consist of space heaters easily installed or removed from the bomb
    bays of B-29 and B-50 aircraft. The final method will utilize standard
    electrical equipment to supply electrical power for the internal heating
    of the munitions. (SECRET)
    This project will also result in the development of a bomb bay
    dispenser suitable for the suspension and release of large quantities
    of small spherical BW bombs. Equipment will be developed to provide
    proper release for best dispersion of large quantities of these
    munitions. (SECRET)
    It is the object of this project to design equipment for use in
    B-47 and later high speed bombardment type aircraft to effectively
    deliver these type munitions. (SECRET)
21. **APPROACH:** Development models of bomb bay heaters were procured from
    the Hayes Aircraft Corp. as an interim method of providing proper bomb
bay temperatures for delivery of temperature sensitive munitions. For a long range approach, the aircraft electrical system will be adapted for supplying electrical power to individual munition electrical heaters. The feasibility of insulating individual munitions is also being studied. (CONFIDENTIAL)

For the delivery of spherical munitions to the target area, ballistic and dispersion data have been obtained from flight tests at Hill AFB using bucket type hoppers and clusters. A test dispenser developed by the Rheem Mfg. Co. for the Chemical Corps will be used for obtaining additional ballistic data. As a long range development, the Boeing Airplane Co. will be requested to develop equipment for release of spherical munitions from sub and supersonic bombardment type aircraft. (CONFIDENTIAL)

Tasks:

Task 50189 (Unclassified Title) Munition Temperature Control, (SECRET TASK)

Contractor: Not established.
Contract: None
Principal Investigator: Not established
Completion of Development: January 1956
Completion of Test: June 1956

Object: To provide the engineering and coordination necessary to assure compatibility between bomb heating provisions as incorporated in different temperature sensitive viable agent munitions and the electrical heating provisions required to be installed in applicable aircraft. (SECRET)

Nature of Task: To assure that bomb heating requirements are maintained within the limits of the aircraft electrical system capabilities and that adequate provisions are installed in applicable aircraft.

Coordination: WADC - Equipment Laboratory, WCLE
Weapon Systems Directorate, WCCW
AMC - Procurement Division, MCP
Maintenance Division, MCM
AFAC, ACOPP
Dept. of Army, Chemical Corps Biological Labs (SECRET)

Task 50190 - (Unc Title) Bomb Bay Dispenser (SECRET TASK)

Contractor: Not Established.
Contract: None
Principal Investigator: (Not Established)
Completion of Development: December 1956
Completion of Tests: July 1957

Object: To provide equipment for delivery of spherical munitions over the target area from subsonic and supersonic aircraft.

Nature of Task: Development of a bomb bay dispenser for suspension and release of spherical FW munitions from subsonic and supersonic bombardment type aircraft.
Coordination: WADC - Directorate of Support, WCU
Aircraft Laboratory, WCLS
Equipment Laboratory, WCLE
Materials Laboratory, WCRT
Weapons Systems Directorate, WCMW
AFAC, ACOP
Dept. of Army, Chemical Corps Biological Labs.
(Secret)

