USDA’s Actively Engaged in Farming (AEF) Requirement

Updated March 7, 2019
Summary

In 1987, Congress enacted what is commonly known as the Farm Program Payments Integrity Act (Omnibus Budget Reconciliation Act of 1987, P.L. 100-203, §§1301-1307), which requires that an individual or legal entity be “actively engaged in farming” (AEF) to be eligible for federal commodity revenue support programs. AEF requirements apply equally to U.S. citizens, resident aliens, and foreign entities. Designing a transparent and comprehensive AEF definition has proven difficult and has evolved over the years. The current set of laws and rules governing farm program eligibility—for both family and nonfamily members on farm operations—remain subject to considerable scrutiny and criticism from both rural and farm advocacy groups as well as certain Members of Congress. In particular, critics contend that current U.S. Department of Agriculture (USDA) eligibility criteria—especially for providing active personal management—remain broad and subjective and may represent a low threshold to qualify for payments, thus facilitating the creation of new farm operation members simply to expand an operation’s farm payment receipts.

Three major categories of legal entities are subject to AEF requirement for program payment eligibility: an individual, a partnership, and a corporation.

An individual must meet three specific AEF criteria. First, independently and separately from other individuals with an interest in the farm business, the person makes a significant contribution to the operation of: (a) capital, equipment, or land; and (b) active personal labor and/or active personal management. Second, the person’s share of profits or losses is commensurate with his/her contribution to the farming operation. Third, the person shares in the risk of loss from the farming operation.

An individual that meets the AEF criteria is eligible for farm program payments but subject to annual payment limits. If a married person meets the AEF requirements, any spouse will also be considered to have met the AEF requirements, thus effectively doubling the individual payment limit. Also, every family member 18 years or older who receives income based on the farm’s operating results is deemed to meet the AEF requirements and is eligible for a separate payment limit. Another exception to AEF requirements is made for landowners provided they receive income based on the farm’s operating results.

A general partnership is an association of multiple persons whereby each member is treated separately and individually for purposes of determining eligibility and payment limits. A partnership’s potential payment limit is equal to the limit for a single person times the number of persons or legal entities that comprise the operation’s ownership and meet the AEF requirements. Thus, adding a new member can potentially provide an additional payment limit. A corporation is an association of joint owners that is treated as a single person for purposes of determining eligibility and payment limits, provided that the entity meets the AEF and other eligibility criteria. Adding a new member generally does not affect a corporation’s payment limit but only increases the number of members that can share a single payment limit.

In accordance with a provision in the 2014 farm bill (P.L. 113-79; §1604), USDA added more specificity to the role that a nonfamily member of a partnership or joint venture must play to qualify for farm program benefits. However, considerable issues remain that may be of interest to Congress. Long-standing concerns remain that some farm operations are organized to overcome program payment limits and maximize the amount of their farm program payments. In particular, some advocacy groups suggest that USDA’s new rule did not go far enough in tightening AEF criteria and that it continues to allow for a high number of farm managers and associated payment limits for both family and nonfamily farm operations.

Introduction

The U.S. Department of Agriculture (USDA), under the authority of Congress as enunciated in periodic farm legislation, provides support to the U.S. farm economy through a variety of federal farm programs. Direct support can often involve the transfer of billions of dollars each year. For example, USDA’s Commodity Credit Corporation (CCC) outlays on farm support programs have averaged $13.7 billion per year from 1996 through 2017.

Program payments vary across commodities and regions as well as by size of farm operations. This variation has generated considerable interest—by both the general public and Congress—in who is eligible to participate in farm programs and, thus, may receive payments. The concern over program eligibility also derives, in part, from instances where farm payments have accrued to individuals who have never engaged in farming.

Program eligibility requirements and payment limits are central to how many U.S. farm programs operate and how support dollars are distributed across the nation. In particular, eligibility requirements and payment limits determine who receives federal farm program payments and how much they receive. A number of statutory and regulatory requirements govern federal farm program eligibility for benefits under various programs. A key aspect of eligibility for major farm revenue support programs is the requirement that a person be “actively engaged in farming” (AEF)—that is, that a person contribute either labor or management time (or both) to the farm’s operation. Not all farm programs are subject to the same AEF criteria, and the criteria often apply differently based on the type of legal entity owning the farm operation.

Report Overview

This is the first of two reports on the subject of program eligibility and payment limits. This report focuses on current requirements to successfully be determined as AEF and thus eligible for certain farm program payments. Another report (CRS Report R44739, U.S. Farm Program Eligibility and Payment Limits) focuses on farm program payment limits, conservation compliance, and adjusted gross income (AGI) restrictions.

This report begins by briefly discussing the historical development of congressional efforts to define and tighten eligibility criteria for farm program payments. This is followed by a description of all of the key terms and concepts involved in defining a farm business and farm program payment recipient, including the three major types of farm business organizations (sole

---

1 “Federal farm programs” generally refers to a suite of commodity support, conservation, and disaster assistance programs administered by USDA. Many such programs are authorized in omnibus farm bills including the Agricultural Improvement Act of 2018 (P.L. 115-334; 2018 farm bill). For more information see CRS Report R45525, The 2018 Farm Bill (P.L. 115-334): Summary and Side-by-Side Comparison, or CRS Report RS22131, What Is the Farm Bill?

