The Army’s Armored Multi-Purpose Vehicle (AMPV): Background and Issues for Congress

Andrew Feickert
Specialist in Military Ground Forces

Updated September 19, 2018
Summary

The Armored Multi-Purpose Vehicle (AMPV) is the Army’s proposed replacement for the Vietnam-era M-113 personnel carriers, which are still in service in a variety of support capacities in Armored Brigade Combat Teams (ABCTs). While M-113s no longer serve as infantry fighting vehicles, five variants of the M-113 are used as command and control vehicles, general purpose vehicles, mortar carriers, and medical treatment and evacuation vehicles.

The AMPV is intended to be a nondevelopmental program (candidate vehicles will be either existing vehicles or modified existing vehicles—not vehicles that are specially designed and not currently in service). Some suggest a nondevelopmental vehicle might make it easier for the Army to eventually field this system to the force, as most of the Army’s past developmental programs, such as the Ground Combat Vehicle (GCV), the Future Combat System (FCS), the Crusader self-propelled artillery system, and the Comanche helicopter, were cancelled before they could be fully developed and fielded.

On November 26, 2013, the Army issued a Request for Proposal (RFP) for the AMPV. This RFP stipulated the Army planned to award a five-year Engineering and Manufacturing Development (EMD) contract in May 2014 worth $458 million to a single contractor for 29 prototypes. While the March 2013 RFP established an Average Unit Manufacturing Cost Ceiling for each AMPV at $1.8 million, this was rescinded to permit vendors greater flexibility. The EMD phase was scheduled to run between FY2015 and FY2019, followed by three years of low-rate initial production (LRIP) starting in 2020. As of 2018, the Army plans to procure 2,936 AMPVs to replace M-113s in ABCTs. The Army also has plans to replace 1,922 M-113s at Echelons Above Brigade (EAB), and the Department of Defense (DOD) estimates that if the M-113s are replaced by AMPVs at EAB, total program costs could be increased by an additional $6.5 billion. While the Army would like a pure fleet of AMPVs, budgetary constraints could preclude this.

On December 23, 2014, the Army announced it had selected BAE Systems Land and Armaments L.P. as the winner of the EMD contract. The initial award was for 52 months, valued at about $382 million. In addition, the award provides for an optional low-rate initial production (LRIP) phase. If this phase is awarded, BAE would produce an additional 289 vehicles for a total contract value of $1.2 billion. This EMD contract does not include EAB AMPV variants. The AMPV reportedly successfully completed its Critical Design Review (CDR) on June 23, 2016. On December 15, 2016, BAE delivered the first general purpose AMPV to the Army for testing. In September 2017, the Army began AMPV reliability, availability, and maintainability (RAM) testing. Also in 2017, based on budgetary constraints, the Army decided that it would upgrade a number of EAB M-113s instead of replacing them with AMPVs. In May 2018, the Army decided to put the EAB M-113 upgrade effort on hold.

Other program issues include DOD Inspector General (IG) concerns regarding performance and design concerns, as well as inaccurate procurement quantities, which could result in inaccurate program costs. The Government Accountability Office (GAO) in 2018 expressed concerns regarding cost growth, difficulties meeting a variety of developmental requirements, and dependencies on other programs that are experiencing developmental challenges.

Potential issues for Congress include a “way ahead” for upgraded M-113s at EAB and DOD Inspector General (IG) and GAO concerns.

Background

In 1956, the Army began the development of a family of air-transportable, armored multi-purpose vehicles intended to provide a lightweight, amphibious armored personnel carrier for armor and mechanized infantry units. Known as the M-113, it entered production in 1960 and saw extensive wartime service in Vietnam. Considered a reliable and versatile vehicle, a number of different variations of the M-113 were produced to fulfill such roles as a command and control vehicle, mortar carrier, and armored ambulance, to name but a few. The Army began replacing the M-113 infantry carrier version in the early 1980s with the M-2 Bradley Infantry Fighting Vehicle, but many non-infantry carrier versions of the M-113 were retained in service.

The Armored Multi-Purpose Vehicle (AMPV)

According to the Army, the Armored Multi-Purpose Vehicle (AMPV) is the proposed United States Army program for replacement of the M-113 Family of Vehicles (FOV) to mitigate current and future capability gaps in force protection, mobility, reliability, and interoperability by mission role variant within the Heavy Brigade Combat Team (HBCT) [now known as the Armored Brigade Combat Team (ABCT)]. The AMPV will have multiple variants tailored to specific mission roles within HBCT. Mission roles are as follows: General Purpose, Medical Evacuation, Medical Treatment, Mortar Carrier, and Mission Command.