d. Other Information:
(1) Reference Item 11, since the Navy may carry and disseminate these munitions, that agency will be interested in this project. The Army Chemical Corps, Biological Laboratories will participate in the development of the dissemination and temperature control equipment. AFAC will participate in the testing of prototype articles. (Uncl)
(2) The following support will be required from the Air Material Command:
(a) Furnish funds for modification of aircraft to provide prototype installation of munition temperature control equipment for service test. Expenditure of approximately $15,000 in FY 1955 is anticipated.
(b) Furnish funds for procurement of prototype bomb bay dispenser (1 ea.) for service test. Expenditure of approximately $50,000 in FY 1957 is anticipated. (Uncl)
e. Background History: Development of bomb cluster adapters with internal heating and insulating equipment to reduce heat loss from certain temperature sensitive unit bombs which are clustered and carried in cluster adapters has been carried out under prior projects R555-731, R555-732, and R555-777. (Conf)
   Certain BW munitions have a definite temperature range within which the viable agent remains effective. It is, therefore, necessary to control the munition temperature during flight if maximum effectiveness is to be realized. The Army Chemical Corps will provide internal electrical heaters in the individual cluster munitions for production items. Electrical heaters plus insulating material will be used to maintain the required temperature for a typical combat mission. As an interim, for present operational readiness, space heaters for B-29 and B-50 bomb bays are being developed. The long range task will be to provide an electrical system with power receptacles at each bomb station with sufficient capacity to supply the required cluster heating power. Cold chamber tests of the M-115, M-33, and E-133 BW munitions and flight tests of B-47 and B-50 aircraft have indicated that the temperatures of the munitions after a normal flight, without munition temperature control, would result in a large quantity of the viable agent being destroyed in some cases. A prototype bomb bay heater was tested in a B-50 airplane. The major difficulty encountered was operation at altitudes above 25,000 feet. At this altitude the rarified air would not support combustion. The proper design may overcome this difficulty. Data was obtained from these tests as to the required BTU output of the heaters at various altitudes up to 30,000 feet. (Secret)
With the inception of requirements to obtain a capability for delivery of BW weapons, investigations were made as to the effects of temperature and altitude on the viability of BW elements. In March 1951, the problem of temperature control was presented to WADC in a letter from HQ USAF, Subj: "(SECRET TITLE) Temperature Control for Airborne BW Munitions", (SECRET DOCUMENT). In October 1951, WADC presented a prepared report on the study, subj: "(SECRET Title) A Preliminary Study of Temperature Requirements for the Protection of BW Munitions During Airborne Delivery to Target Areas", (SECRET DOCUMENT). (Memorandum Report No. WCSTR-555-1350). During the period October 1951 to April 1952, bomb bay heaters were installed in a B-29 airplane for the purpose of determining the adequacy of heating bomb bays with gasoline heaters. Tests were made at varying altitudes from 10,000 to 40,000 feet. It was determined that presently available heaters, properly controlled would operate satisfactorily up to altitudes of 27,000 feet. Exhibit WCSTR-2-50 dated 20 May 1952, subj: "(Confidential Title) Bomb Bay Heating Kit for B-29 and B-50 Aircraft", (CONFIDENTIAL REPORT) covers the requirements for heaters for bomb bays for these aircraft. On the basis of the above a contract was let to the Hayes Aircraft Corp., Birmingham, Alabama, for the design and development of bomb bay heaters for service use in B-29 and B-50 aircraft. These heaters were functionally tested by the contractor and found to operate satisfactorily within the required design limitations. Development will be considered finished upon completion of final test report. (CONFIDENTIAL)

From a survey of aircraft electrical power availability for munition heating, it was determined that 150 watts per unit munition cluster could be made available. The Army Chemical Corps has been advised to design the unit munition cluster with heaters and insulation, such that under combat conditions on a typical combat mission the temperature of the unit bombs will not rise or fall beyond the allowable temperature range. (CONFIDENTIAL)

Other studies on temperatures of aircraft in flight have been made and reported in the following:

(1) Memorandum Report No. WCSTR-127 dated January 1952, (Unclassified Title) "Study-Design Temperature Requirements for Operation of USAF Aircraft and Equipment Phase C Aircraft Compartment and Equipment Temperature (B-36 Aircraft)". (UNCLASSIFIED DOCUMENT)

Early in FY 1952 the Army Chemical Corps under MIPR 52-702-WADC Amendment I, conducted experimental tests with spherical munitions proposed for use with BW agents. Dispersion of spherical munitions was studied. Various diameters, surface contours, moments of inertia, and other factors entering into the dispersion of the sphere were investigated. Numerous drops of various test spheres were made to determine which shape gave the best dispersion pattern. (SECRET)

Under the Army Chemical Corps contract DA-18-064-CML-2028, the Rheem Mfg. Co. was given the task of evaluating the results of previous experimental tests. They were also given the task of developing a test
dispenser for use in B-50 and B-47 aircraft for determining the effects of controlled orientation and forced ejection on the dispersion pattern of the sphere selected as having the optimum shape. The shape selected was approximately 4 3/4 inches in diameter with 9 raised, equally spaced ribs and weighing approximately 2.7 pounds. (Conf)