5 More discussion of AEF criteria, payment limits, and other eligibility requirements may be found at USDA, Farm Service Agency (FSA), Program Eligibility, online information, as of March 4, 2019, https://www.fsa.usda.gov/programs-and-services/payment-eligibility/index.
The initial attempt to restrict payments to actual farmers was in 1987, when Congress enacted what is commonly known as the Farm Program Payments Integrity Act (Omnibus Budget Reconciliation Act of 1987, P.L. 100-203, §§1301-1307). According to the Government Accountability Office (GAO), Congress was motivated to pass the Farm Program Payments Integrity Act after hearing several concerns about farm payments going to individuals not involved in farming. This law required that an individual or entity meet AEF criteria to receive farm commodity payments. Since their establishment, AEF criteria have been a requirement for payment eligibility for most farm revenue support programs. Since 1996, an average of about $9 billion per year in farm support program payments have been subject to the AEF criteria. Thus, significant taxpayer resources are at stake. However, designing a transparent and comprehensive definition of what it means to be AEF has proven difficult.

In 2004, GAO contended that USDA regulations failed to specify a measurable standard for what constituted “a significant contribution of active personal management.” Furthermore, GAO
argued that, by not specifying such a measurable standard, USDA allowed individuals with little or no involvement in a farming operation to qualify for payments.

As a consequence of such criticism, the definition of AEF has evolved over the years as Congress and USDA—via its regulatory powers—have attempted to tighten payment eligibility criteria. For example, the 2008 farm bill (P.L. 110-246) added more specificity to the definition of person and legal entity. It limited qualifying payments via direct attribution to persons or legal entities with ownership interests in joint ventures that pooled the resources of multiple payment recipients. It also expanded a separate payment limit to the spouses of qualifying farm payment recipients. Yet GAO continued to argue that further specificity was needed for AEF criteria.

The 2014 farm bill (P.L. 113-79, §1604) required USDA, in new regulations, to add more specificity to the role that a nonfamily producer who is a member of a legal entity—primarily a partnership or joint venture—must have to qualify for farm program benefits.

In general, family farms receive special treatment in which every adult family member 18 years or older who receives income based on the farm’s operating results is deemed to meet the AEF requirements. Prior to the 2018 farm bill, family membership was based on lineal ascendants or descendants but was also extended to siblings and spouses. The 2018 farm bill (§1703) further extended the definition of family member to include first cousins, nieces, and nephews. As a result, the current set of laws and rules governing farm program eligibility—particularly for family members of a farm operation—remain subject to considerable scrutiny and criticism from both rural and farm advocacy groups as well as certain Members of Congress. Critics contend that current USDA eligibility criteria—especially for providing active personal management—remain broad and subjective and may represent a low threshold to qualify for payments, thus facilitating the creation of partnership members to increase the farm business’s payment limit and expand its farm payment receipts.

12 Attribution refers to the assignment of program payments to a specific recipient for purposes of evaluating whether the recipient’s payment limit has been met or exceeded. See report section “Identification.”

13 See FSA Handbook, pp. 1-3 to 1-14.

14 GAO, “Changes Are Needed to Eligibility Requirements for Being Actively Involved in Farming,” GAO-13-781, September 2013.

15 U.S. farm program payment limits, adjusted gross income limits, and other eligibility criteria are discussed in FSA, Payment Eligibility, online information, as of July 1, 2016, http://www.fsa.usda.gov/programs-and-services/payment-eligibility/index.

• **Family membership** in a farm business is defined by being a sibling, spouse, lineal ancestor (e.g., great-grandparent, grandparent, or parent), lineal descendant (e.g., son, daughter, grandchild, or great-grandchild), niece, nephew, or cousin of the principal operator.\(^{17}\)

• **Farm manager** means any person who is responsible for the management and general maintenance of a farm operation. In particular, a farm manager personally provides and participates in (1) the general supervision and direction of activities and labor involved in the farming operation, or (2) services (whether performed on-site or off-site) reasonably related and necessary to the farming operation.\(^{18}\)

• **Farm laborer** provides the actual physical labor needed to undertake the activities of the farm—done under the guidance of the farm manager.\(^{19}\)

• **Payment recipient** means any person or entity that is eligible to receive payments, directly or indirectly, under one or more of certain farm programs.

### Types of Farm Businesses

Farmers organize their farming operations in various ways (Table 1) to reduce their exposure to farming’s financial risks.\(^{20}\) For example, certain business structures may limit a farmer’s liability when the farming operation has legal problems or debt that cannot be paid from farm earnings. Some of the most common ways farmers organize their business and how these business organizations are treated under payment limitation rules are as follows:

- **Sole proprietorship.** About 87% of farming operations are owned, operated, and managed by a single individual (often as a family unit). A sole proprietorship has no legal existence independent of its owner, which means that only the owner, not the farming operation, can be sued. Owners of sole proprietorships are personally liable for all their farm’s debts. An individual running a sole proprietorship is limited to a single payment limit. However, the operator’s spouse and other adult family members (18 years or older) who participate in the farming operation also each qualify for an additional payment limit.