The Army’s AMPV Requirements

Regarding the decision to replace remaining M-113s, the Army notes the following:

- The M-113 lacks the force protection and mobility needed to operate as part of combined arms teams within complex operational environments. For example, “commanders will not allow them to leave Forward Operating Bases (FOBs) or enter contested areas without extensive mission protection and route clearance.”
- The use of other vehicles for M-113 mission sets (casualty evacuations, for example) reduces unit combat effectiveness.

The majority of the Army’s M-113s are found in Armored Brigade Combat Teams (ABCTs), where they comprise 32% of the tracked armored vehicles organic to that organization. The 114 M-113 variants in the ABCT are distributed as follows:

AMPVs at Echelons Above Brigade (EAB)\(^5\)

In addition to the AMPV requirement in the ABCTs, the Army also planned to procure an additional 1,922 AMPVs to replace M-113s in Echelons Above Brigade (EAB).\(^6\) The Army notes that these AMPVs might have different requirements than the ABCT AMPVs. DOD estimates if the M-113s are replaced by AMPVs at EAB, total program costs could be increased by an additional $6.5 billion.\(^7\)

Program Overview\(^8\)

According to the Government Accountability Office (GAO), in March 2012, the Under Secretary of Defense for Acquisition, Technology, and Logistics (USD, AT&L) approved a materiel development decision for AMPV and authorized the Army’s entry into the materiel solution analysis phase. The Army completed the AMPV analysis of alternatives (AoA) in July 2012 and proposed a nondevelopmental vehicle (the candidate vehicle will be either an existing vehicle or a modified existing vehicle—not a vehicle that is specially designed and not in current service). Because the AMPV is to be a nondevelopmental vehicle, DOD decided the program would start at Milestone B, Engineering and Manufacturing Development (EMD) Phase and skip the Milestone A, Technology Development Phase.

The Army planned for a full and open competition and aimed to award one industry bidder a 42-month EMD contract to develop all five AMPV variants. A draft Request for Proposal (RFP) released in March 2013 stated the EMD contract would be worth $1.46 billion, including $388 million for 29 EMD prototypes for testing between 2014 and 2017 and $1.08 billion for 289 low-rate initial production (LRIP) models between 2018 and 2020. The Army had planned on releasing the formal RFP in June 2013 but instead slipped the date until mid-September 2013,

---

\(^6\) Echelon Above Brigade (EAB) refers to Army combat units larger than brigades—generally division and corps sized—as well as non-ABCT support brigades. Examples of EAB units that have M-113s that will be replaced with AMPVs include Armored Division and Corps headquarters and Combat Engineer Brigades.

\(^7\) Inspector General, U.S. Department of Defense, Army is Effectively Managing the Armored Multi-Purpose Vehicle, but There Are Concerns That Could Impact Program Cost, Schedule, and Performance, April 28, 2017, p. 17.

citing a delayed Defense Acquisition Board review attributed in part to Department of Defense civilian furloughs.\(^9\) The EMD contract award was originally planned for late 2014. The Army planned for an average unit manufacturing cost (AUMC) of $1.8 million per vehicle.

**Department of Defense (DOD) Approves AMPV Program\(^{10}\)**

On November 26, 2013, DOD issued an Acquisition Decision Memorandum (ADM) officially approving the Army’s entry into the Milestone B, Engineering and Manufacturing Development (EMD) Phase. The ADM directed the Army to impose an Average Procurement Unit Cost less than or equal to $3.2 million at a production rate of not less than 180 vehicles per year. In addition, operations and sustainment costs were to be less than or equal to $400,000 per vehicle per year. The Army was also directed to down select to a single prime contractor at the completion of Milestone B.

**Army Issues AMPV Draft Request for Proposal (RFP)\(^{11}\)**

Also on November 26, 2013, the Army issued a new draft Request for Proposal (RFP) for the AMPV. This RFP stipulated the Army planned to award a five-year EMD contract in May 2014 worth $458 million to a single contractor for 29 prototypes. While the March 2013 RFP established an Average Unit Manufacturing Cost Ceiling for each AMPV at $1.8 million, this was rescinded to permit vendors greater flexibility. The EMD phase was scheduled to run between FY2015 and FY2019, followed by three years of low-rate initial production (LRIP) starting in 2020.

**2018 ABCT AMPV Procurement Quantities\(^{12}\)**

According to GAO’s 2018 Weapon Systems Annual Assessment, the Army plans to procure 2,936 AMPVs.

