South Africa's Nuclear Nonproliferation Posture Remains Consistent

South Africa repeatedly has stated its commitment to nuclear nonproliferation since it ended its nuclear weapons program and signed the Nonproliferation Treaty\textsuperscript{a} (NPT) in July 1991.\textsuperscript{b} South Africa has a history of backing Iran's "peaceful" nuclear development.

**Zuma Cabinet Maintaining Nuclear Status Quo**

Since coming to power in April 2009, President Jacob Zuma's cabinet\textsuperscript{c} has maintained the post-1991 status quo and has not proposed major changes to South Africa's nuclear policies, to include its support for Iranian efforts to develop nuclear energy. It has continued to publicly encourage the peaceful use of nuclear energy for all states. In June 2008, Pretoria released its Nuclear Energy Policy\textsuperscript{d} for the Republic of South Africa,\textsuperscript{1} which outlines aims to develop "an extensive nuclear energy program." According to the policy, leveraging nuclear energy would help South Africa "diversify" its primary energy resources, contribute to economic and technological development, and help "mitigate climate change."

South African officials continue to state their commitment to nuclear nonproliferation and have encouraged other African states to follow suit.

- In a 5 March joint statement issued after meetings in London, President Zuma and UK Prime Minister Gordon Brown said a world "free from nuclear weapons" was the "ultimate goal," and they "looked forward" to the 12-13 April Nuclear Security Summit in Washington, according to South Africa's nonprofit press agency SAPA.\textsuperscript{2}

- In a statement at the 14 September 2009 International Atomic Energy Agency (IAEA) Conference in Vienna, South African Minister of Energy Dipuo Peters reiterated South Africa's pledge to nonproliferation. He urged other African states to ratify the Pelindaba Treaty,\textsuperscript{e} which would create a "nuclear weapon-free" African continent by prohibiting development, acquisition, or testing of nuclear explosive devices. The treaty says peaceful nuclear activities in Africa must conform to IAEA safeguards.\textsuperscript{3} \textsuperscript{4}

\textsuperscript{a} Click here or go to www.un.org/en/conf/npt/2005/npttreaty.html to read the NPT.

\textsuperscript{b} South Africa acceded to the NPT on 10 July 1991. For information on other nonproliferation agreements South Africa has signed, go to the South African Department of Minerals and Energy website at www.dme.gov.za/energy/nuclear_np.stm.

\textsuperscript{c} For more information on the nuclear policy decisionmakers in the Zuma administration, see the 20 January 2010 Consultancy Africa Intelligence paper, **RSA's Key Nuclear Decision Makers in Zuma's Administration** (AFP20100113596002).

\textsuperscript{d} For more information on the outlook for South Africa's nuclear policy, see the 30 March OSC Summary, **Emerging Issues and Possible Future Trends in South Africa's Nuclear and Counter-Proliferation Landscape** (AFP20100330517001) based on Pretoria-based think tank Consultancy Africa Intelligence's March 2010 research paper.

\textsuperscript{e} Open for signature since 1996, the Pelindaba Treaty only came into force in June 2009 when Burundi ratified it, bringing the total number of ratifying states to 28 -- as required by the treaty. The treaty established the African Commission on Nuclear Energy, based in South Africa, to verify compliance. Click here to read the treaty. Click here for a list of countries that have signed and ratified the Treaty.
In international forums, South Africa has supported Iran's efforts to develop "peaceful" nuclear programs and opposed sanctions, citing Article IV of the NPT that signatories have an "inalienable" right to use nuclear energy in peaceful ways.

- Addressing an August 2006 session of the South Africa -- Iran joint bilateral commission, then Foreign Affairs Minister Nkosazana Dlamini-Zuma asserted that South Africa's position on Iran's use nuclear energy for "peaceful purposes" was "based on the NPT."5

- At a 24 March 2007 UN meeting on sanctions against Iran, and in a subsequently released statement from the office of the Permanent Mission of South Africa to the UN, Kumalo stated that South Africa intended to "promote dialogue to establish confidence in the nuclear programme of Iran" and expressed hope that the UNSC would allow the IAEA to fulfill its mandate of ensuring that Iran was complying with the NPT and would not preemptively punish Iran without evidence of a nuclear weaponry program.6

- At a 3 March 2008 UN Security Council (UNSC) meeting on the renewal of sanctions against Iran's alleged "proliferation of sensitive nuclear activities," South Africa's permanent representative to the UN, Ambassador Dumisani Kumalo -- then a nonpermanent member of the UNSC -- said though his country did not "wish to see a nuclear-weaponized Iran," neither did it want to deny the rights of any NPT signatory "to exploit the peaceful applications of nuclear technology."g 7

- However, during its tenure as a nonpermanent member of the UNSC, South Africa voted in favor of sanctions against Iran. A 3 March 2008 South Africa statement to the UNSC detailed the country's reluctance, saying it only voted for the resolution to "preserve previous decisions of the Council, which Iran has not fully implemented,"8 referring to the requirements for Iran to cease enrichment-related and processing activities and allow the IAEA access to information and sites. 9