In order to marry the dispensing of spheres with the applicable aircraft, WADC prepared Exhibit WCWG-539 dated 19 November 1952, (Unclassified) "Missiles, Spherical, Dispenser For" (Confidential Document) covering four (4) envisioned phases of the task. As the aircraft affected were Boeing designed and built, the Boeing Airplane Co. was recommended for sole source procurement. Due to freeze of R&D funds in late FY 1953, the purchase request was recalled and was resubmitted for procurement purposes in October 1953. (Unclassified)

Ballistic drop tests were made during the fall of 1953 from a B-50 airplane using the Chemical Corps hoppers and the four inch ribbed spheres. Additional tests using the E-19 Dispenser (Rheem Dispenser) will be made during the summer of 1954. (UNCLASSIFIED)

Work has been done by the Army Chemical Corps in the dissemination of dry agents. During March and April 1952, the Army Chemical Corps, using a Navy ship, in a series of five trials disseminated between 200 and 450 pounds of inert tracer powder along a 105-135 nautical mile line. The object was to test the possibility of achieving long range aerosol cloud travel and consequent coverage of large areas at ground level under meteorological conditions in which inversions of temperature were present at low levels of the atmosphere. Details of the test program are contained in the Army Chemical Corps Biological Laboratories FT4 Division Report dated 22 September 1952, Subj: "(Conf Title) Long Range Aerosol Cloud Travel Phase II". (SECRET DOCUMENT) In October 1952, the WADC, at the request of the Army Chemical Corps, modified a B-26 airplane to install equipment for aerial dispensing of dry agent powder. This equipment has been used by the Army Chemical Corps with indications that the performance of the device is satisfactory. (SECRET)

(10) WADC Exhibit No. WCGL-539, dated 19 November 1952, Subj: (Unclassified) Dispenser for Spherical Missiles". (CONFIDENTIAL DOCUMENT)

(11) Report: Army Chemical Corps Biological Laboratories, Ft. M Division, dated 22 September 1952, Subj: (Conf Title) Long Range Aerosol Cloud Travel, Phase II". (SECRET REPORT)

REASON FOR SECURITY CLASSIFICATION:

Since this document reveals intent to obtain offensive capability in BW warfare, it is classified Secret in accordance with policy outlined in letter from HQ, USAF (AFOSI) to all major Commands, dated 16 December 1952: Subj: "Unclassified) Classification Guide for Matters Concerning Biological Warfare and Chemical Warfare". (SECRET)

DOWNGRADING OF SECURITY CLASSIFICATION:

This document shall retain the security classification of Secret until such time as equipment developed under this project has been used in wartime operations for a period of 90 days at which time classification will be reduced to Confidential or until such time as policy expressed in the F-01 Security Guide mentioned above has been revised.
SUBJECT: Establishment of Four (4) Secret Projects in the Cml C FY 55 Program and Termination of Three (3) Consolidated Projects

TO: Chairman, Chemical Corps Technical Committee

1. References:
   a. COTC Items 2703 and 2730 (S/RD), Chemical Corps R&D Program for FY 54, Approved 11 Sep 53.
   b. COTC Item 2810 (S), Security Classification Review of Chemical Corps R&D Projects, 3 Apr 54.
   c. SR 705-5-1, Research and Development of Material, 10 Feb 54.
   d. Ltr (S), CMHE-P-1 R&D Command, 14 May 54, Recommendations for Chemical Corps Technical Committee Action, to Chtr, COTC, w/2 Incls.