**Selected Program Activities**

**Army Awards ABCT AMPV Contract to BAE\(^{13}\)**

On December 23, 2014, the Army announced it had selected BAE Systems Land and Armaments L.P. as the winner of the EMD contract. The initial award was for 52 months valued at about $382 million. During this period of performance, BAE was to produce 29 vehicles, which would be put

---

through “rigorous developmental and operational testing.” In addition, the award provided for an optional low-rate initial production (LRIP) phase award in the future. If this phase is awarded, BAE would produce an additional 289 vehicles for a total contract value of $1.2 billion. The Army, in its announcement, emphasized the BAE EMD contract did not pertain to the 1,922 EAB AMPVs.

**AMPV Completes Critical Design Review**

According to reports, the AMPV successfully completed its Critical Design Review (CDR) on June 23, 2016. Successful completion of a CDR demonstrates the AMPV’s design is stable, can be expected to meet established performance standards, and the program can be accomplished within its established budget.

**Roll Out of First AMPV for Testing**

On December 15, 2016, BAE delivered the first general purpose AMPV to the Army for testing. The Army plans for six months of contractor tests, followed by one year of government testing and then Limited User Testing. In April 2018, BAE reportedly delivered all 29 AMPVs to the Army for testing.

**AMPV Begins Developmental Testing**

In September 2017, the Army reportedly started reliability, availability, and maintainability (RAM) testing for the AMPV. DOD defines RAM as follows:

- Reliability is the probability of an item to perform a required function under stated conditions for a specified period of time. Reliability is further divided into mission reliability and logistics reliability.
- Availability is a measure of the degree to which an item is in an operable state and can be committed at the start of a mission when the mission is called for at an unknown (random) point in time. Availability as measured by the user is a function of how often failures occur and corrective maintenance is required, how often preventive maintenance is performed, how quickly indicated failures can be isolated and repaired, how quickly preventive maintenance tasks can be performed, and how long logistics support delays contribute to down time.
- Maintainability is the ability of an item to be retained in, or restored to, a specified condition when maintenance is performed by personnel having

---

14 According to AcqNotes: “A Critical Design Review (CDR) is a multi-disciplined technical review to ensure that a system can proceed into fabrication, demonstration, and test and can meet stated performance requirements within cost, schedule, and risk.” http://www.acqnotes.com/acqnote/acquisitions/critical-design-review, accessed September 13, 2016.

specified skill levels, using prescribed procedures and resources, at each prescribed level of maintenance and repair.\textsuperscript{19}

**Army EAB Upgraded M-113 Effort Put on Hold**

Due to budgetary constraints, the Army reportedly planned to provide upgraded EAB M-113s to a small number of units outside the continental United States and in South Korea and Europe. In August 2017, Army officials reportedly noted “that the amount of time and resources it would take to achieve a pure fleet solution for both ABCTs and EAB units would likely push fielding into FY 2040 and beyond, which is not a suitable course of action.”\textsuperscript{20} Officials also suggested that upgrading M-113s for EAB use was “an interim solution until we can get to the optimal solution.”\textsuperscript{21}

The Army had planned to issue a request for proposal (RFP) for upgraded M-113s in the summer of 2018. A number of vendors, including General Dynamics Land Systems (GDLS), BAE Systems, and Science Applications International Corporation (SAIC), reportedly planned to respond to the RFP.\textsuperscript{22}

Reportedly, on May 21, 2018, the Army indefinitely postponed its plans to upgrade EAB M-113s and also put on hold plans to issue an RFP for upgraded M-113s.\textsuperscript{23}

**Other Program Issues**

**DOD Inspector General (IG) Concerns**\textsuperscript{24}

An April 28, 2017, DOD IG report noted the Army has effectively managed the AMPV program, in particular keeping it within cost requirements and scheduled timeframes, but also expressed the following concerns:

- The program might not meet entry requirements for initial production and testing (Milestone C) because the Army has not fully resolved vehicle performance and design demonstration concerns.
- As a result of the aforementioned performance and design concerns, the AMPV could experience increased costs and schedule delays as a result of addressing the IG’s concerns.
- Because the U.S. Army Deputy Chief of Staff, Programming (G-8) had not revised the procurement quantities to reflect changes to the Army’s equipment and force structure requirements, the program’s estimated total cost and Average Procurement Unit Cost is not accurate.\textsuperscript{25}

\textsuperscript{21} Ibid.

\textsuperscript{22} Ibid.