- **Joint venture.** A joint venture is an association where two or more individuals pool resources and share profits or losses. As with sole proprietorships, joint ventures have no legal existence independent of their owners. Members in a joint venture have unlimited personal liability for the farm’s debts. Each member in a joint venture is limited to a single farm program payment limit. Adding members to the joint venture could qualify the farming operation for an additional payment limit for each new member (depending on each member’s ownership interest in the joint venture).

- **General partnership.**\(^{21}\) This is the simplest form of partnership. Most states permit their formation with just an oral agreement. FSA makes farm program payments directly to the partnership rather than to the partnership members, which may be individuals or entities. However, each partner can qualify the general partnership for a payment limit. Thus, the general partnership can qualify for additional payments by adding more individuals or entities to the partnership. Each partner is personally liable for that partner’s own conduct and for the conduct of those under that partner’s direct supervision as well as negligence, wrongful acts, and misconduct of other partners and partnership employees. Partners are personally liable for partnership commercial obligations such as loans or taxes.

- **Joint operation.** This includes general partnerships, joint ventures, or other similar business organizations in which the members are jointly and severally liable for the obligations of the organization. Each member is treated separately and individually for purposes of determining eligibility and payment limits. Thus, a partnership’s potential payment limit is equal to the number of qualifying members times the individual payment limit. Joint operations make up about 6.5% of farming operations receiving payments.

---

\(^{17}\) 7 U.S.C. §1308(a)(2).

\(^{18}\) 7 C.F.R. §1400.3. The code citation provides a list of seven qualifying management activities that are briefly described in the section of this report titled “Active Personal Management.”

\(^{19}\) For more information, see the report section titled “Active Personal Labor.”

\(^{20}\) The material in this section is from GAO, “USDA Needs to Strengthen Regulations.”

\(^{21}\) Other forms of partnerships can be more complex and may include hybrid organizational forms such as limited liability partnerships and limited partnerships that are more appropriately categorized as corporations from both a liability and payment limit perspective.
Three Principal Farm Business Categories

Many types of farm business entities own and operate some sort of agricultural production activity. For purposes of determining the extent to which the participants of a farm operation qualify as potential farm program participants, three major categories are considered (Table 1).

1. **Sole proprietorship or family farm.** The farm business is run by a single operator or multiple adult family members—the linkage being common family lineage—where each qualifying member is subject to an individual payment limit. Thus, a family farm potentially qualifies for an additional payment limit for each family member (18 years or older) associated with the principal operator who participates in the farming operation. Family farm or sole proprietorships comprised nearly 87% of U.S. farm operations in 2012.

2. **Joint operation.** Each member is treated separately and individually for purposes of determining eligibility and payment limits. Thus, a partnership’s potential payment limit is equal to the number of qualifying members (plus any special exemptions such as spouses) times the individual payment limit.

3. **Corporation.** A legally defined association of joint owners or shareholders that is treated as a single person for purposes of determining eligibility and payment limits. This includes corporations, limited liability companies, and similar entities. Most incorporated farm operations are family held.

These three categories represent over 98% of U.S. farm operations (Table 1). Special rules exist for evaluating both the eligibility of and relevant payment limits for institutional and other exceptional types of potential legal entities. However, because of their small number (less than 2% of U.S. farm operations) and unique nature, they are not discussed further in this report.

---

22 Corporate entities include limited liability companies and hybrid limited liability partnership organizations.

23 Such exceptional types of potential legal entities include a spouse, minor children, marketing cooperatives, trusts and estates, cash rent tenants, landlords, federal agencies, state and local governments, sharecroppers, deceased and incapacitated persons, military personnel, and other exceptional circumstances. More details on these types of institutional or legal arrangements can be found in the FSA Handbook. See also 7 C.F.R. §§1400.205-1400.2013.

Note: USDA’s Census of Agriculture is conducted every five years. USDA plans to release 2017 Census of Agriculture data, in both electronic and print formats, beginning in April 2019.

a. The farm program payments in this table include both payments subject to the AEF criteria as well as those farm payments (e.g., conservation, disaster assistance, etc.) not subject to AEF criteria. Benefits under the federal crop insurance program are not included in this table. Nor is the nonmonetary, indirect support provided under the sugar program.

b. A breakout of partnerships by family-held and nonfamily-held is not available from public sources.

c. This includes trusts, estates, cooperatives, charitable organizations, and institutional (e.g., state and local government or a public school) and other.

Identification

Generally, program eligibility begins with identification of participants. Identifying who or what is participating and therefore how payments may be attributed is the cornerstone to most farm program eligibility. To be eligible to receive any farm program payment, every person or legal entity—including both U.S. and non-U.S. citizens—must provide a name and address, and have either a social security number (SSN) in the case of a person, or a Taxpayer Identification Number (TIN) or Employee Identification Number (EIN) in the case of a legal entity with multiple persons having ownership interests. In this latter situation, each person with an interest must have a TIN or EIN and must declare an interest share in the joint entity using the requisite USDA forms.

