INSIDE THIS ISSUE

PROGRAM FEATURE: REACTOR SAFETY

A Primer on Reactor Safety Analysis
by Michael G. Stevenson and James F. Jackson

Two-Phase Flow
by Dennis R. Liles

Accident Simulation with TRAC
by John C. Vigil and Richard J. Pryor

Detailed Studies of Reactor Components
by Anthony A. Amsden, Bart J. Daly, John K. Dienes, and John R. Travis

Three Mile Island and Multiple-Failure Accidents
by John R. Ireland, James H. Scott, and William R. Stratton

SIDEBAR 1: TRAC Analysis of the Three Mile Island Accident
SIDEBAR 2: What if the Core Melted?
SIDEBAR 3: Good News about Iodine Releases
SIDEBAR 4: Los Alamos Assistance to Three Mile Island Investigations

EDITORIAL: Three Mile Island: Aftermath and Impact
by Jay E. Boudreau

Breeder Reactor Safety—Modeling the Impossible
by Charles R. Bell

COMMENT: The American Breeder Program Gets a Second Chance
by Jay E. Boudreau

SHORT SUBJECTS

Keeping Reactors Safe from Sabotage
by William A. Bradley, Roy A. Haarman, and Donald G. Rose

The Structural Integrity of Reactors
by Charles A. Anderson and Joel G. Bennett

Low-Level Radiation—How Harmful Is It?
by Roger C. Eckhardt

PEOPLE

The View from San Diego: Harold Agnew Speaks Out
by Barb Mulkin