\textsuperscript{24} Inspector General, U.S. Department of Defense, Army is Effectively Managing the Armored Multi-Purpose Vehicle, but There Are Concerns That Could Impact Program Cost, Schedule, and Performance, April 28, 2017.

\textsuperscript{25} Ibid., p. i.
Government Accountability Office (GAO) 2018 Weapon Systems Annual Assessment Concerns

An April 2018 GAO Weapon Systems Annual Assessment expressed the following concerns:

The program has experienced development contract cost growth of over 20 percent above target cost due to continued challenges meeting logistics, performance, and production requirements. However, program officials noted that the government’s official cost position for AMPV development—based on the independent cost estimate prepared by the Office of Cost Assessment and Program Evaluation—has not changed as it includes adequate margin to account for the cost growth to date.

AMPV remains dependent on other programs—such as the Army’s Handheld, Manpack, and Small Form Fit Radios—for its key communication and networking capabilities. However, these programs have experienced their own acquisition challenges delaying their availability for the AMPV program. The program is including a legacy radio platform in its production vehicle design configuration, which will, according to program officials, readily accommodate future networking capabilities provided by these other programs.26

Given the aforementioned 2017 DOD IG concerns and GAO’s 2018 concerns regarding cost growth, difficulties meeting a variety of developmental requirements, and dependencies on other programs that are experiencing developmental challenges, the AMPV program will likely receive significant scrutiny and oversight to insure it remains a cost effective and viable program.

Department of Defense FY2019 AMPV Budget Request27

The FY2019 budget request includes Research Development, Testing and Evaluation (RDT&E) and Procurement funding requests for the AMPV in both the Base and Overseas Contingency Operations (OCO) budgets, as well as FY2019 requested quantities.

<table>

Notes: $M = U.S. Dollars in Millions; Qty = FY2019 Procurement Quantities.

FY2019 National Defense Authorization Act (H.R. 5515)\textsuperscript{28}

Congress recommended fully funding the Army’s FY2019 AMPV RDT&E budget request.\textsuperscript{29} While Congress recommended fully funding the Army’s FY2019 AMPV Overseas Contingency Operations (OCO) Procurement budget request,\textsuperscript{30} it decreased the FY2019 Base Budget Procurement budget request by $31.148 million citing “realignment of European Deterrence Initiative (EDI) Army Preposition Stock (APS) unit set from OCO to Base budget.”\textsuperscript{31}

Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019 (H.R. 6157)\textsuperscript{32}

Congress recommended a decrease to the Army’s FY2019 AMPV RDT&E budget request of $6.279 million citing “program management support excess to need.”\textsuperscript{33} Congress recommended a $32.343 million reduction in funds appropriated for Army’s FY2019 AMPV Procurement budget request, citing “contract savings from combined lot awards and reimbursable to direct conversions unaccounted for.”\textsuperscript{34}

Potential Issues for Congress

The Way Ahead: Upgraded M-113s at Echelons Above Brigade (EAB)

As previously noted, the Army’s optimal solution would be to replace EAB M-113s with AMPVs, but the Army felt that given current and projected budgetary constraints, only selected EAB units outside the continental United States and in South Korea and Europe would receive AMPVs while the remainder would receive upgraded M-113s as an interim solution.\textsuperscript{35} Reportedly, on May 21, 2018, the Army indefinitely postponed its plans to upgrade EAB M-113s and also put on hold plans to issue an RFP for upgraded M-113s.\textsuperscript{36} Given the frequently changing nature of the Army’s plans for addressing the replacement of legacy M-113s at EAB and the decision to postpone the

\textsuperscript{29} Ibid., p. 725.

\textsuperscript{32} Conference Report 115-952 to Accompany H.R. 6157, Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2019, And For Other Purposes, September 13, 2018.
\textsuperscript{33} Ibid. p. 378.
\textsuperscript{34} Ibid., p. 263.
program’s RFP, it is not unreasonable to question if the Army has a clearly defined “way ahead” for addressing M-113 replacement at EAB.

**DOD Inspector General (IG) and GAO Concerns**

DOD’s April 2017 IG report, while acknowledging effective management of the AMPV program, also raised fundamental concerns about performance and design, as well as inaccurate procurement quantities, which could adversely impact program costs. GAO’s 2018 concerns regarding cost growth, difficulties meeting a variety of developmental requirements, and dependencies on other programs that are experiencing developmental challenges suggest that programmatic issues continue. Given these concerns, a more in depth examination of the AMPV program might prove beneficial for both the Army and policymakers alike.