All participants in programs subject to payment eligibility and payment limitation requirements must submit to USDA two completed forms. The first, CCC-90124 (Members’ Information), identifies the participating persons and/or entities (through four levels of attribution if needed) and their interest share in the operation. The second form, CCC-902 (Farm Operating Plan), identifies the nature of each person’s or entity’s stake—that is, capital, land, equipment, active personal labor, or active personal management—in the operation.25 These forms need be submitted only once (not annually) but must be kept current in regard to any change in the

---

24 The CCC abbreviation signifies USDA’s Commodity Credit Corporation.

25 FSA Handbook, p. 2-59, paragraph 44. All forms are available at the local USDA county office or online at http://www.sc.egov.usda.gov.
farming operation. Critical changes to a farming operation might include adding a new family member, changing the land rental status from cash basis to share basis, purchasing additional base acres\(^{26}\) equivalent to at least 20% of the previous base, or substantially altering the interest share of capital or equipment contributed to the farm operation. This information is critical in determining the extent to which each person is actively engaged in the farming operation as described below.

**AEF Requirement**

AEF criteria are a required component of eligibility for payments under the principal revenue support programs of the 2018 farm bill, including the Agriculture Risk Coverage (ARC) and Price Loss Coverage (PLC) programs and benefits under the Marketing Assistance Loan (MAL) program.\(^{27}\) In addition, two direct payment programs established by the Secretary of Agriculture under the authority of the Commodity Credit Corporation Charter Act\(^ {28}\) require that payment recipients meet all AEF criteria—the Cotton Ginning Cost-Share\(^ {29}\) program and the Market Facilitation Program.\(^ {30}\) Finally, benefits under the Trade Adjustment Assistance for Farmers also require that participants meet AEF requirements.\(^ {31}\)

To be eligible for payments under any of these programs, participants—individuals as well as other types of legal entities—must meet specific requirements concerning their “active participation” in the farming operation.\(^ {32}\) In contrast, AEF criteria are not applicable for other farm programs including crop insurance and conservation programs (Table 4).

The AEF requirements apply equally to U.S. citizens, resident aliens, and foreign entities. This section briefly reviews the specific requirements for each type of legal entity to qualify as AEF.

**AEF Criteria: Person**

To understand what it means to be AEF, consider first the case of a single producer. The 2014 farm bill (§1111) defined a producer as an owner, operator, landlord, tenant, or sharecropper that shares in the risk of producing a crop and is entitled to a share of the crop that is produced on the farm. The 2018 farm bill retained this definition of a producer.

A person, as an individual producer, must meet the following three AEF criteria:

P1. The person, independently and separately from other individuals with an interest in the farm business, makes a significant contribution to the operation of:

a. capital, equipment, or land; and

---

26 For the purpose of calculating program payments, the term *base acres* is the historical planted acreage on each farm within the USDA program system, using a multiyear average from as far back as the 1980s. Base acre provisions since 1981 are described in Edwin Young et al., *Economic Analysis of Base Acre and Payment Yield Designations Under the 2002 U.S. Farm Act*, ERS, September 2005, pp. 36-41, https://www.ers.usda.gov/publications/pub-details/?pubid=44874.

27 For program details, see CRS In Focus IF10718, *Farm Bill Primer: Title I Commodity Programs*.

28 This authority is described in CRS Report R44606, *The Commodity Credit Corporation: In Brief*.

30 See CRS Report R45310, *Farm Policy: USDA’s Trade Aid Package*.

31 For details on this program, see CRS Report R40206, *Trade Adjustment Assistance for Farmers*.

b. active personal labor, active personal management, or a combination of personal labor and active personal management;

P2. The person’s share of profits or losses is commensurate with his/her contribution to the farming operation; and

P3. The person shares in the risk of loss from the farming operation.

However, with respect to the latter two criteria (P2 and P3), USDA has generally interpreted them as having been met if a person or entity participating in a farm program receives income based on the farm’s operating results and, thus shares in the profits and losses from the crop. The criteria for meeting ownership or rental control of farm assets (P1.a.) are straightforward. The active personal labor and/or management requirement (P1.b.) are described in more detail below.

**Active Personal Labor**

“Active personal labor” means personally providing physical activities necessary in a farming operation, including activities involved in land preparation, planting, cultivating, harvesting, and marketing of agricultural commodities in the farming operation. Other physical activities include those required to establish and maintain conserving cover crops on Conservation Reserve Program acreages and those physical activities necessary in livestock operations. The personal labor contribution by an individual must be at least the smaller of 1,000 hours annually or 50% of the total hours needed to conduct a farming operation comparable in size to the individual’s ownership interest in the operation.

**Active Personal Management**

The requirement for active personal management is less specific. For an individual it means personally providing and participating in management activities “critical to the profitability of the farming operation.” Such management activities may be performed under one or more of the following categories:

- Capital (which includes arranging financing and managing capital), acquiring equipment, acquiring land and negotiating leases, managing insurance, and managing participation in USDA programs;
- Labor (which includes hiring and managing of hired labor); and
- Agronomics and marketing (which includes selecting crops and making planting decisions), acquiring and purchasing crop inputs, managing crops and making harvest decisions, and pricing and marketing of crop production.

The GAO, in a 2013 report to Congress, pointed out that this broad definition of active personal management made it very difficult for USDA to determine whether individual contributions are significant. Furthermore, GAO suggested that, under this broad definition, management responsibilities could be distributed among farm operation members so as to increase the number of individuals who can claim eligibility for payments based on management contributions.  

