Interagency Hotshot Crews

Wildfires can be unpredictable, with the severity and direction of the wildfire changing in a matter of moments. To ensure the safety and protection of life and property, response to a wildfire requires an array of resources including air and ground support.¹ This report briefly discusses the role of hotshot crews for wildfire management.

Hotshot crews are intensively trained fire crews that are generally placed in the most rugged terrain on the most active and difficult areas on wildfires. The primary mission of an Interagency Hotshot Crew (IHC) is to provide a safe, professional, mobile and highly skilled hand crew for all phases of fire management and incident operations.² A crew typically consists of 20 members that have excelled at a variety of standards for IHC operations including physical fitness, operational preparedness training, and field exercises, and has a particular wildfire management experience level. General activities for an IHC may include fire line construction, fuel removal, and burnout operations, among other tasks. The crew may be deployed to any state where they are needed. The National Interagency Coordination Center (NICC) is the overarching federal agency charged with deployment of a crew.³

There are 110 interagency Hotshot Crews, with the Forest Service being the federal agency with the largest number of crews (67).⁴ The Bureau of Land Management, the Bureau of Indian Affairs, and the National Park Service also have Interagency Hotshot Crews. There are a small number of crews that are nonfederal, including crews operated by states and local governments. All crews, federal and nonfederal, must meet the standard for interagency hotshot crew operations and be certified in order to be recognized as an IHC.⁵ As of July 1, 2013, the National Interagency Fire Center (NIFC) reports that 53 crews are working on incidents.⁶

Similar to other wildfire management strategies, there are some concerns about IHCs including funding, oversight, and performance monitoring. The FS reports that funding for federal Interagency Hotshot Crews is allocated to the regions from the National Office of Fire and Aviation Management.⁷ The Department of Interior reports that funding for Interagency Hotshot Crews is drawn from the preparedness program.⁸ IHC positions can be seasonal temporary positions, posing some to question the type of personnel benefits (e.g., health care, retirement)

these employees may receive.⁹ There is an Interagency Hotshot Crew Steering Committee that tracks national and geographic IHC statistics.

Yarnell Hill Fire

Wildfires can be dangerous, even for well-trained individuals. The tragic loss of 19 firefighters—most of whom were members of the Granite Mountain Interagency Hotshot Crew—on June 30, 2013, assigned to the Yarnell Hill fire is a reminder of the danger trained individuals face when trying to manage wildfires. The Granite Mountain IHC is not a federally sponsored crew, but rather is sponsored by the City of Prescott, Arizona's Fire Department. The fire, which was started by lightning on June 28, 2013, in Yarnell, Arizona, has reportedly encompassed more than 8,000 acres. Thus far, the fire has been limited to state and private lands.¹⁰ The federal government is providing suppression crews and aviation support, and has also replaced the local Incident Management Team (IMT) with a federal IMT.¹¹ The Federal Emergency Management Agency also approved a Fire Management Assistance Grant (FMAG) for the Yarnell Hill Fire.¹²