2. Discussion:
   a. Reference a. identifies action of this Committee which reviewed the Chemical Corps research and development effort anticipated for FY 54 and indicated that this program consisted of 196 projects established and continued in force in accordance with applicable regulations and directives. This project listing has been revised during the fiscal year by additions and deletions by action of this Committee so that the program currently includes a total of 180 projects within the scope of the three major areas of Chemical Corps responsibility. The security classification of all of these projects was recently reviewed as recorded in reference b. to meet Staff requirements originating with the change in security procedures and abolition of the Restricted category authorized by DA Circular 127, 23 Dec 1953.

   b. Reference g. identifies the basic regulation pertaining to the establishment of R&D projects in which paragraph 14 indicates that timely and periodical reviews of R&D programs should be conducted by the Technical Committees to assure conformity with the over-all Army R&D program and to eliminate any unproductive and duplicating activities. In consonance with this directive this Corps has annually reviewed its research and development effort in order to insure a completely integrated program fulfilling Chemical Corps responsibilities in the CER area within the Department of Defense. As previously noted reference a. identifies the review conducted at the beginning of the current fiscal year.
2. Discussion (continued):

2. Reference j. identifies correspondence which indicated that the program for FY 55 had been reviewed in accordance with all existing directives and, as a result, a total of four new projects in the CW area classified Secret were recommended for initiation at this time. Appropriate project data sheets for these projects are inclosed herewith and the tabulation below indicates the title, technical objective, and security classification for each. In connection with project 4-98-05-026, it is to be noted that this consolidates three currently approved projects, namely, 4-08-05-021, 4-98-05-022, and 4-36-07-001.

4. The foregoing discussion indicates that timely review of the current Chemical Corps project program has shown the desirability of establishing four new projects and deleting three related projects as a result of consolidation. Each of these new projects is described in the respective project data sheet attached herewith.

3. Recommendations:

It is recommended that:
3. Recommendations (continued):

a. The following projects be established in the Chemical Corps FY 55 project program:
   
   (1) 4-04-15-027, Gas Artillery Shell
   (2) 4-08-03-015, Agent CS
   (3) 4-08-06-025, Area CB Alarm
   (4) 4-96-05-026, CW Field Testing & Technology, DPG

b. The military characteristics if applicable, objectives, approach, and scope of the subject projects as listed in paragraph 21 of the pertinent project data sheet attached herewith be approved.

c. Each of the subject projects be assigned to the Technical Objective and be accorded the priority and classification indicated in the applicable project data sheet.

d. The following currently approved projects be deleted from the FY 55 program as a result of consolidation into project 4-98-05-026:

   (1) 4-98-05-021, CW Field Test Technology, DPG
   (2) 4-98-05-022, CW Field Testing, DPG
   (3) 4-36-07-001, Climatological and Meteorological Factors Affecting Field Test Operations.

e. The Chemical Corps FY 55 project program and related documents be revised in accordance with this action.

20. REQUIREMENT AND/OR JUSTIFICATION: Ordnance Corps is at present developing new toxic ammunition for the 110-mm and 155-mm Howitzers and 175-mm guns under projects TAL-1464, TAL-1756 and TAL-1770, D/A projects 504-03-063, 504-03-064, 504-03-065, respectively. The project presently contemplate development of thin wall, high explosive shell, and efforts will be made to develop equivalent shell for non-persistent agent munitions. If this is found to be feasible, these shells will have greater capacity for toxic agent than the 105-mm and 155-mm non-persistent gas artillery shells which have been developed. Further studies are also required to provide greater assurance against leakage on non-persistent gas artillery shell. A requirement for a large caliber HD Artillery Shell has been stated by the Army Field Forces. To meet this requirement Ordnance is developing Shell, Chem. 8-inch, TL 9 (series) under project TAL-1C75, D/A 504-03-074 for HD gas filling.
21. BRIEF OF PROJECT AND OBJECTIVE:
   a. Brief: The objectives of this project are:
      (1) To review work previously undertaken under Cml C Projects 4-04-15-012, GB Artillery Shell, 155-mm and 4-04-15-020, GB Artillery Shell, 105-mm with a view towards improvement of the dissemination and leakage characteristics of these weapons.
      (2) To conduct investigations relative to the application of new artillery shell developments by the Ordnance Corps as Chemical Munitions.
      (3) To assist the Ordnance Corps to develop an 8-inch HD Artillery Shell based on the MLO6 Artillery Shell.
      (4) Since this is a general project, appropriate projects will be established as investigations and/or requirements indicate a need for specific end items.