---

36 GAO, “Changes Are Needed to Eligibility Requirements for Being Actively Involved in Farming,” GAO-13-781, September 2013, p. 16-19.
37 Evidence provided in Table 3, and discussed later in this report would appear to support this argument.
In terms of evaluating an individual’s eligibility for program payments, the “active” personal labor requirement clearly implies that a person must be routinely “on site” to undertake physical activities in support of the farming operation. The “active” personal management requirement is less clear on physical location and potentially allows a person to make significant contributions of active personal management without physically visiting the farming operation.

**Exceptions for Spouses**

Current law allows for special treatment of a spouse. If one spouse is determined to be actively engaged in farming, then the other spouse shall also be determined to have met the requirement. An exception may also be made for a family member who is called to active duty in the military during the program year provided that the person was making a conscious effort to be, and would have been determined to be, actively engaged in farming if not for being called to active duty in the military.

**Exceptions for Adult Family Members**

Family membership in a farm business is defined by being a sibling, spouse, lineal ancestor (e.g., great-grandparent, grandparent, or parent), lineal descendant (e.g., son, daughter, grandchild, or great-grandchild), niece, nephew, or cousin of the principal operator. Every adult family member 18 years or older who receives income based on the farm’s operating results is deemed to meet the AEF requirements.

**Exceptions for Landowners**

An exception is also made for landowners who may forgo the AEF labor and management requirement and still be deemed in compliance with all AEF requirements if the landowner receives income based on the farm’s operating results and, thus, shares in the risk of profits (P2) and losses (P3) from the crop.

**Failure to Meet AEF Criteria for a Person**

Any person or legal entity that does not satisfy the AEF requirements will not be eligible for farm program benefits under relevant programs. For example, a landowner who rents farmland to another farming operation for a fixed rental rate (i.e., under a fixed cash-rental arrangement) would bear no risk nor be subject to any potential loss from the farming operation. In other words, the landowner would fail to meet AEF criteria P2 and P3 described earlier. In such cases, the landowner would not be eligible for the relevant farm program benefits. Similarly, a landlord who rents land to a farming operation for a share of the crop that is guaranteed in volume or value independent of the actual harvest results would also not bear any risk and, thus, not be eligible for farm program benefits.

**AEF Criteria: Joint Operation**

In the case of a joint operation, the amount of farm payments that can be earned in a year depends on the number of qualifying members and their ownership share. Each partner or member must

---

39 An exception may also be made for a family member who is called to active duty in the military during the program year provided that the person was making a conscious effort to be, and would have been determined to be, actively engaged in farming if not for being called to active duty in the military.

separately meet all of the AEF criteria required for a person. In particular, each partner or member with an ownership interest must contribute active personal labor and/or active personal management to the farming operation (but subject to certain exemptions, such as the spousal and landlord exceptions listed above). The contribution must be identifiable and documentable, separate and distinct from the contributions made by any other partner or member, and critical to the profitability of the farming operation.

Since a partnership’s potential payment limit is equal to the number of qualifying members (plus qualifying exemptions) times the individual payment limit, the partnership’s total limit could be expanded by the addition of each new qualifying member. Similarly, the partnership’s total limit could be reduced by one individual payment limit for each member that fails to meet the AEF requirements and any other eligibility criteria.

There is an exception to the AEF criteria for certain partnerships. When a partnership owns all of the land it uses for farming (i.e., no land is rented), then its members are automatically deemed to be actively engaged in farming, provided that the partners receive income based on the farm’s operating results and, thus, share in the risk of profits and losses from the crop.

**Nonfamily Members in a Joint Operation**

In the case of a nonfamily member of a joint venture seeking to satisfy AEF criteria, his or her individual labor and management contributions must be recorded in a special log to verify that a “significant contribution” has been achieved. This is described later in this report in the section entitled “Recordkeeping Requirement of Personal Hours Worked.”

**AEF Criteria: Corporation**

In the case of a corporation or similar entity with multiple owners (or shareholders), the entity is essentially treated as a single individual. It is considered as “actively engaged in farming” with respect to a farming operation if:

C1. The corporation makes a significant contribution of capital, equipment, or land (or a combination thereof); \(^{45}\)

C2. Each member with an ownership interest in the corporate entity makes a significant contribution of personal labor or active personal management—whether compensated or not—to the operation that are:
   a. performed on a regular basis;
   b. identifiable and documentable; and

---

\(^{41}\) FSA, “Payment Eligibility and Payment Limitations,” December 2015, p. 1.
\(^{42}\) Actual program payments for a partnership would also consider each member’s ownership share before evaluating whether payment limits have been met. Adjusting actual payments for ownership shares may result in their total falling below the unadjusted payment limit. See FSA, Costs & Benefits of Proposed Rule “Payment Limitations and Payment Eligibility—Actively Engaged in Farming,” March 18, 2015.
\(^{43}\) Because of direct attribution of payment limits to an individual, some partners may receive payments from outside the partnership that would count toward their individual payment limits, thus potentially reducing the overall payment to the partnership.
\(^{45}\) If the corporation is also a member of a joint venture, then its input contribution must be made independently and separately of other partners in that joint venture.
c. separate and distinct from such contributions of other members;

C3. The collective contribution of corporate members is significant and commensurate with contributions to the farming operation; and

C4. The corporation also meets the AEF criteria cited above for a person of (P2) sharing commensurate profits or losses, and (P3) bearing commensurate risk.

