Dispute Settlement in the WTO and U.S. Trade Agreements

The United States traditionally has championed the use of effective and reciprocal dispute settlement (DS) mechanisms to enforce commitments in the World Trade Organization (WTO) and in U.S. free trade agreements (FTAs). While effective and enforceable DS has been a long-standing U.S. trade negotiating objective, its use has become controversial following some adverse decisions, particularly with regard to U.S. trade remedy law.

**Dispute Settlement at the WTO**

The WTO was established in 1995 after eight years of trade negotiations in the Uruguay Round among members of the General Agreement on Tariffs and Trade (GATT)—the predecessor to the WTO during 1947-1994. The WTO administers a system of agreements promoting trade liberalization, including rules for trade in goods, services and intellectual property rights. Through its Dispute Settlement Understanding (DSU), the WTO provides an enforceable means to settle disputes regarding obligations under these agreements.

Under the GATT, dispute settlement was largely viewed as ineffective because there were no fixed timetables and decisions could be blocked by a disputing party, which frequently led to no resolution of disputes. In defining U.S. aims for the Uruguay Round, Congress sought to achieve major reform in the GATT dispute settlement system in the following U.S. trade negotiating objective:

> to ensure that such mechanisms within the GATT and GATT agreements provide for more effective and expeditious resolution of disputes and enable better enforcement of United States rights.

The DSU was credited with strengthening the DS system by imposing stricter deadlines and making it easier to establish panels, adopt panel reports (DS decisions), and to authorize retaliation for noncompliance. It also reversed the GATT process for adopting a panel report by providing that a report can be blocked only by consent of all members.

**How it Works**

The DSU established the process for the settlement of disputes for the WTO system of agreements. It commits members to take disputes to adjudication under DSU rules and procedures rather than make unilateral determinations of violations and impose penalties. As a first step, the DSU encourages the settlement of disputes through consultations and requires a party to enter into consultation with a requesting party within 30 days of receipt of the request.

If a dispute cannot be resolved within 60 days of a request for consultations, or if a party denies a request for consultation, the complaining party may request the establishment of a panel. The DSU sets the procedures for choosing panel members and establishes a panel’s terms of reference. A panel typically is composed of three “well-qualified government and/or non-governmental individuals” from third party members not a party to the dispute, as recommended to the parties by the WTO Secretariat. If members cannot agree on panelists, they are chosen by the WTO Director-General.

Dispute panels hear cases and issue reports to disputing parties and then to all WTO members within nine months of a panel’s establishment. Third parties may join if they have a “substantial interest” in the proceedings. Until recently, decisions could be appealed to the Appellate Body (AB), a standing body of seven jurists serving four-year terms, who were unaffiliated with any government, and had expertise in international trade law. Since 2016, the United States has vetoed the appointment of new AB panelists, as a way to show displeasure over certain practices of the body. On December 10, 2019, the terms of two remaining jurists expired, leaving the AB without a quorum to hear new cases. Dispute panels can continue to hear cases, but appealed cases remain in limbo, and, if appealed, panel decisions cannot be enforced. In addition, some WTO members have developed a work-around outside the WTO to hear appeals amongst themselves.

**WTO DS Core Objectives**

[The DS system] serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law. Recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements.” Art. 3.2 DSU

Once DSU proceedings are completed, the reports are presented for adoption by the Dispute Settlement Body (DSB). If a violation is found, the member must bring the offending measure into conformity with WTO obligations. It may choose to change its practice and the parties may negotiate a reasonable timeframe for implementation. If the respondent does not bring its measure into conformity in a reasonable period of time, or its responsive action is not acceptable to the complaining member, the parties may negotiate compensation. Alternatively, the complaining member may request that the DSB authorize retaliation through the withdrawal of tariff concessions or other suspension of WTO benefits equivalent to the effect of the offending practice. Procedures set specific timetables, although delays often occur. To date, 600 cases have been filed at the DSB, with the United States a direct party to 280 cases (Table 1). Dispute Settlement in the WTO and U.S. Trade Agreements

Investor investigate contains a “rapid to the USMCA’s first DS proceeding. In December 2020, the United States sought to participate in the selection of panelists for a DS case, even if a party refuses to participate in panel selection. GMTA rules, a party can choose the forum, but cannot bring the dispute to multiple fora.

State-to-State Dispute Settlement

State-to-State DS has been infrequent under U.S. FTAs, and disputes are usually resolved via consultation. Three cases were decided under North American Free Trade Agreement (NAFTA) DS, with other disputes adjudicated under WTO DS. Other than in NAFTA, the United States has brought one FTA to formal DS—with Guatemala over labor practices. The United States-Mexico-Canada Agreement (USMCA) changed the roster selection process to ensure formation of a panel in DS cases, even if a party refuses to participate in the selection of panelists, closing a loophole that discouraged the use of DS in NAFTA. In December 2020, the United States sought consultations with Canadian over certain dairy practices, which if not resolved may lead to the USMCA’s first DS proceeding. USMCA also contains a “rapid-response” independent panel to investigate denial of labor rights at certain facilities.

Investor-State Dispute Settlement (ISDS)

Most U.S. FTAs since NAFTA contained a separate dispute settlement system for investment. ISDS allows an investor to seek arbitration directly with a host government to resolve disputes over alleged breaches of a party’s investment obligations. ISDS proceedings are conducted under the auspices of the World Bank-affiliated International Centre for Settlement of Investment Disputes (ICSID), or comparable rules. Panels are typically composed of three arbiters—one appointed by the investor claimant, one by the party, and one by agreement of the disputing sides. A successful claim can only result in monetary penalties, and a tribunal cannot compel a country to change its laws over an adverse decision. In a break from previous U.S. FTAs, USMCA ended recourse to ISDS between the United States and Canada, and limited its use with Mexico. (See CRS In Focus IF11167, USMCA: Investment Provisions, by Christopher A. Casey and M. Angeles Villarreal.)

Binational Review of Trade Remedy Actions

Unique among U.S. FTAs, NAFTA contains a binational dispute settlement mechanism to review anti-dumping (AD) and countervailing duty (CVD) decisions of a domestic administrative body. While some groups in the United States supported its elimination, it is retained in the proposed USMCA.

Current Issues for Congress

Congress may seek to address the new DS mechanisms under USMCA and the demise or potential reform of the AB in its oversight of U.S. trade policy or in a possible future debate on Trade Promotion Authority.

USMCA. In oversight on the USMCA, Congress may examine the new DS processes to enforce the new and enhanced provisions of the agreement. Congress may also debate whether ISDS provisions should be incorporated into future FTAs and whether they strike the right balance between the protection of U.S. investment abroad and maintaining a government’s right to regulate.

WTO. As noted above, the United States has refused to agree to new AB members, putting the body in limbo. Central U.S. concerns include whether AB panelists have interpreted agreements too expansively; issuing advisory opinions on issues not relevant to the case on appeal; timeliness of AB proceedings, treatment of AB decisions as precedent, and whether AB jurists should be able to finish cases after their terms have expired. Some WTO members share U.S. concerns and have made proposals to address them. The Trump Administration rejected them, maintaining that the DSB must address the fundamental issue of why the AB acts as it can allegedly disregard the language of the DSU. As of yet, the Biden Administration has not announced a position on this issue. Given the effective demise of the WTO DS system, Congress may consider the relative importance of U.S. complaints with the AB with the value of having a functioning DS system for the multilateral trading system.