If any member of the corporation fails to meet the labor and management requirements of C2 above, then any program payment or benefit to the corporation will be reduced by an amount commensurate with the ownership share held by that member. An exception to this requirement applies if (a) at least 50% of the entity’s stock is held by members that are “actively engaged in providing labor or management,” and (b) the total annual farm program payments received collectively by the stockholders or members of the entity is less than one payment limitation.

There is an additional exception to the AEF criteria for certain corporate entities. When a corporation owns all of the land it uses for farming (i.e., no land is rented), then the corporation is automatically deemed to meet the AEF criteria provided the corporation receives income based on the farm’s operating results and, thus, shares in the risk of profits and losses from the crop.

**AEF-Related Farm Payments by Farm Type**

When considering institutional recipients of farm payments subject to AEF criteria (i.e., ignoring family and individual payment recipients and recipients of farm payments not subject to AEF criteria), USDA data for 2015 suggests that there were 95,417 qualifying institutional arrangements (Table 2).

*Notes: Farm program payments to sole proprietorships are not included in this table. When these payments are included, the total payments subject to AEF requirements for 2015 were about $8.6 billion.

a. The farm payments in this table include only payments subject to the AEF criteria—that is, under the 2014 farm bill (P.L. 113-79). This includes ARC and PLC payments. However, payments under the MAL program are not included due to data unavailability. In 2015, MAL benefits were about 2% of the total payments ($8.6 billion) that were subject to AEF requirements.

b. Includes limited partnerships, irrevocable and revocable trusts, estates, and individuals operating as small businesses.

**New AEF Rule: Nonfamily Member Compliance**

A nonfamily member of a farming operation is, by default, anyone who fails to meet the criteria of family membership. The 2014 farm bill (§1604) required USDA to add more specificity to the
role that a nonfamily producer who is a member of a legal entity—primarily a partnership or joint venture—must play to qualify for farm program benefits. In the rule, USDA was directed to explicitly:

1. Define what constitutes a “significant contribution of active personal management” for the purpose of payment eligibility.
2. Consider limits on the number of persons per farming operation who may be considered actively engaged in farming based on a significant contribution of active personal management. Such consideration should take into account:
   a. the size, nature, and management requirements of a farming operation;
   b. the changing nature of active personal management due to advancements of farming operations; and
   c. the degree to which these new regulations will adversely impact the long-term viability of the farming operation.
3. Exclude operations comprised solely of family members from these provisions.
4. Include a plan for monitoring the status of compliance reviews.

The resulting USDA rule, published on December 16, 2015, specifies how legal entities comprised, either entirely or in part, of nonfamily members may be determined eligible for payments, based on a contribution of active personal management. The provisions of this rule do not apply to persons or entities comprised entirely of family members. It is noteworthy that, based on 2012 evidence in Table 1, nonfamily farm operations comprise a relatively small share (less than 9%) of total farm operations. USDA estimated that the rule’s limit on the number of farm managers could affect around 1,400 general partnerships and joint ventures, reducing USDA outlays (and benefits to producers) by about $50 million total for crop years 2016 through 2018, with an annual impact of $4 million to $38 million.

As a result of the rule, several additional requirements now apply to nonfamily farming operations seeking to qualify more than one farm manager. Specifically, in addition to the existing AEF requirements, a limit is placed on the number of nonfamily members of a farming operation that can be qualified as a farm manager. Also, an additional recordkeeping requirement now applies for each member of such farming operations contributing any active personal management.

**Limit on Number of Nonfamily Farm Managers**

This rule restricts the number of nonfamily farm managers per farming operation to one farm manager, with the following exceptions:

- Two farm managers permissible. If one person of the farming operation meets the AEF requirements by making a contribution of active personal management, and that farming operation seeks to qualify a second farm manager, the farming

---

46 The 2018 farm bill did not make any changes to the AEF requirements established under the 2014 farm bill.
47 CCC, “Payment Limitation and Payment Eligibility; Actively Engaged in Farming,” 80 Federal Register 78119-78130, December 16, 2015.
operation must also meet the requirement that it is either a large operation\(^{49}\) or a complex operation.\(^{50}\)

- **Three farm managers permissible.** To qualify a total of three farm managers, the operation is required to meet the requirements for both size and complexity.\(^{51}\)
- **No more than three farm managers.** Under no circumstances is a nonfamily farming operation allowed to qualify more than three persons as farm managers.

### Recordkeeping Requirement of Personal Hours Worked

If a farming operation (comprised, in part, of nonfamily members) seeks to qualify one or more nonfamily farm managers as actively engaged in farming, then all persons that provide any management to the farming operation are required to maintain contemporaneous records or activity logs of their management activities, including the management activities that may not qualify as active personal management under this rule. Specifically, activity logs must include information about the location of where the management activity was performed (either on-site or remote) and the time expended or duration of the management and/or labor (see below) performed for the farming operation. In addition, a person’s contributions must be identifiable and documentable, separate and distinct from the contributions of other members of the farm operation, and critical to the profitability of the farming operation.

### Active Personal Management: Significant Contribution Redefined

The new definition for a significant contribution of active personal management (for nonfamily members only) requires an annual contribution of 500 hours of management or at least 25% of the total management required for that operation. Eligible management activities must be performed under one or more of the management categories listed earlier in the report section entitled “Active Personal Management.”

The final rule also takes into consideration all of the actions of the farming operation associated with the financing.\(^{52}\) Passive management activities such as attendance at board meetings or on conference calls, or watching commodity markets or input markets (without making trades), are not considered as making a significant contribution of active personal management.

---

\(^{49}\) A large farming operation is an operation with crops on more than 2,500 acres (planted or prevented from being planted due to weather) or honey or wool with more than 10,000 hives or 3,500 ewes, respectively.

\(^{50}\) Complexity factors account for the diversity of an operation including the number of agricultural commodities produced; whether irrigation is used; the types of agricultural crops produced such as field, vegetable, or orchard crops; the geographical area in which a farm operates; alternative marketing channels (that is, fresh, wholesale, farmers market, or organic); and other aspects about the farming operation such as the production of livestock, types of livestock, and the various livestock products produced and marketed annually.

\(^{51}\) The spousal exception would expand this limit to a potential maximum of six payment limits.

\(^{52}\) Such actions include including securing production loans; crop selection and planting decisions; land acquisitions and retention of the land assets for an extended period of time; risk management, crop insurance, and legal liability decisions; purchases of inputs and services; labor contracting; use of the most efficient field practices; decisions made to achieve regulatory compliance; and prudent marketing decisions, including hedging and forward contracting. In addition, the 2014 farm bill manager’s report requested that the Secretary pay special attention to a broad range of farm operating activities that take into account the changing nature of active personal management due to technological and economic advancements in farming, communication, and marketing technologies that producers must avail themselves to remain competitive and economically viable operations in today’s farming world including crop genetics, farming practices such as no-till and minimal-till farming, and telecommuting. Agricultural Act of 2014 (P.L. 113-79), Managers’ Statements, “(46) Payment Limited to Active Farmers.”
Significant Combinations of Labor and Management

The final rule, in response to public comment on the difficulty in discriminating between management and labor for farming operations, expanded the measurable standard of what constitutes a significant contribution to include a potential combination of both active personal labor and active personal management. A minimum hourly requirement for a significant contribution of active personal labor of 1,000 hours was established and joined with the hourly standard of 500 hours adopted for defining a significant contribution of active personal management. USDA published a table showing the qualifying minimum combinations of hours contributed to management and labor activities. The table includes five minimum thresholds of combined hours, ranging from 550 hours with predominantly management-identified hours to 950 hours with predominantly labor-identified hours.

Issues for Congress

Since 1987, when Congress first introduced the term “actively engaged in farming” and required that an individual or entity meet AEF criteria to receive farm program payments, U.S. legislators have continued their efforts to limit payments to those who are actual farmers. However, long-standing concerns remain that some farm operations are organized to overcome program payment limits and maximize the amount of their farm program payments. In particular, some advocacy groups suggest that USDA’s new rule did not go far enough in tightening AEF criteria and that it continues to allow for a high number of farm managers and associated payment limits for both family and nonfamily farm operations. These concerns include the lack of specificity in eligibility criteria that continues to allow for as many as three nonfamily farm managers (each, plus their spouses, qualifying for a full payment limit) and no limit on the number of potential farm managers from family-held farm operations. This is noteworthy because family-operated farm businesses represent over 91% of all farm operations.

As an example of the lack of specificity, critics point out that the 2014 farm bill provision (§1604) permits exceptions under the rationale of “concern for the long-term viability” of the farming operation. Furthermore, critics contend that, under the current monitoring system, it can be difficult for USDA to verify the management claims of farm operation partners. Several of these concerns are briefly described here.

GAO Studies: Program Eligibility, Monitoring, and Enforcement

GAO has undertaken several studies of program eligibility and of USDA efforts to monitor and enforce program payment limits. GAO has cited three principal hindrances to USDA oversight

---

53 CCC, “Payment Limitation and Payment Eligibility; Actively Engaged in Farming,” 80 Federal Register 78119-78130, December 16, 2015
56 By definition all individuals are family members. Family or individuals represented an 86.7% share of operations in 2012 (Table 1). In addition, family-held corporations represented over 89% of all incorporated farm operations. A break-out for family-held partnerships or joint ventures was not available.
and enforcement of AEF regulations for members—both family and nonfamily alike—of a farming operation that claim AEF compliance by providing active personal management: (1) the definition of active personal management is broad and can be interpreted to include many potential activities, (2) requirements of what constitutes significant contributions of management are subjective, and (3) it is difficult to verify individuals’ evidence of claimed contributions of active personal management and personal labor—often depending on interviews with individual payment recipients.\(^{58}\)

GAO has said that the three concerns cited above prevent USDA from rigorously enforcing payment eligibility criteria. As a result, large farm operations can distribute various management activities among a partnership’s members so as to increase the number of individuals who can claim eligibility for payments based on different types of management contributions. Furthermore, broad regulations allow members to claim that they are making a significant management contribution without physically visiting the farming operation.\(^{59}\) Thus, the federal government risks distributing payments to individuals who may have little actual involvement in farming operations.

In a 2010 regulation, USDA recognized that it has the regulatory authority to tighten eligibility criteria but that it is unlikely to use that authority unless explicitly directed to do so by Congress:

> The definition of what constitutes a significant contribution is provided by regulation, not by statute and could be changed. We recognize the difficulty in determining the significance of a management contribution under the current definition and the desirability of a measurable, quantifiable standard. However, unlike labor, the significance of a management contribution is not appropriately measured by the amount of time a person spends doing the claimed contribution. The current regulatory definition of a significant contribution of active personal management has been in effect for over 20 years; Congress has not mandated a more restrictive definition during that time, including in the 2008 Farm Bill.\(^{60}\)

As a result, GAO stated that “it appears unlikely that FSA will change its regulatory definition of active personal management in view of its 2010 statements in the Federal Register.”\(^{61}\)

USDA data from 2015 (Table 3) demonstrated that partnerships and joint ventures with larger numbers of members relied more heavily on active personal management criteria to meet AEF qualifications.

Congress—in the 2014 farm bill (§1604)—explicitly directed USDA to design new regulations for AEF criteria but only for nonfamily members of farming operations. Furthermore, Congress directed that the new AEF criteria avoid any new regulatory obligations that would add to any paperwork or management burden of family farm operations. USDA released the rule in 2015.\(^{62}\)

---

\(^{58}\) GAO, citing discussions with FSA officials, states that “during appeal interviews, individuals with little involvement in farming operations can overstate their management contributions by giving rehearsed answers or providing new information that has not been verified, often with assistance of hired consultants.” GAO-13-781, p. 15-23.

\(^{59}\) GAO cited a notable example whereby a farming operation located in a Midwestern state received about $400,000 in program payments in 2012 while farming about 25,000 acres. The operation was organized as a partnership that included six corporations and 11 individuals (all from the same family ranging in age from 18 to 88) as members. Two of the family members, including the 88-year-old, had addresses in south Florida. GAO-13-781, p. 18.

\(^{60}\) CCC, “Payment Eligibility and Payment Limitation; Miscellaneous Technical Correction,” 75 Federal Register 889, January 7, 2010. The citation is in response to public comments regarding a 2008 regulation.

\(^{61}\) GAO added, “In August 2013, a senior-level FSA headquarters official said that the agency does not plan to change the regulatory definition of active personal management without direction from Congress.” GAO-13-781, p. 19.

</table>

**Source:** GAO, “Farm Programs: Information on Payments,” GAO-18-384R, June 5, 2018, Table 4, p. 9.

**Note:** Data is for general partnerships and joint ventures combined. The farm payments in this table include only payments subject to the AEF criteria—that is, under the 2014 farm bill (P.L. 113-79). This includes ARC and PLC payments. However, payments under the MAL program are not included due to data unavailability. In 2015, MAL benefits were about 2% of the total payments that were subject to AEF requirements.

### Limit on Number of Allowable Farm Managers

Under the 2014 farm bill and 2015 USDA rule, a farm operation—operated primarily by nonfamily members—that meets both the size and complexity criteria discussed above could qualify three farm managers (and potentially their spouses) in addition to those persons qualifying under the personal labor criteria. Thus, a large nonfamily farming operation could have a payment limit that is over $1 million per year. Family-managed farm operations have no limit on the number of potential qualifying members and, thus, on the overall payment limit.

Members of Congress may be interested in reviewing the number of farm managers allowed, possibly by establishing an explicit limit on the number a farming operation could claim. For example, everyone on a farm operation who qualifies as a working farmer (i.e., provides land, capital, or equipment and meets the personal labor requirement) could remain eligible to participate in farm programs and receive program payments. However, a restriction could be developed whereby only a single farm manager would be eligible to qualify without providing any farm labor.63 The spouses of the qualifying persons—both workers and manager—could continue to qualify for payments.

### Potential Long-Term Viability Exclusion

The 2014 farm bill (§1604(b)(3)) instructed USDA to consider the extent to which new regulations would “adversely impact” the long-term viability of the farming operation. The basis for determining whether a “significant contribution” of managerial activity has occurred is a subjective assessment. Some wonder whether it might negate any farm manager limit—even on

---

63 The Senate-passed version of the 2018 farm bill (H.R. 2; §1704-§1705) included additional restrictions on the use of AEF criteria including the limitation of a single person or entity per farm using active personal management to meet AEF requirements. However, these additional restrictions were omitted from the final bill in conference.
nonfamily farm operations—since one could argue that all farm managers are critical for a farm’s long-term viability.64

Qualifying Family Members

The farm manager restrictions related to the 2015 USDA regulation are relevant only for nonfamily members of a farming operation. The 2014 farm bill (§1604(c)) explicitly directs USDA to not apply any new restrictions to farm operations comprised solely of family members. An adult family member is considered actively engaged in farming if he or she receives income based on the farm’s operating results. It is assumed that such a family member meets any input or labor requirements, and no recordkeeping is required to verify that sufficient labor hours have been worked on the farm operation or that sufficient managerial time has been made.

Congressional Monitoring

Various Members of Congress will likely be interested in monitoring the success of USDA’s efforts to impose new payment disciplines on nonfamily participants while preventing new management burdens on family farms. Furthermore, they will likely be interested in the extent, if any, to which large farm operations are able to avoid eligibility and payment requirements.
